youtube to mp3 and trim the 73 sec to listen in car, phone: super gentle soprano – humans will speak like it 73 sec amazing (min 14 to 15)☺☺☺ 14. Susanna☺☺: Astral travel guided meditation 2mv, Compassion meditation, voice tender like ASMR 15. om mani padme hum 3mv meaning is here, Buddha 3mv "Om Muni Muni, Maha Muni, Shakyamuni (Buddha, sage of the shakya clan), Swaha" (Om=God/Amen☺, muni=sage, maha=great, swaha = amen/hail, sw (su)=good, aha=call, call the good/bless us), 16. heart sutra 3mv (meaning is here), 17. lullabies: Spanish, English, Hebrew, Arabic, Chinese, Norwegian, Finnish, Romanian, Japanese, Swedish, Hindi, Silent Night: 32 languages (more here). When we sing lullabies our tone is gentler. Lullabies are closest to eterni, since the Immortals (future humans) have a gentle unconditional love for humans (& fellow Immortals), we're like 1 day old babies vs them, so to live long, we need speak eterni, to extend that infinite God like *love* of the Immortalist Anthem 1st page☺☺☺, so infinite kindness radiates in every word, every thought, emotion verbalized/created/felt within 18. Sinead voice in Silent Night 1991 19. Maria's whisper 22mv 20. Norway whisper 17mv 21. Karunesh (free mp3s) first 3 min of Zen 5mv 22. Crystal, Dream, Inner, Silent 23. flute, flute2 4mv 24. Compassion, Essence, 25. peterkater.com

Below, 26-30, are 5 examples of good tones vs bad *(99% of music)*, since we learn via contrast:

26. Aniron tone 39mv *far gentler more tender than US politician, journalist, comedian* average tone or the horrific tone in 'Battle Hymn' USA song (lyrics) about "God's" imagined vengeful violent ways, vocal tone that unfortunately is common in military songs or anthems worldwide.

27. Peaceful spiritual Chinese song 1mv and soprano Chinese folk song, both *gentler more tender than Chinese politicians'* average *tone and* far gentler than this kid and others shouting *in the training camp. Check out* singing ceramic. There is also a nice song from Tibet, one of the only feminine nurturing ones I found in Tibetan Buddhism, 99.9% of which seem ultra macho masculine voice based. It was sung by Balok Tenzin Dorje near Lhasa, a guy who knows English, Chinese and Tibetan and who got a chance to see other cultures via youtube and how far ahead they're in *nurturing gentle* tender soft quality versus traditional macho Tibetan stuff. The nearly complete absence of eterni vibe (ultra *gentle tender soft healing* feminine graceful *nurturing* universal loving kindness) in Tibetan Buddhism, Jainism, most Hinduism, Judaism, Islam, most Christianity sucks. You can see that by watching their music and sermons.

28. Japanese voice gentler than most Japanese politicians average tone. ☺☺☺

29. "hymn of the cherubim" 10mv by USSR church choir & Russian lullaby vs next 4: ☺☺☺

29.1. Putin's & women tone on the worst Putin tone (Putin tone is way better usually) day, though the Russian theft of gold from Africans they claim to "protect against the 'evil' Americans'" is a clear sign of the anger and genocide for theft adoration (fuel war in Sudan, etc

to steal gold, anger at blacks for having gold while Russians don't, greed and envy typical of ultra low IQ chimps of the jungle not of evolved humans, gold advanced future Immortal humans don't need to live to a trillion, their bodies are made of several types of matter, their food is energy, etc) and "benevolence" of a Russian state who says one thing in public and does the opposite behind the scenes. This is odd, given the Putin use of a big dog on a foreign female country leader, in light of known killings of people by dogs. This shows a complete disrespect for the entire nation that official represents (Putin did this to other officials from Japan, etc). This is a little macho, and 100% in line with his macho videos of judo, naked horse riding, naked cold water immersion, etc. This makes you wonder if Putin approved this alleged torture of Ukrainians or if MI6 made up the "Putin is a pedophile claim" before staging a fake "poisoning, death of Litvinenko" (similar to 100s of claims online and youtube about alleged pedophile rings in the US Congress, White House, UK, including Bohemian Grove satanists where former presidents, vice presidents, senators, etc go). This is not surprising, given that Hollywood always pushes genocide of workers via wars, violence and sex outside of procreation by normalizing it via movies. Hence immortalists will change movies 100%, to remove all sex scenes, all war, all violence. Nevada is full of gambling, all legal, every state pushes lotteries, casinos, depravity, the criminals rule USA, EU, etc. The US revolution was fake: a few criminals fooled all. Why is Putin always showing himself naked and promoting the Bible with its mass rape? Torture by CIA is here. Check the alleged torture (special video editing or fake pics? Approved by Putin?) of the gunmen of the 3-22-2024 attack (KGB impersonated ISIS Muslims attacking a violent music venue with all deaths faked?) on a concert (false flag event?). If violent music was played there, they can simply not allow any bad music, allow only serene music, there is no need to terrorize all with such torture imagery. Search youtube on how easy it is to create "fake bruises in movies" of swollen face, red eye, all kinds of scary illusions. It's possibly a hidden call for the workers of the world to unite against aristocratic terror music created to turn all into mind controlled killers of fellow workers at the command of the rich.

29.2. TV host 1, TV host 2, host 3, (notice how loveless this tone is, typical of most news hosts globally, vs the physical immortality blessings or 1000s of spiritual youtubes), host 4: yelling at Brits for doing exactly what the Russians did too; how insincere, wasteful of human energy; this role playing, TV drama is damaging all humans☺☺; it incites Brits and Russians to fight, by a lady (Jew?) who may be neither Brit nor Russian. If criticizing war, torture, abuse, do it for *all groups*, and speak lovingly about World Peace in 3 months and 0 violent crime within 20 years all day. This type of 'hooligan like' talk, in such a Hitler tone, present on 80% of news stations globally, adding negative or aggressive emotions, needs be illegal, while the ideal would be eterni tone or eterni tone that soothes and calms everyone. We need Eternal Universal Peace in 3 months: that ought to be the main TV focus globally, not war, weapon delivery reports.☺☺☺ We *need discuss*

how to achieve World Peace *in 3 months*, for real, forget about everything else; the past is gone, nobody can change it and without forgiveness no peace can ever be achieved. Some hosts have a gentler vibe, a lot better than most, see this CBS host vs 'Russian agent' Marjorie who talks about Peace in one war only, not *Eternal* Universal *Peace:* ending of all wars. We need *immediate permanent peace*, to avoid the end of all humans in 10 seconds soon.

29.3. unforgiving yelling anger deifying (not Love deifying) 'Sacred War' tone and lyrics that are unGodly, anti-Immortality *for* All*: 'fight to the death',* no need of any death to achieve peace in 1 trillion ways*),* since God transforms all thru educational loving grace, it doesn't curse yell and hate like this "song" where they pretend to be anti-fascist to hide the fascist treatment of non-Russians, evident from history. For immortalists, there *is no noble* wrath*, as the song claims, all wrath is* evil. *We need to keep calm and find a nonviolent way to prevent* war*, etc.* Wrath wastes ATP better spent finding a solution fast. Compassionate *serene* loving kindness is noble. If mad at X, don't interact with X, find nonviolent ways to solve the issue, don't glorify violence like this.

29.4. typical military parade tone (Shoigu here), which, in all nations like 2020 USSR March, lacks the Immortality *for* All vibe of *gentle tender soft healing* graceful *nurturing* universal loving kindness, damages the human quantum field, being anti-immortalist military vibe.☺☺☺

30. South Korean language teacher whose voice (hear her even *softer* tone in dry eye healing & her *gentle* kind whisper) is ☺☺☺far gentler☺☺☺ than *most* Korean *politicians' average tone, especially* 1. North Korea TV same Korean language & ethnicity 2. TV again 3. soldier 4. Kim 5. his sister 6. South Korea US style pop "gangnam" shouting, or "feminine grace" Venom.

Imagine if kids would listen to prerecorded language *and other classes from the 20 most* eterni tone *healing voices of that subject,* like the best of this Korean teacher, instead of the angry or negative emotion (tiredness, etc) tone of their physical teachers (today we only really need classes for experimental classes, hands on learning, all else can be done online with teacher speaking 10-20 times less, but way better), *being able to just go to final exam and doing it all at home without getting pollutted by negative stuff they go thru – the future would be so much better, as we create* a new world of harmony, instead of repeating the past. If all politicians and TV/radio speakers would intone like these gentle singers or Enya (her gentlest songs), or like the first 3 min cathedral music ☺☺☺ or 2 min starting here, the *world would be so* different*, a place of* healing, peace. Immortality capitalism with centralized tone education, brings Eternal Universal Peace in 3 months and 0 violent crime, 0 jails in 50 years, 0 theft, etc in 100 years, etc.

PEACEFUL MUSIC IS KEY TO LONGEVITY & pets are calmed by eterni music too:

At least play peaceful *tunes on earphones;* this prevents rushing (spies send ideas via tech to the brain, we think it's our thought, we *rush, bump into objects, trip down the stairs, etc*); *speaker*

music is better as it transforms pets & the cruel uneducated or psychopathic insane type of spies who spy on all via mics and cameras, terrorize the planet, they need peace too to evolve their soul. Listening to peaceful music helps World Peace manifest, helps you survive in a world of conflict. They're restless, since they use restless junk lyric music to lower in IQ, enslave, loot all. In confusion, chaos, restlessness, we're distracted, easy to manipulate, loot, enslave, destroy. WW1 & 2 created chaos, out of which a new order emerged: Zionist USA at the top. Same idea. Create future artificial conflicts like USSR borders, (place huge minorities or resources within neighbors via new border, to start wars over water, etc if USSR falls) then send peacemakers or military bases to protect against 'threats'. That's why TV, radio have unetern i tone, violence 24-7: it enhances parasitism. Everyone fights someone, not seeing they're all vampirized by the rich. Why not everyone reach Immortality? Why not Immortality *for* All? US has been taken over by a military dictatorship who brainwashes all that world Peace in 3 months is impossible and not worth even talking about or striving for, since well before 1913. In the ghetto of Washington DC, where very high crime exists in most areas next to the White House, the biggest building by a wide margin is not Immortality *for* All Health center, but the Killing of All Temple of Satan: The Pentagon, a World Terrorism Center. It's from this demonic Temple that all evil of Hollywood military Elites and the music, movies industries (see 1st 7 movies) emerge. From the military headquarters of major powers, the aristocrats terrorize 200 nations and most slaves within the military itself. All actors, musicians, celebrities are chained dogs of the military. Sadly, this is true in other nations too, the military is in charge of everything, and the goal is not World Peace in 3 months. It sums up all that US attack dog of the UK has stood for 250 years. If everyone had angel tone and immortalism values, there would be no *crime, reason to spy on all, enslave all.* World Peace in 3 months *only lasts if all are very* peaceful *and listen to such tones, music always.*

It is human to quickly forget about wars, when they end and resume the same patterns of 'depraved' music (rap, heavy metal etc with crime instigating lyrics) or ultra restless, violent (under the cover of patriotism or violent 'scripture'), full of negative emotion, artillery rounds rhythm and low IQ lyrics that lead later to new wars; music is a reflection of the average emotion and acceptable social behavior and speaks volumes about the ethics or complete lack of ethics in a civilization; this is due to the historical inertia, autistic lack of empathy for others maimed (or left homeless, etc, without kids, spouse, etc) by war, and the inability of humans, at present stage of evolution, to realize that when one human is tortured or dies in a war, all humanity is living shorter, due to the quantum entanglement of all with those wounded, tortured or killed. 1 killed means 100 killed later long-term via shorter lifespan, yet few care about the fact listening to aggressive music creates further imbalance in the emotions of humanity and is (or may be) as 'sinful' as complicity to murder, since it kills subtly by polluting everyone around with the tone of speech that comes from listening to restless music void of the

eterni *healing* *nurturing* gentle *grace*☺, music which is as destructive as torturing others (which itself leads to a bad tone in their speech and drags humanity into an ever deeper hell).☺☺ To be the *light* of the world is to listen and create the most peaceful music in all genres, with the holiest lyrics, to be the saints who always sing about World Peace in 3 months, then once achieved, about happy | Immortality *for* All |, infinite gentleness for all (0 violent crime, 0 jails), about Eternal Universal Peace in all stars/universes we expand to so that we maintain our Peace *forever*, about peace on Earth, the world of Immortality *for* All, no more violence, to create that peaceful vibe that *all nations* mirror back, instead of the threat and intimidation vibe; odd how Americans get so angry some nation is fighting them, but are Americans always radiating out the peace, is peaceful☺☺☺ new age or *meditative* music like above played at elections, rallies, on TV, radio? Are peace wishes, prayers, discussions the main thing on TV, do we really value life for all, nonkilling for all, above all else, have we banned all violent theme Halloween decorations, plastic body parts, etc? Is 1 single life above everything so as to discusss World Peace in 3 months by all means and how to get there, are we worshipping the God of bloodshed, mighty weapons or of Peace, Healing and Grace, or are we hoping bombing all (who get a little irritated by our not so gentle healing nurturing kind demands) will bring lasting peace when it never does? It's funny, every country does the same thing like USA and *they point fingers at others, start wars, but they all create such incredibly bad and unpeaceful and* un | Immortality *for* All |☺☺☺ type of music, rhythm and lyrics and that really ruins the whole planet as it brings war. It's like a mad place, where no country realizes they're the problem too. Some country has to say: bring some tranquility perhaps, a way nicer tone, rhythm and lyric content, 20 times more *healing* *nurturing* *gentle* *tender* *soft*. ☺☺☺ Few realize how *much* worse bad *music* is than *thermonuclear* weapons *themselves*, as they do damage for millennia due to inertia effects and people imitating music emotion, aggressiveness effortlessly, since 'it's a popular style'.

In 2020s, almost 8 decades since first nuke use, our music and TV-radio tone etc are so far from the eterni gentle tender healing peaceful vibe needed to prevent and balance out the energies of historical inertia, that there is no surprise Peace doesn't exist, war is eternal on Earth. Since *1945* nuke use, warfare was waged on a small or big scale somewhere, with no real change in the music lyrics (towards peace, civility, Immortality *for* All, *gentleness*, tenderness, *kindness*, qualities of immortals development, nonkilling, nontorture, etc) or music verbal tone or rhythm. If we had a truly universal compassion so many talk about, we would do everything possible to end all wars and violence, to remove violence from scriptures, from music lyrics, *rhythm*, emotional and verbal tone. At least, we can hope that more people listen to more peaceful free youtube music (convert it to mp3 as previous paragraph explains) and turn off the radio TV, finding more uplifting youtube voices to listen to (a few examples given above), instead of the "war creating" tones on mainstream (old centuries of bloodshed) media. If we do that selection

of tones, we will help our species avoid its 10 second end and, individually, get a better grade for this life, if we have a soul. The RDA for some minerals and vitamins has a very narrow range and if you're 100 lb you need less than if you're 300 lb; so, using the wrong amount due to the general vague weight independent RDA, can lead to shorter lifespan; likewise, in those with certain conditions, like lack of absorbtion, they eat way above RDA for some nutrients, to stay alive, but if healthy people were to do that, they would die sooner. So, the amount of a 'nutrient' is highly dependent on the state of the organism. The human collective organism is so overdosed, way above RDA, with restless violent energy/music, lacking in *gentleness*, kindness, tenderness, *nurturing* grace that, in this context, more of it would shorten our collective lifespan average and would be akin to an MD giving someone way above UL (upper limit) for a vitamin when not needed or giving cyanide to someone who can't detoxify it. Some are so self-absorbed, self-confident, they have no idea how far their tone changes after listening to average music by innate unconscious imitation - they acquire the same junk tone. We need to address the species threatening (life threatening) *deficiency* in the vitamins of "soft *grace*", gentleness, tenderness, sweetness, "Immortality *for* All (not just war planner sitting in office)".

Even music without bad lyrics, just country music, Eurovision 2021 winner or religious upbeat 'Christian rock' or whatever, further exacerbates the *deficiency* and leads to more *wars*, is *sinful* and against the very religious principles they sing about in an aggressive way void of *grace*. Most Eurovision winners are violent songs by immortalist standards, which aligns perfectly with the fact most Nazi officers became free after WW2, so the Hitler energy continued in a disguised form as an impulsive low IQ primitive reaction to the demonic Bible energy of genocide, etc. Nazis never realized one can't extinguish fire with gasoline, the infernal Bible evil with more of the same, since the cycle of genocide never ends, everyone copies those doing genocide, etc. Did you hear Germany require all music, media to talk about World Peace in 3 months? No, Hitler was against peace, he was for war and jailed those who didn't want to fight to conquer Europe by force. Check the waste of resources to do Eurovision songs like these, the bad tone, while others live in jail like conditions called crowded, moldy, stinky condos. Instead of songs about single family homes for all that would give all the best sleep and least crime, they're just making all a brute. Check out UK 2024 Eurovision, love is all about "kisses", (an unintended sarcasm about MI6 weapons to destroy brains of people), that encourage LGBT for fast depopulation. Winner of 2025 Eurovision is a "very beautiful soprano voice" guy JJ (who claims he has a boyfriend, so perhaps gay now on paper, hence promoted to win, to make all Filipinos and Germans gay, since he's half Filipino, half German), but the lyrics and emotion of the song are not good, they focus on negative feelings, and program people to believe love is a waste by the very title Love Wasted, when it is not wasteful to love others or be kind to them, but helping usher Eternal Universal Peace, since we're all one human quantum information field. This guy

would benefit humanity if he had kids with the most soprano voice girl he can find, to create the most angelic voice kid for the Immortalist Anthem like song or the InterUniversal Peace poem, to fire up the planet (with the most eterni tone) all the Immortalist Youth. Sadly, this guy's voice for the first 25 seconds of the song (which are not negative, like the rest of the song, and 20 seconds which could become way more eterni with eyes closed, without a distracting Eurovision audience, and while sitting and focusing on *gentle tender soft healing nurturing graceful* loving kindness) is 5 times more beautiful in its gentleness than 99% English female recordings of USA (not talking about gentle spiritual songs in Latin in a church). You listen to most US female singers, and you sense a lack of love, a contract fake song with a gun to the head by the CIA... sick. Listen to 2025 Eurovision winner who sings better than most US female singers. It shows the state of total depravity that has become the USA, where every female is turned into male, where often, the most violent macho hooligan voice, lyrics and energy becomes the celebrity, where every trace of feminine energy in females is exterminated to BOMB all. We're not even talking about guys, because USA guys when singing sound 90 times worse than US females, way more loveless, as if CIA tortured them for 50 years. The female is the more naturally nurturing immortalist tone gender, but the male brain is bigger and can focus deeper (females are better at multitasking, guys can excel in one field and be the best of any female), so when a soprano male trains oneself into eterni soprano tone for years, the male can produce an even more eterni tone than a female by imitating the best female and producing the most transforming brainwave, that activates the *gentle tender soft healing nurturing graceful* loving kindness centers of the brain, that is mathematically emotionally more coherent and far more transformative for males especially, as if shifts the sick insane human primate brain, sick in his violence, into that of civilized Immortals who have 0 violence. It's good for guys to learn to be more nurturing, so we don't disappear in 10 seconds as a species soon. Perhaps youtube/@immortalia would help USA guys create decent lyrics and music. The state of USA pathological violence is clear: guys are more feminine and can sing much more loving tones in Europe than girls in USA. Eurovision seems to promote de*population* via gay stuff, or trying to make a statement: Europe is 10 times more loving than USA. EU homicide rate is 5 times lower than USA for example, while in Italy, Norway, etc it is 10 times lower. You can see all 2024 Eurovision songs here. Passivity, silence in lyrics about ‖ Immortality *for* All ‖, end of wars, is complicity to genocide; to not care is to approve of genocide going on daily on Earth. Thus, to avoid sin, you would think the religious would fortify their worship music, worldly music with *grace* vitamins. ☺☺☺ It's hypocritical for a pastor to argue that 'in a context genocidal quotes are OK', but when it comes with the context of a sick and totally unbalanced humanity waging war on itself forever, it's not OK to say that it is sinful to listen to music that further moves us from peace, gentleness, that further unbalances the collective emotion of humanity towards aggression? In the context of the extreme cruelty on Earth, listening to anything but the most

peaceful 1% of music is sin, even if religious. ☺☺☺

For eons, leaders were peer pressured to raise voice when talking to big audiences due to lack of mics and today due to lack of echo and using a more powerful mic to diminish need of so much yelling, to use rhethoric to stir emotions to extremes, project a sense of confidence, enthusiasm, energy, temporary joy (highly emotional outbursts of joy or anger, instead of the gentle tender joy and highly subdued sadness/anger that knows any success is but a tiny progress towards lasting joy of 900 year lifespans). Imagine if we used this type of peaceful soft music in the background, and we would be more melodious like in the World Peace in 3 months minute, it would create a different vibe and the world will be like WOW, a New United States, every governor, senator, rep, White House official, talking like a teleporting shimmering shapeshifting physical Immortal from an Alien Dimension or World, caressing the weary soul of every global citizen with the *healing* tone of *gentle tender soft* loving kindness, leading the World towards the Light, the Love, the Bliss of || Immortality *for* All ||, ushering the Wondrous World of Eternia. *Truest confidence doesn't stem from a louder voice, it's coming from the tender nurturing gentleness that prevents conflict and directs human efforts to the lasting joy of emotional* tranquility *(fewer extremes), multi-century* happiness *instead of war and shortening others' lifespan covertly.* Gentler tone brings the serenely expressed (aware of the long road ahead, so enthusiasm is tempered) enthusiasm of a kind world where any covert intent to shorten anyone's lifespan doesn't exist, where *all nations* help each other to triple lifespan. Tao Te Ching says "the sage avoids extremes (of emotion by proper eterni tone)" and "the gentle and flexible (tone) outlives the aggressive and rigid", so how gentle healing musical nurturing is our speech? For people we see on TV to change tone, everyone needs to change their tone, because the media and politicians have the average tones of humanity; then as those on TV-radio change tone, listeners change their tone more, a positive feedback loop is established where the people and the TV folks inspire better pre-verbal thought tone, pre-emotion thought tone, vocal tones in each other, and the world becomes a Paradise of Immortals. Vocal tones are higher octaves of *inner tones*. What if parents, teachers, policemen before talking to someone who made a mistake or even during normal speech, use an amplifier and a microphone to enhance gentleness and perhaps sometimes even during talking with gentlest healing music in the background, or politicians at parades, visits, oaths, play this type of music for a few seconds or at ultra low volume during the entire speech, to calm all beings and bring them the Eternal Bliss of the Infinitely Loving Tranquil Immortals, to communicate the wellbeing wish for all beings, the deescalatory intent tone, to remind self and the audience the proper tone of intent, emotion, speech, transport the audience into the realm of grace and infinite happiness of the Immortals?

Many wish religious melody and tone played at services was *always* more like this gentler music that brings out the gentlest tender healing *nurturing* kindest behavior of the Eternally Shining

Ever Patient☺☺☺ Infinitely Tender, Limitlessly Gentle and Loving Immortals who live so long, they know no anxiety. Which voices make you more comfortable, less threatened and calm you more, bring more World Peace and global healing, *the usual TV or politicians voices* or these gentler voices? *Why can't kindergartens, schools, colleges* (politics, journalism degrees, public speaking) teach it? Listen to the 7th minute of this clip to get a better idea of what I refer to. People get a license to drive a car, but no license/education to drive (we imitate TV tones we hear) the destiny of humanity's emotional life via their tones on TV-radio, it makes no sense to get no license for media speaking, since when millions hear it, the net effect on global average lifespan is far greater, as all *gentleness* and tenderness, healing or lack of it are encoded in the vocal tone and the public imitates that. When speaking fast, people can't have perfect *gentle tender soft* tone, but why speak fast? Why can't the government front people, spokespersons have the most healing voices they ever have (like speak in public gentler, kinder, better than 99% of private life, since it affects millions of people and has enormous karmic effects for human destiny), reduce what they say 2-3 times, to make speech 2-3 times slower and *more healing and musical*? *Gentle singers (or slow speaking nuns/monks) when they have gentle healing tones are very rested, often close their eyes to place their whole brain at work in emanating the most healing tones by shutting down video processing and going into audio 100%, and practice a lot, so we would need public speakers to speak less, meditate, rest before speaking, so they can make the* much higher whole brain thinking effort to refine the tones dramatically to heal all, which takes tremendous mental energy, so much, that they would only be able to speak a 5th or 10th of what they normally do in public. Why not take the 10% most important content of a speech and say it in best tone in a third of the time, at 3 times slower speed? Why not take some inspiration from the gentlest lullabies in one's language? Some lullabies (and spiritual songs) are usually closest to eterni speech due to tender soft emotions and energies moms transmit when singing it. It's not what we say, or how fast, *but our emotion and intent*, evident in tone, that is most important in public speaking, since public speaking is not an emergency where someone needs a code fast to prevent some malfunction in some equipment. Most emotional (behavioral) life patterns of humans are learned from the vocal tones of the people around them. Likewise, parents could play on their phone, tablet, pc, 20-90 *prerecorded lullaby* Immortality *themes songs* (like those I made with my phone microphone, an Android mp3 recorder app and tablet as background music source), so the best tone they had in 30 years (or use the gentlest stuff from youtube, or 50 asmr whispers excerpts to calm babies when dad or mom is tired and tempted to speak in a barely noticeable "negative emotion" tone) is *repeated over and over and the baby brain architecture is built on the healthiest most healing emotional patterns learned from parental voice*, not the "cruel/mean" historical inertia encoded in our tired voices that unbeknown to us carry the negativity/short life programming of eons.

Gently avoid eating any polyphenol rich foods last (like blueberries, etc) or anything more throat corrosive like onion, ginger, pineapple, etc, always make smoothies for any vitamins, supplements with lignans or olive polyphenols, etc so it doesn't attack your throat and affect voice quality. Babies and young kids imitate, and learn behavior not from "do this and that" yelling commands, but the REAL TEACHER, the parental☺☺☺ (hopefully gentle healing tender prerecorded often, to avoid contaminating the precious new chance to live to 200 with the stress of eons) and early teachers (nursery, kindergarten, school) voice patterns. Tech (rockets) enabled us in 100 years to move matter 8,000 times faster than 20 mph running, tech (youtube recordings in every discipline in eterni tone replacing most teacher, pastor, politician talkand even some parent talk) can enable us in 100 years to become 8,000 times kinder and more peaceful (no more war), so we can focus on longevity instead of killing each other. *Current average speech is like those diesel buses that stink and produce tons of CO_2, eterni is like 0 CO_2 emission electric: no pollution of others with negative or aggressive emotions, intents*. Future people will be amazed that in our age humans spoke the way we do, just as we're amazed people used chariots, papyrus, stone inscriptions, before email, etc. While we can't replace all journalists TV-radio music speakers instantly with those trained to speak nicely, we can create the best AI version of their voice, with measured MRI emotions of positive nature being highest (30x above normal speech), after a 4 week vacation, and use that to replace original sound of any news video, by AI saying the same thing in the ideal tone no person can emulate after a stressful day or even normal day due to super-human effort needed, vs after the nicest vacation in their life. Why are we so incredibly ultra low IQ as a species to commit 'subtle genocide' on humanity thru the negative emotion unfiltered via media poisoning the brains of all humans and creating endless conflict and short lifespan? We got tech, why not use it to enhance lifespan in all ways, not just taking vitamins? *We spend years to train to do certain jobs, weeks to learn driving so we don't kill anyone, etc, but 0 minutes to learn to intone and filter out those tones, emotions, intents that shorten lifespan of our species; people forget 99% of content of any video will be irrelevant (except inspiring timeless ethical stuff or immortality blessings, etc) eons or even 300 years from now, as tech and history and concerns change; the only thing that will have any influence in that future a lot is the tone, and that tone can contribute to peace or a star war that kills 5 trillion humans; if we divide that by how many people today, if that occurs, our tone today is killing so many in the future, yet we don't pay any attention to it, we have endless 'how tos' and rules about this and that, none about tone; science videos need eterni tone too to speed scientific innovation, hypothesis thinking due to no wars and no negativity, because tone effects go for eons*; tone of speech (which is of emoting, thinking etc) is so critical to the survival of an eterni civilization's ethics, progress, culture, it would need *apply AI filters to* remove *negativity in foreign media content to translate content into* the eterni tone; *we're so rushed to share content,* but tone could be 1 billion times more important than content, for the future, it will be

as relevant then as it is now, content not so much, *unless* an eternal wish. See more on why using younger voices helps, in the soprano section.

Every baby and kid is like a super-sensitive analytical instrument, sitting in a clean room, trying to analyze "what's keeping humanity from living to 150 soon", instrument which has to be kept free from the "dust" of our "tired and mean voices", *handled with immense care*☺☺☺ *and vocal restraint the parents never had ever in their life, a baby* with twice the neurons adults have, with 1 million times the power to double human lifespan of any adult if all things go right. A very sensitive GCMSMS equipment is rendered useless very fast if high contamination levels of samples are run on it, just like gasoline engines can be ruined or possibly damaged by running diesel on them. Young people are like brand new instruments, capacity to reach low detection limits exists if proper care is taken first years of life. To maintain the extremely low detection limits of an instrument, we run transparent (that appears cleaner, just like transparent people appear less fake or evil) water, etc samples or diluted samples on it, while the really dirty samples on an older rough instrument that we use for screening samples that are obviously dirty. Likewise, to maintain the ability to *discern good from evil at very low levels* of evil disguised as good, but fake good, the human brain needs to be calibrated towards a lower detection level of evil (or a " higher good, lower evil") baseline in order to tell upset people from happy people, liars from really honest people later on in life, to discern really bad emotional states from those faking hard they're happy, etc – things that are useful in *developing a better empathy and bringing a world of peace;* this aids the future adult to also perceive better patterns in one's own voice that indicate they became very contaminated by the "historical inertia influenced" people around them and they need to do preventive maintenance on their "instrument" to clean it up and return to the ultra low detection limit, that is now achievable only by deep clean that removes the much "higher evil" background noise, the raised "noisy" baseline (familiar to those looking at spectra) from 2 ppm to perhaps 7 ppb. A car well maintained lasts 35 years (not just 5), a brain well fed healing tones early on (*when acoustic and chemical nutrition has strongest impact on life expectancy*) will last in top shape far longer too. A baby contaminated with negative emotions, especially from a mom who has morning sickness and starts talking instead of whispering mostly (talk with eyes closed to reach higher eterni tone levels, and softly, *ultra rarely* in "normal loudness" if not a very very good day) or using recordings, can't develop the best DNA and brain, because stress signals in the voice (common in all parents daily, especially when tired at the end of the day, unaware just how richly brainwashing their voice is in that "I am stressed tired, want to sleep", hence not using the ultra relaxed happy rested healing prerecordings this era offers) trigger stress in his system and instead of brain building he's anxious and releasing fight and flight stuff, getting lower IQ, feeling crapy and tired too, whether in the womb or born.

Parents (*dad tone is very important, as mom imitates those around her, and baby hears dad too, even if mom is heard louder*) and teachers have a choice: recreate the past millions of years (of cruelty, short lives) or create something much healthier, nicer, shimmering beautiful. We can walk at 4 miles an hour or use tech to travel at 17,000 mph with rockets. That's why moms and dads are giving 10-30 years of extra lifespan to their baby and a few to themselves too when they prerecord lullabies and calming things that they use to calm self and future baby, *well* before pregnancy happens – so one can use that and know that voice teaches wrong stuff when spoken in bad moods. Healing human voice☺☺☺ is therapeutic for the baby, he needs is desperately when mom feels bad, since he feels a little of her "morning sickness" too, so without preparation, neural disaster is certain. Can you imagine someone operating a nuclear power plant without intensive training and preparation? The human baby brain is more complex and more advanced than most advanced gadgets, ships, planes and plants that take longest training to operate, yet people go at it with 0 preparation, moving inertially like mindless robots repeating history. Each day the brain grows and all days of a lot of bad speech will be wasted, as the negativity was too high (parents talked without prerecordings, all parents get tired each day, that's when prerecordings are key), baby learns its basic neural patterns from that tone and then the neural basis of the kid is no longer healing and positive that much, but more anxiety-fear-paranoia-stress-cruelty-meanness prone. When people prepare for being a doctor, soldier, etc, power plant technocian, they simulate the thing entirely, they don't just "imagine they will speak gently or do the right thing". *No, they prepare and go thru months long exercises, and yet today, with tech no parents had for eons, **nobody prepares like they could, to give the baby, what nobody had in the entire history of man** – a chance to live longer*, just from the much more optimistic healing vibes of the voices heard around baby, well insulated from the voices of those not trained to speak in an eterni way, just as we well insulate the baby when small from many things, from certain foods, vitamins even, from vaccines, which are not all given at once, but over 4 years. Babies got fragile brains that grow 80 times in the womb and 2 times when outside in the first year, brains who can't handle without damage to their emotional healing immune systems the normal voices full of negativity and short-life programming and patterns of those around. Skeptics will say, hey, are you saying the brain of a 3 month preegnant mom hears, when ears are not even developed much?

Maybe he doesn't hear well before age 2-3 months in the womb or whatever (they do hear well age 4-5 months, *his brain is* very able to sense mother's *emotions* and *cues* about the environment *that she* unconsciously engages in when speaking in "normal tired tone" *even without he having ears fully developed*), but when mom engages in old patterns, she's more likely to reinforce her stress brain hormone secretions (instead of playing calming lullaby that calms her and diminishes her stress too) associated with tired tone of speech she repeats

without thinking. Each tone has a neural secretion component associated with it, so when moms uses prerecording of high quality instead of speaking, she floods self AND her BABY whom she massages on her tummy, with gentle healthier vibes and chemicals (memory of those states trigger healthier chemical brain secretions and placenta secretions). Babies can't handle vaccines, rough cruel mean or tired voices of less aware parents, kindergarten teachers, etc are like vaccinating kids 50 times at age 3 weeks (they would die), are wiping their chance to live like an Immortal of 500 year old totally. We don't realize that sound is not just our voices, but forms the very foundation of that brain and it's ability to know "evil" from good, lifespan enhancing brain patterns and lifespan shortening catecholamines. Insulated for first years from "normal" voices, as we insulate babies from a lot of stuff, at age 5 for example, they hear the "normal speech of others" and realize what "evil" or "lack of information" or "proper upbringing" of "lifespan extending tones education" is; at 5 is when they're stronger, brain is formed and more able to deal with/discern "evil without becoming evil itself (babies, kids are sponges who imitate everything around and become that, without much discernment)", as babies with more mature immune systems are given stronger vaccines. Likewise, teachers, pastors, public speakers, people in jobs where they talk to *others (especially to young people who still form their tones and emotional patterns)* a lot, can play lessons they record in their best tones of the year, and then talk only a little in the class or to the audience, since they would become totally exhausted if they were to make same mental effort in every class in the most resplendent speech they (or anyone on youtube) ever recorded, since our brains are not used to multi tasking at our evolutionary stage now (just like humans have neocortex and other structures not all animals have), to think fast and also modulate tone to radiate *gentle tender soft* loving kindness vibes☺☺☺ and well being to all listeners at once, different brain regions involved.

These recordings need not be of the teacher themselves always, if some other youtube teacher has a really uplifting eterni voice and presents some math or physics (that nobody on youtbe made in eterni tone), having practiced months to reach that recording of a math lesson in a tone that brings World Peace and a Civilization of Immortals with 900+ year lifespans (of perfect health) a hundred times faster. So many big churches/cathedrals in quiet areas, auditoriums, buildings with gigantic rooms for video projectors or 3D holograms, gigantic lecture halls (that are very sound proof and cathedral like) could be used to record science lectures with much higher visual richness to help students like it and pay attention (instead of texting or thinking offtopic), so teachers and college professors don't use so much time to repeat same thing year after year, in ever less eterni tone (due to aging brain being less capable). Instead of wasting cognitive energy with repetition, the teacher awakens higher brain functions in himself and makes the schools the most beautiful places of healing on Earth, with speech tones and meditations 20 times nicer than of many clergy of religions (we got tech pastors don't use as

they sometimes make fun of the science of living to 1 billion or even 900 years old, when in fact, to really understand God or spirituality, you would need at least thinking about it deeply for a few millions of years and research it, 80 years is not enough, 500 would be nicer and lead to a more precise truer spirituality. Living to 900 gives more time to the worst to become angelic, as explained in the "Immortality *for* All" section), the schools having the nicest visuals on Earth (far exceeding violent video games, so people love learning to triple lifespan more than anything else), 900 times nicer and more meditative than Disneyland, making every student fall in love with the Knowledge of Immortality. While the gigantic projector on the white wall or TV explains everything in amazing & beautiful ☺☺☺ voice, the teacher can stop it every few minutes and speak 10-20 times less/hour, but in 10-20 times higher quality, personalizing the class with the inner growth in tone/content and "Immortality Building Playgrounds" innovation project ideas they found by practicing conscious breathing, meditation (while students listened to the recording) and deeply thinking about tech advances since year of the recording. This creates a huge difference, as students, for the first time in their lives, are spoken to in a eterni way for 1 hour, and they start imitating it, transforming the world. This is very important to practice on a bad day (if not 90% of teaching days when prerecorded material can be used) when they feel negative emotions which unfortunately can't be 100% hidden no matter how hard one tries, "honey, my kid, dear audience or students, I made/found this recording, I can't speak today much as I try to heal my tone, perhaps you can listen to it, this teacher/pastor talks about our topic today, but his/her voice is 90 times better than mine today, so I prefer you listen to this instead of me talking about it, as ideas are similar and tone is 80 times more important than the idea usually, especially when talking about moral, behavior, ethical or spiritual topics" would be a lot better than speaking to a large audience or even family in a bad or average tone. People follow our actions more than words, and our vocal tone more than faked actions. ☺☺☺

7.8. MUSIC, Violent Movies and The Violent Behavior they create

Black activist explains violent music causes fatal shootings. The thuggish American music, engineered to enslave the workers, to break carotid arteries, cause strokes, deaths and brain damage for fast enslavement, like this rap from Chicago that Australian police deems a global threat, is perfectly reflected in the housing disparities. It's sad governments allow and create perhaps via mind control, for social engineering, so many bad bands (weed, drug pushing lyrics), singers (pure murder/drugs rap lyrics, some with double meaning (billionaire singer got all Hollywood awards in order to segregate blacks, create unique culture to set one part of working class against the others, for aristocrats to make trillions by theft: lyrics in Formation, etc can be interpreted (by low IQ blacks who often murder whites just because they're white, showing that "white lives don't matter for Beyonce" just as many cop or black lives don't matter for 500 artists with attacking police or general black on black violence in black areas listening to the junk

lyrics: profit over humanity) as incitation to murder (word "slay" many times) whites ("albino alligators") which, like the Freedom lyrics programming blacks to negative emotion and ideas "tears, bitter, blind, burn into flames, rot in hell, riot thru your borders, death is around the corner" like dozens of other rap songs that reinforce slavery memes (Freedom is about oppression, but Hollywood giving awards ignores the other 300 songs by black "artists" that call for violence and lust instead of compassion, the evil movies depicting lust and violence made by Jews/Brits/etc, or lyrics that incite blacks to violence against blacks or cops and thus create the "police brutality" Beyonce sings about, create crime waves and a separate segregated culture that creates jailed people, as per KKK British Superiority and Jewish destruction of whites/blacks by rap music ideals, rap trash, pop trash, etc, all to create a sewer culture of worker slaves (of any race) drowned in their filthy cities segragated from the aristocratic enslaves to further justify inEquality and fight Equality at every step, with every song indirectly). Nations of the world, beware, you're next to be "culturalized/terrorized" with holy CIA tones and teeth like these, and flesh damaged by drugs) in so many nations (not just USA, but dozens of nations), e.g. UK Black Sabbath, UK Zeppelin, or violent music videos and tone, like 1, 2, 3, or 4. They torture the hell out of musicians and singers, sleep deprive them, sometimes drug them, and then have them compose something which will damage the brains of millions of fans, for maximum enslavement: the lower in IQ the people, the easier to use them as cannon fodder and subjugate them. Decent lyrics are not legal. Music really gentle tender nurturing (instrumental or vocal) and non religious, but spiritual or scientific is not there, it doesn't serve the military needs of max brainwashing and religious indoctrination, so it's not going to be played in grocery stores, TV-radio, etc – only the more mundane restless stuff. In each nation, all music is a military approved business. "Satan rules the world", human sacrifice simulations seem the Hobby of demonic voice Republicans, as the Bible says, the reign of terror and violence rules unabated, no feminine energy allowed, *shouting is called music*, truly gentle tones ultra rare. Protocols of the Zion Elders in full swing, see alleged songwriter (songs that destroy the entire humanity, not just the listener) influence, Bible Odes to human Sacrifice, Rape, Genocide. For 50 more examples of bad music, please go here. Violent video games stimulate aggression ► PB 2010;136(2):179-81. "*Listening to rap music was significantly and positively associated with alcohol use, problematic alcohol use, illicit drug use, and aggressive behaviors* when all other variables were controlled. Alcohol and illicit drug use were positively associated with listening to musical genres of techno and reggae" as shown at ► JSA 2006;67(3):373-81 ► a "study of music popular among adolescents from 1996-1997 revealed that nearly half (47%) of all rap/hip-hop (hereafter referred to as rap) songs mentioned alcohol... other genres of music were much less likely to mention alcohol in the lyrics (country-western [13%], hot-100/top-40 [12%], alternative rock [10%], and heavy metal [4%]). Moreover, nearly two thirds of the rap songs mentioned illicit drugs as compared to approximately a tenth of the songs from the other genres... references to

alcohol in rap song lyrics increased five times (8% → 44%) from 1979 to 1997. Of songs that mentioned alcohol, the positive attitude toward alcohol expressed in lyrics increased from 43% in 1970-1989 to 73% in 1994-1997.. twice as much violence and criminal activity was depicted in rap and rock music videos as compared to country, adult contemporary and rhythm-and-blues music videos. Empirical studies suggest that alcohol and illicit drug use among youth may be associated with listening to popular music such as hard rock, heavy metal, rap, and techno". Music can cause traffic accidents if restless or amping up raw emotion, instead of tranquil observing of what's going on around us. So, in order to prevent road issues, the eterni government bans cars from playing music that is too restless. James Brett, who wrote some of the most evil lyrics on Earth (google every name) almost for endless "artists", died in a plane crash together with the wife and daughter who supported his demonic career that destroyed millions of people. The garbage "Jesus take the wheel" # 1 hit song programs the masses for 50000 car crashes a year: expect it, sing it and do it; pure genocide, like "hungover" (normalize deify alcohol use, singer is guilty of genocide too) see alcohol section, title (garbage to destroy the youth, tone of music typical USA garbage to remove all empathy and gentleness), etc. Did this conman stage his death, fabricating his plane crash that was remotely controlled? Aristocratic leeches often stage their death to live in higher privacy after they looted the nation.

Student pulse explains: "Armstrong (2001) conducted a content analysis of 490 rap songs from 1987 to 1993, in which 22% contained lyrics featuring violence against women including assault, rape and murder. His study classified rap songs into different categories in which rappers either pride themselves on sex acts appearing to harm women, justify other acts of violence, warn women who challenge male domination that they will be assaulted, and/or seem to invite male violence against women (Armstrong, 2001). Weitzer and Kubrin conducted a follow-up study analyzing the portrayal of women in 403 rap songs through a content analysis, in which themes of derogatory naming and shaming of women; sexual objectification of women; distrust of women; legitimization of violence against women; and celebration of prostitution and pimping appeared at the greatest frequency. Sexual objectification was found to occur in 67% of the misogynistic lyrics in their songs sampled (Weitzer & Kubrin, 2009)."☺☺☺

Kids who watch violent things on TV are 3 times more likely to be convicted of criminal behavior by the time they were in their 20s, and are far more likely to abuse their spouses and assault others ► DP 2003;39(2):201-21. Hundreds of studies over several decades have shown that violence in media leads to violence in real life and makes World Peace ☺☺☺ harder thru the pollution of the planet's psychic and energetic field. "There were overall modest but significant effect sizes for exposure to media violence on aggressive behaviors, aggressive thoughts, angry feelings" ► APAM 2006;160(4):348-52. Kids (and adults) imitate what they see in the movies. "More US children die by accidental gun use than children in other developed countries. One

factor that can influence children's interest in guns is exposure to media containing guns... Adjusted median number of trigger pulls among children who saw the movie containing guns was 2.8 compared with 0.01 among children who saw the (same) movie not containing guns (guns edited out). The adjusted median number of seconds spent holding the gun among children who saw a movie containing guns was 53 compared with 11 among children who saw the movie not containing guns“ ► JAMAP 2017;171(11): 1057-62; the gun they used was a real unloaded gun that recorded number of triggers; shockingly, some kids pointed it at other kids and fired it, showing kids don’t comprehend the difference between toy and real gun; seeing violence and gun use makes kids play much more aggressively; the Psychology Today article has more details than PubMed, basically none of the *kids who saw the movie without guns pulled the trigger*. This shows how we imitate without realizing. A “1967 study showed that simply seeing a gun can increase aggression, called the "weapons effect." The mere presence of weapons increased aggressive thoughts, hostile appraisals, and aggression, suggesting a cognitive route from weapons to aggression.“ ► PSPR 2017: 1088868317725419.☺☺ “Motorists drive more aggressively when there is a gun in the vehicle” on the passenger seat, very VISIBLE, instead of a tennis racket (they wanted the study challenge to be over faster, being more nervous of course) ► JESP 2017;73:82-5. It's not clear if in general, in other studies that evaluate driving habits of people who own or don't own guns, someone with a gun hidden, INVISIBLE, in their vehicle somewhere (not on passenger seat to see it all the time) would be more aggressive, when all other confounding factors are accounted for; in such cases, perhaps his aggression causes him to buy a gun like in reverse causation, though it does make sense, a weapon can make people more nervous in some cases if it is seen (but gun owners are oblivious of the gun presence unless an emergency appears that causes them to use it or think of it). We know how those who listen to meditative peaceful music are basically driving much slower at times, more carefully, or at least within speed limit, while those playing rock drive faster, as music makes them restless; likewise, the rock, rap, upbeat music fans are always more likely to have guns, since you have to be a lot more aggressive to pollute humanity with that rock tone (you acquire via subconscious imitation of aggressive emotion in such music) to begin with or with killings (guns are used to kill) that destroy human quantum entanglement field, so the music may be a confounding factor in such studies, i.e. bad restless music makes them both to buy guns and to drive faster, if any such studies conclude hidden guns are linked to worse driving habits. These associations exist in children too, even with very VISIBLE toy guns, but that may be again educational factors that confound, that contribute to some of the effect; very INVISIBLE guns would obviously have a lower effect, since you don't see it, don't think about it, are busy driving, etc. Chapter 13 talks about the hypothesis of the astral noise of weapons and objects, they didn’t do many studies yet on aggression, music listening habits and hidden weapons (in a safe locked that kids don’t know exists in a room) to compare astral noise of normal toys, gun toys,

real guns and its effect on adult and children behavior. I have not read those yet. Simply seeing a gun on a table increases aggression versus seeing a badminton racquet ► JPSP 1967;7(2,Pt.1)202-7. "*violent* video games increase aggressive behavior in children and young adults... Playing *violent* video games also decreases prosocial behavior." ► PS 2001;12(5):353-9. We need some Media Protection Department of the Immortality *Nurturing* Agency see below. ☺

On December 2, 1970 America created the EPA (Environmental Protection Agency) and this helped us to turn the red rivers and grey air in cities into something far more decent today. A lot of our cities were like Beijing is today at certain times, smoggy, so bad, you can't see more than 100 feet. In the same way, some Media Protection Department of the Immortality *Nurturing* Agency could be created to make sure the songs-movies are not encouraging drug use, alcohol abuse, violence, etc. Nobody benefits long-term, there are nobler ways to make money than creating music that harms billions of people indirectly, since violence affects the whole planet. When EPA was started, few people liked the idea and even today, some want to shut it down, to increase profits for polluters who spew carcinogenics, mercury, arsenic in the air, water, etc. And if Media Protection Department of the Immortality *Nurturing* Agency is started, the music and movie industries could theoretically dislike it, since it may theoretically temporarily decrease sales, but the truth is, there is a lot of money to be made making constructive movies about science, renewable energy, electric cars, World Peace, terraforming planets, living long lives, exploring Mars, learning science, astral travel, telepathy, afterlife, what happens, the science of consciousness, soul existence proof. What's the point of making money, in an industry that causes so much suffering indirectly for other souls, leads to so much negative karma accrual that may take several lives to pay back sometimes if reincarnation is true or 500 years of service in some realm if reincarnation is not true? Isn't it better to remain karma free and just make 25k, than to taint one's soul and make $ destroying millions of people? Alcohol lyrics lead to alcohol abuse. Rap music leads to more alcohol abuse. Why is toy gun production legal in USA if it causes real injuries and deaths of people? Toy guns ought to be illegal. Same for any toy that resembles a dangerous object, like sword that could lead a cop to shoot some kid or adult. "As Hillary [Clinton] pointed out in her book, the more children see of violence, the number they're to the deadly consequences of violence. Now, video games like 'Mortal Kombat,' 'Killer Instinct,' and 'Doom,' the very games played obsessively by the two young men who ended so many lives in Littleton, make our children more active participants in simulated violence." Bill Clinton, U.S. president. References to drugs in rap music increased from 11% in 1980 to over 69% in 1993. Mentions of cannabis and "blunts" (marijuana-stuffed cigars) doubled between 1979 and 1997; the number of drug references increased 6 times over that time. ☺

7.9. Music EFFECT on Telepathy Precision and World Peace in 3 months

7.9.1. Intro 7.9.2. Music of Light via Colorful Clothing 7.9.3. FREEMASON 'Music' 7.9.4. Evil Music

7.9.1. Introduction: This 40 page chapter is a must read for anyone who wants to prevent the 10 second end of humans via a new bomb about to be discovered. To jump to very evil 'demonic' US & world music examples, go to 7.9.4. All gyms are becoming like Odes to infernal violence, *to turn all into soldier cannon fodder killers for aristocratic wars of looting*, via aggressive music. All stores almost have become Temples dedicated to Aggressive Macho Soulless Tone Odes to Infernal Egoism and Lustful Depravity, without any lyrics and concern for World Peace in 3 months and 0 Violent Crime in 5 years, which can only occur, given historical inertia (50000 genocides last 50000 years alone), with immortalist tone & lyrics being the only music allowed, only movie-TV tone *allowed for a few centuries at least, until we have had 0 war, 0 violent crime for 300 years*. The world civilization has become rotten to the core, on the verge of spiritual and later, material collapse. Please kindly wear headphone to listen to immortalist music and save your soul by more humane sports or physical exercise. The definition of subhuman beast (blood soaked animal who loves blood drinking) or glorified cannibal ape is in this paragraph (ferocious hyenas who torture others, Earth has many millions, who do that as their full time job). *The next* 40 pages *argue that due to the* planetary emergency and risk of all humans vanishing in 10 seconds soon, actually within 2 years per AI calculations, all music released from the day immortalists take power after they win elections, has its lyrics, tone, rhythm approved & makes at least one reference to Eternal World Peace in 3 months, even if a romantic song like this. Likewise, 95% of the time allocated to all TV-Radio-Internet programs will be eterni tone lessons on The Ethics of Immortality *for* All, *The Ethics of 0 violent crime in 3-15 years* via new standards for movies-music-literature-social-media, the sciences of living to 120 and later 1 million, the daily progress towards Eternal World Peace in 3 months. Presidents talk twice daily on TV, 2-3 min at least each time, about what we can do today, or did, to achieve this World Peace. A national or even continental (for EU, etc) State of Emergency (valid for x years, until violent crime is *0*) is installed to facilitate decent behavior, content and scenes on TV-radio, music. All sports coverage will be removed and replaced with programs on ethical civil 'sports' of bringing ~*~Eternal Universal Peace~*~ and Immortality *for* All.☺☺☺ The music of Peace will be known worldwide. Why? Because the most basic level of spirituality, ethics, civility, perhaps, is to not kill others, like 500+ mammal species who don't kill their own (and don't practice boxing martial arts type of huge violence). The most basic ethics, spirituality means to have World Peace, 0 violence (billion times lower at least), 0 jails, 0 torture, within 10 years as a goal mentioned in every song released by anyone in the nation, not just sing Eternal World Peace in 3 months.

The most basic ethics means to have 0 killings, a *trillion times lower violent crime rate*, a trillion times lower aggression, shouting, a trillion times more *gentle tender soft nurturing* grace in music rhythm, lyric and tone. Yet we humans seem so far below 'the level of some of these

animals' on Earth, we have not attained even their spiritual level (what is a term for this stage on Earth, '2 day old baby soul',☺ 'savage', beast, subanimal☺ or subhuman?☺ a term that could help us diminish our ego, while also recalling that we could some day evolve to become trillion year old teleporting shimmering shapeshifting physical Immortals); contrast in language, while employed lovingly in eterni tone, can help us learn and perceive better. The thought of World Peace *in 3 months* seems remote and of no interest as a TV or music topic, yet in religious services and holidays people spend huge amounts of time doing rituals, prayers, etc - without a concrete plan to achieve *global peace in 3 months*. America is destroyed, as the media is broadcasting violence in music, news, movies nonstop, so then teens emulate that violence like in this video. The USA statistics are scary, if true. It's hard to know, since all nations fake their videos and crime statistics for various reasons and much crime goes unreported. So, did all our wafer, baptism rituals help us reach the most basic spiritual level, World Peace? If not, can we try peaceful music, something different, more media filtering? So, to balance this 'incredibly anti-life unloving and human species survival threatening' absence of 'World Peace *in 3 months is doable and our goal*' talk globally, in the hypothetical Eternia or immortalist nations it would be forbidden by the Immortality *Nurturing* Agency, INA☺☺☺, the super Agency above all others in the nation, for anyone to release any music, song, TV-radio program book, article that doesn't talk about World Peace in 3 months, 0 global violent crime in 5 years, (meaning Immortality *for* All and eterni tone in every song, no killings) and ways to do it to help us attain the most basic 'kindergarten' level of spirituality: a world of nonkilling. The next 39 pages explain it.☺☺☺

Music is meant to uplift the human spirit, ethos, aspirations, etc, and no real spiritual life or real culture can exist if one single human (later animals too) killing exists on our planet, so we have a long way to go to reach that basic civility, kindness, culture, ethics or spirituality (if not atheist) level, and music can help us get to it in 10 years, instead of 5 trillion. Kindly watch 37 sec of Lenin (who advocated for terror, genocide like Hitler, causing 120 million communism victims) or 26 sec of Hitler tone of speech reminding us of Viking culture (the blonde, blue eye 'superior' cannibals), *(far worse than the anti-*eterni*, cruel, loveless, ungentle, frightening tone of WWII rulers of* Italy, Japan 1 + 1 min, Romania*; US tone was better, but too much yelling, no "loving healing grace", anti-eterni:* USA tone in 1941, USA tone in *1945* 4 months before nuke use*; UK 1939,* way better*, but not as the best spiritual speeches in* eterni tones *by some rare clergy; yelling in music or speeches leads the country to hell, in the long run, because citizens* imitate emotional tones of leaders*, & the* human quantum field *will favor nations with calm, poised loving tones that don't bring war. Thus, to serve a nation & humanity is to speak like an angel in public, full of the gentle healing grace of* God*)* and then see what the Hitler tone led to: 5 min horror video of Buchenwald and starvation, see folks when USA liberated the camps, see last 5 min to be blown away, female overcrowding, Austria skeleton camp video and pic1 pic2, and 90

min on Auschwitz and 45 Holocaust pictures. Hitler could care less, his days were filled with nonsensical activities disconnected from reality (him being a puppet leader controlled by the hidden spies), as he was drugged by his doctor with meth, cocaine, etc. During war, food is scarce, so jails run out of it, and they often used starvation alone to exterminate people in camps: not clear how many died of gas, bullets, intentional starvation or disease, but the numbers are big as 100s of archive pictures show, though we don't know the identity of all. Some people think that tone was not evil, just 'loud', but see part 1 yelling Nazis teaching the youth (part 2, 3 of 3 hr PBS TV documentary): to "die (anti-Immortality *for* All) for the state and to be violent with anyone (even relatives)" who doesn't agree with the genocidal Nazism; immortalism teaches to be kind to all (0 violence), being the diametrical opposite of Nazism or violent communist or feudal ideologies of slavery or violent war. Please forgive me for sharing these disturbing videos, because they may ruin your good vibe for 1 hour, just listen to this peaceful music to bring your vibe back, before continuing and always recall the simple principle: believe nothing until confirmed by 50 unfakable sources: this means that sometimes, we stress about things that appear real, but may not be 100% so or even 10%; as explained in the spies section of faking everything, history can be rewritten by backdating stone inscriptions, fake papyrus paper books, etc and a whole narrative can be made that is fiction. Likewise, with advanced tech today, they can create sometimes very fake videos, to make them look blurry and old and these 5 videos, genuine as they're probably, don't show the full story of what happened, how many of those killed were of what nation, ethnic background, etc, so the main idea is to achieve peace and not stress, worry about the past or whether they killed 15 or 80 million in WW II. Even if they killed far fewer, say 900, in some fiction reality, it would be a disaster, we want no violence, not just 0 killing, no torture; the point here is not wasting life *(many write books to argue that the number of Jew, Pole, Chinese, German, etc was 2 or 10 times smaller, bigger)* with how many and who the killed were, but to bring within 2 decades 0 violence, 0 killings, 0 torture and to change our music to reach that level of kindness.

By their fruit, you will know their intent and nothing is more telling than the tone. The low IQ of Hitler was evident, he caused 80 million dead (millions at least, if you doubt the 80 figure) in WWII with his tone, when, to move 560K Jews out (Ctrl+F 'Hitler' & 'Jew' to find why in this book), he could have just fined the rich Jews who got rich at the expense of the poor Jews and given free (with the fine money) airline tickets + 3 month salary gift to all poor Jews *(1937 Jews = 0.8% of population, 1.2% of* wealth*, note the bad quotes in the Jewish/Christian* scriptures*, which fuel tension),* so they can (after selling stuff that doesn't fit on an airplane) happily fly to various countries in areas where amazing & beautiful ☺☺☺ job opportunities appear near some Messiahs (just make some stories and fake miracles) or stuff Jews love, at least it would mean no war, no violence and life would be pretty normal globally; better yet, he could have taken the

wealth of rich Jews whom he claimed to have "created bad music, cultural content to keep Germans low in IQ" (fine for "shortening lifespan of the masses thru low IQ"☺☺☺), and given it to immortalist more egalitarian non racist Jews (those without the superiority over gentiles complex) and poorest people to create an Immortality *for* All culture, since not all Jews were feudalistic like the German aristocrat class: thus, he could have created Immortality *for* All with 0 violence, but society was backward, spirituality shallow and few realized appearance has nothing to do with character, intelligence; DNA was only discovered after WWII, genes etc later etc. Hitler's low IQ could not imagine a trillion ways to move 560K Jews out of Germany peacefully, with 1 tired person (poor sleep during airplane flight) instead of 80 million dead in WWII. This is important to realize, because puppet controllers use a 'low IQ' leader, like Hitler, to destroy entire continents and that tone is not just pure anger, it's also lowering IQ of millions listening to the trash (see why in detail here), like some political party leaders today do. Today, in Germany (video has some claiming to be German, may be Ashkenazi Jews or *nonGermans inciting Germans to repeat WWII mistakes to see who is a real Nazi or agitate to pollute gentile or German quantum field?*) and in all nations, we see that same 0 IQ max hate, violence tone almost in many protests, places of worship, movements, political speeches, which means that peace is not possible yet. After 2 world wars from bad tones/ideas, that made Germany lose 34% of its territory, we see the same things happening. We see this off tone in many concerts: in 7.9.4. you see 30 examples of popular music from many nations that mimic the Hitler energy to some degree, the energy that led to 80 million dead in WW II (violent Nazism using enormous torture and even germanization of kids like perhaps Ukraine kids today among 1 million Ukraine refugees, mostly kids, in Germany and russification of Ukraine kids in Russia (those deported) though most history youtubes got fake info, spy disinfo too; WWII events were complex?), extermination of disabled, 'satanism' can be alive under the guise of religion, democracy, socialism, communism, even if people don't realize it), the same sound patterns in Nazi marches we see today in the vocal, MRI patterns of many singers, church speech or music and government marches made for their armies of genocide.

We need a culture of kindness in tone, no more inciting nations to violence over nonsense: we were chimps, now we're humans and we will possibly (if we don't disappear in 10 seconds) evolve into shimmering shapeshifting Immortals living trillions of years, so we will all be able to take any appearance, race, alien or human, etc, as Immortalist Anthem explains, so all need to help all live to a trillion, ☺☺☺ and stop all fights, improve our tone. We can bring a World of Peace in 3 months and repeat it on 3 trillion other planets currently or some day in a state of war, as we save them with Eternia Ideals. Our tone *reveals who we're in that moment and it creates the world around us*, those horrific 5 videos above will hopefully make the "*vocal tone to planetary outcome" connection* clear to all. This Battle Hymn with violent lyrics (grapes of wrath,

Jesus, God is violent brainwashing) is similar to many anthems and military parade hymns from many nations in tone and melody, and quite identical with many Nazi Hitler rallies songs on youtube and modern pop, rap, rock songs; it is as if we have become so out of touch with gentle healing speech and music, we're ready to blow the planet up in the name of religion or something silly; is history going to repeat itself? Please go inside your soul, after listening to these eterni tone music samples and realize USA and our planet are in grave danger, due to the tone of so much music in every nation, vocal tone, music video images tone, intent tone, lyrics tone and melody tone. Millions in Eastern EU nations don't have electricity and the youth is going to 1. violent restless rhythm and loveless tone music concerts, with 2. "elevating" rhythm and yelling gentleness void tone, 3. bad lyrics vs this, 4. chimp gangster tone, 5. anti-eterni war causing yelling (bad lyrics) tone; these 5 clips show the appearance of a very bad type of music in Eastern Europe (besides *9000 times* more drugs; some music improved, this is way worse), from pre-1989 to today, much more violent thug like tone and vibe, mirroring what has happened in many areas of the planet in the last 100 years; on the flip side, youtube allowed the promotion of peaceful eterni music, so the 100 year trend can end: only cops and a few confused people go to these fake concerts with bad lyrics to catch the bad guys. Unlike prior centuries, people go less to church or relaxing places and church is replaced by the music they listen to, for hours daily: this allows us to speed up kindness building by 500 times, as people listen to the music for hours daily, so if it is good, it will be like going to a very amazing spiritual place 90 times a week, creating a very different vibe. If the music is bad, it will wipe humanity out in 10 seconds.☺☺☺

The global youth is being destroyed, robotized, to become too cruel, unloving, aggressive, too religious, too unspiritual, believing, like Germans/Nazis did, that "rituals and fake miracles bring Heaven on Earth, and that Hitler is Godly for claiming to be a Christian or writing about Christ in his book". Perhaps, after the 5 WW II videos, you'll agree that there are no human rights, ethics, culture, spirituality if killings or wars exist, so, *until we reach* World Peace, all nations need to show the most minimal respect, love, kindness, compassion, global empathy for human life, most minimal concern for human species quantum field, millions made homeless, disabled by wars every decade. To do this, we ban all TV-radio-Internet music unless it is peaceful rhythm, World Peace in 3 months focused in full or in part (hear a simple song here, or some lyrics '*today we enjoy a day full of* bliss*, in 3 months we will enjoy* World Peace*, if* universal *compassion replaces hedonism, and* global *altruism replaces egoism*'; romantic songs will say things like 'when we love each other, we love all humans and bring World Peace, so all couples can enjoy a life of peace'); besides focused on or aiding "*ending all violence in 10 years, prisons in 30 years*" (replaced with healing centers). Given the threat to human species from war, the planetary emergency we're in right now due to risk of all humans dying in 10 seconds, World Peace in 3 months would be required in all songs in at least 1 line, even in church services, at least 1 song

about this; nobody gets a TV-radio approval without first showing the World Peace in 3 months words in any program used, to prevent the end of humanity. ☺☺☺

The Right to Human Life is ABOVE THE RIGHT to intone and speak everything, to shout, yell, etc, BECAUSE without life, we can't have any capacity to speak anything, the world being a nuclear desert. It's because of that the Bill of Rights needs a key reform, to place the World Peace in 3 months, Eternal Universal Peace, as the MOST FUNDAMENTAL Right of All. The Right to Trillion Year Lifespans for all is fundamental, it is the right to Life, to not be killed by violent crime. Thus, we need to lower violent crime 10 billion fold by changing the priorities to make all media, literature, movies content a peaceful *gentle tender soft* content that promotes 0 violence in scriptures, etc. The Right to Trillion Year Lifespan is more fundamental than that of "religion", (since a religion can condone violence that ends lives and thus freedom of religion), of publishing terror, torture, violence, rape, genocide calls is not guaranteed by a Noble Constitution of a Kind Space Civilization when it interferes with the most BASIC right: of Immortal, Eternal Life. Virtue (*gentle tender soft nurturing* grace) building, qualities of Immortals building required in at least half the lyrics LIKE IN THIS POEM, because peace doesn't last without those qualities; removal of all violence, lust, low IQ lyrics in 500000 existing songs or 100% ban. It's imperative to include it even in classrooms, at least once an hour, even when talking about applications of sciences and engineering to manifesting World Peace in 3 months. World Peace is meaningless unless it lasts 3 millennia or billion years, not just 2 weeks; violence of any type makes the 'ceasefire' break easily, so once wars end, all music must replace World Peace *in* 3 months *lyrics* with *'0* violent *crime in* 3 years' *focus;* "Happy serenity *in every home in* 3 years" could be the phrase to mean that, since it's more positive than phrases with 'violent' in it; focus and just do it, everyone talks about it on radio, TV, music; once that is done, we move to replacing all prisons *with healing centers;* focus as in *"perfect virtue and bliss in every home* in 30 years"*;* once that is done we move to ending all healing centers within 50 years "infinite grace and healing in every home in 50 years" and doing it all in their own home as all have much better homes, more healing. Then, as we finally built the kindergarten level of spirituality, non torture, nonpunishment, we can better focus on the science of living to 500.

7.9.2. The Immortalist Music of Light, via Colorful Clothes of the Immortalist Youth

To achieve the amazing & beautiful ☺☺☺ goals above, we need a unifying force, *focused* and *dedicated*, so in Eternia☺☺☺ or any country adopting Immortality *for* All humans motto, we can even go one step further besides immortalizing all school subjects (applications of all inventions, science or civic lessons to granting Immortality to All). This extra step is creating one basic template containing the words " Immortality *for* All" & "eterni is gentle tender soft nurturing graceful loving kind" for the national unified beautiful colorful immortalist uniforms for all

school kids, with variations for each school, so a school focused on physics can have more physics formulas on the back, while chemists will get chemistry formulas, etc. A school where math is king and 50% of STEM hours, will have math formulas. Each student will choose his specialization much ealier, moving to a school of his pre college major. Instead of imbecile sports and "extracurricular monkey IQ activities", kids will be smarter than freshman and sophomores today, doing movement via lab cleaning and volunteering, actual research like undergrads, helping design the 11 companies unified product lines 1000 times higher quality via the National Unis that work with the 11 companies and all high schools and 1 million immortality sciences labs to design it, though the school will be more of a curriculum than a building as the labs will be used by all, but schools can be turned into researh centers, the schools used today, where students can research and have fun with STEM from age 14, like how to live to 4000, by learning how to make mice live 40x longer first, etc. No lecture halls are needed when all is by national unified accent eterni tone videos. Within each school there can be a slight variation, some more blue, some more purple, etc, to fit people's preference. This helps reduce reasons to 'hate' others. Today, kids get bullied because of having clothing of a certain type, that are not "rich", "designer" or "right color", and kids waste endless time to impress others, seduce others, etc by showing off with flashy clothing. All uniforms for a school must be approved by the only education agency in the nation, responsible for managing all schools, the Immortality Education Agency, the new Department of Education. To make sure kids are doing science (not dating or theatre) at the school (the lab part, since theory will be done at home via online central one national school), having the same uniform is better, to also prevent teacher prejudice (in grading or helping given students) based on colors they like, though even lab grades will be done by computers, eliminating all teacher grading, teacher enters the results of the experiments, and AI computes. Everything graded by computers to reduce any human bias, theory all like SAT2, all multiple choice, even languages. Wearing 10-30 hours a week some uniform with purple, gold, blue, lavender, sky blue, etc won't be the end of the world as some claim. In the chemistry lab kids wear lab coats anyway, so what's the deal? Until all schooling is online, this uniform will be for theory and labs too. It will be their most beautiful piece of clothing of poor kids (poverty won't exist, as one pay is real) and it also prevents the bikinization of female students who wear revealing clothing to secude teachers and improve their grades. Even worse, these days the seduction game has invaded male students culture: kids date instead of learning. The clothing won't be all black like at funerals in communist times, but colorful, so nobody can complain it's a one color IQ minus 50 uniform, but one complex, reflecting of etlif 800 trillion IQ.

Another step in the defense of the human quantum field is creating the Immortality *for* All Youth volunteer organization or Immortalist Youth to be shorter, to help teens create, discover music (played in stores, public transport, public areas, etc) and ways to bring World Peace in 3

months (and the other goals above, including 500 year *lifespans* by year 2700) peacefully as verses 8-40 of Immortalist Anthem explain. This encourages the youth and adults to wear the most beautiful colorful clothing ever seen (the music of the colors we will discuss in the next 12 pages, before going back to the music of sounds), that act as Beacons of Hope in a world of rather selfish indifference to the possible disappearance of the entire human species in 20 years. The shimmering shapeshifting lights of the later versions (glitter like reflections that change as you move) help all see the Eternal Soul in all, so that racism disappears. These hoodies, pants, T-shirts, jackets, caps, beanies, shirts, suits, etc would have "*Eternal Universal* Peace in 3 months" on one leg, big letters and "Gentle *Tender* Soft Healing Speech *for* All" (meaning no violent crime or mean tone, always use the most loving and gentlest most nurturing tone, especially when in public, youtube, TV-radio, etc, to create loving thought, action, to convey the World of Compassion we want to bring) on the other leg, or on the back, while on the front "Immortality *for* All", meaning no killings, no war. The Immortalist Youth, in school or anywhere, as an Eternal Commitment to ~*~ Immortality *for* All ~*~, wear the colorful amazing dazzling uniforms, shorts, t-shirts, pants with 25-500 rainbow colors at least on a background of light purple or lavender, same background as the Eternia flag, the flag of all Immortalists Worldwide, also 900 templates (each kids chooses 5 to focus on next 1-2 years for his uniform sets) quite similar, but differences in which colors or Immortalist qualities, though all contain the ultra important words above, in various forms, such as: *Gentleness, Nurturing Grace, Healing Softness*, eterni tone, *Tenderness, Universal* loving kindness, Hypothesis Testing, Immortality *for* All, Eternal Universal Peace (*telescope view of galaxies*), World Peace *in 3 months (replaced once* World Peace *comes true with Infinite Grace, meaning 0 torture, 0 violent crime, 0 jails),* on the back, front, leg, hand to *bring the maximum # of positive words.* Many love the colorful clothing from 50+ nations, so the immortalists can vastly improve on it, to create something even more amazing, the garment that extends long-term lifespan by the highest number of trillions of years. Check out some 90 color nice garments from China, way nicer than the 3 color crap you see in Europe: black, red, white being the main color of 80% of folk costumes, rarely you see a little yellow or blue, pathetic.

Immortalists choose the *healthiest* types of clothing. In Australia we see a strong degradation of morals, with the main news site news.com.au showing the most irrelevant news that lower the IQ and goals, vibe of society and promote the spread of germs via ultra short skirts that create only underwear as the *only barrier between a woman's anus and the office air*. On top of that, the Aussies got the highest number of medals/million inhabitants at the 2024 Olympics, showing a strong focus on chimp sports, instead of on longevity, with Australia far behind Singapore in life expectancy, 3 years shorter. The reason relaxed jeans are much better is that they create a much stronger barrier between genital feces and the office air, keeping everyone free from hepatitis, cholera, etc spread via feces. Bitches who want to get a promotion unfairly, try to

wear short skirts to seduce ☺filif pig IQ bosses☺. But because jeans allow far less air contaminated with feces bacteria to pass thru than underwear, even somewhat relaxed fit jeans provide a much stronger hygiene for the collective work space, lower disease transmission. We don't care about a woman's legs, but about not inhaling her feces daily. Also, long pants can improve dramatically the circulation of the legs in areas with colder offices, further increasing the lifespan of the female wearing pants instead of mini-skirt. Cold extremities are a main reason for short lifespan. Pants protect legs from falling objects that might scratch the skin and act as an infectious disease transmission site from an object someone touched with a deadly virus for which no 99.99% vaccine protection exists. UV rays damaging leg skin can shorten lifespan via oxidative stress depleting the blood of antioxidants meant for the brain, heart and organ daily repair. *The big hole of many women shirts, between breasts, allows all kinds of bacteria to enter and to colonize, infecting her children after she comes home,* especially her nipples will be dirty for the baby with the feces from workers who never wash their ass, except once every 6 months and deadly mouth pathogens of those who never floss. *Workers sneeze and spread viruses on her breasts, infecting the baby 3 hours later. This act of brutality towards her baby is low IQ.* The horrific stench in coworkers' mouths is due to lethal bacteria that often colonize the entire body and lungs and blood vessels leading to arterial plaque and dying 10 years earlier. So, when you come home from work, you take off pants and wear house pants, while if you have naked legs you carry bacteria in and then infect your house more with bad breath and feces from coworkers. Gently think again before buying a skirt. We know how few people have good dental hygiene, floss daily. Other anti-eterni fashion is showing a lot of one's chest, which leads to women having the chest skin 25 times worse (sun damage dark spots) than men by age 90, as UV destroys it. Nobody cares about her breasts, but her kindness, intelligence and longevity science knowledge☺☺☺. The burning of neck-chest area skin depletes body of antioxidants, shortens her lifespan, increases offspring birth defects since the uterus wears faster, even if she's not pregnant. Most people think clothing prevents vitamin D formation, but most clothing allows 2-20% of UV to reach the skin. Our hands and face, neck, absorb UV too at 100%. Only the tightest jeans, thickest denim of dark color blocks 99.95% UV. Pants, jeans, etc need to be relaxed (jeans that stretch via elastomer 1% or something similar), to prevent testicle or vagina damage, as birth defect via friction and heat section shows. Thus, the healthiest attire is conservative, promotes sex for procreation only mindsets of the trillionarians (they live to a trillion). Sexy clothing is a cause of skin cancer, feces spreading, infectious diseases given to helpless babies, with nascent immune system, unable to deal with so many bacteria. The staged COVID19 epidemic showed thru *100s of videos* (cough, talk, saliva from talkers gets on your chest, leg, with the most toxic bacteria and viruses) *how many viruses come out of a mouth, contaminate the chest/legs of the persons listening*. Without a cloth cover, these are transported into the house. Work clothes need to be washed to remove contamination risks.

Thus, the immortalists, feeling far less insecure than mortalists, *don't wear 'bare skin' clothes*. Going to restaurants where everyone touches every surface, speaks is a disaster, see why.

The serene music and positive peaceful clothing that is so different than the norm are ways to awaken from the 'indifferent cruelty trance' all the sleeping robots programmed to shout, yell, worship the racist quotes of Karl Marx & F. Engels, kill forever in eternal war and wear their communist "black coat, pants, red scarf, white shirt, like the Hitler Nazi flag of genocide". Communist students were required to wear only 1 color as uniform (like Nazis too), black pants, black coat (white shirt) mostly (blue sometimes), so now we can finally break free and bring immortalism, the light of Life Immortal,☺☺☺ the goal and culture of Eternal Youth for all, the awareness of a trillion ways to Peace via peaceful methods, instead of *only "one way: WAR, one color"* to Peace. Notice the USSR, North Korea uniforms (white, black, red scarf, Nazi flag, Z) are back now in Russia, black suit, white shirt mostly (though schools can choose different colors, rarely choosing grey/white, blue or red/white/black, 2-3 *colors max).* This is sadly a way to reinforce the past. CNN and most websites always serve as Nazi propaganda machines, we see black font, white background, red in the banners, mostly the 3 Nazi colors, never any lavender soft background, or purple font. Now you know why my book is so different, it tries to break the Nazi and communist global trance *to bring* ☺☺☺gentle tender grace.☺☺☺

USSR uniforms are *perfect for creating* low IQ, credulous, naive, *easy to exploit slave labor and cannon fodder, mindless slaves to obey commands*. It's low IQ to choose ultra simple design, no words like "*Discern,* Question, *Test New Hypotheses, Verify* via *50 Sources,* Immortality *for* All, *Trillion Year Lifespans for All, Gentleness, Tender* loving kindness, *Healing Grace,* Trillion Serene Ways *to* Eternal Universal Peace, *Tact, Kind,* etc". Is this what education is supposed to be like? To stimulate your *intellect, visual cortex, cognitive fluidity* to the minimum, force memorization of stuff, have no critical thinking skills, learn fake miracles as facts in religion classes? It promotes no development of cones cell color perception, fluid intelligence☺☺☺, complex information, qualities is allowed, only obedience to the new USSR tone. How can qualities develop, if they're never written anywhere? If we gently use clothing to evolve, *school uniforms ought to be the* most complex and amazing & beautiful ☺☺☺ *of all, to* stimulate the brain. All pants need to be loose fitting around genitals to avoid *damaging the genitals (especially testicles)* by oxidative stress from high heat and friction: tight jeans would be illegal as they damage the future generations and even this one by excessive oxidative stress from tissues pressed with each movement. All kids hear is shouting on TV, threats, slaps, no *gentle tender soft healing nurturing graceful* loving kindness. 2 colors instead of 200, 0 words vs 40 qualities is a like no Internet access to N.Korea, it creates a narrow minded view: only one way is seen possible: violence, torture, instead of trillions of peaceful happy graceful ways to peace. ☺☺☺

We see this Nazi flag uniform in Jewish life (red string), some "Christian" monks, as if some Jews, aristocrats, etc are back to the game of 'gentile "Christianity, Nazism, USSR, Islam" benefit us'. See☺☺ the kid dancing in the right corner and how identical his uniform is with the new Russia uniform. Suspect? Enjoy the vibrant rhythm?☺☺ Oddly, the politics, business classes wear the Jewish attire: white shirt and black suit, almost like an odd Ode to the Torah. We hear this amazingly 'gentle soothing healing World Peace enhancing' tone coming from Blk/Wht. If you have music with 2 sounds it's like a beeping noise with 2 levels, how does it compare with normal music with thousands of sounds? If you have clothing with 2 colors only, what music and IQ will it create in the brain? We see the music in Iran: 100s executed for not believing in the illogical Quran, Bible stories. No different than the Inquisition killings by Jewish Bishops, and other types of Bishops. The Iran spies, disguised as "religious leaders" use a made up (by spies, like Christianity) religion to terrorize, subjugate and keep everyone as low in IQ as possible, mostly due to fear. Some may not even realize they're undermining their "national security" since they're duped by the top guys who pretend to be "Iranian"? Loving Gentle Kindness is enough, World Peace in 3 months? Note the Quran Jewish green in the rabbi, the so called "Arab" religion, whose Quran is just the Bible (Torah mostly) rewritten with some extra ideas.

Arabia is hot and wearing white makes a lot more sense, see how many switched to black after Islam? Arabian cultures used to be very colorful and wearing nice decorative garments (colorful like India, see how colorfully amazing this is vs the monochromatic, one solid color (any color) garments, zoom in it is saved it here too, India lace pattern, colorful belts, colorful amazing Indian shoes, cushion, (saved the beautiful one here) African clothes: select images tab on google or go to Walmart section for clothing materials for new patterns, another one, Kenya swimsuit (colorful), Arab multicolor. As soon as the Jewish "Torah rewritten?" Quran took over, the clothing has changed: one color, black burqa (can breathe, blue one is tough), blue burqa or white, like in the Jewish Bible takeover of Europe with the fake miracles and all monks/priests wore (some still do) black or black with some white? And they took all babies away from mom, to harass them in cold water during forced infant baptism, like they still do it in Orthodox Christianity and all Christians did it for 1200 years initially due to Jewish rituals: watch a crazy baptism. Odd coincidence: the Torah got the burqa well before Islam? Genesis 24:65, 38:14. They joke Quran is not 85% the Torah..., people have not read the Bible, Quran is Bible rewritten, with a few additions. Jews don't control the world perhaps (Wouldn't Hebrew, not English, be the language of science, politics if they ruled?), their fashion rules over continents? No more, since Islamic Kazakhstan banned Islamic face coverings in 2025. Masks worn all day get dirty, increase risk of flu, sickness if not washed, so burkas need daily washing. If Jews or another group (Italians, British) ruled the world, their language would not need be the most used one in science. People of 70 nations, not just Jews or Brits or whites, can have offspring

that are raised as Jews, Brits who can pretend to be Muslim, Christian, Shinto, Buddhist, Taoist clergy or USSR Russian or Chinese atheist too and make all believe it, since they can look like the local race: Black, Asian, etc. Plus people of 200 nations can electronically control brains of any person. So, if Israel is one big military base for training and then dispatching elsewhere, one can see how on paper even Jews could run the world and every country thru local Jews pretending to be locals. So, if Jews can run the world, in theory 50 nations could do it too, and none would know. Russians, Brits, Chinese are bigger, more likely to run the world. So, it's not important who runs the world, which group of nations, but if we reach WP in 3 months. ☺☺☺

These amazingly beautiful colorful immortalist uniforms of the Youth and Adult groups shine. The immortalist schools allow any clothing, while the uniform highlights IQ, Discernment and Gentleness qualities, chemical and physics formulas on clothing that is so much more beautiful than the *"boring 0 neuroscience, 0 visual cortex stimulation, 0 IQ increasing" private fashion companies create*, that most will choose it of their own will, probably 99.99%-100%. Private profit oriented companies *can't create everlasting* beauty*, they don't have such goals, ethics or the state resources of 90,000 PhDs in material science, neuroscience. In this Manhattan clothing* Music *of the* Quantum Information*, Music of Colors project, we ☺☺lovingly tenderly gently kindly☺☺ use everything in daily life to bring* Eternal Universal Peace *in 3 months. This* is a government of love, and free will, allowing all to choose. However, frankly, when people are faced with having a paid 1900s chariot *with 2 wheels, a roofless* 1920s Model T or a *free 2023* Tesla *Model Y* to move from A to B, *EVERYONE CHOOSES A TESLA*. Model T offers no protection, it has no roof, it even allows a lot of oxidation of your chest skin due to the fashion of low IQ that prioritizes revealing skin to longevity, thereby leading to high oxidative stress and the lowering of IQ via free radicals the skin generates. *Clothes make us* beautiful*, no need to show all our skin and live shorter*. Longevity above vanity. IQ and health of visual cortex and offspring eye health above "tradition of odd past". Behold women skin around the area below neck, it's 10 times more oxidized often times, so destroyed, this is due to "tradition" and "0 brains". We see how much money and effort is wasted to put the most toxic makeup that destroys the eyes, instead of focusing on World Peace in 3 months, no torture, so people have no dark circles naturally thru gentleness and the end of the global terrorism run by spy agencies and militaries fighting like wolves or hyenas for power. Clothes will be so dazzling, amazing, everyone will feel beautiful, reducing the feeling of "inferiority" in some students, who have less flashy clothes due to low salary of parents. It brings unity, doses of love, attention, kindness to all, as in ~*~ Immortality *for* All ~*~. These clothes over time can develop such amazing high tech, to monitor biomarkers and any easy to measure health parameter, without toxic RF or WiFi and then download the data via removal of the thing (before throwing into the washing machine, can place it on, as it sings and creates acoustic nutrition), that it would revolutionize longevity and

nobody will be “low IQ” enough to not wear it, given the immense health benefits. Normally, in other nations, this would cost 40 million dollars of doctor visits a year, but in Eternia this is the government’s free gift to all, ~*~ Immortality *for* All ~*~. The clothes allow monitoring the daily levels of 500 nutrients, then downloading it when washing. When *government* genuinely loves its people, instead of subjugating it, *the people love it* back. The initial uniforms will be simpler, but as each year passes,☺☺ and they wear out, each new generation is better and more high tech is used, so over 100 years we go from a model T garbage to a Tesla, but even that model T would be like an alien saucer tech vs today’s chariot clothes. ☺☺☺

The written qualities of the trillion year old Immortals and amazing ☺☺☺ beauty will also diminish racism and prejudice, allow people to breathe (no hijab or face covering), to not overheat the brain (lowers IQ), think clearly by proper brain oxygenation, because it makes everyone look so much more beautiful colorful and loved, and it takes the focus away from the skin color, appearance to a considerable extent, towards the future teleporting genderless shimmering shapeshifting Immortals of the Immortalist Anthem. Not garbled chaotic symbols, but orderly, symmetric, amazingly contrasting purples, yellows, pinks, blues, lavenders. Arabs, Russians etc will wake up from the hypnotic trance, question the religions imposed on them by the force of military and clever fake miracles, and choose Eternal Universal Peace and infinite *universal* gentleness? *Lovingly patiently gently kindly*☺☺ listen to the rabbi 20 sec, compare it with Hitler’s private voice. Was he 3-50% Jewish? Could be, given how Jewish Jesus wanted to be worshipped and recalled by simulating cannibalism, ignoring recalling God. Hitler too, had a diabolical obsession with people dying for “Hitler” (see the insane oaths), like Jesus wanted all to die for him, since ‘no greater love is than giving life for your friends’ in service to spreading the fake miracles. Hitler private voice is a clue into Hitler’s public voice, theatrics, agenda, why didn’t Hitler speak normally, why did he incite Germans on purpose via the most violent tone? Why do it, when there are a trillion peaceful ways to achieve World Peace? Hitler helped Jews to flee to Israel (Haavara Agreement) & after WW2, Israel appeared. *Coincidence*?

Immortalists choose various lavenders as background, 40% of the uniform maybe at least, (lavender stimulates all 3 color perception cells: red, green, blue, being a mix of the 3 colors) no other color gets more than 5%, to make room for 24 to 500 other colors: magenta, bright yellow, orchid, lime yellow, pink, whitish yellow, purple, blue, safety green yellow, deep purple, etc. The font can be white or bright yellow if purple as background on a 5% of the uniform, or purple font for light lavender background of all uniforms, etc. Lavender is the rarest color, related to orchid pink the color of love and compassion, it is peaceful, close to sky blue, and people in hot climates (where all wear white these days) can get a super light lavender (lighter and bluer than this: almost white from a distance in a sea of colorful darker clothed people) version of the uniforms (very light pastels, fonts written with purple/blue, fewer areas for darker purples, blue,

yellow, etc) to avoid too much heat, to stand out and bring the Immortality *for* All, Eternal Universal Peace, ~*~ *Unity in* Diversity ~*~. The reason it is better for all immortalists to have similar words on uniforms and similar colors as Eternia global flag, is to enhance the quantum unity of the immortalists. This helps them to disconnect from the vibe of all who wear black/white typical uniforms and all militaries, etc, since they want to bring the World Peace in 3 months, 10 billion reduction in violent crime in 10-20 years, 500 year lifespans for all in 900 years, etc, so all immortalist nations public schools wear it too due to free government uniforms, by national law these uniforms are free and most will choose them as they will be infinitely amazing versus normal ones in other nations, to bring the immortalism to all grade levels, increase IQ, ethics and character development. They can be worn outside of class too and the government will provide T-shirts, shirts, shoes, scarfs, beanies, extra pants with "Verify via 50 Sources, Immortality *for* All, Trillion Year Lifespans for All, Gentle Grace, *Eternal Universal Peace*" words printed to students for free, to promote immortalism, physics, chemistry, with the formulas. Even parents can get some of these for free, to encourage the national renaissance of a new civilizational vector, away from the war of the past, towards Eternal Universal Peace. What better way to beautify our world and cheer up visitors than to Light up the souls of all, smiley faces and a shower of color, more beautiful than Disneyland by 100 fold. Let every street in USA and all immortalist nations shine in splendor, become alive, beautiful and let everyone be perceived as beautiful, let everyone feel loved by a government who cares about happiness. Let positive quotes, words, emotions, qualities, science, longevity, immortality words uplift all. All clothing words have to be positive and uplifting, like the culture section explains. ☺☺☺

Later, they can even have clothing with built in tiny speakers *powered by* vibrations *of the breathing movement or* subatomic oscillations (no *battery) or solar, that play softly the* Immortality *for* All *music of* deep serenity like this. If a person doesn't like the shade of lavender some wear that makes up about 50% of the cloth area, there can always be a wild variation of darker, lighter, redder or bluer lavenders, so different, some almost white for hot climates if making UV protecting garments (to reduce oxidative stress) of light colors is easy (it will be due to many geniuses). To reduce RF pollution, we may be designing RF shielding garments... if we find a tech that doesn't wane after 50 wash cycles. *By federal law, all schools switch to wired connections for computers to prevent* brain damage from nursery to age 15 at least. Also, all cities need to implement LiFi, turn off all phones when not expecting phone calls, ban phones in all schools by federal law (airplane mode OK), and *provide aluminum foil shielding via special paints or* foil behind dry wall, etc to reduce RF in houses close to towers, due to devastating health impacts, especially nurseries, kindergartens, schools. Max allowed would be 0.05 mW/m^2 in any area with kids, buildings, etc. This is because there is no way to really dress yourself in a perfect shield. They wear out fast after 30 wash cycles. HEALTH FIRST, uniform colors are

secondary. All focus so much on colors and uniforms and 0 ON RADIO FREQUENCY POLLUTION... except France and Israel who set some limits for those in nursery and primary. Students can wear beanies, hats, caps or even head dress (to protect neck and back of head from RF, that caps and beanies don't cover) if they find the RF radiation in the insane school causes headache due to lousy policy implementation by cell phone billionaires. ~*~ Immortality *for* All ~*~, everyone's head is destroyed, it's just only few feel the destruction being done. This enables people to use RF shielding garments under the colorful stuff, that may look very ugly otherwise due to cheap price (all grey, making students feel their privacy is invaded), and special such garments need be designed for RF sensitive folks, for an extra fee. ☺☺☺

7.9.3. THE UNHOLY Murder Praising 'MUSIC' & *Ritual* in FREEMASON TEMPLES

This claim of RF pain will be tested, via biomarkers for head pain, to prevent *abusing the RF loophole to wear the craziest stuff freemasons love:* blood ritual hats. Anyone who attacks others' heads in order to cause them to wear microwave laser blocking hats with aluminum inside would be executed, that's a lot of people today in the US government. Freemasons are a cause for homeless crisis in USA: they steal land, resources for violent rituals, oaths. Many UK Kings and other parasites have been freemasons, (Freemason national lodges exist in Sweden, Norway, Germany, India, Italy, Denmark, etc, it's not just British or French) and freemasonry brainwashes people into illogical pseudoscience, such as numbers have special meanings and if you got a special number in your name, you're special. Numerology is the science of ant IQ people. Primitives hardly realize that you got trillions of cells, and each cell has 1000000 numbers at least for each of the 100000 chemical reactions happening in a cell each second, wait, you got trillions of cells and trillions of numbers in 10 years in every cell. These number and special "guy" tricks are used to flatter ☺abysmal IQ☺ folks and boost their ego, so they can be useful slaves of the country that controls that Freemason lodge. Sort of like the diabolical Jews who lower the IQ of every country with Horoscopes and other camel filif IQ stuff to distract workers and keep them in chains, as useful slaves of the Jewish/British CEOs or other parasites. These fiendish thieves have only one goal: global subjugation using torture and genocide disguised as a spiritual movement, identical to the Christianity miracles scam. All they teach is praise of Torah, Solomon and Jews, Jesus and other junk to further lower the IQ of the Masons, useful cannon fodder used by the top guys who manipulate the herd going to their ☺abysmal IQ ☺ rituals. They do teach some basic stuff about the 7th endocrine gland, pineal gland that releases DMT and causes "spiritual experiences", and how you meditate to "release more DMT", and feel happy or one with all beings, but that's about all there is as far as scientific stuff, besides: what you think about/focus on, you tend to manifest: if you focus on numerology, Masons, your country disappears fast as dishonesty becomes 1 billion times higher, so UK/Jews can take it over: if you focus on physics, you get rid of British, Jewish, freemason vampires.

Masons promote religions of violence and thus act against the ethos of Immortality *for* All. Again we see black and white in Freemason clothing. *Freemasons invented USA*: Halloween sells fake body parts, fake *blood*. China bans them. Watch this bloody killing energy of George Washington oaths to kill, *to be* loyal *to his* Masons*, not* USA. Was he really freemason or a spy who used a freemason cover? Why Freemason monuments in Washington DC? A trick? *Who rules* USA*?*

Freemasons wear black and white, see apron video and their rituals, like Jews and Mormons. Mormons, Freemasons use those same secret hand shakes of spies, "King Solomon of bad vibes in Bibles" in rituals, "Melchizedek" Israel shakes. Do they love blood (Eucharist fake)? Isn't it odd, Jewish Jesus gave us a daily Mass ritual about "blood of Jesus" we're meant to drink, in "memory of him" to save the sins he made up for us to keep us guilty? Spies made for us a fake religion using faked miracles. Are these the same spies who made a few other fake religions before that vanished? How ancient is the spy scam? Are they using those odd rituals, so public on youtube etc as a cover for something else? Why is a 3rd degree oath to kill oneself to protect Masonic secrets more important than ~*~ Immortality *for* All ~*~? Why are a few war and bloody revolution planners at the top to live and useful cannon fodder low ranking Masons to die? It's not compatible with the US constitution: Liberty for all: without right to life, no other Bill of Rights makes ANY SENSE. If not, why legal? Why is Islam so Jewish, why is Quran mostly recycled Bible? Who made it, what spy group, for what? Freemason rituals have strong allegiance to Israel, the Temple rituals. Legal? The blatantly anti-American democracy principles, pro-Israel Freemason rituals are here for all to see. They're rave about 'wise Solomon' Temple, Solomon loved the Molek deity Kings 11:4-5 that people sacrificed babies to, see more in the Bible section. If you read their rituals, these people seem like agents of Israel, guilty of treason, Mossad agents. Be amazed how much Israel brainwashing happens in all these rituals, 7th, contains "have my breast torn open, and my heart and vitals taken from thence" if he breaks his oath of secrecy, he will happily undergo human sacrifice like Aztecs, how becoming of 'evil' USA. How can this filth be legal in any civilized nation, much less in immortalist nations? A cover for finding free organs for top Masons, Jews who control the Ponzi scheme (pyramid of vampirism)?

Do Americans *realize we have* been Mason Israel puppets since 1775 *or much earlier?* Read this stuff about Jews trying to ban English and make Hebrew as USA's official language in 1780s and a Sephardi Jew paid the Dutch to invade England in 1688 and toppled its king: a Jew living his "peaceful" religion, see more on Isaac using Lopez gentile name to dupe the gullible Dutch. Columbus came to USA with some Jews in 1492. Then, by the 1700s, more came and started their plans to create the New Israel and overthrow the English, Hebrew was taught in the main Universities and commencement speeches in Hebrew happened at Yale, the Skull & Bones place. Yale, Columbia, Brown, Princeton, John Hopkins, Harvard taught Hebrew, when none in England taught it, so the Jews were already in advanced stages of taking over USA overtly: look at the

Hebrew characters on the 1. Yale seal, 2. Columbia seal, 3. Dartmouth seal. Jews supported the decentralization ideas of Jefferson, as that allowed them to create mini-Israel in New York and other areas, keep their state within state, language, education, everything unchanged, never assimilate into an immortalist culture of ~*~ Immortality *for* All ~*~. One only needs to read the Jewish Torah quotes (Bible) to see how different it is from Immortality *for* All, to become curious about Freemason empty loveless cold killing deifying verbose in rituals. All their rituals contain similar gruesome vows about the mutilations they deserve if secrets told. The whole Christianity seems nothing but a big scam Jews or Romans made for enslaving gentiles, check out the Israel brainwashing in the 6th degree, unbelievable gibberish (pure nonsense), making many suspect, this is a spy organization using Israel imagery to hide their goals. Did the international Jew take over some of the Freemasonry? Given that in 1717 the Grand Lodge of England unified Freemasons and became the central one recognizing the rest, it may have been initially a British empire spy network (London Masons), though these days local spies can take over and use it for their ends, like with churches and anything. This is not surprising, since UK, like dozens of nations, has some evil music bands and Aliester Crowley was writing about sacrificing kids and babies in his books per Internet (see alleged California ritual), so they do use these types of covers (singers, fake satanists) for their spy networks, but it's not clear how much role *playing* and how much, if any, real satanism exists among the cathedral builders, masons or Jewish Brits who made some of the lodges. 4th degree tells Masons they're to "*to offer up sacrifices acceptable to God*", such as goats or maybe people, as Turkish videos show us the way of the Jewish Temple: sacrificing goats (as in the Jewish Zohar goat sacrifice? What God, Jehovah of these quotes? The God of eternal cruelty, genocide and mass rape? Is that the God they sacrifice to? Oddly, in 4th degree, if he doesn't keep his oath, his ear is cut off, then 5th oath, his tongue is cut off, 6th hand is cut, and the horrific mutilations continue.

The whole wording for all these cold mechanical Freemason rituals reveal the blatant evident absence of universal *gentle tender soft nurturing loving kind* compassionate *grace*☺☺☺ (not only are these words wholly absent, *like in most religious services lacking them at least 2-3 times as it would be normal,* the most essential qualities for World Peace, but so is the vibe in the whole procedure and text), everything is like a sort of pompous cold sadism filled, respect (for their evil hierarchy of comedians) filled ode to 'Lovely' Quotes of 'Satan', with 0.1% of text having some quote from the Gospel to make it sound 'holy'. It's unbelievable, compare it with Immortalist Anthem first 40 lines or the peaceful poem, to see the huge difference between immortalism and evil freemasonry. So how can you achieve *Eternal* World Peace in 3 months if you never talk about it? How can you aim or hope to develop gentleness, *tenderness*, *nurturing grace*, softness, *graceful* loving kindness, etc if you NEVER EVER MENTION IT in gross mutilation filled rituals, where people are blindfolded and handled with ropes, prickled with knives? Can

we achieve 0 emissions in cars without talking about it? What kind of ethical state legalizes ritual that deifies mutilations and horrific murders? By the way, how can any ethical nation legalize the 1000s of violent, mutilation, rape, genocide, killing, torture, terror quotes in the Quran, Torah, Bible? Did you see in the whole Quran one instance of these words: gentleness, *tenderness*, *nurturing* *grace*, softness? How can we bring those fundamental qualities upon which Eternal Universal Peace depends if they're never mentioned? ☺☺☺

Christians are to drink Jesus' blood, eat his flesh in a cannibalism simulation, so this Masonic stuff is OK? Do the same conmen control all Christian churches and Freemason lodges and create a fake animosity to dupe all? People are homeless, but hey, we got these 0 IQ rituals and Grandiose Mormon and Masonic buildings, my goodness, what a spirituality, full of pomp, black, white, and no loving kindness. Is there any wonder that USA is the land of such cruelty, selfishness? Watch the housing scam too. Talking about what kind of IQ and energy black and white create: like music with 2 beeping sounds, instead of 5000 sounds, pretty boring and cold. In science of chemistry, physics, etc we don't use texts from 1st or 7th century, why do we do that for ethics, religion and spirituality, laws and etc? How can any spirituality exist without World Peace first, the end of killings, mass killings in wars, torture, etc? It can't. So how can any so called "spiritual" religion have any service that doesn't talk about World Peace in 3 months every 20-40 words? No spiritual life is possible if killings exist, if war exists. World Peace in 3 months is the urgent need of the species, to avoid all humans dead in 10 seconds. These "0 IQ" Masonic and many other rituals keep people "low IQ", easy to dupe, distracted, naive, enslaved and selfish. When others are being killed, when the human quantum field is destroyed all they do is useless rituals. You can tell how much *they* care and how "spiritual" the Masons are. Not only don't they work for World Peace in 3 months and magnify that, but they condone killings in their rituals. For God's sake, in engineering and factories, in order to produce an outcome, to make a product, etc, we use methods that have been proven to work: we don't make a Tesla with some hocus pocus alchemy book from 1st or 7th century. We use stuff that has a PREVIOUS RECORD of actually working in making a Tesla, or etc. So, how did wafer eating and Masonic rituals and other 0 IQ rituals work in bringing World Peace in 3 months or even 3 years? They did not. If we expect different results, isn't it logical we start acting like rational individuals with a ☺☺☺ functional brain, try something DIFFERENT than the last millennia of eternal bloodshed?

Nobody would stop immortalist students from wearing many non-lavender colors as background in many areas of the garment (sky blue for serenity and appearing less feminist), as long as the nice words are there in purples, yellow, blues, lilac, aquamarine, fuchsia, lavender, magenta, turquoise, orchid, pink, (bluer versions of these too) etc... with amazing & beautiful ☺☺☺ qualities on various backgrounds in contrast with font colors, and beautiful colorful circles, flowers, geometric shapes on wrists, collars, waist, shoulders, near feet, to create symmetry and

dazzling contrast. With mass production, all citizens of Eternia can get nicer clothes, by a factor of 700 to 1 than the "free, democratic, communist or islamic countries" which seem like feudal colonies of military dictators who give themselves fancy uniforms, while the rest wear 1 color. See how much effort goes to make those special parts of uniforms that overlay clothing on top (shoulder insignia, marks, gilded cords, epaulette) that officers got, yet no effort is made for peace and color in civilians clothing which require no special straps, marks, cords, decorations, only good designs. *Generals suffer from a God complex, since everyone obeys them*, they get irrate when civilians want World Peace, 0 torture in 3 months, 0 violent crime in 2 years.☺☺☺

The immortalist uniforms would use lavender to break from the quantum field of average humanity, it is odd and nobody wears it now: they're bringing the so called IMPOSSIBLE. *It's the quantum physics of decoupling from the war loving vibe of last million years.* One color (solid color with no other 24 colors, words, contrasts), like a black or white monk robe, programs us to be more "narrow minded and easier to turn into robotic killer who views only one way out: war". Likewise, in our music today globally, we see only 1 main musical "set of notes combo", the uneterni *rhythm, lyrics and tones...* Why is having 10 geometric forms in 400 designs or little squares, triangles, circles, ~*~, 20 words of qualities we totally lack, 30 colors important vs all "black, white or your favorite color"? It's about knowledge, information and knowing what you stand for: for gentleness, for peace, for longevity, 0 torture, 0 violence. It's the liberation of humanity from ignorance, from lack of information, from fanaticism, from lies. It's giving all information, *changing the quantum field, the conversation, totally, fully, 180°*. Serial killers and nice monks all can wear all white or black; a 1 color robe is neutral, stands for nothing: it provides no *information, music,* eterni *vibe;* it's total closedness, secrecy, lack of transparency on what we value, it's just pure *total blackout of information exchange, war*. It's not about modesty here, we need good vibes and any way to bring those to awareness helps. We understand in old times, it was 10,000 times more expensive to make a colorful t-shirt... Watch carefully what is written on T-shirts these days, never World Peace in 3 months. *Why?* We see tons of clothes with 2-5 colors, but you could use the same exact colors and dye to write the qualities, World Peace in 3 months, ~*~ Immortality *for* All ~*~. It's not a lack of *resources* and pigments, but of interest of the people. Why don't people demand *every clothing piece have* World Peace *in 3 months written on it*, if they follow the God of nonkilling? What kind of ethics and spirituality is that, when even mass killing, which war is, has not vanished yet? Well, in Eternia, everyone may do that, by referendum, to save the human quantum field. ☺☺☺

Critics will say we can't have every *song* and clothing piece with Eternal Universal Peace and *Tender* Gentle *Nurturing Grace for All*, or *Gentle Grace 4 All* (meaning no violent crime) to save characters and make fonts bigger, because talking about other stuff is more interesting and stopping the killing of civilians and cannon fodder soldiers is secondary: but no civilization exists

when killings exist. Yet, this is exactly what we need: World Peace on every planet, so *UNIVERSAL*, that is permanent, or *eternal*. This way once World Peace is attained, the T-shirt and all permanent markings on every street, bus, train, building, monument, etc are still valid *(no need to erase '3 months' on trillions of such signs)* since the real work starts after reaching it, to maintain it on all planets we live on, Mars, etc. A few clothes can have time periods, since clothes wear out, and for "*Gentle Grace 4 All* in 10 years" it's fine, since often, you can't really achieve everything so fast, it may take 45 years, by then most t-shirts would be so worn out. But in a culture of reuse and to make better use of space, instead of "in 10 years" we can use that space for another quality: *Compassion* etc. On electronic media, instantly erasable, we can put the '5 year' deadlines and need to of course, to keep it real instead of hypocritical. Then to achieve "0 torture, jails, violent crime in 20 years, then 0 theft, etc much later" we can use "*Gentle Grace 4 All*" and many others "*Nurturing Compassion for All*" etc as the phrases, to enable big font on clothing, and we can include ~*~ Immortality *for* All ~*~ on the back with big fonts, and in small fonts around the wrist where we see our own clothing for reminders or shoulder, collar where people look at when talking to us to see the reminder, to change their thought patterns, evolve their vibe. Seeing Discernment, *Gentle Grace 4 All*, eterni or Etherial or eterni tone, reminds all of the tone of *singing*, *speaking*, *emoting*. All websites can be instantly changed to Eternal Universal Peace once World Peace is attained, but until then, we keep World Peace in 3 months or Eternal Universal Peace *in 3 months* on *all electronic ad boards,* all public transport *electronic displays,* all TV stations *on margins, all* tram, bus, train, airport *permanent markings, inside, everywhere*, by federal law, the *Tender* Gentle *Nurturing Grace for All*, colorful, amazing loving kindness, ~*~shiny stones~*~ even *in some areas* arranged as the words Gentle Grace, for all to see. It would be ugly to write "0 torture, beatings, violence" on clothing, so that can't be done, but we change from the hypocritical "freedom and democracy, or peaceful development" empty slogans used as cover for torture, genocide to concrete goals on easy to change on TV, electronic media: World Peace *in 3 months*, 0 VIOLENT CRIME IN 20 YEARS, OR 0 TORTURE IN 2 YEARS. Vague words on "peaceful (torture) development" are useless if behind the scenes they torture people in their homes. We achieve EV goals by a date, same with this.

Communication speed went from 1 day to a milisecond, so, that's about *10 billion fold decrease in waiting time*: likewise, to achieve 0 violent crime, we need a *10 billion fold decrease* in violent crime globally, since about 10 billion incidents happen yearly. It's doable, but it has to require a much higher level of commitment and dedication than up to now, so yes, *to be kind, is to sing about it all day until we achieve it, to wear those clothes* until all have reached trillion year lives, which can be "Trillion Year Live 4 All" on some shirts to be more explicit about what Eternity *4 all* means. This *music, clothes, websites and signs* everywhere about the qualities we lack sounds extreme, but people need reminders to achieve a goal: we need to stop playing mental games of

pretend and just do it. We either do it or we're hypocrites doing genocides for another million years. To achieve a 10 billion fold reduction in violent crime, it needs be stated as a GOAL, LIKE THE MANHATTAN PROJECT, ☺☺☺☺☺☺☺THE GOAL FOR ALL GOVERNMENTS, AGREE TO IT, SETUP A GLOBAL PLAN, all day in the news, trillions of articles zero crime. Once all violent crime disappears, then obviously all that 'end violent crime' electronic content is erased, as we focus on other forms of crime, etc. The clothing will remain the same, as that is too expensive to change for every milestone in the journey to Eternity *for All*, *Gentle Grace 4 All* or, loving kindness *4 All.* Another way to say 0 torture, 0 violence, 0 jails in fewer words is Eternal Bliss *4 All*, let all be happy, don't inflict pain on anyone, let all breathe and meditate for cosmic bliss, get good sleep and achieve a state of Eternal Bliss, Eternal *Grace*, *Eternal* Serenity. This is not the cheap trash T-shirt, of one color, it's a little more expensive and only mass production on a national scale beyond one company can make it ultra cheap, by using the smartest people in the nation. "*gentle tender soft healing loving kind eternal bliss for all*" can work too. Let cops stop torturing, learn chemistry and garment engineering to help advance peace and reduce crime to 0 so they become Immortality *for* All bringers. As the centralization of capitalism advances, so will the amount of useless redundant jobs diminish, so we can have 10 million extra physicists and chemists to design the most advanced complex clothing designs for the same price and energy as today's crap one color T-shirts. We get *sound biochemistry majors* to create the most amazing & beautiful ☺☺☺ Music in the background in cities, *trams, metros* that increase lifespan: normal transport noise decreases it, so we invent amazing melodies with lifespan increasing properties. Immortality *for* All has no deadline, since we need wait a trillion years to see if anyone can live to a trillion some day, so that one remains there as our eternal goal of eternal lifespan increasing. For that one we don't need a 3 months or time period deadline in the news, websites, etc, it's just a reminder to not shorten the lifespan of anyone by torture, covert or overt violence or killing. We certainly, once peace reigns, aim for 500 yr lifespan in 700 years, but let's first end all torture, wars, violent crime, without which 700 year lifespans are unlikely.

We need beautiful colorful eterni combined qualities ('*gentle tender soft healing nurturing graceful* loving kindness'), ~*~*gentle*~*~ designs, smileys, ☺☺☺☺☺☺☺ qualities we lack. One color conditions people that reality is simple, 30 colors and 20 words and 50 shapes with geometry and math, physics, chemistry too mixed in, all positive qualities, have a vastly different effect. In fact, everyone will realize the fashion designers are conmen, using that as a cover for their stuff. Everyone will find Immortalist's uniforms other worldly and far more beautiful than most "simple boring stuff" people wear today. Likewise, the 18+ can join the Immortality *for* All Bringers, who also wear these clothes, pants, t-shirts, shirts, suits 24-7, in an act of ☺☺*lovingly tenderly kindly*☺☺ ~*~*gently*~*~moving away from the HISTORICAL INERTIA that programs all to wear all black or all white or all *ONLY* one color, and to use war as the *ONLY* way to solve issues,

when there are 1 trillion non-war methods, and never talks of World Peace, Eternal, Forever in 3 months or weeks. *Christians call 'historical inertia' a 'Satanic world order', satan was made up by religion so black, white robed priests got cannibal simulation rituals to 'free people' from the 'boogie', if you pay $ or give all national wealth to the foreign spy clergy who use their spies to take over all political, financial, etc power.* It's not about black, because we see people wearing all white too and being fanatical (KKK), solid colors are not good, we need many colors, even if half of it is lavender in between, immortalist values, qualities written to transform completely the energy of millions of years of chimp behavior. Communists, some Nazis, used tons of torture and violence and they loved black uniforms, not the best association. Lots of Islamic terrorists and torturers used all white too, so to break the quantum connection with that, a different style would help, since the brains act in weird ways. Music is dull when all is one note: if we have many, it is alive, same for one color clothing. Music shortens lifespan if it's only 1 note, nobody would listen to it, same for clothing. Imagine music with one note just like a beeping noise for 30 minutes... *the IQ/behavior/culture coming from that:* WAR, bloodshed, all go insane☺☺☺☺☺.

When we live to 500, obviously, these 18 age limits for youth group, etc will change. It's possible that as the youth and society realizes the cosmic emergency our species is in, they will have this Youth group and Adult group the main one they spend time with, out of compassion for all victims of war and violence, and to save the human species from self-annihilation by creating World Peace in 3 months☺☺☺ and maintain peace for 1 trillion years, which is a trillion times harder than to attain it (recently United Nations achieved World Peace for 1 day via ceasefire), since little time is left to avoid the catastrophic end of humans timeline: so infinite is the compassion of Eternia, *they may give up all* useless *hobbies and focus on* World Peace *in 3 months alone to finally achieve it*. Besides, immortality capitalism Immortality Credit Score will reward participation with access to longevity technologies, so this may incentivize fun seekers to have some 'peace for all' goals too, but nobody would be forced to join the immortalists, so as to ensure maximum happiness for all and the ideal natural selection for longevity: giving longest life to those most selfless and peace loving, not the "feudal selfish subjugators of masses who torture millions who don't submit to their fancies". Those for sex shops will use vibrators that generate toxic electric, radio, magnetic field (like electric toothbrushes) and have shorter lived lower IQ offspring, as a natural consequence of not working for Immortality *for* All. The Immortality *Nurturing* Agency will priotitize safety and longevity effect of products that are used by all, not just a few (<1% plastic vibrator users), since hapiness can be achieved by meditation, to an even higher degree; of course, legislators can ban products proven to shorten lifespan, but to get that scientific proof of damage you need millions of people to use it and control for confounding factors to assess the birth defects, etc adult effects and these take time and resources better spent in better nutrition for all. Without ending torture and violence, there is

no real culture, freedom, immortality science progress, nor can music of high quality emerge. It doesn't really sound as 'totalitarian' as it appears at first to allow only songs that mention World Peace in 3 months, after you read the stuff below too, since it is done out of infinite *gentle tender soft* loving concern for the human species. It's totalitarian to never talk about World Peace in 3 months, also, so how do the so called 'free' USA, Russia, China, EU, India etc deal with this 'freedom'? Being a peaceful country on Earth, wanting to create the most loving gentlest softest most *tender* most *nurturing* vibe that has ever graced a nation, a hypothetical Eternia (with this Anthem) could be called totalitarian by heavy metal music fans, because we want a minimum level of civility and peace building to prevent all wars, violence; it would need a *100* point checklist *for* any song *to be* approved, scientifically and objectively measurable,☺☺☺ no more chimp 1st century music; same for any release, tone, content or government spokesperson, ministry talk; everyone super trained to speak in the most healing way, so instead of 100 speeches we give one, of 100 times higher quality; instead of any garage 1-2 person company creating rockets, we have clean rooms with thousands of PhDs, etc. Instead of anyone making cars, we have thousands of steps and standards for thousands of parts and then robots making the car, in most plants today, like Tesla, so it's about 1 million exact parameters and specifications at least; how many parameters and criteria do we have for public broadcasting and music and leaders speaking to the public? Very few, unless they want to completely destroy, lower IQ and enslave a particular group via social engineering: criteria for max entropy/ chaos.

Thus, since we want to grant Immortality *to* All,☺☺☺ to uplift ALL☺☺☺ HUMANS, in all☺☺☺ nations, we want to bring World Peace and maintain it beyond 3 weeks, to a trillion years, we will create the most stringent criteria; a good car or rocket has *millions of criteria*, going into its parts, etc; a good TV-radio, public broadcasting, speaking, music quality produced via filtering by the Media Department of the Immortality *Nurturing* Agency will also mean standards that are *9000 times* more complex than today; we can do the *chariot standards* of today, or the space rocket of tomorrow, ours is the choice, with chariots, World Peace will take 20,000 times longer, as it can't match the space rocket speed. Therefore, instead of anyone starting a TV-radio station and spewing negative unfiltered emotion and content, we would make it ultra high tech and quality, even if it means reducing the amount of junk presented and the amount of radio-TV stations, though with AI use, there is not much need to reduce science or etc content, as long as no negative words are too abundant AI can do it, 100 times better than tired pissed off humans, since AI is based on a rested happy human; instead of reading news, people study neuroscience ☺☺☺ and create the most nurturing healing kind AI version possible using high tech to save their vocal chords and focus on content and emotion filtering; we respect everyone's opinion, love all, are sorry others may misunderstand our devotion to World Peace, yet gently and caringly stick to our ideals of eterni music and peace thru peaceful nonviolent means. Not only

that, but Eternia would have to make it illegal for foreign TV stations to broadcast uneterni tones and content☺☺☺, foreign singers or musicians *(or companies, like McDonalds, playing foreign music that doesn't help end all violence and prisons globally within 20 years, i.e. that doesn't build character, proper tone, proper priorities, proper ethics, or radio-TV stations, etc)* to come and make concerts of music that don't meet the eterni criteria for local producers too, World Peace, Eternal Universal Peace *in 3 to 12 months,* Immortality *for* All *in every song*, (Gentle Tender Soft Grace, "Eternia brings World Peace in 1 year to all planets in need, Immortality *for* All*, Heaven on Earth" or "Loving all humans gentler and deeper than the most loving mom loved her baby last century, we manifest* World Peace *in 1 year, bringing the hope of* Immortality *for* All*, a world where all have the right to live to 500" etc*) to avoid corrupting our youth, having them become mean, selfish, lust seeking, or angry, hateful, negative or cannon fodder for other countries' military operations. The decline into war or slavery starts subtly with music/emotional reaction programming, cultural, tone programming. We don't want to become doormats and have our culture destroyed (culture is everything,☺☺☺ from it comes education, tech level, lifespan length, standard of living, peace☺☺☺*, everything, it's the factor deciding if a nation is independent or slave colony for selling junk products and recruiting cannon fodder*): to build/maintain peace is much harder than to destroy it, given the historical inertia and our wild eternal war past, so we need extensive vigilance, discernment, self-control, self-mastery, self-filtering, kindness, gentle *nurturing* compassionate tenderness, sweetness, bliss.☺☺☺☺☺☺☺

We want to help humanity reach 1 trillion people in the solar system colonies, not to fight wars; this way, we get more science discoveries on living to 500, since we get 100 billion Immortality scientists with immortality capitalism centralized efficiency that spreads to these space colonies. In 2022, humanity has gone closer to its potential end (if we're not careful) that ever, with threats on Russian TV to kill 10s of millions of people in seconds with nukes (UK gone in 1 blast after 500 m tsunami, plus former president called for strategic nuke use to defend invaded Ukraine areas), due to Russia not having enough conventional weapons to defend itself or Moscow against any future NATO conventional invasion of Russia, similar to the 1610-1612 occupation of Moscow by Poland and 1812 occupation of Moscow by France; nuke threats are in stark contrast with threats of all history when no country making them had thousands of nukes. However, they may be fake threats, i.e. they do them to justify ships in some area (Alaska, if the Russian TV clowns shout and threaten to take back Alaska) by a supposed enemy, in order to interdict drug cartels or provide cover for other activities (against China), not anti-Russian, if Russia is covertly part of NATO. Such ship movements can also be a ruse to fool other nations that a conflict is imminent. If cartels take over a Ukraine city, NATO and Russia may decide to wipe it out by razing all buildings, thousands of scenarios could be unfolding that the media will never talk about as it is secret. Threats made by Russian officials are now in the 100s, probably

300 by December 2024, so most just ignore them. 2022 was the 1st time in human history a major (largest European war since WW II) war happens *350 miles from any of the only 2 thermonuclear superpower (1000s of nukes) capitals (Moscow)* that is engaged in it and issues fake nuclear threats via TV hosts who're controlled by KGB; so, with thousands of Russian nukes and 1% possibly still working, the world is in a new phase of danger *unlike ever before*; for all history a war or threat from a country meant a few dead and over a long period, but now it can mean 2 billion dead in minutes, and the end of us all due to famine (nuclear winter and radiation causes crop failure and wars over less irradiated land, water, etc), chaos, looting, viruses, climate change, radiation next 10 years, all striking humans at once. It's an *unprecedented* time in history, that requires *unprecedented* changes in our culture and way of singing☺, speaking,☺ etc if we want to survive. The possible end of humanity makes peace infinitely urgent in 2030, as many got hypersonic nukes that make the end of humans likely. The internet, instant video communication, instant satellite verification of peace make peace both urgent and possible to verify for the first time in history, so we need to talk about Peace 1 billion times more to ☺ preserve the human species☺☺☺☺☺☺☺☺.

Thus, to save humanity, in Eternia and immortalist allied nations, *every* public *broadcasting* entity, *every place of worship song or group of songs (1 minimum), has to say something about Peace in 3 months* and nonkilling each day, each program, every hour, due to the highest cosmic emergency created by the existence of war and killing that destroys all humans and makes Immortality *for* All impossible, like say "World Peace *can manifest in 3 months* if all Eternia citizens are *kind* enough, like trillion years old Immortals; may we try harder to let *gentle tender soft nurturing grace* pervade every speech, intent, feeling, action worldwide". To sustain a happy ~*~Eternal Universal Peace~*~ for trillions of years, we need to have violent crime rates down 1 billion fold, since today, the rates are 1000 times higher at least than reported, due to the ultra lax definition of “violent crime” and the lack of reporting: governments alone thru torture, police violence, military-cop training, spy training etc commit 4 billion violent crimes a year, yet these same violent governments report much lower national numbers. To achieve the transformation of “severely brainwashed into violent vibe mode” folks, whose DNA and brain was tortured for 100 generations by psychotic ideas, who need some mega help in the front of this mega historical genetic inertial force, into beings of a Civilization of Immortals, it is essential to remind everyone thru 10-20 minutes for every hour of TV-radio (TV networks would all become state owned via Eternal Altruism Inc anyway, one of the main state companies of Immortality *for* All capitalism) of the ultra essential happiness and loving all humans exercises. 99% of crime comes from anger, lack of bliss, so select the most pleasant, eterni tone younger voices, the best 1 out of 50 million, (who become the voices of ethics.gov and central ethics courses from grade 1 to post doc) proven scientifically to light up the strongest the brain areas

that are dormant in most people related to qualities wholly absent in our civilization, TV tone, church etc tone: infinite *gentleness*, *tenderness*, softness, *feminine nurturing healing* grace, universal loving kindness. This is not extreme, since sports get too much coverage every day, they harass and bombard the whole planet with sports news every hour with militant thuggish tone; the sports section explains that current sports *(except gentle stretching, gentle yoga (video on yoga injuries), tai chi, etc while listening to more eterni peaceful character building lyrics)* degrade human quantum field and are anti World Peace and Immortality *for* All. Sports, the immortalism section explains, (Ctrl+F lower nature), magnify the lower nature, diminish the higher nature and eterni tone of speech, thought and action.☺☺☺☺☺☺☺

Therefore, due to the cosmic emergency, of total annihilation of 100.00% of humans in 10 seconds possible soon, *to play such sports is totally* unethical, let alone to use resources for that instead of building *better* housing *to* diminish natural disaster *deaths,* to diminish "crime, violence, war" that come from overcrowding. Thus, due to the risk of all humans disappearing in 10 seconds, no sports are on TV-radio, no more demonic baboon dog hollering disguised as "sports commentators". The only sports will be Immortality Building community service types, can watch youtube for how to stretch and do gentle walking, yoga, tai chi. All Olympics and somewhat violent sports are eventually banned by International Agreement to become human and not remain a baboon, and they're replaced by house building, community service, lifespan extension gadget building gatherings of cooperation for lifespan maximization to facilitate inter-University exchanges of research findings, joint research projects that are harder to do with materials of one country alone. People refurbish the present baboon stadiums and stuff to make them the Universal Immortality Ideas exchange platforms. Prizes are given to those who got the most amazing & beautiful ☺☺☺ ideas, extending life the most. *Sports increase lifespan by 0.1 to 10 years max, while* science *from 100 to 10 trillion years*, so obviously, we need such OLYMPICS if we're honest about understanding ethics, God, spirit, which take 5 trillion years at least. If your standards are from year 2700, normal speech of sports commentators is like hearing Hitler all day long. If your standards are the 2023 ones, you get 1 billion times more violent crime from TV-radio-music-movie tone side effects. People learn ethics mainly from tone, emotional and intent tone encoded there, not from violent scripture presented as Word of God by hollering, Hitler voice like, pastor (hear it) or rabbis (hear it). *The sports* shouting time is replaced by "World Peace, *no violence and no prisons,* eterni *qualities building,* virtue magnifying, *kinder tone,* techs to realize Peace*; societal systems* to bring efficiency *for 900 year lifespans fast,* fewer languages ideas, volunteering for Immortality for All as physical exercise". Perhaps, this would be the first civilized TV-radio agency to build the first spiritual civilization or "All Eternia citizens are called to help the planet reach World Peace in 3 months, end violent crime in 5 years, so all can live in peace, in healing centers or at home, without prisons, war and violence.☺ We need to

free humanity from the stress of imminent war and end of our species. Let us gently, healingly discuss how to do it each day, when we gather with family, friends and be the carriers of *universal* compassion globally, *let us bring this world of peace right* here☺☺ *right* now,☺☺ *this* life,☺☺ *so* soon☺☺; we can be the balance, since in most nations World Peace in 3 months☺☺ is technically a forbidden topic, as if a military dictatorship controls every belief, group, party, nonprofit, celebrity is military approved, they brainwash us World Peace in 3 months is impossible thru the thuggish military 'culture'.

Look how they control all world leaders, who have written by others what they will say and do, to go to these sports events, etc, glorifying our selfish and uneterni sports, while never talking about the sports of bringing World Peace in 3 months, never having such online remote (fuel saving, house building, peaceful music, literature building, etc) Olympics, etc, that use no materials and billions of dollars for stadiums, etc, using $ for tackling the root causes of war. The entire planet ?*seems*? under the spell, complete dictatorship that is, of the military-industrial complex bent on eternal war: *no free speech, nobody talks about* World Peace in 3 months *on any major TV station, most politicians seem like robots* remotely controlled *by the* militaries *to talk about "weapons" all the time, but about "*World Peace *in 3 months" NEVER. 100s of articles* online explain how the military of each nation runs everything*, directly or thru mind controlled FBI,* CIA *officers posing as the CEOs,* celebrities*, politicians. Every important person has army/FBI training.* You can also tell that from the way they speak, the tone of content and what is said. The same is true now in all nations, the military runs everything from behind, due to lack of peace and the *possible weaponization of every single technology and* product *in existence*.

Billions want *to talk about* HOW TO achieve World Peace in 3 months IN PRACTICAL *TANGIBLE* STEPS,☺☺☺, *but the military controls all TV-radio-Internet (sites with heavy traffic), so we never hear it.* It's worse than the 10 principles of North Korea in a way, since they were created that way by USSR, US and China and all players in the region. INA, Immortality *Nurturing* Agency, the super agency, to save humanity, will require all websites to flash a widget to say "World Peace in 3 months is possible with more Eternia citizens kindness. Let us give all the human right to Immortality or at least 500 year lifespan☺☺☺, via World Peace". Any human-human war, no matter how small, how far away, is a cosmic attack on the "entire planet, all nations, the entire human species", it destroys its quantum field, and is the highest emergency for all citizens of Eternia, since any tiny war will lead to a big war later that will cause big nations to invade Eternia and use it to stage attacks on others, to use it as buffer state, cannon fodder, etc, plus a big war could end all humans in 10 seconds. We certainly don't want any other nation, let alone Eternia, to look like Syria (see entire cities wiped out 50%). Due to the state of eternal emergency on Earth, with no World Peace, Eternia of the sci-fi reality banned all sports news☺☺☺ and other filif IQ☺ programs that do nothing to achieve World Peace, only to destroy the

amazing eterni tone humans can produce, by hollering and yelling during sports, bullfights, etc like killing soldiers, ***further increasing the chance of all out nuclear holocaust***. The scapegoat section 1st paragraph explains the issue of selfish sports too, besides the sports section itself, and it is lack of empathy and selfishness, extreme competitiveness that can wipe us all out. Sports commentators arguably have the most destructive and war causing tones almost of anyone on TV and radio, sports need a change towards helping serve troubled spots on the planet, to prevent the emergence of the causes of wars, and a redefining of what it is to be engaged in healthy sport, health is that which gives ALL HUMANS (NOT JUST the players) 900 extra years, not just 5 years, and 900 comes only from building a civilization of Immortals, not from moving balls, so we start with World Peace. "Sports" news (refers to fake sports that revolve around moving a ball, etc) need to be banned from TV-radio, to make space for World Peace in 3 months News and Proper Music and Speech tone. All new sports relate to Eternal Universal Peace in 3 months and 10 billion times less violent crime within 10-20 years. This is the National Security of the State. If the entire planet wants to become nuclear dust, that's their choice, we, Eternia, are not interested and have no interest in sports competitions of moving balls and behaving like chimps, shouting like hooligans. We had enough war, we need to evolve towards more cooperation, nurturing gentle tender grace healing and mercy.☺☺☺ Any killing is as bad as a genocide almost since it can lead to it, so all Eternia resources will be mobilized to figure out how to stop it, prevent the causes that manifested it. ☺☺☺☺☺☺

The militaries, spy agencies worldwide filled with paranoia, have harassed for eons people who create World Peace songs or want peace; Nazis even killed many who refused to fight by sending them to gas chambers or concentration camps, as did the Soviets shoot anyone who didn't fight (Gulag folks forced to be front line cannon fodder against Nazis). How can anyone dare to create songs about World Peace in 3 months,☺☺☺, they must be silenced, otherwise, no job for the militaries, nobody to torture, enslave (to their own belief system or fake religion, etc by force) and kill (well, they do some humanitarian things during disasters and help with fighting pirates, ending slave trade of Blacks and Whites, slave trade happening (Slavs in EU for centuries) on all continents for millennia, when it fits selfish national interest to protect a nation against a bigger invader, but the addiction to violence can't be satisfied if Peace reigns and true altruism and Immortality *for* All Ethics emerges, so the bad guys who control the world's militaries (to some degree?) are going to be bored or, unhappy their world view of "peace is only achieved thru war" is not listened to by all officers or people, since after all, they created a whole career on teaching in military college many (fake, real war, etc) concepts and it's a matter of personal image; to revenge that anyone dare question their apparent (or real?☺☺☺) "Imperial Absolute Unspoken but implied Terror of Nuclear Holocaust for anyone who dares to want/think something different than" the "assigned slave labor" for them *(this is evident from the tone of*

speech of most politicians last million years, if you watch carefully, Eisenhower vs this, you notice a different *level of* loving kindness *and gentle tender softness),* anyone who dares to not accept their 'Infinite' Power Reign on Earth to start endless wars/torture for endless reasons instead of using positive compassionate methods that show via video the same things without torturing anyone, they will do endless torture, as explained below after a 3 page talk on music they, apparently create by remote controlling artists to social engineer chaos, murder, war, violence, rape, jails, worldwide in a holy war on 'nations to be enslaved, kept backwards'; which voice makes you feel more loved and makes you feel like they wish you to live to a trillion years old, they wish Immortality *for* All ? What if, to be trusted by the world community as a peace bringer in 3 months, USA needs to vastly change the acceptable public tone of speech, and content of verbal public speech (loud over mics, etc), though tone totally changes content by itself, otherwise, it's a mind game nobody believes? ☺☺☺☺☺☺☺

Over millions of years, people have developed a "bamboozling detector" i.e. a way of sensing intent, honesty from the tone, overall vibe of all involved, remote controllers, etc; in 2020s, with audio tech, echo, phone mics for all people, billions of youtube clips, everyone can hear new tones and voices, and realize that we could all speak like that all the time, which would be a change from chariot 35 mph to space rocket 17,000 mph, 500x increase in gentle loving kindness intensity, like in travel speed; this would enable us to evolve far faster to kind tone of telepathy and to World Peace in 3 months. Today, with brain writing gadgets they can remotely control countries to invade others, so then they can justify coming to the other nation's defense and bomb the attacker country into the stone age, or have both nations destroyed a bit for better domination, while appearing as savior of global order, ethics and uplifting music, chaos happening often due to terror groups they create to justify occupation; or they simply use cars, gadgets, phones, computers, etc to torture, control millions of people in a nation to do diligent slave labor work against their will or without them having a clue they're robots, though controlling just 50000 main top officials, important people can work too; sadly, other major powers can resort to similar methods by learning from the "USA, World Ethics Teacher", while claiming they will be the guardians of a much better world order, when their music today (examples *1*, *2*, *3*), which *reflects how they will treat the weakest, poorest and most helpless victims of wars and etc... is still far from "eterni and focused on the minimal human right to World Peace"*; even in the more peaceful (music wise) societies like China, S Korea, Japan, India, we see the same issue with music, very aggressive sometimes, lacking empathy, gentle healing grace, totally unrelated to our urgent need: Eternal Universal Peace attained in 3 months.

Each global power claims they will be SO MUCH BETTER, but the music and tone reflects exactly how they will treat the planet, in very similar ways. How can that be? Is humanity able to move towards Peace? The big power militaries of world history are used to infinite power to kill

millions if needed, so when some say there are trillions of ways to peace without violence, they're killed or tortured to death slowly over 1-20 years; it is these war addicted generals who're anti-Immortality for All in military ethics, as President Eisenhower explained it in this 2 min video, (he is role playing actually, if you watch his body language how he's theatrical, etc his tone, because he knew the military controls everything, but by saying we must prevent this and that, it creates the illusion that the military is not already in full control of everything, so people imagine they're free, they choose leaders, etc, but what if military remotely controls all who matter? All countries are like that, so feel free to gently not waste time voting..., perhaps, you can kindly work on | Immortality *for* All | instead, upload nice music if you're not tortured by the military for daring to dream of World Peace in 3 months and have a decent life of peace, ***votes mean nothing if WWIII ends humanity, since the same guys, spies or etc can control all candidates)*** who're the greatest threat to every nation's existence and even to humanity itself, besides the poor starving people in the US. Who controls the military in each nation? You can figure it out easily by reading this book, especially Chapter 13 and 14. 4 US Presidents did a lot for World Peace, but it's just 0.000001% of what we can do today when Internet allows instant communication, a billion times faster than 200 years ago when it took 3 months to send a letter far away: the average people worldwide are not yet really passionate about World Peace in 3 months, due to media brainwashing. We need angelic guys, with true compassion, to replace the torture, terror based militaries with Eternium like entities (details here☺☺☺), spy agencies with Immortality Nurturing Agency entities. The present military dictatorship of 150+ nations allows and (endless military imagery in 100s of videos, celebrities are recruiting tools, whether they realize or not) encourages music with drugs, violence or violent scriptures, low IQ, etc.

7.9.4. ~*~Eternal Universal Peace~*~ is absent in all US music except these immortalist lyrics

Below are *5 pages* of music clips designed to aid the evil aristocrats, destroy World Peace, exterminate, enslave, destroys the human quantum field, making us easy to control brutes:

1). Intro (Taylor Swift, Bad Blood) to USA pop or country music, (Taylor got 3 cats, some claim she's Jewish, fits perfectly the Zion Elders book, her music destroys gentile societies, she's an evil billionaire (like all billionaires) descended from 3 generations of Bank Presidents (Looters), her dad financed her label, her rise to fame was due to Money/clever marketing, not songs, US, the Land of Peace, Pet/Human Rights/Ethics forced to listen to "Elevating" Tones/Vibes☺☺, like

2). Eminem the sound of America's fall into cruelty (the music that made every American far more violent on a quantum info field scale) and all similar 'artists' (probably 3000+ in US alone) who're just human looking chimps (see video of female chimp eating neighbor kid, these genes are in many world singers, you can see it in their tone and behavior), see male chimp violence to understand why most music is evil. See Neanderthal cannibals science discovered roamed 40K

years ago, except modern singer cannibalism is a covert destruction of human tone & ethics. The DNA component is strong, that we need to ban 99.9% of music that returns us to our chimp mentality, but most animals today (so called humans) can't even find an issue with the music. Even today, there are still a few cannibal tribes made of natives in South America, Africa. Most humans are related to serial killer chimps, while some to the far more peaceful bonobos. Only when we (evolved chimps) realize how evil we are, real chances of World Peace emerge. ☺☺☺

3). The jazz music was also created as a mind and genetic warfare (like heavy metal, heavy rock in 1960 by Brits in US/UK) project to lower IQ, raise violence and increase entropy in the brain, so avoid it like the plague. Another KKK project. The 'bad type of' Brits/Jews always come up with new music styles to screw others. The Jews love the sound of trumpets too, it's part of their violent culture (they appropriated the culture of savages around them and called it Jewish), seen clearly in their Diabolical "Bible", hear the 3 music clips (trumpet or jazz: 1. sound of cows, car horns, devil bull horns and cow IQ, that some Jews adore, 2. dance of chimps & baboons, 3. shout of "demons via rabbis") to understand the "culture". Trumpets were used by Christians to warn of Muslim invasions via fortress fires too: it said Jew Twins (Muslims), the Quran (Jewish Bible rewritten) come to practice the demonic Bible: genocide, mass rape, human sacrifice, arson, kid beating, slave beating in to turn East EU into burned lands for the 300th time. ☺☺☺

4). Music below to enhance the "superior" (where Republican and some Democrat CEOs, politicians gather to watch human sacrifice (war is sacrifice) simulations) US culture with drug pushing lyrics or murder/drugs rap lyrics, super violent lyrics or teeth CIA terror made or flesh eaten by drugs praised by rappers who seem to have been training with the Chief of Demons. If these people are so Christian, how come demonic like music plays in almost every store? Read the music and violence section 1st page for more on DNA destruction via music. Now, the song "sacrifice (of care?)" by Sinead O'Connor gets a demonic meaning: eternal war and violence. The Jews and other aristocrats can dye hair blonde to pose as Christians who compose evil songs like "My Jesus" where official blonde clip is about death (hidden from lyrics☺☺☺), accidents to subliminally program the gentile and worker mind☺☺☺ to expect ritual generational abuse, and official lyrics words like "weary, carry my cross to Calvary (to be crucified by aristocratic Jews), heavy, shame, stealing, desperate, grave, tears, broken dreams, wasted years" to Program the Gentile Subconscious for Eternal Slavery the mindless gentile slave worships even in the Jewish Bible imposed at gunpoint on his nation by Jews☺☺☺ for 2 millennia in Lev 25:44-6 (unlike the immortalist Positive words only literature, anthem, poems). The music is psychological warfare against the gentile working class, to condition workers to expect/enjoy suffering/slavery, be depressed, so the bad type of Jewish etc MDs can prescribe more deadly drugs to lower IQ. Likewise, celebrities fill their songs with negative words, negative emotions and criminal actions, blood, drugs, alcohol to further destroy the gentile and working class, so trillions are stolen.

These infernal spy agency-military murderers torture with microwaves-sonic-etc devices millions. The music is what they created to enslave the ENTIRE planet into a matrix of eternal bloodshed. Evil can hide even in country or religious music. Check out the makeup, eyelashes (teaching evil), macho energy of the song that presents evil as good, violent melody as the peaceful melody we need for World Peace Eternal, like the evil Bible itself, mixing 7 nice quotes with 1500 evil ones and saying it's good. ☺

5). Much of classical music suffers from the bipolar disorder of its lunatic composers, being very violent: Beethoven, Vivaldi, Wagner, Saens, Chopin, Tchaikovsky when compared to the music of the 21st century New Age style of Eternal Universal Peace. ☺☺ We don't study science from 17th century books, why use trash music from then? This is explained in subtler detail in the state of emergency first paragraph on why getting violence 1 trillion times lower requires a ban of 99.9% of music today which is a subtle instigation to murder and violence, via lyrics or melody or vocal tone. The garbage acceptable back then is not OK now when all humans can die in 10 seconds. Sadly, most folk music today is violent by immortalist standards and we need a 30 year break from that crap too, if we're serious about zero violent crime, zero jails in 3-30 years. ☺☺☺

This is spy agency-military social engineering to create soldiers to fight for aristocrats and jail the slaves from the poor working class, be them black, white or other. Check out FBI approved music creating youth that attack cop cars and shoot cops. It's all designed so they have reasons to shoot those youth who listen to mind controlled "rappers" with lyrics about police attacks and all forms of violent crime. This is racism and genocide against gentiles by the bad type of Jews, Brits who often write lyrics for black artists, it's a Holocaust against the working class. The 11 companies system makes all have a job, so less time to take over streets and use fire crackers, etc. Why are fire crackers and fireworks even allowed to be sold on any day? Only government ought to make fireworks in designated areas where nobody sleeps or use holograms to avoid air pollution. Street takeover cars roll over people, injures some. Death penalty for all violent crimes is needed besides banning all music types below, before it ever plays anywhere and has a chance to get any "fines". Violent restless music and shaking like heavy metal or even some rap, pop, Swift, Britney Spears and 3000 others clips can lead to stroke, death and permanent brain damage, the secret goal of the murderers who control these musicians: hybrid warfare against the USA and all nations bombed into the Savage Age of Eternal Violence by these "musicians". This is no different than terrorism, as you will realize by the clips in the next 5 pages. It's genocidal for the US gov to not ban headbanging in concerts and forbid violent music. We Americans are conditioned by the Evil Palace Dwelling Monster Aristocrats to be caring about World Peace and Immortality *for* All "so much" that not 1 single song about Peace in 3 months exists (popular on TV-radio, not youtube mini songs). Aristocrats can only steal trillions from the people and state using violence and that theft implies the existence of wars of looting and

destruction of the worker class in other nations. Thus, World Peace is not a minor or central meme in the top 50 songs released in the last 25 years. In fact, besides the old 'imagine' song about a world free of war, that is almost never played these days, nobody ever sings about Peace, which is universal kindness. Selfish love, romantic love, 0 IQ love songs are allowed, as those end aristocratic classes that get paid 50-50000 times more, produce slaves, to maintain aristocratic mansions. But peace is not allowed, since when true kindness begins, aristocracy ends, theft ends, massive theft ends. So kindness is NOT allowed, as that ends aristocracy. Do you understand why our music and culture, movies and everything are so depraved? The answer is right here, watch these 8 million mansions. As 'Satanists' ('mock human sacrifice' *fans*, violent thugs of infernal voices who love burning girl effigies) hold infinite power in USA, decent *gentle tender soft nurturing* feminine healing compassionate intelligent (not the genocide rape type of Bible stuff about Jesus fake miracles religion aristocrats made up to subjugate 200 nations) vocal music is almost nonexistent (except maybe some youtubers most of us don't know about, so perhaps 1 out of 1 million songs). Endless US songs, including Taylor Swift which is obviously guilty of genocide via her music, via violent crime waves, have bad lyrics about smoking, alcohol, drugs and killing. All her team who help her concerts need to be tried for assistance to genocide. Same for all other "celebrities of violent lyrics". See how homeless were moved (very stressful and torture like for those people) by Taylor Swift concert, selfish people wasting $100s for a violent music concert instead of helping build houses for the homeless, instead of implementing the 11 companies model for a job for all, a house for all. What is more destructive than such soulless concerts? Any reference to alcohol, smoking, crime, drugs needs be forbidden in all songs. Such songs today are a continuation of the US tradition of 'vibes' for 100+ years that have helped the Holocausts of WW2 to happen: see US taxpayer money at work, US companies, banks helped Hitler. All Germany's enemies helped the Nazis covertly, *knowing fully this 'help' will destroy Germany, create* Israel. 'Bad blood' is one of 1000s of similar songs, to educate the youth about the "proper" vibe and tone of speech like in "Poker Face", and *9000 other songs 900 times worse* than 'Bad Blood' in lyrics, tone, energy, etc, a true expression of the Zion Protocols.

When non-Americans see, hear the music, what will they think of Americans, that Taylor is a foreign spy trying to destroy the US or that Americans hear/see violence in music always on the Internet, radio and in neighborhoods? Selfish sports, dogs, cats, violent music, are way more important than nonkilling, World Peace in 3 months, what a Zion Protocols culture, nothing like Immortalist Anthem is allowed in any nation, only war news, weapon supplies, staged killings, false flag bombings. Congress plays baseball games with knee shootings, instead of creating peaceful music rules for Eternal World Peace; when the planet disintegrates in 10 seconds, they play sports, pretty 'logical', given the collapse of peace: who cares about World Peace in 3 months, ending brutal killings, 2 million unfairly in jail, 10 million tortured, when they can build

thousands of stadiums and gyms to glorify macho ethos? Big shouting at concerts while others are tortured to death in jails or by violent gangs, in CIA prisons (homes)? Is that ethical? What country is that? Where is the universal *gentle tender soft nurturing* loving kindness? What civilization is that? Until a single slap, a single spanking, a single violent crime never occurs for 10 years, we're mere brutes. Taylor Swift is popular, due to heavy Military memes. Popularity of any song, movie, fad is military controlled in every nation. Almost every nation is a Military Dictatorship, all nations are brainwashing their citizens World Peace in 3 months is not possible, so low IQ cannon fodder can die for the army general office dictators. Their armies of gangsters attack people's knees, toes, legs, hearts, eyes, heads. The so called democracy is nothing but a farce, a distant dream from the Revolution with fake elections. All Congress seems to do, recently, is vote for a new House Speaker, 4th one in October 2023, after 9 elections for the former speaker. *They* know about tone, the idea of a new Parliament standard of speaker, *but do nothing for* World Peace in 3 months. Many Americans and workers globally have been socially engineered by spy agencies *to* love dogs, *dog* barking like music, cats, gas cars whose smog kills millions 9 years early, way *more than they love* millions *of people that militaries, oil wars, smog, bad music kill.* They could create a new Congress speech protocol, and perhaps, peaceful music international agreements. Kids or adults seeing half-naked people creates a focus on sexual organs (since they cover those parts only), which destroys the quantum field. Thus, Russia wants to ban sexualized costumes at concerts, a good idea, let's have Immortality *for* All, Eternal Universal Peace written on clothes, the let the colorful shimmering light of the soul shine forward, make us look more alike and diminish racism. ☺☺☺☺☺☺☺

This *type of rap, pop, etc music* seems, at times, to some people, *the* complete destruction *of the* USA and other nations by 'remote controlled helpless ghost shell singers/musicians' (not all are like that, some are rarely, others often due to brain destruction via torture and sleep deprivation disguised as 'spy training'), more deadly than thermonuclear weapons as explained in the Chapter on tone and the music thing, to put it mildly, since when our *gentle tender soft healing* grace and eterni emotion are destroyed, everything will be gone. They murder millions… *destroy millions of brains… with this demonic music.* Millions of cops, soldiers, spies are destroyed, lifespan shortened, in US and outside, by current policies. Millions of civilians have their lives shortened by this institutionalized cruelty, so over decades, it's the same lifespan years taken as killing millions of people in their 30s. Other nations copy US models and do the same if big, so the entire humanity sinks. Emotional and intent tone leads to habits that perpetuate for centuries and lead to use of weapons far more destructive than all we got now, that kill 8 billion in 10 seconds. Some don't even realize it and listen with joy to such music which can lead to America's demise. Will USA lovingly gently compassionately wake up, and stop damaging the humanity's quantum field?☺☺☺ Or will we suffer the same fate as Nazi Germany, who was

cheering at the horrific Hitler voice, as today, the youth of the planet in wild concerts that stir up, in the free will opinion of peace loving people, perhaps the "*wildest (almost infernal in some clips)* aggression *or human emotion quantum field* degradation *humanity or some people have ever seen in music"*? Examples are: worst parts of this - all EU nations, German evil voice metal, British John Lennon who beat his wife and women in general, left his child/wife to be with Yoko to shout like Hitler rallies in new songs that even Hitler could have done better perhaps ☺☺☺ (the all time hit from Beatles is a pure garbage song where histeria takes over the audience as they shout and utter banal kindergarten IQ lyrics a 4th grader could have created in a much better style; this depraved song is thought as of a worldwide hit, but its voice, trash tone, focus on erotica feeling (pure lust, programming that love is lust, or that biology impulse) instead of universal kindness and meditative bliss that ends all suffering, war and violence, and rhythm is anti-eterni and a disgrace, for the world needed Peaceful stuff to reach World Peace, not cruel macho tones like this, similar to "kill slaves" laws of Chapter 28 from the UK parliament, the same 900 year long pathological lack of empathy and kindness in plain view of the planet, contrast these Beatles banal filif IQ lyrics (similar to 99% of romance songs today, filled with the same vibe of cruel apathy to the millions dying yearly due to violence) with the eterni version of romance; Mi6 aristocrats needed to create the lowest IQ lyrics to enslave the working class of 200 nations, see MI6 chart of superiority, Brits #1, East EU #4), though Italian crocodiles 'singing' metal need to receive *$90 billion fine and lifetime labor sentence* in a healing city for destruction of the human quantum field, South Korea K-pop 50 million fine (low IQ youth dances, singer yells like Hitler, when they could build houses for homeless Seoul people 3 miles away from their demonic concert arena), North Korea, Japan (*worst shouting parts* of these, sort of similar to Japan horse cruelty, same junk music like all non-Japan heavy metal lyrics & shouting; the Buddhist peace in this clip is gone, the loving kindness of Buddhism (not Thai boiling of Buddhists), as if too little was learned from WWII, whatever may be true among these reports or alleged real videos or real images (not photoshopped), Korea invasion, etc, unit 731), China (pop violent murder tone by "female" – 90 billion fine – crime generating human quantum field destroying tone of speech on TV for World Peace, similar to 50,000 other "musicians and singers" whose yelling tone part would be banned and bring $90 billion fine in Eternia, this piece of trash female singer (like most similar aggressive bitch tone male/female singers) forgets Chinese men eat dirt and scavenge food in garbage bins due to a world of violence (coming from such infernally violent average tone of 98% of singers worldwide, even most Eurovision Contest European folk music orangutans resembling more the Aborigines than they realize in their arrogant ☺abysmal IQ☺) creating a corrupt Chinese system that *fakes communism and is nothing but feudalism with top officials the aristocrats,* endless corruption, police violence, *millions of useless companies, while the 4 needs:* shelter, food, transport, healthcare *are not fulfilled for all:* tone of speech on TV reflects violent crime in that nation, singers don't get

offended, your *tone* needs improve 1 billion fold for violent crime and war to go down 1 billion fold*)*, hop (9 billion fine, same depraved crime generating tone as most rap and hip hop, no gentle tender nurturing grace needed for Eternal Universal Peace), PLA rap (5 trillion fine, genocide tone), China metal (50 billion fine): this is the definition of "peaceful development and virtue building" or copying US Hollywood demon vibes?), Siberia (50 billion fine), India (rap – violent tone 10 billion fine for a "world meditative music revolution of universal gentle loving kindness?" *actually all rap is about the same everywhere, need be made illegal now*), Russia (rap *1*, *2*, *3* Putin's definition☺☺☺ of Russia *(or minority controlling USSR/Russia)* Led World Order?, Lyube, Putin's favorite Russian rock band (per many news reports) founded in 1989 made this infernal imagery song (played during torture of Russian dissidents in prisons) that Putin loves, full of bloodshed, stabbings (stab in the back is a common expression he uses) apparently, as this 'Soldat' (soldier) video Lyube song depicts the destruction of the human quantum field by human-human violence, being pure satanism funded by the criminal Russian government, who fails ethics, a preview of Ukraine and Syria ruins Putin co-caused, see civilians being killed by Putin (if not a Hollywood effect on empty buildings) while they shop at a market, see the wounded civilians, whose only sin was buying food), America (the list is too long, and most readers know US music, Eminem 1 trillion, rock, weed lyrics, Snoop Weed (no shouts, but drug pushing like Lil Wayne), 100s of videos and songs with words like kill related to violence (Elon Musk wife, maybe 75 billion fine) (and sword images from Musk wife, 75 billion fine, too, that turn viewers into mean people: this ought to be illegal, any depiction of object or move that is violent), Ultra Murderous Lyrics made in USA, More Bad tone+Lyrics (20+videos), More Rap videos, more rap pure hooligan 5 billion fine music, rap 20 billion fine for violent tone ionciting people to mean cruelty and violence like all rap, US metal yelling to destroy China 1 trillion fine and US genocidal metal to destroy Korea – 1 trillion fine?, Bad Blood Taylor Swift genocidal violence (nuke blast too) imagery 800 trillion fine, (genocidal militaries uses celebs, hence Taylor got huge violence in most clips to help military recruit serial killers as soldier cannon fodder eager to help aristocrats build palaces by eternal genocide against 200 nations), UK Black Sabbath, Zeppelin, Iron Maiden, Australia ACDC (see one singer in 1976, the video is self-explanatory, it shows the types who sing trash), Cold Chisel Aussie Infernal Shouts – 1 trillion fine, rock, and other violent Aussie groups, every EU country (incl Italy) has its own evil metal groups (Italian animals), these infernal musicians deserve lifetime labor for promoting alcohol and violence, made by folks with no concern for World Peace in 3 months.

A lot of folk music or religious rock or "Praise of Jesus, etc" music *(sung in white or black churches in aristocratic cities even) is very violent yelling and macho in tone and melody, worthy of* 50-500 billion fines based on neuroscience proof that it causes crime and violence*, filth which hypes up the murder animal instinct in the so called "spiritual" Christians*, etc (even though that

can be 5 to 5000 times less violent than the worse rock, rap, metal), 'Christians' *who call* Evil Good and Good Evil, *in 190 nations, compared to* what is needed for Eternal Universal Peace, as if those nations have not learned anything from the evil deeds of their history. We're not even talking about the infernal tones of clergy: examples to clarify who is the Hitler like tone "clergy" today: pastor, rabbi, Buddhist monk, imam, Hindu preacher. *By their fruits*, you shall know them: evil from good, not just clergy, *but celebrities* and people. The Hitler *tone* led to 80 million dead, like bad music and clergy *tone* lead to identical genocides indirectly. To let this criminal depravity continue is like to let *10000* Hitlers to rule the planet. Let no 'clergy' deceive you. This is why CIA, FBI, War Dept need to be replaced with Eternium and the Immortality *Nurturing* Agency who implement real ethics. Listen to 50 decent clips and compare it with stuff below, explaining why the Middle East is at war forever. Hitler energy is found in many expected places too: heavy metal (fine 200 billion for this?) at Mass (pastor) style music in churches; 6 Jewish songs 1. US rabbi imitating Hitler's vibe – fined maybe 5 trillion 2. dance of 'spiritual' aggressive Jews – watch the undercurrent of aggression found in 90% of world music too, 3. spiritual Jew festival – shout baby shout, be a true Jew, macho patriarchal energy – pure trash that never ever brings Eternal Universal Peace – call it the Chosen Race too and go back to the cave age – fine maybe 5 billion if you're serious about Eternal World Peace in 3 months, 4. bench collapse: when rabbis fall from grace 5. Jewish Arizona aggression: shout, no gentleness or empathy for the 5 million Ukrainians Jew Kaganovich killed in 1933, 6. aggression consequences – 160 Jews injured; wondering why they don't sing more like this gentler tune (can have more cheerful and positive lyrics though). Equally Hitler like are these typical Saudi songs: 1). song to exterminate any trace of gentleness in humanity, 2). song of Genocide via Sword, 3). song of Genocide via rifles, 4). wedding with swords, even at Wedding Killing is Glorified, 5). song Deifying Killing Devices known as Swords, 6). Deifying Killing Humans with Rifles, 7). Listen how Aggressive War Like the voice is, 8). yelling with sticks, Symbol of Beating, 9). yelling like many Western musicians do all the time, macho energy again. See Quran quotes to understand why such aggression. Since they're gentler than Taylor Swift's Bad Blood 800 trillion fine, 9 trillion is fair fine perhaps, what do you think? ☺☺☺☺☺☺☺

Is this why Benjamin Rush, the guy who wanted a Department of Peace to prevent war, wasted time to make America the land of shouting and striking terror in many nations seeing and hearing US music and making others copy it too, frightening the kindest people? Is this what is left of America's spirit? At MIT we were terrorized by crazy students in several dorms, with the same type of violent music, just 100 times worse, played loud at 3 am or at 7 pm during the dorm area wild parties from hell. The top school of engineering could not have the most basic civility, respect for others' space, peacefulness necessary for global peace. If we want World Peace, we need to have an honest look at the tone of many styles of music in 200 nations, since

it's not just the mainland US pop, rap, rock music or native folk music in Europe, Asia full of shouting, yelling and restless, almost violent, energy or the so called patriotic national folk songs from "hell" many fanatical nationalists love to promote and destroy World Peace chances. To counteract the historical inertia we need a *gentle tender soft* grace of a 50 times higher intensity, so then tones like this Hawaii, Guam, Easter Island, Japan stuff are not ideal. In every country on Earth (unknown to people of that country, who're not familiar with eterni tone and what it takes to maintain Eternal Universal Peace) there are dozens of folk or more ancient songs that are far too savage, aggressive, macho and gorilla (who kill fellow gorillas) energy and to achieve and maintain Eternal Universal Peace, we need to be real and choose: tradition or civilization. We know what tradition gave us: eternal wars. If we dig enough, we find the dirty truths about every region on Earth and how much of the past is reflected in the emotions, tones, dance moves of many songs today. For example, those who never visited Hawaii, think it's this super peaceful place of Aloha, but look at possibly true versions of the real history (killing prisoners of war and eating them later, like Mexican cartels sometimes do). See the Hawaii homeless. So, if we want to end the cruelty, to create a world of *universal* loving kindness, we need to change everything in every nation, island (Hawaii too), town, some popular songs (last) and traditions that are not ideal: bad sports, macho military parades, odes to Eternal Killing, or even dances that have a violent rhythm lacking gentle nurturing compassion for all who suffer due to wars.

To overcome the historical inertia, the extreme cruelty of our society that condemns millions to jail, needless wars while millions of churches, etc sit empty and play quite aggressive music that destroys the empathetic kind center of humans that recognizes all do everything, not a scapegoat, we need a music that is extremely gentle kind spiritual soothing eterni, compassionate to neutralize the cruel genocide vibrations of eons; *we're today, most of our lives, 99+% of us, like the illiterate men before writing and books became common (1500 when printing press invented)*, except this 'writing' is the creation (microphone assisted to prevent yelling) of an eterni tone in our music, lyrics, speech, thought, etc; this is even more than that, since one can write without changing self, but one can't speak eterni tone all the time without becoming a wholly different person, 100 times nicer sometimes; this 'superhuman' tone that requires enormous cognitive effort, ultra good sleep to filter out negative emotion and make it so gentle, etc is needed until we had eliminate all violence and Peace was stable for at least 100 years, then we can slowly reintroduce more upbeat music, when all torture, etc, jails, etc are gone; to not require this gentler vibe globally (like we ban drunk driving) is, *arguably*, to be lacking compassion, virtue, kindness, it is to miss a chance to neutralize the violent historical inertia, to miss a chance to bring civilization on Earth, to miss a chance (this lifetime) to give all the human right to decency, to a life of peace, and no more bombs flying, cities made rubble. By consensus, by science studies showing human behavior and actions after such music played,

people can decide what is acceptable on radio and TV, if we want to become truly kind and have 0 violence, 0 jails, 0 torture. It's easy to point fingers at this and that, but if we look deeply, *95*+% of music worldwide (popular songs played by youth last 30 years), in *all nations and cultures*, is creating the energies that fuel war and the state of affairs today; the historical inertia is so huge, that the music and TV-radio vibe have to be so gentle kind sweet, at least *the top 5%* gentlest content today. until we achieve true peace, we need to take a break from this addiction and heal our planetary disease. So, the military, with absolute power over all events in each nation, allows bad music, since there is "true" (*false*, the only free speech is for people with 10 followers or readers) "freedom of speech" in some sense as long as it aligns with military recruiting goals via violent video games for remote warfare, in their crusade for human rights to free speech and perhaps inciting the youth to such tones and behaviors as these music clips, worldwide, so peace, decency and kindness☺☺☺ in vibe are evaporated worldwide and war is here to stay.

It often seems, maybe to me only, due to a love of more peaceful music these days, that in USA, and other countries, as present national anthems are a great testimony to, sometimes, for many songs, etc, that if you incite as much war thru music/anthems as possible, then you're going to have your music become so popular, the FBI will approve of it, Eurovision music awards (2021 winner, Italian vibe prep for WW III?, simply unbelievable, to me this is pure terrorism, not music; 2022 winner: the 'gentle' lullaby vibe from Ukraine? 2018 winner: "stupid boy" song, Israeli grace?) will promote that style (like they did for many decades) as it is really lacking in gentleness tenderness kindness and stirs up aggression, to "elevate the EU and European nations to a higher level of *motherly* universal soft healing grace"☺☺☺ the more shouting the better, the ruder the tone the better, the more vulgar, mundane or low IQ, banal, 0 science, 0 immortality focus the lyrics and the emotion the more lenient the government is towards it, especially if played in some special neighborhoods only for social engineering, the more popular a song becomes (granted, some of the creators of these bad songs are role playing, creating other far more decent stuff, or mostly decent stuff, but the fact such a song is even allowed to pollute the entire humanity is beyond belief and leading the entire humanity to the end fast), the less peaceful *loving gentle tender soft healing* nurturing compassion, the more popular: we're on an interesting☺☺☺ journey as a nation, not sure what will remain of USA, at least, we can save our spirit, what is left of its imprint on the brain, brain that the military in each nation doesn't control by their total control over the media, Internet and everything. We're already used to the Protocols of the Zion Elders, (more on it here), except the spy who wrote it forgot to mention that spies (from 100 nations, not just Mossad, they use 500 times more methods than that old Protocols set) also disguise as clergy or religious political leaders believing in fake stuff, to create, magnify denominations, religions and keep entire countries enslaved in ignorance and abysmal IQ, a little music to distract with more violent content, low IQ or devotion to "Prophet,

Buddha, Avatar, Lama, Son of God # 2457896" no questions asked stuff is not enough. We got free will to have infinite compassion for these musicians/singers who're sometimes manipulated by various spy agencies, since they have gone thru tremendous torture to create a perfect mind controlled slave, at least slave for a while during a recording, etc... They're ultimately victims of the collective historical inertia energies, a reflection of our lack of interest in peace, and we can't really complain too much about human body-brain shells, since they often 100% remote drones, the entire creation of spy agencies and the soul (unknown to us, we only see the vehicle) can be the nicest on Earth, yet the vehicle has been taken over by the inertial historical forces, our chimp nature. This is USA, the land of damaging the quantum field of humanity that nobody is talking much about, since "we have to say we're the greatest nation on Earth always or be killed", with or without Americans realizing; many are not even aware of the fact this is not creating peace (perhaps due to the terror by the military controlled media, as in all nations, who is busy never mentioning too much about peaceful instrumental or vocal music like this), so will we avoid the demise of huge empires (now 50 times smaller) by choosing peace before it is too late? What about ideas like this hypothetical anthem? And hold on, then we're called 'anti-freedom' for just wanting the human species to have a chance to survive.

Civilians need no guns, we, Eternia, support a global ban☺☺☺☺☺☺☺ on all killing weapons for civilians and for kid toys that resemble anything that kills or injures, since Planetary Defense Soldiers only need to protect us and guns are useless for fighting aliens anyway. If they reach our planet, guns are useless in fighting them, they got tech to shield themselves against them. If aliens attack, Planetary Defense can give everyone a mass produced easier to use device that is 1 billion times more effective than a gun or they can deploy the ultimate system to wipe out all aliens in the solar system if no non-killing tech exists due to the novelty of the alien, thus having no time to develop special alien brain influencing tech. The police can have devices to kill animals who're sometimes attacking humans (big cats, etc), especially since a *carnivore animal kills thousands of 'too close to human biological system and size' animals*, destroying human quantum field due to proximity. Due to this effect, we support a vegan diet for all carnivores in zoos (vegan meat) and the end of conservation of all wild animals who kill. If big cats attack humans, we kill all big cats in the area, to protect mammals/cops/people and free them from the need to wear guns, which are not needed in a world of *peace* where all are *angels*. Thus, we support the gentle (as we reach 0 violent crime, cops need no guns) end of the killer carnivores, so we have 1 killing of a mammal (painless, without suffering/bloodshed), instead of the carnivores doing 9,000 killings to survive and then their descendants a trillion killings next millennia via their offspring which kill animals daily, causing human-human war due to quantum effects of violence on like species that imitate the species around them. ☺☺☺☺☺☺☺

USDA already killed, in an improper or cruel way, due to lack of money, research (*much $ is*

wasted with liquor stores, gambling, strip clubs, vape stores, stadiums*, the thought of evolving the quantum field of the planet, of being nicer to animals is not there*) 2 million mammals and 15 million birds in 1.5 decades, to protect livestock and airplanes from crashing, etc, see full list in 2022 here. Sadly, some of these animals are even suffering a lot and are vegan, so we need to evolve these bad practices too. However, if we eventually end all carnivores after achieving World Peace and 0 violent crime, our planet achieves freedom from bloodshed, as all humans eat vegan or eterni food and move the quantum field away from bloodshed. Of course, this is done with high tech drones that send darts for painless death, ultra important; each gentle end will save brutal painful polluting for the human field deaths of thousands of animals; humans already 'culled into extinction' about half a million species by encroaching on their habitat, so a few dangerous carnivores is nothing, in fact, we will probably cause big cats, wolves, etc to go extinct without anyone wasting time with getting rid gently of hyenas, coyotes, big cats like we caused endless species to disappear, as more cities expand in natural parks, and become areas with lots of trees, real and artificial, producing oxygen, replacing forests, etc. The souls of the animals will perhaps reincarnate as the peaceful animals or even evolve to human stage, if it is possible, they may become birds etc as we expand to 1 trillion planets and keep nice peace doves around. Or they will simply reincarnate on wild planets, not where evolved eterni humans exist. God will give them new bodies. This absence of wild animals, and of violent crime a few years after World Peace is achieved, removes the need for guns to defend against dangerous animals which can easily kill a human in rural or near natural habitat areas. It's imperative we remove all references to guns, drugs, alcohol, lust, violence in *music* globally, so Eternia will be the champion of that idea too by making those references illegal in our nation, besides promoting eterni tone, lyrics, etc. Because Immortality *for* All means just that, no more killings in war or citizen disputes, let anyone interested form groups that focus on Immortality *for* All. Let all folks sing together ways to bring 500 year lifespans. May all love the vegan diet and the end of humans spilling animal blood via high tech eterni food. ☺☺☺☺☺☺☺

It makes sense that to achieve more precise telepathy with more peaceful spirits one might be helped by playing only very peaceful music and promoting World Peace and nonviolence (a world where nobody harms another physically or non-physically). This would imply avoiding music that is upbeat and only listening to peaceful one (to counteract the harsh tone or restless rhythm or unkind words in world music, movies, literature, speech, society, TV, radio). If we're already always peaceful, no music is needed, but if we ever listen to music, we can choose peaceful meditative types, if we want to bring a better world by becoming more compassionate and empathetic. A restless person often manages to piss everyone off. ☺☺☺ If you like a song, it is sung in different melodies and voices, and for best theta-delta brain waves we can choose the softest gentlest most peaceful version. Promoting peaceful movies, songs, the editing out of "all

violence, rape, insults, vulgar language" in all scriptures, movies, songs, political discourses helps us to connect with more evolved spirits or quanta whose aim is World Peace. It's possible that in a few centuries science will prove that strange hypothesis that gentle music (and gentle tone of speech, which unlike random unconscious speaking has a different geometry as in cymatics, emotional, astral, energetic) will also attract spirits different, even as children, because "bad" music/tone of speech (astral sound of speech based on emotions accompanying it) annoys those souls as Tesla was annoyed by sounds far more than other people. Someone listening to such annoying music or not making effort to modulate speech while in the presence of this soul (estimated probability of future behavior), or not doing certain things important to the soul at all or to some degree (could be any of these telepathy habits), can't then be the parent of the soul. Another spirit will incarnate and that soul may choose to go to another planet. Such a baby might only thrive in an environment full of *gentle tender soft* loving gratitude and praise, where the gentlest most soothing lullabies are joyously played as mp3s before and after conception. "Baby Immortal, Telepathic Loving One, Bringer of World Peace, Bringer of Heavenly Peace, Gentle Softness, We Love You Forever, Adore You, Thank You, Praise You, Welcome You, You're the Star of Immortal Light, the Bringer of the World of Immortals, Baby Trillion Year Baby, Come Now Descend On Earth and show us how Heaven is like, Baby Immortal, You're our Hope, the Hope of World Peace, Heavenly Harmony, Ease." See how to install Chrome extensions. ☺☺☺

Because the neural networks for many brain functions are shared, upbeat music (even if it has angelic lyrics, but music style is more dynamic like some rare upbeat classical symphony, country, romantic, blues, pop, anything non-meditative) has a tendency to more easily cause limbic system (emotional intensity) overflow of TELEPATHY EMPATHY perceptions, making it harder to distinguish the feelings and thoughts of others or of spirits, leading to more conflict and low accuracy in telepathy exercises. 3 days have 259,200 seconds, and just a minute, 60 seconds of upbeat music, is enough to lower the ESP-TELEPATHY precision for a few hours, since the brainwaves have changed and the associated neural networks have caused a slight increase in cortisol. To make a computer, it takes 1 month, but it can be broken in 1 second. To reach a high empathy-telepathy state of reading your child's (spouse, coworker, etc) emotions or thoughts can take 3 days, but can be diminished in just 3 minutes of upbeat music taking you out of the zen state of theta-α brainwaves. While people can obviously learn to not be affected too much by this, it's still going to have an effect, just like studies above show aggressive music makes aggressive people, or low ω3 is associated with violence due to lack of DHA for synapses that transmit information brain-wide. Music has a physiological impact on the brain independent of the feelings (neutral, dislike, happiness, like, love) we associate with this or that song, impact that can be seen on MRI and brainwave equipment and which affects ESP precision too. An upbeat music that a person may like a lot, may trigger a flood of feel-good dopamine

and super-excited emotional state, of such intensity, that it will block accurate perception of others' emotional states (non-joyous) or of images, words, sounds. This blocking can occur also due to the brainwave patterns impact on brain areas involved in precise perception of telepathy transmitted or psychic information in some location. The hypothesis is that 100 studies of 100 people each evaluating telepathy/empathy precision while listening to music one is neutral to (not music you like or dislike), will prove that the upbeat music lowers precision, while tranquil one enhances it. No music may even be better than any music in many cases where it's very difficult to be precise. Listening to aggressive, restless or very upbeat music enriches the psychic field of humanity with like energy, having via telepathy diffusion a real effect on the probability of misunderstanding, rushing, super excited emotionalism, fiery zealousness, or even violence ever occurring or possibly lower empathy-telepathy (harmony) and bad consequences as such, since we're all quantum entangled to all. Even jokes or sarcasm about bad things can be harmful via telepathy diffusion that loses context. ☺☺☺ The interstellar civilization of 5,000 year old human Immortals that had peace (no species ending star wars emerging from solar systems declaring independence due to lower emotions inducing music) for 50,000 years has a vastly different eterni personalized (for DNA, microbiome, and actual atomic structure) nutrition than us, based on very complex models and supercomputer calculations. Likewise, the music that sustains such a peace/lifespan is probably personalized and vastly more neuroscience supercomputer models based to avoid the 10 second end of humanity. ☺☺☺ A reasonable hypothesis is that the music is very different/serene, gentler/higher emotions inducing, with lyrics/patterns that focus on the higher good of the collective of Immortals or altruism, empathy, compassion, gentleness, tenderness, grace, hypothesis formulation and testing, questioning everything, positive emotion replacing negative emotion through awareness and technological aids, like prerecordings, background music, etc, immortalist lyrics, etc. Chariots reached 25 mph, then Helios 1 reached 215,193 mph due to more knowledge. Please read the end of the God Hypothesis section for more on music lyrics and rhythm. ☺☺☺☺☺☺☺

CHAPTER 8 – Speech, Thought, Feeling, Energy Tone & Content

8.1. Eterni Tone of speech (examples) 8.2. Content of speech (and thinking or feeling)

☺☺☺~*~ **Eterni Tone = Immortality *for* All** ~*~☺☺☺

See the New Phonetic English for Eterni Tone & 1 Earth Language: move tongue/mouth less, use neurons instead to improve the *gentle tender soft nurturing graceful* serene loving kindness of the Tone: develop a New Cortex. May All Nations Merge as 1 in the Eternal Radiance of Universal ☺☺☺ Unity of Tone, Language, Immortalist Culture, Immortalist Anthem & True Equality. ☺☺☺

☺☺☺ 11:11 ☺☺☺

☺~*~ May all humans live to a trillion years in Eternal Universal Peace & Bliss ~*~☺

8.1.1. **Introduction:** gently *listen to* 100+ kinder vocal and melody tones *like* the 1000s☺☺ on youtube, very different than the tone of most "cops, police chiefs, CIA-FBI, politicians", etc who sound more like Hitler and these yelling clergy from hell: pastor, rabbi, Buddhist monk, imam, Hindu preacher and who have turned USA into the dictatorship of the Most Macho, Mean, Yelling and Agressive.☺☺☺ Violent crime on Earth is 1 trillion times higher than ideal for Eternal World Peace maintenance, due to our undeveloped emotional brains, that masticate sounds instead of emotionally and cognitively singing them in eterni tone. We need to feel/radiate words so as to imbue every sound with the Eterni Tone filter of *compassionate* happy *gentle tender soft nurturing graceful* serene universal loving kindness, not masticate/vocalize the words. We need to develop empathy. We need to change languages, to make words shorter via

minimal mouth movements and sounds, so that we can focus on the higher cortex immortalist brain emotion functions instead of mechanical larynx/jaw/tongue movements. *The* nutrition section *explains, as millions of* science *papers explain, that* nutritional *deficiency early in life has some irreversible effects on* lifespan *length, health and brain. Likewise,* acoustic deficiency, thru lack of eterni (new word), eternal *or* etherial (more other worldly, gentler, more like a whisper*)* *or* cohetarian (coherent *eterni*, defined next page) tone to imitate from *"people around (parents usually) during pregnancy, first years of life",* has irreversible lifelong effects on behavior, morality, ethics, lifespan length and health; so, set humidity to 60% (see humidifier section) *or even 65 where you live, to keep throat and vocal chords healthy, eyes wet and to hydrate well.* All yelling, shouting, sudden powerful all out blowing of nose when sick or coughing, etc, any sprinting without first training self to jog, run gently, or doing 30 pushups without first doing 5, 10, 15, 20, 25 easily for months, sudden effort (pulse rises fast and stays high for too long), excessive laughing, holding laughter, head shaking during music concerts, sudden rise from bed from pulse 50 to 90 by doing some running or etc (killed many seniors), high strain during defecation *(wait, let feces come out naturally, many died during defecation, yelling, procreation due to devotion to the wrong idea☺☺☺ of "overwhelming force" ethos of "true" maleness),* create turbulent flow of blood via higher pulse/blood pressure, rapid movement that causes vascular tears, which become scars, bumps in arteries creating new plaque via turbulent flow, plaque that can rupture, with clots going to the brain causing vascular dementia over time, leading to IQ loss of 30 points, poor decisions, shorter life. Raising voices leads to brain arteries like these horrific pictures of Alzheimer arteries that starved brains of oxygen/nutrients. Avoiding raising voice protects arteries, besides avoiding violence or drama. Parents with tone issues can use youtube recordings of healing voices often (acoustic vitamins), try to 'sing' (musical speech) often if speaking (at least around the kid, fetus, before conception even, prephysical baby), to modulate and filter bad tone out, turn the 'little unrefined chimp' into an angel, to give their fetuses, kids what they never got, since eterni music was not freely available online as youtubes anyone can turn into mp3s etc.

If we want to lower violent crime 1 trillion fold, we need to make the media, TV, youtube videos, etc 1 trillion times more eterni, so this will mean finding via neuroscience the best voices to activate the eterni (compassionate happy *gentle tender soft nurturing* graceful serene loving kind) ethical behavior (least aggressive) centers and have those 10 voices be the AI over for all content. The point of a youtube is not the voice, but the content, so your contribution is the content, the voice will present it in the correct way, in which 99.999999% of people never can. It will be that voice 1 in 10 million that totally changes history. Right now we have 2 million low quality videos on a topic by 2 million random uneterni voices, when we could create one 25 times longer video than the average video in eterni voice. Sort of like instead of a 1 page PDF

(summary of a 10 min youtube), we get a 5000 page PDF with 1, 5, 50 page summaries within it. Today we have 90000 garage companies making terrible vitamins, when we could have 1 company making 100 times better vitamins, properly tested, formulated, packaged, stored, shipped. Same with 10 million youtubes, like TV stations, garbage in/out, quantity not quality. To create these high quality voices, the best in the world, and then an AI to use for each video, we need to have these people avoid any violent activation of stress, fight, flight neural pathways, as done today by macho mucles exercising folks who simulate violent acts and infinitely low IQ stuff any Immortal would not engage in, since they live to 1 billion with physics. We will use 100,000 scientists to create these perfect human voices and then the AI voiceovers for all online content, educationa dn everyhting, with all officials releasing statements in these AI patterns to be able to remove genetic pathological aggression in all. To build a SpaceX rocket that travels 1000 times faster than human natural speed of running, we select the best engineers who're specialists in rockets. Thus, just as we don't randomly pick janitors or people off the street to run SpaceX or nuclear fission reactors, we don't just allow anyone to pollute the airwaves and youtube, online videos with their voice, we create the VERY BEST voice that travels to the World of Eternal Universal Peace and zero Violent Crime 1000 times or a Trillion times faster, and that Voice is only 1 in 1 billion, created by the top 100,000 neuroscientists, neurologists on Earth based on the most advanced science of behavior. Every person's DNA needs to be upgraded by the most Eterni Voices on Earth we create via training, and AI, for the establishment of Eternal Universal Peace Civilization of Immortals. We took the ebst cleaning tech, the soap and had everyone use it. We took the best communication tech, the keyboard, and everyone uses it to access a trillion billion more data than before. We will take the best Voice and everyone will use it to read their content. It's that simple: the chimp voice replaced by immortalist voice of Ethics, of *gentle tender soft nurturing graceful* serenity.☺☺ The voice we listen to creates the level of aggression we will display next 24 hours. Even today, many lived to 115 by doing zero exercise, and with the proper nutrition, humans would be able to live to 4000, everyone, without any exercise that activates the aggression pathways, the stress, the urgency brain pathways, that lead to conflict, war, etc. You can't create the Eternal Grace world of Eternia with the present "sports" that activate the vocal path of violence, and are a form of acting as if violence is here to stay and we can't eradicate it fast by the universal education, universal housing, universal banking, etc companies. Just as 11 companies 3 agencies will replace 1 billion companies and agencies, 10 voices, 1 accent 1 language will replace 10 billion voices as we move towards telepathy and identify with our ideas, instead of our chimp masticating sounds so much. We think and are happy, no longer talking, AI voices make our thoughts audible, we think it, the faster than light 'WiFi' or LiFi amplifier receives it, hears it and nobody speaks, being focused on the higher cognitive functions of creating billion year lifespans via science. These 10 voices allow us to protect citizens, by using AI voices and not allowing

foreign spies to know the voices of certain people, as that would enable them to identify via scanning of all phone, Voip unsecure phone networks who is who, what they buy, their routines and how they could be killed. Using AI dubbing gives us all the best protection too. ☺☺☺

Obviously, in an immortalist society, the government creates the parent license, to require all parents to listen to the most amazing & beautiful ☺☺☺ 1 in 100 million voice videos, proven scientifically to cause the highest activation of the happy compassion empathy brain regions, so that pregnant ladies can listen for hours daily to beautiful sounds created by the most healing tones and voices and neuroscience of human baby happiness experts (experts measure the diagrams and brain areas during development of national pregnancy training videos, they don't speak, as their strength is MRI or behavior knowledge, not tone) (who help, via the daily videos for pregnant ladies, to induce bliss in fetus by having mom enter bliss states) and feel great, make baby associate the infinite bliss of mom (happiest in her life due to meditative classes she watches or listens to on the PC as part of 222 weeks off to create a deeper child parent bond) with that immortalist tone of speech, gentle, soft, kind, so he has the motivation to fight the primate historical inertia to talk like grandma and to adopt the new video tone of the new Homo Happy Immortalis, which he hears daily as mom watches daily her ethics and baby loving lectures. This creates happy babies who're always way happier than previous generations and view orgasm as boring and unpleasant, while the immortalist greeting they practice daily from age 0 to 18 is infinite bliss, thereby shifting the human quantum field/DNA to the Immortal paradigm. Moms who're not happy due to quarrels with partners, cause stress hormones, pain and high heart rate in babies and all these negative feelings the fetus feels within seconds of human voices of mom and dad, ruin the baby, making him unwilling to speak for years and being misdiagnosed with autism (medicated for nothing). Thus, a few arguments can cost parents 300K in autistic treatments later, which do nothing, except cure the symptom, while damaging baby brain and body. Baby thinks that speaking will cause mom and dad to speak and baby knows, from fetus times, that parents speaking means catecholamines, cortisol and pain, so he avoids talking. Similar issues can emerge from circumcision or immersion baptism causing him pain, mistrust and avoidance of parents who ignored his cries as an infant tortured by the pain of penis, lungs or asthma. The baby simply associates parental speech and speech with feeling horrible, pain, etc and avoids speaking until he figures out when out of the womb he's disconnected from mom and won't feel her emotions, so speaking doesn't cause pain, since mom is not always angry when replying to his words: the fewer words, the less she replies with the tone, so the infant doesn't speak to avoid that tone he believes will cause the fetal pain. ☺☺

Baby is traumatized by shouting and yelling of parents, who're unaware fetus feels and hears everything and will subconsciously (for the rest of his life) mistrust or even hate those voices and people whose voices caused him pain as a fetus, and he will believe that any voice or speech can

cause pain, so he's silent. Parents, your voice can ruin your entire family, stop shouting/arguing with anyone while pregnant or after birth, love your kid, protect kids meant to aid you when old. Thus, we need implement the universal education system, kind tone English only videos for all pregnant moms, to create national unity, national tone, national bliss, prevent autism, violent crime coming from the baby hating his parents because of how their arguments made him feel those horrible states as a fetus and mom's anger was felt 20 times more than she did, doing 20 times more damage to his psyche and brain, which often is just 5 times smaller, developing, as a psycho if parents argue. Any parent who shouts needs to be reminded by the Baby Protector Device who says "Be *gentle tender soft*" when it detects parents shouting or raising voices during pregnancy. Both parents need to take daily lessons during pregnancy, on ethics and proper speech, such as this chapter. Unhappy babies can't enter nirvana and unhappy babies become criminals, since anger fuels it. Families, cities, states, nations, planets are ruined by improper tone of speech during pregnancy. Thus, knowing this, the government creates recordings with a quality and positive emotion 90000 times higher than any pregnant mom can make, to relieve the maternal stress from having to carry a 6 month fetus and also to create world's most amazing & beautiful ☺☺☺ gentlest most tender most healing tones. This creates the Unified Accent to support World Peace, as all people speak English and 11 companies exist. Thus, mom and dad are relieved, they only need to talk little, which means whatever they say will be in 1000 times gentler kinder tone. As the baby enters cosmic consciousness of the unified quantum field of humanity and Immortals, he's forever happy 900 times easier than the happiest babies of prior generations. Happy mom = happy baby. The reason is that we want 1 trillion times lower violent crime, meaning 1 trillion times less angry, or happier babies and we don't want any shouts or negative emotions, pain, stress for mom, because that prevents fetus baby from entering nirvana daily during pregnancy, which is the number one goal of any mom of the immortalist society. This enables the baby to shift into a New Species, not Homo Sapiens, but Homo Happy☺☺☺ Immortalis.☺☺☺ This new man, perceives the cosmic breathing of the immortalist greeting as 1 million times happier than orgasm and naturally, is ever engaged in helping all humans to live to a trillion. Arousal doesn't happen, as his brain changes, every decision is made logically (animalism dies), sex is a pro-creation only chore until we become the teleporting genderless shimmering shapeshifting Immortals with the precipitating materializing tech, who can materialize offspring, 1 billion donate 1 trillion atoms each via their third eye or the top of the head, to create the 8 billion parents kid. Skeptics laugh at me, and say that we don't change so fast, but let me ask you this, if you watch female deadly spiders the size of your hand in a jungle or etc you don't get aroused but scared, so when you enter universal consciousness yourself is defined as a formless planetary field, "me" becomes humanity, this information field, this ancient field of eternal bliss, what extends to all timelines and galaxies with Immortals void of erotic arousal or sexual organs, you become different and DNA starts to

change. We become like those we focus on: humans or the Immortals. The ideas above show that most nations waste trillions of dollars due to bad tone of music, TV anchors, etc that create junk emotions, leading to endless wars, autism and behavior healthcare costs, violent crime waves and related jails/courts, scientific fraud, theft and the demolition of honesty. With 35 trillion in debt, it's perhaps time to try something way more efficient to pay our debts: kind tone, universal free education in a gentle happy soft tender nurturing compassionate tone, etc.

If we try to filter speech when tired without singing, it's ultra easy to slip back into normal tone, while barely singing while speaking takes such a huge effort that we're reminded to filter better, at least in the beginning. Gentle *healing* tone *(hard for tired parents without practice)* lowers stress, inflammation (fewer arguments), lengthening lifespan. It makes us think deeper and more often, question more often, cogitate more like a philosopher scientist who always formulates hypotheses and tests them, knowing they know nothing. The eterni tone is the tone of skeptical scientists who offer hypotheses, and is thus the expression of highest humility and genius, advancing scientific and societal progress 100 times more than normal tone. We don't change tone easily when adults, it takes effort of a full time job for years; we can't learn 5 languages in perfect native accent when older, but when a child we can *because baby brains have twice the neurons of adult brains, being far more plastic; the same is true for tone. Nature is aware of this, so it automatically shifts adult tones slightly, in the presence of infants, making it kinder, more soprano like kids' vocal tone, since babies, kids perceive negative emotion better. It makes sense to measure neuroscience biomarkers, like take a pic of molecules passing thru a blood vessel (no need of blood samples), and determine which forms of speech and singing lead to the most anti-aging effects. Of course, this will require decades of research, and can be tried with inner silent singing as well as loud one.* Then people play that music more to enhance their longevity, like each creates their own personal song that maximizes their lifespan, instead of aristocratic terrorists imposing their hooligan music on everyone's brain at gunpoint in all stores and etc. Let every citizen become a priest and a singer. Democratize spirituality and music. This music played on us is not random music, but music to destroy the workers by the aristocratic elites. To protect yourself, listen to earphones to immortalist lyrics songs you create. ☺☺☺

Adults need be 100 times more guarded and filtering around small kids and pregnant women whose fetuses hear and learn from "sounds around"; this is explained in the prerecordings paragraph. ☺☺☺One way to do that could be to form a habit of watching the emotional state first, (close eyes, breathe deeply if needed first when learning this), and create a strong filter that blocks "any word until a very high degree of wellbeing, harmony and bliss is achieved (maximum possible that hour/day, speak only when absolutely needed or asked if such ideal state is not achievable that day, become thus a happier being, as we're reminded to achieve bliss often, instead of preaching; talking in our usual garbage tone (even talking or telepathizing

in the best tone, even if eterni tone interrupts far less) is interrupting or diminishing states of cosmic bliss, since we're barely starting to develop those brain centers and we can't do both yet); normally our emotional brains and verbal analytical critical thinking brains are poorly connected, we're all very "autistic" so to speak (like primates lack neocortex, humans lack the eterni filtering cortex that unifies many brain areas of the future humans, so we use "90% of the brain, not just 10%"), we carry our average garbage of millions of years in our tone, it's like lifting 200 lb weights to change the inner or verbal outer tone and block verbal thought formation before emotion is filtered, cleared, purified and the tone filtering areas are fully lighted; if we don't do that, we will move to telepathy from verbal communication, lacking eterni inner tone, but our emotional brain will be the same violent monkey brain and tone, so we won't be like the Immortals, but like telepathic mortals, equally cruel (thus primitive in technology) to verbal mortals. The move to telepathy is our species' chance to change the inner tone, brain, technology level far more (maybe even 10,000+ times) than writing ever gave us chance to. Eterni verbal tone can help us rewire brain for eterni telepathy and thinking tone. People focus on spelling or pronouncing words correctly while ignoring mental and/or verbal tone. We often like 100 times folks (with bad accent, spelling) with an angelic tone than folks with a bad tone (yet perfect accent, spelling), since tone is character. Accent is not important in the future of telepathy, since AI can take our words, perfect the accent to "native", send it to friends via telepathy gadgets, but pronouncing thoughts/words eternily in emotional-healing-intent tone is human intent (not AI accent), as tone changes our entire thought life, civilization, content of thoughts, thought formation algorithms, DNA, kids, aging speed. ☺☺☺

It's not having perfect accent that matters in a language, but being eterni in tone, since few will even speak anymore. Tone is so important, it changes the accent of a language as humans evolve, to allow positive gentle tender kind emotion to be conveyed stronger and easier, so the tone will create new DNA and accents; genetics create accent and language, telepathic music, telepathic tones, telepathic language too. It may be the case that as we want God's Love to embrace us unconditionally forever at all times, so does God want our tone and content of speech, thinking (inner talk), feeling, radiated energies to embrace all beings at all times with selfless gentle loving kind compassion, healing grace, humblest, least knowing (not knowing, gentleness never knows anything, it always learns), non-assuming most tender softest most feminine most nurturing most peaceful energy and approach, not sarcasm or potentially hurtful remarks.☺☺☺ A gentle tone of speech activates different neural pathways compared to normal speech, especially when accompanied by emotions of *universal* loving kindness, etc making it less likely for our brain to move into fight and flight, negative emotions or panic mode *associated with louder and less gentle tone of speech*. When we interact with other human beings, when we establish relationships with them, we usually use verbal speech, with a certain

tone of voice, *emotions, intents, thoughts, energies radiating out of an area or the whole body*. It's then evident that the quality of relationships between humans, *all nations* and the chance of World Peace depends on the voice tone to a great extent. The world can experience as much gentleness tenderness healing grace softness and compassionate forgiving kind intelligent hypothesis thinking as our tone of speech conveys. The first thing we learn is speech, it's not math, writing, science, politics, any other disciplines. We learn first the tone of speech from parents or day care teachers, we *internalize* initially the tone of speech not the vocabulary or any other human knowledge, its loving kindness, its emotional pitch, its emotional radiation, its intent fully encoded in the tone, its sound, its harmony, rhythm, music, and that's why the tone of speech is so fundamental in establishing and shaping the brain architecture and the future empathy or telepathy ability of the future adult. That is why immortalists require parent license and centralize education in the universal free education of one accent for all USA and one day maybe even NATO. The eterni or the most angelic cohetarian music of Immortals can be thought of as coherent eterni or simply eterni music or speech. Cohetarian is a term used if you want to emphasize coherence, coherent and eterni merged into a new word, the coherent ultra gentle tender soft music, tone, intent, energy, emotion of Immortals; word, intent, energy are coherent or identical, which is impossible for liars, and, more importantly, they're gentle tender soft healing nurturing, since one can create very negative music with coherent negative or ultra passionate zealous anti-hypothesis thinking and anti-humility☺☺☺ positive joyous emotion (pride=short life, after pride comes the fall into the abyss of aging, humility = Immortality, awareness of our not knowing or knowing nothing, humility raises no voice, only lifespan length). Eterni is more than cohetarian (which sounds too strongly related to coherence or emphasizing coherence, which is not enough, since coherent threatening intent-word is not eterni), it is the most immortalist or Immortal like cohetarian speech imaginable, i.e. it tries to imitate as much as possible the tone of anxiety free 900 or 5 billion year old Immortals (just as monkeys can't imitate human tone well, humans can hardly imagine or imitate a tone and brain that doesn't lie or threaten or get anxious or angry, since it lives forever).

8.1.2. The nurturing, *tender*, eterni, healing, gentle SOPRANO speech of immortalists mirrors the vibe of the 1st page of the Immortalist Anthem's trillion times gentler love for the worst person

Eterni speech is a musical speech infused with eterni emotion of the Eternals or Immortals (not so much typical human emotion) that is almost like enveloping the other person in softest gentlest rays of universal loving kindness (that emanate from the whole body) and well being, speaking with more whole brain functioning, with higher quality words, lower quantity, with thought forming less verbally, more translinguistically, more emotionally, energetically, activating on MRI different brain regions than normal speech. Parents unconsciously speak in a more loving, eterni, healing, gentle slightly soprano (not opera screaming uneterni soprano) way

with their baby (adult males normal range is 85 to 180 Hz, adult female range is 165 to 255 Hz), and it's easy as they're younger. As we age, our voice pitch lowers, soprano being associated by the brain with youth and Immortal life. Not only that, but as we age, our brains age, our vocal chords age and we no longer have the perfect control of emotion-vocal chord synchrony, and we no longer can express the range of voices as when we're younger to better express emotions that are eterni: gentle tender soft healing nurturing kind sweet compassionate loving. So, in order to heal humanity, it is helpful to create AI based on each person's best eterni tones☺☺☺ when younger and to use those to speak when possible, after we typed a text or thought it in a brain reading headset. Our brains get stimulated when we hear the wider range of the youthful voices, whereas with older voices listeners are no longer stimulated to cognitive function of younger brains and its more perfect vocal control, they can't be induced to recall their younger years and to reactivate those inactive neurons of emotional life, etc, so they age faster.☺☺☺

Thus, for Eternia, it would help to designate 20 queens of eterni speech from each of the 20 nations who replace presidents or other speakers of government (including generals) (to signify that we made a commitment to changing our thoughts, emotions and actions, reflected in our tone of speech and content), since nature makes female voices more nurturing by design, who interact with the public more and read more or create amazing AIs that heal us and reduce *negative emotion, which leads to war and crime*; the queens can make the eterni *Nurturing Healing* Grace Council of Immortality *for* All, who functions as a sort of Presidency of the 10,000 immortalists (so called parlamentarians and gov officials) - who use the 20 voices as the public interactive mechanism, to evolve the entire human species; no worries, the oldest expert men and women decide what goes in the text, the most diplomatic and smartest people who know all issues, etc - so men don't become slaves of females if that's an ego issue for some; to have the public government speakers those who're never tortured, never stressed is ideal (they can watch movies of what happened before during wars etc, without being tortured themselves, to understand how important gentleness is, etc, wile being allowed to recover from that bad vibe by wathcing uplifting stuff); the queens don't need to know the bad news behind a script they read; the text can be written by people ages 18-100, but the reading needs be done by younger people who're the queens to evolve our ethics and take us from 'humanized chimp' stage to Immortal in waiting or at least, civilized mammal, who doesn't do any act of violence against fellow human; the healing voices Presidents or Queens or gov speakers just read some script using the most healing serene instrumental music as background, and echo perhaps, with shimmering genderless shapeshifting Immortals AI holograms, who have folded hands as in prayer around the real person speaking or central AI speaker, but a smaller size, to simulate the help out there, that we're not alone, and these smaller Immortals holograms have above the head nice thoughts, like "May all humans live to a trillion in everlasting bliss", to help viewers

realize the Immortals help us from the future to bring this world of Heaven, where we're the shimmering energy matter beings, who live to a trillion and live on energy. This would create a *holy healing inspiring uplifting* atmosphere that elevates the listener brain tone, emotional tone, etc, the human spirit if you wish, to a higher vibe, as we would expect from the trillion year Immortal hidden within our souls or quantum info bodies, or an angel of another dimension, an evolved being off-planet. *It's the duty of governments to lead, by living example of speech tone and content, the people to a higher vibe* and what better way is there than choosing the most angelic speakers on the planet, with calming instrumental music in the background, amazing holograms, having the most elevating content in speeches that develops our ethical qualities? To bring Heaven on Earth, we can at least pretend we speak, emote, think like those living in Heaven. We can act as if discovering living to 9 million is around the corner, bring it in our timeline, imagine, visualize Immortality daily on TV and learn to be peaceful, angelic and sweet.

The script or text of the 'politician or gov official' can be read using same music by AI too (everyone also can get an AI of eternitone based on their voice), that way, everyone learns to be calm and happy, kind and eterni in all circumstances and is not brought down by the negative emotion, stress and anxiety of the speakers like today; we want to evolve to be happier,☺☺☺ as that is the key to World Peace too and higher efficiency, cooperation, innovation, etc. Females do a lot less violence and killings globally, war planning, etc, so they're more capable, also due to raising babies, to be nurturing in tone and kind and help us easier to evolve our emotions and eliminate all violent crime in record time. We need to use all tools to bring peace. If we never speak when telepathy replaces speech, but the headset speaks in the most angelic AI, others can't sense our negative emotion, or interpret being tired as being mean in tone, and the conflicts are reduced ten trillion fold since they're not imitating unconsciously our emotion, since the content/tone can be polite and made even better, once approved before released to the microphone amplifier for others to hear; but before we get to that tech, we can do our best to use more AI and or special speakers to change completely our music, TV-radio, government, parliament, etc speakers; gov officials are parrots reading scripts others wrote, so we might as well have the most angelic speakers read it or AI do it, so we think more, speak less.

To slow aging, we need to speak like a younger person or personal recording we made, in soprano to imitate our youngest self, to help trick the brain to slow aging and we can only do that if we hear younger voices mostly, people under 50 or 55 if someone's vocal chords and brain is very unusually young still due to no torture etc; that's why it's important to be aware that there are AI/angel speaker methods or ways a million times cheaper and faster to diminish war and violence, crime and chaos than with *traditional approaches (punish, jail, yell, bomb, attack, torture, etc)* of scapegoat that always fail as society doesn't deal with the cause (negative emotion amplified a trillion times due to low EQ), only the symptom. EQ is important, not just

IQ. If we don't use muscles they atrophy, if our brains don't hear certain sounds, that old people can't make anymore, nor the wild variation in tone and the rich emotion dance, etc, musicality, etc - then those brain areas become atrophied due to lack of stimulation, and we start behaving more chimp like, with lower emotional intelligence due to the aging inertia force; there is one way we can stop that brain aging, that is by exercising our brains, we go listen to younger voices (can be ours) that are eterni and evolve our intent and emotion, to better convey universal lovng kindness and save 1 trillion dollars in useless wars. This goes back to the trillion ways to bring peace without negative methods. Soprano is higher *(above, from the heavenly* Immortals*, from heaven, from "above" - easy mnemonics)* frequency sound than low pitch sound or infrasound (infra means below), just like gamma ray or cosmic energy is much higher frequency, energy ("lower entropy") than infrared. Since when parents speak soprano they're most loving, unconditionally loving their baby, it's a good brain trick to use a more soprano tone to enhance brain wide filtering and to return to the chart of a 20 year old parent etc and that of a loving person, since brain associates that tone with the tender gentle loving care emotions and youth, with qualities of Immortals or long-lived societies, where everyone has those gentler affectionate loving kindness emotions all the time, not 2 months of one's life during interaction with one's infant son or daughter. Every adult is like that helpless 2 week old baby, who needs all the tender loving kindness we can express: how would an 8,000 year old Immortal speak to an 80 year old (too (2) weak old (no longer 1 year, but 30-80) baby, notice how we speak with grandpas as we do with kids, more lovingly) or 40 year old? *He would speak* just as we do with a 2 week old baby, very lovingly; *so can we speak*, and the extra benefit is we trick the brain to go into the chart of the 8,000 year old humans of the future, to jump time. ☺☺☺

Buddhism and Gospel both have a quote about "love all beings unconditionally gently tenderly like a mom loves her baby", that could be a secret to immortality. *Yet,* today, kindergarten thru college, almost nobody is taught this (people could practice this vocal, emotions, intent tone under teacher supervision monthly or weekly for minutes in the weekly Immortality Ethics class), so we end up with the current tone of speech on average which leads to a certain outcome in world affairs, not the most harmonious one, but one with more conflict, as people raise tone, threaten, engage in potentially hurtful sarcarm verbally or in writing. But we can try to improve tone now. I recorded on youtube my voice as I was trying to speak or sing with a gentler tone☺☺☺, in an effort to encourage others to do the same so that they fill the planetary consciousness field with gentler tones: 45 second "May all beings be blessed with *universal* loving kindness, *gentle tender soft* sweetness and happiness that brings them physical Immortality and bliss" (the point is not the imperfect lyrics here, but the unusual feminine gentler tone and the practice to hear ourselves speaking in a gentler tone because it allows us to imitate our best voice when we relisten to it on our phone or in the car, so we begin to activate

the neurons that store this tone more and more and then when speaking we switch easier to a more eterni tone, a tone a billion year old Immortal would use when talking to a human, who at any age, is like a 2 day old baby who needs as much loving *nurturing* kind sweet tender grace as the Immortal can shower the adult "baby" with, so the baby would hear not a speech, but some ultra enchanting other worldly *sounds*, perhaps like a concert of a million voices of such grace and soothing healing power, the baby would be transported into a state of cosmic bliss, since he has never heard that before and he's baffled at this sound and music of the Immortal with tech eons ahead of us in sound healing, just as babies are often in awe when hearing some comforting special music or voice they never heard before; just as adults speak very lovingly, healingly and higher pitch with tiny babies and never get upset at babies for spilling milk or making a mistake, we learn to become calm and realize all adults who upset us are "2 day old babies" who need eterni tone from us the most when we want to speak in the harshest tone; by being *eterni*, we stress less and live longer, as we get angry 900 times less, replacing negative emotions with healing universal kindness and soft tender compassion), see a 1 min blessing (maybe 5-9% *eterni*) ► "May all beings be blessed with universal tender kindness, soothing infinite compassion that brings them physical immortality", or the (5% *eterni*) 45 second blessing mentioned above, 1 min song ► "Let us speak like an angel, gentle tender soft peace, bless the planet with World Peace", 2 min talk (1.5% *eterni*) ► "Advantages of eterni speech" and 2 min live song (1% *eterni*) "Do you remember when we were Immortal". See also the 43, 69, esp. *86 (maybe 3-5% eterni)* sec youtubes about prematter baby, as they're more eterni than normal speech too, plus the many other youtube.com/@immortalia uploads, like loving kindness.

The tender nurturing☺☺☺ universally kind gentleness in the 2-5% eterni tone is often 100 times higher than other tones we use, now imagine if everyone would speak like that on TV-radio-music more often, we would have a synergy of 8 billion people having a chance to inspire all to speak like this more often daily (you remind others 7 times a day, others remind you via social interaction, music, TV-radio, all are reminded so often), thus initiating a positive feedback loop where the universal loving kindness in the world increases 1 trillion times like in a fission reaction (not 500 times as expected from 500x increase in universal loving gentle tenderness % of tone), ending all "cruelty, war and violence", so we focus on longevity instead of fights. Because almost all non-visual information in the brain is encoded in or influenced upon retrieval by the original tone we learned as 1 year olds, when we change our tone consciously as adults, we might also actually promote whole brain thinking and changes, deeper empathy (and telepathy) ability, new associations, divine ecstasy (samadhi, satori) states, and perceptional discoveries as the information is stored in new tones when retrieved from the brain memory banks. If one listens carefully to the voice tone while radiating certain intents or emotions, one notices the differences, in self and others, and this can become a tool to discern the suffering

and intent of other people, their confusion or whatever mix of random emotions they go thru, so that one may compassionately act as the best healer given what they most lack in understanding. When someone is infused with some of the divine infinite intelligence and grace (God is impossible to harm, undefeatable and infinite power, without need of yelling), one has no need to ever yell, raise tone or have any negative emotion, as infinite compassion is always in the background and fear, panic, anxiety don't exist, as one is enveloped by the Infinite Immortal tender soft gentle energy. It's difficult to retrain oneself to speak in a gentler fashion, at least in the presence of a soul who is pained by speech that is accompanied by less ideal emotions, intents, thoughts, as Tesla was pained. Yet Maria's youtube ASMR whispering shows that it is possible to try to imagine that you're speaking with God in human form when talking to a soul or all people, as this helps modulate the astral/physical sound of speech. It's a super-human feat to be able to do that all the time and no soul expects 24-7 compliance.☺☺☺

Mother Teresa and people of all religions used to say God is disguised in all, what tone of speech would we use if God or an Angel would appear to us? Say an Immortal comes and tells a would-be parent, that some easily pained soul wants to incarnate, just another nanosecond baby, as all humans are compared to trillion quadrillion years old Immortals. What would the parent do? Gently try to learn to speak to an angel (easily pained soul) sent from Heaven to make parents better souls, using gentle speech, very feminine and full of loving kindness and seeing the kid they talk to as the Immortal shapeshifting *dazzling* shimmering Angelic Radiant Beautiful infinitely *loving* Lightbeing, of untold grace, sweetness. Our brain automatically goes into the habitual tone of speech we used with others before, so it's hard to change one's tone suddenly with all people, at first, maybe with one's kids or spouse only. Obviously, the easiest way to begin to change one's patterns is to speak like that internally, which has psychic, emotional and telepathic protection advantages explained in the first paragraph of 14.6, as the energy of self becomes very different than that of 99.99% of people. As explained in Chapter 7, soothing healing tones change cellular geometry and dynamics; perhaps Civilizations of Immortals might speak (via telepathy or voice) almost like singing or sing in speech much of the time to make use of this self-healing and others' healing biophysics law of cymatics.☺☺☺

Chapter 9 explains that when we're happy, we smile. Likewise, when we smile, even if fake, we induce the brain to release endorphins, so we become happy eventually. The same happens when we talk in a loving kind eterni gentle tender way, we dial down the amygdala fear and negative emotions (we raise tone in panic or negative moods only), create new neural pathways that eliminate the fear that has been running our civilization for eons. This fear is very strong, primal, encoded clearly in the average tone of speech even. A world of Immortals, of Paradise, can't exist when we live in such fear, as this leads to conflict, violence, and short lives due to war. Moreover, the brain can't discover new science and tech as fast, when fear/amygdala runs

the brain too much instead of neocortex (all brain resources go into fight, flight instead of creative thinking of physics), as it's afraid to make new connections, new physics hypotheses, to ruffle the feathers. It's fear that raises the tone; it's as if we have all become hypnotized by the historical inertia to speak as if we're in panic. Behind a seemingly confident loud speech is often hidden the primal subconscious fear. Most speak like an angel almost 0.1% of the time, imagine if that tone became the tone of 99% of our speech (99% of learning on how to behave may occur unconsciously from the tone of those around, not from how to guides), the world will move from fear to kindness, from normal speech to a kind tender affectionate speech people only use with babies or kittens afraid of strangers when they're massaging the babies or pets to make them happier or less afraid. We're often too tired, rushed or stressed to invest 10 times the energy to filter negative emotion and be the most soothing healer in tone. There is no short-term financial or social reward for that, but the invested energy will repay 100 fold, as we speak less, have better relationships with all beings because we listen more and everyone likes a gentle tone person. Deep down, some brains are afraid of *the* unknown tone of this unknown *world of kindness*, 900 year lives and no violence, lies, threats, yelling. The future human is so different (brain slightly different too physiologically as it processes far less fear), so much less fearful, due to less anxiety as nobody dies before age 80000 trillion, that they may seem like an alien/angel even if looking same as us, hence the fear of the "unknown" tone.

8.1.3. ☺☺☺ Shapeshifting Species whose Superluminal Craft is its Very Body ☺☺☺

The previous paragraph explains the tone that brings advanced tech and etlif IQ, instead of filif IQ. The book's first page hints at our future formless forms, detailed in the Immortalist Anthem's first lyrics too. *A billion years ago,* if we accept the current theories of Earth's history (which are hypotheses only, we don't know with 100% certainty, but in some ancient past there was no human as planet was forming, maybe not exactly 1 billion years ago), there was no animal or plant on Earth, a billion years from now, the future human descendant may be SO DIFFERENT from us, just as we're from "tiny lifeforms a billion years ago". We don't know that though, since we may be similar in appearance, but not inner structure. Bacteria are hypothesized to be the same in many ways as a billion years ago (although we have no way of knowing that, other than finding some crystallized lava that trapped bacteria inside for 0.1 billion years), so humans may look almost the same a billion years from now.☺☺☺ *Eventually, we become* informational *or* pure knowledge formless shapeshifting species, *who can materialize a form for every planet, star, etc one creates lifeforms for or discovers and copies, a species without fixed form, so all communicate their experiences* thru various forms, just as today we have electricians communicate their knowledge to nutritionists, *or we have undersea robots or solar probes communicate their findings to us.* We create a *superluminal craft* that is made of "astral" (unknown invisible to us wave-particles) light, and this somehow can modify matter locally to

allow the formation of a physical copy of us or some lifeform compatible with the temperature and conditions in that planetary, star, black hole environment, white hole etc... Today, humans can make out of *quark assemblies* (called neutrons, protons, atoms) *various circuits* that travel with a spacecraft at 90,000 mph. Likewise, once we understand the universe deeper, we make out of *idprenphoton assemblies* (particles of inter or inner dimensional quality that make up *prenphoton*, a sort of "quark" equivalent in the analogy above), *various circuits* and things that make up the *nphoton* craft (like our current crafts are made of "quarks"), where *nphoton* is an unknown boson, perhaps from a parallel universe with slightly different physics laws, allowing you to travel in vacuum to stars 700 light years away in 1 min, *0.2 billion times faster than light*.

The hypothesis of the *theory of relativity* (not everything in it is false, but it is incomplete as it fails to explain black holes or 10^{500} multiverses and deals with physical light only, 300000 km/s is not the fastest speed, quantum action alone is 10000 times faster) that *"light is the fastest traveling thing" is false,* because there is no proof physical light our lifeforms see is the fastest traveling thing to begin with, but of course we may not know anything faster for now; besides the math and physics is not always that clear, it's sometimes quite arbitrary. We look for neutrinos inside the earth, but what if *various circuits* are made of *prenphoton* more abundant in some vacuum of space ("astral planets or structures" invisible to us), like in those myths of 0 point energy? *They say a* supernova *explosion far away we see now, happened 500 years or 4 billion years ago, but with a telescope seeing prenphotons, not photons, you would see a totally different sky, with the events much closer (0.2 billion times at least) to our time*. Our vision is based on photons, while Immortals can use prenphotons enabling them to see in real time trillions of civilizations in nearby galaxies, but if we had an astral body based on *prenphoton*, *a supernova explosion could have happened 5 minutes ago, not 8 billion years ago*. Before Einstein, others said $E=mc^2$, when we define E and m, we refer to what we perceive in our world and with our senses. It's all relative. In another frame of reference, a different "matter", "light" and "energy" can be related via a different c. We always hear about dark energy, dark matter and, today, "dark" (invisible to the human) light. This is how a 5 year old genius in math and physics, who graduates from MIT at 11 in physics, would be introduced at age 5 to an idea that would help him over 30 years to design experiments to discover the first clues of this dark light, matter, energy. The interesting thing is that if we alter the fetus diet by pregnant mom dietary changes, we get fetus change all genes so he can, like a queen honey bee, live 40 times longer, to 3200, enabling humanity to perhaps discover 10 other forms of matter, energy and light, to get closer to real time view of the universal *neighborhood*. So, nutrition is very helpful to physics, if we want to discover stuff, since many laws are complex and require experiments that take centuries to complete, since to create a craft that travels at 30,000km/s (a tenth of the visible light speed) is hard and even that takes 2 centuries to reach a far away planet, to confirm what

is seen thru dark light telescope is actually true (confirmed 2 centuries later), when it returns to earth 4 centuries later with the video clip, so the geek has to live to 3000 to get a good grasp... This also gives us time to become kinder, bring Eternal Universal Peace on Earth via 1 language and 11 companies, which are needed to discover more, and prevent going back to the stone age due to star wars. In inner cosmology, we have lightbodies (named astral, causal, cosmic, universal), with innermost being subtlest and being made of fastest traveling particles, hence the interesting observation that one can travel in a "lightbody" to a far galaxy in seconds, while by light it would take billions of years. If the spirits or Immortals managing the universe have subtler bodies, they can communicate instantly over huge distances vs what our internet allows.

Back to shapeshifting, the longevity of human lifeform depends on so many things, one perhaps being the original form of the Oldest Immortals, or what we call God. *Why would having 2 arms and 2 legs be the best? Could there be a world where having 3 of each would be better? Or different things about our biology? Why perceive photon bosons 400-800 nm and sound 20Hz-20KHz, when it could be something else?* Will far future humans even speak and eat normal matter? Maybe not. Perhaps the worst person in year 9,000 would be a 100 times nicer than the nicest human today, speaking like an angel from another planet, talking to all humans with the same loving sweetness they would have for their 2 day old baby, as if all humans are their babies who need lots of love. A harmony so heavenly, that would seem total utopia nowadays.☺☺☺ Today, like unicellular organisms before had very little complexity, we're extremely simple and unsophisticated in the cognition involved in modulating positive healing beautiful emotion (creating 10-20 types of qualities into the tone consciously) and filtering out negative emotion during speech, we say "can you give me a fruit?" without massive whole brain effort of filtering that would make our head almost dizzy as it does when we try solve a very difficult science problem, due to asking the brain to do something the current brain structure can't handle while maintaining current speech speed. Even when we slow down speech a lot, it is a huge effort to reach even 50% eterni tone, but doing that creates (over many generations) a Homo Sapiens Musicalis whose emotional, mental inner life and healing musical verbal speech is void of almost any negative emotion, so peace (and much faster☺☺☺ longevity science discoveries as a result) emerge. If nursery, kindergarten, primary, middle, high school teachers would speak in a eterni way and specifically remind kids that all beings are like a 2 day old baby compared to an Immortal of the future, who needs universal loving kindness and healing soothing gentle compassion, then violent crime goes down 1 billion fold, peace arrives.

8.1.4. Eterni Tone of Speech: less mouth/lip movement, lower volume/lung acrobatics, sit, close eyes if recording to focus neurons on sound modulation, to convey *gentle tender soft* peace

The understanding of brain processing of human voice could enable us to enhance our tones by training or using a speaker that processes sound (before it is verbalized, speaker can detect the microseconds before the speech is rendered by the vocal cords without needing to read the mind) and creates new sound to superimpose with the sound we emanate or training so as to make the verbal or telepathy tone the *most* healing *one* for any listener, filled with "tenderness", "gentleness" and 50+ other filters. If reading the presound is not feasible in the near future, the sound tech can be developed to such a degree that the speaker can neutralize negative emotion and create a speech 700 times more loving than spoken, leading to a world of harmony. This would function as a biofeedback system to help us develop higher cognitive processing of emotions (very different than monkeys), to reach perfect eterni speech by always hearing it in others and prevent conflict 200 years before it arises due to tone.☺

There are many ways to speed eterni speech habits, including prerecordings used more by parents, teachers, pastors and public speakers. One thing some may miss is that not all exotic *sounds are* eterni, i.e. if one likes certain sounds types, even certain soprano forms, they may not be very eterni, because the brain uses a lot of energy to modulate vocal cords, mouth shape (o for some sounds), lung capacity and function when we're trying hard to make exotic sounds outside our normal range, thus diminishing our capacity to focus the brain on the emotion, intent, thought filtering centers that modulate emotion, intent, thought, energy radiation and the capacity to convey☺☺☺ healing *gentle tender soft* universal loving kindness emotions and benevolent intent, energies that soothe all and prevent conflict before it can ever arise as a possibility. Intensely soprano or any tenor singing is usually not eterni singing, oxygen goes either to: 1). filtering and eterni tone brain areas or to 2). lung contraction, expansion, mouth special opening and vocal cord volume raising. 90% coherent eterni high soprano is almost nonexistent; while it is the most beautiful music for some, is the hardest one to produce, especially for males who need extra effort. Tenor singing can never be truly eterni really, as it's not gentle, wastes huge neural resources on volume and lung acrobatics and takes way too much of the neural networks of less gentle less tender emotions to pollute the sound harmonics. It *needs to be banned*. A 5-20% eterni tone beautiful high soprano song like Aksel, the Vienna boy choir (too much brain processing of facial appearance, body language as they know they videotape their faces, too little eterni tone quality, too macho, but definitely gentler than most US songs by males; you can't record the best song with eyes open, eyes open waste too much cognitive power), Libera choir (listen to this guy vs politicians at rallies), this choir (watch how much mouths move, how mechanical it is and how little eterni tone emotion is in it, and how much effort they make to make certain sounds, explaining how hard is to add eterni tone to those musical notes), Hymn of Cherubim or this Oslo solo and choir (too bad so of these choirs didn't win Eurovision, usually only the most violent demonic music wins the EU contest of Hitler

shouting disguised as "music"). If they raise the voice too much, they lose a lot of eterni quality, so one would need to be much more rested (meditative states for days), sing with eyes closed while relaxed on a slightly inclined chair, without caring what others think about your body movements or with no audience, to allocate all brain resources (*wasted with visual processing, acceptable gaze, smiles,* being self-conscious on the stage and standing on two feet) *to emotional and* tone *filtering brain areas.* Pay attention to the way the soprano is formed to retain its gentle *nurturing* healing quality and not veer towards screaming, as in most soprano songs where people's brains are so drained by the vocal acrobatics, the *gentle tender soft* healing *nurturing* compasion is lost to some or great degree. When the voice is lower, like this nun choir (8th minute only ☺), we can modulate better. We're trying to go against our chimp nature (we were hollering and screaming a lot in ancient times, so this made us easily raise voice without emotional filtering), so we need all brain resources we can get, that's why in concerts singers would need to stay inclined on a chair with eyes closed, not holding any microphone (it would be above them so they don't need raise voice or scream and waste resources holding it), the audience closes their eyes and takes in sound and lets the singer sing 100%, not pressure him by staring at him, let him sing not show off, hold microphone, dance and waste huge brain resources with physical movement. Unfortunately, because so much dancing, lights showing and everything, the voice becomes 9% eterni not 20 or 50%. All we need is quality recordings, concerts aren't even needed, listen at home on youtube and create World Peace. Singers perform better when no audience exists, as they focus on the tone 100%, eyes closed. ☺☺☺

The brain wastes huge resources just to stand on two feet and have eyes open staring at the audience. The audience, instead of evolving their audio brains and closing eyes, stare at the musician's clothes or movements. If music is to transport us to our future World of Immortals, its emotional and hypothesis thinking cognitive quality, it is very hard to create for our existing brains, so we need relax and focus on the sound creation or processing (when audience learns eterni speech by listening to music), its *gentle tender soft* flow, while we try reach cosmic bliss. Good music will make us reach bliss easier. Angelia (youtube), in some intervals, almost reaches here very high eterni high soprano, part of it is because she closes her eyes temporarily, becoming totally focused on the singing. This lullaby, because it doesn't waste so many brain resources for high soprano and "screaming" (raising volume), can focus better than many spiritual soprano songs on the *gentle tender soft healing* grace☺☺ of *nurturing* universal loving kindness. Eterni speech *or song* is not some vague or *fuzzy "*spiritual*" concept*, but an exact neuroscientific reality seen on MRI brain scans which can tell who is doing eterni and who is doing soprano magnification in his or her "spiritual" music because the director made the sign to "emit soprano sounds now". Anyone can do maybe 2% eterni singing or talking easily, but 80% eterni is like solving the most difficult science problems or differential equations or doing

something that requires *very deep* "whole brain multi region" thinking we aren't wired for.

8.1.5. Emotional Tone Notes as superscript of each note, say gentle[t] is read/sung in a tenter tone

Music has not made *notes* for 30+ different eterni emotional or healing intent tones (harder to hear) and incorporated them into traditional musical notes yet, but it could. Most choirs are designed to have amazing vocal pitch variation, ☺☺☺ but not *emotional quality variation*. For example, we see they have a higher, lower pitch (even in some tonal languages), musical notes of various types, but do they have *tender* tone, and then warm *gentle* tone, neutral gentle tone or nurturing tone or compassionate tone? No. It's more about high and low, disconnected from how the singer *feels* towards others, in a *universal* sense. When we feel a *specific* emotion, we give our vocal traditional musical notes tones *specific harmonics and patterns*. When people write letters for a musical *note*, they could create a system to *indicate one of 30* eterni *emotional notes in which that traditional musical note is sung*. We can even make *notes* for general *inner emotions* one has to reach the hour before singing thru meditation on that state of being.

If one is happy or tranquil or very gentle for a long period before the few minutes of singing, a different pattern emerges that influences the entire composition, even if one tries to sing the 30 new notes for tender healing emotions and intent. This then totally transforms humanity, as singers pay extra attention to emotions, thoughts, intents, energies and humans consciously create all music to mimic the coherent (word, intent, emotion are one, no lies or deception) eterni positive gentle emotional tones of the future Immortals who're like angels of *gentle tender soft healing nurturing* loving kindness. More on adding emotion-intent tone note above *some* words, superscript notes above words, a similar concept, is explained in the section on the power of eterni tone to build or destroy universes, very gentle happiness[g+]. It may take years or decades for an orchestra director to get good at seeing (as good as computers) who has MRI brain regions for filtering light up from their tones, as their ears need to become super trained, and correct those singers or students (speaking in classroom) who fall behind, but they can also use tech to create an AI alert to teacher when AI detects low filtering via classroom microphone and then teacher can ask the student (after class, all students AI has flagged) if he forgot to filter and evolve his brain to a *coherent* eterni brain living much longer. Therefore, for most beginners, eterni tone is far easier while speaking in quite normal (not too exotic) types of vocal ranges. eterni tone is not about how low or high our voices sound, but the patterns of the voice, at whatever frequency (slightly different of course as we're conscious and change it without wanting) we naturally speak, without the need of too wild vocal acrobatics that diminish filtering capacity of the brain. When one is eterni 5-10% for a day of the month, one has a totally different emotional life, being tranquil and happy much more often. Being 90% eterni (normal speech is about 0.03-0.8% *eterni*, 0.8% for the very best tones, most 0.1-0.2%) all *the time is*

pretty hard, it's like mastering 5 hard languages with different alphabets like a native (writing and speaking), a feat that we can only do if we're starting as a kid to master the languages (requires many years of full time study), in this case, eterni language. Only 20 humans or less have such a mastery of 5 hard languages; this is also true for 90+% eterni speech employed 100% of the time, or truer (fewer folks); it's a different language, that completely transforms us. When tired, we can't even reach 4% eterni level 5 minutes/day for days, needing rest for this higher brain function to fully express. Another way to develop a better eterni speech☺☺☺, of loving sweetness, healing graceful kind emotions, intentions and sounds, is to sometimes sing (maybe add effort instead of trait praise) "I love you X, you have worked so hard to be *gentle tender soft* today", "Thank you X, You made such amazing efforts today to be an Immortal Angel of graceful gentle tenderness", so as to train self to better radiate thru the whole body good energies.☺☺☺

We want God to love us, but do we love God in other people thru our speech tones?☺☺☺ The most telepathy enhancing speech seems the one at the border between whispering and speaking, as in some of the most soothing lullabies or softest songs, or in some parts of popular songs that are softer (but have other more upbeat sections). If one never spoke with a girlfriend or boyfriend or person, it's a good opportunity to practice training the brain to associate talking to that person with a soft eterni speech. This is because it will make it much easier if in the first phases it's done that way, to always speak in a more tender soft way with that person, helping to practice this. With people we knew for decades or years, it's very hard to retrain the brain to not go into the automatic tone of speech the brain has for "that person", based on history. Before we date someone, we can recall this, practice it a lot first dates (mentally at least), as it will make it much easier to achieve perfect harmony. Since most people talk the most with their spouse and kids, it makes sense that this is the greatest opportunity to practice at first.☺☺☺

Some say that the Love, Respect, Reverence, Adoration one has for God and evolved spirits (or 100 Trillion years old Immortals if one doesn't believe in God) is fully or partially revealed in many ways, including in the way one speaks to others, treats animals, the way one presents themselves in public, the way one qualifies the gift of Life given by God for all to see and get inspired by. If God sparks dwell in each human and everyone is a child of God, how do we speak to God, with what emotional/energetic/intentional radiation, loving tenderness, humility, non-assuming quality, not knowing quality, perhaps quality, soothing healing graceful softness and musical tone? Is our religion or spiritual path or understanding of physics if an atheist (action force = reaction force in Newton's 3rd law) practiced while speaking? How do we speak? Does it show a lot of gentleness tenderness softness and humility? Perhaps we could even say that no true and complete love (for other spirits, humans, animals) is possible without the tone of voice being filled with loving adoring *nurturing* healing graceful soft tender sweetness that is musical and tries to adore, acknowledge, see, thank, respect, honor the divine in others. All we say

might be a waste of time sometimes, if the tone of voice reveals negative emotions and conduct, intent at any level that would create a negative possible outcome, that would misqualify the Life energy from God. The voice tone is more than a sound, it's a soul print of enormous depth, the full Akashic records so to speak, revealing stuff possibly from before birth if one would have the capacity to tune into the vibrations of the soul that are hidden in any voice pattern and the soul pre-existed. How so? In ancient times we looked at an apple and saw it simply, but today we know it contains trillions of molecules that would take endless books to draw each in exact order. Similarly, today, we look at the voice tone as an apple in ancient times, but in the future, the trillions of gigabits of information would be able to warn us ahead of time of even things that have not happened yet in their body, life, etc, if they continue on this voice pattern (voice reveals what happens inside a spirit or body) and enable us to develop a better medicine and diagnosis, since we understand better what it means, as today the EEG reveals a pattern, the pulse a pattern, the levels of biophotons a pattern. Our voice is a record of diseases even, of how we behave/intend, how we love/forgive, grow/evolve. Physics is easy: we use the gift of life with gentle kindness in tone, because all returns back to the origin. ☺☺☺

8.1.6. Scripture quotes are useless if tone doesn't have the quality spoken of by the quote

The previous paragraph touches on the complete lack of Godliness of most clergy today, as if they don't believe in God at all and it's all a mere car sales event. Becoming a vegan is a little hard first, but acquiring this eterni speech habit is thousands of times harder (anyone can eat vegetarian for a day or speak angelically a day, but doing this 24-7 for decades is much harder). The nice thing is that when we do this *coherent* tone *of speech,* emotional *tone,* intentional *tone,* linguistic *thought tone,* we apparently use far more brain areas than in normal speech, leading to a subtle activation of the synesthetic multi-channel telepathy perhaps, and to less speech, more telepathy, since it takes far more energy to *speak* this way, which engages the whole body, being, as if radiating out an echo of tender gentle soft *universal* loving kindness, altruism to envelop all human beings in the warmth of the Future World Peace of the Telepathic Immortals. Not only that, but they always say that to bring *Heaven on Earth*, we need to fill others with universal selfless loving kind compassionate love which permeates also our tone of speech, changing the content of speech drastically too as emotional filtering increases 10-50 fold. Talking about spirituality, ethics, love, kindness, religion, God, etc and yet using a rough tone is incoherent and makes it far harder for anyone to understand or like the stuff being said or to comprehend the meaning of scripture (Bible) quotes like Ep 4:2 "*With all humility and* gentleness, with patience, bearing with one another in love," 1 Thes 2:7 "*gentle* among you, as a nursing mother *tenderly* cares for her own children", Phil 4:5 "Let your gentleness be evident to all, the Lord is near", "To speak evil of no one, to avoid quarreling, to be gentle, and to show perfect courtesy toward all people" or "the Lord's servant must not be quarrelsome but kind to

everyone, able to teach, patiently enduring evil, correcting his opponents with gentleness". Yet, if you listen carefully what goes on with clergy, spiritual teachers, or even university lecturers or preachers of many philosophies, belief systems, religions sometimes, it's not very coherent, the "gentleness lacking" tone of speech is contradicting what is being said (so much so *some people want to get out of the place*, but often remain there to be polite), same for emotions and background thoughts at times. This contradiction is even bigger for many non-clergy people and makes trusting such people ultra hard, that's why coherence is helpful in communication, which depends on trust and walking the talk, walking and modulating the tone of speech to express loving altruistic kindness in every moment, if one wants God's energy☺☺☺ to flow thru oneself strongly while speaking. The gentlest thing is said to be the most powerful. Eterni speech is coherent gentleness and universal compassion as if trying to radiate the perfect healing vibes thru the whole body while speaking to or around a Trillion Years Old Immortal who can see every thought, astral tone and emotion we have. If some deity, angel, Immortal or nice spirit would be visible to us, when we speak to others, we would speak differently. A person who can speak this way always, could perhaps be called a coherent immortalist or *eterni*, due to coherent emotion, intent, thought, tones, astral, physical. It's the coherence of this speech that increases the ability to heal others with a selfless kindness of 5,000 Watts vs 1, that melts negativity.

This eterni speech and eterni whispering seem much harder to implement than any other "telepathy habits", and they may be the most transforming habits of all (the other assisting these 2 habits sort of), able to dissolve the human consciousness filter partially and to enable more frequent hearing or understanding via trans-linguistic telepathy of more evolved thought forms. Confirmation bias is a super-strong filter that reinforces fear-paranoia and related thought forms easily too. Perhaps, really advanced telepathy is not possible without mastering these 2 habits, or at least eterni speech. This would explain why so few people are truly good telepaths/remote viewers/perceivers if a correct hypothesis. An incoherent man can't hold a coherent thought, emotion for long, nor can he receive an impression that requires coherent reception for a long time of energies, emotions, thoughts. To speak angelically 100% or 99% of the time is to be a sea of tranquility with very serene and universally kind emotions. In chemistry, a catalyst only works if it's 99% or 100% pure, mixing it with junk inactivates it. ☺ In physics and gadgets we have very very precise alloys, or measurements, 99.999% accurate sometimes. Any trace of impurity and the gadget doesn't work. Uranium causes a powerful nuke only if enriched 80+%, way above 3%, if our speech tone is only 3% eterni it is powerless; but at 80% if practiced by many or 99.999% if practiced by fewer, speech *tone may* bring World Peace rendering all weapons useless. If we pollute our speech with role playing bad tones for example or watching bad tones (which contaminates our brain, as we imitate what we hear), we have no way to achieve the precision required for correct perception of various types, just like a lens that

needs to be free from junk. A drop of purple acid base indicator can make thousands of drops of water in a liter slightly lavender, so one minute of bad tone can diminish for days (sometimes for a decade due to karmic effects) our emotional tranquility, happiness, relationships quality, loving kindness, ability to turn enemies into friends and bring World Peace, ethical judgment, spiritual abilities. We drop a stone in a lake and the ripples go on for hundreds of times longer than the second it took for the stone to drop, and they travel thousands of times further than the stone itself, just like with speech affecting thousands of people, not just the speaker. Will we be so kind to our soul, afterlife journey, even our bodies, to always (or at least 80%) speak in a eterni way and discover perhaps the more ignored, yet surprisingly strong *force in the universe* to bring World Peace? String theory says *all is vibration*, like the *tone* of our speech. Spirits might be hesitant to share ideas when the coherence is low, for many reasons, such as the ethics of such people or the likelihood of implementation (many people don't have the coherent tenacity and willpower to implement something for which they see no benefits within 20 years).

8.1.7. Eterni Tone is TRUSTED more & is more Powerful than all weapons combined

Another advantage of gentle tender speech is that it is trusted more (TRUST brings peace and harmony, something our planet would benefit from), so if the new satellite launching rocket blows up and engineers want to fix the issue, there may be 5 main hypotheses offered by 5 engineers about what went wrong. The correct hypothesis may be given by an engineer who speaks in the least eterni way. As a result, it is TRUSTed the least in some cases or this case, as it overrides the logic. The team spends 4 months to test if the other 4 hypotheses are true and discover it's the 5th one finally, having wasted 5 months instead of one. If the engineer would have employed a much more eterni speech, that is much more TRUSTed, he might have gotten the team to test his hypothesis first, speeding up scientific progress by 4 months ► "Blind and sighted listeners judged both men's and women's voices with lowered pitch as being more competent and TRUSTworthy than voices with raised pitch... raised-pitch voices were judged as being warmer than were lowered-pitch voices, but only for women's voices… our findings suggest that robust perceptual associations that systematically link voice pitch to the social and personal dimensions of a speaker can develop without visual input." ► Psy Bull Rev 2016;24(3):856-62. This may mean that a President's radio address has a higher TRUSTworthiness when a gentler tone is used. If a world leader, diplomat, mayor, governor, etc wants the planet, city, state to TRUST him or his nation, he probably needs a gentler tone when doing public speeches. ☺☺☺ This example illustrates the value of eterni and gentle speech, especially eterni speech, which has a gentle positive *emotion*, *intent* and *energy* *radiation* tone, not just the fakable gentle *"vocal" tone [the most obvious* pattern of tone which can be faked, *unlike the* unfakable *emotion*, *intent* and *energy* *radiation* components of the vocal tone]), which is far more TRUSTed than just mere *gentle tender soft* speech. The same advantage is probably very useful in

professions that rely on finding information, on people TRUST*ing* them and giving them information, like detectives. In every brain yelling and louder voice tones are associated with negative experiences, because in negative emotional states people's tone is like that.

Thus, when someone talks in a way that is not *gentle tender soft*, they put themselves at a huge disadvantage, since most brains will filter out, have a bias against and *distrust* the info coming from that rough tone or similar ones. The brain averages out and interprets the "truth" of information in many ways, one being by the tone of speech, facial expression of speaker, emotions radiated, intentions radiated, all of which are heavily encoded in the actual vocal output, etc. Thus, as in the legend of a movie, it might one day be said: "There was a human who came out in America, a human of such eterni *gentle tender soft* speech, with such coherence in emotional tone, intent tone, energies tone, that when s/he spoke, s/he lifted *the Holy* Immortality *for* All Spirit energies in people to a new level, brought many in divine ecstasy or samadhi states (like that of 'saints') and was able to bring World Peace, the start of the Era of Ascending Immortality. It was said that the wondrous amazing ecstatic & beautiful ☺☺☺ Holy Immortality for All Spirit (Holy Shekhinah, Great Spirit, Tao, God) took 100% possession of her/him when s/he was speaking. For indeed, the fruits of the Holy Spirit☺☺☺ are love, joy, peace, patience, kindness, goodness, faithfulness, gentleness, and self-control." One day we will have a President who talks in an eterni way at all public events, something we never had, an inauguration where music is gentle and eterni in tone, and every speaker has a much gentler tone than ever. This will require training to speak like that Immortal since age 0, to be surrounded with such harmonious tones people always, so he or she imitates that tone, not the tone of eons, for decades, the kid (who becomes President) imitates the tone of those around the kid, since usually only very few monks or clergy in the entire world have such a tone that heals and reconciles, pacifies and brings together everyone, relaxing them and unifying *them as pillars of the* Universal Immortalist Peace Alliance. Due to the influence of such a President on billions of people, the world will never be the same, as a new standard of being "a politician" would have been created that totally changes civilization and what is deemed as civil and decent on TV, radio, any public environment where speech is recorded and can be seen by millions.

The technology, tone and ethics of future Immortals is so much more advanced than ours, that many people can't even wrap their minds around it, so what Immortals define as civil and decent is something that most people define as the most angelic healing speech imaginable. Without fanfare, by leading from behind, like the man of Tao Te Ching, the President will achieve that which is needed, while people will say "it happened naturally". Due to the emergence of our species from difficult natural environments, where threats from natural disasters, lions eating us, etc have made the need to yell in jungle very big, all have equated a loud yelling tone with something important and useful for our species survival, but as millions of years passed this

changed and we're moving towards a gentler tone as we're no longer a few "primates" yelling from far distances, but the masters of the planet, 100,000 times more numerous, living closer, and needing to yell far less (distance is far shorter now during speech than eons ago), especially due to microphones enabling us to make the shift we never could before 2000 when everyone could buy a cheap voice amplifier. Yelling is no longer going to help our species to survive, yelling is not needed anymore. Via a phone message or a voice amplifier, we get a sweet tone saying "kindly move away to town x, a tsunami is arriving", with no need to yell, but with a tone that diminishes panic and allows the best moving to occur. Eterni tone will help species survive and thrive, so over time, eterni tone will replace the tone today. This amplifier and other communication techs will enable us to shift our tone to the sweetest gentlest one faster, like the tone of those of the genuinely spiritual people of universal loving kindness with a gentle tender soft healing tone; as a result we will promote more this aspect of behavior in our culture and public way of life, radio, music, etc, reaping universal, eternal peace, harmony as a result.

As explained in Chapter 5.5, during gentle tender eterni speech, we activate, strengthen different neural circuits than during somewhat panic filled moments when voice is loud, so when a little "anxiety arises", we're less likely to switch into those negative emotions by the force of habit of speech.☺☺☺ Gentle tender eterni speech lowers "insults, conflict, foolish remarks" 50+ fold, since we filter, emote, think 10-800 times more, so we're more relaxed paradoxically since we know we won't say potentially offensive stuff. It also makes us appear much more compassionate, kinder, wiser, trustworthy, independent of the % of eterni tone i.e. % of healing gentle tender intent emotion thought, since billions of years have taught our brains that fast speakers tend to "make more mistakes and be more offensive, start fights" and thus those voices are distrusted more without our conscious minds even realizing it; for example, when a guy talks 1st time (or when in bed first time with his wife) to a girl he really likes, he's so eterni in tone, so slow, so gentle, so filtering, so loving, but when he talks to his buddy he talks like a fool, so fast, being so offensive (if same stuff were spoken to the gal). How can someone talk of ethics or Love of God and have such an unloving tone? "By their fruits (tone?) you shall know them"? Our brains act like automatic filtration machines that have bias against what they distrust from eons of genetic experiences: *we don't realize just how much we undermine others'* **TRUST** *in us* by our speech speed alone, let alone the far more important speech tone and emotion. *This becomes even higher* distrust after one has read this chapter entirely, and previous one, since you realize that person is either not aware of this or chooses to intentionally pollute the public and you with their unfiltered speech, unhealthy emotions, since unfiltered fast speech can't be infused with universal *gentle tender soft* healing grace every few seconds, thus can't act as a healing therapy for our planet that needs this tone more than we admit, to bring peace. Evolution taught us in emergencies, people speak ultra fast, thus fast speech cues our brains

unconsciously that it's time to be anxious, so we find slower speech far more soothing; when anxious, we can't TRUST, hence the speech speed alone has a huge influence on TRUST. Parents therefore would benefit in reading this, since when kids are angry or anxious, fast speech is the worst idea: it shows they care little, for the audience, for filtering, for loving that brain who will imitate speaker tones, emotions, thoughts unconsciously, and become anxious or peaceful, mean or compassionate, angry or kind, happy or sad. I know it's sometimes difficult to change tone and speed even minutes a day, but the long-term benefits are worth it. It takes years to change speech tone a lot, but every day we can try recall to quit our addiction to the bad tone of eons, talking so much, so fast, when we could say 50x less in 50x nicer tone. Not only tone will improve, but everyone will think we're smarter, since we said nothing 'silly'. If we analyze objectively much of our speech, 80% of it (98% for non-stop talkers) we could let go of and still communicate what we just said, and yet, in a 5 times better tone (since we now got 5x the time to say 5x fewer words), which will be TRUSTed more and, far more importantly, would create way less conflict as we offended so much fewer folks or traits/actions of a person.

All are Trillionaires, powerful mighty cosmic beings able to bring Eternal Universal Peace:

Our tone may impact human future *1 million times more next billion years* than *anything* we do. Our 'legacy' to humanity is often 1 billion times less important long-term than our tone.☺☺☺ The tone creates a universe, civilization or ends it, destroying it altogether, in the long term, simply because distrust brings war and wars end civilizations, planets, maybe even *universes*. It's funny,☺☺☺ people want to bring peace and even scientific progress (depends on peace for longevity, *so* science is not used for war mainly), but they feel so powerless, because they 'are not President, billionaire, celebrity, rich, Nobelist' - yet there is something they got that's more powerful in bringing Eternal Universal Peace than all weapons humanity has: the tone of speech, or if someone is silent by choice or condition, the *tone* of *emoting and* thinking. All weapons combined are worth $900 trillion; the World Peace effects on humankind over next trillion years are (well, if you agree with my hypothesis, otherwise, it's 'may be') so much bigger from *kind* tone than all these weapons, which means everyone is a trillionaire without realizing, searching often desperately for a way to bring a better world when it's a lot simpler and more *democratic* and available to all than we imagine. God, if God exists, *may* have set it up that way, so that all have equal *real* (not apparent) *power* to influence the future: whether we speak or not, whether we're mostly introvert or not, whether we're on TV or public or not. This *power* refers to our real tone, the part we create that no tech can influence, outside of the one interfered with by others via upbringing, culture, gadgets or torture. When young and naive (or have our thoughts, decisions, beliefs written inside the brain by spy agencies), some think to change the world they need to be rich or president, but when we realize all human action is born of *tone*, we see reality. We often forget our tone is (most likely or possibly if you're skeptical) more powerful

than all weapons combined, in bringing peace or war, long-term, so how do we use our *power*? Do we realize our brains and tongues, vocal chords, that create inner/outer tone etc are or could be *more powerful* than *all* devices humanity has created so far? Mightier than the fanciest combo of nukes? *Every word we* intone *mentally or vocally is or could be* mightier *long-term than* a big thermonuke detonated. How do we use power? Is God testing us, to see how we use power to decide when we become truly Immortal? Wait a second, people will say, how can it be more powerful? Well, we know words today are often way more *powerful* than a stick or sword, the fanciest weapon in a stone age, since they can be used as code to open a computer system and prevent a huge explosion killing a solar system etc or to teach advanced weapon tech that kills all people in a solar system. One say thermonukes will be like a stick is today, and the tone of someone can prevent the disappearance of a galaxy, thanks to one human who lived 2 billion years prior and used a kinder☺☺☺ tone when saying something in a kind gentle healing tone to his friend that stuck and influenced the friend in an immortalist way.

The weapon tech changes each 10 years, becomes obsolete, but tones remain for 10^{80000} years. Our tones are the same as when sword was the fanciest weapon. *Tones don't change much, they're us*, objects do change very fast, human, brain, soul anatomy takes much longer to change, even if we were transhumanists, tones would still be there for 10^{80000} years, able to wield more influence than all tech combined today. It's not like we all can access all gadgets today in existence, but we have this powerful gadget inside, which will affect the future much more. Who could imagine that their tone is mightier than all devices humans created so far? Well, God may be $10^{7000000000000}$ mightier than any Immortal. People are so rich, so powerful, yet they're unaware of it, seeking power to do good in objects, paper money, etc. Are you happy now? You're a powerful trillionaire (even when totally silent using tone internally) sitting on a treasure others only dream of. They don't know the Secret consciously: their inner (& vocal) tone is mightier than all devices humans created so far. Our tones influence behavior of all humans, so tones manage all current tech and future tech 10^{20} times more powerful through ripple effects. All our brains are in quantum entanglement, influence each other, we're one superorganism. In this era, we're distracted by many online videos which often want to share the all important truth which will save humanity, uplift it and move it forward; a question arises, how can we decide which videos are more truthful and which videos are more useful among the true ones? Naturally, some things that are true today won't be true 5 centuries or millennia from now, so the stuff dealing with tone, ethics and the qualities of Immortals will be true and relevant even 5 billion years from now. The videos with a more eterni tone or audio programs etc are truer, because even though they got somewhat irrelevant in 5 centuries content, they at least got the tone which helps us approach the truth of the future Immortals' tone, the space of infinite bliss of their energy of *infinite tenderness and* tranquility; the infinite love, tenderness,

gentleness, kindness of Immortals is *so nurturingly* graceful that its softness and *healing quality is so strong compared to most stuff on TV-radio-Internet*. Truth has many levels to it, temporary truths, valid only for a year (how to get to a store that will be there only 1 year), for 400 years (science that is true for 400 years or tech, before becoming outdated), political truths (valid only 100 years or 5,000 until those nations disappear or alliances shift), etc – and then the truly Immortal☺☺☺ truths – that deal with the very ethics of Immortality. So, when we're left with only a few decades of life, do we spend our lives watching bad tone videos online or improving our tone, recording the best of our tone, listening to it more to recreate our tone daily to a gentler kinder version, and maybe inspiring others to bring into the present the unbelievable wondrous ethics of the Immortals? We create vibes every minute, every moment we watch something, we shift humanity's tone towards short lives or long lives. So you got youtube suggest to you to watch something and you click on it, you took the bait, but then you recall, you're here not to recreate the past, how cities are now (this is irrelevant in 500 years or 5 millennia), how countries are now, how history was, but to create the stuff that is not here – the world where everyone speaks (i.e. *emotes, thinks because we can't speak with a healing tone if we don't think, emote so*) like an angel – so feel free to ignore it or skim thru, spending 30 times less per video until you find one with voice or video that is uplifting and changing your tone to eterni tone. Otherwise, you pollute one more brain (yours) with the average TV tone, and doing so much damage in the long run (if it mixes with the bad part of your tone), in a trillion years, due to ripple effects, maybe things far worse than a small nuke war on Earth that kills 80 million.

It is politically incorrect to state that someone's bad tone at the wrong time could do more damage long-term than a nuke war today. It's ironic how parents and teachers scold kids not doing this and that, but they never listen to the elephant in the room, the parent/teacher tone, and never even talk about tone much, let alone offer a nice living example. We're so unconscious and totally or mostly oblivious of others' tone and what hidden effect it has on us (unless we're super aware and take measures to erase/diminish its effect by listening to something eterni to *neutralize the bad tone at the same time or by turning on subtitles (click on CC and select English, then mute the video, more professional videos always have subtitle option), at higher or equal volume and still understand what s/he said, since you know the eterni mp3 clip already, so it's easy to listen to youtube, while listening to mp3 too)*, we never pay attention to tones for decades until someone draws our attention to the neuroscience of it. Well, is it even worth listening to a video? Much of what we listen to is junk anyway quite often, hocus pocus fake science studies disinformation agents make videos about while presenting some true studies and facts too to gain your trust. It's often junk, unless it's something we urgently need, like a video on how to solve a math problem if doing homework, etc. If we go into a jungle where lions ready to eat people exist, we wear some PPE, personal protective

equipment, like a huge car with very impenetrable doors, windows and tires so we can take off fast if 10 lions attack at once. Imagine if a true immortalist who is 900 times nicer than the average human (just like a nice human is 900 times nicer than the nicest gang members), goes into the jungle of the "torture and killing is our religion" world of mortalists' tones – it's like going into a war zone, in hell itself, without any PPE, armor, shield. We protect ourselves from many things, but not from bad tones than remove hypothesis thinking, whole brain thinking and kind behavior. Bad tones undetected ***prevent us from seeing that what they say could be 100%*** false. Low IQ folks don't realize there are a trillion ways to peace without any threat, violence, torture, so when our brains also low IQ, narrow minded due to tone we use, we start thinking like them, we become brainwashed unconsciously with other similar beliefs and ways of acting.

8.1.8. Eterni Tone is lower volume and slower speed, to perfectly sculpt the gentle vibe

The less eterni☺☺☺ the speech tone ***is, the more likely that person is to be fine with*** covertly killing, torturing you or anyone if so ordered by his boss: thus AI and a very well trained person can detect spies, gangsters, soldiers, cops pretending to be civilians, and violent people easily. In the far future AI could detect even people who killed others as cops or soldiers, due to quantum effects changing tone. If we visit hell or gangs, we run into the risk of becoming like hell or gangs themselves, now imagine kids, who're way more naive and prone to imitating. Brains are sensitive instruments to detect intent, ethics, present state of awareness, emotion, robotization, sleep deprivation, nature of others via their tone of speech. Having an eterni tone increases survival, it is a matter of life and death in some cases: if we pollute tone too much, we won't know the average and present nature and emotional state of others, we won't have a calming effect on rough people (not by choice, they were brainwashed since birth at times) and won't make as many longevity discoveries either, since tone affects how we investigate and think. The energy to create a 50% eterni tone video of 5 minutes and upload it to youtube is enormous, you need weeks of reaching that high level of brain functioning sometimes, if very tired, most people only reach 10% max, once in their life. Not to mention, the content, etc. The truth reveals itself via the tone, hey, if you had a truth that is 1 trillion times more valuable than any information you found online, what tone would you render that into? Perhaps your most eterni tone ever you could that year. So, when people lie or create disinformation content, their tone is very trashy, since it's a garbage cover to hide stuff, they don't make the huge effort and energy needed to present that info in the tone of Immortals, since they don't value what they're saying, they don't believe in it, it's pure garbage to them, their ethics is incompatible with that of Immortals, so the two energies don't mix; even if they mix some mundane truth into it – overall it pollutes your soul. Fake news is easy to detect via the tones of those presenting them.

The louder one speaks, the less one is heard (understood). This sounds paradoxical but the

hearing doesn't refer to hearing a noise level of speech per se, but understanding what is being said. It's paradoxical like many statements in Tao Te Ching, for example: the best leader is unknown to all, leading from behind without words via the Holy Spirit of Immortality for All and the gifts of true empathy-telepathy with angelic spirits that stem from the Holy Spirit of Immortality for All, the second best leader is loved by all, the third best is feared, the worst is despised. The best leader and speech is so gentle tender soft, almost like a whisper or very gentle soothing speech is almost inaudible. If we try speak musically and eternily when alone, we have an easier time to practice eterni speech more often by default with others and to sync several brain regions, creating new synapses that allow for more verification of ESP data, leading to increased ESP precision. Whispering when tired, instead of talking normally, is better, even if not as ideal as eterni *musical whisper or speech.* Eterni whispering or even normal whispering is easier than eterni *musical* speech as it lowers the usual emotional output associated with normal speech, shifting the brain to a more tranquil emotional output by default, since for eons the brain associated whisper with gentleness. A Telepathy enhancing school or any family wanting to practice eterni evolution for epigenetic shifts, can give microphones (see Amazon) to all and enable all students and teachers to talk very gently (like these songs) or whisper and sing in eterni tone even during math classes to practice this important habit, exteriorizing gentle tender energies, positive emotions and intents, embracing all beings in benign energies. Then evolved telepathy speeds up as brain resources go from vocal cord, loud sound creation (*lots of calories, wasted oxygenation of brain*) and processing to harmonious gentle healing *tender* telepathy and people replace speaking with telepathy, no longer whispering in eterni tones in audible ways.

The moment we raise our voice we completely lose the capacity to be a good telepath, empath and healer for a while, since anger doesn't radiate compassion and kindness and naturally, no strong ESP emerges if we're not kind to all beings, since healing, empathy and gaining others trust telepathically is based on tuning into the unified field thru being nice to all. We hear the uneterni or unkind tone of voice in movies, and we need to avoid movies and most violent content, otherwise, we beome like the demons who created it. Being gentle also implies not being so serious and uptight all the time and allowing ourselves to laugh at ourselves and chill out a little. ☺☺☺ After all, we know nothing about anything with absolute certainty since there are trillions of possible causes for the laws of nature and events. Gentleness comes from the awareness we know nothing. Eterni gentle tone allows us to be more positive and flexible, to create the happy joyous moods we want, as we're not stuck in anger or rigid negative thought patterns, we can combine gentleness, smiles, laughs, positive thoughts, words to bring out happy states of being that stimulate optimistic visions and a better future for all. Gentleness includes blessing all people, wishing well to all. Examples of gentle tone accompanied by coherent emotions are in the soothing gentle voice music section. ☺☺☺

Slower speech, lower volume turns off the fight and flight in speaker and listener and activates the prefrontal cortex of rational thinking, while shouting activates the amygdala violence center of impulsive emotional outbursts and dangerous actions that are not well thought thru. Thus, slower speech, lower volume makes us less anxious and low cortisol means a longer lifespan for all. It's a way to treat anxiety in all, to deescalate, to become a calming presence in a world of violence, to more easily quantum entangle with the Immortals, whose technology, wisdom and insight you then have a higher chance to comprehend. Immortals who live 400 times longer are far less anxious (since nobody dies before age 9000), so they *can* speak 2-5 times slower (less too), with far higher quality emotion, intent, radiated energy. There is no drive to impress anyone, to perform, to show 'how much smarter one is'. They're far more genuine and honest, we tend to perform to get what we want from others. War, violence start with negative emotions, so if we don't teach kids how to filter emotions thru proper tone, how to fill all with universal loving compassionate kind helpful *nurturing* healing grace, we can't bring the heavenly galaxy of 9 quadrillion year lifespans. Deep inside our souls, we know this to be true, because in movies the all wise sages speak slower as if the words carry an echo (as in NDEs) coming from the coherent focused universal selfless tender gentle loving kind compassion. If we, telepathic "Immortals" live 9,000,000 years, we have 0 anxiety about making it to the next day or year, as everyone makes it to 400,000 at least, and this makes their world far more relaxed like people in zen or contemplative prayer (meditative) states or α-delta-theta brainwaves. Imagine how much less stress exists when you know you will live to 0.4 million at least. In such a heavenly world, the hypothesis is that the need to rush so much while speaking is not there anymore.☺☺☺

When we massage, in order to radiate good energy, emotion, we slow down, we don't move rapidly. Likewise, if we want our speech to be loving and kind we need to slow down, filter negative emotion and make it a song of love unto the God in the other person. Rushing makes it impossible to have a gentle tender tone. The Immortals have much more time to regulate the tone of speech, to make it melodious, healing, humble, soothing, gentle, tender, healing, soft, connected with the radiation of the most benign intentions, emotions of gentle tender healing grace, *universal* loving kindness, sweetness, *nurturing* compassionate merciful understanding bounteousness. Perhaps Immortals saw that 90% of tension (tension potentially leading to conflicts if the two are not both very kind and capable to heal and calm down the other) comes from the tone of speech (which reflects the emotional average radiative output of a person too), and 10% from vast differences of opinion, due to different upbringing, life experiences, or whatever. So instead of waging wars, they prevent all violence and mean behavior from the very first (conception, not birth) day of life, *by parents teaching kids to speak via imitation of* the most angelic tones of speech they *can express in the presence* of the "Heirs" of the Immortal Civilization, the infants, who will speak in a gentle tone their first words in a few months as they

imitate the gentle speaking (thinking, feeling) parents. The gentlest is the strongest according to a famous hypothesis. In our world, we treat diseases often after they manifest (sometimes just the symptoms, not the cause), wars/violence after they manifest, but in a world of Immortals, everything is prevention, so no disease and no war ever occurs, there is no need of prisons even as peaceful harmonious loving kindness prevails. Future humans know all misbehavior, violence and wars come from negative emotions, and that the brain areas for emotions regulation are shared with the brain areas for speech tone regulation.

We teach kids in kindergarten basic language, math maybe, and 1st to 7th graders many many subjects, but never *emotional* filtering *while speaking*, universal loving kindness or altrusitic love for all beings, *gentle tender soft* speech radiating that love out in practice to all beings one speaks with, thru tender smiley looks to all beings one gazes upon as explained in Chapter 9. How do we want to create a heavenly earth of empathic telepathic people with no violence and no war if we don't teach these and instead subject the youth to improper tone of speech in schools and media? What kind of role models are we for the future generations if we want to build a civilization of 900 year old Gentle Patient Kind Tender "Immortals" living in peace and harmony? In the future world of 900 year old "Immortals", the greatest crime ever happening may be someone frowning and the way this is dealt with may be sending a healer immediately around that person, without the person knowing, to engage that person in a beautiful conversation and with the most tender smiley look of the healer and ability to radiate positive vibes in the strongest way. If we teach kids from age 1, to do this, to radiate thru the whole body universal loving kindness to all while speaking, they all become healers of all human beings and the whole world becomes a paradise. The future us, the Immortal us, know that all war and violence starts with a frown upon which tension builds and gets out of control. Every habit and every action changes the genes and brain structure of future generations, so gentle tender speech enhances the genes and brain structure of better emotional regulation, higher happiness and easier time to achieve World Peace. ☺☺☺ The gentle speaking baby will pass on this habit and new brain structure to his offspring. Brain doubles in the 1st year of life, so his brain will be different than the parents' because he had parents speaking differently. ☺☺☺

Why would Immortals *speak* 2-5 times slower*? They don't speak slower to slow down the brain or thinking speed, but to think* 2-5 times deeper, to think in reality faster, to think much more than in normal speech. We can hypothesize that 99% of communication (and learning of ethics) is often times in the tone of speech, not the content of speech, the tone of thought (ours or others) not the content of thought, this being almost always true when we refer to the tone of some kids, teens wanting to say any lie to get some candy or favor, or tone of deceptive people or those manipulated (brain partially damaged) by others without them knowing, where tone 100% contradicts what is being said. But even with usually honest people, in a power plant or

some place requiring a password, employees may even use a code word, gesture or action after which the tone of speech (more soprano maybe) indicates yes or no, regardless of what is being said, as a way for computer to know. Sure, in an emergency, one needs maybe one code word or number to enter somewhere to tell a computer yes or no, so speed is more compassionate than tone, but most of the time life is not like one word can save a million people or even 1 if spoken fast and without eterni tone. We have often defined in our culture fast talking as the same as fast thinking, but that refers to several components of thinking, not so much the emotional filtering and healing thinking, intentional thinking, compassion for humanity thinking, desire for World Peace and 1 million year lifespan thinking, etc. Ignoring these types of non-verbal thinking means we focus on the outer appearance of our and others' speech (words used) and become ultra easy to deceive by those whose extremely nice sounding (often soft spoken for maximum deception) words are spoken in horrific tones oblivious to those who don't pay attention between genuine and fake eterni tone, tones that reveal the daily intent, emotion, compassionate thinking intensity of the speaker. ☺☺☺

8.1.9. Using microphones, amplifiers to achieve a quieter, more eterni tone (lower volume)

The eterni tone pattern is independent of how loud one speaks naturally, but for any person, louder speech than their natural average means less capacity for eterni tone as brain resources go to higher vocal output: you need to exhale more as you yell, breathe faster, raise your heart rate, activate stress response, deplete brain resources more, inhale more often to be able to yell at the top of your lungs, all this depletes brain resources and tone becomes pure trash. Today, we can speak in a lower volume eterni tone using amplifiers, microphones, such as the Amazon portable voice amplifiers teachers use: Giecy amplifier (gold is great, allows you to see ticks or insects, tick bites can kill you, if in nature) has low static, excellent quality except for playing music, good to hear yourself to help self to improve your tone, hear your breathing, for reaching super-bliss every minute like the Immortals, though you don't need amplifier for the breathing bliss. For far more amplifying power, in noisy environments or at home to make musical speech with echo to max, to enable lower voice (thus better tone quality) and train brain to create musical speech as eterni tone only neural path, you can sometimes use a bigger amplifier with Giecy headset mic, like HIKEP one, on your shoulder, especially if recording or going thru some 2 week holiday and trying to improve your tone. Try buy a wired headset to protect your body from RF and use wired internet desktop/laptop for calls, HD audio Sennheiser SC 75 is comfy (way comfier than cheaper or pricier Logitech that crush ears and break often). The Pile mic is better than the one that comes with HIKEP if you want to record a 2 min song with less effort. Avoid portable bluetooth speakers (way more powerful than a phone speaker) connected to the wireless mic whose volume is adjusted from your phone, because they destroy your brain with RF. We use lower voice volume to enhance gentle healing tenderness and spirituality like these

voices, instead of using voice alone or even a microphone to speak as usual, or sometimes, yell like eons ago in the jungle. We only need to watch some youtube recordings of concerts to see how few have healing gentle eterni voices and how many yell subtly or obviously. Why can't people use tech to become kinder, police/military/pet owners/parents could use lapel (attached to shirt collar, only if using LiFi, to avoid cancer) ☺☺☺ or headset microphone voice amplifiers (with 2 mics: lapel + headset) when calling peers, kids, students, pets in a musical gentle eterni way (like these voices)? This would elevate the human emotional average far more than yelling "Kid or dog or person x, come here" in a very commanding loud tone that habituates the brain into using those macho/war/fight/flight pathways more often and in far lower quality tone (low social harmony, peace, longevity as a result of so much negative emotion leading to eternal war). If pet collars or leashes have a microphone amplifier connected to owner microphone, the owner can sing nicely in normal tone the most soothing call or command (loving request, "command" word is too cruel) to sit, etc or prerecord it and press a button on their phone app (that plays an mp3 for the dog to hear) or a button on the belt (like a bluetooth earphone) for calling dog near them without having to run (maybe talking to someone now)☺☺☺, or yell so much (disturbing the tranquility of neighbors with uneterni angry vibes) from 30 yards and untrain the brain in eterni tone use. There can be future apps for training eterni speech including auto pet calls and repeating of the gentle soothing voice mp3 call on dog collar to "dogname come here or to mommy or daddy" in the most *nurturing* tone we would use with a 2 month old baby, to relieve owners and neighborhoods from such acoustic pollution of endless dog yelling (like levitating craft or forcefield/new material sound barriers will remove most traffic noise). ☺

To prevent kids imitating yelling tones with minimal eternism, companies could make small LiFi amplifiers, worn by parents, powered by a tiny battery that play prerecorded ultra eterni soothing sound of parent calling kid (worn outside only) near them when they go out to play and they venture too far for eterni speech (more than 5 yards outside). Parent prerecords 10 questions or statements like "I would like to go home soon, can you come to me to tell me what you would like to do?" "Do you want to play more or come home and eat? Can you come to me to tell me if we can go home in 10 minutes when you're done playing?", and plays them when needed. The mic allows kid to answer, request help and then have kid voice file transmitted to parent in low data format (for minimal WiFi exposure if LiFi fails, WiFi off always, unles he presses the "Send" button), or simply have some prerecorded mp3s to call kid near parent to talk to him in person (explain why, as in the examples above) to avoid WiFi from kid to parent, giving parents opportunity to evolve their tone and kids to learn from the start a MUCH BETTER ☺ tone than any generation in the last 4 million years. Phones for small kids are a bad idea as cellular radiation can damage their brains. Phones are OK for emergencies, always off, unless calling 911, and ages 14+. Phones with online capability would be for 21+, since they damage

brains and kids don't understand how deadly phone are. That way they don't wear phones or anything and don't get polluted with frequencies much, or parents could carry an amplifier to avoid using WiFi. Yelling "Alex please come here" from 15-400 yards (meters) in a noisy area is a sure way to ruin one's living example of eterni speech, the longer the distance and higher background noise, the less eterni the tone, as volume needs to compensate. Kids emulate parents, and parents are often their only living example of sane tone of speech, if parents can't do it, nobody will, teachers are too stressed and underpaid, nobody expects them to talk like that to every kid, but parents can find the love/time for their kid teachers can't give to all kids. This new tone leads to an *epigenetic shift* that starts a chain reaction that changes history altogether: much like when humans emerged from monkeys, a group of humans goes to another planet and being isolated from the Earth gorillas (songs of gorillas vs the worst tone of the worst future humans) develop immortalism more and become a new species who outlives 9000 fold the baboon humans today. Until such LiFi prerecordings capable parent-kid mic-amplifier systems are sold, *parents could practice some physical exercise and walk to the kid eternily* (with an eterni tone of movement*)* and speak to him with eterni tone to avoid the catastrophe of loud voice habit in talking to the kid. We walk within 1-2 m of the kids to talk, we avoid slamming doors. We proactively build a Civilization of Immortals who think, speak in eterni ways. ☺☺☺

8.1.10. Imagine if we all focused on the Power to Heal, not the Power to Kill

We got Parades showcasing the Power to Kill, Death Worship everywhere, but no Parades showcasing the Power to Heal and Grant Eternal Universal Peace & Immortality for All. Our society is very macho and focused on performing acts of killing simulation, glorifying risky and deadly behaviors that kill humans. We can overcome tradition, historical inertia and change the habit of yelling in horrible tones "left" "right" etc during military/police exercises/parades or displays of guards in every country on national day, visits of foreign leaders. In 1988 67 spectators died during a needless 'parade of aircraft show', and in 2002 another 77 died at an air show. Pilots watch the crowds, try to impress, have cognition impaired due to emotions of "how they perceive me", and are thus more prone to crashing and killing you by accident. *Stay safe: Immortality First, Life first. Save your life, avoid these* baboon *events* glorifying killing that make you lose your hearing, devolve your tone of speech/emotion (due to bad noises) and lose your compassion for the homeless or homed terrorized by greed that doesn't give them triple pane window and decent house ventilation in airplane noise areas. Watch past shows on youtube, with volume turned off, if you're curious. Protect your vibe. Develop empathy for those abhorring such useless helicopter tours (Hawaii visitors harassing locals) and air shows, whose sleep is disturbed by the noise. Imagine if soldiers, cops, politicians would have "Immortality *for* All" or "May all live to 900" written on their more colorful uniforms and suits ☺ (lavender, 100% blue, yellow, lime, purple, turquoise, orange mix instead of the typical one color uniform). ☺☺☺

Imagine if instead of the Power to Kill (rifles, bayonetes, swords, yelling) displayed at foreign leaders visits, countries display the Power to Heal and triple human lifespan, not to shorten it via sudden death in war. We have had these displays of "kill power" for eons and peace hasn't come yet. ☺☺☺ These demonic death worship symbols are discussed in detail here. Why not try *"heal power" displays with eterni choirs,* healing gentle tones *and* colorful *booths with 800 to 8 trillion year lifespan techs* (ultra boring 3 color "Trooping of Color" type of stuff redesigned to 200 color stuff, from military to healing tech and World Peace in 3 months techs, kid, adult choirs singing the trillions of ways of World Peace in 3 months maintained for trillions of years until we move to new *universes*), booths with energy efficient cheap housing for longer lifespan, water filtration, etc tech that kids, adults and soldiers dressed in 200 colors, pink, lavender, gold, white (atypical colors associated with healing and doctors) and smiley faces work on, colorful qualities written on every booth, so when people watch they don't recall war, weapons in their heads, but recall Life, Eternal Universal Peace, and present to the foreign leader and the global audience the image of infinite love instead of war, threat and yelling sounds? The speaker, with this type of music in the background says in an eterni tone using echo mic "Today we can celebrate the advent of the World of Peace, possible within 3 months once all gently agree with it and its maintenance for 8000 trillion years as the more motherly, 50% yin or feminine, 50% yang/masculine, thus balanced, universal loving kindness *of* affectionate *compassion replaces the unbalanced* punishing 100% yang patriarchal *drumbeat of war, as the* ethics of immortalist militaries replaces the present ethics, as humans love all a trillion times more than last century's best mom loved her kids like the Immortalist Anthem teaches, as the kindness of nonkilling extends to all animals, plants, as we move to a more vegan, later 100% eterni diet." ☺☺☺

"This new longevity tech focus, imbues us all with infinite loving kindness and heralds the dawn, so close on a cosmic time scale, of the Age of Trillion Year Lifespans that ☺☺*lovingly tenderly gently kindly*☺ calls us to our duty to embody the eternal shimmering shapeshifting *teleporting* fluid intelligent Infinite Compassion of Immortality *for* All, to Love infinitely all beings, protect the human species quantum field and sincerely wish happy Immortality for All, like civil citizens of a decent society would. To love all beings, not just all humans, propels us to ever more advanced tech to live forever without shortening anyone's life and graduate from this universe as a species, becoming interdimensional Immortals, able to withstand the end of this universe." Let us display universal kindness, not killing techs, weapons of inflicting pain, torture and death, let us deify life, not worship killing tech. We want God's or Immortals' (our future descendants) Grace shine upon us and triple lifespan and all we show others is human wrath/ability to shorten others' lifespan? If atheist, we want others to trust us and grace us with peace and all we show at visits is weapons of killing, no tech of healing, rejuvenation, peace bringing?☺☺☺ There is no scientific evidence that military parades make nations more secure, they only pollute

the human quantum entanglement field and give too much info to enemies. ☺☺☺

8.1.11. The Shimmering Colorful Parades of Eterni Tone/Music at every foreign leader visit

At foreign visits and even at Immortality 'Parades' done near the City Immortality Centers, in order to avoid traffic jams and accidents, kids, colorful uniforms cops, adults could present triple worm lifespans biotech, AI news readers, examples of how they help kids and adults in foreign leader's country, in their shimmering colorful garland and colorful neon lights surrounded booths that the dignitary passes by. The booths are to the right and left of the mind blowing carpet: lavender with gold, or bright yellow gold background carpet with purple trim (contrast), wonderful edge designs and "Immortality for All Humans" written on it every few feet, as well as " World Peace in 3 months is possible", "Immortalist Peace Alliance", "Gentleness Kindness Tenderness Soft Healing Intent, Thought, Speech, 900 Year lifespans", not red carpet, to signify we move away from the past and embrace diversity of thought, Life and colors, not the color of bloodshed in wars. The booths present kids (future of the world) teaching eterni talking to small babies (who're hugged, kissed) and fellow kids, singing lyrics of the "Immortalist Anthem" versions like "You will Live to 90000 years old, Parents will sing lullabies: you're the hope of all humans to bring peace, triple lifespan forever". Instead of reviewing lines of identical soldiers dressed in 3 colors on a one color red carpet, he would visit 50 booths with amazing & beautiful ☺☺☺ colorful (400 colors) displays of techs, vegan foods (vertical farm, water lentils (duckweed) (ω3:6 ratio 2:1)) tech (using 90 times less land), eterni foods (nonkilling plants, animals), choirs, acts of kindness (eterni thought, intent, shown in movie holograms) that blow his mind away, make him want to join the Immortalist Alliance for World Peace in 3 months. ☺☺☺

If police brings peace and harmony, it makes sense to have colorful healing uniforms and later with holograms that change colors, and *military* uniforms *with* Immortality *for* All written on them with gigantic letters for all to see, with police cars being the most stunning colorful cars on the road as symbols of Immortals☺☺☺: fluorescent yellow (the color human eye sees from 3 times the distance of other colors), purple, *lavender*, blue etc, not just black/blue and white. Some police cars with tons of yellow, blue, white exist, but are rare.☺☺☺ Even just yellow and purple/lavender would be a good start for fluid intelligence, instead of the black and white combo, and uniforms too, this way, people know cops can have 15 types of uniforms (not just all black, indigo/beige; no police has true blue or green blue or magenta, only indigo), and pick a multi-color uniform that matches someone's preferences more (green-gold-orange one for example, instead of the purple-lavender-yellow one) when going to talk to someone more. Perhaps,☺☺☺ as with the "devotion to cruelty slows progress (in all areas, even defense tech) analogy", science is more valuable to human progress than tradition of "slightly" cruel tones (lacking gentle tender kindness and eterni wish for ultra long lifespans). Having the most

humane, gentle, kind, intelligent, healing eternily speaking soldiers, policemen, parents, pet owners would benefit humanity far more and enable it to discover defensive capabilities far beyond those the modern chimp human brain can discover, just as we can discover now things way beyond chimps can. People are too trapped in fear (generals are too afraid of any change that a country may take advantage of) for any country to do it alone, only international agreement would permit this, as explained in the World Peace chapter. What if rough tone of speech delays defense progress by a billion years? It may seem illogical, but perhaps the reason humans became not some other chimps was because some started speaking differently, more affectionately, more lovingly to fellow chimps and became over time human speech. For eons humans have lived in the wild and needed to yell really loud, being at long distances and having no microphones and due to emergencies like a lion attack, having a loud voice to warn others and yell was useful and people sort of valued those people, who often became leaders. This is perhaps why the traditional myth exists that "a leader is a guy or female with a loud and deep voice, that inspires authority"; it doesn't inspire authority except when people buy into it.

8.1.12. Eterni Tone allows us to more easily time travel to the world of Immortals

Perhaps in future Civilizations of Immortals, that humans can maybe sense via time-jumping (as ancient people wrote about things that later became true, like being in 2 places at once which is now possible with telepresence and many cameras, or maybe present Civilizations of Immortals if existing), that these yelling or loud uneterni tone people *are* thought *of as* the worst, because the future immortalist leaders have the most angelic healing musical eterni telepathy/verbal tones imaginable in their worlds and galaxies. Can "time-jumping" be a simple fact of pure physics or chemistry? ☺☺☺ To achieve a final chemical, you can try 1 trillion step synthesis, but also a 1 step synthesis with more knowledge. Likewise, perhaps, to travel to a state of the universe ("the final chemical") you can *wait a billion years for history to get there* (80 years from now, a newborn is 80 year old senior due to a chemical synthesis like process with quadrillions of steps, so state of future you "time travel to" can be likened to a chemical system state) or *go there in 20 seconds* thru unknown *random events* of physics, or a time-shifted universe, like a wormhole allows in theory travel a trillion times faster than light speed, to scan it, without being able to influence it of course, to get a glimpse of it: zero violence, only blissful gentleness. The Immortalist Anthem explains we become like those we focus on: God, mortals, Immortals.☺☺☺

Another simpler analogy is this: there are neutrons and protons in an area of desert or 1 billion tons of sand, out of which people create city A, ancient, bloodshed filled, and 500 miles away City B, modern, using the exact same sand amount. The cities look thousands of years apart, one built millennia ago. A human located in the middle of the line between the cities needs to travel 250 miles miles to either city. To get there there are many ways, but it takes the same amount of

energy to get to either, since it's a flat drive, using walking, electric cars, airplanes, hyperloop, vaccum train, etc. city A is an analogy for a version of the future, City B is another version. If we only saw city A like places, we think City B is impossible or in the far future, but it could co-exist, and if we start traveling towards it, we meet this ☺☺☺wondrous beautiful amazing science fiction reality, which is independent of our walking towards it. Our walking towards it doesn't change its reality much (except in an infinitesimal way), only our individual reality changes much because it is merging with that far greater reality. The most beautiful amazing science fiction version of the future individual inner reality (source of outer reality) of living people (self mainly) or yet to be born (yes, the "soul" of what a future kid will be) is equally distant (250 miles) from us as the mundane version of the future reality. It takes equal effort to travel there to City A or B and meet depressed mortals (A) or happy Immortals (B). The most beautiful "soul" is equally distant, from the mundane, the most eterni future brain structure is equally distant. Which city we walk towards? Which "soul" do we call to inhabit the body? The City B sees when we go towards B or A, when we choose and starts helping us to reach City B, its amazing & beautiful ☺☺☺ reality, to make it safely there, free from historical inertia hypnotic power to make us want city A. Can we be kind to ourselves enough to let ourselves imagine the immediate future can be SO DIFFERENT than city A we're used to? The "souls" are waiting for our call? "*Two years or decades from now*" is arriving soon, what future and whom ("souls") will we choose? We may not understand or have language to explain with precision to present people what goes on in that eterni future (except the most obvious to notice and easiest to describe accurately things), just as people from 1 million years ago would hardly be able to explain to locals of their era what goes on today when we use fancy techs and how they work, as they would need to define 1 trillion scientific terms and explain 1 trillion prior inventions first, etc. All times are connected chemically and in physics ways so to speak, in a very scientific way, being in "quantum entanglement" with each other on information and/or unknown levels. The "loud low (or deep as some call it) or loud unusually high (not necessarily soprano or whatever) or loud (of any type in between) voice is authority" myths have emerged in prehistoric times and some politicians have used the myths to improve their image by yelling as much as possible during speeches, bringing their eternism to minimal levels (unintentionally, due to the biology factors mentioned above) and with it spreading as much disharmony as possible globally, with or without realizing.

Other leaders, trying to appear more moderate and likable by a gentler folk voter block, didn't yell to the max, but raised their voice a lot. A group of women speaking in very feminine soprano voices may view the loudest soprano as a leader, due to inertia, not the most eterni tone female, so often times women, like men, start raising voices due to this social expectation and peer pressure, not even intentionally as a manipulation tool, undermining their ability to lead in a much better way, via eterni tone of speech (like these voices) not volume, speed or

word density/minute of speech. Both genders need to realize we're no longer jungle people, we're surrounded by amazing & beautiful ☺☺☺ tech that enable us to make a quantum leap from chimp-humans who kill (or yell at) each other, to immortal humans who never kill/yell. We have microphones and amazing techs to magnify our voices, so we can use brain resources for musical eterni speech like these voices (instead of raising the volume), sound and emotion analysis software to improve our tones and emotions and become truly civilized, because there are trillions of ways to any outcome without violence, war, yelling, mean tones. A cop has a tiny ear headset or shirt collar microphone WiFi or LiFi connected to a policecar or belt amplifier that raises the volume of the ultra musical healing sweet speaking calming tone that makes a suspect deescalate dramatically as he never heard anyone speak like that to him, let alone a policeman. "My sweet friend, I hope you have a pleasant day, (while smiling), I'm John, a guy whose job is to bring peace, healing tenderness, compassionate kindness in the world, would you be so kind to help me bring some peace today, some people said you were making some noise, is that true? etc" instead of "Hey, can you come here and show me your ID?" in the worst tone due to using 80% of energy to raise voice to be heard from a distance. The response would be 100% different of course to the 2 approaches in dealing with spouses, kids, suspects, pets, or anyone, that's why it's best to not talk to people from very far, as our tone becomes "pure trash" as we raise the voice to be heard and ***cooperation*** and harmony also become "trash", as loud uneterni speech is far more threatening and provocative invoking fight and flight in the listener, lacking healing harmony, loving compassion, healing tenderness, all which require enormous brain resources to incorporate in normal speech (almost impossible with loud speech). The guy who gives the command left, right to a group of soldiers can have a similar microphone (attached to his shirt) and do it in sweetest tone like these voices (soldiers have a LiFi amplifier (to avoid cancer causing WiFi) near the neck of the shirt that, hear his voice so it's all silent, only they hear the commands, not the public) so parades, if still done, do less damage to listeners' brains. ☺☺☺

Likewise, when generals talk gentler they elicit vastly different responses from other countries☺☺☺ who then emulate this and lead to a positive feedback loop that brings World Peace a million times faster. Imagine how hard it would be to reform all police academies and military colleges to implement such ideas which reduce violence in the world, tension in families and even attacks on law enforcement. It's hard when always used to "raising tone" and "torture" as discipline for a million years, to change to healing positive methods of transforming the negative into positive, by self-discipline instead of others-discipline, by self-evolving one's tone and radiation towards others before expecting others to do so when they never heard such tone their entire life, bombarded by unhealthy tones on radio, TV, movies, etc... as no kindergarden, school or college teaches anything... (no centralized education yet) and only a few monks, spiritual songs and singers ever have it. A related thing that influences our tone of speech is how

we move and even walk, due to shared neural networks. This means when one is honest one starts to question even the utility of many sports or even palace guard changes and military parades where tons of people are so uptight, tense, all moving with exact precision and stomping the ground with exacting super high stength, when all the energy could be used to dress them in futuristic ways of smiley faces and peace signs and many colors (instead of the usual grey, white, black, or blue) and use tranquility inducing songs and beautiful emotions radiating equipment (like biofeedback, etc) to make all happy and peaceful, defending thru preventing any negative emotions instead of increasing the loudness of speech (yelling) or of physical movement (stomping and very forceful and rapid movement of hands that have medieval weapons). Those knee and leg joints suffer, why not remodel some houses instead with that energy? Maybe make a 'military parade' or sport the most uplifting and eterni tone show in existence, with graceful movements, voices far more eterni than any church thing today? That could help us more long-term. Besides, against hypothetical physical or non-physical aliens who (have not discovered us yet maybe or maybe did but we can still become free) dematerialize planets, control time shifted virtual universes (including what we refer to as some afterlife dimensions), 5 lightbodies of souls (not all 7 quadrillion lightbodies of a soul), star gates, wormholes, does any honest general really think a few of these theatrical yellings, movements or displays of medieval weapons when a President visits or any karate, martial arts, boxing, etc physical fitness are of any use? What if they don't even hear human speech difference between loud yelling and eterni, as we don't hear infrasound communication of elephants, etc? ☺☺☺

We waste all this energy to raise voice for what? To intimidate aliens who never hear the yell? We just raise our cortisol and waste mental energy that can be used to discover new things to prevent the enslavement of humans by these aliens. How can yelling defend us against such aliens? Perhaps if we want to evolve past them, we need to refine our movements and traditions too, not just the tone of speech, but tone of walking too. If you have a car and run it at 150 miles daily, it won't last long, but if we run it at 40 it will, especially electric batteries. The same is true with our bodies, joints, etc. The more damage to joints, muscles, the less the immune system goes to protect the brain to maintain top cognitive shape: we can choose brain vs muscles, seems like society chooses muscles. People yell to intimidate other countries maybe as a show of force (since they never found aliens and don't worry about aliens as a threat, having more urgent threats), as deterrence, but when you're no longer insecure, this is not needed, you think about protecting all humanity against a much bigger enemy, death and all forces causing such a short lifespan. Another uneterni tone is detectable in the way people salute each other, with a brief uneterni "hello or how are you" or a gesture. Waving the hand rapidly (instead of bringing hands together gently as in prayer for World Peace and end of all violence) as people do at times or a military salute that brings palm to the head is a rapid high

intensity force movement (the military solute and some forms of civilian gestures are almost equivalent to yelling so brain resources for coherent eterni *thinking*, healing transmissions for all humanity, go to minimal levels during such quick moving). What if these rapid movements are replaced with something softer, like a very gentle smile (no need of big grin to show teeth like sales people) that heals and slow conscious breathing, or even bringing hands together as in prayer above the heart (as in Indian Namaste) or as a heart sign made with the 4 fingers of both hands signifying we obey what is the universally kind, emotionally healing and lifespan tripling for all humans, not the impulses of rage in our head to start endless human-human wars for a billion years, impulses implanted by bad aliens? When we breathe slowly, we oxygenate the brain,☺☺☺ take calmer better decisions☺☺, are more empathetic to humanity (the only allies against bad aliens, even if enemies in the past), less manipulated by alien technology, more focused on all humans' wellbeing and longevity. An alternative is doing the same movements people are used to, but slower, while consciously breathing, smiling gently, recalling these ideas.

8.1.13. Eterni Tone entrains Immortals so we more easily 'see & hear' 10^{33} lightbodies

To easier cultivate Eterni Tone we try to move beyond mechanical mouth acrobatics, and to engage the entire central etlif Immortal Blueprint Quantum being linked to the Immortals descendants too (all decillion lightbodies etc, decillion=10^{33}, lightbodies *being not necessarily in the classical sense, but as* abstract *forms of knowledge* systems between complex life systems in a multiverse *which* become manifest realities of "superluminal photons, etc" like self-organized systems in certain conditions*)*, as any enemy can easier manipulate 1 organ than all organs, 1 dimension than all dimensions. Eterni Tone is about Tone of movement too, not just speech, as mentioned in the pages above: an alternative to rapid gestures (waving hands to say hi) could be to stand silently, close eyes, breathe slowly, pray or wish silently for 1 trillion year lifespan for all humans some day, or say or think "Immortality *for* All" and smile to express the happiness of serving the cause of the Civilization of Immortals. The walking section explains how fast and slow movements affect our behavior. Very fast and intense movements draw all brain resources to that leaving none for kindness, discernment and innovation, disrupt the zen state of eternal vigilance, the main things that help defend against very advanced bad aliens (or bad people everyone can encounter at times) for whom any martial art/physical prowness is useless. Karate won't help, but deeper knowledge and the most amazing & beautiful ☺☺☺ emotional filtering, eterni tones possible to create the subtlest harmony among all humans. The idea "eterni speech is better than normal speech and much better than loud yelling speech" can be presented thru a comedy where the guy who has the less eterni tone (but never raised voice or yells on TV or movies) always screws up, the eterni tone guy is succeeding always, the talkative does less, while the silent achieving more in the comedy movie. The more often we speak, the less we think, the lower the content and tone quality, the less we listen. People tend to listen more

carefully to someone who speaks far less and recall what they said. So the less we speak, the more we're heard. Our brains, nerves, etc have possibly evolved a way to hear without ears (due to living in a society of conmen and liars, who're not always speaking to reveal their good or evil intent), that which is invisible and inaudible (since spies fake their facial apperance, tone perfectly), but the vibrations of other humans that oscillate in unique ways, because a sound harmonic is a reflection of a chemical signature, an emotional signature, of an intentional signature, a quantum electron distribution (orbitals in chemistry) that can be "felt" (resonance with, recognized as friendly or not, just as some cells recognize friendly or unfriendly chemicals or organisms) thru all "nerves" (known and unknown) so to speak in ways science can't explain now just as 800 years ago we didn't understand well how we feel via nerves etc.

We know of 5 senses, taste, touch, sight, sound, smell, but what if there are 40 others using different unknown organs that can tell us a lot more than say someone's tone of speech, which when not faked, tells us already a trillion page book about anyone? Sound changes the cell proteins, vitamin production, crop yield, etc, so likewise, trillions of chemical reactions make a 'sound', a pattern of energy and matter that we can sense with our 40 other senses (smell not chemicals, but subatomic wave patterns, subatomic subquark subelectronic boson 'molecules', etc), the inaudible sound we "read" thru quantum entanglement. Say a dumpster smells in a certain way, rotting meat, flesh etc. Same way, someone who killed others "smells" in a peculiar way, as explained in the immortalion section. The spies and soldiers "smell" in a special way, as they kill or hang around killers often, and after they kill, they "smell" differently, due to quantum effects of the killed, very similar to how when we die, we rot and smell differently, just a different smell, not chemical, but subleptonic. If a guy kills someone, detectives find these blood (of victim) traces under the nail of the killer for example, etc, by covertly analyzing their nail clippings. This is similar, when someone kills, the killer gets marked for life, in a way they can't disinfect, they have "death subboson subquark geometries, ☺shimmering fractals☺ and peculiarities" in their "aura" for life. Each subboson etc assembly, each "subhadron" "molecule" has its own NMR spectrum so to speak, its luminescence, as it absorbs "subelectrons" to get to an "excited state", etc. A true immortalist thus smells differently, of Life, not death. A genocidal aristocrat who kills many covertly on purpose via his "products" smells of death; of course, he'll pretend to be a leftist, to fool everyone. The killer has "astral" DNA of the killed forever etched in his aura, so future cops will find every killer instantly. That's why the future world has no killings, as the culture of Immortality *for* All wins, and the "psychopathic torturers with victims' "astral" DNA etched forever in the torturer's aura for each victim" can't exist either, as it's detected by the planetary anti-torture monitoring system. The infernal demons incarnate who claim they never torture anyone won't be able to hide their genocides. A mass grave smells from 100 feet away in a peculiar way, that the nose or best dog can't detect, even if hermetically

sealed and burried deep under with concrete on top, because normal matter can't seal this "smell", this smell passes thru concrete, it's not "matter" as we know it; just as a corpse has putrescine, from spermidine, etc, so does the "unseen today" matter have a "putrescine analog". The new periodic table explains we're more than the known matter, and this other body has its nervous system and sensory organs that can sense via "astral sensing" the others' reality bypassing the normal sensory inputs and outputs, going directly into the decillion "lightbodies" sensing. Even with the 5 senses all know about, the physical brain itself can evolve new hybrid senses, via new neural connections that link the most "unconnected" neurons of the brain and unseen subleptonic bosonic brain: a molecular smell has a unique sound etc in certain people, etc, or maybe color that helps the brain detect something, so the relay of information from the "40 unseen organs" to the "5 obvious ones" can occur via a hybrid route too. The color, sound, taste, texture of a smell can be the way for the brain to know "danger" of a peculiar physical smell. Everyone is evolving new senses, the humans need them to deal with machine looking or human looking AI, synthetic robot humans managed by apex predator genocidal aristocrat (diabolical smell) in a military/spy agency industrial complex, etc. Likewise, the color, texture, taste, smell of a vocal sound of a speaker, can warn of danger. With CTA, MRI, ultrasound, etc and modern science we can detect some particles we know and based on this see certain structures we depict in anatomy textbooks and more obvious parts of the human DNA and anatomy, but we don't see everything now, just as we didn't see what MRI, etc shows today (we can see even proteins and DNA replicating, etc) millennia ago about the intricacies of our 5 senses and how each is linked to the central nervous system, etc. So, just because we don't quite see it now, and may see it only in 900 years or much later, it doesn't mean it's not there, as real as your ears and eyes, and just as accurate in telling others' nature, just 1 trillion times more accurate, since they can't fake their "astral" face or tone. Frauds can fake their tone to sound eterni for the untrained or tired ear, or facial/body language, but they can't fake the decillion lightbodies sound and extra information. Evil can't fake good at the deepest level. Evil is too low in tech and awareness to do that. Recall the God discussion. Any kid can make a replica of F-35, but only some nations can actually make a real F-35, whose combined IQ is far higher than the kid, so how can you fake God when you're not? You can't. ☺☺☺

This gradual domestication and civilization of our primate sound, its continuous refinement,☺☺☺ the gentle taming of the tiger and gorilla sound aspects, increasing in musicality of universal loving kindness and nonkilling absent in tigers and gorillas who kill their own kind (500+ mammal species don't kill their own), etc could enable humans to become "Immortal" living to 3-8 millennia old, who're as different from us today as we're from chimps, not in the tone of speech, of decillion lightbodies telepathy, of musicality and harmony, only, but in technology too. We'll become a very telepathic species too (sound is inefficient for info transfer, too slow)

that never kills its own kind and is at peace with itself. Today a guy may say 10 times less words in a speech, but because of the eterni tone, the words are heard and remembered by 300 or 3 million times more people. The eternism of a speech (or telepathic or inner thinking) tone is independent of whether one is more soprano/higher pitch in their tone, as in any piece of speech we can identify decillion (10^{33}) patterns predictive of character and future decisions, behavior if speech tone remains similar, very similar in some ways to chimps who kill other chimps for example (500+ mammal species don't kill their own kind, so we may learn a thing from their tones). When we speak ultra fast, like we short-lived humans do today, compared to future human Immortals of the future, we move to 80-99% non-tone thinking, leaving tone (emotional, healing humanity, radiating tenderness gentleness soothingness well wishing for a happy life of a billion years, intent modulation thinking and transmission) aside. ☺☺☺

Why do people speak fast sometimes? It can be their DNA or the need for approval, the wish to be loved or accepted, the desire to impress others with facts they learned, or simply enlighten them with science facts in a 20 minute presentation that can save in the next 3 months 100 lives out of noblest, average or least noble intent. Sure, he prevented 300 people from getting scammed or having a heart attack, etc, so he did a nice job. But, at the same time, there is an issue: he failed to also save 1 million lives in covert wars coming from tones of speech, in the next 3 millennia due to people imitating tones of the 20 minute rush mindless (in tone, not content) presentation (content amazing, tone disastrous). Obviously, 20 extra minutes to render the same speech content in much better tone would have still saved those 100 lives over next 3 months and maybe a million more in the future 3 millennia.☺☺☺ Rushing to save 20 minutes only achieved the short-term lifespan increasing effect and short-lifespan civilization long-term, hence we could hypothesize Immortals speak slower (actually, the data transmitted is 10-100 times bigger audio file so to speak, because the tone is so much more orderly instead of pure chaos), so they can increase lifespan far more and develop much more telepathic like emotional and intentional filtering that promotes healing and longevity for all. ***All*** human ***behavior is highly dependent on, and shaped by the non-verbal*** tone processing thinking or eterni degree of our tone of thinking, emoting, intending, speaking, which our civilization almost completely ignores from kindergarten to PhD, tone☺☺☺ which, when it degrades, leads to increasingly bad verbal content and then outright conflict and war, covert or overt, which shortens everyone's lifespan ***as most are busy attacking others*** instead of making everyone live to 500. It's often times a battle of ego vs higher self, do we want to appear low IQ (short-term) or smart (long-term)? Speaking eternily, like the gentlest nun/monk, etc, universally lovingly and slowly (i.e much more non-verbal processing thinking) will attract labels of 'low IQ' from "used to fast speech" masses in the next 50 years, but would transform them totally over time into deep universally compassionate thinkers who focus on the non-verbal communication in a speech, not just the

apparent content, who listen to the pauses, melodies audible and inaudible between words, vowels and consonants, develop patience and the thinking patterns of 90000 year old humans, be thought of “smart” long-term when they're no longer with us (but recording to analyze tones exist), which is no benefit to some who want to be called “smart” while they're alive.☺☺

Unfortunately, 99% of stuff on radio and TV, movies, etc is simply training people how to be the opposite of gentle, tender, soft and all that is needed to become a healing telepathic conduit of peaceful methods of solving world's problems. Perhaps not even 1% of those speaking on TV or radio modulate consciously their voice to speak in a *gentle tender soft* fashion and we imitate what we hear around us. Due to power of inertia, entire generations continue the same patterns of the previous ones, albeit in a slightly different form, due to changing technology. So, in a family setting or any where they might have a living room or common area, the tendency is to place a TV and listen or watch it, sometimes leading to the strengthening of the exact opposites of these ideal tones, since we are, as humans, at all ages, subconscious imitators of stuff around us. We have computers now, so everyone can listen to their portable small TV, their monitor, on headphones to more uplifting stuff.☺☺☺ While there are those 0.1% of programs and stations that are showing gentler more elevating content with people speaking in tones worthy of imitating, most TV trains people subconsciously to behave in ways that sooner or later lead to disharmony. It's basically the same stuff that led to the current state of the world. We can't bring about change by repeating the same stuff or watching the same stuff of past millennia.

The more people watch random stuff on TV, as opposed to specialized material on youtube, etc, the less likely it is for them to meditate, relax, develop introspection, empathy, early on, do some science invention or discovery as some 14 year olds do. Some may listen to TV too loud too long and disturb others in the family who might want to meditate or concentrate on a science problem without earplugs, etc. So, of course, depends how soundproof the doors are, but some people watch too much TV, and most content is not that uplifting and elevating. A family where everyone is taught to meditate, talk gently, behave like an angel, pray, communicate lovingly, etc, by watching, playing music by the people with gentlest voices and vibes, is going to have a totally different dynamics than a family where people watch often the hollering and yelling (so-called “normal” speech) type of voices that are quite often present in movies, TV and other programs (reality TV, etc). Same goes for a planet: the content people watch sets the baseline tone for world harmony or disharmony. The sarcastic insults, physical aggression content of comedy at times, and verbal attacks that define most content occasionally, even as some nice people relate what one guy said, create an acceptance for this lowering of bar and moving towards verbal disharmony, leading in steps to actual conflicts among nations later and to individuals who're prone to value attacks instead of "harmony and peace, forgiveness and tact, kindness and all that preserves serenity". Saying a 10 minute prayer

and then listening to any of the 99.9% trash music or any TV program can cancel each other out, as the vibe what totally shifted towards bad by the 10 minutes of bad music or TV (99.9% of music/TV/radio). This might actually be true and many people might not be aware of how bad the effects are, as they're cumulative, subtle, hard to perceive (like a shift in attitude, tone of speech, emotional pattern, etc). Many scriptures talk of gentleness and yet if you look at our sports, the TV programs and movies out there, it's very rare to find something really gentle. We become what we watch and listen to, and that's perhaps why it's so hard to even dream of World Peace, a gentle soft world where no violence exists.☺☺☺

The one thing many people may recall as a kid is just how pissed off they were at everyone in the family because they were playing TV loud in living room while they were trying to study, meditate or practice astral travel. Every time this happened, they had to go ask them lower the volume, sometimes due to the disharmonious sounds coming from the TV program more than the "noise". While a kid or person may be asking nicely for this, the fact is the others have no way to assess the emotional perturbation this causes, especially when it repeats a lot, since we don't normally feel what others feel fully. So, the interesting thing about this is that if someone is trying to study or practice telepathy, obe or contemplative prayer or meditation (meditation is part of Christian traditions too, not just Eastern) and he as a kid is upset by the loud TV, it can just create some extra layer of disharmony between kid and parents or siblings who do it, and things are cumulative, more cumulative especially in families that don't read about gentleness, forgiveness, telepathy habits ideas, T.H.I.N.K. (is the speech T.rue, H.elpful I.nspiring N.ecessary K.ind) acronym, ethics, true equality, societies without money, loving patient empathetic communication, replacing anger with compassion. Then people wonder why that kid doesn't always listen to his dad. Eterni Tone builds real progress towards a world with compassionate empathy-telepathy. "It takes a village to raise a saint or a good gentle tender empathic somewhat telepathic person able to be a good healer and innovator". Hence the importance of evaluating or deciding whom one's kids spend their time with, since kids imitate their peers.

But even as adults, we remain kid like, in many respects, so we can still change a little, even if it is harder. To learn a language or tone of speech or behavior at 3-7 is easy, at 20 it's hard, and at 50 it's way harder. If you watch the clips about some of the families with kids finishing 2 year college at age 11, you will notice that they often did not have TV at home or if they did, it was very rarely used (and perhaps only for the more educational stuff like discovery channel or rare things, etc). There is much more higher quality stuff on youtube, they got videos on any science or whatever topic, etc. There is always a danger for kids to start liking watching TV more than learning, reading a book about ethics or doing homework or meditating and trying to do something nobler, more humanitarian. In some countries (for example in Tibet, when a kid was seen as reincarnation of a lama), people used to send their 2 year old kid to a monastery to be

taught the way of gentleness and spirituality by monks too, at least part of the time, so it's basically the same idea of trying to create a different gentler vibe than usual that can be accomplished thru many methods. ☺☺☺ Any parent would prefer their kid to read a book than watch TV, get good grades than watch TV and get lower school grades.

8.1.14. Eterni Tone epigenetically changes the sperm/egg, giving parents & kids a longer life

A reason (besides the ones below) why eterni speech increases longevity is that it requires more neocortex stimulation, higher multi-brain areas thinking, increasing intelligence, telepathy precision and thus decision making.☺☺☺ It will also change epigenetically the sperm, egg (*new ones created*?), embryo thru vibes, IR patterns (energies, *emotions* radiated jointly with tones, chi energy is made of IR (infrared) and other waves) and less stress chemicals; the *fetus and infant imitates* parents' voice tone patterns, kid also living longer as they develop much higher emotional self-control thru thicker neocortex. The healthier, longer lived kid then can help his parent, so the parent lives longer by birthing a healthy kid. ☺ Just like apoe4 allele can cause a 12 fold increase in Alzheimer risk, or like smoking increases lung cancer risk 20 times, eating a lot of trans fat and saturated fat increases heart attack risk 10 times, it could be that not changing one's speech tone to a *gentle tender soft* healing one (not just audible tone, but intent and emotion tone) is a risk factor for a shorter life, just like say being overweight diminishes lifespan (most centenarians are not overweight) and a risk factor for epigenetically failing to transmit to the next generation a kinder emotional radiation pattern in the brain while speaking. Fortunately, the tone of speech, the emotional tone of speech, the intentional tone of speech, the music we listen to (and subconsciously imitate in tone and rhythm, without even realizing), the linguistic thought tone of speech is not a thing set by genes, but by human free will which then in turn creates *epigenetic* changes. Just like eating healthy, exercising or other lifestyle changes determine which genes and diseases turn on and off, it's something anyone has total control over. ☺☺☺ The *Tao Te Ching* explains what other texts do too: the flexible and gentle tender live, while the inflexible and rigid harsh die (like if the wind blows a flexible plant bends and survives, but an inflexible one is easily broken). A flower when she's young or a baby when born, she has many more days to live, and she's soft, flexible tender yielding. A flower or human person when she's old is more rigid, inflexible, etc... and has fewer days to live. Thus, Tao Te Ching says that "*gentleness* is a sign of life", that the fool is heard most often, while the wise seldom speaks; the fool, when he speaks, he's so loud with such a lack of *gentle tender soft* tone of speech, healing intent, emotional regulation, that everyone hears it, but when the wise speaks, only those nearby hear it, as gentleness, life, subtlety, grace, *softness*, tenderness pervade wisdom. 1 Thes 2:7 "*gentle* among you, as a nursing mother *tenderly* cares for her own children", Phil 4:5 "Let your gentleness be evident to all, the Lord is near." ☺☺☺

Why would *longevity* increase when we speak in *gentler* softer ways? Perhaps, when we're toning our speech consciously and enriching it with benign universal compassion, loving kindness, altruism, soft melodious healing grace as if singing a song of adoration to the God spark in others, we become more capable to be flexible in perception, to be filled with humbler kinder vibes, attract the help of nobler informational fields, to see the infinite complexity of every person and situation, to adapt, be a good listener, make more friends (instead of enemies), make more interested listeners (instead of people trying to get away from us as fast as they can), to heal others easier, to praise, soothe, forgive, inspire, transform them into happy people who then reflect more positive energies back to all around them. When we make more friends and have nobler radiations energetically, our life is a little better as there is less internal anxiety (will he figure out my "ulterior motives and true intent" sort of anxiety) and also people are more friendly and nicer to a gentler person who speaks in a gentler way, audibly and inaudibly (we are sometimes much better at hearing the "inaudible" than we think). Additionally, a gentler way of speech improves telepathy, by increasing space between linguistic thought to speech translation, time in which the neocortex can better receive telepathy and override the limbic system more "primal" drives and emotional patterns of the historical inertia (the way ancestors used to react in similar circumstances) better. This better telepathy, in turn, improves the ESP and survival chances of a person, in general, like they would take better care of their health maybe thru better telepathy. Chapter 12 shows that exercise or nutrient (B_{12}, D_3, polyphenols, carotenoids, etc) intake drop mortality 40%, when comparing highest with the lowest quintile. A ***hypothesis*** that may be verified one day is that the same holds for the tone of speech, audible one, and also inaudible emotional speech, linguistic thought speech, intentional inaudible speech. Speech tone may be more important than exercising to longevity, because *it creates the student or "not knowing" mindset which learns more and knowledge can triple lifespan, exercise can add 10% at most*. Studies show that centenarians are *more* cautious than average, avoiding deadly risks (climbing the Everest, jumping from a height to impress others) that lead to premature death. This slowing down of speech speed to ponder, express more ***kindness*** is also self-protective, (since it leads to more cautious decision making due to shared neural pathways) even if one does it only out of universal loving compassion. Some die at 60 due to smoking a lot, a few can make it to 100 while smoking. The rough speech, lacking grace and modulation, gentleness,☺☺☺ effort to heal, to be a conduit of divine *nurturing* softness and tenderness, of God's Infinite *universal* loving kindness is also a little bit like smoking; many may live 10-40 years shorter because of such ungentle speech, which leads step by step to worse and worse decisions, even if they eat organic vegan healthy and exercise 2 hours daily. The impact of smoking on one's longevity depends on DNA, so it could be with the impact of speech tone. ☺☺

Amla is a gooseberry that grows in India which is revered in Ayurveda and written about for

millennia. Science found that amla has one of the highest amounts of antioxidants. Table 4 of NJ 2010;9:3 shows dried amala has 261 mmol antioxidants/100 g, versus 3.8 for dried apples. Some thought only "naive folks" can think amla is 69 times richer in antioxidants than apples simply because a "stone age text says amla is special". Same goes for other foods of ancient texts. Many ancient forms of knowledge are confirmed by modern science, for example, slow breathing lowers the heart rate and makes us more tranquil. *Gentle tender soft* speech infused with kind emotions, intents, vibrations is an ancient knowledge, and possibly, like many ancient berries or fruits, 69 times more effective than random speech in achieving a better world long term. The Metta Sutta of Buddha and New Testament both talk of loving all beings as a mom loves her infant child, about gentle or right speech. If we talk gently, naturally everyone will have a different response than if we yell or talk ungently, yet this simple fact of physics escapes many (when was the last time they taught gentle healing tender intent, emotional and verbal tone of speech in school to heal and uplift all beings, sing to the Immortal spark in them?), as it's viewed as a useless externality in our high tech era to try to speak like an angel, tonal wise because "If it's not in a peer reviewed science paper, it's not true".☺☺☺

How would any Catholic speak in the presence of the Pope? With a gentler softer tone, just as a Tibetan Buddhist would with the Dalai Lama. How is the ideal way of speaking with or around the future of humanity, around kids? Kids are imitators of parent/teacher/TV/music tones and even if they can change later as adults upon reading neuroscience books, some things are impossible to change after age 2 (most brain is formed), failing to improve the world more. If we want to create a better world with a more angelic tone of speech, a more healing vibe to our international exchanges around politicians, countries, etc it can't occur until parents (and all who create media that kids might be exposed too, everyone, even those who have no kids and are not parents but create movies, songs) change their way of speaking from day one around the child, to act as a nobler way of speech example than previous generations. To communicate via written language, we get so much training, in spelling, grammar. To properly communicate via tone of speech, to relate to all the good news of the Immortalist Anthem, of universal loving kindness we get 0 training. *To cure endless diseases we* had enormous 500 year efforts of millions of scientists, who discovered pills we can eat to cure those things, this meant we ate differently than eons ago, new compounds, ratios. To cure the violence in the world, we most likely need to speak differently (takes much more energy, as we unify vocal, emotional, intentional, energy radiation, spatial brain areas, is slower, just as 900 year old humans of the future speak less and less rushed as nobody dies before 400 and most live to 9000, anxiety and rushing are gone) than eons ago, with enormous efforts to filter out genetic, cultural, upbringing propensities to intone created by negative emotions of the historical inertia. ☺☺☺

When we visit sick or dying people, we always use a gentle tender healing *nurturing speech, we*

know that it is Life saving *and* Longevity *giving*; we innately know loud "normal" tone is Life Shortening. Our planet is like a sick and dying person (since we age rapidly after 18, having no knowledge of living to 9000), where most of us don't always realize the amount of negative emotions our/everyone's Tone carries and programs us to repeat (the *historical* inertia, passed thru generations, their emotions, behaviors, tones). Did you notice how many negative emotion traces (ungentleness, lack of grace, absence of compassion, tenderness, healing, *nurturing*) are still subtly encoded by *history* in every tone almost on TV, radio? Very few songs and tones are eterni (100% positive healing *nurturing* gentle tender emotion void of all aggression, fear, threat, anxiety, negative emotion trace related tones). My tone was mostly eterni maximum 1 minute in my first decades of life, recently I got to 5 minutes a year (hoping to reach 20-50% of speech), it's not normal speech, but like the most difficult science problem solving. We listen to a news broadcaster and a soft spoken angelic monk who worked 40 years on his tone, and we notice a *night* and day difference... *It takes* 20+ times *the energy,* so we end up speaking 20 times *less.*

8.1.15. Eterni Tone can be promoted globally via AI using Eterni human voices

An AI (artificial intelligence) simulation of the most eterni gentlest healing soothing voice can read the news to heal and educate people in the ideal voice with the *highest density of universal* loving *kind* tender *soft,* World Peace *intent, tranquil bliss, most nurturing emotional tone.* We don't have the best voice daily, due to stress, only in our best 2 hours of the year, after focused intent, weeks of full-time practice, deep meditation and rest can, can we perfect our voices to be super enriched in healing harmonic tones. These are the only tones a Civilization of Immortals can afford in the media, if it wants to reach ever higher levels of longevity. Why pollute brains via TV if we can use AI to help? Media people are humans with good/bad days. Think about how much people practice for a spiritual song, now imagine how much effort is made by future Immortals to create the most healing speech that prevents all negative emotion, the root of all conflict and enormous stagnation war-violence brings for humankind. *The AI would be a supermodel who smiles, reading positive news, so people love to listen to the AI; sometimes, maybe AI also holds a gentle pet, dove or piglet*, to evoke *nurturing* gentle kindness, petting the chick/pig every 8 seconds, kissing the pet every 2-7 min and talks in some programs about loving kindness *for* all sentient beings *(less powerful than us)*, need for veganism, and vegan/eterni diet. Aware all war starts from unkindness towards the *seemingly less powerful*, the amazing & beautiful ☺☺☺, kind eterni smiley attractive supermodel AI gazes *nurturingly* too, with the most gentlest most tender loving look anyone has ever seen on TV. Beauty (supermodel and inner beauty of kindness) is then associated with that tone in the brains of the viewers and listeners, accelerating learning, and the world makes steps towards Peace. The AI could remind at the end, sometimes, that we're meant to talk to all in the loving tone moms talk to their babies, caring for all beings through the tone of speech as if they're our only small baby, reminding viewers

that future Immortals view us as nanosecond old babies.☺☺

The AI could even bring an AI baby, in some programs, to hold a few seconds and talk to in soft tone "Hey, sweet baby, you're the amazing gentle tender future of our world of Immortals". As we age, our brains shrink, wear out and lose the ability to have the most perfect Eterni Tone control that we had when we were 20-40. So naturally, the AI would be built based on younger people's tones. Since all people imitate what they hear, this helps the older people to dial back the aging clock by reprogramming the brain to use that Eterni Tone, that they missed using that day, retraining the brain to keep the neural networks of Eterni Tone alive/young above all else, inducing the brain to make the effort to make that amazing & beautiful ☺☺☺ harmony. When we're young, we're surrounded by younger voices more, so this is also a way to trick the brain into thinking we're in those times and reverse some biomarkers to an earlier age. It's a little like the Lepton-Quark-Boson-Immortalion Chart Reversal to an earlier age. When we listen to very old people (or us at age 60 instead of 20 or 30 or 40), whose ability to make it eterni is lower and brains operate differently, due to shrinking, aging, etc, we unconsciously emulate their level of eterni tone and brainwaves to some degree. This is not all bad, since age is not the main determining factor for eterni tone %. However, young eterni tone with eterni lyrics is way more optimistic than the depressed pessimistic mundane tone of mundane talk on TV by a senior general talking about killing others to 'bring peace'. Young people (or even us when younger) are less brainwashed, they 'know' less, have more plastic brains, which in turn helps our brains become more plastic, optimistic. When we live to 1 trillion+ or million even we will have a youthful voice for 'eons', might as well act as if and embrace soprano higher pitch voices of our youth, instead of ridiculing and marginalizing them, if used by any public speaker, politician trying to use eterni tone. The recreation of the environment, voices when we were younger, has a special effect of reawakening the brain to its younger days patterns, thereby having a longevity effect. After all, we want to be like a 20 year old for 900 years, not like a 120 year old. Likewise, teachers, public speakers speak mentally or whisperingly (especially when tired and healing gentle positive happy eterni tone is hard), and then the best AI reads the mind or whisper and speaks in the most amazing eterni tone (best ever of that teacher, improved with other voices), so teacher☺☺☺ focuses more brain resources in eterni tone of content, mostly inaudible emotional tone (picked up via harmonics of musical notes, content and sequence of words too, besides quantum entanglement) and less on vocal cords, still being able to intone and modulate AI output, as long as tones are an MRI positive emotion, as AI filters out negative tones. Students imitate emotional life of teachers by impression, expressed thru vocal tone.

For example, the parents talk into a tone of speech, or mother, and this tone is associated by the baby brain (born or womb brain) with a secretion of cortisol (stress hormone) across placenta or in his body, leading to a repetition of this anxiety building each time a tone is used (even if mom

or parents don't go into cortisol secretion themselves) that triggers the memory of extreme stress in womb when cortisol overflew into his brain. This associative memory can cause the baby to become very anxious and/or unhappy or etc as a kid/adult, leading to all kinds of problems. A lot of neuroscience-based books out there by doctors explain these mechanisms in more detail, but the tone of speech of parents carries emotions and the brain doubles in size in the first year of life, so womb time and 1st year are truly the most critical when everything has to be perfect emotionally for the best outcome and moving away from historical inertia of negative emotional states leading to conflict on the international stage. To prevent conflict, we not only need educational systems to help people to learn some techniques for questioning stressful thoughts that lead to anger and negative emotions, but also more awareness of the critical time of womb and 1st year in forming brain patterns and emotional life patterns of the individual based on what parents teach by living example. That's why in immortalist societies we will have 222 weeks of parental leave, since first year of life brain doubles in size and the emotional self is hugely influenced by the first 9 months of womb and 12 months of life. Parents without awareness, without having read these studies may fail to reach the highest potential of their kid, by not maintaining the most positive emotional states and avoiding any simulation of anything negative, even a frown, since as with fake smiles causing happy hormones, fake frowns can actually induce brain to secrete poisonous chemicals that go thru placenta into the baby's system and give birth to a more restless, anxious, socially inept individual, less capable of empathy, telepathy as he's anxious all the time. People often look at other cultures and see how parents treat their kids or spouses, and think it's totally wrong since it's physically aggressive. Yet, a never talked about form of "aggression", which is going on in a lot more places than almost anyone wants to admit, is the tone of speech to the Divine Spark in every child, which has to listen to the improper ungentle untender unsoft tone of speech of parents even before being born (astral and physical tone). From the point of view of another far more evolved civilization of Telepathic-Empathic Immortals of future humans, this could be equivalent to earth parents physical violence in today's mortal civilization. When people speak, they have certain intents, emotions, thoughts which create an astral noise inaudible, but as real as audible sound. So, nice tender speech with filthy thoughts and feelings will sound awful astrally and actually, even physically, if one is really good at acoustics of thoughts and emotions (supercomputers will help realize this). Some like to scapegoat humanity's problems on 3 bad guys, saying they have nothing to do with it; yet we're all linked and the emotions, tones, sounds, intents, vibes we pour into the planetary field of consciousness (human) create the future, sometimes far more than actions as explained in the Telepathy Diffusion section. ☺☺☺

When people go to a church or a temple, they become very quiet and if they talk, in a lower tone of speech filled with more *gentle tender softness*. It's as if they're approaching some Holy of

Holies and there is a natural softening taking place. Yet, ask how many parents speak in the presence of the born, unborn or unconceived child (spirits can hang around or their guardian spirits) with the gentleness softness kindness tenderness they would speak if they knew that child's soul or the accompanying spirit of the child is actually a trillion or 100 times older than the parent's soul and the kid's mysterious Telepathy Empathy knowledge would only unlock (become available to parents) IF parents create a vibration of the most tender *gentle* softness there can be in their beings and around the child. ☺☺☺

How many parents do we know who aim to consciously practice speech that is *gentle tender soft* out of reverence for the Divine Spark in the Child who lives in their house or will live in their house once conceived or born? Probably few or none. How many parents do we know who aim to practice Holy of Holies Speech tone around their unborn or born child in all locations and ask others to do the same for the sake of humankind's future? Holy of Holies tone would be gentle tender soft *kind* reverend *nurturing* *graceful* melodious healing merciful compassionate. Why sing to God at church if we can't sing (by melodious tone of speech, emotional/intentional tone) to the God spark in other people *in our own family even*, our very child who is the future of humanity? For a couple, God is mostly in the child of a couple, not in a church building. Speaking filled with beatific selfless universal compassion gentle emotions, with noble intent to only bless help uplift all beings, because every person may be an angel from heaven, a disguised teacher of Immortality, telepathy, tranquility and World Peace thru coherent universal selfless love and kindness and turning an enemy into a friend, anger into forgiving compassionate merciful love. When parents speak gently they help humanity achieve a longer lifespan by teaching a nobler way to their child, they become nicer people themselves, living longer and improving the quality of their relationship with each other and everyone around them, not just with their child. ☺☺☺ Some kiss/massage their spouse 15 minutes/day, but 15 hours/day the speech is not like massage, gentleness, tenderness, healing *nurturing* grace, loving kindness, compassion. The positive effects of touch can be immediately cancelled or exceeded by the negative effects of random "as usual with strangers" speech tone, emotion, content or "as usual with strangers" look, smile gaze facial communication habits. Initially, for many people, the spouse is their only opportunity to comfortably easily practice gentle tone. A couple can say 1 sentence/song 50 ways to discover which tone is the most healing, pleasant for the other and self, to maximize happiness, to jointly record and listen to often, etc. Healing speech is like massage therapy for the soul and brain, body and mind, like a balm or honey. ☺☺☺

We see today how parents of gifted kids spent time with them and enabled these kids to graduate from college at age 11 or 12. Likewise, if one wants to raise a kid with above average empathy-telepathy skills, the parents would put effort in it for years, like the other parents who showed the kid math or physics or chemistry when young. If we want kids to be healers who

heal everyone via speech and thoughts, can we create a space of such evolution to occur, a space of loving gentle tender softness of such intense focus that it would seem wild or strange to most people? Kids imitate the astral and physical tone of speech of parents and adults around them, even if later on as adults they introspect and change their tone slightly. Initially, all human knowledge, emotion, thought, vibrational radiation is *mostly taught thru parental speech* tone (and its coherent emotional tenderness or lack of) until kids learn to read, so this has a huge impact on the *child's future character, inner peace,* emotional *stability*, healing ability and emotional radiation habits thru speech, future telepathic and empathic abilities.

8.2. Content of speech, writing tone: fixed lifeform IQ, filif IQ is 10^{27} times < fluid form shapeshifter Immortal IQ (eternal life etlif IQ)

8.2.1. Introduction: the Filif IQ stuff 8.2.2. Evolutive Writing 8.2.3. Question Everything

Filif is an adjective and a noun, referring to low IQ, below 900, vs 400 quadrillion for Immortals who travel faster than light. It can also mean someone who is simply not having IQ octillion or 10^{27}, who is a human or related fixed alien or Earth animal, someone also honest about the human condition, a fixed lifeform with an IQ infinitely small versus an Immortal, someone with a small ego and a healthy sense of awareness of one's lack of knowledge about the universe, just as bacteria know little versus humans, but a difference at least a billion times larger than that between bacteria and humans. As people realize their infinitely low IQ, they stop being violent about 'stupid' beliefs that are obviously false, from the perception of our descendants of IQ 10^{90}. They realize the only thing worth pursuing is living to a trillion to get closer to the truth, raise IQ. So it isn't really a negative adjective or noun, just as "ant" is neither positive nor negative, it's just a lifeform, as humans are ants or bacteria size lifespan/IQ in the perception of other beings. It's a word meant to bust the cosmic size ego many have developed today, which halts all progress and makes them think they're the center of the universe, and perhaps, the smartest lifeform out there, without offering any proof of their "universe revolves around Earth or humans and God looks like us and sits on a throne" when evidently, if God exists, God is formless and is infinite in size to be able to be omnipresent and omniscient. Conflict, rage, anger, yelling, violence arise when people don't realize how infinitely "low in IQ" they're vs other beings, not just having IQ of 70 vs 200 for geniuses, but 200 vs 200 trillion quadrillion. If all were smart enough to not get offended at being called "ant IQ", "cabbage IQ" or "filif bacteria IQ", there would be 0 conflict, war or violence on Earth. The earlier people learn to have a small ego and not take offense, the faster we have perfect harmony and an honest world of people with 0 yelling and a calm witty sense of their own limited condition. Thus, it's important in education to instill a sense of just how infinite human stupidity is. If kids grow with a big ego, this will set them up for failure and endless conflict with others. Finding the right words to do that is

sometimes challenging, if we try to maintain eternal tone kind vibe. Teachers provide grades, to inform students just how they did. Words also provide sincere feedback of how intelligent or "ant IQ" an action is: honesty is important, without it, we can't understand how others perceive the evolutionary intelligence of our actions, and if we get offended so easily, we can't improve our decision making as nobody provides any feedback anymore. We see kids/teens/adults exploding over the slightest feedback, this is a big ego issue nurtured by an outdated educational system. While being kind, empathetic, etc is nice, progress slows to a halt if we fail to provide honest feedback. When you're want to refer in a text, for the sake of contrast, to "abysmal IQ", you don't have to use normal words, but something general that refers to all fixed lifeform animals on Earth, humans included, as it is a far more tactful way to call someone a *Moron*, like angel *Moroni* of the *Mormon* cannibalism/violent quotes scripture Church (see genocide by *Mormons*). They can't know, via the ambiguity of the term, that you refer to ant IQ or human genius IQ of the Immortalist Anthem, or just lower IQ than Immortal etlif IQ. Filif is a perfect label for traditionalist, religionist (liars who pretend to have proof that meets science standards) and aristocratic bandits and animals who fight humankind progress.

Dishonesty and going around the bush, being overly polite and etc leads to stagnation and lack of drive to radically improve the disastrous situation a nation/species has gotten itself into, the possibility of humans ending in 10 seconds soon. However, the use of negative 'vulgar' words like "imbecile, stupid, idiot, moron, retard" is associated in the human psyche with a less smiley ☺☺☺, more aggressive angrier energy that is arguably not so helpful for the establishment of a gentle tender soft nurturing loving healing kindness for All vibe that we need to create a relaxed happy world of eternal 0 violent crime/war. Other equivalent combos that are far less used and carry a more neutral or scientific vibe may work better for contrast and teaching purposes. We're in a dilemma: we have a society of very low IQ, created so by aristocratic social engineers who want abysmal IQ slaves they can subjugate easily. To escape this state, which creates a violent crime rate 1 trillion times higher than normal, to evolve to higher IQ, we can realize that humans live 40 times longer than rats, and that "rat IQ" can be simply how humans of the future, who live 40 times longer, could describe our present IQ using 'rats of their world' so to speak. "Ant IQ" then becomes merely a scientific fact, as explained in depth below, not a vulgar, offensive speech, but a realization of our limited condition: moral, ethical, spiritual, technological. If you got 33 million companies as US does today, millions of them got 3 minutes of PhD level research, expertise, education, but with 11 companies, you can have 5 million PhDs, or 3 trillion minutes of expertise. This is a 1 trillion fold higher IQ in immortality capitalism than classic capitalism. Cats have IQ of a 2 year old, same for many animals, so perhaps IQ 25 equivalent as some claim online. Human average IQ is 100☺☺☺, so it's really more of a 4 fold difference, not a trillion as with PhD expertise. So, when we say we have a "cat IQ" society we're

stating the fact: we produce trash products of low cat IQ. Animals are static, have a fixed form, live short, etc, Immortals are shapeshifting energy ovoids who can morph into any animal form of any planet, so IQ is so far ahead of us, that we're more like "cat IQ"☺☺☺ than "shapeshifter Immortal IQ". Any person's IQ is 1 vs 100 for one of 10 million human specialists in a niche area of knowledge, so a person has IQ 1 vs 1 billion for this collective human intelligence, which itself is lower than that of an Immortal. So when we say "bacteria IQ" it's true.☺☺☺ Compared to Immortals who live a trillion years, our IQ is way smaller than bacteria IQ is vs humans, so "ant/cat/rat/dog/fixed lifeform IQ" is a compliment if referenced to a human Immortal. If you want to avoid "animal name IQ" due to it being offensive, perhaps "filif animal name IQ" or "filif IQ", fixed lifeform IQ, is OK, as it applies to mortal ultra primitive species like Earth animals and humans, this is a short, yet far more diplomatic when dealing with gigantic ego people who can't handle reality as it is and think themselves the smartest lifeforms of the entire All That Is, all universes. See the first lines of the book on why our future selves may have IQ 100 trillion: 4 billion years ago we were 1 million times smaller/shorter lived, so one day we'll be IQ 98 trillion.

Fil and lif are symmetrical parts of filif, fil is lif inverted, like 11:11, and they're pronounced as feel and leaf, fee leaf sort of, it's the leaf that leaves with the wind, leaves always leave with the wind, like in 11 companies, eleven, e-leaven companies of the left leaving leafing companies of the leftists. Leave is pronounced like live to 98, 11 is a symbol of Eternal Life, leaf/lif is Life Eternal. We developed huge brains due to needing to move, to leave, to leaf, to move to the left, to leftism, (where universal compassion or love dwells like our heart), to immortalism, to reach Eternal Life, in the future we develop galaxy sized cloud particle brains, as we move even faster than light, moving a billion light years in 1 second. This is a good way to avoid being offensive, while also clearly saying, for those with enough IQ to comprehend, that they're 1 trillion times lower IQ than the shapeshifting fluid form Immortals. Life and Fluid contain Lif, the Leaf, the 11, so it is God's way to say one verse: "Life is fluidity, death is rigidity" (Ch 76 Tao Te Ching). E-leven is like Longevity escapes velocity, we gain 1.1 year of life expectancy for every 1.0 year of aging. It's a simple poetic way to make people think, catalyze them to develop true tech, without making them feel too stupid, since everyone is a filif IQ on Earth, even animals. As a shapeshifting fluid form Immortal, you can hop in stars, black holes, neutron stars, planets, steer universes universe towards the Immortality *for* All goals. Ant IQ, bacteria IQ, human IQ are within the same range of filif IQ, so it's actually not offensive at all to call someone cat IQ if they understand the joke. The Immortals have etlif IQ, eternal life IQ, we will get there in a trillion years too hopefully. The astral travel section explains the faster than light moves of the soul, via Eternal Travel Inc tech. The astral body is like a shapeshifting fluid form Immortal, a spirit of sorts. Filif = feel life (fil lif) like animals, etlif = eternalize life, eternally think life into existence, extraterrestrialize life via formless essence precipitating new 'animal' lifeforms on planets.

Big ego people will say humans don't have ant IQ, but any Immortal looking at ants/chimps fighting to the death, instead of moving elsewhere to find food/banana, would think we have ant IQ. From their point of view, cats, ants, humans are infinitely short lived nanosecond particles, the same, not even 8 hr bacteria, but nanosecond neutrinos, so we hover more in the cat, ant range, having 'cat IQ' much more than human Immortal IQ. Future humans will think a sentence with a trillion billion words in seconds and have a name that is a trillion words today, which calls the Billion Spiritual and Ethical Characteristics of that Soul, so to call our IQ bacteria IQ is a compliment. Even on Earth, we got partially shapeshifting octopus who changes form 100s of times daily, both shape, texture and color change. Immortals can live inside suns, hot, cold planets, etc. Progress only happens if you realize you're far behind your goal. If you call everyone a genius, nothing happens, all is fine, nobody makes mistakes, we never criticize anything and stagnate forever. Our fixed form mortal IQ is a trillion times smaller than that of a shapeshifting fluid form Immortal. In reality the human IQ is made of bacteria IQ, ant IQ, chimp IQ, hen IQ☺☺☺, rat IQ, since in our evolutionary journey, we have been all these and we sometimes borrow "wisdom" from those levels of consciousness or fall back into those levels by mistake due to genetic or environmental influences, we have all forms of animal intelligence in our brains, so it's technically not an insult but a reminder of a temporary slip into animal mode. Scientifically, ant IQ, etc are less offensive than stupid, moron, etc, because they reflect the reality of our IQ being a hybrid of all these animal intelligences, like a polyhedron with 100s of mirrors each reflecting one quality we learned in our journey from bacteria to human, and now to shapeshifting fluid form Immortal. To avoid the "offensive" quality of animal comparisons some may need to check the size of their ego and realize they're no smarter than a bacteria is vs humans, compared to an Immortal living 4 million years, than an electron versus Immortals living trillions. If we never realize how short human lifespan is, how abysmal our IQ is, how are we even going to ever aspire to evolve past that? Thus, paradoxically, we need a gentle reminder of how "stupid" we are, so we can evolve past that: for example, humans can't even make eyedrops that have 1% of the compounds in natural tears, which is 2100, in natural concentration, so we're abysmal in IQ. People confuse character and kindness with appearance. The appearance is the words used, but a person can use "offensive words", and yet be 5 times higher IQ and 500 times higher ethics IQ than others. Our actions, intent, tone etc are 1 trillion times more important than the words we use due to subconsciously imitating those around us. Thus, for the sake of clarity, discernment and kindness we come up with a more intellectual, compassionate, gentle, polite, kind, academic and clarifying combination of words that would be less offensive than "moron, etc" and more precise in its definition of the "unethical action" that was committed which attracted the "imbecile" label. While in person the use of "animal IQ" or "abysmal IQ", "idiot/stupid, etc" is a bad idea and not something I ever told anyone in person. In a text about the sci-fi immortalist societies, it's different, since it describes humans who reflect

our overall super low IQ vs the future descendants of humans who live to 4 million years old. "Low IQ"☺☺☺ is a way to signify it's an unethical choice that sabotages progress, that we disapprove of, as it wastes resources that could prevent crime/war.

Racism, xenophobia and religions are very linked. For example, Hindu religions are linked to their 3 million Gods and the Indians from India. Diwali, Christmas, Ramadan, Eid, Easter, etc are not celebrations of Light, but of Clergy Stealing Our Money, of DIVISION, of that which divides humans. Jesus says in John 14:6 that only thru his Infernal Drunkard Cosmic Sized Ego you can go to heaven, that's DIVISIVE for a Jesus who promoted alcohol in memory of Jesus, not God in Luke 22:19-20, by drinking alcohol daily, because God doesn't count, only Jesus. By his infernal Gospel, Jesus killed 273,000 people fatally crushed by cars each year due to alcohol and 3 million killed by alcohol a year, for a total of 400-1200 million since his glorious Religion of Bloodshed arrived not to "bring peace, but a sword in Mat 10:34". The slavery and slave beatings deified in the Bible/Torah (kids, workers, sex slaves) or Quran (sex slaves, mutilated infidels, kids, wives) are a testament to their violence, approved by demonic Jesus in Mat 5:17-9. It's good to read the 30 pages on how Jesus faked all miracles, like a true drunkard who, hear this, pretends to turn water into wine to encourage alcohol use which kills later 400-1200 million people. The fecal bacteria IQ Jesus says in John 3:5 that you need baptism too to avoid hell, that's retarded, God needs no water, I explained this over 30 pages in the Retarded Rituals Section. God needs no matter/water to bless humans directly, only filif cockroach IQ people like Torah Jews (all their water rituals), Bible believers and Jesus do. Hindus think their religion is above others, hence they focus on that and their idols are often statues of of brown or black skin color, which is 0 IQ, as God has no form. A real Celebration is that of the Immortalist Anthem, of the Day when we'll be able to take the same form by shapeshifting at will, to eliminate racism forever, because, let's face it, we're animals and we have a biological tendency to favor people who look like us. All religions are quite racist, they each favor people of a certain type to some degree, who're "superior", in an unspoken way: Buddhism the East Asians, Christianity the Europeans, Islam the Arabs, Judaism the Jews, Hinduism the Indians, etc. Religions are inherently RACIST. Religions are for people with IQ of 3 months old babies.☺☺☺ If people are dishonest, they claim they're above this racism biological tendency that runs in the background without them even knowing, that they conquered all animal tendencies of the chimp DNA (that they can never feel negative emotions or get angry like cannibal chimps do), but all experiments done so far show racism is ingrained in the stupid human DNA: people and animals prefer to be around, be led by and mate with those who look like them. Are you honest, come on, stop beating around the bush. Hyenas are not attracted to dogs, bonobos favor bonobos to chimps and baboons. Be real, World Peace only arrives when people are radically honest and stop fooling around. In our world of liars and frauds, few admit to this genetic racism reality and to celebrate divisive religions that are not

universalist is a waste of public space and money and an attack on the very immortalist state principles of Eternal Universal Peace and Immortality *for* All, via the scientific transformation of the human animals into shimmering genderless shapeshifting Immortals, where we all look the same, with the mind file and clothing maybe different as The Immortalist Anthem explains. Islam is linked to people of Arab descent who believe in the special nature of Mohamed, the inventor of the religion of rape, genocide and theft, a carbon copy of Judaism (Quran is part of Torah recycled) with its racist "Jews are superior" Torah (part of the Bible). The violence in Quran, Bible, Torah, Talmud, Mahabharata, Gita is incompatible with civilization. People fought over language, religion and resources forever, so the only way to peace is 1 language, 1 "religion" of Eternal Universal Peace, Immortality *for* All, 0 violent crime, science to prevent fights over resources, 1 country for all, Earth itself. For now, each nation/EU like group can create 11 companies. This requires unity, merging nations for a greater cause: World Peace.

It's not possible to be a universalist immortalist and go to these temples and religions, as these stone age dog IQ religions don't talk of a shapeshifting pure energy humanity where we're all the same pure light/energy, same form and being in tune with the same scientific eternal God of Eternal Grace and Gentleness of the Immortalist Anthem, a God so diametrically opposite to the violence in many Hindu scriptures, Gita, Mahabharata, Bible, Quran, Torah, etc. These religions are divisive, they're based on violent scriptures that create us versus them, a division absent in the only scripture with positive words only, the Immortalist Anthem, they're anti physical immortality, they concern themselves with spiritual immortality only, they're anti progress, anti life, just pure junk to keep people fighting like tribal chimps over the definition of God and never evolving past this limiting lifeform we have that only lives to 80 and can only take one form of this planet. These religions are keeping everyone a cat IQ primate, an incredibly retarded person with IQ so low, any far future human will think of them as ants, not even rats in intelligence. Once all understand this, by reading the 95 pages on these false violent rantings of malnourished cave men that have somehow been accepted with the status of religion in USA, even if imported from India, Arabia, Israel, and other places, people will no longer attend these and the criminal clergy, shouting daily (samples: pastor, rabbi, imam, Hindu, Buddhist) wasting everyone's time in these places will find more constructive jobs to contribute to society via the 11 state companies, instead of fooling around and spewing nonsense like dogs barking on Earth. An immortalist government can't accept any "religion" with rapist violent scriptures. They're terrorist organizations, not religions, and need be designated as such, plain and simple. Why is USA a colony of India, Jerusalem, Mecca, Nepal of violent or chicken IQ religions? Can't we decide our local scientific philosophy of life, free from cults, organized religions, pig IQ rituals?

For people who want to be more polite, and not use "idiot, moron" etc in writing, a clarifying word combo to express our urgent need to increase universal free education and raise average

IQ can be abysmal IQ, primitives, low IQ, 0 IQ, chicken IQ (chicks live 20 years in the wild, humans 80, so chicken IQ is a metaphor for someone with IQ much lower than 320 year old humans living 4 times longer than us), genocidal (for actions that cause loss of millions of lifespan years, or roughly 0.5-5 million 40 year olds losing 40 years of lifespan each). Animals are more selfish simpler intellects, whose main goal is the immediate food, like some people who care about self so much and the human species so little. Thus, these "offensive" animal IQ comparisons are not myth, they simply point to the nature of these pigs who simply have not reached the basic intelligence level of a human Immortals "wanna be", who view all human beings as their Family of Immortals, whom they would love 1 trillion times more than the best mom loved her baby last decade, since they want to evolve past the monkey stage. Immortals would view all fellow Immortals as their children, not as an ideal, but due to the fact they're actually parents of all children due to new species procreation ability of the Immortalist Anthem. Not only that, but kids can help recreate the existing Immortals via upgrades to programmable matter of the species blueprint, so everyone eventually becomes everyone's parent and child sort of, all help each other live forever. In our linear fixed form abysmal IQ or "ant IQ" world view, we think of stuff in very rigid ways: x is a child and y is a parent, but when tech is advanced, after a while that difference becomes very blurry. The average human today is ultra selfish and tribal, caring only about his family and friends (self-interest) or nation (some only), ready to kill others in wars and self-defense and not interested in 0 war, violent crime in 3 years, he behaves is very hyena like animalistic ways, like wild dogs when seen by a detached alien observer. His ability to feel hourly the Immortalist Anthem emotions/intents is almost nonexistent. This can all change with the Internet and education, since this is all due to the "scriptures" and social engineering created by the "dogs" at the top of societies for millennia: culture creates genetics after millennia and it's all reversible. Humans definitely want to move away from the angry energy of swear words "imbecile, moron, etc", but we need to clarify how dire the situation is for humans too, since the end of humans in 10 seconds is a bigger sin than using a few "offensive to big egos" word combos like "cockroach IQ"☺☺☺. Humans love to use more precise analytical academic words or more comical, like at the Nuremberg trials, when the killers of 40 million people were tried, as one day aristocrats may receive lifetime labor in a healing city in cases of mass killings via bad products. Sadly, many don't realize their actions, music, movies, etc are genocidal indirectly, so we need remind all brainwashed people that wars are outdated and only abysmal IQ creates war. Immortalists try to love all, forgive all, as the Immortals do, having infinite compassion for the infinitely low IQ of genocidal aristocrats or of poor person of IQ low *enough to buy* junk 1.4$ trillion/year useless products aristocrats sell to build palaces *via bad companies that are* genocide in disguise. *We need to have compassion for all humans to heal the human quantum field, as the* Immortalist Anthem *explains:* biggest aristocrats forget the 13.19. principle of Eternal Infinite Resources for All. Aristocrats facilitate

the destruction of the Eternal Unity of the Human Family of Immortals so perfectly Encoded in the Ethos of the Immortality Credit Score and Its System of Equal Pay, rooted in the same Infinity Thinking of Merit-ocracy being Infinitely Small vs the God or Immortals, via Virtue Building Incentivization. Please forgive the generous use of the word genocidal in the book, which is sort of prosecutor like, as if they face the Universal Working Class Tribunal, but the redundant existence of waste of half of labor force is a catastrophic sin of not focusing half the energy on 0 violent crime and 0 war, the advent of Paradise on Earth. Mk 10:25 "*it's easier for a* camel *to go thru a* needle's *eye, than for a* rich *man to* enter *heaven*". Via free education, the vibe will increase and people will no longer believe in win-lose scarcity thinking but in win-win infinity thinking, as nobody will accept aristocrats to live off as parasites, off the others they con via wars that cannibalize others. The less flattering "puppy IQ" words are not there to lower the vibe, but to clarify the catastrophic effect of certain choices, within a precise context of universal loving kind *compassionate* enlightenment for the sake of IQ, ethics, 'soul' elevation and prevention of 10 second end of humans: those 'low IQ' choices are genocidal due to cultural brainwashing, not to our DNA, meaning the affected humans can evolve out of this with deeper thinking and introspection, and overcome this acquired low "intelligence of the species evolution" kind. Our intelligence is made of 5000 subscores, not just academic that IQ scores measure, and one such intelligence is species evolution speed and dynamics. ☺☺☺

The victims of the genocidal aristocrats are folks whose goals are pathetically abysmal in IQ and viewed as resisting the human collective quantum field drive to evolve the species, so it can live longer, travel between stars, expand to other galaxies by long lifespans, increase the species' chance of survival in case Earth gets wiped out by a virus, gamma ray burst or some other unknown to humans event. The socially engineered robotic slave is not interested in evolving self or humans to 9000 year lifespan, only in getting rich or allowing aristocrats to take advantage of him with lethal products, so he behaves like a robot chasing money, a safe afterlife in a fantasy religion with 0 proof, organized religion, marriage, fame, sex outside procreation and/or stimulants. Those disliking genocidal can use a combo of words that clarifies within a context the error committed that contradicts the Immortalist Anthem Ethics. Such more polite yet clarifying combos, that seek to illuminate their unethical deeds, could be:

1). "1st grade IQ and USA traitor making useless ultra low quality products" aristoc-rat,

2). "ultra low IQ and evil intent scientist wanna be" aristocrat CEO of a sewage smell like trash company (of 10 employees, 0 PhDs, vs 1 million PhDs with the 11 National Unified Companies) making redundant trash products (to get rich) that damage billions of people and waste global resources, see humidifier, mice, room heaters, eyedrops, phone, electric sections for examples.

3). "3rd grader IQ incompetent thieves creating food products without a food chemistry degree"

4). “enemy combatant, foreign spy, hybrid warfare assistant of anti-life forces” aristoc-rat

Thinking deeper before speaking, acting, typing and verbalizing thoughts internally with less positive emotions (even if hard to practice) helps bring World Peace and inner peace faster (since everything or a good part of what we radiate outwards may come back to us sooner or later in some fashion). It makes us more polite too or what they call “emotionally intelligent”. It also helps us develop Evolutive or Evolving TELEPATHY, which is aided by Evolutive Speech and Writing born out of a gentler sentence structure, feeling the words and using positive words in phrases as in "perhaps not the smartest", instead of negative words like "stupid". To accomplish this, we would most likely have to practice Evolving Listening, Watching:

8.2.2. EVOLUTIVE or Evolving (meaning eternally improving) Listening, Telepathy & Writing

8.2.2.1. Listening and Watching:

This book removed all exclamation points, !, except for 3 quotes or math factorial, since ! changes the tone to that of shouting, moving away from the serenity of the Immortalist Anthem. The phonetic eterni English will no longer use exclamation points, as human languages have sky high levels of shouting in writing and speech, which prevents Eternal World Peace. It's impossible to maintain the most focused thoughts on the amazing & beautiful ☺☺☺ Civilization of Ecstatic Immortals if we don’t filter out negative streams of consciousness, information. Every day we Listen to *info streams from the Internet, people, email and often times we don’t realize how distracting* they are, brainwashing us to repeat the short lives history of humans. Probably for many people, the solution is to limit watching news to 5-10 minutes weekly (same old historical inertia repeating forever), stop watching the low IQ TV programs (give away the TV), social networks, etc and obviously making efforts to go into conscious breathing and happy states daily instead of interacting with people not interested in creating *Heaven on Earth* or what we could call a Civilization of Immortals. Every time we watch stuff (that is not *gentle tender soft* and conducive to acquiring the 1 million qualities of an Immortal) online, instagram, facebook or TV, we give thought power to that, remagnetize it and pollute the mass consciousness field with negativity, become worse as a person, acquire bad karma, leading to a repetition of the past with new technologies, same old short lives of incessant war and violence. All that mental energy wasted in watching negativity or silliness could have been used to visualize the heavenly Civilization of Immortals, to create a little path towards that timeline.

8.2.2.2. EVOLUTIVE or Evolving (meaning eternally improving) Telepathy

Evolutive Telepathy born out of compassion for spirits around us is realizing that spirits hear our thoughts, just like we hear when people speak. We all have around us spirits who're more or less evolved than us, and one way to help the less evolved who happen to be around is to

elevate our thinking. What this means is that how we think and what we intend to do in the end is perhaps 10,000 times more important in many circumstances than anything we speak, write or do even, since what we think determines also what help we receive from evolved spirits and we hypothesize that evolved spirits have more say about our life than anything else, especially afterlife. Ultimately, being careful with what we think will help us to have kinder and more thoughtful words and actions, as the T.H.I.N.K. acronym (is the speech t.houghtful, h.elpful, i.nspiring, n.ecessary, k.ind). A way to develop translinguistic telepathy ability, which is ultra useful in bringing World Peace, could be to IMAGINE that the spirits take all our verbal thoughts and broadcast them on CNN and/or BBC or in the astral world in some "holographic screens where the spirits try to evaluate which human to help more based on the universal kindness degree of their thoughts". This doesn't mean that this is how the spirits know which person to help the most, they may have a sense of clairsentience that encompasses an entire planet and instantly multilocate to 300 people who at a given moment display the greatest amount of loving kindness globally, in a process of making 300 copies of themselves, for those few spirits who may be able to do that. Not only does this imagination exercise elevate the loving kindness of our thoughts which can be seen by anyone visiting our Akashic records or spirits nearby, but since we want to be subtler and kinder, we naturally shift the brain and astral brain towards the conceptual and other forms of telepathy far more than the audio-visual-verbal, especially verbal telepathy. Another way of evolving one's brain thinking could be said to be to think while applying an emotional regulation from the heart so to speak or from the pranic body as when consciously breathing; like with the tone of speech and gentle conscious breathing, if we feel thoughts in our souls as they form in the "astral or physical brain", we filter/think only the gentle tender healing thoughts birthing like emotions, connecting with benign 'spirits'. There might be some form of synesthesia that enables a much more detailed feeling and perceiving of thoughts (some analog of colors and shapes of numbers type of synesthesia). ☺☺☺

This Evolutive Telepathy is perhaps a way to align the thinking of the Brain and even that of the spirit (it seems they occur on 2 levels) with the Gentle Serene Healing Selfless Compassionate Kind Patterns of Thinking of the Evolved Spirits who radiate universal loving kindness for all. By shifting to translinguistic telepathy, our thinking becomes private to immature spirits still stuck in human language based telepathy and all the war it brings. Today, spy agencies and militaries can read and write thoughts, emotions, images, inner sounds in the brains of anyone – and they can use you to create war and all kinds of negative things, so it helps to know which thoughts are yours and which are intrusion; likewise, by telepathy, they can make people 'discover' or 'invent' or 'solve science puzzles' that 'nobody has figured out for years or centuries', to boost the ego of a person and control them, manipulate them better, especially with some sleep deprivation. By us having more private thoughts, these spirits no longer hang around us, as they

can't taunt us and manipulate us into going into negative emotions or into doing unethical unkind or violent things, and our aura becomes much clearer and brighter over time. Every spirit who comes near a Translinguistic Telepath might suddenly, unthinkably, become more serene or happy or smiley or light-hearted (less angry, etc), and if they like incessant jokes (no real action for World Peace) and violence, they go away to their games.☺ A hypothesis is that violent spirits dislike honesty, serenity. We can even mentally ask spirits or God to show us a slightly more evolved sentence structure or way of thinking about an issue that we're wondering about. We're all works in progress, have our ups and downs, moments of inspiration or immaturity. By asking for help from the infinite bounteous field of compassion and knowledge, listening quietly, we get conceptual, maybe verbal and audio-visual data to further refine our patterns of thinking.

8.2.2.3. EVOLUTIVE or Evolving (meaning eternally improving) Speech/Writing

A more diplomatic way of *writing* or speaking, of content, can be seen in the first five pages of the eterni leader speech 1 year before World Peace happens. When possible to use without changing the meaning, especially when writing a small anthem or scripture, or dealing with a very hurt sensitive person in need of healing or in a tense explosive situation, it seems much better for all involved to avoid using negative or offensive words when addressing people or talking about people, or even in quotes containing them: "stupid", "moron", "idiot", "ignorant" (use clueless instead), "bullshit" (use nonsense, hot air, empty talk, fraud instead, "bamboozle others" not "bullshit others", bamboozling not bullshitting), "crazy", "crap", "bad", "hate", "disaster", "macho", "war monger", "criminal", or even the widely used "violent", any word that has a negative connotation, in written or spoken form, as it will have a subtle "less ideal" escalating, conflict instigating and lifespan shortening effect on all humans. There is almost always a substitute that is deescalating, more healing, gentler and yet as accurate in describing, yet it creates a world that is softer, kinder, sweeter and more tender. The "imbecile" is a short word for the more correct and far kinder, "a trillion times lower IQ☺☺☺ than the IQ needed to love the worst person a trillion times more than the best mom last decade loved her most beloved infant, as the Immortalist Anthem calls us to", though in writing or texting or verbal chat, it is often a little long to always be so detailed. We're not talking about normal IQ, but the IQ subscore relating to the ability to help others with that skill they lack. On the other hand, not using clear words to designate low IQ, can confuse readers if you're too polite or vague. Perhaps, a smiley face and quotes, if a word is used, is always better, as they get you're being a little sarcastic and it will be far less negative in emotional effect. Though people want fast ways to indicate when the IQ and company or organization could be far far better than the complete disaster it is, so sometimes we do need some relativistic "negative or insulting" words to highlight how disastrous the situation is in a power plant that might kill 3 million people in an explosion, even if it's better to always go with the long explanation. Certainly, if you can prevent

4 million dead by using a word like 'rat IQ' to help people fix an issue due to trying to improve their image or get a raise by not being an "idiot", it's better than killing 4 million people by praising low IQ people for their incompetence. This book's main theme is the abysmal IQ of the system of 33 million companies, where mom/dad garage company has 5 hours total of PhD level courses, while the 11 mega companies have 40h/wk, for 5 years, so 10000 hours, times 5 million PhDs, 50 billion hours, so 10 billion times more expertise than the ☺cat IQ guys☺ starting most companies, products today. Thus, it's a little hard to avoid using colorful words in some contexts to highlight the genocides small companies do. The tax area explains this Genocide well. ☺☺☺

I apologize for this 'sinful' overuse☺☺☺ of "rat IQ", "scorpion IQ", but it's a desperate call to save humanity from a catastrophic 1 minute end due to an equally "0 IQ"☺☺☺ "weapon test", as every low IQ country, like small companies, tries their luck at weapons of mass destruction. Most don't realize all humans can disappear in 5 years due to a weapon test. Thus, we need to unify all nations under the 1 language, 1 bank, 1 currency, 11 companies model of the immortalists before we all disappear in a nice flash. We need to understand that when you cut everyone's life by 10 years due to "imbecile"☺☺☺ decisions, that number becomes 10 billion lifespan years for 1 billion people, or the same as killing 100 million infants who would have lived to the age of 100. GENOCIDE on a scale that makes the 1940s Holocaust a mere joke. Additionally, in a book, having to write 3-4 lines each time you want to use word "low IQ" or idiot, imbecile, etc would take many extra pages, 15 maybe, which you could use to explain more useful stuff. We can ideally always avoid any NEGATIVE WORD, *if meaning is not lost and concept ultra diluted*, at least in diplomatic or tense situations, which is *very hard* of a habit to acquire for adults (kids need to be taught this since age 2, so they become the first polite World Peace in 5 months building, and then sustaining for eons generation) due to our reflex to use 1 word instead of many words that dial down 70 times the 'personal attack, conflict arousing or World Peace ruining vibe' so present at times in politics, family, schools and use instead "perhaps not the most 'antonym of the negative word' type", replacing "war monger" with "perhaps not the most peaceful types", "macho" with "perhaps not the gentlest types", "punishment" with "healing reminder of noble action and noble speech", "bullshit" or "nonsense" or "crazy" with "a little hard to understand", "ignorant" with "perhaps not the smartest in the town, county, country or galaxy", "stupid" with "dubious IQ, questionable IQ/wisdom, seemingly low IQ", "not reflecting the infinite complexity of life" (for religions, ideas, concepts), or, even better, with "less progressive for immortalism, less eterni in vibe, less ingenious or beneficial for immortalism, less *healing or* less *healthy lifespan* increasing for the maximum number of people" (very polite, especially if seemingly is used before, as it's not calling the person/decision 'low IQ' indirectly)," or "seemingly illogical", "questionable benefit decision", or phrases that are more diplomatic than 'stupid' such as "*i have an alternative idea,*

which may work slightly better (even if it's 100 times better and everyone would agree it is*)* in this situation for maximizing immortalism", without the need to label as 'low IQ' a decision, organization or person; we're so used to negativity that we don't realize how it can start wars; "perhaps he's not the smartest around, but we could find ways to help him if he asks for help", "how stupid do these people think I am?" with "perhaps they correctly realized I'm not among the smarter ones, so that's another incentive to develop evolutive telepathy", "I am sure he's joking" with "perhaps he's exploring infinite learning potentials and possibilities", "bad" with "perhaps not the very best", "violent" with "lacking gentle healing tender kindness" or perhaps not as gentle as I thought" or "not the gentlest type", *"I hate or dislike apples" with "apples are not my favorite fruit" (that's why the word 'hate' is absent in this book, except in this sentence)*, "Can you do x" with "May I ask you for a favor, would you be so kind to do x, it would really help me with y and z?, "He needs do x" with "Perhaps he would benefit from doing x", "is, are" with "seem(s) to be, *is/are* perhaps, *could be, might be, is* hypothesized *to be*", "He is not very good at math" with "I don't know for sure, although it seems like he's not the best person I met in math", "He is a good guy" with "Assuming my perceptions are right, it appears he's a good guy", "She is typing" with "She seems to be typing (based on sensory data)". ☺☺☺

The culture we live in is not the gentlest in the universe, so our language structure often takes us away from our wish to have gentleness, tenderness, softness and World Peace. The news have so many insults and negativity, as well as most people using negative words in teaching or making a point (it's faster, seemingly less energy consuming, but far more rude and mean to say "stupid" than to say "perhaps not the smartest" which would elevate our vibe a little, and with that the energy level too), that trying to use a language expressive of the musical tones and singing and astral tones in the higher astral, a language that is full of loving kindness, requires a real almost superhuman effort, *like climbing against a hill.* The ideal thing could be to never mention in speech people that we need to refer to as "perhaps not the smartest", unless we absolutely have to describe those people. For example, when asked about how good someone is at something, instead of saying "he is stupid", we could say "he seems less capable than guy z at that particular skill, according to my limited human perception, but I don't know for sure, here is the data that made me arrive at that preliminary perception..." Instead of "alcoholic" we could use "someone who is not the most balanced due to alcohol use", thus creating a linguistic portal for the timeline where one uses far less alcohol and helping to create that timeline. If we use "alcoholic" we fuel the timeline where that person is very unbalanced and drinking a lot. Same thing for "Mr. X or country y is not following the rules", this is fueling the conflict timeline. A more ☺☺☺optimistic statement would be "I hope Mr. X or country Y will work with us for the best future of harmony and peace" which would fuel the peaceful best timeline. Even the word "ridiculous" is slightly sarcastic, angry, 'yelling' in tone (we raise voice in sentences with this

word when saying ‘ridiculous’), even if said in a totally benevolent funny way, so I removed it from the book; a more benign term fueling the best future timeline would be "amazing or funny" (if ridiculous was meant in a funny way, something hilarious) or "not the best sign at the moment" or "not the best outcome for now" or "not the ideal outcome, but things could change soon with the right moves" (if ridiculous was referring to something that was not amazingly funny, but less ideal). If we get used to being negative and judgmental about things and situations, we reinforce those bad states and don't acknowledge how fluid reality is and how things can change from day to day and we sabotage our collective capacity to work towards a better future of World Peace, non-violence, etc. We also may accidentally, without realizing, do this with closer people and hurt their feelings if we do this with situations and strangers, since we can't totally change our language 100% when talking to friends versus strangers. Another example of negative talk or mental thought is "nobody cares about issue x", which is the way sometimes we exaggerate things to "vent our frustration", but saying that only freezes the process in that state in our minds. Venting accomplishes nothing, it only reinforces the way things are, makes us a victim of an "unchangeable situation". A truer statement would be "few seem to be really concerned about this, but that could change very fast if telepathy was used to ask for help from the universe or information would be presented to people, etc". ☺☺☺

We could hypothesize that the best healer who turns enemies into friends for World Peace doesn’t use almost any negative word, phrase or thought. We often don't realize just how much of our thinking (or speaking or writing) reinforces the way things are, and how we could use that mental energy we got spare to come up with solutions instead of complaining and restating the obvious thing that "the world is not perfect". ☺ Other examples of negative words are "backwards" as in "country y is so backwards on the coal front". A more upbeat way to state it COULD BE "country y is number 1 or 2 or 3 in terms of new coal installed per capita in 2016, making it one of the least progressive on climate action and spewing carcinogenic aerosols for the whole planet to soak in, even if they installed some solar." The list of negative adjectives is endless, "terrible" comes to mind: it doesn't describe anything, it's just an emotional reaction that shuts down "detailed thinking and careful observation of ways in which situation could be changed to the opposite of what's happening"; that’s why I removed it from the book. Remaining optimistic even in face of "daunting tasks" is a lot easier when we remain objective and don't slide into emotional negative simplifications and labeling. Another example of "bad words" is using phrases, which don't contain negative words themselves, but are the equivalent of bad words such as sarcastically saying a person is "without brains" (meaning "not intelligent") or other demeaning sarcastic insulting phrases that any language is very rich in. Stating a fact "Clinton voted to invade Iraq, while Obama did not" or "Merkel supported a particular law" is fine, but stating “insults” mentally or in the absence of people, that we wouldn't voice if we

were in front of them, is a waste of time. The habit to label, judge others is so ingrained; a lot of it comes from our extrovert culture where we vent our thoughts without restraint as comedians do. When we catch ourselves talking sarcastically, we can impose a 1 hr, day or week silence period as self-discipline to watch our mouth, mind more. ☺☺☺

Factual Analytical Observational Responsive Gentle Tranquil Humble Non-Assuming Soothing Clarifying Sweet Healing Polite Intellect Stimulating Hypothesis Offering "Low Gentle Healing Tone" Soft Tender Speech vs Opinionated Unasked for Impulsive Hurried Loud Random-Tone Speech (aware of our VOCAL tone all the time? What if we would speak to everyone as we would (tone wise) with some guy or gal we want to know more or date or impress?). ☺☺☺

In all our cultures, literature, language structures, for speed purposes we have steered over thousands of years towards a very "simplistic labeling" way of writing and speaking, using a few words to render what would normally take a lot more words to be more exact and objective. We lack the habit of adhering to facts (neutral presentation of actions of others, motives which we have no clue about, since we can't read others' conscious mind, soul mind and spirit telepathy induced motivations-thoughts and understand what happened), steering towards biased expression of Labels, Judgments, Opinions, Interpretation, Insults, Bad Words, Sarcastic Phrases, Jokes or even threats. For example "Person X drove 8.2 miles above the speed limit at 5:03 pm on June 12th 2015" is a fact. The opinion of someone driving with person X, who got upset they were stopped by police and delayed was that X was "an idiot who drove way past the speed limit and made me miss my appointment". The truth might be that if X would have slowed down, the other person would have missed the appointment anyway. But in the clouding of serene rational thinking that happens when anger takes over, people stop making "realistic" judgments or World Peace enhancing conclusions. Another example is emotional devotional adherence to a Dogma, Blind Belief, Absolutist Statement that has absolutely no "truth value" to other people who regard that as a "false interpretation of facts or only one of many possible interpretations of facts". This passionate adherence to this dogma makes the person unwilling to admit their belief is ultimately a (perhaps not even easily testable) hypothesis about how reality works, workings of reality being infinitely complex and ultimately unknowable to the finite human brain. This dogmatic fanaticism then creates sometimes tension in communication when they speak and think in a fashion that is more cult-like, inflexible, incapable to adapt to new data that changes the interpretation or belief. "Earth is flat" because it appears to be so comes to mind, or "We live only 1 life" because it appears to be so. Nobody can prove or disprove that souls reincarnate, because of a billion spirit interference theories. ☺☺☺

The Advantages and Healing Gentle Grace of "THINK, perhaps, MAYBE, SEEMS TO BE"

The 20+ telepathy habits are a commentary on T.H.I.N.K., where instead of before "speaking",

we “question” verbal thought before "inner verbalizing", asking the 5 questions, is it T.RUE?, H.ELPFUL?, I.NSPIRING?, N.ECESSARY?, K.IND? Anything that is kind is automatically full of Perhaps, Maybe, Hypotheses to avoid offending others or making them feel uncomfortable. *Perhaps* it is hard for people to develop a true loving kindness unified field coherence unless they truly live by these T.H.I.N.K. ideals, or a variant of them, presented in many spiritual paths in different words. The greatest thinkers were not sure about anything. A good habit, to aid moving away from subtle offending, absolutism, fanaticism in thinking, speaking, writing *might be* to use “perhaps”, “may”, “*maybe*”, "It *appears* to be the case that", "It *seems* as if this is so, but I'm not sure, what is your interpretation of these facts?" “It was *hypothesized* X is true” more often. "X is bad, let's do this" speech is manipulating, commanding others to believe in a relative opinion about X, to do something. The more World Peace and telepathy enhancing talk is perhaps "These are the facts..., what do you think is the best thing we could do regarding X?", which is a respect for the interpretation of data by others, an appeal to co-creating the best outcome based on collective intelligence (which is always greater than individual intelligence). Today, we got more charts, science papers, facts, so we’re more prone to move towards facts not opinions, hypotheses not dogmas. "It appears to be that this is happening based on these facts" is better than "this is happening based on what I feel/know". We understand the relative nature of our knowledge more than in ancient times, since we got a cell phone pocket library a trillion times bigger than any library before, we understand multiple possible interpretations of the same facts. Over time we may move towards a more science like eterni speech, based on more facts, hypotheses, perhaps, asking for input in conclusion creation (from facts). ☺☺☺ Future humans who live to 200 may have the least smart person be like the smartest today, least eterni *in* tone like the most eterni today. As IQ increases, so does EQ, eterni tone%. Why can't all be friends of “Angel-like” or Godlike Higher intelligence, why radiate negative emotion towards anyone via uneterni tone, if it shortens our lifespan via stress hormones and chemicals the body makes? If a 9 million/billion year alien *(able to create planets, galaxies or universes) landed using a human form,* perhaps *s/he would be so* smart, able to turn all into friends. Wouldn’t all be in sheer awe and ecstatic bliss in her/his healing presence that makes everyone feel more ecstatic/loved than ever, *due to high tech and* vastly greater intelligence *who knows a* million *ways to achieve anything in the* sweetest *most* healing, *nurturing,* graceful *and* ingenious *way* without negativity, without inflicting even the smallest *emotional/physical pain on anyone?*

The glorification of less tender tone, expression, behavior, creates a zealous over-confident “I’m right often, won’t bother to consider other hypotheses, ungentle unkind tone/action works” thinking pattern, that prevents science discovery, seeing new hypotheses, delaying the curing of all diseases and fast aging by eons. This may be the self-correcting mechanism of the universe, to keep order in place: after pride, the fall comes. Another advantage of eterni speech (and other

forms of deeper “useless” kindness, like maybe avoiding eating animals, and even plants later as eterni diet becomes popular, etc) is that it creates a very tender healing flexible caring mode of thinking and action in the civilization, very cautious, which aids its survival. If bacteria, unaware of an elephant existing, itch him, the elephant might move and in the process unintentionally kill them all or step into a pool of water with some antibacterial chemical that wipes out bacteria. Likewise, humans when they test new weapons to kill other humans or when they have a less kind, more confident, aggressive energy, are more inclined to try out things without thinking about possible elephants (strong universal empathy vanishes when eterni tone is absent), unseen, in other dimensions, elephants who, also unaware of humans’ existence, may do something that ends humanity in hours. When people are *eterni*, they're more careful, kinder, think about other beings more, like bacteria feed off many surfaces but they have no way of knowing which surfaces when colonizing will often get them all wiped out as they interfere with humans. When humans do things in space, the same thing can occur, not all planets (surfaces) are the same, even if to us (like to bacteria) they look similar. *However, mosquitos can do wild things, like cause the death of millions of animals via a disease they spread, so they can cause a shift that is trillions of times their weight, like humans can with their thermonukes;* so just because we can do wild things, doesn't mean we're more than mosquitos versus some aliens; they're not going to kill us unless there is no way without it, just like we don't kill all bacteria, some are living inside and we love good bacteria; it helps to not get so self-centered and think we're so amazingly special; men said ‘we’re the center of the universe, stars are divine beings’.

Rocks are very rigid, and can block the flow of water, alter it, etc in the short term in a river, but over eons, water erodes the rocks. The rock doesn’t live a long time; the water, with its gentle fluid yielding adaptable nature does. Eterni speech (by speech we refer to inner speech via telepathy too if they use no sound) civilizations, like water, live much longer, than “normal” speech civilizations, because their thinking and emotions are more watery, less rocky. When wind blows, the more fluid plant will survive (it bends easily), while the rigid will die. This is known far and wide, but few civilizations put it into practice as Tao Te Ching says. Even in the absence of elephants, when a country A goes to war against B wiping it out or harms it covertly (no war) for some odd reason (A was not attacked), that creates an anti-eterni tone energy that can come back and destroy A, as the inner A unkind energy amplifies and in the future creates a rift between 2 emerging modes of thinking in country A leading to war between the two sides and the end of the civilization as it declines or ends if the war is catastrophical and leaves nobody alive. Like the flexible plant that bends, like the water the goes around the rock (instead of being a rock and trying to fight the other rock and breaking in the process, a rock or country throwing itself at another rock or country can break and die), the eterni tone *and* kinder civilization vastly outlives the opposite. Did this fact escape endless human empires?☺☺☺

We could argue that a or the main problem that causes conflict in the world may be the *tendency* of talking/writing without witnessing and purifying the thought-feeling formation. We think far more when having eterni tone that filters thought and emotion.☺ This habit or *tendency* can be gently dissolved by more introspection, searching inward of the faster, easier ways to prevent judging, labeling, categorizing fast without empathizing or feeling how that might make others (spirits too) feel. When we feel a little disappointed in someone's behavior, it *seems to be* a good idea to (feel free to gently notice how I did not say "it is best") pray for them, allow them to be as their free will wants, ask the Universe to send them blessings of inner peace and positive qualities they may need, instead of "emitting negative thoughts/emotions that are judgmental about them", as negativity doesn't heal/improve/help them/anyone. Truth is always infinitely more complex than an individual brain can fathom thru one's labels, judgments, angry thoughts. It often seems to be kinder to think 10 times than to write in speed something potentially insulting and then laugh, joke in a potentially offensive way or add "lol" to soften it. *This helps us to be more tolerant, accepting, forgiving, less judgmental/cruel in speech. What* is kind or funny to us may come across as cruel or insulting to others, since we have no way to know how *dear* and holy certain things are to other people, nor do we know their fears, trigger points of bad memories. A peacemaker has a gentler way of writing/talking.☺

To be gentlest, avoid "he/you/anyone should" or "must"... as it is a *form of subtle yelling and commanding people*, with no respect of free will. This book has few instances of "should", unless I *quote some paper* on something important and I can't avoid it. A nicer way to say "you should do x" is "from this research some people have found that x works. Have you ever thought of trying x method of solving the problem among the 2 trillion ways possible? I would give it a try, but if you don't want to try, I understand, you got free will, just an idea that came to my mind, not sure if it's among the best and simplest solutions...". ☺☺☺ "The best (or any adjective in superlative form) way to do this is..." seems not ideal either. One could use "One of the potentially reasonable ways or one of the possible ways to tackle this seems to be this". It seems to be gentler to avoid/minimize using superlatives or absolutist words such as "best", "greatest" in many cases where the use lacks in Nuance, Grace, Tact, Gentleness, Compassion, Tolerance, Forgiveness. We often think, speak, act, feel in binary ways (either positive or negative), instead of thousand fold ways (34.50% positive because of 80 reasons, rest negative because of 70 reasons). We often think in black or white, with no thousands of possible shades of grey so to speak, allowing for little space to understand others' points of view and where they come from, forgetting NUANCE and CONTEXT. Perhaps it's impossible to be an effective peacemaker if one is not an eterni speaker, centered in deep emotional tranquility. We can only bring peace if we're rather stoic ascetics, thinking many times before speaking or writing. ☺☺☺

Everything that happened in our life so far, may have happened for one reason alone: to make

us THINK deeply non-linguistically many times before verbalizing thoughts internally, speaking, acting and writing. "Whole being" soul non-linguistic thinking translating into linguistic thinking (and then action-speaking-writing) is part of the *expression* of thoughts that create the 500 or 80 year lifespan world we live in. The habit of *discerning the Valley of Transfer of Non-Linguistic Thought into Linguistic Thought* is just like biking or any skill, a habit that can be developed as we listen and watch our thoughts form, transmute, change. The Tao Te Ching and other texts *hypothesize* that the centered individuals are only concerned with their own faults, not with the perceived or real faults of others. Each person knows their own faults better than most strangers if they introspect and listen to their "angels" or "spirit teachers" and one's faults are enough to keep one busy changing one's thoughts instead of "judging others and sending negative thoughts to others by thinking negative things". When temptation arises to start internally verbalizing negative things, it may help to use our favorite focused invocation as in one of the trillions of variants of "Gentle Tender Soft Smiley Soothing Healing Peace, sweetly kindly *nurturingly bless* the planet with World Peace" ☺ or anything non-linguistic uplifting that helps replace negative thinking with positive thoughts. Another method is to realize all judgments are relative opinions, not the truth itself and then willingly witnessing such judgments vanish so as to enable seeing the good potential in others. The world seems to be a product of THOUGHT, so to bring World Peace or a better world, it seems that the way of thinking needs to change. ☺☺☺ Every harsh, potentially insulting (even a joke), judgmental, negative, cruel word and thought, verbalized or not, written or not, is a step towards wars, unhappiness, world chaos. It takes an eterni speaker to abstain *from making judgments (to vent disbelief, frustration or surprise) and remain quiet instead so that* we use the mouth only to uplift, heal, nurture, inspire and bless, *never to downgrade/attack anyone, since those who're "bad" need healing not more negativity.* People are smart enough to notice over time that silence means "nothing good is to be said about person x or idea x". Speech can offer potential solutions to those (whom we're tempted to downgrade) who ask, otherwise silence (total silence, no criticism or praise/advice) is better usually, to avoid interfering with the pace of their healing or evolution, to enable maximum grace and peace. Thoughts have effects on whoever entertains them. Everything we ever built was imagined, planned, THOUGHT first, so let's imagine peace and trillion year lifespans for all. The truth SEEMS infinitely complex/unknowable; perhaps if it were knowable, life would not be a school anymore. Every belief we have seems to be, could be thought of as a working hypothesis that helps us journey thru life's lessons, not necessarily a truth. ☺☺☺

8.2.3. Questioning the source of every sensation, thought leads to more evolving telepathy:

Connecting with more precise telepathy is often aided by a little analysis of the thoughts-impressions we have or received using 4 questions for any suspicious thought, emotion, spiritual perception or even biological (arousal being one of many possible ones, but could be the

"hunger-thirst" for smoking, drinking alcohol, overeating, etc) or astral perception apparition or sensation (can be induced by unevolved spirits with manipulative or even harmful intent, even if they don't realize it harms humanity):

1). Is it *true*? (i.e. does it really represent truth in its most universally loving kind form?)

2). Can you absolutely know it's *true* and coming from the ideal spirits we can connect to?

3). How do you feel when you think that thought or suddenly have some particular emotion or physical sensation? Do you feel respected, freed, with awareness expanded or the opposite? Do you feel in "cosmic consciousness" type of bliss state or what kind of state? ☺☺☺

4). Who would you be without that "annoying or limiting thought, image, feeling, emotion, physical sensation"? Why not block it and stop it, detect its source via ESP perhaps? Often times we have a thought and we think it's ours, but it could be surreptitiously implanted by a misguided spirit. If we have thoughts that bring a lot of stress, we can question them using these four questions Byron Katie came up with, thework.com, to help us see other hypotheses. Just because I share this doesn't mean I agree with everything Byron Katie might say in her books or videos, obviously, since she has hundreds of videos and I have only watched a few. All our thoughts, self-generated or received, are ultimately hypotheses and subjective data streams, rough approximations of the infinitely complex reality of any person, thing, situation, etc. And as such, it's only logical that any thought is ultimately one of the trillions of interpretations about the best possible answer to a question or the best method to achieve a goal, etc. As every thought is just a hypothesis, we can question the hypothesis, maybe test it and consider at least a few variations of said hypothesis or thought, even the opposite. These 4 questions of can help us to discern the truth and switch channels from "lower telepathy" to "higher telepathy", when we receive thoughts that are "stressful", be them spoken, telepathic, self-generated. "Lower telepathy" from more confused energy fields, past inhabitants psychic impressions in a given location, spirits, humans, tends to bring a lot of fear, panic, anxiety, limited awareness, commanding tone and paranoia, while higher one from more mature spirits tends to bring peace, World Peace, non-violence, gentleness, tenderness, softness, sweetness, kindness, cosmic consciousness, respect for our free will, and optimism. ☺☺☺

Miguel Ruiz came up with those 4 agreements, which say "Don't make assumptions" (3rd agreement). It's the same idea, when we don't make assumptions, we can actually go thru these 4 questions and see what alternate hypotheses or thoughts could be truer than the one we worry about. There are charts made in 100s of books that can be used as ways to filter, interpret, evaluate telepathic ideas from spirit so as to determine, when unsure, the consciousness level of the spirit and its ideas. The evolved spirits telepathy comes across as

tender, guiding (not demanding), empowering & expanding (not limiting, constricting), supportive (not pushy), suggestive (not commanding), encouraging development of understanding (not obedience), soft, gentle, leaving choice to you (not making choice for you), sweet, freeing, more inclusive (not exclusive) in the sense of more nuanced when saying "something is less ideal", free will respecting (not forcing or intruding), informing (not flattering), patient, serene, humble and aware there is a greater unknown truth (since all wise spirits know how little they know) and all it shares are perceptions based on its relative knowledge, optimistic (optimistic usually, unless trying to suggest to us to not do something inappropriate we're about to do, even if we don't realize that it is not the ideal choice at the moment and may interpret their message as not that "positive"). It would be great to create the Translinguistic Telepathy University☺, imagine a new world where language fights are over, a peaceful world with words richer in universal qualities described in the spiritual qualities and beliefs of Immortals section.☺☺☺

FRAGILE, HANDLE WITH CARE: when a company buys a $90,000 instrument, it often says “fragile, handle with care” on the box. The instrument will break if it is rough handled. Yet, the human supercomputer that the brain is, worth more than 90K, if often handled with no care at all in sports that expose the head to impacts. There is little care to handle it gently so it reaches super happiness states, which are what the 9000 year old Immortals of the future experience daily. This little care, attention and grace is noticeable in the tone of speech, rhythm of music, music lyrics some listen to or share with others, without them realizing how this diminishes their ability to move into these happiness states that end negative emotions and all violence. Einstein reportedly said “peace can only come thru understanding (not force). A problem can't be solved with the same level of consciousness that created it”. So, to bring peace, we need to reach happy states, so we get a glimpse of the 24-7 state of the long lived Immortals, our far future descendants from year 5000 or 90000. In the future, the “police” would teach people how to reach happiness to prevent any negative emotion via the 20+ telepathy habits. ☺☺☺

CHAPTER 9 – Smiling & tender looking, the eterni gaze

This one is really easy to practice naturally effortlessly when you pay a little attention to your breathing and become the cosmic bliss immersed being, who rejoices in the Eternal Smile of God's 24-7 hug of you thru the infinite field of the oxygen molecules lighting up your brain thru ATP transport and the electronic transfer of oxidative phosphorylation. ☺☺☺ Longevity is enhanced by smiling often, and "eterni or immortalist gaze" (inner, if eyes closed when singing an 'eterni greeting' "May all interested live ecstatically forever or for a trillion eons" etc and/or outer) or gentle universally kind benevolent compassionate gaze. Women smile more than men and they outlive men. ☺☺☺ To help oneself to smile more often, one can record on the phone an audio file or a video file of oneself laughing and smiling and relisten to it to rebring that memory and mood and help one laugh and smile and maintain a positive vibe all the time, at least when one can listen to headphones or music (computer work at home, etc). Listening to oneself laughing is very contagious, just like when we watch a comedy show or others laughing. One can make a hilarious affectionate tone and content audio/video file with loving affectionate words towards God, a spirit or someone one loves and relisten to it. It may be the case that as we want God's Love (Universe's for atheists) to embrace us unconditionally forever and without interruption, so does God want our facial expression (smiley, loving look) to embrace all beings (God sparks) at all times with selfless universal love and kindness, *gentle tender softness*, healing tender grace and peace, to never frown, threaten, express any negative emotion like anger thru facial expression or eye look, to never post a sad/angry face on social media or any public forum, as the world is already OVERFLOWING with negative emotions leading to incessant war-crime-violence and as Mother Teresa said, a smile is the beginning of love and it helps others to move from negative emotions to positive ones, being a true service to humanity. Ideally post only smiley pics. What some don't realize when they post sad, angry, scary or unsmiley pictures of themselves publicly via internet, videos, etc, is that that image is replayed in the minds of many people who then unconsciously connect with the subconscious mind of the poster and transmit that image via telepathy, the poster's subconscious receives that self-image, and reinforces the unsmiling unhappy state leading to his/her own emotional decline and incapacity to move to positive joy very easily and also to the decline of capacity of those viewers to move to positive joy, delaying *Heaven on Earth*. Even if the angry sad pictures are of other people, there is a karmic effect, since the emotional state is down in those people and those people connect with the posters' subconscious bringing the poster down emotionally. ☺☺☺

Sometimes the karmic consequences could be unexpected and far greater than one would have ever guessed, as we hear tragic stories in the news of some teenager moving in such a negative emotional state because of a negative and ugly or scary angry picture accompanied post, that

they committed suicide. So in these tragic examples one can see that even if suicide doesn't happen, the karmic consequences evident later on, maybe in the afterlife, can be far more catastrophic than what we thought while a human being, especially if the audience is bigger than 5-25 facebook friends, due to the compounding effect. In Chapter 4, an analogy was used to explain that perhaps in a world of Immortals the worst crime that ever happens, equivalent to the worst thing in our mortal world, would be to frown (or make any negative emotion display face unintentionally) at others or frown for any reason due to internal sadness, case in which everybody would come to their aid send healing to help them move out of that state. This shows how far we're from a Civilization of 900 year old Immortals, if that's true indeed. Does that mean that if we frown at others we're unworthy as souls to live in such a world? This becomes then a very interesting question, why are we on this type of world? Is this solar system and dimension a classroom, where students are required to enroll when they make a "frowning" mistake in a world of Immortals, just like in our world, when we make a mistake in driving we need to take drivers' classes? Is this evolving civilization of ours used as a school for souls to learn how hard it is to build a world of Immortals and translate it into a subuniverse (may be virtual too) and to become more aware of what they have lost full awareness of by incarnating a part of or the whole of themselves into this "second life" virtual universe? If you read the science studies below, you will see that not smiling may cause someone to lose 10-20 years of their own life, and since people around imitate us (especially kids, spouse, siblings, relatives, etc), maybe cause some other 10-40 years lost in others' lives, 10 years per kid, maybe 5 from wife. This can in theory at least become the equivalent of shortening a life by 20-60 years as it can happen when someone takes someone else's life and shortens it by 20-60 years. ☺☺☺

This then shows why in the Immortals' world, frowning could be so bad, maybe equivalent of killing in this world. If you add effects on grandkids and great grandkids for 300 generations, it becomes even bigger. Thousands of lifespan years, true miracles of life giving thru smiles today, equivalent to raising from the dead hundreds of people, like a sage saving lives with every smile, performing miracles. Imagine if you would have a magic wand to bring the dead to life, perform miracles, we sort of have it, it's our smiles, our healthy diet, lifestyle, kindness, positive vibes. ☺

Holding a pen with your teeth is a common method some use to train to smile for hours while doing computer work or something and to trick the brain to release good hormones, until the habit has become second nature. This is very helpful because we can't ever hope to bring World Peace if we can't turn negative emotions inside of us and in others into positive ones; one way to do that is smiling and feeling positive emotions so strongly they become contagious like yawning. Perhaps 99.9% of all war, violence and crime starts from an unsmiling face indicating negative emotions or lack of ☺☺☺ happiness. ☺☺☺

SMILING AND LONGEVITY:

Studies show that those who have a positive view of others (who trust others more) and who have a positive view of the future live longer. Optimism is a common trait of centenarians and optimists always outlive the rest. Smile width and frequency predict health and longevity according to PS 2010;21(4):542-4, a study presented in LA Times article which says "People who smile a lot are usually happier, have more stable personalities, *more stable* marriages, *better* cognitive *skills and better* interpersonal *skills*, according to research. Science has just uncovered another benefit of a happy face. People who have big smiles live longer." People who smile 3-5 times more than the most smiling in this study may gain 25 years of extra life, explaining why some centenarians live to 105, while their twin sister only to 75, with the centenarian being ever smiley and the other one always lacking a smile. The centenarians smile a lot.☺☺☺ Imagine how useful it would be to smile around your baby in first 21 months of life when 85% of the brain is formed, and first 10 years too, so he grows up as a smiley adult reaching a longer lifespan. ☺☺☺ For more studies on smiling vs longevity, see a TED 7 min talk and 3 min video.

The Scientific Studies Showing Smiling makes people easier to remember and makes them appear younger, hotter, more familiar (even if stranger), likable, courteous, competent, trustworthy, attractive

1). Smilers are trusted more ► NN 2002;5(3):277-83, enhancing the Evolving Telepathy of smilers who exert less effort to over-explain themselves verbally and, in doing so, to filter out noise and negativity from planetary average consciousness, local energies from past events, etc. ☺☺☺

2). sciencedaily..52.htm explains that seeing a smiling person makes people happier; the short article is based on this much longer free paper: Ped 2008;122(1):40-51. Because smiling makes others happier, it aids them in their own evolving telepathy, as higher quality telepathy depends on filtering out negative emotions and other forms of noise. This means that people connect more with their Evolved Spirit Guides which give them better ideas on how to go forward in the Relationship with the Smiling person, for the purposes of Harmony or even World Peace, reinforcing the idea that Smiling people have better relationships. Smiling faces lit up the orbitofrontal cortex reward center of the brain ► Neuron 2001;32(3):537-51 ☺☺☺

3). Smiling faces (of strangers) are remembered more ► NPsy 2008;46(9):2310-9, placing smiling people at a strategic advantage. This may be a reason why relationship success is higher for the smiling people: others simply record better what we said, stare more at us, understand (learn from) us better when we smile, leading to more harmony. ☺☺☺

4). Familiar faces who smiled were remembered more, unfamiliar faces who smiled were not

remembered more ► Percep 2004; 33(4):399-408. ☺☺☺ The full paper is here. ☺☺☺

5). Strangers with smiling faces were more likely to be labeled as familiar, than strangers with neutral faces, indicating that the seeing of a ☺ causes the brain to judge him as FAMILIAR, part of the people one knows (or trusts as shown in the other studies) ► Memory 2000;8(5):285-92.

6). Smiling faces are perceived as more attractive and kinder ► PMS 1996;82(3Pt 2):1111-21, giving smilers an advantage in Telepathic Evolution as It helps both their and others' brains to filter out noise better, as kindness cancels out noise and when a person interacts with a smiler, they, therefore, hear the Immortals' kind evolutive telepathy better leading to better actions.

7). blog.. study that found smilers showing their teeth are the most liked, perceived as the most competent. Closed mouth smilers are only half as likable as teeth showing smilers. ☺☺☺

8). Smilers are perceived as more competent, likable, courteous ► OBHDP 2005;96(1):38-55 ☺☺

9). Those smiling were perceived as younger ► PO 11(3):e0152093. Another study found the same thing ► PR 2015;117(1):188-205. ☺☺☺

To Smile is to make a real effort to evolve our telepathy, our feelings, to speak less (since we smile), to think more since we speak less, to feel more and bless others more as we speak less. To smile is to kindly and gently make a selfless real effort to change the vibration of our soul for the sake of humanity, to smile is a real effort to break with the less rosy past of humanity and create a new marvelous future, to smile ☺☺☺ is to practice evolving or evolutive telepathy, to remember to practice T.H.I.N.K. (before speaking, THINK,☺☺☺ is it T.rue, H.elpful, I.nspiring, N.ecessary, K.ind), to remember to never get angry and remain calm and cheerful in all circumstances, to always see the gold in everyone (their potential at least). To smile is to shift from verbal-audio-visual language to trans-linguistic telepathy mode easier, to activate new neural pathways, to express one's Radiant Beautiful optimism in the magnificent future of 900 year lifespans we can bring, besides World Peace in 3 months. To smile is to change everything around our world, since changing one's thoughts changes everything in the world, everything in our civilization being born of thoughts, plans, ideas, visions, feelings. ☺☺☺ To smile is to evolve telepathy faster thru the simple elevation of our vibrations and energies and thoughts to more easily align and couple energetically with the thoughts, energies and feelings of the evolved spirits, guides, beings, angels, whatever name some prefer, who want to help us to bring World Peace, longevity science progress and *Heaven on Earth*. Having seen the NDE Light-Love-Joy and the immense beauty of higher heavenly realms, these spirits function on a different mindset than ours and see reality in a far less constricted way than us, trapped in the body (with its issues, problems, ways to distract us from the resplendent beauty of the spirit) and in the cultural, linguistic, emotional conditioning of millennia of war. ☺☺☺ Smiling makes sense

because everyone is a genius at something (even if not the most important or uplifting thing, but every piece of knowledge can be useful in bringing progress and World Peace) and we're surrounded by geniuses. Smiling is at times extremely difficult, but it is one of the simplest and most powerful ways to change the course of history, all free, no money needed. Kids smile a lot more than adults and have such a healing effect on adults (the kids and people who smile are also trusted more); in the same way, the person who can break the old habits and smile more can become a powerful telepathic healer of others around him, by evolving his/her thought-feeling patterns daily to a higher vibe. ☺☺☺ To smile is to acknowledge God's Infinite Eternal Love (if you're atheist, you can think of it as the Universe's Love) and God's presence 24-7 in our lives, to thank God for flooding us with this Infinite Eternal Grace, to tune into the 0 point energy field of Unlimited Compassion and Serenity to bring a better future, to see the Gold (not dirt) in All, to Be Optimistic and Contagiously Inspire All to Dream of that Future of World Peace, the Civilization of Immortals. To smile is to demand Less of others and focus on understanding others more, to smile is to go with the flow of grace more, to balance oneself (most earthlings are too yang, and this makes real telepathy hard to master), to listen more (prayer is both talking and listening), to witness compassionately more, to be silent more often (silence is often leading to the best listening skills and acts as a healing wave for others to vent on and heal), to follow the Tao, "It seldom speaks, and never asks, but is answered without a question." and Ch 17: "The existence of the leader who is wise is barely known to those he leads. He acts without unnecessary speech, so that the people say, "It happened of its own accord". ☺☺☺

Smiling is not like some fancy meditation or astral travel technique that requires a lot of training or time, or quiet time alone, etc to master, it's something we all know how to do from the womb (babies smile in the womb), it's just difficult to change our habits of "not smiling that much" often times even because it seems easier to follow (inertia) the negative depressed pessimistic "World Peace is fiction, etc" crowd than to be the positive smiley oneself. Do we want to bring kindness, healing, peace, joy, smiles in the world, or do we want to bring meanness, trauma, war, sadness, frowns in the world? In the Life Review, what will be our answer about what we brought in the world overall? What we choose to see in others we bring out in them more of, so smiling is seeing the best version of all, it's blessing all regardless of their actions and thoughts, it's basically being a healer that lifts others up to dream, imagine and hope to embody their best version. This is a simple question of whether we want to bring smiles or frowns in the world; we can often forget the connection between smiling and what far-reaching effect smiling has when it is genuine and full of good noble intent. Does smiling enhance or hinder our goals to bring peace, healing, trust, joy in the world? There are infinite ways to answer this. ☺☺☺ Smiling is one of the easiest habits to acquire and embrace even if before we have not smiled before much, being always the serious person, full of stress hormones, cortisol, adrenaline and

noradrenaline, chemicals that are very bad not only for longevity, but even for correctly filtering telepathy. Like with learning to play chess or ride a bike, it will take a few weeks at least to be really good at smiling much more often. As long as we try our best to make each day better than the previous one, smiling wise, that's progress. A smile can affect many people's consciousness and thru that indirectly prevent a war, or lead to someone trusting in themselves, their telepathy and making a discovery that helps improve significantly our life on Earth, so burdened by our bodies and lack of awareness. ☺☺☺ The movement of the eyes as they benevolently and smilingly relax the gaze to the universally gentle kindness for all beings look, can be a trigger for shifting and concentrating astral rays of healing. It can be done even while we relax or meditate with eyes open or closed, it can allow better remote viewing of spirit Images via telepathy too (as long as intent is noble and World Peace enhancing), since RV is telepathy assisted by spirits for humanitarian purposes. There is nothing hidden from the intelligent intent reading 0 point energy field, so as we shift more into it, we become slightly more telepathic. Non-local, wormholes in the eyes, staring at the light of universal mercy-forgiveness-compassion, transducing the matter into another world, as a poem of translation. As the belly, facial and eye muscles are moving and shifting, as it were, they're swimming in the ocean of everlasting grace, light and compassion of God or 0 point energy. And it's like a gel made of the sweetest softness that brushes against these muscles, as the translation advances. To smile silently, we can't speak; not speaking makes it easier to be aware, have very positive thoughts much faster than those spoken, observe, listen, filter incoming thoughts (low vibe stuff from people, news, media, internet, random telepathy diffusion) and discard bad thoughts bad spirits or people try to suggest, evolve, radiate healing peaceful vibes, remaining tranquil as we listen to tranquil music.

When we smile what we do, even while sitting on a chair talking to someone, is shifting the position of the mouth muscles slightly, as we do for our legs when we do walking meditation. A telepathy, longevity or serenity habit is to walk and move as if we're shifting into another world, slowly. If we're in a situation where such walking is not feasible, we can practice the shifting of dimensions thru the gentle movement of our belly as we breathe and the gentle soft tender movement of our mouth as we recall to benevolently smile and bless all around us with the infinite optimism in the best in all. What this awareness connected to physical movement does is create an ever slightly closer connection with the 0 point energy field ultimately (and ESP), as we shift spatial awareness (time-space-consciousness web) using biological movement processes to guide the intent of connecting with the boundless kindness field. The movement of the eyes, as they relax the gaze to universally gentle kindness for all beings, can be a trigger for shifting and concentrating astral rays of healing, for happy states of consciousness. ☺☺☺ Smiling enhances telepathy with Immortals precision by diminishing negativity. It's a way to remember that God's infinite bliss and joy is infinitely greater than anything produced by humans on a tiny

planet, among hundreds of billions in a galaxy among hundreds of trillions in a grain of sand we call this baby universe. So, because God's bliss is greater, happiness can definitely be there 24-7 no matter what happens in our tiny universe called Earth. When people are unhappy, it is the person with the deepest self-mastery who can choose to create smiles and happiness and lift the whole group to a happy state, or a peaceful state. Smiling helps us to not be affected by the faces of other people (happy or sad, lovely angelic or scary), by their stories, jokes, words and to remain the angel on Earth who smiles thru ups and downs. It's the happy peaceful person who can avoid anger always and paranoia and who can prevent a fear-based conflict to emerge in a situation due to uncontrolled anger, stress-based fear, irrational fear or other unhappy emotions that distort judgment, empathy, telepathy and the intent of other people. Smiling is thus true altruism and service to the world, helping more people to have more positive emotions and more optimistic thoughts, defusing tension. ☺☺☺ Happiness is intrinsic and doesn't need to depend on anything outside of us. It's a state of mind, a choice to a great extent. We're humans, but if we apply the growth mindset explained below, the least smiley person can become a smiley one. ☺☺☺ Another thing is we clean our cars, body, homes, daily sometimes, but we rarely do a daily cleaning of our mind/body of all the negative thoughts, emotions we picked up by interacting with the media produced by our planet and from other people who had a bad day. So, smiling is also an opportunity to have positive thoughts like "i am happy and healthy, peaceful and blissful, all around me are happy, healthy, the world is becoming a wonderful planet of peace and Immortals" or at least exteriorizing peace, love, joy and saying simple words like "happy healthy" or "happy happy happy joy" repeated out loud to fellow family members and laughing to cheer everyone up, while magnifying the feeling. ☺☺☺

Sometimes we forget the toil of endless generations before us, we forget to smile as one filled with gratitude would. There are so many reasons to be happy, even if life is not perfect. If you think about it, we're blessed with so many comforts which kings didn't have 200 years ago. Before, we could be eaten by lions and animals a lot easier, it happens rarely even in the industrialized world in nature parks, more often in remote villages of the developing world still. We can go from Beijing to Los Angeles in hours, we have warm showers, air conditioning, all kinds of foods easily available from many continents at the supermarket, internet as a free library at fingertips with 5 trillion times more information than any library from 1800, cars way faster and more comfortable than chariots or even horses. We can study and find information on any topic a lot easier, without needing to be near a gigantic physical library. ☺☺☺

In one study, they had old people recreate in their minds (and even surroundings actually a little bit) the feeling or impression of being decades younger. This has led to a reversal of many aging biomarkers. The biomarkers changed to those of younger people, some of them. The same thing can be applied to recording pictures, videos of self or kids or spouses, etc when one was younger

and replaying those 1 minute daily, with the people saying very smiley face filled positive affirmations like "Today is the most amazing & beautiful ☺☺☺ day in the history of humankind, as we're closest to the Civilization of Immortals, *Heaven on Earth* manifest, etc. You're so beautiful tender soft gentle amazing compassionate, loving, forgiving, ecstatic, happy today and more so when you make holy divine efforts to be more like an angel Immortal from Heaven, blessing the mass consciousness field with elevated uplifting emotions and thoughts that propel us towards *Heaven on Earth*. We're a perfect family, filled with joy and bliss". "We are a perfect team", for team members at work who want to create a video like that to watch every month or week or whatever, etc. There is a greater effect of happy joy recreation if the video is recorded in the highest state of happiness one has in a given year. Record it when young, and watch it over, relive it, reverse aging, become more psychic, smiley as you were more so when younger, more telepathic, empathic, more able to feel and sense energies, emotions, etc. Couples could be kissing and saying "I love you Firstname, you're so... (list positive qualities above) amazing when you make the effort to be kind, smiley, positive, etc" to play when either is unhappy or neutral and wants a mood booster. Kids and parents can create similar videos about perfect harmony, etc and play them when one is sad... either parents or kids. Likewise, hotel, house, business outer/inner/lobby walls, floor designs, business doors, walls could contain SMILEY FACES, instead of squares, rectangles or different shapes they got in them, they could even have "Kindness longevity Immortality smiles gentleness tenderness are our goal" sentences. ☺☺☺

McDonalds, etc could have intricate colorful shapes on their walls at times (imagine if they would have peace sign, smiley faces, hearts, positive words about Immortality, telepathy). "Speak Kindly softly gently" would be good in a business where they talk a lot on the phone with customers, to heal customers via the phone or video, etc. People with smiley faces on their doors, as posters or small engravings, probably would perform much better in relationships, have less tensed families, kids doing better at school as love peace kindness softness prevail and are aided by smiles everywhere, on every door, especially near doorknob where people look, but also on walls, outer walls, when houses are made. A Civilization of Immortals or 900 year old mortals would see it logical to promote designs that prevent negative emotions from arising in the mass consciousness field, so as to maintain peace, harmony and nonviolence. This would prevent violence before it arises, by saturating the mass consciousness field with positive emotions imagery everywhere, not just movies, songs, literature, but everywhere. This way anger becomes an unknown emotion to any human being, same for fear, extreme sadness, anxiety, etc, the main causes of all violence and evil in a civilization. The language in a civilization of telepathic Immortals could also change the words for death into "missed Immortality" or "Soul Immortality" (because the Soul is Immortal, but they missed physical Immortality) and for "hello" and "good morning, afternoon, evening, day, night" to "happy☺☺☺ Immortal life" or

"Immortal life", because to live a 500 year lifespan, almost Immortal, life, one has to have every day very good, every morning, so it's a stronger blessing. When saying "goodbye" or "see you later" people could say instead "I love you and see you smiley, and ecstatic every day of our Immortal life". When seeing people again, instead of saying "good to see you", they could say , "amazingly blessed to see your ecstatic sweetness and Immortal radiance again" or even sing it. They could even make it longer, sing it spontaneously in the most amazing & beautiful ☺☺☺ tones like an Immortal Angel in Heaven, with lyrics that can be adjusted depending on telepathy, to bring the maximum healing effect via a gentle tone (not repeating the same thing exactly each time, to avoid it becoming mechanical like mechanized prayers when people think of something else), for example "See you smiley☺☺☺, ecstatic, gentle, tender, relaxed, blessed, sweet, every day of my Immortal life" if they have time. A 5,000 year old person, who has no anxiety but only desire to heal, nurture bless uplift elevate others into ever more ecstatic states, has 20 extra seconds to say *in* eterni tone (see Chapter 8.1) "see you happy, blessed forever" instead of "see you". Anxiety is gone, rushing is gone from a Civilization of Immortals where all live to 4000. This greeting and language means these telepaths see the divinity in others for all their "Immortal" life in this dimension, Immortal being free from disease, suffering, death. A telepathic civilization might allow one to perceive 8 billion people at once, so really, seeing them is natural.

For spouses, it might help to kiss each other on the ears or eyes each time they leave or arrive, after saying or singing to the other (singing makes happy elevated emotional conveying stronger) ""See you smiley, ecstatic, gentle, tender, relaxed, blessed, sweet, every day of my Immortal life" when leaving and, "amazingly blessed to see your ecstatic sweetness and Immortal radiance again" when arriving, or whatever, to stimulate the loving kindness infusion of the audio-visual "telepathic systems to move away from the historical inertia and infuse those circuits with loving universal kindness. Or one could use the same expression for both leaving and arriving like "I love you ("as we're supposed to love all beings", added for strangers or non-family members, etc if acceptable in that situation) and I'm super ecstatic to see your smiley happy ecstatic Immortal radiance now and again in the future" (for spouse "in the future" could be changed to "again forever")." With a person you know, you can even recall the happiest video of them in your mind as you say these positive words, the video of a moment when they were happiest to help you to see them happy and them to see themselves happy. Much of our thinking is processing audiovisual data. Or people could ask "What would your Immortal smiley ecstatic☺☺☺ radiance want to eat" when they're a waitress or when they ask peers or family about what they want to eat? People could ask "How is your Immortal loving serene ecstatic divine radiance feeling now? How ecstatic loving serene can we become thru effort to recall our Immortal nature?". Instead of "thank you" they could say (even better would be to sing) "Thank You Sweet Smiley *gentle tender soft* Serene All Loving Immortal ☺☺☺ Ecstatic Radiance"

☺☺☺SMILING AND PRAISING OTHERS, SEEING THE GOOD IN THEM☺☺☺

Smiling gently and looking tenderly, *while consciously breathing,* can also be thought of as a form of silent telepathic ☺☺☺PRAISE for people's efforts, which can often be more effective than spoken praise. We have heard many times that the ideal seems to be to thank everyone, to Praise All for their effort (not traits) and criticize none. Stanford Professor Carol Dweck came up with the terms growth mindset and fixed mindset, in trying to explain the best way to praise people so as to stimulate their best long-term performance (in any area, not just science, ESP, sales) and happiness (at work or at home in personal interactions) ☺☺☺. "Thank you for being so sweet and precious when speaking gently. You're so sweet when you do speak honestly or coherently (intent, word, tone ultra identical and refined to heal) like an *eterni*, or display that peculiar fragrance of selfless *universal* loving kindness, your whole being shines like a million suns, as if you're a trillion old shimmering Immortal from heaven, etc". "Thank you so much for doing that, that was very sweet of you. You're an angel, sweeter than honey itself, I love you so much more, as Buddha, Jesus, etc said to love all beings unconditionally to bring World Peace. I'm so grateful for your smiles when they happen, for your musical healing tone of speech, for your hands-on-healing, playing gentle peaceful music." Praise is a form of gratitude. The benefits of gratitude are known to science. Gratitude (which effort praise is also a form of) is enhancing ESP precision because gratitude improves sleep, health status, makes us feel happier, more optimistic, less anxious, etc. It's a well-known fact that accurate ESP tends to happen in more relaxed states, less anxious, stressed and happier, spontaneously, when least expected and not under pressure to "get results". Same for astral travels, most are spontaneous. So, when doing telepathy exercises, best results happen when we're in a peaceful stress-free zen-like state. So, if one wants to be a better telepath, empath, etc one has to be in a more peaceful state as explained by Douglas Dean, who, among many, mentions this in his book "Executive ESP". We don't even realize how blessed we're vs 200 years ago, we can run away from hurricanes easier, since we get weather station information. The mere gratitude for the Immortal spark of God dwelling in all people (Immortal Souls), fills one with an endless stream of stress-free thoughts and noble sentiments about the amazing, ecstatic & beautiful ☺☺☺ indescribable life Immortal of these anxiety-free Immortals (disguised as mortals) as explained better in Chapter 2. Imagine if people would say "Thank you to the Immortal divine spark in person x" each time they might be tempted to say or think something negative, it makes the grateful person much happier. ☺☺ This 5-minute video explains the dramatic effect (on test scores) of growth mindset versus fixed mindset. Kids praised for their intelligence were encouraged to develop a fixed mindset and did far worse than kids who were praised for their effort, and thus encouraged to develop a growth mindset. It makes sense to promote humility, since a humble telepathy student person or kid will grow up a much more effective World Peace bringer and better at people and telepathy with

Immortals skills, eager to learn from others, to lead from behind (a critical skill in certain situations), to make effort to bring peace or a given outcome, without assuming s/he is "the best at gentleness, relationships, math, being a perfect lover, telepathy, empathy, mercy, diplomacy, etc" because "parents, spouse or peers or friends told him/her that every day". For example, one can whisper to spouse or girlfriend/boyfriend today "Wow now you're shimmering like an angel from heaven, exuding this *gentle tender soft* celestial music thru the gentle tone of whispering and of speech, you must have worked so hard to create this beautiful ☺☺☺musical tone in your whisper and speech, in your gentle tender gaze☺☺☺ that makes you look like an angel. It's so amazing & beautiful ☺☺☺ when you make an effort to practice healing whispering, loving kindness looking and gentle speech to inspire me to practice these telepathy habits too. Thank you for helping our souls to become one love, gentler, softer, closer to God's Infinite Eternal Unconditional Love that is infinitely powerful/intelligent in sharing a quadrillion ways to bring World Peace peacefully and a world of telepathic Immortals." This is called praising the effort, not the "quality". ☺☺☺ Children who hear a greater proportion of process praise (e.g., "you worked hard") may come to believe that the sources of their accomplishments are effort and deliberate practice, whereas children who hear a greater proportion of person praise (e.g., "you're so smart") may come to believe that the sources of their accomplishments are fixed traits. In summary, we found that parents' use of process praise at home with their toddlers predicted children's endorsement of an incremental framework five years later. Praise that emphasizes children's effort, actions, and strategies may not only predict but also impact and shape the development of children's motivational frameworks in the cognitive and sociomoral domains as explained at CD 2013;84(5):1526-41. Carol explains effort praise in this Google Talk lasting 47 minutes. you.4 is an 8.5 hr "Mindset" audio book of Carol.☺

If nothing good to say, we can be silent and silently pray for or envelop in peaceful healing energies or bless the person that "seems bad". Any bad thought or word makes telepathy of subtler nature harder and it just makes us less happy anyway. Criticizing oneself is fine, but not anyone else. ☺☺☺ Forgiveness never criticizes anyone, just like the NDE Light is only total infinite eternal unconditional love-compassion-warmth-wellbeing. The self alone is to blame for anything one perceives as "bad" in the world. "Bad" is someone's learning journey in this school and it's pointless to label people or judge them because only advanced spirits and God know what lessons each soul came to learn in the physical universe. Whatever people do is their choice, only higher powers know the soul intent which is often unknown to the conscious mind. A very nice soul may choose to be bad briefly for a few years for a higher purpose (healing others, reforming something, etc) unknown to all. Everything we think and speak influences the person we think/speak about a tiny tiny bit, even if a trillionth of what they're influenced when they think themselves. So if we want the best timeline for every human being, the best World

Peace timeline, *we need to overcome the bad habit of criticizing others.* ☺☺☺ I know, it's almost impossible, as everyone does it almost at least once a year. The main person affected by useless criticism is the person criticizing usually, wasting their mental energy when they could do something more productive for humanity. ☺☺☺ Nobody changes because of our words. As we change, the world changes, since we're all connected on the subtler astral levels. No need to try to change others by criticizing them. The gentle walking is a great aid in avoiding slipping back into the worldly criticizing self. A good mantra or saying to recall sometimes when we're tempted to criticize others is "Everyone is an Angelic shimmering Immortal Lightbeing, except me who has so many faults. Everyone is a Perfect Spiritual Teacher in disguise, an Avatar of Soul Immortality, except me, the eternal student. Nobody is 'less than the ideal version of goodness', except me. I don't know others, only God does, so, therefore, assuming they're saints is a humble good step that keeps the ego in check and healing going on." ☺☺☺

Any exact same idea can be communicated as Praise "You are so great when you recall doing x" (this enhances telepathy with good spirits/Immortals precision, very nice gentle reverend benevolent humble low soft gentle tender tone, accompanied by positive selfless universal loving kindness emotions and maybe even smiles) or as criticism "You are so lazy, you failed to do x" (this diminishes telepathy precision, yelling or frowning or angry arrogant tone, pretending one is perfect like God, when one has thousands of faults himself, yelling at other "children of God or All That Is" or if not yelling, using a demeaning negative emotion filled polluting tone that is bound to irritate and hurt others, increase conflict and contribute to the war energy on the planet). If everyone made an effort to be kinder, more positive in their communication, World Peace would be a lot easier to achieve, since the average diplomat will use much nicer gentler humbler kinder sweeter softer tone and sentence structure too, leading to fewer conflicts. 670 trilion Earths fit inside one of the largest stars known to us, VY Canis Majoris. One reason to be happy and to draw strength from within the joyous songs about and meditations on "World Peace and Civilization of Immortals are Imminent" is that once enough people decide they want these, they can happen ultra fast, as the energy of one big Immortal is like that of trillions of Canis Majoris stars. This energy, wisdom, Eternity and grace is all available to us once we acquire the 10,000 qualities of an Immortal, by practicing the 100s of habits (20 being presented here) that make us nicer, more able to connect with God/the 0 point energy, 24-7 smilier. ☺☺☺ Intent to commune with God, much bigger than a big Immortal, transports us to a different space of consciousness where joy, peace, ecstasy exist and fear doesn't. ☺☺☺

☺☺☺ Thank You for your gentle tender soft healing nurturing graceful kind SMILES ☺☺☺

☺☺☺ Whatever you can is fine, big or tiny smile, see the dental section for more confidence in smiling. May the Eternia Anthem bring *~Eternal Universal Peace~* & Immortality *for* All ☺☺☺

CHAPTER 10 – CONSCIOUS eterni Breathing & Meditation

10.1. Conscious Breathing 10.2. Meditation 10.3. Walking & Gentle Moving Meditation

10.1. CONSCIOUS eterni (immortalist) BREATHING

Benefits of slow conscious breathing with earplugs on include instant tuning out of the outer world, to focus on the quantum entanglement/telepathy with God and Immortals via breathing *God's light* that enables 'soul flight' and bliss☺☺☺, lower BP/HR (longer lifespan as a result), lower stress, better decisions, IQ, ESP, higher emotional self-control, inner peace, kinder fewer words, better relationships. Stanford (at Sci 2017;355(6332):1411-5) found that *slow breathing induces* tranquility in mice *and* mapped which neurons are involved in linking breathing with states of mind (meditation teachings for millennia were that slow breathing calms the mind). For amplification of the tranquility effect, inhale God's light, and exhale it to envelop the Earth or all beings within 10,000 miles in all directions, while listening to very tranquil music. Slow aware breathing can be done for 1-4 minutes even while shopping and waiting in line, while smiling, at school during class breaks to better listen to telepathy guidance or create positive thought or feeling streams, with eyes closed while sitting at a window or on the bench, even if looks strange at first to others, in the car before going somewhere while engine is off with eyes closed, eyes open when driving of course. The slow aware breathing also allows for a better witnessing of the valley of low speed verbal-image-sensory-primitive-mundane thought formation from high speed (higher intelligence spirits sourced at times) synesthetic conceptual non-verbal thought, so as to create the most elevated verbal thought output mentally, diminishing therefore the need for heavy slower regulation of verbal thoughts via the T.H.I.N.K. acronym technique modulated by verbal thought (before you speak, ask if what you're about to say is T.rue, H.elpful, I.nspiring, N.ecessary, K.ind) or by more "primitive" thought when speaking. Modulation of heart rate and emotional output increases the capacity to discern telepathy energy quality, source and nature, allowing for an easier development of trans-linguistic synesthetic understanding of what type of spirits (remote perception) are conveying certain telepathic ideas, as explained in Chapter 8. That's why spy agencies use sleep cycle disturbing and torture, because this enables easier brain control for total slavery. Naturally, slow gentle walking also helps with this as explained in the 3rd section of this chapter. Breathing using the same shifting and connecting with the infinite field of 0-point-energy etc can replace the walking when we don't walk but sit at the computer, wash dishes or wait in a line at a store. The awareness on the breathing can be combined with many variants of awareness and astral exercises, or "affirmation type of thought streams". Use earplugs and a sleep eye mask ($1 at the dollar stores) while in a sleeping position at first, until you learn to focus, because sound and light will distract big time. Billions of people don't know that earplugs exist and make a huge

difference. After you become better at it, you can breathe during chores, without earplugs, but still use earplugs to enter deep trance states. Some use earplugs to improve sleep quality.

BENEFITS OF SLOW BREATHING EXPLAINED BY MANY SCIENCE STUDIES:

Breathing enabled a 20 bpm voluntary heart rate drop ► IJY 2013;6(1):26-30. Slow breathing lowers heart rate according to a study of 60 people who tried slow breathing for 3 months and fast breathing for 3 months ► IJMR 2004;120(2):115-21. There was significant reduction in resting pulse rate, systolic blood pressure, diastolic blood pressure, and mean arterial blood pressure after practicing pranayama and meditation for 15 days ► HV 2011;12(2):58-62. ☺☺☺

CONSCIOUS LOWERING OF Heart Rate (HR) THRU BREATHING:

yo.F4 is a 1 min video on using the mind to lower pulse from 88 to 32 bpm. Athletes have a pulse of 30-40, while normal people got 50-100, lowest during deep sleep. The longest living people have the lowest heart rate. The heart rate is normally set by the autonomic nervous system, but there are ways to lower it at will the same way we train ourselves to remain calm and emotionally cool, since nothing is as it seems (our models change every few years in science, slightly, so any hypothesis today will be slightly updated a few years from now and vastly so 400 years from now). Slow breathing has been used for eons to also induce astral travel. Another related activity is conscious laughter. The conscious breathing can be eterni. On May 1, 2017, I decided to sit on my chair with eyes closed and practice the conscious breathing meditation and entered into the most mind-blowing trance state ever, basically, I didn't move for 2 hours, the total of meditation was about 4 hours. The meditation was the wildest and most ecstatic one ever since I could sustain it and not break the trance for a record amount of time. Something which I found helpful besides focusing on the breathing, was to recall God's Infinite Love and Eternal All Radiant Ecstatic Bliss from other experiences and also practicing surrounding all beings in love, or whoever might come in my mind at that moment, if someone is thinking of you, for a few minutes you can think of them (or longer if the soul bond is stronger), and then, in order to avoid getting out of trance, continue surrounding any person, thing that comes into your mind in love. The feeling of ecstatic meditation trance or of God's Love is like imagining the happiest and most loving hug of any spirit or person in our entire life (that we experienced or could have experienced) multiplied a trillion times, the love-bliss magnified a trillion times. A simple analogy would like imagining a hug by some spirit the size of a galaxy where you lose all individuality, as the body disappears, and freezes literally in place without movement, the body consciousness disappears and all there is is the love pouring into you from this hugging being and your love pouring into the hugging being. Transcendentally speaking, this Infinite Love is present in every soul, but we normally don't see it, so if one were to attain cosmic consciousness

one would be in this state of bliss 24-7 and feel the utmost love from everyone and also, transform everyone around them with their happiness and love which is contagious. There is nothing left, no two beings, but one, one state of bodiless cosmic bliss and ecstatic love, i.e. awareness of physical body ceases to exist at times. Hard to explain in words, but it proves that to experience the Infinite Eternal Love in any soul all one has to do is to enter cosmic consciousness like states via meditation. This would have many real life pragmatic applications, such as relationships and marriages that are 10 times happier and more harmonious, leading to a world of peace, free from violence, and a world where the development of translinguistic conceptual telepathy will be accelerated as fear and negative emotions are wiped out. It's proven by science that those who're happy have happier relationships with everyone and this is what conscious breathing does in a way, it allows us to become happier, to witness the wonder of life, how effortless the belly moves, like a gift from Infinite Lovemoving us into bliss, as we no longer restrain or try to control the amount of love we radiate into the universe but are just pure love bliss itself so to speak. ☺☺☺ Other meditation experiences are in Chapter 14.

10.2. "MEDITATION" (happy brain states, relaxation, chilling out)

Meditation (also called contemplation, visualization, contemplative prayer) has many benefits: helps us develop telepathy with peaceful spirits or God, lowers the heart rate (the lower the rate, the longer we live) and blood pressure, brings World Peace faster, reduces stress, improves relationships, school grades, boosts immunity and makes us happier. Any deep trance relaxation is actually a form of meditation too and provides the same benefits as Huffington Post explains. The manganese superoxide dismutase paragraph explains why meditation can delay aging. There are many types of activities that are loosely called 'meditation', including visualization, autogenic relaxation, breathing, listening to eterni music while relaxing and chilling out, just being. In this book, meditation refers mostly to these things, not the stressful effort to "watch thoughts", the whole idea is to lower cortisol, not to stress to achieve some "2 thoughts a minute". Traditional meditation is stressful, the reality is that anything that is stressful is not meditation. A more accurate word would be happy brain states, as far as this book goes, since happiness doesn't come from fanatical Genocide Mass Rape Religions psychos created, but from your own brain. In other words, exactly as we now travel 9000 times faster than the natural walking speed with rockets, in the future, via neuroscience and understanding our brains, we achieve infinite bliss 9000 times more often on demand, by smiling, conscious breathing, visualization, positive thoughts. It's nothing fancy and it's actually a very down to Earth and simple idea that has nothing to do with the ultra stressful "Hindu or Buddhist techniques to strive to still thoughts and feelings" or anything like it, it's totally opposite, you relax and fill your mind with positive vibes. ☺☺☺ The bliss states referred to in this book are not attained via any fancy secret or esoteric religious meditation, it's just plain focus on some simple

visualization techniques, but the reality is that today, in the West "meditation" has become something very different from the original meaning, i.e. it's usually a self-guided visualization imaginative journey of relaxation. That's fine, you know the word "equality" has 4000 meanings, "longevity" can mean 4000 years or 95, etc. Don't get caught up in these words, just admit that we have a brain and all happiness comes from the brain, not from eating tasty crunchy things or from sex outside of procreation. The secret police state wants low IQ citizens who don't know their brain, so they can be easily manipulated, their brains written by electronic gadgets, so people can't discern self-thought from computer thought via silent sound and synthetic telepathy, etc. The theocratic regime is using fear of "evil spirits" to discourage any imagination, any discovery, any communication with the human quantum field of Immortals, which undermines the enslavement of that nation via religion by pervert rapists who fake their belief in religion to vampirize an entire nation of slaves, the authority of these genocidal rapists who steal all national funds to build villas and palaces for themselves, while the rest live in moldy cottages or condos. It's a lot of power behind the attacks on so called "meditative relaxation breathing visualization" stuff, to take away your freedom, your critical thinking skills and freedom to define meditation in any way not defined by any religion, to condition you Joy only comes from Sex outside of procreation or only from drugs, or only from following some cow IQ religion or ritual, not from your connection with the quantum field of humans in the age when we live to a trillion years old, etc. The pigs want to indoctrinate you that ethics is pigs making 50,000 times more than average pay and that this is good and that is bad, longevity is 95 and them stealing everything and religion is killing all to defend the rich in phony patriotic wars that only slaves fight in. Same thing with meditation, whatever doesn't enhance their complete control over you is not good, any independent thought or freedom from their mafia run nation, TV-media overflowing with weed-alcohol-sex-makeup-piercings makes you happy is not good, how dare you be happy without pure poison they prescribe to destroy your nation and exterminate all your people? First thing the rich need is low IQ. Chains are next, not physical chains, but mental via fake science papers, fake media, brainwashing, fake elections. Gurus are there as spies to control your mind and tell you how to meditate, etc... Think. Choose.

Mindfulness meditation led to a 20% drop in cortisol stress hormone levels from 382 nmol/L to 306 nmol/L ► JMAT 2013;96 Sup 1:S90-5. Interestingly, cortisol decreases 31% after massage therapy, but increases 80% after intense exercise with 80% of maximal oxygen uptake, so if people do dynamic meditation, it seems best to be gentle. Moderate exercise (40% of maximal oxygen uptake) or moving meditation doesn't increase cortisol more than 5%. This is consistent with a small 45 person study that found that cortisol doesn't decrease during traditional walking, but decreases during the gentler Buddhist walking meditation. It's not clear how double blind this study was, since if people are used to doing Buddhist walks and are forced in a study

to do "normal walks", of course, they get stressed, since even eating a food that irritates our system raises cortisol, if we're allergic to that food (while in other people there is no cortisol rise). This TED talk by a Harvard lady explains how meditation leads to brain changes in areas that relate to compassion, empathy, memory and coping with stress. Meditation has some anti-aging effects for the cortex ► NR 2005;16(17):1893-7. Meditation experience is associated with increased cortical thickness. ☺☺☺ Meditators aged 50 have a brain 7.5 years younger than nonmeditators, those aged 95 a brain 14 years younger than nonmeditators ► Ni 2016;134:508-13. Studies found that meditation can reduce the amount of violence in a given area that the meditators focus on as shown in this 4-minute video. This video has Stanford Professor of Materials Science William Tiller claiming that meditators can alter water pH from 5,000 miles away☺☺☺; a Tiller video allegedly☺☺☺ shows meditation intent affecting enzymes☺☺☺. School performance went up and suspensions decreased by 4 times at Visitacion Valley middle school after introducing two 15 minute meditation periods daily as the 7 min clip shows.☺☺☺ The school is covered in this article too, showing a possible solution to violence-filled areas. Obviously, if all people would stop listening to the trash violent tone of 99% of music, radio and TV and choose only immortalist music and content, you would get violence drop far more. In addition, warm baths, showers, red light, near and far IR mats provide energy to mitochondria at 650, 850, 1050 nm, working much better than massage or 'meditation'.☺☺☺ Meditation can increase cortisol if people strain to achieve something, you need to relax and sleep well, use earplugs and use peaceful music if needed, warmth is key to boost immunity. If you strain, it's not meditation, but stressing your body and delaying healing. They need call it relaxation and have it be relaxing. There are a lot of charlatans making fake studies too, you need to really think about science and what really works to help you live to 100, etc, nutrition is far more important than meditating 30 minutes daily, without good sleep and nutrients we die at 65, not make it even to 85. Be real. We saw many meditate 1-2 hours daily, die at 65-90 and other honest simple low stress people live to 117.7, even after having 12 kids.

There are millions of ways to meditate (see several in the divine ecstasy section), while relaxing on a bed, standing, walking. We can meditate by just relaxing in bed and doing the classical toes to head "my legs are heavy, limp, relaxed" progressive relaxation, with earplugs if noisy or if anyone may distract you (no earplugs are OK if alone in a quiet remote country area, no airplanes, noises possible), after a shower, for just 20-60 minutes a day, with the intent to connect with the compassionate happiness-bliss in the *universes*. You don't want noise to stop the focus on endorphin buildup to heal the brain. Sitting cross legged is too stressful anyway. If you fall asleep, that's fine, catch up with sleep first, then continue.☺☺☺ This deep autogenic relaxation (what some call meditation) helps us to entangle with the Immortals easier, as we use 100%, not 5% of the brain to do so: in normal states, 95% of the brain resources go to holding

the cross legged position or standing one, to process auditory and visual inputs, etc… But when we close our eyes (eye mask) and ears (earplugs), we create a wholly new level of focus, we get 20 times better telepathy, 100% vs 5%. It's like you're a remote viewing expert, viewing Immortals' or alien blueprints for superluminal craft. This state allows you to solve problems that normally you would not be able to solve, as there is simply not enough cognitive power for abstract scientific thinking or other types of strategic thinking.☺☺☺

This state of introspective self-analysis, meditation and prayer can also fill one's atoms with enough of God's Light so as to make all folks alive today saturated with the Gentle Tender Soft Nurturing Loving Healing Kind Virtue of an Immortal, who, as the Immortalist Anthem explains on the first page, loves the worst human a trillion times gentler and deeper than the best mom loved her infant last decade. As we meditate on Infinite Immortal Compassion, Love, Mercy, Forgiveness for all (we are nanobabies compared to some Immortals and God), we become happier and longer lived, helping all to discover bliss.☺☺☺ To further God's Light positive effects, surround all beings in this light, especially those who're in tune with the Immortalist Anthem ethics (who will be like dots of light on the sphere of Earth seen from space as if you're above Earth looking during bilocation), via the discerning distribution of light to those least violent. An Immortal a trillion times older would only have love for a nanosecond baby, or we would only hug, kiss, love a baby 1 second or month or year old who spilled a cup of milk, so does a Godly immortalist only have compassion for the worst human on Earth and the rest, as the Immortalist Anthem says. This is discerning the very best from the worst, yet loving all anyway, as in an Immortality Credit Score based Civilization of Immortals. In the immortalist frame of reference of trillion year old Immortals, we see others' perceived or real mistakes (we'll never know, only God/Immortals know) coming from this lack of education during upbringing in a softer vast light, and we no longer feel upset, people are merely robotic brainwashed beings acting out their brain software, there is no reason to get angry at their low IQ. Each person has good qualities too, each human is also a shimmering Immortal angel deep inside that could come out to the surface easier once we know their strength and magnify it accordingly. ☺☺☺ As explained in Chapter 2, we have no way of knowing the soul's real nature, we only know the human mind, emotions, personality, which can be a product of genetics and environment (spirits around too maybe) mostly, not of soul choices. Because we can't see the full history and nature of souls, what appears as a bad human, could be a very angelic soul. If we were born in bad circumstances or similar to those of people we got angry at, we might have done the exact same thing they did to us or worse. If we inhale and exhale the Eternal Happy Light of God daily, we may be one of the smiliest and happiest persons or most powerful "enemy into friend" transformers on the whole planet, capable of turning the most "evil" people into "saints" by just interacting with them for hours or days. "Evil" people may often be so because they're

controlled by negative emotions without realizing and the confirmation bias of their emotional brain processes is so strong, they can't imagine anything positive about some people. ☺☺☺

10.3. WALKING and GENTLE MOVING "MEDITATION"

Walking, exercising, moving in gentle kind soothing soft ways, as if shifting into another world of tender grace and celestial music can increase lifespan. Since today half the shoes come with memory foam, reminding us of softness, these shoes can be used as an aid to practicing conscious breathing and walking trance meditation, telepathy, prayer (or buy memory foam shoe insoles to use with existing shoes, $4+ at walmart, a slightly bigger shoe size allows you to put in foam if absent). Choosing the softest shoes with the thickest memory foam can be even more of a reminder of God's ever present tender gentle love and softness hugging us 24-7 as if our whole aura is being held in the hands of an Immortal or of an angelic field, besides being healthier and more longevity enhancing thru shock absorbing. This exercise can diminish fear and the chance to move into panic, enabling us to more objectively interpret peaceful noble spirit telepathy, without the lens of fear or stress that distort things. When we first do this change to soft memory foam insoles and/or shoes, we can create a Pavlov like reflex of moving into a very centered state of positive heavenly tranquility and telepathy whenever we walk in those shoes, by training our brain to associate the new sinking in memory foam sensations in the foot with the trance state we enter. This reprogramming or rewiring of the brain is most effective when the insoles shoes are new, because if the brain gets used to it, it's harder to rewire and create new synapses weeks later. The planet is a reflection of the *gentle tender softness* of our thoughts and retraining our mind to create gentle tender soft feelings and thoughts is a lifelong process. Walking in a store then becomes a spiritual practice of transforming ourselves. Our smiley happy positive consciousness acts as a filter of telepathy (filtering negativity) and we then only hear (or mostly) ultra positive thoughts that come within the range of our overall happy joy, gentleness, habitual thoughts, tenderness softness. ☺☺☺

Since 1 trillion year old Immortals or Aliens treat ALL human beings like we treat 1 minute old babies, with utmost tenderness and patience, it's not easy for us to comprehend or tune easily into the level of tender softness and grace of these beings and the structure of their telepathy. From the vantage point of an Immortal, the differences between people's ethics and conduct are way smaller, just like for us humans the differences between the ethics and conduct of 1 minute old babies are small and not worth panicking about. We see a trillionth of a person compared to what a 100 trillion year old Immortal sees. If a 1 minute old baby spills a cup of juice by accident, we're not going to punish the baby, but fill him with love and kisses. Now, what is the right action and behavior of humans, if a trillion year old Immortal would also never punish a human, a 1 minute old baby in his perception, but instead follow the scriptural saying "Love all

unconditionally" etc as a mother loves her infant child. More on this is in Chapter 2. This is probably much more brain rewiring than doing a static breathing meditation due to the vast amount of neurons involved in walking while conscious breathing. Memory foam is like the memory of foam, or of water and air, the memory of the gentle water and even gentler lighter softer air. Tao Te Ching says nothing gentler than water, melting the hard rock, but air is even gentler and foam is air or Ascending Immortality Radiance, is recalling levitation, the floating on a cloud, the weightlessness in the spirit world. Most people would agree that walking gently decreases the likelihood of tripping and becoming all hurried, stressed, unable to hear the gentle verbal or non-verbal telepathic whispers from refined spirits who want to help us bring a kinder world. For maximum effect, it is naturally better to extend this gentle tender kind walking style to more of our activities, chores, shopping, computer work style, driving style, action style. Tao Te Ching says "rushing into action you fail" and "the sage breathes like a babe, unifying the inner and outer worlds", the inner world of thought and the outer world of action. The breathing or awareness of gentleness can be two of the many tools in remaining calmer, gentler at all times than we have been so far; this way better decisions are taken, better understanding of good spirits happens, when we're *gentle tender soft*, not just in a 20 minute daily walk, but 24-7, remaining centered, serene and at peace like the sage at all times. ☺☺☺

Walking meditation or moving meditation (24-7 meditation, doing it at all times, while doing chores, shopping, etc) is the ☺☺~~*Moving Stillness and Still Movement*~~☺☺ of Tao Te Ching in a way, it is like moving prayer, gentle stretching, tai chi and qigong in some ways. Tai Chi Master Lu Zijian lived to be 118 like many other tai chi or qigong masters, and like many of the longest living people was very active. The Bible talks of people who lived to be older, Adam lived to 930 years; Noah to 950 years, the Qi Gong adept and herbalist Li Ching-Yuen lived to be 256 years old reportedly. Qi Gong means Energy (Qi) Cultivation (Gong). Tai Chi means Tai (Supreme or Great) Ji (Ultimate), but it's more complex than that. Tai is made of 3 characters or 3 words meaning one centered person (a goal of Tao Te Ching is to become more like the sage of Lao Tze, so one of the infinite ways Tai Ji can be translated is "becoming centered in the TAO, *gentle tender softness*, God"). Tao Te Ching explains the basis of harmony with God-Tao, which is yin within yang, stillness within movement, moving within stillness, the way of water, still movement, not a rushed energy like the one that perpetuates eternal war on Earth due to over-yang unbalanced energy that represses almost anything feminine and makes telepathically listening to serene spirits far harder. Femininity (gentleness, softness, kindness, silence, receptivity, listening, *nurturing*, acting in a trance state in a yin-yang manner, intuition) in the Tao Te Ching context doesn't refer to biological gender, a male can be 90 times more feminine than a female. ☺☺☺ Walking meditation is supposed to be slow or ultra slow. That's how it is said that we develop true brain center synchronization and prevent brain aging, that's the

principle of a lot of longevity techniques, visualization, breathing, walking, awareness all done at once, instead of just focusing on the physical movement of muscles (one brain center). The qigong teacher (yanxinqigong.net) whose papers showed his qi emissions killed cancer cells, not healthy cells, explains this well. 3 of his papers are below. Hundreds of papers have been published in science journals about the ability of qi to heal many conditions. Here are 3 papers about qi destroying cancer cells ► IJBCB 2006;38(12):2102-13, CPB 2013;31(1):113-22, MCB 2012;363(1-2):245-55. Qi emissions are accompanied by medium IR waves of the 3-5 µm wavelength ► AJCM 1991;19(3-4):285-92. Our bodies emit IR naturally, that's how motion sensors work. This is why some European hospitals have used IR mats that generate 2-9 µm IR waves to heal many conditions since 1920 ► PRM 2006;11(3):193-6. IR waves were discovered in 1800 by Herschel, who discovered Uranus in 1781. ☺☺☺

Most healers walk slowly. It helps to tap into the 0 point energy field and become a World Peace instrument, instead of something else or the opposite (restlessness instrument). Proverbs 11:27 says "Anyone can find dirt in someone. Be the one who finds gold" or in other translations "He who diligently seeks good seeks favor, but he who searches after evil, it shall come to him" ☺☺ i.e. the universe mirrors back to us that which we seek out in others and in our immediate universe. If we seek and acknowledge that we're surrounded by divine compassion and walking on the streets and things made of subatomic strings of universal compassion, that we're surrounded by the Ever Present Radiant Beautiful Magnificent Love of God 24-7 as in the Thought "God's Love, Peace, Joy is always around me", we're seeking more of that Love, we're Thanking that altruistic universal love, we're magnifying that Kindness-Love and we call out that infinite mercy-compassion-forgiveness to fill us and help us become an instrument of World Peace and Healing instead of an instrument of conflict, we're merging with the Sea of Healing Vibes of God's Everlasting Compassion. ☺☺ It's like walking gently and feeling in our aura, in our ovoid so to speak, that divine compassion is surrounding us, that God's Love is pouring into our tiny bubble and that it transforms our emotions and thoughts into expressions of *gentle tender soft* kindness, another method could be each time our feet touch the ground, as we walk, we thank God for the love as we're levitating on the ocean of Sparkling shimmering Light of Mercy, and we can recall words like "tender", "soft", "gentle" with each time we touch the ground, or whatever quality feels like we're perhaps more in need of, be it "gratitude" etc, so as to create a more balanced "astral potential" which may cause a synchronization leading in theory to astral (or, if Immortals or new science help, maybe physical) anti-gravitic effects. 2 and 3 may be the basis for the math of ascension wormholes, room temperature element conversion, levitation as they're the smallest numbers with more access to different dimensional geometries. Chapter 78 of Tao Te Ching talks about the Way of Water, how thru its gentleness it overcomes the rock, how the gentlest thing overcomes the hardest thing in the world. By way of analogy, if water is

time, and rock is gravity, as water grinds at the rock and finishes it, time shifting grinds at gravity and cancels it. Gently, as shifting into the doorway to the bright elysian heavenly dimension, the time slows down as in NDE, 3 minutes seem like 3 weeks, and time (as water) has "time" to grind at gravity. Imagine we're walking on the eyelid or the cheek of a sleeping 1 billion-year-old Immortal Angel or on God's cheek, so we would walk tenderly and gently to avoid being a disturbance. But also, this cheek radiates the most healing and amazing & beautiful ☺☺☺ smells, energies, tastes, feelings and we're grateful. With every step, we feel we touch the sea of everlasting life, with every step we feel we're surrounded by the most tender gentlest caress imaginable, the loving embrace of God. ☺☺☺We can walk as if we alternate magnetic and electric field poles, whatever it means will be evident to those meant to understand since I have no clue what it means, maybe spirits only reveal knowledge to whoever they choose or maybe this “whole anti-gravity” refers to future tech based force field bubbles that regulate temp, UV and allow levitation. Maybe this helps us levitate via these bubbles, as we glide on the cosmic ley lines that intersect the Earth dimensionally thru some form of "bilocative projection to the point of intersection" of force fields, we slowly connect with a deeper peace and slowly raise the astral potential of the feet, but more importantly, we just become more centered in the universal grid of eternal grace and inner peace, the peace that passes all understanding.☺☺☺ This walk of shifting and singing thru vibrations and patterns we imprint on the sea of universal consciousness could in theory even lead to astral or physical scientific teleportation, with or without force field bubbles. If anything, this is at least an inspirational sci-fi paragraph for futue tech development. Techs were often sci-fi literature first.

Walking slowly also makes far less noise, as we softly touch the ground as if it's holy ground made of musical shimmering with 1000s of colors soft sapphires and rubies, holy ground made of soft universal kindness or the love of God itself, ground we don't want to damage, being too immensely beautiful and emanating different music (as a guitar, etc) with different walking styles. Walking prayer or walking meditation is good, we sit too much these days, and one can do prayers and spiritual communions too, as valuable as going to a church when done really well, as per many saints. Luke 17:21 "the kingdom of God is within you.", Luke 17:20 "Once, on being asked by the Pharisees when the kingdom of God would come, Jesus replied, "The coming of the kingdom of God is not something that can be observed,". Often times walking alone is better, as one gets gentler softer telepathy, than when walking with someone who doesn't think about gentleness and tenderness of God much, or the telepathy habits. They often say to keep the company of sages, not of worldly people. So, because the fragrance and the astral sound of a person is knowable on a higher level of consciousness, etheric fragrance of harmonics (not smell, hard to explain), it's often better to walk alone when such person is not really aligned hourly with a burning desire to be a World Peace angel. Out of charity and compassion, one can walk

with certain people, but one would always make separate walks too; this is a serious exercise of developing inner peace, and at least in theory making a scientific discovery about human anti-gravity. Just because we don't understand doesn't make it unreal. We didn't understand electricity centuries ago, it was still real. Astral potential may be real. ☺☺☺ The holistic approach leads to more whole brain functioning and more inner peace. I'm much more into "gentle walking" now than ever before, due to noticing some amazing & beautiful ☺☺☺ things happening during meditation walking. The world is probably at war also because everyone is so obsessed with physical fitness and spiritual fitness is non-existent during "exercising or walking". This comes from perceiving matter as separate, when it is strings of energy that can be shifted across dimensions perhaps. ☺☺☺ It seems that just like rock and restless music blocks some telepathy from peaceful spirits, fast exercising and walking also do. This is a new hypothesis: fast walking irritates the calm serene soul center that connects us with empathetic compassion and the 0 point energy field. When we're rushed in life, we can't see the subtle at all "Look it can't be seen, listen, it can't be heard" Tao Te Ching. ☺☺☺

When we exercise gently (too much rapid exercise can build arterial calcium and shorten lifespan), or walk, or do qi gong or ***gentle yoga*** (video on yoga injuries) or stretch, we can bring the softness gentleness and ethereal quality, as when we're shifting inter-dimensionally from one world to the other, like in astral travel or like in those movies when matter body becomes spirit, we try to eliminate the boundaries, thru harmony, so as to better tune the astral physical brains to the patterns of 0 point energy field and the compassionate, gentle, tender and peaceful spirits. We can imagine as if we're walking on a sea of sweet gentler tender soft divine energy and everything we touch is made of blessed divine energy, sometimes we may enter another dimension temporarily after decades of practice if this is possible, or develop 360 vision while in the body, thru astral awakening and unity with the field. When we walk, imagine we're walking on a shimmering sea of boundless compassion (you can even see it as purple or pink or lavender if you wish) and that with every step we're creating ripples that affect the whole sea, the whole universe, every human being, so that we can transmute each step into a movement of grace that radiates loving kindness and healing gentleness into this sea of energy, this shimmering sparkling energy we call ground (which appears solid, but is pure energy), and we create that lovely healing music, when we walk, if we pay attention, we may even hear vibrations and the music as in the spirit worlds when everything has a music, life, light of its own, the ground we walk on, etc. So, this is a technique to bring awareness to what emotions and thoughts we're creating, what quality of energy are we sending to Earth when we walk, to the whole collective of all beings, this can make us much better at radiating peace and compassionate forgiving kindness to all living beings, while we simply walk for developing better telepathy with compassionate peaceful spirits. Each time we touch the ground, there is an astral sound, and

how is it? It's loving, harmonious, orderly, healing or is it chaos and disharmony generating? We try to listen to the astral sound, and we will get feedback from spirits about how to attune our energy transmissions. One way to better conceive and feel what I'm trying to say is this: when we walk, we walk on the shimmering sea of boundless energy, we're held by the ground, by the 0 point field, by God's Love or Tao or whatever you use for that Infinite Eternal Mystery, we're held in an embrace by the ground who fills us with all the serenity-affection-love we could imagine. Similarly, when we walk thru the air, we walk thru the love in the air, we walk thru this sea of limitless compassion-kindness-sweetness that holds us, hugs us, embraces us, and helps us to shift into a state of deeper oneness with the field. ☺☺ This enables us to be a mini-sea of affection so to speak, instead of seeking affection. We become more of a geyser of universal patience and compassion, of subtle affection for anyone who may run into us, thru the action of the energy around us (affection without touching anyone, just being around us), even if we don't try to love anyone or tell them anything, by us being in the field, we're helping others reach peace too, which is what people seek ultimately, inner peace. This therapeutic energy can even turn most negative feelings into compassion, enemy into friend, etc. This can be applied to any movement, including when touching the phone screen, the keyboard: are we touching it and emitting loving kindness, do we fill the dishes we wash, the counter we wipe, the keyboard we type on, the doorknob we touch with universal *nurturing* compassion and gentleness? This method may be used on other planets to develop spiritual abilities, maybe that scene in Star Trek when the guy becomes energy from matter is possible. This idea can also be applied to any chore, activity, even to simple things like opening mail, writing a check, writing a note somewhere on a letter or address on an envelope. As we move the pen or finger gently tenderly softly ☺☺☺ on a phone typing a text or a keyboard or an envelope, we shift it into another dimension so to speak and activate the brain center for telepathy, begin to connect with the pre-birth memories that provide new clues into telepathy.

If done at home in living room or your room with steps of 2-3 inches each, you can do this exercise with eyes closed too, or in many more private parks or nature places (where nobody will question what you're doing) as long as when you walk you don't move horizontally (stationary walking, you remain in the same spot as if on a treadmill or something), you just lift your legs and let them touch the ground. If you recall the astral elongation exercise that led to the "cosmic bliss" experience, many variants of this can be applied, i.e. as the foot slowly lowers itself and touches the ground, the astral foot is going deep into the earth and cosmos, and as the foot is rising, it's elongating upwards into the heavens and cosmos. The softness and happiness felt as one touches the ground can ideally become ultra soft and ecstatic, so as to induce the euphoric flying sensation in the astral. ☺☺☺

Most football players that donated their brain to research were found to have damaged their

brain thru football, so it is best to engage in gentle exercise or volunteering, or just walking or standing and walking or gently moving while at the computer desk. Even if you don't set your desk tall up like some do so that they can stand up at the computer, but walk for 1 minute every 20 minutes, it will make a huge difference. Frequent breaks of mini-walking are far better than one long walk, as studies below explain. But some people who exercise too much (endurance type) live shorter than those who exercise gently. Too much running shortens lifespan. A study of 4,512 people found that the risk of dying from heart disease was 2.3 times higher for those who spent > 4h/day viewing TV/screens compared to those who viewed screens < 2 h/day, all-cause mortality was 48% higher too ► JACC 2011;57(3):292-9. A study of 0.2 million people found that if you replace sitting at the computer with standing and walking while standing sort of like on a treadmill (without a treadmill) you reduce your risk of premature death by 15-20% ► IJBNA 2015;12:121. Independent of waist size, the risk of dying from heart disease was 80% higher (46% higher of dying from any cause) for those watching TV > 4 h/day instead of < 2 h/day in a 8,800 people (aged 25+) study ► Circ 2010;121:384-91. A study of 7,744 men (20-89 yr) who were followed up over 21 years found that men who rode in a car > 10 h/wk or got > 23 h/wk of combined sedentary behavior (TV watching, riding in car, etc) had 82% and 64% greater risk of dying from heart disease than those who reported < 4 hr/wk or < 11 hr/wk, respectively ► MSSE 2010;42(5):879-85. A study of 17,013 Canadians 18-90 years (follow up at 13 years max) found that all-cause mortality rates were 87 (sitting almost never), 86 (sitting 25% of time), 105 (sitting 50% of time), 130 (sitting 75% of time), and 161 (sitting all the time) in physically inactive participants and 75 (sitting almost never), 69 (sitting 25% of time), 76 (sitting half the time), 98 (sitting 75% of time), 105 (sitting all day) in active participants across sitting time categories ► MSSE 2009;41(5):998-1005. This means, among inactives, those sitting the most had 87% higher risk of dying compared to those sitting only 25% of the time. See how those sitting least and being active got the lowest mortality. These data demonstrate a dose-response association between sitting time and mortality from all causes, independent of leisure time physical activity. Shockingly, for women, the mortality was 85% higher for those sitting the most versus those sitting the least.☺☺☺ The downsides of over-exercising can't be ignored, however. Increased cardiovascular disease mortality associated with excessive exercise in heart attack survivors. Exercising past a certain point (7.2 MET) increases ischemic mortality 3 times. The risk of unexpected death due to strenuous exercises is 5-7 times higher than moderate-intensity exercise ► JER 2016;12(1):42-6, as also explained in the MSSE 1987;19(3):187-94 study of 36 runners, most of whom died of heart attack within 24 hours of the marathon. ☺☺☺

CHAPTER 11 – Normal and eterni foods for living 50 times longer

11.1. Living 5-50 times longer via different nutrition (eterni foods) alone ☺☺☺

11.2. Pottenger experiment 11.3. AGEs 11.4. 73 reasons to be a low (4-8%) fat vegan

11.5. How to calculate amino acid scores, daily protein needs & protein digestibility

11.6. 163 vegan foods with higher amino acid score than Burger King hamburger

11.7. Some of the more popular foods, please click on the food of interest for the science:

Lentils ($1.5/lb vs $14/lb beef; both got 120g protein/lb) Beans Veggie: Kale Cabbage Broccoli Cauliflower Artichoke Collard Spinach Carrot Tomato Onion Bell pepper Cucumber Beet Squash/Pumpkin Zucchini Asparagus Fruit: Watermelon Cantaloupe Pineapple Plum Apple Papaya Grapefruit Berries Cactus Pear Banana Kiwi Other: Yeast Ginger Caper Cilantro Rosemary: . Reverse Baldness . Vinegar Hot pepper Turmeric Pollen Herbs Buckwheat Corn Oat Fatty (max 5-9% cal): Chia seed ω3 Flaxseed ω3 Walnut ω6+3 Soy ω6 Pumpkin seed ω6 Bad fats (avoid): Oils Avocado Olive Coconut Sunflower Brazil nut Other Nuts: high ω6

11.8. Caffeine 11.9. Biophotons 11.10. Fasting (using a 12$ enema that lasts decades relieves gas, bloating, removes hardened feces that poison the blood with toxins) 11.11. Smoothies

11.12. Odorless Stools/Gas/Mouth, Soaking Legumes/Grains, avoiding foods that inflame the gut, activate TOR, shorten lifespan by increasing oxidative stress, dumping toxins in the blood

11.12.2. Why all need to always Soak Legumes/Grains 11.12.3. How to Soak Lentils to Stop Gas 11.12.4. Pressure Cookers = the healthiest meals 11.12.5. Food Chemicals that Cause Gas: avoid 11.12.5.2. Sulfur: nephritis 11.12.5.9. Gluten: diabetes, IBS 11.12.5.10. Artificial Sweeteners: IBS

11.13. Acne, brain, back, hand, leg healing via light (purple, blue, red 660nm, IR 850nm) nutrition

11.14. Dental Health, best nanohydroxyapatite toothpaste & fluoride (banned in TX, FL) dangers

11.15. Cure diseases via vegan food: 1. Diabetes 2. Cancer 3. Heart disease 4. Others

11.16. Avoiding nutrient depletion (sex outside of procreation) through meditation ☺☺☺

11.17. Eye nutrition (no dry/red eyes), thru the 2100+ meibomian/lacrimal gland nutrients

Air nutrition: window fan + HEPA: Cozeware 26dB video or fan only: 5”1W 32dB, 9” 24dB, 11” 20dB, desk/bed CO_2 meter ideal is < 550 ppm. A 90 degree tilted air purifier (exhaust into the room) is MUCH BETTER than a mere window fan as it removes pollution: seal gaps, use objects to lift it to window sill level (rectangular purifier easier than cylinder), tape paper to block inside

air intake, so intake is from outside 400 ppm, to reach 550 ppm faster with less noise/draft. Pure air is key to preventing high hs-CRP, which brings heart disease and early death. Remove carpets (see how) to lower hs-CRP, carpets raise many air mycotoxin, microbe levels a million fold, then install wood, LVP or tile. High CO_2 is bad, as air lacks O_2, raises HR/BP; see HEPA. Use oil heaters.

11.1. LIVING 5-50 TIMES LONGER VIA DIFFERENT NUTRITION ALONE

11.1.1. Insects, plants, humans living 5-600 times longer via nutrition alone or nutrition+DNA

11.1.2. Immortalist or high tech Eterni Foods replacing animal/plant agriculture ☺☺☺

11.1.3. Allowing Vegan Proteins/Foods to develop (ending the monopoly of Big Meat/Dairy) in the transition era to the eterni proteins/foods era

11.1.1. Insects, plants living 5-600x longer via nutrition alone: as bees live 50x longer via diet, so can humans live to 4000 by pregnancy diet change, as a bridge tech to trillion year lifespans. See ☺~*~ $1 BILLION Immortality Prize ~*~☺:

Introduction: Royal jelly (RJ), called bee milk, is secreted by the hypopharynx glands in the head of young worker bees (12 mm long), via the bee tongue, feeding all larvae in the colony for the first 3 days and the queen (19 mm long, 50% heavier) all her life, like breastmilk feeds infants. Queen bees eat this, while bees eat honey with fermented bee pollen. Some fight over language, ethnicity, religion, sports, music, wasting trillions with nonsense instead of making 1-5 changes (20 mg of a chemical, as seen below) in the diet of pregnant ladies and offspring that makes all live 50 times longer. Living 50 times longer is not a sci-fi future of advanced eterni foods or undiscovered chemicals, but about changing the diet ratios of some nutrients in natural foods we already eat and know how to extract from foods or make in a lab. Science turned larvae into queen bees by giving them not royal jelly, but the same worker diet with a higher % of glucose and fructose. The same can happen with humans, people born years from now may live to 4000, not 80, do you realize that? For us, already born, science may find a way to live to 200 or longer independent of diet and genes (restoring subatomic config), if lucky, but it's a LOT easier if you change the genes in the early fetus stage, changing the genes after they expressed need higher efforts. The consequences of nutrition are huge, as summarized in the nutrition and longevity paragraph. Worker larvae can become queens. Likewise, immortalist capitalism via 11 companies is the nutrition based natural transformation of the slavering short-lived subjugated worker class into the queen class, the only class, the Immortals, the USA Family of Immortals living to 4000 years initially, 50x80=4000. The current aristocratic mansions become the Immortalist Unis. With time and more chemistry advances, as we moved 9000 times faster than any natural human with rockets, we will figure out how to live 9000 times longer, like 80,000

years old trees. Science discovered how to make sterols identical to those in bee pollen, using engineered yeast bacteria, sterols that make bee colonies expand 15 fold. Chapter 3 talks of worms living 10 times longer via 1 gene change, rats living 10 times longer. "The target of rapamycin (TOR) is a central cell growth regulator conserved from yeast to mammals" ► ARB 2011;80:1001-32. So, some chemicals may have similar effects in humans/insects. ☺☺☺

11.1.1.1. Dramatic Effects of bee DIETARY CHANGES on Bee Morphology and Lifespan:

Maleszka achieved the same effects (making queens) of RJ (Royal Jelly) without RJ, by reducing methylation ► PO 2011;6(4):e18808; his Science 2008; 319(5871):1827-30 showed that reducing methylation by silencing the expression of DNA methyltransferase Dnmt3, a key driver of epigenetic global reprogramming, in newly hatched bee larvae led to a RJ-like effect, meaning the majority of Dnmt3 small interfering RNA-treated bees emerged as queen bees. ☺☺☺

LS 1976;18(7):693-9 found that bees fed the usual Worker Jelly (WJ) diet of bee bread + honey became queens only if sugars were added. Sugars made the food tastier, causing the bees to eat more and become queens. The myth that larvae need Royal Jelly (RJ) to become queens was busted: they added 4% (40mg), 8% (80mg), 16% (160 mg), 20% of the WJ (1 g) glucose/fructose (G/F) and to the 4% group, they topically applied 1 or 10 µg juvenile hormone JH to each larvae:

►►► At 4% G/F added (40 mg G, 40 mg F to 1 g of Worker Jelly) offspring were 100% workers.

►►► At 4% G/F added + 1 µg/larvae JH $C_{16}H_{26}O_3$ offspring were 50% queens and 50% workers.

►►► At 4% G/F added + 10 µg/larvae $C_{16}H_{26}O_3$ offspring were 100% queens and 0.0% workers.

►►► At 8% G/F added (80 mg to 1 g WJ), offspring were "worker-queen" *hybrids* and workers.

►►► At 16% G/F added (160 mg to 1 g), offspring were 8% queens, 45% *hybrids*, 45% workers.

►►► At 20% G/F added (200 mg to 1 g), offspring were 50% queens, 41% *hybrids*, 9% workers.

Insect Juvenile Hormone makes queens, in bees it's JHIII (see structure) or $C_{16}H_{26}O_3$, Methyl R-(+)-10,11-epoxyfarnesate, $(CH_3)_2C(\text{-O-})\text{-}CH(\text{-O-})\text{-}(CH_2)_2\text{-}C(CH_3)=CH\text{-}(CH_2)_2\text{-}C(CH_3)=CH\text{-}COOCH_3$.

People will be shocked that you can take the regular diet of bees and add one compound (or maybe 3 for humans) and increase lifespan 50 fold. Pregnant human mothers fed 1 or possibly only 5 extra compounds, could also live 50 times longer. 10 µg JH is the same as 20 mg of a chemical added to multivitamin pills would give babies 4000 year lifespan. Many of the bigger scientific discoveries were done by kids and teens, so it's easy to see how someone learning chemistry from age 1, could see patterns at 17, give all humans 4000 year lives via 3 chemicals added to fetal diet (starting before conception). It's probably so simple, like the 4 Maxwell

equations, etc that cover so much physics, 4 lines for 4 compounds that change human history forever, as Eternal Immortality *for* All and the Immortalist Anthem become the goal and ethos ('scripture') of civilization via the discovery, which only happens when all have heard about the Immortalist Anthem, to enable a democratic spread of immortality tech to all humans who're ready to create 11 companies 3 agencies for all humans, to live in Eternal Universal Peace as a Holy Family of teleporting genderless shimmering shapeshifting Immortals. The human quantum field won't reveal the chemicals until the world is ready for the one universal powder replacing 50 billion foods and restaurants created by gluttons and greedy aristocrats, one universal pay replacing 2 million payroll specialists born of Infernal Greed, one language replacing 7000☺☺☺, 11 universal companies replacing 0.8 billion today, zero violent crime and zero aristocrats (each aristocrat is a mass theft crime), as only then all are clothed in The Radiant Beautiful Glistening Garment of Gentle Tender Soft Nurturing Loving Healing Kind Virtue filled Resplendent Magnificent Bounteous Effulgence of Eternal Immortality *for* All.☺☺☺ Larvae raised on 20% G/F weighed 220 mg if they became queens, 180 mg if they became workers. Larvae who got 8% G/F ate 366 mg of food, while simple WJ larvae ate 212 mg, showing that, just like with humans, adding sweeteners to foods causes us to eat more and gain weight (queens weigh 50% more). Even bees have a sweet preference. We need to demolish stadiums and use the money to build labs to reproduce the results in this 1976 paper and make rats, rabbits, humans live 50 times longer. Why are people such "fruit fly IQ" chimps playing chimp sports? College professors lived to 104 without ever exercising, but just walking in the lab and college from one place to another. The reason they added 4% sugars is that without, larvae die with plain WJ (extracted from 1-4 day old larvae), since they removed the larvae from WJ natural cells into artificial cells and this created a stress. Natural WJ from 1-4 day old worker cells has 4% sugars, but WJ from 5-6 day old cells has 15% sugars. By adding 4% sugars, the total sugar rises to 12%, the same % found in RJ and older 5-6 day old larvae cell WJ. Then, turning into queens is easy with 10 µg JH. In other studies they diluted RJ in half and added G/F; if larvae are given more than they can eat, they will eat more of the diluted RJ to get enough protein to become queens. This shows, in bees, with preexisting genes for this genome, living 40 times longer requires: 1 macronutrient (sugars) to reach 12% minimum and one hormone, or if no hormone, 20% sugars. In humans, it may take both macro and other nutrients, while maintaining the normal reproduction. Some studies on what "non-RJ diet can make queens" are not very useful to longevity research, because they stop the study once they get a queen like bee, but you have to wait 7 years to see if that queen lives 10 or 40 times longer than its worker bees (queen bees can reach 2-7 years) for 5 generations, birth healthy bee colonies (5×4 years = 20 years).

☺~*~ $1 BILLION Immortality for All Prize ~*~☺

☺To Catalyze the Greatest Science Revolution the World Has Ever Known, the USA will Establish the $1 BILLION The Immortality Prize☺, which will Dwarf the Nobel Prize created by a guy called Alfred Nobel using dynamite profits (Nobel was created to recruit spies in the science fields, use spies to spy on others via science conferences, and are awarded more on "spy recruitment potential" and ability to disguise what is really being discovered and focused on by other militaries, by giving prizes for false and irrelevant stuff, to confuse enemies, than on what is really going on or who has the scientific merit, all revolves around espionage in our world, behind the scenes, as we have 200, not 1 nation, aristocrats and slaves, not one Family of Immortals). The $1 Billion is given to the researchers who, if not already here, move to USA for life (not allowed to exit to any conference etc) and use the $ for scientific research only to help mice, rabbits, humans live 50 to 5 trillion times longer and end all violence on Earth in 3-5 years. The same researchers (3 max) can get the prize for even 45 years in a row if they make the best discoveries and Americans can get the prize even 90 years in a row, if nobody outside discovers stuff. The 3 categories of the ☺~*~ $1 BILLION Immortality Prize ~*~☺ will be:

1). Raise lifespan 50x 2). 0 Violent Crime in 3 Years 3). Eternal Universal Peace in 3 months

Nobel Prize will become a joke forgotten by history as all nations vanish in the Light Immortal of Eternia, The Land of Immortals, of The Immortalist Anthem Unifying all villages (countries) into the Disneyland World of beautiful colorful telepathic radiant teleporting genderless shimmering shapeshifting Immortals aged a trillion years. Let America's Radiant Glistening Garment of Gentle Tender Soft Virtue Shine in all *Universes* as The Light of a Trillion Suns, so all see the God of Ever Ecstatic Resplendent Magnificent Bounteous Effulgence of Eternal Immortality *for* All.

►►►►► ☺☺☺~*~☺☺☺~*~☺☺☺ ◄◄◄◄◄

Why do we need Nobel Prize for Literature or Peace or Economics? Low IQ Nobel could not comprehend that Most Literature is Pure Evil and there shouldn't be a Literature Prize, but only Immortalist Eternal World Peace One World Language Poem for Universal Anthem Prize, as ideas as poems with rhyme are recalled much better and the poem's beauty, ethics and Radiance uplifts all, for creating World's Best Anthem, World's Only Anthem, the Immortalist Anthem (all can send a draft for it, like this). The 1949 Medicine Nobel was for lobotomy, a skull drilling technique that is useless and banned today. In a gentle tender soft nurturing immortalist society, with Noninvasive Medicine professors, such cruelty would never get the prize. We don't need long scripture, long texts, literature pieces, but One Good Positive Uplifting One, so Nice, all humans know it by Heart and use it to Unify and End War and Violent Crime Forever. Thus,

the immortalists create the Immortality Prize. Low IQ Alfred didn't understand that Economics Prize is Genocide, since we need 100,000 times fewer economics, accounting, etc majors, if humans have only 11 companies with 1 universal pay: we simply use resources to give all 8 billion humans shelter, food and clothing, health to live to a trillion as the Immortality Credit Score section explains. 11 companies not 1 billion as today. You need 1 million times fewer "economics" majors, no stock markets, no gambling, no games, no stupid fraud to make some greedy jokers make 50,000 times the rest. Alfred's Low IQ didn't realize we need Immortality *for* All Prize, meaning Immortality *for* All Physics Prize, Immortality *for* All Chemistry Prize, not just random Physics and Chemistry used to harm others as with weapons, Ethical Physics, Ethical Chemistry. The Nobel is No Bell, Not Beautiful, even the name says it is ugly, No Belle (Belle = Beautiful in French, Beau is the male for beautiful, beauté means beauty), it's born of/built on genocide (endless people died in explosions to make this guy rich and able to finance it). The Nobel Peace prize is Evil, because without a Deadline, it's trash. We can talk about Peace for 5 quadrillion years, so if we want Peace, we say "World Peace in 3 months Prize" as the ☺~*~ $1 BILLION Immortality Prize ~*~☺ explains. The 11 companies for all humans. You Give us the Way to Bring Peace NOW, not in a sci-fi future that never comes. The ideal way to write Science or Anything is to Combine it with Ethics, as this Book does, so that all are transformed into the Angels of Eternal Universal Equal pay and Trillion Year Lives for All who Sing the Immortalist Anthem Best Future Version in the New Simpler to Learn Phonetic English. This new writing makes neuron connections between Left and Right Brain, Ethics and Logic, Compassion and Science, Eterni Tone Neuroscientific Ethics and Etermi Foods Efficient Physics, Male & Female, Leftists & Rightists, until we all Merge as the Family of Shapeshifting Immortals.

SA 2015;1(7):e1500795 showed 1 single phenolic acid completely changes which genes turn on in bees: when they fed bees p-coumaric acid in addition to RJ they were able to shrink the bee ovaries as it happens with workers. Coumaric acid is a phenolic acid highly present in bee pollen (bee bread is fermented bee pollen) and honey, but totally absent in RJ. Phenolic acids may turn on short lifespan and sterility genes in low sugar diets in insects, as shown above.

PG 13(8):e1006946 "Plant microRNAs in larval food regulate honeybee... development", wrongly hypothesized that plant micro RNAs (miR162a) from bee bread (fermented bee pollen) can inhibit certain genes (*amTOR gene especially, or Apis Mellifera (am)* Target Of Rapamycin (TOR), humans have TOR gene too, amTOR is inhibited in worker bee and activated in queen bee development) that shrink the size of the body of worker bees and the size of their ovaries, postponing larval development and rendering workers sterile. This theory is obviously only true in low sugar diets, since the previous study shows in high sugar diets, big bodies can emerge. These plant miRNAs are far less present in RJ, compared to bee pollen, RJ having a much higher bee miRNA content. Bee larvae died when they were fed too much of certain plant RNAs instead

of real bee pollen (bee bread) with only half of those RNAs. miR162a inhibits TOR in Drosophila fruit fly, causing the body size, fertility, ovary size to shrink. In both cases, TOR mRNA (messenger RNA) decreased (was downregulated) as miR162a increased (the more miR162a, the less TOR mRNA). Micro RNAs are 19-24-nucleotide-long non-coding RNAs that act as post-transcriptional regulators of gene expression in eukaryotes. They can regulate genes (turn genes on and off) in animals too, via diet. From a 1.1 mg fruit fly to a 100 times bigger honey bee of 110 mg, we have the same TOR behavior. Worker bees have half the TOR mRNA of queen bees at the 3rd instar larval stage ► DY 2014;35(2):92-8. High sugar may turn on TOR, without RJ present, and regardless of whether bee bread miR162a is in the diet, since WJ + sugar led in the paper above to big size and TOR like effects. CR 2012;22(1):107-26 shows many plant micro RNAs are in the human blood/organs: miRNAs can inhibit human genes that remove LDL cholesterol. miR168a can bind to the human LDL receptor adapter protein 1 (LDLRAP1) mRNA. ☺

The important thing here is not that we discover how to live to 4000 immediately, but the idea that we could discover how to make mice live 3 times longer, enabling to do that in people too and then giving everyone another 200 years to discover how all will live to 500, then 1000, 4000, etc, not just for fetuses, but even the living people, getting to a point where some reach octillion (a quadrillion trillions) years ages, while others are only a trillion, the new babies. We humans are getting $10^{99999999999}$ times more info about life via quantum entanglement than a computer looking a text or pictures, so, we can discover things $10^{99999999999}$ times faster than AI. Pressed by evolutionary drives for survival, we can program our subconscious minds (like many inventors obsessed with the truth, we become obsessed with the truth of immortality technology) to discover how to make everyone live forever, or at least to 200 via a bridge tech we find via our healthy obsession with curing aging that becomes as common as listening to music as we hear chemistry and physics of trillion year lifespans daily on radio, TV, every song, etc, with no song being allowed without mentioning living forever or at least a trillion. Everyone needs to learn basic biochemistry and get on the program. If our society focused on helping all interested to live forever, by longevity escapes velocity, by gaining 1.1 years of lifespan for every year passing, we defeat and reverse aging slowly over millennia. This is possible, because an atom is octillion years old and we can make an atom assembly also reach octillion via simple knowledge we lack today. No more useless businesses, but immortality for all, the idea of living to 300, then 3k, 30k, 300k, etc becomes accepted and we can simply discover a bridge tech to keep us alive until next century discovers the next bridge tech to the next 200 year lifespan addition and slowly we get most people to make it to 5 octillion. You see, to achieve anything, you have to aim for it with all your society and energy, like with the 11 immortalist companies and the entire structure of society, eternal lifespans number one always. ☺☺☺

11.1.1.2. Effect of nutrients added to diluted RJ on bee lifespan:

PBS 2020;287(1927):20200614 confirmed that the less food (RJ, water, G/F,) given the lower the % of queens. Giving larvae more than they can eat leads to 100% queens. If given diluted RJ, larvae eat more of the diluted RJ to make up for not getting 100% RJ, so 0.37 ml gave 58% queens, 0.34 ml 44% queens, 0.28 mL 10% queens, 0.19 ml 4% queens, 0.16 ml 0% queens. They found eating more in the 1st stage of larvae development can lead to queens, regardless of the carb/protein ratio. 0.37 ml of 50% diluted RJ is not meeting the minimum 239 mg pure RJ needed for a queen in nature (which probably provides more of those sugars we have seen as key above), so they just proved less RJ makes fewer queens. ☺☺☺ Nurse bees give worker bees limited food and workers eat it all, while queens get more than queens can eat, eating far more, becoming 50% bigger than workers. Nat 2011;473(7348):478-83 found that royalactin (major RJ protein 1, MRJP 1, there are 9 of them, 4 making about 80% of RJ protein) makes queens from larvae, but he did not adjust for the diet quantity *confounding* factor to see if queens emerge without royalactin; others, trying to disprove his royalactin hypothesis, underfed bees (21 times less royalactin/day) and thus no queen emerged ► nature...0. RJ protein only helps when enough food is given, since larvae fed the same queen diet, but lower quantity, led to workers not to queens. NC 2018;9:5078 explains the unique mechanisms of royalactin.

JAR 1981;20(3):165-71 found that adding difco bacto-yeast extract (1.25%) and charcoal-treated yeast extract (2.5%) to diluted RJ increased queen% from 10% to 30% and 50%, respectively; 10% queens is the control (RJ 48%, water 48%, glucose 6%, fructose 6%) diet. JIS 2011;11:96 found that the higher the G/F % (and the more glucose vs fructose), the more queens emerged; and sugar "was 20% in RJ and 15% in worker jelly collected from the cells containing 1–3 days old larvae… Glucose to fructose ratio in worker jelly was 1.3 at younger ages and it decreased to 0.7 at older ages, whereas these ratios in RJ were 1.7 at younger ages and decreased gradually, but remained higher than 1, at older ages…". JAF 2012;60(24):6139-49 speculated MRJP3 plays a role in queen body being bigger, but MRJP3 is not present in WJ + sugar diets above that produced queens, so queens can emerge without RJ unique proteins.

"Queen *cells are much* larger *than worker cells, and are* vertically *oriented while* worker *cells are oriented* horizontally… Young workers with developed hypopharyngeal and mandibular glands ("nurses") detect the differences between worker and queen cells and feed the larvae different food... either different sugar concentrations or other phagostimulants (appetite) in RJ enables queen larvae to eat more food, which, perhaps through stretch receptors in the gut, sends signals to the brain. Higher juvenile hormone (JH) synthesis by the corpora allata results in reduced apoptosis and the expression of queen-specific genes" ► PO 2011;6(4):e18808; they oriented the queen cells horizontal in the lab (to eliminate gravity *confounding* factor) and fed larvae the same diet: only 81% of larvae fed WJ (worker jelly) became workers (19% were intercastes) if sitting in horizontal larger queen cells, instead of 100% in the horizontal small

worker cell; big cell means more space to develop into larger hybrids. The *more nutrients eaten that determine living 40x longer, since worker larvae are not given* all "you can eat" *food like queens in queen cells, being food restricted*. RJ has more sugars than WJ, promotes appetite, *they eat more protein, body becomes bigger.* Humans don't need to lay 1500 eggs daily (more than the queen bee's own body weight each day) so we don't need a bigger body than the 80 year old human, so the human living 40x longer will be the same size.

11.1.1.3. The royal jelly (RJ) effect on worker bees, mice, worms, mammals, humans:

Warning: humans can have severe allergic reactions (even death) to RJ, so read references 194-9 from IJMS 2020;21(2):382 before taking RJ, especially if you have asthma or bee product allergies. To avoid allergies, some take protease enzyme treated RJ, like the Yamada one used for dry eye patients; or eat it with pineapple, which contains the protease called bromelain. RJ Contents: JFF 2012;4(1):39-52 reports fresh RJ has 60-70% water, 3-8% lipids ("80-85% fatty acids, 4-10% phenols, 5-6% waxes, 3-4% steroids, 0.4-0.8% phospholipids"), 9-18% protein, 3-13% fructose, 4-8% glucose, 0.5-2% sucrose, 0.5-3% mineral salts ("ash"). If freeze dried, <5% water, the same components at 3 times higher %, since water fell 65%, so "27-41% protein, 22-31% carbohydrate and 15-30% fat". Fatty acids are 32% trans-10-decenoic, 24% gluconic (metal chelator, could cause mineral deficiency, papers % of this varies), 22% 10-hydroxydecanoic, 5% dicarboxylic acids, 17% other acids (mostly C_8-C_{12} saturated hydroxy acids).

WORKER BEE EFFECT: PJ 2017;5:e3118 reported that feeding RJ only to worker bees, whose genes were optimized during early life for pollen + honey as diet, not RJ, results in death within 3 days. *4% RJ extends lifespan of worker bees slightly*, but high % shortens it. This shows that diet interventions to double human lifespan may be dramatically less effective after reaching adult stage, as genetic programs are set. It's much easier to do it in the fetus (pregnant mother) and child stage (first 2 years of life especially, adding nutrients to breastmilk or infant formula or using bottle to provide eterni "milk" besides natural breastmilk). ☺☺☺

MICE EFFECT: EG 2003;38(9):965-9 found after 16 weeks of RJ: "average survival (of 50% mice) times were 88 weeks for the control group vs. 79 weeks (10% shorter) for the low-dose group (about 0.6 mg/kg weight, 0.036g/132lb human), 112 weeks (27% longer) for the intermediate-dose group (6 mg/kg, or 0.36g/132lb human) and 110 weeks (25% longer) for the high-dose group (60 mg/kg, or 3.6g/132lb human)… RJ didn't extend the total lifespan… RJ increased the average life span" at intermediate/high doses only, while decreasing it at low dose. JNSV 2001;47(6):394-401 found RJ reduced fatigue in mice, but only if RJ avoided heat and was frozen immediately upon collection, which denatured 57 kDa protein (molar mass is 57,000), a marker for RJ freshness (1.6% of weight when fresh) or potency. RJ that was stored 7 days at 40°C (104°F) was almost useless because whatever eliminates fatigue degraded; heat storage caused

90.6% of 57 kDa protein and 60% of protein 2 to disappear, even if 10-HDA (10-hydroxy-2-decenoic acid), other fatty acids (palmitic, oleic, ALA, etc) and all B vitamins were intact. The mice who ate the frozen RJ had *half* (see Figure 4) the serum glucose of the mice who ate the 40°C stored RJ, after 15 minutes of swimming, getting tired faster. *Lactic acid was lower* in the cold storage RJ mice, so muscle pain was lower. The more 57 kDa protein in RJ samples, the more swimming endurance, so they hypothesize it's this protein that diminishes fatigue by stimulating the Cori cycle liver production of glucose from lactate. The onion section explains how heating onions completely reverses their clotting effects, that's why RJ is freeze dried. Why do some cure many diseases with raw foods? Probably when they ate 99% cooked foods, they heat destroyed a lot of polyphenols, phytonutrients they were deficient in. RJ can "ameliorate the experimental HS (heat stress)-induced infertility in rats" ► And 2019;51(3):e13213.

WORM EFFECT: PO 2011;6(8):e23527 found that in worms, RJ and pRJ (protease treated RJ, to break down proteins) increased avg lifespan or did not shorten it (worms are perhaps closer to bees biochemically than mice) at various concentrations: "RJ treatment was begun at the young adult stage with concentrations ranging from 1 to 100 µg/ml. RJ treatment at 10 µg/ml extended the mean lifespan by 7–9%, whereas either 1 or 100 µg/ml RJ had little or no effects on the lifespan... In contrast, pRJ prolonged the mean lifespan at all concentrations tested (1, 10 and 100 µg/ml). The maximal effect was observed at 10 µg/ml, at which concentration the mean lifespan was increased by 7–18%". Since pRJ has no proteins left, the lifespan increased because of peptides, amino acids; man made intervention (pRJ) made natural RJ more potent.

MAMMAL EFFECT: AR Sci;92(1-2):75-85 found RJ "may be effective in improving pregnancy and lambing rates". 500 mg/day RJ led to an almost quadrupling of lambing rate from 28% in controls to 100% in the RJ group. Bee pollen section explains litter size, conception rate, offspring weight and health, increased in rabbits. Parents may need take RJ if infertile.☺☺☺

HUMAN EFFECT: We're not bees, so eating RJ won't make us live to 3200. We have seen above that queen bees *emerge even* without RJ, just with more sugars. Bee pollen is 5 times cheaper in bulk and WJ (worker jelly, a mix of fermented bee pollen and honey) raised queens may live 50 times longer like RJ raised queens. Studies show higher conception rate, testosterone when humans eat RJ. IJGO 2008;101(2):146-9 found RJ tripled pregnancy rate of couples using IVF (from 2.6 to 8.1%). NJ 2012;11:77 found "improved erythropoiesis (red blood cell synthesis), glucose tolerance and mental health" in healthy volunteers versus placebo group after 6 months of 3 g RJ. "RJ... 50 to 100 mg per day, decreased TC by about 14%, and total serum lipids by about 10%" ► Exp 1995;51(9-10):927-35. Testosterone, estradiol, DHEA prevent cognitive decline, fast aging and cardiovascular disease. PB 2017;55(1):497-502 found that in high TC subjects, RJ for 2 months (3.15 g/day) increased serum DHEA by 14.6% versus a 2% decrease for placebo, while

testosterone and estradiol didn't change much; TC fell 11%, LDL 5%, while liver and kidney function markers were unchanged. CJIM 2014;20(5):347-52 found RJ can lower blood sugar by 8% and A1C by 19% (from 8.67 to 7.05%). IJMS 2019;20(19) :4662 has more on longevity effects. In vitro, RJ prevents Alzheimer (inhibits β-amyloid producing β-secretase) ► SR 2019;9(1):168. RJ (powder, enzyme treated, *2.4 g/day*) reduced eye dryness/issues in people ► PO 2017;12 (1):e0169069. Ntr 2021;13(8):2536 found that acetylcholine (1 mg/ml) and the 9 fatty acids in RJ together increased tear production, while using only 1 fatty acid didn't do much. The same effect almost of all 9 acids or RJ itself is attained with only 3 acids + acetylcholine in RJ (enzyme treated with proteases, to split proteins into peptides and amino acids to reduce allergic response) improve tear generation: 10-hydroxydecanoic $HO\text{-}(CH_2)_9\text{-}COOH$ (0.36% of RJ), 3,10-dihydroxydecanoic $HO\text{-}(CH_2)_7\text{-}CHOH\text{-}CH_2\text{-}COOH$ (1.35% of RJ), 8-hydroxyoctanoic $HO(CH_2)_7\text{-}COOH$ (0.31% of RJ). One day we'll make a pill containing the 3 acids + acetylcholine, which is 900 times cheaper than RJ if mass produced. We already can take choline bitartrate or lecithin from bee pollen, so that may do it too, except those 3 acids are not in any foods, except RJ. Some RJ may have double these 3 acid levels, % varies with pollen source. Even without enzyme treating, these 3 acids are still there in fresh and minimally processed RJ. The only other recent study on dry eyes is in rats: if you have dry eyes, bee pollen may make them drier in the long run via less protein (essential for ocular homeostasis) secretion, since in PO 2014;9(9):e106338 bee pollen 0.5 mg/ml in water did lead to 5 times less protein secretion than plain water (20 times less than 0.5 mg/ml RJ) in one test (though intake of 40 mg/ml pollen in water did produce more tears by volume than plain water in another test), RJ performing way better than any bee product. But a healthy smoothie we make may be better than both RJ and bee pollen too: "*Protein secretion from the LG (lacrimal gland), a critical function for tear secretion, was only (not honey, pollen, apilarnil, propolis) evoked by RJ and the decrease in tear secretion in vivo in the dry eye model was restored by RJ and propolis at a dosage sufficient for human health benefits. In addition, the intake of RJ suppressed corneal epithelial damage, which is considered as one of the clinical manifestations changes on the ocular surface in dry eye.*" Let's find out if people on a low fat diet (to prevent atherosclerosis) incorporate these 3 RJ fats more, since body absorbs low intake nutrients dramatically better, so the ratio of these 3 acids to the other acids absorbed would be much higher in a low fat vegan (6% fat by calories usually, vs 30% for many). Additionally, *vegans* are closer to bee diet, so effects of RJ may be stronger, as mammal proteins/fats don't interfere. Bee brains contain 30% of total fatty acids as ω3 (similar to us); bees get poorer cognition when ω3 deficient ► PNAS 2015;112(51):15761-6.

11.1.1.4. Conclusion: ☺☺☺The Happy Emergence of Immortality *for* All☺☺☺

It seems like adding sugars to the worker diet makes them queens (50% bigger) and worker cells are tiny, not allowing for body size expansion, with worker cells receiving minimal food, while

queens get more than what they can eat. In bees the queen serves the reproductive function. In humans everyone would be living longer, so it would be different. As the first fetuses age slower, it will take 100 years for the skeptics to realize the babies who got the new diet during fetus stage actually might live to 4000 years old, so this will give them time to read the Immortalist Anthem, this book, prepare the World for ~*~Eternal Universal Peace~*~, 11 companies and 1 language, 1 country for all humans, 1 law (no more different laws), Immortality *for* All, etc with zero violent crime. Perhaps a bee product not found in nature could increase human lifespan by 5-20%, if eaten in pregnancy, but it's highly doubtful, because we're not insects. RJ is special perhaps due to the need of making 1500 eggs daily for 5 years, which may not occur easily in some of the non-RJ queens, as mere WJ is not enough to make 1500 eggs. But if we only look at lifespan, we don't care about RJ. We already know from thousands of studies that malnourished fetuses often live to 2 years old only, just 40 times shorter. We need study effects of nutrients early. We have seen how DNA methylation is lower, in queens, but the higher methylation could be due to malnourishing early on that leads to different gene expression early on, not to not eating RJ all their life. Many people had every relative get diabetes and then they were the first one in centuries or millennia to become vegan and did not have diabetes because he did not eat saturated animal fat known to kill insulin maker β cells. To live long we need zero violent crime in 5 years and eternal World Peace in 3 months, so trillions wasted in wars are spent on research on that 20 mg compound, which, like in bees, increases lifespan 40 fold. Without Peace, no honest research is done, humanity may disappear in 10 sec via the 2 capsule scenario, and all $ goes to weapons. It's thus everyone's duty to bring one nation on Earth, with 11 companies, 3 agencies for all humans, 1 language, 1 currency for all, 1 education for all. ☺☺☺ Money for Life, not war.

11.1.2. Eterni (Eternity) high tech foods replace *animal*/plant *agriculture*, 4000 yr old sippers of soft slurry (powder dissolved in water) replace "masticating cannibals"☺☺☺

Far future eterni food for trillion year old humans may mean unknown matter-'light' particles or 'energy', meaning to outsiders we live without eating. Initially, eterni means the most ethical diet, that abolishes the torture of rodents, insects, birds killed by vegan agriculture and livestock by animal agriculture, abolishes bloodshed and deifies the Core Principle of Immortalism: there are a Trillion Ways to Solve Any Issue, such as disputes or how to feed all, without any violence to sentient beings. Thus, enveloped in the Light Eternal of gentle tender soft nurturing loving healing kindness of the God of Immortality *for* All (Immortalist Anthem), we Create the Eterni Diet for All, to Walk, not just talk, about Noninjury, Nonkilling. In 2030s, eterni means the end of grocery stores, restaurants (all is done online or via vending machine): we know the level of 100,000 compounds in µg, later ng amounts eaten daily, how many eterni *powder packets* were shipped in paper cylinders (no microplastics) by food.gov (at the AI prompting) for us to dissolve

in water at home, packs are small, so that we don't have to weigh, we choose smallest packets if wanting to eat just a little extra, we scan *(phone or a special scanner by the house "Home Biomarkers Machine" used to measure body fat%, and other simple things)* the barcode of every pack eaten *(rinse 'glass' with water to avoid errors of nutrient intake, the 'glass' is made by a clever expansion of this paper cylinder by pulling upwards and then removing the separator between the powder cylinder and the water cylinder, made of water resistant (for 10 minutes) recyclable paper, you pour water into the enlarged 'glass' and mix it in this taller cylinder, to avoid the use of dishwashers, forks, knives, garbage disposal, as everything is eaten, scraped and finally rinsed for an accurate AI input and kitchens don't exist anymore; a perfect zero trash society: the paper is recycled, no injuries from broken glass, or wood/plastic/metal cups hitting kid toes etc)*, so AI calculates the next meal formula based on the weekly biomarker numbers at the City Immortality Center ($90 million scanners that can't be in each home). Thus, eterni means µg are known, and we are, for the first time in human history, able to calculate EXACTLY the intake. New mass spectrometers are designed, with 1000 openings ion traps, instead of 6, to detect chemicals 100 times faster and increase sensitivity for lowest concentration chemicals 100 fold. Imagine being able to have a list of 50,000 chemicals in any food product in 5 minutes, everything has a label (with 1-90000 chemicals, seen via a barcode at utility.gov), no more guessing what's in blood, urine, saliva, eye tear, feces sample, shampoo, soap, etc. An eterni is not a *vegetarian* or vegan, but a compassionate☺☺☺ person who avoids producing food by causing pain in animals/plants, whose soul is soothingly enveloped and joyously engulfed in the Eternal Gentle Energy of the Glistening Garment of Virtue, of ethics, of Godly vibe, of gentle tender soft nurturing loving healing kindness for All. An eterni is not a vegan, but someone who eats super *high tech food* ("personalized to DNA, weight, health issues" powders dissolved in water 2 min before ingestion, to make a drink, slurry or paste, shipped twice weekly, so no vitamin/nutrient degrades in liquid/paste form during shipping, for free to all citizens) that helps them to live 4-9 billion times longer *than eating animals or plants would allow one to*, to build a Civilization of trillion year old Immortals. Thus, there is no need to be militant about not eating meat, since meat will be like poison is today in the future high tech era – i.e. *nobody would eat meat since it would shorten their lifespan 2-90 times*. *Agriculture kills rodents, birds, veganism is not that kind, but kinder than eating meat.* The next 17 pages explain the eterni diet concept. Biology is a trillionth of chemistry, chemistry a trillionth of physics, so with each 20,000 years, a physics focus speeds up the move towards shapeshifting bodies eating exotic particles/energies, enabling the move to trillion year lifespan. Example: knee pain, pills take long, do damage, etc. A little 850 nm IR light is like sunlight warmth and remove all pain or legs growth by electricity in any area of a frog, even eyes, etc (mind blowing signaling via electricity).

In 2100, a chemical reactor may make the best berry anthocyanidins in 10 minutes with drones

delivering them to you as part of an eterni custom powder for your DNA & atomic scan in 1 hr using the 55°F Vans of Eterni Foods Inc. This 1 hour old powder is 1000 times healthier than the crap powders that rot for 2 years in warehouses, with anthocyanidins turning into toxic oxidized cyanidins. Eterism is the gradual move from high tech food to what appears as etheric food, invisible food, the energy invisible particles that allow shapeshifting of Immortals. Veganism with supplements can help until the era of 0 bloodshed, when nobody kills any animal and all carnivores are extinct (pets will be vegan or eterni). We'll evolve big "brains, eyes, ears", small "jaws, teeth, mouth" as we drink thick gels/drinks of eterni powders dissolved in water, chew no more, use solid powder since it preserves nutrients 900 times better, rots 5000 times less: the *masticating* chewing ☺filif IQ human☺ is replaced by the refined drinking genius. All they need is a spoon to stir the water and mix. He's the epitome of immortalist efficiency, the food is prechewed so to speak, to prevent cell division, aging and enormous brain resource wasting in chewing and use that to invent living to 9 billion. He meditates more, greets more in an empathic way, distances himself from chimp violent chewing, into graceful moves and tones. After drinking his meal or eating with a spoon thicker gel like blobs if he wants something more solid, he flushes mouth with a high tech mouthwash and develops 100 times fewer cavities, as no food gets stuck between teeth. This lower dental infection boosts his immune system fight against brain aging, instead of against food lodged between teeth by low IQ mastication, unable to remove it by mouth washing, gentle tooth brushing. In a positive feedback loop, his brain performs better each generation. It's known natural tears have 2100 chemicals, so the immortalists *will also find the 2000 chemicals in the saliva and replicate them in this powder*, so that we mimic the enzymes and processes of our digestion, to avoid hard stools coming out of poorly or 0 chewed food lacking saliva. You will notice your stool is coming out easier when you eat by chewing versus 100% smoothies, due to the enzymes in saliva that digest starch, etc. Eterni Foods diminish the stress on the body 10 fold, because for eons and even today, we eat 10 mg of an essential micronutrient one day, 30 next day, 5 the other day, none the 4th day, 100 the 6th day, none for 3 weeks, etc. This is becoming less so, as all take vitamins and have more regular meals, but it still happens. The body develops routines, shortcuts, efficiency and 0 emergency, when given the same exact nutrients it needs daily in daily doses, instead of once 3-20 days. ☺☺☺

What would you prefer? Having 50 billion foods available today, with all their texture, taste and color aristocrats have us focus on, that give 80 year lifespan, or all humans (like they have same universal pay in the future) living to 4000 via one single food: a light brown *(or whatever boring color (not going to be bright* red, blue, etc from toxic colors*) the mix of all polyphenols, etc gets)* average taste (not even sweet, maybe neutral like lentils) powder that contains exact µg of 90,000 chemicals, that we eat 2-9 times daily depending on how much we weigh. Most would

prefer the one powder and living 50x longer and having time to achieve nirvana each minute 5 million times higher than "taste, texture and color" bliss they get from foods now. No sane person would trade 2 min of taste bud bliss for losing 3920 years of lifespan, in which you can experience 2000 years of bliss. Not to mention, normal foods are hard to buy, cook, etc, the powder is dissolved in water, shipped by food.gov, so one drone will deliver 500 packs, instead of 500 people going to a grocery store often, saving electricity, toil to produce electricity or maintain robots that manage the solar repair, avoid trillions of tire particles that kill via smog, noise, wear, tear from driving, cooking… Ethical persons choose so out of compassion for asthma people, all killed by smog, as the Immortalist Anthem calls for. The goal of life is not the Worship of millions of tastes, colors, textures via gluttony, but the achievement of instant Eternal Bliss via Breathing and Oneness with God's Immortality Nature, God's Central Quality, as in Living to 4000, then 4 trillion, via Eterni Food of a New Spiritual Science. Radiant Religious and Ethical People Worship God's Central Nature, Immortality, not matter Taste/Texture, they ☺☺lovingly tenderly *gently kindly*☺☺ wake up from the Slumber of Worship of gluttony, Clothe Themselves ☺ with The Radiant Glistening Garment of Gentle Tender Soft Nurturing Healing Virtue filled Resplendent Magnificent Bounteous Effulgence of Eternal Immortality *for* All.☺☺☺ Then, the Holy Spirit of Immortality *for* All that overcomes death by Scientific Iridescence will hover to Rest in Their Healed Ecstatic Soul,☺☺☺ filling Them with Limitless Bliss. Potato shares 50% of our genes☺☺, dog/pig/cow 80-4%, chicks 60%, eating them is cannibalism, it's time to evolve to Eterni Foods, understand why humans can be so similar to potatoes in IQ: we're half potatoes☺☺. 4.2 billion years ago, plants, animals didn't exist, but one cell did, we all came from it. Plants experience pain, the juicy part is their "blood", don't spill "plant blood", be kind. ☺☺☺ Since Eterni Foods give us 10^8 yr lives, present food will be seen as bad as we view cyanide now. But religion lovers, people who believe in every fraudster, think "natural poisons don't exist". The 1st page and anthem say it all: we were one cell, living a million times shorter, being a million times smaller. Now we're trillions of cells. Likewise, today, we have 1 form, in 4 billion years we'll maybe have trillions of forms (DNA codes) as Shapeshifting Immortals of the higher etlif IQ. When we realize 99 years is a nanosecond, all human effort goes towards 10^{90} year lifespans.☺☺

They say "let's be close to God, know God, emulate God's qualities to become more of the presence of God" or "let's know physics, science to improve human condition, cure disease, end all deaths and disasters". All agree that to know physics or science, we study 4000 hours not 80, for some exam. To know God, i.e. the physics laws of trillions of dimensions that grants us shapeshifting Immortality, etc, we study 4000 years, not just 80 years. Thus, to know God better, to emulate God better, know God's Will and Ways better, we need to live long enough to develop the Wisdom and Knowledge to discover God. Thus, we can see then that the very first ethical, social, scientific advancement, and spiritual duty of any immortalists or ethical and

spiritual people is to live to 4000 at least, and then more, to a trillion eventually, so in that nanosecond in Eternity of a trillion years, we can begin to comprehend God and live in a Godly way, or, as atheists say, in a kind way. We have the Gentle free will to Tenderly adorn ourselves with the mantle of shimmering bliss stemming from the knowledge of Immortality, of God's central nature that enables us to get to know God better, so we may bless the human quantum field with longer happier lives in tune with the universe or God, if you agree with this ultra wide God definition, so inclusive, that anyone agrees God exists. Thus, God calls us to create a God centered civilization, i.e. the Paradise of Eternal Blissful Grace and Nurturing Softness of Eternal Immortality *for* All. We can say is that the very first communion with God, (or "commandment" if you like that violent word, since God suggests, doesn't yell or command) if you will, well above all other "commandments" is to use all our energy, effort and time to extend the lifespan of all humans by millennia, to be alive, to make the max number of people stay alive for millions of years (we can be in 2 places at once, Heaven and here, no worries, that's bilocation), so all become knowledgeable about God and a Godly life. People say "we want to go to the highest realm, nirvana, heaven", but that's not possible with 80 years life, too little time to study the ethics of a Godly life.☺☺☺ See the Big Lie. Why reincarnate 50 times, if we become 5000 times wiser in a life of 4000 years? The purpose of life is to know God, who is Immortality itself, i.e. the purpose of life is to experience Immortality or oneness with God.☺☺ The first "commandment" is Don't kill self by Aging, Don't Die, Stay Alive, structure society around that: Immortality *for* All. The essence of "spiritual or ethical instruction" can be said in 3 words: Immortality for All. ☺☺☺ To Love God is to grant Immortality to All, so all know God. Thanks be to God. ☺☺☺

To be spiritual is to dedicate one's entire life and time to the kind 11 companies that turn Earth in the Realm of Immortality. You see, when all we want is to be one with God, to emulate God, we give up our silly 1 billion small businesses, and unite as One Family of Immortals☺☺ to bring Immortality via the 11 companies, which enable us to extend lifespan 9000 times faster, as all energy goes to that, not war. To be spiritual, to emulate God, to know God, we support the first and most important of the 11 The National Unified companies, Eterni Food Inc, the very expression of God's Advent on Earth.☺☺☺ God doesn't need low IQ rituals, God only asks us to Think, to Practice Spirituality in the Wonderful Immortality for All Labs, the New Sport: Knowledge Discovery. Our 'Ritual, Worship, Selfless Service' is the Discovery of God Knowledge via Hypothesis Formulation and Testing. God loves intelligent action to prevent suffering of animals, plants and people 1 billion times more than temple ceremonies, evil sports, God loves us to worship by walking as chemists, physicists, engineers in labs, loving our research so much, practicing science all day, to defeat aging. True immortalists realize "The Kingdom of God is within", not in buildings, and that the Temple of God is Our Body, that needs to last 4000 years, later 40,000, then 1 million, then a billion, trillion, etc, not a Pyramid or Cathedral. Maintain your

Body (Temple), not a usually empty building taking space, nourish it well.☺☺☺ Jesus didn't tell anyone to build churches, Vatican did, as they needed a spy base to loot/screw locals by lowering their IQ.☺☺☺ Our temple gardens are the single family homes where kitchens are converted into labs to do experiments among the 50 million areas of specialization of sciences. Our temple gardens are our research centers that dot every street, replacing the 500 types of junk businesses that make people spend 1.4 trillion/yr on vanity and 1 trillion on gluttony too. Our temple gardens are our Immortality Centers that dot the land, where all measure for free 5000 biomarkers, in the Eterni style of Eternal community of Immortality for All. ☺☺☺ Our sermons are the wonderful science papers☺☺☺ we write about extending life by 300%. Our community service & sport is our happy lab cleaning, to get ready for the next experiment. We're God's angels, defeating the demons of ignorance, death, we help Life overcome death. Unlike those worshiping 80 year lives, we create 80 trillion year lifespans, being a trillion times more prolife. Unlike the hedonistic Christians and others, we're a trillion times more prolife, by sex for pro-creation only and after extensive eterni tone of behavior training, via the holy divine parent license to protect life a trillion times more. We're the most liberal, progressive and conservative at once, the guys worthy of winning all elections worldwide. We got the holiest most progressive prolife Anthem, free of negativity/low IQ in other anthems, our Anthem is trillions of times kinder than the so called "scriptures" of most religions. Our Anthem calls for Giving All trillion Year Lifespan (since in a trillion years all will have time to become a sage), loving the worst person a trillion times more than the gentlest most nurturing kindest mom loved her baby. This is totally opposite of existing religions that call for Taking Life in genocides (so called wars): War (Analects of Confucius), Tao Te Ching (rarely), Gita (when Krishna tells Arjuna to commit genocide), the Abrahamic "Religions" (500-1500 times). It's the difference between God & evil, Day & Night, Space Rocket & chariot, Eternal Life & spiritual, physical death. This isn't arrogance, but a statement of fact, obvious when you read the Anthem & the nonkilling section. Even Jainism, that avoids killing insects, has cruel hair pluck rituals that inflict pain, worships suicide, being OK with dying at 20 before ***they understand what the truth is, not claim they do***. We're overdue for a pain free spirituality, ethics, philosophy or "religion" for the 21st century. Buddhism is also like suicide bombing, you beg, are a parasite, you let aging kill you and all, let aging commit genocide, while telling lies that your practice will give us eternal life in a dimension, when you have zero proof (proven interdimensional travel) of that realm. They all worship death, genocide in very subtle indirect forms, that contradict Honest Ethics. ☺☺☺

Thus,☺☺☺ the immortalists' Goal is Boundless Compassion for all animals, plants, dying people, whose chronic diseases are eliminated and postponed by millennia via Eterni Food.☺☺☺ Full of Cosmic Bliss☺☺☺, a million times higher than food taste, all adore the simple plain tasting universal powder feeding all, for Virtue is Above Ego and Taste. We're all God's Kids or one

human family, so why would an ethical human need more than one powder (plus lower glycemic index version for those 0.1% without any pancreas or insulin, diabetes and maybe a vitamin to personalize any congenital vitamin absorption oddities that require 5-400x of a vitamin for 0.1%)? All bees live 50x longer by one food alone. A true Family of Immortals☺☺☺ is United in Purpose, in Passion to Attain the Nutritional Mix Formula that grants all 4000 year lifespan. ☺☺ God shows the way: nonkilling.☺☺☺ Thus, a Holy People and Planet, fully Possessed by the Holy Spirit of God, the Spirit of Eternal Immortality *for* All, is fully Dedicated, Body, Mind and Soul to the Eternal Emergence of the Eternal Youth Elixir Via the Eterni Tone Immortalist Culture and Sports, as the Expression of the Living Demonstration of God's Victory over the depraved selfish self, as explained in the Discovery of the 4 Chemicals that Change Human Lifespan Forever. This is the Glory of Chemistry, no more Slavery to the Big Food Mafia or Restaurant Industries, everyone is a Philosopher, Immortalist Sage, Intellectual Scientist, Peaceful, happy, enjoying the 1st and most vital of the National Unified 11 companies, Eterni Food Inc of food.gov. The Cognitive Meditative Homo Immortalis won't need Restaurants anymore, as Virtue makes him 1 million times happier, his Joy is the Manifestation of Eternal Immortality *for* All.☺☺☺ The arrival of Eterni Food is not difficult, once the ultra spoiled mindset of "I need 5 trillion flavors" vanishes, melts in the Ocean of Euphoric Bliss and we stop using chemists for "taste, texture, color, smell, focusing instead on 4000 year lifespan on TV, replacing these "rat IQ" chefs saying "let's add this for more texture/taste of this type" without any analysis of the biochemical consequence of that for longevity, for making it to 200, then 900, 8000, etc. ☺☺☺

How do humans get from "cannibal" blood drinkers, as meat is full of blood, 0.5% of it, to this age of Eternal Universal Grace and Peace?☺☺☺ Simple: have the gov require true labels on each food (warning: this food killed 3 million already via high salt, hypertension last 4 years) and we know each food sold today has some issues, some barcode will explain all issues in graphic pics and detail (not just poisons, but also oysters too much Zn risks Cu deficiency and brain aneurysm, Brazil nut too much Se causes cancer, etc), but even the labels will explain the gist of it: dairy can give heart attack by the rBGH and other antibiotics, hormones, estrogens that they add to spike milk production, via the acne that enters arteries and forms soft plaque, leading to rupture and clot caused stroke and death. So, on each food, we explain what it contains, the mg or µg of Hg, Cd, poisons, dioxins, PCBs etc to show the real deal, to show the poisons in each food with specific cases of death or disability on each food label in each store and with a note "To avoid these effects, choose this powder free of all these 30,000 poisons we identified in animal and plant foods". This way, we encourage all to order it online via food.gov instead of killing people with tire particles and carcinogenic NO_2, etc emissions by going to these physical stores to buy poisons that remove 3920 years from their potential lifespan. Once people realize

everything is bad, being so scared by the label and videos about the label at food.gov/barcode, as nature didn't design it for us to eat it forever, and plants/animals put poisons inside to stop the slaughter, things to kill animals trying to eat them. The aristocrat is an evil thief who wants to keep all addicted to the sewer trash worth 3 trillion a year he sells to drain our wallet and kill us at 80 instead of 4000, so it's up to us to say we want a different world, not one of fraud and focus on appearance and taste, texture, but 4000 year lives as a bridge to 4 quadrillion year lives later. The thief takes over media and bombs our brains daily with endless fraud, instead of 11 companies, to make us buy trash. His goal is profit, not us. He has no concept of the Family of Immortals, to him the 99% are mere cows to be worked to death not his kids to be loved cherished, where he feels like the Immortalist Anthem mom loving her baby. Dad comes home with oatmeal, we eat oatmeal, same food all kids (8 billion humans). Likewise, one day we have this 1 powder for all humans, with minor variations for all, given to us by Dad (dad = the Immortalist Anthem of *gentle tender soft loving healing nurturing* loving kind science) with 1 capsule or extra customization at first, if way cheaper than making vastly personalized macro/micro nutrients for all, as it will eventually happen ☺☺☺ when agriculture vanishes 100% and Eterni Foods or eternism become the only way we eat. 1 powder for all is Efficiency above Wanting to be Spoiled, look at bees, we give all one food, they all live 50x longer, there is no personalized nutrition. Can we be efficient, so kindness rules? ☺☺

The Neolithic idea of "eat this and that food on each day of the week" is just a way to shorten lifespan. Eterni Foods reduce biochemical stress: body goes into 911 fight and flight mode when all of a sudden you dropped intake of a nutrient 4 fold. Regular sleep is key to longevity, same hours, same lunch hour. What happens if you sleep one day 10 minutes, next day 2 hrs, next 5 hrs, then 15 hrs? You die 25 years earlier. What happens if you eat 400 calories one day, 1000 next, 200 next day, 6000 the 4th day? You die fast. The less regular and less predictable by the body, the shorter the life. You destroy the body, but this is what our "PIG HEADED MONSTER DIETS"☺☺☺ give us today, eternal daily all out emergency for several micronutrients. You don't see the stress of cells when you gyrate intake so wildly like most do without a thought, and then they wonder why they can't live to 125. Aliens will look at our diets and think of us as we think of chariot vs spacecraft or pigs eating anything. Pigs live to 20, but the vegan Aldabra giant tortoise to 350, as they eat only the healthiest plants, a diet very rich in fiber, phytonutrients, antioxidants and polyphenols. A chariot has 5 parts, a spacecraft 10 million, man's diet is often 5 parts: meat, potato, cheese, bread, nuts, as man is a glorified pig today whose ethics has 5 parts: theft, rape, genocide, beatings and fake scriptures vs the Immortalist Anthem. A diet to live to 20,000 will have 100,000 parts, each weighing exact mg and µg. These 100,000 parts are the chemicals found in our diet and a few extra others, just not in the ratio and form today, but free of toxins, antinutrients, pesticides, hormones, preservatives, heavy metals, mycotoxins. It's

never too late to be so pig headed/animalistic, to embrace the idea of 11 companies: simple living, high thinking, complex thought processes and techs behind that 'plain color' simple powder. Learn from the turtles: heart rate is 4 times slower, 15 bpm, like the Eterni Music that Lowers the Heart Rate and Grants us 350 year lifespan, they don't shed blood, live 4 times longer than us. Isai 66:3: "He who kills an ox is as if he kills a man". Let THINKING rule the diet, not taste, texture, appearance. Let Immortality guide us. Behold, the future is Upon Us, the Disneyland World of beautiful colorful telepathic radiant teleporting genderless shimmering shapeshifting Immortals aged a trillion years becomes real. Let Thy Radiant Glistening Garment of Gentle Tender Soft Nurturing Virtue Shine in all *Universes* as the Light of a Trillion Suns, so all see the God of Ever Ecstatic (no plant, animal, human pain) Healing Resplendent Magnificent Bounteous Effulgence of Eternal Immortality *for* All, the healing Way of the Immortals, the Eternal Ethics of the Immortalist Anthem.☺☺☺ We'll try to encourage people to eat their powders evenly (give everyone 7 packets to dissolve in water for minimal glucose, TG spike) to achieve an equal distribution of many vitamins (B) that have a limited capacity to be absorbed all in one meal for maximum therapeutic effects on the brain (to get the peak serum level last 18 hours not 2), as explained in the 2nd paragraph of the B2 section on 40 mg 10x/day for headache.

If you're super kind to animals/plants, you will be kinder to people, go to war less. It creates a culture of compassion for all sentient beings. To be kind to animals doesn't mean to have a pet, since pets eat thousands of livestock, but to not eat animals and to discard pet ownership if pet is not vegan or eterni. Each eterni powder pack will be labeled with the best hour to take it and be personalized for his DNA and health issues, for maximum healthy lifespan. Each package has maximum 300 calories to prevent weight gain and belly fat, with high calorie construction workers being allowed to buy 500 cal max packs, as they can lift a lot of stuff and need more energy. This solves the obesity epidemic, with people eating industrial 1200 calories at one fast food meal followed by a high calorie snack or at home in the evening, becoming obese. *We get* these "filif pig IQ folks" (pigs live to 20, humans to 80, so humans of the future who live to 320, may view modern humans as smart as pigs are vs humans today, and we humans think of those with pig IQ as lower in IQ) *on TV telling us how to cook in toxic or less toxic ways*, and mix stuff like monkeys and no science papers and nutrition powder formulas discussed 3 hours on TV (2 hours at night, 11 pm to 8 am) to help us live 40 times longer like queen bees who start from the same DNA and live 40 times longer by a different diet. It's uneconomical to grow purple cabbage and to extract 300 mg polyphenols from it. Plus, current extraction methods are very chemical and primitive, they do a lot of chemical damage to the extract. It's possible to create biophysics based extraction methods using techs similar to those that assemble molecules 1 million times faster than today's archaic organic synthesis multi step multi reactor processes. However, we're so far from that 'plasma like' gel that allows us to separate molecules based on new particle

field attractors (force field that sucks from this gel only molecules of interest at 100.00% purity without damaging them) of 'EM potential', that it's sci-fi. Create a "magnetic" attraction between the new particle field of the molecule of interest and this custom field value specific to that molecule. Modulate the field, first eliminate those with field values above, then with field values below and remain with pure extract. This is *1000 to 1* billion *times faster* extraction *than the methods in industry* today. Quantum computers in 2025 were at least, for public papers, 1000 trillion times faster than the fastest supercomputer, so they could be used to make new catalysts for chemical synthesis using new reactants, so you synthesize nutrients at 900 times faster speed, 9000 times lower cost, 50 times fewer synthesis steps via computational chemistry. This is a bridge tech, until we discover the instant assembly of any molecule from basic chemical building blocks, which takes 1 billion times faster results and 1 synthesis step: application of new plasma or 5th state of matter field and other tech. This is stuff way more amazing than carbenes in water, eliminating organic solvents and green chemistry. *Nutrition* science *will become 1 billion times more* exact, since we can take 1 million people, give them the exact same 4 packs to dissolve in 400 mL of water at same exact hours every day, 8 am, 11 am, 3 pm, 6 pm, with the only difference being the mg or µg of one "vitamin, mineral or nutrient X". Today, our studies are pathetic, since the mg of 100000 compounds in food are different, so you can never eliminate those *100,000 confounding factors* and the chewing order for foods is different, so it changes biochemistry, not any two tomatoes are the same, making the RDA/UL pointless. With a slurry/gel, the powder mixed with water, the nutrient order is the same for all.

You only achieve what you aim for, if your aim is to remain a gorilla, then you remain one, a faithful slave of the aristocratic terrorists. If we want to remain ☺abysmal in IQ☺☺☺ (vs 500 year old humans of the future), we vote Re-pub-licans and Demon-crats, both being controlled by the rich. Palace dwelling musician or other aristocrats, *(whom you're ☺☺lovingly tenderly gently kindly☺☺ invited to boycott for most create only bad aggressive music that* destroys the immortalist vibe in the USA*)*, only want useful cannon fodder slaves, to be lied and brainwashed daily on TV, fight slaves, to make the rich richer, eat poisons and sing silly violent tone songs. Conmen took over America, gently rebel, vote Immortalist Party now.☺☺☺ With immortalists, we get to have 80% science backed programs to make everyone a genius of chemistry and physics, eventually 1 day make all smarter than Einstein. All TV presenters would be fired: only people with college degree in Life Sciences & Engineering to bring immortal lifespan techs always into the discussion and the applications of tech to solve current issues. Instead of so many tornado or hurricane floods movies with damaged houses, we show what happens when we build all houses 5-8 feet higher (raised foundation) in flood prone areas, with stringent standards (no house damaged, concrete block, domes, brick, etc, not paper houses called mobile homes) and explain the reason some houses fail is due 100% to the aristocratic massive thefts

from the average people (trillions stolen) not due to Mother Nature, due to decentralization, 5 million crap contractors, 20000 royal families in the 20000 cities making different rules and wasting taxpayer money, all crappy weak rules that protect their gangs, not the PEOPLE, we also can show physics of aircraft to prevent tornadoes, and how we will build this to end all tornadoes, hurricanes, etc), using the most scientific vocabulary, will be reporters/presenters of any TV-radio station, people who took speaking classes for 1 year at the Eterni Tone Academy in Washington DC metro area and later, Eterni, the New Capital. We educate people why 50 million Americans deal with the moldiest buildings over and over, floods inside homes (should never occur or 10000 times less often, with an ethical government, not one of clowns; deaths from poor housing being flooded etc are in the thousands) that bring mold and endless needs to remodel normal or mobile homes (ought to be illegal in hurricane areas, see why) and buy new mattresses, sofas, objects ruined by water, etc, leaks not repaired for months or years, due to a criminal system of aristocratic massive theft of public funds (they made up a system to pay themselves 50 to 50000 times more per hour than the rest) to build their mansions, to establish states within states and glorify their low IQ, while the PEOPLE's issues are ignored, since aristocrats live in the best areas with no floods or issues, due to endless slaves to fix anything, and there is no incentive to create a national system, an Immortality Building Inc for all to have a decent hotel and house, not just 1%. This would equalize pay (max salary 2-4 times the minimum) and destroy the aristocratic class, creating one class: humans. Defense is nationalized, the army, why is housing, a basic need, of survival too, not nationalized? Likewise, the immortalist TV stations educate the masses about the bad foods sold by the aristocratic bandit ☺filif IQ ☺phonies, how the same criminals profit from the death of billions 15 years before their natural years had the food been healthier, and 10 years early due to brain cancer RFs in cell phones and WiFi devices on all the time (when there is no need only convenience of aristocrats to spy on everyone and mind control every move to left or right, every thought and emotion).

The future immortalist presenters study the art of speech from the age of 2, and then get a science degree to act as science communications interface for the PhDs, postdocs and professors, who're doing research and don't have the best tone, having not spent 20 years specializing in that. The number one priority in life is Life and that is what we will do in all areas of society. Our aristocrat controlled TVs are a grotesque evil pizzeria of garbage to justify military solutions to any issue, instead of Science based solutions specific to immortalist militaries, like new inventions to not need resources, the daily broadcast of planetary virtues and the cosmic efforts to "grant all humans Trillion Year Lifespans" as a basic right, as the UN Charter redefined for ~*~Eternal Universal Peace~*~, etc. Virtue is absent on TV, happiness classes and the value of self-sufficiency, not being a parasite, not importing anything, are not discussed: without self-sufficiency, no freedom ever exists. Let the Light Eternal of Immortality

for All shine on the New TV to raise IQ. All virtue is rooted in peace, nonkilling, nontorture, nonviolence of the Immortalist Anthem, in *gentle tender soft loving healing nurturing* loving kindness. Thus, it's the duty of all to centralize, eliminate 1 billion redundant jobs that become science-engineering jobs so we bring the age of eterni food unaffected by climate change, to prevent food/resource wars, to triple human lifespan every so often, to keep everyone healthy, happy, to build the modern ethics where everyone wishes upon everyone Immortality as a teleporting shimmering shapeshifting Immortal of infinite kindness. ☺Abysmal IQ☺ folks can't realize that everyone would be quadrillions times smarter and kinder, gentler than the best of humans combined today, so such beings would be worthy of immortality and can take on many racial appearances thru the day if they wanted. Primitives they can't go beyond their simplistic hate and extermination programs, war ideology, gross programming of serial killing aristocrats.

Climate change alone may lower crop yields, forcing famine on billions, unless they go vegan or eterni food tech is developed. This quantum leap to eterni in protein, fat, carb chemical synthesis or biosynthesis is the most important thing for humanity to do right now, while we attain World Peace in 3 months and reach 0 violent crime, because we don't understand everything about nature and when a supervolcano eruption will cause *crop yields to* decrease *50 fold* globally leading to the death of 98% of humanity *if no* preparation exists. In 0.25 billion years, we may be wiped out due to continents merging. Eterni Food Inc makes agriculture obsolete 1000 times faster. Oddly, we live in a fantasy world of complete irresponsibility, where too many are focused on sports, wars and violent music, instead of the super urgent need for World Peace in 3 months to be able to dedicate enormous resources, *huge physical energy (lost to sports today) to building* 1 million eterni food labs in USA in the eterni city centers and some extra in big nations, to preparation for this natural event that will come sooner or later. What love of nation and humanity is that? Play sports and have no preparation for 8 billion dead? The day when 80% of US land is used to grow plants to feed animals would be over, everyone would be vegan, *as crop yields decrease 20 times. We're so unprepared.* ☺☺☺

Our planet is wholly unprepared for a mega Yellowstone eruption, the volcano has been quiet for 70,000 years, but the ground has been rising due to magma at the fastest recorded rate in 2012-2022, so, if it erupts covering most United States in ash, like last huge eruption, when a third of USA became dark due to clouds of ash, we will say "science failed to predict". NASA said we can cool and solidify the hot magma over a few millennia. Do we know everything about reality? Many nations depend on US for food, so wars will break over food after 20 million Americans die due to ash and lava. Equally insane is the US lack of preparation for West Coast tsunami from a huge Cascadia earthquake - that would devastate 3 states if San Andreas fault is causing tsunami too, *killing up to 1 million people:* where are the movements of people inland, the building of water canals, desalinized water pipes to inland states and areas, etc? How are

fellow citizens globally prepared to produce eterni food and ship it to *states, countries under volcano ash* or unable to produce food due to tsunamis, ash, lava, nuclear winter like global cooling by 10 degrees? Right now, *global warming may cause* eruptions of more *volcanoes*, giving us a nuclear winter effect that kills 7 billion in all countries, just like it could happen in a world war: even those that are neutral and not fighting WW3 due to taking the coward attitude of "no war *(until all know which side will win, joining* late *to get some benefits)* but no World Peace in 3 months either, no courage to oppose war in of itself, pure cowardice"; *WW3* can only be avoided by *permanent* World Peace *within 3 months, WP3*. The bright Ukraine flag *yellow* color of the sun, the nice *blue* sky of Ukraine flag would be gone: USA got *3 supervolcanoes*, and when 1 erupts in a big way "Air traffic would come to a halt over much of the world, *the chemical composition of the gas emitted could be deadly, a global climate chill would set in for years, maybe decades." WW3 dramatically increases the chance of supervolcano eruption, especially thermonuclear due* to the fact *Russia can nuke last eruption points, seismic faults,* use ionosphere devices to *cause tectonic plate shifts, earthquakes that cause* 100-500m tsunami waves, (can be 500m high near inland lakes too, via a small nuke, removing drinking water for millions of people), that flood 20 miles inland on all continents, damage infrastructure, since global warming aids it too: we're not ready, we better develop eterni food *tech,* instead of violent music/sports: eterni food takes 100 years to develop well at least, to replace agriculture, it requires an all out planet wide effort, bigger than electric car one. ☺☺☺

Oddly, after I wrote this one page about cataclysms, 3 hours later, on 2-21-2023, I experienced the strongest wind in my entire life anywhere, around my Los Angeles home *(*trees fell*), with strong whistling, and these sudden* 54 mph *winds for hours/days also happen during cataclysmic all out eruptions or wars,* ionosphere weather Los Angeles *March 23 wars that cause cyclones, tornadoes (*75% tornadoes *happen in USA, Australia gets 80 times less), volcanoes, earthquakes, 100 mph winds; winds reached up to 70 mph in other areas and 60 million* Americans *were affected, including the* Yellowstone state*, Wyoming, where every road has the craziest winds;* 1000s of flights *were canceled,* 100 degree weather difference across USA. Until that happens, millions will have to move to higher ground due to sea level rise by 20 feet. 100s of articles already talk about producing protein, etc from microbes, CO_2, sunlight, water, to replace *livestock* and plants. ☺☺☺ We got strange tornadoes with real or fake casualties (most dead were from Sharkey county of 3800, 70% black, vs 10 million Los Angeles) on 3-24-2023. Does US know, notify people ahead of time, then fake deaths?

New tools allow us to discover eterni food candidates 1 million times faster. Each food, in a 100% opaque package to prevent nutrient loss, has a precise weight and a barcode that is scanned upon eating it all, to go into AI to build personal health data, with the exact, not "estimated" (*and off by ...900%...*) number of µg of the most common 0.2-0.5 million molecules

for the most accurate nutrition studies to eliminate 0.5 million *confounding* factors; this could be a powder which dissolved in water becomes a thick nourishing liquid, *since paste like*, liquid like foods nutrients deteriorate chemically extremely fast and this would be the era of super fresh *food, fresher than fruits and veggies whose nutrient content decreases HOURLY*; it is the era of PRECISION, when we know within 5 minutes of dissolution a given amount of vitamins exists there ALWAYS, where instead of chewing so much, we evolve tiny teeth, mouths and bigger brains (like aliens in these pics maybe), see lentil smoothie section; without extremes, we eat no solids or 100% liquids, but the liquified solids or solidy liquids, the middle way; no more hard chewing, but gentle drinking like a baby (or minimal chewing of a soft "solid" food, a cake that is far more stable chemically than a beverage, until *our bodies get used to* purees *only, "solid" foods which are more of a solid-gel like cucumber, not chips or bread that get stuck in between teeth)*; 20 *times* less tooth wear too, as acidic foods *are mixed with less acidic and we swallow, no longer abrasively scrubbing teeth with staining or acidic* hard *foods;* far less dental flossing, care needed; smoothies increase bioavailability, reduce "calorie intake, air intake, belching, telomere shortening, cellular division", thereby increasing lifespan, even if people don't meditate; liquid smoothies allow uninterrupted cosmic bliss of breathing, disturbed by heavy chewing. The middle way of quite hydrating small meals is preserving longevity, because eating big calorie meals made of solid stuff (or 'eterni cookies, cakes, breads, etc') and then not eating nothing except water, causes harder or smellier stool that putrefacts (and poisons the blood) to develop compared to eating it in 2 meals (I noticed this on me), one or both very watery veggie *or* eterni shake instead of pure water; we don't build belly fat and then burn it with water, causing telomere shortening, glucose gyrating wildly upwards and then downwards with water. Later, precision can move from 10^{-6} g, microgram (ug), to 10^{-9} g, nanogram, 10^{-12}g, picogram, 10^{-18} g, attogram, before the atomic tracing era; today nutrient intakes are "estimated" but this can lead to vastly different disease outcomes and we can't cure most diseases for all patients with the present "estimated food intake", let alone live to 500. In the pre-eterni era, every food, cultivar, fruit, etc would have a barcode used to get all nutrient data. Whether we eat 1 or 10 mg of some things can be the *difference between life and death*, due to synergy, and *we have no way to build that knowledge today, since every* food, fruit, veggie, grain, meat, dairy has wild variations of nutrient content, unknown to us. Just as electric cars will replace gasoline ones, solar-wind replace all coal, solar panels price fell 500 times in 50 years, computation power price down 1 million times, so will Eterni Foods replace all plant-animal agriculture. Electric cars (like Tesla) waste 10% of energy as heat, gas cars waste 85%. Likewise, vegan foods are far more efficient than meat or dairy, and eterni far more than vegan. Tesla, who became vegetarian, said we will live on cosmic energy in some future era, eterni food is the step before that, just like smoothies (lentils in them) are a step towards that bigger brain smaller mouth, stomach future. This diet was put to the test, 400 lb obese were given bland liquid with everything in it to survive

and in about 8 months lost 200 lb: people overeat due to taste addiction, the body can detect easier with one food, one formula, what calorie intake and value that food has, but with so many foods, it can't. Economics and environmentalism, besides health, will drive this fast change, fast on human history scale. Survival of the species, by expansion in space, will also drive ditching meat/dairy for Eterni Foods.

Even with current tech (with agriculture still existing), with *1.* weighing via analytical balance in every kitchen, with 2. barcode scanning for every flour, ingredient, nuts, lentils, seeds etc used in smoothies, food making (use pressure cookers with water, to minimize AGEs, set pressure, temperature, time of cooking more to estimate correctly food composition after cooking, instead of oven/stove cooking for random temperature and times and endless additives that react with cooked stuff and change chemical composition during high heat catalyzed reactions), that is connected to the Internet personal nutritionist AI or NC (nutritional computer in every kitchen that has AI models and data for every family member) *3.* habitual scanning with phone of every store/restaurant food eaten (adjust by 0.2 if only 20% of fries eaten for example), fast food, drink, fruits, veggies (every banana/fruit has a barcode that indicates its estimated non-peel content of nutrients based on its weight), etc we could get 50 times more precise estimates than the vague ones used in today's nutrition studies, but there is no political will, as people want profit via restaurants/food products, not to triple lifespan.☺☺☺ With exact knowledge of µg of 0.2 million chemical compounds eaten before conception and during pregnancy for 8 billion people, we can discover with powerful computers what no human can today: thousands of birth defects (low folate or choline led to spina bifida, we discovered) or adult diseases developing due to malnutrition during preconception, pregnancy or early childhood, i.e. for all mothers/fathers who passed short lifespan (75 not 110) or diseases or birth defects, we noticed 30 out of 0.2 million compounds being low and 40 maybe being high, unlike the parents who didn't have such offspring. Right now this is impossible to find out due to variation of content for the same fruit-veggie-grain depending on cultivar, etc and people's self-reports of diet being wildly inaccurate. Many talk about autosomal dominant or recessive genetic disorders or inheritable diabetes tendency sometimes or CRISP ***gene editing***, forgetting that queen bees do ☺ GENE EDITING, change their traits (starting with same genome), physiology and extend lifespan 40 times by ***simply eating differently***; we forget that human fetuses and 0-5 year old kids who eat differently, could also, live to 900, cure "incurable genetic diseases", turn bad dominant traits into recessive or vanish them altogether, turn good recessive genes (that aid living to 110) into dominant ones, since food turns on and off different genes, altering their expression, so they ignore the huge impact of parents' nutrition before conception, during pregnancy/lactation (women) (first 2 years ***after conception***, which are like queen bee larvae stage, 20 days from egg to adult bee, out of 1000 day lifespan, or 2% of 100 years, 2 year).

We can detect what supercentenarians☺ (reached 110 ☺, 1 in 5 *million people*) ate that set them apart from the rest, this can lead to the discovery of new vitamin like compounds, vastly expanding the understanding of human biochemistry, of how to cure every disease via nutrition almost or postpone its onset by 50 or 300 years. Our so called nutrition "knowledge" today is ultra vague, like alchemy of 1500 before chemistry appeared. Our addiction to Paleolithic "country X cuisine" restaurants comes at a steep cost: short lives of ignorance. No restaurant is called "Living to 150 cuisine" or "Biochemistry of longevity cuisine", but we have all kinds of nationalistic cuisines that keep us in Paleolithic traditions and conservatism that eat us alive. The addiction to "taste, texture, tradition" leads to short lives; we can instead prioritize Knowledge and Analytical Precision if we ever want to discover how to live to 900 via nutrition. We have thousands of assumptions and hypotheses about how every nutrient and vitamin is absorbed, etc, since we don't know via physics of the future and monitoring molecules and atoms in real time what goes on. Any doctor, chemist, biochemist knows that the need for Eterni Foods is huge, if they ever hope to cure simple things like diabetes, heart disease, cancer for all people, since zinc bioavailability, essential for diabetes prevention can be affected by thousands of chemicals we eat, to give an example. We need a new fad, millions of youngsters to get as excited about this as they're about latest phone, gadget, video game, music release, celebrity news, so that instead of wasting so much space with kitchens, restaurants and time with food shopping, buying, preparing, eating we dissolve the powder in water and drink the thick shake in minutes (or it comes already as a paste or cake or whatever with ultra high pure filtration water used), do biophysics and biochemistry studies at home on which hypotheses might work better and we enroll in different AI hypotheses and powder mixes that build gigantic libraries of data about what works to improve biomarkers in 2-5 years and what gives longest lifespan. ☺☺☺

Every house will be free from kitchen and instead of a kitchen we have a meditation and eternal lifespan tripling science room, where big screens and quantum computers allow holograms and interactive tech to teach all family members about particle physics, biochemistry, nutrition of 900 year lifespans citizen science to be able to guide the AI in nutrition suggestions for next week's Amazon shipment of personalized powders – instead of chewing so much like herbivores and waiting like "not very high IQ folks" in drive thru and restaurants or in kitchens for stuff to cook or blend, we relax and meditate after eating the Amazon shipped stuff, while listening to favorite personalized acoustic nutrition music no traffic noise, then we develop new AI models, adjust them and we think about how to live to 900 or 9 million later via particle physics discoveries. Right now, humans eat a little more carefully than pigs. We can do better than that. ☺☺☺ That's why above I'm joking about the "pig IQ TV chefs". Some want to remain filif low IQ primates, are happy to be poisoning themselves, to be an animal forever, killing in wars.

Kitchens are *hallmarks* of Paleolithic *civilizations*, Amazon shipping of Eterni Foods can be

replaced by molecular assemblers the size of a microwave in some far future that does better than Amazon shipping as it is fresher, but in the transition period kitchens are primitive. Everyone becomes a citizen scientist studying the AI models used to evaluate next day shipment from Amazon of the powders, which may have 200 mg of vitamin C instead of 78 mg today, 200 mg of polyphenol number 7565.☺ There are 8,000 common polyphenols, most fruits and veggies have 70% polyphenols concentrated in a few individual ones, so we can get the polyphenols from 500 fruits, veggies, spices, herbs and teas in one mix (standard mix or custom mix if we're into citizen science and apply for NIH funding to get custom mix at same price enrolling our data with them, otherwise, pricier than standard), as most people have no time to eat 500 foods and can't adjust which and what amounts of polyphenols, vitamins (which forms of vitamins too), fatty acids (ω3/6, oleic, palmitic, stearic, DHA, EPA, DPA, ALA, ARA, LA), proteins, carbs, plant micro RNAs (level can extend bee lifespan 10 times, present in veggies and fruits, some polyphenols seem to shorten bee lifespan, others seem to lengthen it, same for humans in large doses, don't we need real data?), phytoestrogens, fiber types they eat. With thousands of fiber types, each has to be personalized based on one's needs. But those with citizen science interests can use custom mixes and to develop new biomarker monitoring programs, build real knowledge of how their unique molecular distribution, composition and genome (not a textbook computer model) reacts to custom mixes, 400 biomarkers after 3 weeks of trying a new hypothesis of aging, alerting NIH of a new discovery: e.g. people with genome X get diabetes cured instantly via custom mix # 5678, Nobel Prize given to citizen scientist. ☺☺☺

There are many lethal substances that are "polyphenols" chemically. We have seen how some lectins can kill people (ricin), so in 50 years we may discover over 500 mg of a polyphenol may shorten lifespan and 3 g of another polyphenol may double lifespan. Organic or natural doesn't mean "lifespan extending"; eterni food has another *huge advantage*: it is made very fresh, 24-48 hours before eating, even when custom mix, it doesn't sit exposed to heat, air and light in a shelf (or grain storage to develop bacterial growth) for months or years to lose 90% of many polyphenols, vitamins, nutrients, and when it says 2 mg vitamin K it's there, you don't cook it to destroy that via heat, you don't oxidize it to create carcinogens. Powders are far more stable too during shipping in the summer months. Produce loses its nutrient value rapidly sometimes, even if just sitting on the shelf or fridge 7 days. Many health beverages stating vitamin A, D, K, E have none left as light and heat exposure on shelf destroyed the vitamins.☺☺ Vitamins, polyphenols, etc degrade in solution sometimes 900 times faster than in powder form, so eterni powders can be made into a gel, cake, paste, etc 2 hours before shipping almost or 24 hours with the most amazing filtered water (that would cost a fortune to have in every house, and waste tons of water as reverse osmosis does), instead of sitting on shelf in a grocery store for 5-30 months and then being dumped, like billions of tons of food are dumped due to not being bought by the time

it expires, all after wasting huge energy to ship it to store, then people to drive to buy it, then keep it cold in store maybe in solution or produce form which takes far more space and energy. This issue doesn't exist with computerized estimation of demand for each protein, carb, fiber, nutrient, vitamin powder, based on AI patterns of all inhabitants and customers, as NIH tells major companies producing the typical yearly demand for each of the 50,000 top nutrients to avoid waste and over production. Fish you buy, cook and destroy all ω3 at times or cans have 0 ω3, what's the point? ☺☺☺ Endless foods have "not so smart" fillers, texture builders, colors, preservatives that shorten lifespan. High IQ society doesn't care about such useless stuff, the bliss of meditation far exceeds that of masticating food for hours that has a peculiar texture, the bliss of being alive 7 million years instead of 95 at best; Eterni Foods need no preservatives, being made hours/2 days before shipping. Nobody will weigh for 4 hours in the "kitchen" 9000 nutrients, let the automated systems do it by mixing things, tell Amazon what to include if you want to manually override AI decision for 5 or 30 nutrients on a given day and it's automatically calculated in your intake for future science you do on yourself or others. ☺☺☺

The immortalist government makes a key priority to convert all kitchens to science and meditation or relaxation rooms to double citizen spiritual and science IQ and usher the Era of Knowledge and Scientific Fact based eating, not random paleolithic stuff. We need billions of young people to get on the hot new trend of eterni food and citizen chemical nutrition science and contribute to the greatest progress medicine has ever known. Health is determined by many things, especially the amounts of 0.2 million compounds daily, currently unknown, estimated. Biochemists know that the absorption of every nutrient vital to health, slow aging or curing some diseases is *influenced* heavily by the intake of at least 800 other molecules and we don't know what the intake is for the 800 heavy *influencers*, so we often can't cure anything. Doctors try to cure a condition caused by low something, but they got no idea the patient ate 200 other molecules in a level that synergistically made the patient deficient in that something, (or by canceling the effect of medicines the doctor gave) by changing bioavailability, because food intake is all estimated and it varies ..300%.. from lot number of fruit, grain, veggie, meat used to another. We can't leave that to chance if we want personalized nutrition to cure personalized diseases. We need exact data, precision, like never before in history, if we want results like never before in history in health, medicine and longevity.

The fastest runner ever reached 28 mph, but with STEM, we got rockets attain 215,193 mph. If we take *random junk in nature* (rocks and metal pieces, or *components* with an "estimated" *weight*, x grams "give or take ..*300%*.." or estimated current, resistance, etc) and assemble them we can't build a car or rocket that surpasses our *natural transportation speed by 5 times (140/28=5) or 7,685 (215,193/28=7,685) times.* Likewise, if we want to live 5 or 7685 times longer than our natural lifespan, we can't do it by building a diet *(our body, our car, our rocket)*

from *random junk in nature* ☺☺ (fruits, veggies, legumes, meats, dairy with "estimated" *weight* of 0.2 million *components*), the eterni *diet* will contain ultra precise µg amounts of the best 0.2 million natural (and maybe man made) compounds in a ratio not found in nature. The stuff we eat builds the biocircuits inside the human body, the components of our car/rocket, that we want to live 5 or 7685 times longer, these circuits don't have random components of random or "estimated" (give or take ..*300%*..) weight, current, resistance, etc. We may need a nutrition science 7685 times more complex than today, studies and simulations that can control for 1 billion *confounding* factors, with personalized nutrition that changes daily, ng or µg of 0.1 or 1 million compounds calculated exactly, shipped by Amazon and later, in some century, printed in the living room from raw materials. In engineering rockets or cars (the body is like a rocket or car) we leave nothing to chance, everything is ultra precise, each component is of a weight, that *can't vary by even 10%, let alone ..300%.. or ..900%..% as nutrients can from one apple to another apple;* the same PRECISION will be for the engineering of the eterni *diet*. ☺☺☺

Unlike natural foods, full of lectins (glycoproteins), antibiotics, bird, swine, animal flu and other viruses (most infectious diseases are hypothesized to have emerged due to human domestication of animals), meat/fish viruses/bacteria that force people to cook meat a lot and create AGEs, growth hormones, pesticides, agaritine and other carcinogenic and rash causing chemicals in mushrooms, gas producing chemicals in 100s of foods, heavy metals, proteins that damage cells, cause allergies and anaphylactic shock deaths, all kinds of chemicals that (unbeknown to us) stealthily shorten our lifespan *even* if we're not allergic to those foods (fish, nuts, dairy, asparagus, etc), Eterni Foods are free from viruses (fewer epidemics and less human-human contact transmission, since no restaurants needed), harmful bacteria and many *natural poisons given to us by the "fictional God of science illiterate folks who claim natural* foods are the best" ► Toxins 2010;2(9): 2289-332. Educated people realize human created transport beats nature (25 mph humans) 10000 (space probes) to 1 in speed, and so will Eterni Foods beat nature 10000:1 in longevity outcomes some future millennium. The road of thousands of years of science starts today, with the Immortalist Anthem. Today we simply lack the technology to simulate the human body response to nutrients or to monitor daily or hourly thousands of aging speed biomarkers to assess the safety of every compound in natural "healthy" foods. But in a few decades, the first human molecular simulation may appear. ☺☺☺

Eterni food is all man-made (even if it may use man-made natural compounds mixed in new ratios, or artificial compounds) without agriculture or killing plants/animals, but using bioreactors and chemical synthesis of proteins, fiber, carbs, fats, etc first, molecular assemblers way later, etc. Grazing to produce meat and dairy uses *28% of Earth surface* to provide 1% of the protein we eat, *crops use 12%* of the Earth, while human housing, villages, cities, infrastructure, etc only 1%; *a ratio of 40:1;* imagine what a nice☺☺☺ world, without dense cities, if we made

humans more spread out; even if we remained the same, we may be able to have 20x the population today. Plants are close to us, they suffer too, except when we take fruits, seeds without harming the plant. This suffering is changing our brains, just as animal eating changes consciousness as animals have more pain accumulated than plants after eating so many plants.

The new foods will be far more environmentally friendly, while agriculture will be obsolete. It will get to the point where you can take feces and convert it into such foods, enabling self-sustaining spaceships to live in space for 9,000 years without needing new supplies which take too much energy to transport 500 light years away. Today, if we had 5 people on Earth our tech will be ultra primitive, but with billions we got specialization and advanced tech (doing better than nature by 7685 times, see the beginning of this paragraph) no 5 people can ever produce; likewise, when we have Eterni Foods allowing us to colonize a trillion planets and to have 20 to 100 times more people on Earth even, we can have a trillion times more people, enabling a degree of specialization a trillion times deeper, leading to inventions that make living to a million or billion years old possible for *all trillion billion humans* in the galaxies or at least our galaxy initially Today we have World Vegan Day on November 1, one day we will have World Eterni Day maybe. ☺☺ It could be when an American President is sworn on January 20, or the birthday of world's first eterni President who would be the first eterni (not vegan) President and Ushers the Age of Immortality, the First Civilization of Immortals, as everyone is charmed by her/him and becomes an eterni and immortalist. This Civilization is a World of *Knowledge*, Immortal Learning and Understanding. If we paint, we look at it, get inspired, etc. but if we paint a molecular mix that cures all diseases and aging or postpones them by 900 years, that is truer ART, one that is Compassion and Mercy Itself (born out of Infinite intelligence, Knowledge and Wisdom), that diminishes suffering 1 million times more than a painting or sculpture or even music piece. So, *we can bring the Art of the* science *of* Nutrition *and usher True* beauty *like it has* never *existed on Earth. This is the Motto of eternis.*☺☺

Some people may laugh at this, but they laughed at the Wright Brothers *who* invented *the airplane and who were* told "this tech *will* never *take off etc". Yet* nobody uses chariots now, they use fast cars and planes, *just as nobody will eat animals and plants one day, they will use* Eterni Foods. Vegan foods, while better than animal ones, are *not God's final answer, God evolves and we do too, as God wanted us to. We evolved thru* science *discoveries that reduced mortality from many diseases 500 times and we will* evolve *through* science *and* increase lifespan *20 times.* Castor beans *have ricin, which kills people in doses of 2 mg. Even some beans have lectins which clump red blood cells and* kidney beans *can actually* kill *people if not cooked, as these* lectins make the blood coagulate. Many Asian fruits are deadly. Celery can cause red dot rashes in the sun. Organic *Natural* Cage Free God given/created microbes, insects, big cats, attack/kill us, so natural isn't always good. Many *toxins exist in* all "natural God *made* organic

foods" not just synthetic (anything synthetic is "God made thru human and telepathy"). Eterni Foods won't have natural or processing toxins, nor AGEs present today in processed dry heated *foods* or semi-toxic flavors, texture fillers, aluminum, preservatives and colors. ☺☺☺

About 3,000 Americans die due to *bacteria, parasites, viruses* in food each year per CDC, while about 80 deaths/year occur due to food allergy alone ► JACI 2014;133(4):1075-83. Some people have died from eating star fruit even. *These early deaths due to a primitive food industry would be unheard of in a Civilization of Immortals where earliest death is at 400 years old; the sudden anaphylaxis deaths are the OBVIOUS food allergy caused early deaths, but other chemicals in food can cause a slow "natural" death in much greater number, 20-50 years earlier than without those chemicals (we don't know how deadly the "natural" chemicals are, since almost every human being eats them, just like worker bees eat different plant RNAs and live 10 times shorter).* We purify water from ocean SO MUCH, before we drink it, but fish, meats, plants we eat without much purification, ingesting all heavy metals, pesticides, antibiotics, growth hormones, PCBs, farm/ocean junk, maybe radioactive stuff too. FI2019;10:673 explains fish can cause anaphylactic shock which led the Netherlands (later other EU countries) to pass legislation to deep freeze all fish at minus 20°C (-4°F) for 24 hours or cook it 10 minutes at 60°C (140°F) before consumption to kill parasites. Deep freezing is much better because it doesn't oxidize cholesterol or any fat, while cooking creates very toxic atherogenic compounds. *All man-made chemicals could exist naturally in some planet or universe. All most amazing and life saving scientific or medical man-made stuff is "God made" sort of too, as telepathy came from God or spirits, so there is nothing to be afraid of. Some toxins in God "made plants" kill people through anaphylactic shock, like with nuts, eggs, fish. What if God wants us to evolve and become co-creators of better* eterni (nonkilling) foods helping us to live much longer? Exactly like nobody will raise cows for 5 years to make meat, when lab made meat via cell culture is producing beef in days (without antibiotics, pesticides, heavy metals, hormones, etc and using 20 times less water, resources, land), nobody will raise plants for years or months to extract proteins or polyphenols, when chemically we can make components of a diet making us live to 900 in 1 day using a small reactor setup or chemical 3D printer (some exist already as research prototypes) or 2 minutes with a molecular assembler. Also, why would you make meat to get 100s of bad products, when you can synthesize just the complex lipids that people may benefit from that are harder to find in vegan foods, but the body can make. The vegan diet uses far less water, land resources than the omnivore diet, the eterni *diet* far less than the vegan diet. *For ecological, longevity and health reasons, all will become eternis.* In 1800s computers were huge and trillions of times less powerful than today's computers of the same size. Likewise, in 200 years, we might be able to produce food 100 times faster, 100 times more lifespan extending using 700 times less land, with 100 times less water and resources, using chemical and biochemical reactors, not

agriculture. The computer chip industry revolution has changed our world, just as a food industry revolution Immortality Foods Corporations?) could make us live to 900. ☺☺☺

Before *eternis* become popular, people will probably move to a more vegan lifestyle, since it takes far fewer resources and with chemistry, you can make from plants proteins that are even better than meat. Later on, biochemical factories will make proteins, amino acids, carbs, ketone bodies, fiber, 8,000 polyphenols, etc things in natural foods or new ones not found on Earth or in nature anywhere. *We already have a few companies using biochemical reactors to make amino acids, peptides* that will replace proteins, *companies making* ketone bodies (β-hydroxybutyrate). The body uses 3 ketone bodies for fuel during fasting, by turning fat into ketone bodies. These 3 ketone bodies are β-hydroxybutyrate $CH_3CH(OH)CH_2COO^-$ (78% of the ketones in the blood), $CH_3(C=O)CH_2COO^-$ acetoacetate (20%), acetone $CH_3(C=O)CH_3$ (2% of blood ketones). Basically, acetoacetate is the oxidized butyrate (2 less hydrogens, where CHOH became C=O. The shift away from plants has started actually, it's subtle and perhaps directed by Immortals. Geltor makes world's first vegan pre-eterni collagen. Today people die of anaphylactic shock after eating nuts, fish, dairy, something totally unacceptable in a Civilization of Immortals where every single person (no exceptions) lives to 400 or 900 at least, some making it to 1500. Eterni Foods would enable people to eat once a day a cookie, cake or dessert and get the best nutrition. Then, as science advances further, it might enable inter-dimensional transformation after the age of 20 or 30 when grown up to convert on living on energy, like Tesla predicted, energy able to turn into matter needed. This would eliminate bathroom trips, etc and time lost shopping for Eterni Foods and eating them 2 minutes a day. Right now, a normal food has 10-100 ingredients listed, but in the future, with a number for each product one could access on a website 20,000 chemicals in that food or powder that dissolved in water is all needed for nutrition that day. The degree of knowledge and complexity will expand naturally. Eventually, if we discover how to rearrange subatomic particles easily to convert any element into others, *we could take dirt or garbage and turn it into tastiest healthiest 2,000 year lifespan giving cakes, beverages, water and food we need, or any material or good, without a need to go shopping,* but having the *living room subatomic assembler* produce it based on a blueprint given to it (we buy the blueprint online) and some raw protons, neutrons, photons and electrons from garbage, dirt, etc. By the same principle, people will be able to live without eating, as air and cellular waste becomes raw proton, neutron, electron source for needed molecules, with no need of pipes, water treatment plants, as water is extracted from air, purified and recycled. Filters are easy to clean thru the assembler producing new ones from the dirty filters. Everyone is off-grid, no utilities connections needed. Toilet waste is turned into raw protons-neutrons-electrons in some stable form, and later into water or food or whatever *is needed by the household a few hours later.* These Teleporting shapeshifting people would be able to live for 80,000 years, which

is not really that long, given that a Utah tree colony root is 80,000 *to a million years old.* ☺☺☺

No more boring waitress, restaurant, McDonalds jobs, kitchens in homes, cooking: all people working in these Paleolithic like jobs in restaurants, McDonalds, etc would be able to instead work on designing 5,000 eterni food equivalents to every single item out there in ultra high tech labs (sometimes near or inside the restaurant) and sometimes from home. For example, many eat potato fries in hundreds of companies, but they're essentially the same, even if not all called French fries; as PhDs in biochemistry of 900 year lifespans, instead of physical acrobatics by flipping burgers and fries robots can do, they do mental acrobatics by designing new proteins and microRNAs that triple human lifespan; they design powders with better protein and fat profile, no acrylamide, far healthier ω3 to 6 ratio, no oxidized fats and toxic stuff in them; they educate the public about the cons of fried foods, of dry heat prep methods in the transition period, but later there is no need to educate about that anymore actually, because all foods are scanned before being eaten (to ensure accurate AI calculation of nutrient intake and correct suggestion for which one of the 50 million eterni formulas are best for that person, time, day period in their life) and foods are at room temp, no need to heat them or prepare them anymore; the stone age of having to use microwave, stoves and ovens will be over; 50 million formulas for 50,000 weights, genomes, etc powders are made into gels, cookies, fake potato chips, "loving kindness" cakes instead of "chicken legs" body parts people eat today, enabling us to test which ones yield best lifespan by having millions of new nutrition *studies. Others would work on robotic chemical and biochemical* synthesis *reactors, rapid new organic* synthesis *and compounds discovery, assembly lines that create the* Eterni Foods with 25 times the efficiency of the best human worker, never getting tired *(like the Tesla Motors robots building Teslas),* package them, ship them via Amazon to users personalized based on their weight, gender, genome, etc... *for maximum lifespan*. Many people live to 110+ by just 0 exercise *or ultra moderate* gentle *stretching, like tai chi, walking, streching,* gentle yoga (video on yoga injuries), chores, etc. *We can never live to 900 by playing soccer, but by playing biochemistry "soccer" we can.*☺☺☺ This will enable people to relax more, think more, meditate and to focus on cognitive development, instead of physical ability development and ultra boring jobs with repetitive tasks that robots can perform better with 1000 eterni factories replacing the top 1000 restaurant companies, and then food comes shipped via Amazon daily, no need to go to restaurants, as people socialize in the Immortality Parks and Research centers in every neighborhood where the best methods to live on energy and less food are discussed and worked on via new particle physics and atomic transformation and new nanotech (a billionth of a meter), picotech and femtotech (a quadrillionth of a meter). Today our cultures are obsessed with sports, gyms, muscles, etc, but not much about knowledge fitness, loving kindness and inner peace, tranquility fitness, Immortality thru knowledge fitness, just moving like Paleolithic men fitness. ☺☺☺

11.1.3. Allowing Vegan Proteins/Foods to develop (ending the monopoly of Big Meat/Dairy) in the transition era to the eterni proteins/foods era

The education section explains all restaurants can become mini-Immortality Universities in the country that adopts the immortalist system of government. Most corn and soy cultivated in modern times is fed to cows and livestock. Imagine if all this land would be used to grow lentils (or vertical farms and amazing & beautiful ☺☺☺ labs creating 800 types of proteins superior to both plant and animal types) for example, lentils which could me soaked properly to remove oligosaccharides and most lectins, then cooked in industrial pressure cookers, packed and sold as frozen at 2 pound of cooked lentils for 70 cents (not 5 dollars as today, unsoaked and with tons of sodium, due to not taking advantage of economies of scale). ☺☺☺

Unfortunately, since Big Meat in all countries seems to own all governments, nobody almost can find a decent snack that has a lot of high amino acid score protein, low fat (below 4-7%) and fiber in it, without industrial levels of sodium, sugar and/or fat, much of fat oxidized causing rapid atherosclerosis, the source of 100s of diseases. Nut mixes have few walnuts (the only nuts with high ω3), are 75% fat from calories, usually high ω6 (peanuts 5200 times less ω3 than 6), oxidized, roasted, low quality protein. Go into any store and all you find below 60% fat calories is granola with huge levels of fat (25-50%) and sodium added, cereals with huge levels of sugar and sodium added, potato/corn chips with 40-70% of calories from fat, some if it already oxidized and with very unhealthy ω3:6 ratio, and the story goes on. If there is one snack with no fat, sugar or sodium added, like puffed rice, wheat or rolled oats, the protein content is low. Wheat and rice have tiny levels of protein of low amino acid score, compared to lentils. Nothing exists like a lentil type of richer protein, unless you buy canned beans, which have unhealthy sodium levels usually, are unsoaked (oligosaccharides that cause gas and lectins that upset some left there), and leak tin into the beans and are harder to digest than lentils. ☺☺☺

If the Big Meat wouldn't control everything, the lentil (and other vegan sources of protein, snacks, deserts, etc) industry could develop and produce far healthier snacks (and foods, lentil burgers with no oxidized cholesterol, AGEs) that provide than some carbs with sodium, pure oil and sugar to gain weight instantly and worsen *diabetes*, *atherosclerosis*, *rapid brain aging and chronic inflammation* thru ω3:6 ratio, so that most die by 80, instead of at 110.☺ *Big Meat pollutes the environment on such a scale*, they dwarf even Big Oil. *Tyson pollutes* waterways more than Exxon Mobil, Koch Industries and Cargil combined. The lentil crops and minimal processing needed can produce 0 waste into waterways, as these high tech immortalists using veganism to launch immortalism will find ways to use the water from soaking (with lectins and oligosaccharides) and other left over stuff to produce via microorganisms, composting and/or chemical synthesis 100% vegan fertilizers, besides partnering with cities or areas of cities with

"above 5%" vegan population to create a vegan food waste bin on every street and taking it for free to composting centers. This soaking water, rich in organic sugars and glycoproteins (lectins) can be used as organic feed stock for composting. Even today, the companies making precooked lentils to be sold in the frozen section pollute 100s of times less than Big Meat per protein calorie. The meat-dairy protein is a monopoly that is antiscience, *against public health interests.* Why is it antiscience? There are many reasons and some are below: ☺☺☺☺

1. Antiscience *ads:* Big Meat/Dairy limits people's knowledge with banal ads that lower IQ. They *brainwash 8 billion people* thru their relentless banal ads that we need to eat meat and dairy (aluminum loaded) and *"milk/dairy will do you 'good'", like* 4 out of 8 child deaths due to food allergy due to cow milk, *immune suppression (COVID19), osteoporosis, cancer, acne, Huntingon, multiple sclerosis, autism, human milk got 5 times more iron, 2 times more chromium, 4 times less protein, calcium, sodium, magnesium, cow milk is optimal for baby cows not human babies or adults, cholesterol, diabetes, 130 million puss cells and IGF-1, leukemia, colic, diarrhea, Parkinson, vomiting, chronic constipation, chronic inflammation, without* offering *people any* science *and educational material* about biomarkers of lomgevity and nutrition studies like this/other books or nutritionfacts.org. It's the epitome of "a lie repeated a million times becomes fact". They lower people's IQ, has any human learned anything intelligent from their ads about biochemistry? *No. The* immortalist government would prohibit such nonsensical ads, as they don't raise public IQ, ask no science *questions and just state facts without any proof or reference to science papers* (even if faked by Big Meat). ☺☺☺

2. Anti-choice*: the only* choice *for protein is "beef", "pork", "chicken", "dairy". This is not* science*, this is "limitation* taken to extreme", a joke from the Paleolithic. If we love science*, if we love* Freedom in the land of the Free*, we have CHOICE, we have at least 800* sources *of protein, to determine which one is best for living to 700*. To determine the best food matrices and proteins, you need to try different things. If everyone eats 4 main things, that's no science. In chemistry we try thousands of things many times *before we discover the GEM that triples human lifespan, the protein that does that*. We tried meat for 2 million years, still live to 100. Might as well try something else, like Smart Protein 2.0 or 879.0, as we have smart phones? Smart because it triples lifespan, not just help you to get by to live to 90. How about Liberty to Choose? Break the Monopoly? Look at the plant kingdom, we have protein from at least 90 possible sources, if allowed to develop: rice, wheat, pea, lentil, soy, quinoa, buckwheat, kale, veggies, etc. Look at the vegan eggs, vegan bacon, vegan proteins, etc – these industries have far more scientists who know about chemical sysnthesis, separation, processing, optimization, microorganisms to make amino acids, etc, things essential to developing the Eterni Foods of Immortals. With chemistry and bioreactors we can make new proteins that are healthier, more bioavailable, less toxic (no antibiotics, growth hormones, pesticides, lectins), than anything in nature, just like we travel

now 1000s of times faster with rockets than nature enabled us.☺☺☺☺

3. **Anti-change and anti-progress:** Compare their ads, once 5 years meat/cheese upgrade, with those of vegan immortalist companies who have a product update every 2 months, like with Android software. They add a better blueberry extract, a better RNA-vitamin mix, a new soaking process, a new chemical or microorganism synthesized peptide that far exceeds bioavailability of certain nutrients, vitamins, versus the meat food matrix. Meat is the same for 900 years, but vegan companies are updating their formulas often to make the eterni imitation products of good stuff found in meat, plants, etc to triple human lifespan. Their ads say "This is the best product science can create now, to be updated every 2 months for maximum lifespan tripling potential, based on the 700 biomarkers of longevity. Check immortalist-nutrition.com" ☺☺☺

4. **Anti-safety:** dangerous chemicals *that* destroy *all organs:* oxidized cholesterol (oxysterols) from animal products, absent in vegan foods is up to 100 times more atheroscerosis forming than free cholesterol; *oxidized cholesterol can cross the blood-brain barrier while cholesterol can't. Have you ever seen a Big Meat ad telling you that the meat contains cholesterol that becomes pure poison depositing in human brains,* every blood vessel (arteries with plaque got 20 times more cholesterol and 45 times more oxidized cholesterol than normal arteries) causing organ malnutrition (blocked blood flow) and rapid aging (atherosclerosis) *once oxidized by wet or* dry (especially) heat cooking *typical in these dry heat stoves at McDonalds and most fast-food POISON STORES? Antibiotics/hormones (not present in* vegan foods) that speed up cancer, make immune system weaker and give birth to superbugs? What fair competition, democracy, market capitalism is that? Is it more like a *dictatorship of the Big Meat Lobby?* ☺☺☺

The present vegan protein powders (developed out of our anemic vegan foods industry) out there are not very good as they're void of much fiber and have not used soaked grains and lentils to remove the carbs and lectins that cause digestive issues in many (just like whey protein powder causes gas), ***this industry can't develop when Big Meat owns every senator and representative***. Why do taxpayers treat Big Meat with subsidies, where they can pollute 700 times more than vegan corporations? These same bandits often kill millions a year. Poor people walk into a dollar or cheap store and can't find any fiber rich protein food in the frozen section, only super fatty products of meat and dairy industry. Rich people walk into an expensive store or restaurant than adds astronomial levels of unhealthy oils and salt, also lacking this fiber rich protein food. Both lack choice due to a paleolithic food industry and system. Rich and poor find some soy foods, developed because with so much soy for cows, it was easy to make some fatty soy foods, although some are fat free. The problem with soy is that most have ω3:6 low, 1:8, and making that as the only major source of protein is not good for several reasons. Plus soy foods are needing heavy processing, unlike lentils, to make them more digestible. In 100 g of soy beans

we get 19.9 g fat, versus 1.1 g in lentils. This means soy got 18 times more fat; lentils got 2.7% calories from fat, soy got 40.2% calories from fat. ω3:6 ratio of 1:8 in soy is worse than 1:3.7 in lentils. This is an issue. If millions of acres for soy and corn fed to cows had lentils, the poor people would buy frozen presoaked precooked lentils for a dollar there to warm up in 20 seconds at home, a bag weighing 2 lb (lentils cooked weigh about 2.5-3 times more), getting enough fiber to diminish cholesterol, triglycerides, glucose, etc without virtually any fat (since they already get so much fat from all the rest of the foods). How can you ever dream to develop Eterni Foods when there is not much choice for dietary protein to start with? You need to develop the knowledge, to see what works, etc, to supplement any protein that may be thought of as incomplete, to see what happens, etc. Lentils are a very good source of protein, as explained in the amino acid section that deconstructs the beans and rice myth.☺

11.2. Pottenger showed 0 taurine = death, sick offspring for generations

We have seen in 11.1.1. how *diet can shorten lifespan 50 times*. Unhealthy Food and/or lack of nutrients during critical periods of brain development (especially womb and 1st year of life when brain volume doubles, but first 20 years matter too) Induce Epigenetic Changes, lower IQ, lower telepathy, poorer health inherited by future generations. ***Plant micro-RNAs from our diet turn on and off cholesterol removing genes even in adults.*** Bee larvae died when they were fed too much of certain plant RNAs instead of real bee pollen with ***only half of those RNAs***. The Pottenger book talks about a dramatic case of just what a difference food can make. Mice studies have shown recently similar things when applied to DHA or other nutrient deficiency, too many AGEs toxins. Francis Pottenger, an MD, experimented on 900 cats in 1932-1942, feeding some cats *mostly cooked meat and others raw meat/milk; many say the results of his study simply show a deficiency of* taurine *causes health issues that become worse each generation, not the* AGEs (since most commercial meat for cats is cooked and those cats live to 15, but they do add taurine)*, but regardless,* it's a study that shows cats depend on proper food for a lot of stuff.

Those eating cooked meat and pasteurized cooked milk became sicker and sicker each generation, since cooking milk and meat destroys 80% *of taurine (*essential for nervous system and eyes*)*, had many miscarriages and difficult labors with many cats dying in labor, and at the third generation they became infertile and reached a very short lifespan (getting sick of degenerative diseases early on). Maybe the destruction of biophotons during cooking and the creating of AGEs from the cat diet led to extra bad consequence besides taurine missing, since some scientists say biophotons help the body communicate the order of the 10 million trillion chemical reactions in each second in a human (speed of light communication). The cooked food has much more AGEs, McDonald's French fries got about 90 times more AGEs than boiled potatoes, cooked chicken can have 13 times more than raw chicken. A family had everyone with

diabetes, but a kid decided to go vegan and he didn't get diabetes as expected. Diet can turn off gene expression. It took 4 generations of good diet cats to undo the damage done by 3 generations of bad diet; within 4 months of being put on a cooked meat diet, cats developed mouth infections and lost teeth. Raw vegan Annette Larkins is in her 70s and looks 3 decades younger than her age and omnivore husband. Could it be that her far lower AGE levels caused a much slower aging? If one nutrient does that, taurine, when present in 5 times lower amount, imagine if we lack 10 nutrients for 10 generations, we may not live to 200, but once we discover those 10 unknown nutrients, we will all live to 200. Anyone play sports or study biochem? ☺☺☺

The 1st generation of cooked meat fed cats started to develop degenerative diseases, became lazy. The 2nd generation developed degenerative diseases by mid-life and started losing their coordination. The 3rd generation developed degenerative diseases very early in life and some were born blind and weak and had a much shorter lifespan, many being infertile. There was an abundance of parasites and vermin while skin diseases and allergies increased from an incidence of 5% in normal cats to over 90% in the 3rd generation of deficient diet cats. The 4th generation did not survive 6 months, vs 14 years normal lifespan, so about 28 times shorter lifespan. Bones became soft and pliable and the cats suffered from adverse personality changes. Males became docile while females became more aggressive. The cats suffered from most of the degenerative diseases encountered in human medicine and died out totally by the fourth generation. This has also been observed in recent studies done on mice with respect to individual nutrients. Rats exposed to chemicals or foods that raise estrogen levels (meats, dairy) during pregnancy produce daughters *that have a higher than normal risk for breast* cancer; that risk is passed on to the next *two* generations. Diet is far more important than genetics.

Discarding cooking water from meat will discard most taurine; as a vegan, I do take taurine. 1000s of papers show a lack of basic nutrients causes severe changes in sperm quality and even sperm producing cells; so, these changes mean a deformed embryo can emerge, abnormal and a new inherited gene can emerge that doesn't go away instantly, unless deficiency is fixed or some high tech is used, since once the gene appears, it's not always that easy to fix, so a gene that appeared 2,000 years ago can now be in 40 million people. However, today we also have a billion times faster ability to change some genes and enable all to live to 300. Today, we have a new danger, that never existed before, extreme RF causing bad genes. So wear anti-RF clothing protect fetus, testicles, ovaries, because you don't want *your WiFi router, phone on* (turn it off, use airplane mode 99% of the time) to give a bad gene to 50 million people 500 years from now. One can easily see how important it is, until the last pregnancy, for vegan (and even non-vegan) men and women to eat healthiest lowest AGEs diets, so as to pass the best genes to their offspring and help the world go vegan. See a list of AGEs in foods in the next section. Evolution naturally selects the more altruistic and eco-friendly people, that's why humans may become

vegan one day, although many may transition directly from meat eating to eterni. Being vegan allows 10 times more people on the same land, faster expansion of science and off-planet, more survival of the species, so it is favored by evolution. But even more favored is eterni that is 161 times better than vegan foods (just like we can fly 161 times faster than birds). ☺☺☺

11.3. Advanced Glycation End Products (AGEs)

11.3.1. Studies Proving Genocide via AGEs
11.3.2. Dry Heat & Food AGE levels
11.3.3. Flavonoids That Inhibit AGE damage
11.3.4. Anthocyanidins fight AGE damage
11.3.5. Flavonoids fighting AGEs, TOR activation
11.3.6. Extra Flavonoids that inhibit AGEs

11.3.1. The next 12 pages explain how *cookies, candy* (some candy are pure drugs, avoid all candy), *chips* (if any oil was added especially), *many cereal brands*, highly processed meats, junk foods, dairy, pizzas contain *10-900 times* more deadly *AGEs* than healthy foods (stuff you boil in water or cook in a pressure cooker under water at 240-350°F, produce, puffed cereals). For more genocides by aristocrats against Planet Earth, see the 11 companies section. We need to ban *these Weapons of Mass Destruction* disguised as "junk foods in shiny or colorful packages", just as we ban mold, lead, cocaine, dirty bombs, cyanide. Tax 900% first, ban later. 61 million people die yearly. High *AGEs* foods shorten life by 12 years on average (some lose 40 years, others only 1 due to eating 40 times less *AGEs*), so 9 million deaths are due to AGEs, i.e. due to Dry COOKING, Dry Heat PROCESSING. The next 2 pages present studies on AGEs, before the 10 pages on the AGE levels in foods and possible ways to reform the corrupt and low tech low IQ food industry. AGE levels are shown in Table 1. AGEs form free radicals inn the blood which cause oxidative stress and damage all cells in the body.

PNAS 1994;91(11):4766-70 found that plaque fractions of *Alzheimer's* brains contained about 3 times more AGEs, no wonder with the increase of overly oxidized cooked fatty junk food (which can have over 100 times more AGEs) we have seen a 89% rise in Alzheimer disease since 2000. Methylglyoxal induces protein glycation leading to AGE formation and is believed to be the most important source of AGEs. "Methylglyoxal is not only capable of *increasing* the *rate* of production of β-*amyloid* β-sheets, oligomers and *protofibrils* but also of increasing the *size* of the *aggregates*... *AGEs* were colocalized with amyloid plaques... Aβ-*AGE* was *more toxic* than Aβ in decreasing cell viability, increasing cell apoptosis, inducing tau hyperphosphorylation, and reducing synaptic proteins". ☺☺☺ Oxidation of sugars leads to glyoxal, methylglyoxal, which can lead to carboxymethyllysine and other AGEs. Methylglyoxal, AGEs may cause autism: MH 2012;78(4):548-52. Kilhovd reported increased serum AGEs in diabetic persons with ischemic heart disease compared to patients without. AGEs accumulate in atherosclerotic lesions. AGEs promote the death of blood vessel cells called *endothelial* cells ► BBRC 2006;344(2):658-66. AGEs prevent the production of nitric oxide (NO is hypothesized to relax and dilate vessels, thus

lowering blood pressure), thereby causing hypertension; AGEs diminish the activity of *nitric oxide synthase*, blocking the synthesis of nitric oxide by endothelial cells. Similar to *pericytes* in the retina, whose survival is *impaired* by AGEs, kidney *blood vessel cells* called mesangial cells are killed by AGEs ► Biom 2015;5(1):194-222. Insulin making β *cells* (pancreas) die due to AGEs ► ANYAS 2008;1150:311-5, leading to *diabetes*. ☺☺☺

AGEs-RAGE interactions stimulated the growth of human pancreatic cancer cells. AGEs stimulated the growth and migration of cultured human melanoma cells, increased levels of AGEs and RAGE in colorectal cancer ► MH 2005;64(6):1208-10. Evidence supports AGEs involvement in cancer, Alzheimer, osteoporosis, etc ► MM 2015;21(S1):S32-40. Pentosidine is an AGE used as a biomarker for all AGEs, due to its ability to fluoresce ► "serum or urine pentosidine levels are now being used to estimate future fracture risk in osteoporosis and diabetes" ► OI 2010;21(2):195-214. Dietary AGE consumption was associated with 43% higher risk of pancreatic cancer in men ► AJCN 2015;101(1):126-34. AGE receptor overexpression has been linked to cancers of the colon, larynx, tongue, stomach, mouth ► PO 2014;9(10): e110542. Cancer malignancy is enhanced by glyceraldehyde-derived AGEs ► JO 2010:739852. ☺☺☺ As we get older, our capacity to eliminate *AGEs* diminishes; *AGEs* accumulate inside our muscles, bones, tendons, ligaments, destroying the collagen (30% of protein in our body) and elastin structures ERAPA 2016;13:3 and leading to slow/painful movement and more fractures, as everything becomes more disconnected and brittle, less elastic, less strong ► JDI 2017;8(3):377-82, less able to execute axon impulse, as neurons get damaged too; the more AGEs we eat, the slower/more painful our movements will be as we get older ► JAP 1985;103(6):2068-76. *Reducing dietary AGEs led to improved insulin sensitivity* ► Diab 2016;59(10):2181-92. Those with more AGEs can have *twice the risk of dying from heart disease* ► ACER 2009;21(2):182-90. The more AGE methylglyoxal in the blood, the faster the *cognitive* decline ► Neu 2011;77(14):1351-6 & MAD 2011;132(11-12):583-7. High AGE foods double CRP (C-reactive protein) (0.42 instead of 0.21) and increase arterial stiffness, increasing risk of arterial rupture and *cardiac death* ► NMCD 2017 ;27(11):978-84. *Hearing loss is associated with high AGE intake* ► JAMDA 2018;19(3):235-9. Kidney malfunction is linked to high AGE diet ► DC 2018;41(6):1292-4. ☺☺☺

AJCN 2017;106(1):162-7 found those eating French fries twice a week (fries have 90 times more AGEs than boiled potatoes) have 2 times the death risk of those eating boiled potatoes, and 2.3 times the risk if they ate French fries more than twice a week. Fried eggs doubled the risk of bladder cancer, while boiled ones did not, could it be those lethal AGEs? ► NC 2013; 65(4):538-46. This is not surprising since Table 1 above shows fried eggs have 30x more AGEs than 5 min poached eggs. "Toast bread to the lightest color acceptable" says the NIH website, adding "*Cook potato strips, such as French fries, to a* golden yellow rather than a *golden brown* color" for the same reason, it generates carcinogenic acrylamide, AGEs. Glucose & sugars/C=O donors +

Asparagine $H_2N(C=O)CH_2CH(NH_2)COOH$ = Acrylamide $CH_2=CH(C=O)NH_2$ + etc. In the liver, acrylamide does plenty of destruction, converting to glycidamide, a highly unstable carcinogenic molecule that then attacks everything in its path, wrecking the body. Dry heat not only forms AGEs, but also deadly oxysterols: RB 2013;1(1):125-30 found "24-OH and 27-OH were not the only two oxysterols increased, the levels of 7α-OH, 7β-OH, β-EPOX and 7K also *being increased* two-*fold in* Parkinson's *disease brains versus control brains*... a mixture of oxysterols stemming from the heating of dietary cholesterol, comprising 7-K, 7α-OH, 7β-OH, α-EPOX and β-EPOX, led differentiated human epithelial colonic cells (CaCo-2 cells) to apoptotic death.."24-OH, 27-OH, 25-OH are very good ligands of LXRs and farnesoid X receptors (FXRs), whose hyperactivation is now recognized as implicated in both *diabetes* mellitus *and non-alcoholic fatty liver disease*". Heating dietary cholesterol turns it into oxidized cholesterol or oxysterols. No wonder, in one study, *vegans* had 3 times less Alzheimer than animal food eaters, since animal foods alone have cholesterol. *Vegans* eat no oxidized cholesterol, have 73 times *lower diabetes mortality* than heavy meat eaters. *Could this 73 fold difference be because* non-*vegans eat* more oxysterols, *AGEs*? Vegans eat less fat (meat, cheese have fat) and fatty foods form AGEs during dry heat cooking. Plant sterols are less toxic since they're not in the human brain; the body produces cholesterol daily, and cholesterol is different than plant sterols. Processed meat increases *colorectal cancer* risk by up to 50% ► NC 2008;60(2):131-44. Fried meat produce more harmane, a neurotoxin that causes Parkinson. Thank McDonald's, KFC, every Big Junk Food out there who sells friend legs, pork, chicken to destroy the working class.

11.3.2. Dry Heat, Fixing the Food Industry & Comparisons of Food AGEs Levels

45 min roasted potatoes (with 5 ml of oil) AGEs are 13 times higher than 25 min boiled potatoes. Dry heat is a disaster BECAUSE oxygen comes in contact with the food a lot more, while in water, *water* protects that contact from *taking place*, etc. BRI;2014:238485 found "Dry heat promotes AGE formation by > 10- to 100-fold *above* the uncooked state across food categories. Animal-derived foods that are high in fat and protein are generally AGE-rich and prone to new *AGE* formation during cooking (especially grilling, broiling, roasting, searing, frying). In contrast, carbohydrate-rich foods such as vegetables, fruits, whole grains, and milk contain *few* AGEs, even after cooking (as long as they use a lot of water, not frying, grilling to oxidize in air)..." Thus, we need avoid DRY HEAT. If you cook, it's much better to use boiling or water submerged ☺☺☺ pressure cooking, not dry heat (oven, frying, roasting), as dryness makes 10-100x more toxins. Infant formula got 73 times more toxic AGEs (Enfamil.com 487 vs 6.7) than breastmilk, *no* wonder IQ is lower: no human *antibodies*, no human oligosaccharides that boost immunity, etc.

Because these foods sold, with full awareness of the toxins, are violent crimes of causing intentional organ failure, strokes, heart attacks, diabetes, kidney damage, death, Alzheimer, the

immortalist government needs to give these huge companies a 2-7 year deadline (2 for the most lethal products, 7 for the least consumed and least lethal) to remove these products by investing in wet heat cooking methods, which requires retooling the entire food industry, at a gigantic cost, obtained by state of emergency freeze of all salaries to the average salary as a compromise penalty for genocides done prior. If we prosecute any slap and violence with death penalty or lifetime labor (mining copper, etc) during the state of emergency, so will death penalty apply to all leadership of any company not complying, besides the immediate closure of the companies or shut down, bankruptcy and takeover by Eterni Food Inc, who would retool these companies. Equal justice for all. Governments who're preimmortalist, and not into the radical state of emergency, can *covertly gradually* triple the prices of bad high *AGE* foods until the full Eternal Ban, *so all are slowly deaddicted, buying less junk each month*. This is needed even before the 6-12 months of 12-20 hours a day Ethics/Penalties Education (9000 times the amount stolen for theft, lifetime labor/death penalty for any slap, punching or violent crime) on TV during the State of Emergency to reduce violent crime a trillion fold by Food Companies (9 million homicides/year) and by individuals. More on the emergency state is here. Most people know that soda, fries, junk food are bad, as thousands of online articles explain.

The useless cookies, candy, chips, sodas completely destroy our teeth (because we eat them between meals without brushing teeth afterwards, sodas alter pH preventing enamel regeneration), stick to our teeth, turn us into low IQ masticating monkeys, instead of people passionate about eterni foods to live to 90000, we worship taste and texture, eating 10 times a day (endless sipping ruins teeth 10 times faster, requiring tons of amalgam that then poisons our brains and body). We need to take control of all food companies and limit *AGE* levels. Eterni Food Inc can help people evolve the cannibal chimp brain who wants 'tasty food' into the eterni brain who has a higher cortex of eternal bliss from breathing happily. Japan and Singapore eat *rice (AGE level 10-50 times* lower than most breads*) and live the longest in the entire world.* These *AGEs* we eat cause *Alzheimer, autism, heart disease, kidney failure, atherosclerosis, cognitive decline, inflammatory* diseases. "Tissue AGE can be measured by skin autofluorescence" ► BJN 2015;113(7):1040-3. They measured *AGEs* this way since 2004 at least. Pizza can have 758 times more AGEs than cooked rice, 401 times > puffed wheat, 488 times > prepared Quaker instant oatmeal. The same food boiled or cooked with water in a *pressure* cooker (least oxygen, least *AGEs)* can have 3-100 times less AGEs than fried/roasted or broiled/grilled; dry heat (oven for example 30 min instead of microwave 30 seconds could create 60 times more) cooking creates far more carcinogenics, just like smoking (burning organic stuff) causes lung cancer. Fried fish and chips are cooked in oil with oxygen contact, barbecue, chicken, etc are so popular, yet so toxic. ☺☺☺ British 0 IQ restaurant wants to invade Romania market with their poison "fish and chips". Wendy, McDonalds, Popeyes, junk food chains want to invade

much of the world, to poison everyone with AGEs. American innovation at its best. *It's time to ban* fish *and* chips *stores* and replace them with fish in water shops, where they use electric pressure cookers to cook potato and fish under water at 355*°F* or the default 320°F (see page 10), no oxygen to reduce AGEs 10 fold and give people 5 extra years of lifespan. European Union of ☺filif snail IQ tech☺ has no regulations almost, except how to shout in music, promote Eternal Wars.☺☺☺ It doesn't protect the masses from British or other vampirism at all, or American aristocrat vampirism via Popeyes fried chicken EU restaurants that destroy the bodies of the folks eating that. The rich *poison* the poor worldwide with soda (more on the low IQ of USA here) and fried foods, to *enslave* the workers. Governments ought to bankrupt fried food companies, meaning any fast food chain that doesn't eliminate fried food too, via 5$ billion fines. Since US is run by criminals, the EU has to do it themselves. The food 'free radical forming' AGEs go into the stomach, blood and all organs, *not just the lungs*. In 1950s many *doctors* were smoking packs of cigarettes a week and telling patients that "*smoking* is harmless". *Today, doctors eat tons of dry heat foods, loaded with 10-20 year lifespan shortening AGEs, and* think "AGEs are harmless", if they even know what *AGEs* are... It may be a long time, before FDA regulates *AGEs* levels like they banned trans fats 50 years after the first people proposed a ban. It doesn't take a rocket scientist to figure out (especially after reading this section entirely) that eating high AGE foods, like many processed and home cooked dry heat foods are, *can* be (especially in those who can't fight the free radicals due to low antioxidant intake) as bad to lifespan length and quality as smoking half a pack daily. Avoiding adding oils before or during cooking cuts AGE formation a lot, add tiny levels of oils only after cooking if really needed. ☺☺☺

"Foods of the ►*fat* group showed the *highest* amount of AGE content ◄ with a mean of 100 kU/g. High values were also observed for the *meat* and ►*meat-substitute*◄ group, 43 kU/g. The carbohydrate group contained the lowest values of AGEs, 3.4 kU/g. The amount of AGEs present in all food categories was related to cooking temperature, length of cooking time, and presence of moisture. Broiling (225°C) and frying (177°C) resulted in the highest levels of AGEs, followed by roasting (177°C) and boiling (100°C)." ► JADA 2004;104(8):1287-91. When some foods are processed or cooked a lot, they produce AGEs, which are associated with oxidative stress, Alzheimer (3 times more *AGEs* in their brains), heart disease (AGEs kill endothelial cells, see below), hypertension, diabetes (AGEs kill insulin-producing cells), autism, rapid aging. 10 min cooked rice AGEs are *10175* times lower than (x <) *5 minute fried bacon*, 1878x < Parmesan cheese, grated (Kraft), 2942x < whipped butter, 867x < Big Mac McDonald, 169x < French fries McDonald, 758x < thin crust non-vegan pizza (some vegan one may have far less AGEs, since meat/cheese increase AGEs). For a list of 549 foods with their AGE content, see Table 1 at JADA 2010;110(6):911-16.e12. The obsession with taste, slow cooking, 400°F oven cooking, frying causes early death. A little temperature change makes a BIG difference. *Grilled* veggies (carrots,

celery, broccoli) AGEs are 23x < *boiled* (canned) or raw carrots, *baked* tuna 5x < *broiled (higher temp than baking)* tuna, *raw soft tofu* 8.4x < *broiled tofu,* 12x < *sauteed (outside) tofu,* McDonald biscuit 15x > bagels, white Italian bread (Freihoffer's, Bimbo Bakeries, Horsham, PA) 26x < toasted Greek bread and 48x < Croissant, butter (Starbucks). Not all cereals have the same AGEs in Table 1: 10 min rice 9 < Oatmeal, instant, dry (Quaker) 13 < puffed wheat 17 < canned corn 20 < Pop Secret (General Mills) microwaved fat free popcorn 33 < 8 min pasta 112 < popcorn air popped with butter 133 < 12 min pasta 242 < corn chips (Frito Lay) 1278 < Rice Krispies (Kellogg) 2000 < potato chips (Frito Lay) 2883 < macaroni and cheese, baked 4070. One more reason to avoid pasta and spaghetti, macaroni, besides gluten. Oatmeal has 3 times more fat than wheat, yet it has 19 times fewer AGEs than pasta and a little less than puffed wheat, just buy wheat (or ideally other healthier nongluten grain) from bulk bins at health food stores for more fiber, antioxidants, 20x fewer AGEs, use pressure cooker to avoid dry heat. Dry heat takes animal cholesterol and oxidizes it, making it up to 100x more deadly. ☺☺☺ Kellog's Corn Pops AGEs are 38x > PopSecret fat free popcorn. Avoid any cereal snack with fat, as it oxidizes in the bag and heat creates more AGEs. "Low" fat "Fiber One" by General Mills AGEs are 100x > instant oatmeal, so beware of "healthy fiber rich cereals" (9 times more fiber/calorie than other brands) which may be deadly. Same for "healthy" protein powders, you don't know if AGEs are high or low or if proteins are denatured, FDA doesn't require labeling of AGEs, so it's safer to go with home cooked lentils (takes 2 secs to press start and it's done, unless you soak them first), popcorn, everything, just get a lunch box. *Lower fat protein powders are safer, if they don't use heat, base, acids in processing..., which is hard given today's tech*. Puffed wheat AGEs are 118x < Rice Krispies (Kellogg), all puffed cereals have very low AGEs. Instant oatmeal brands fared the best among cereals. *Rice, white, quick cooking, 10 min* AGEs are 222x < Rice Krispies (Kellogg), 319x < Waffle frozen toasted (Kellogg), 108x < homemade pancake, 251x < toasted frozen pancake (General Mills), 1252x < Beef frankfurter broiled 450°F 5 min, 1239x < Chicken skin thigh roasted, 2058x < Chicken skin back or thigh roasted then BBQ, 1107x < Chicken breast breaded oven fried 25 min with skin, 489x < Shrimp frozen dinner microwaved 4.5 min, 568x < Tuna broiled with soy 10 min, 964x < Cheese American white processed, 320x < Chips potato (Frito Lay), 358x < Cookie biscotti vanilla almond (Starbucks), 298x < dried figs, (they use heat to dry and produce AGEs), 104x < Coconut cream Coco Goya cream of coconut (Goya), 867x < Big Mac McDonald's, but 8x < Veggie California burger microwave 1 min (Amy's) (thus, many Vegan BURGERS are 100x < most meat burgers), 150-1,000x < "avocados, nuts, seeds and many oils" (MDs reversed heart disease with 5% fat veganism).

What about fumes from dry (waterless) heat cooking? Just like second hand smoking causes cancer via polycyclic aromatic hydrocarbons (PAHs) etc carcinogens, inhaling the fumes from barbecue, grilling, pan frying, oven cooking (pizza with 758 times more AGEs than water cooked

rice) has damaging effects on our lungs and health. It's the exact same compounds sometimes from burning organic matter in tobacco that comes out of burning organic matter in plants that we fry, cook, dry heat cook, sometimes even worse due to animal products. Therefore, it's best to clear the house of fumes immediately, after someone cooked something with dry heat. People living near restaurants that grill and fry foods excessively have been found to have a higher incidence of lung cancer and PAH exposure ► BMCPM 2017;17:41, PO 2016;11(2): e0148641. EHP 2012;120:910-5 found high level PAHs may even cause birth defects. ☺☺☺

Check out how flies, rats avoid processed foods but eat home made foods because of toxins. Today, with a pressure cooker and smoothie maker, we never need buy any cooked/processed junk, no cooking skills needed, press button and it cooks it. No wonder people cure themselves of diabetes, heart disease, etc many diseases by going 50-100% raw vegan or whole plant foods (no processed). Baking apples increases AGEs more than thrice. Apple or fruit pies not a good idea, those probably have 100x > AGEs than baked apples based on data from the other foods. *Even homemade French fries AGEs are* 69x > *canned carrots and* 53x > *apples.* The *McDonald's* French fries AGEs are 90x > home boiled 25 min potatoes, 169x > rice cooked 10 min, 152x > canned carrots, 2.2x > homemade French fries, 117x > apples, 90x > puffed wheat, 76 x > canned corn & cantaloupe, 66x > tomato & Bread white Italian (Freihoffer's, Bimbo Bakeries).

Low AGE intake has also been shown to lengthen lifespan to the same extent as does calorie restriction in mice. Studies in healthy humans show that dietary AGEs directly correlate with circulating AGEs, such as CML, carboxymethyllysine, and MG, methylglyoxal, as well as with markers of oxidative stress", markers which become lower once people eat less AGE (plus many diseases diminish, wounds heal faster, etc). Scientists created AI proposed enzyme (not found in nature) by scanning 50K enzymes for the best one to start tweaking, and this synthetic enzyme can remove the CML attached to skin proteins in vitro (70 year old skin drops CML level to that of a 30 year old), giving us hope that 90% of the damage AGEs do can be reversed entirely in 100+ years ► NC 2026;17:5926. Cooking of meats and dairy often times produces 100x to 1000x more AGEs than boiling fruits, veggies. This may explain why most centenarians ate little if any, meat. Not all cooking is the same, and obviously, cooked foods can have > 10,000x more toxic AGEs than other raw ones (not the same food, as the table shows). Some studies found that exercise can lower blood AGEs, while others found no change, possibly due to the type of exercise, intensity, DNA, *confounding* variables. Ntr 2015;31(3):446-51 found no change in AGE via exercise, but rapid change via dietary change. MSM 2009;15(6):65-73 found a small decrease in AGE with more walking. The only study that found a really big change in only one single AGE (methylglyoxal) was a tiny 13 people study ► EJAAOP 1992;65(1):88-93 ► "After short runs the methylglyoxal concentration had decreased to 13% in the untrained men and 30% in the trained men, and after long runs the concentration had decreased to 41% in the untrained and 60% in

the trained men". This shows that diet is important, with or without exercise. ☺☺☺

Grilling burgers causes carcinogenic compounds to form. Consuming or creating at home vegan or meat burgers (which are then cooked in oil) without the proper research is not a good idea, as oil, sugar oxidation during cooking can lead to AGEs, oxidized fats or oxidized cholesterol (for meat burgers, that contain cholesterol, oxidized. Vegan or meat burgers with some kind of natural or added ω3 ALA, DHA or EPA or unsaturated fat *(vegan or meat based burgers doesn't matter)* that are cooked with oxygen (not in a pressure cooker with limited oxygen) at high temp are toxic. Perhaps, a good idea would be to inspire FDA or other agencies in other countries to require pressure cooking at low temperature and low oxygen of all burgers to protect the heart health of all people. *Or require nitrogen cooking, instead of air cooking*. *Cooking above certain temperatures could be banned* except for very few foods that absolutely need it. Frying foods could also be banned as it forms dangerous levels of oxidized fats, sugars, etc that cause heart attacks and strokes and destroy much of the good stuff in fish or whatever is fried, the EPA and DHA. Governments need to do a lot of chemical testing before and after a burger/food is cooked to assess the chemical structure of the fats and all compounds that form, before approving it. The more a burger is cooked with oxygen, the more brown carcinogenic compounds are formed. All processed foods (burgers) in "fast food industry" are better precooked at low temp/oxygen under pressure by the manufacturer, frozen,warmed 20 sec before serving. Pressure means shorter cooking time and 5-100 times fewer AGEs, oxysterols, etc chemicals that increase heart disease, cancer, oxidative stress, brain inflammation, aging. We discovered lead and we used it in pipes in Roman Empire and for dental fillings in 1800s, but now we know better. We discovered fire cooking with oxygen and high temperatures, created “sacred fire” religions, but now we know better that it creates very toxic and lethal compounds (especially when you add oil to it), so like with Lead, we can move away from it. Our understanding always evolves, and so do our choices based on that understanding. We have evolved transport last 10 millennia, but cooking has stayed the same, except for the pressure cooker which leads to less oxidation, better nutrient retention, etc. We can require all industrial manufacturers (that cook foods) to use gigantic nitrogen pressure cookers, since the air has 78% nitrogen anyway to reduce AGEs. ☺

11.3.3. FLAVONOIDS (quercetin...) deactivate diet AGEs and inhibit the formation of endogenous AGEs (most of them also lower LDL, TC, TG, ApoB, Lp(a), preventing strokes, infarcts)

The next 11 pages explain some of the best supplements to take to get the best flavonoids (quercetin, hesperidin, fisetin, naringenin, grape seed extract, hawthorn extract, etc) if produce is too expensive or hard to find (air tight bag, always in the fridge). Flavonoids also help you lose weight, as they turn on AMPK and turn off mTOR pathway. They also usually have antiplatelet, anticlotting activity (like other polyphenols and dietary phenols do), which helps non-O blood

types that clot easier and are at higher risk of stroke/infarct. Combined with garlic, ginger, etc flavonoids will replace blood thinning medications for some people, since they're safer than current medication, as our bodies got used to them for 1 billion years: most of our biochemical templates come from small mammals that became monkeys one day, we still have things in common with mice, and even fruit flies, bees (that's why we will discover how to live 40 times longer, by a diet change, as queen bees live 40x longer than the rest via new compounds humans made in the lab, not just royal jelly). Below is a list of the 5 classes of flavonoids, their chemical structure and the foods with the highest levels of flavonoids, presented by flavonoid class. Always eat high flavonoid healthy foods with vitamin C rich foods to prevent anemia due to iron deficiency caused by polyphenols (flavonoids are a subclass) that are sky high in peppermint, some teas and many spices. *This prevents your kid from having IQ 30 points lower too, and being far healthier as your AGEs are low.* The Richest Sources of Anti-Cancer Anti-Oxidant Flavonoids are presented below, together with studies about compounds (some flavonoids) that inhibit AGE activity and formation inside the body. Meats, fish and dairy don't have these anti-cancer anti-diabetic anti-atherosclerosis compounds that inhibit the action or formation of AGEs.☺ The numbers below are from USDA. Ntr 2013;5(9):3367-87 reports "quercetin glucosides were absorbed 10 times faster and the plasma concentration peaked 20 times higher than quercetin rutinosides in humans". The bioavailability of flavonoids (and other phytonutrients) varies a lot across foods, so much research needs to be done to come up with the perfect eterni food. Peppermint data is from phenol-explorer.eu. There are other less common types of flavonoids, such as isoflavones in soy foods, chalcones, dihydroflavonols, etc. Two good papers on flavonoids are JNB 1996,7(2):66-76 & PB 2004;42(Suppl):74-83.

FLAVONOID AMOUNTS REFER to mg/100 g of RAW FRUITS OR VEGGIES (unless it says dry):

1). FLAVONES: dry parsley 4,523 (apigenin 4,503), dry peppermint 1,486, dry Mexican oregano 1,046 (luteolin 1,028), parsley 217, celery 3, orange 1, watermelon .6, apple .5. Name meaning is on=ketone on the ether ring between phenyl rings (see numbering of the flavan structure): The two main flavones are apigenin 4',5,7-trihydroxy flavone or 4',5,7-trihydroxyflav-4-one (hydroxy =OH) & luteolin 3',4',5,7-tetrahydroxyflavone (or 3'-hydroxyapigenin). Apigenin is a senomorphic (reduces age-associated cell inflammation, turns senescent cells into healthy ones) and may inhibit CD38 enzymes to preserve cellular NAD^+, prevent muscle atrophy, reverse aortic stiffness, vascular inflammation, alleviate physical frailty and cognitive impairment as it does in mice. Hydroxyapigenin (fisetin) is a senolytic that kills *senescent cells making inflammatory chemicals*.

1.1). Isoflavones: soy 139. They are, as the name implies, isomers of flavones, where the 4'-hydroxyphenyl group is bound to the C_3, not C_2. Genistein, 4',5,7-trihydroxy isoflavone, the most abundant soy polyphenol, is isoapigenin, an isomer of apigenin. Daidzein is 4',7-dihydroxy

isoflavone or genistein without 1 OH. In 100 g soybeans, we find aprox 75 mg genistein and 50 mg daidzein which make up 90% of isoflavones, with 10% (14 mg) being glycitein or 4',7-di hydroxy-6-methoxy-isoflavone or 6-methoxydaidzein. Soy isoflavones are world famous. Once on Wikipedia, click on PubChem ID, then 2D structure, to get a nicer view, like D-catechin.

2). FLAVONOLS: raw capers 492 (q or quercetin 233), canned caper 304 (q 173), dried parsley 331, lovage leaf 177 (q 170), kale 93 (q 23), radish leaf 78 (q 70, vs 3 in broccoli, 4 red apple), mustard green 63, watercress 53 (q 30, kaempferol 23) steamed watercress 0, cilantro 53 (q 53), yellow hot wax pepper 51 (q 51), purple onion 47 (q 39), chia seed 31 (q 18), onion 26 (q 20), red apple 4 (q 4), tomato 0.8, parsley 0.28 q. ☺☺☺

FLAVONOLS: ol=alcohol, on=ketone on the ether ring, hence also called FLAVON-3-OLS. The 3 main flavonols are: kaempferol 3,4',5,7-tetrahydroxyflavone (3-hydroxyapigenin) & isomer fisetin 3,3',4',7-tetrahydroxyflavone (fisetin is in 10+ spermidine pills in 400-800 mg amounts, but most flavonols help as much, it's thought to be the best senolytic chemical, 66$/100g), quercetin 3,3',4',5,7-pentahydroxy flavone (3,3'-dihydroxyapigenin)

3). FLAVANONES: dried peppermint 8,740 (eriocitrin is 8,052 mg, eriocitrin is the rutinose glycoside of eriodictyol), dried Mexican oregano 457 (naringenin 372), grapefruit 54 (53 is naringenin, naringin = naringenin glycoside that gives grapefruit its bitter taste), lemon 51 (hesperetin 28, eriodictyol 21.4, naringenin 0.55), lime 46.4 (hesperetin 43, naringenin 3.4), orange 42 (hesperetin 27, naringenin 15), tangerine 17. hesperetin (MW 302) glycoside is hesperidin (MW 611), 1000g/51$ gives high gas like citrus does, try 300mg/day max, lowers LDL by HMGCR inhibition, or buy quercetin instead, a nootropic memory, cognition enhancing chemical via lower oxidative stress. Neohesperidin in bergamot is even better at lowering LDL, as the sugar moiety binds better in the enzyme HMGCR, but this lowers testosterone in eyelids, leading to dry eye (cholesterol is needed to make cholesterol esters for tear lipids). Statin like food chemicals that cause dry eyes (via lower eyelid cholesterol synthesis and thus lower androgens (local testosterone) needed to produce eyelid lipids), include: quercetin, fisetin (modulates SREBP2 and downstream lipid metabolism, exerting a distinct LDL lowering effect that works in tandem with statin-like kinetics), resveratrol, red rice yeast (natural lovastatin), garlic and many other HMGCR inhibitors. Essentially, all antioxidants, flavonoids are nootropics. 1 lb of oranges has 4.54*(611/302)*27=248mg hesperidin. Thus, if taking it as a powder, 500 mg max is OK with fat, being fat soluble, as if eating 2 lb oranges. Hesperidin and diosmin in citrus peels improve peripheral circulation, swollen leg, being sold together for that. Pure sells diosmin alone. However, cutting salt intake to 300 mg/day is 10x more effective in reducing swollen feet than hesperidin. Hesperidin (like citrus) causes severe gas in some, so take only 80mg/day max if so. Hesperidin is hesperetin + rutinose, the rhamnose-glucose indigestible disaccharide we lack

the enzyme to break into 2 sugars, causing colon fermentation and gas, like bean oligosaccharides. Hesperidin also lowers blood pressure, softens the stool (in rat studies and human reports: me too, I took hesperidin 1st time in 3 months on 9-5-2026 and stool became so soft suddenly (soft stool is a common side effect websites report), which was great, soft stool helps with regular bowel movements, lower toxic load (stool dumps toxins when it lingers), zero hemorrhoids. Hesperidin "enhances epidermal (skin: arteries, colon are skin too, softer colon skin = easier stool gliding) permeability barrier homeostasis". If you get digestive, enamel erosion, gas (via pectin) issues with citrus, eat hesperidin, save 5000$. The aglycones (flavonoids) end in e, enin or etin, while the glycosides end in i: ingin, itrin or idin. The Eternia Council may suggest including hesperidin in the Eterni Foods first powders. The real reason we buy citrus is hesperetin, naringenin (=hesperetin without 1 methyl, 1 OH). This shows as we evolve from chimps to Homo Immortalis, we take the 0.3% best of any food and mix them up to create Eterni Foods that give us 4000 year lifespan, as bees live 50x longer via diet. No longer do we need to eat 900 foods/pills, but one powder in water, to save time. We also become the Holy Spirit of Immortality *for* All that overcomes death as in the immortalists' creed.

FLAVANONES: an=2 extra H, alkane, on the ether ring, hydrogenated flavones. The 3 main ones:

3.1. naringenin (2S)-4',5,7-trihydroxyflavan-4-one (2,3-dihydro-apigenin)

3.2. eriodictyol (2S)-3',4',5,7-tetra hydroxy-flavan-4-one (2,3-dihydro-3'-hydroxy-apigenin, 3'-hydroxy-naringenin or 2,3-dihydro-luteolin),

3.3. hesperetin (2S)-3',5,7-trihydroxy-4'-methoxyflavan-4-one (2,3-dihydro-4'-methoxy-apigenin or 4'-methoxy-eriodictyol).

4). FLAVAN-3-OLS: CACAO BEANS 8,606 (epicatechin 99, catechin 88, gallocatechin 8,262), unsweetened cocoa powder (unprocessed with alkali) 261, grape seeds 168 (epicatechin 93, catechin 75), rabbiteye blueberries 124, alkali processed cocoa powder 93, blueberries 52, blackberries 42 (37 catechin, 5 epicatechin), red apple 12 (epicatechin 10, catechin 2), white nectarine 10.6 (7.6 catechin, 3 epicatechin), peach 9.2, apricot 8.4 (4.7 epicatechin, 3.7 catechin), pear 6.8, banana 6 (catechin 6), strawberry 4.6.

FLAVAN-3-OL: an=2 extra H, alkane, on the ether ring, hydrogenated FLAVONOLS where the ON (ketone) became AN, so C=O became CH_2: catechin (2R,3S)-3,3',4',5,7-pentahydroxyflavan or trans-dihydrodeketoquercetin and its 'cis'-isomer epicatechin (2R,3R)-3,3',4',5,7-pentahydroxy flavan. Gallocatechin is 5'-hydroxycatechin, having 6 OH groups, so it has the higher free radical scavenging ability. Catechin OH is on the other side as the lone phenyl ring, catechin ether ring C_3 CHOH is 3S stereoisomer (2R,3S for the 2 carbons (CHPhenyl-CHOH) of the "cis-trans"), while epicatechin ether ring CHOH is 3R stereoisomer, (2R,3R for the 2 carbons). Recall the flavan

numbering of carbons. As far as light refraction, natural catechin is D-catechin or (+)-catechin, while natural epicatechin is L or (–) or levorotatory (polarized light is rotated counterclockwise). Epigallocatechin is 5'-hydroxyepicatechin, with 6 OH (3 of them are on one phenyl ring in consecutive order as in the gallic acid, hence gallo), while epigallocatechin gallate (EGCG) has 8 OH, being "Most Effective Catechin Against Antioxidant Stress via Hydrogen Peroxide and Radical Scavenging Activity" ► MSM 2018;24:8198-206. The more OH, the more free radicals it neutralizes. If the phenol OH group is bound to a carbon (via an electron pushing alkyl group nearby) that pushes electrons to the oxygen more, then the aromatic ring resonance effect stabilizes that future phenoxy radical and makes it easier to break the oxygen bond and scavenge radicals. If the OH group is aliphatic, not aromatic, the there is no ring to distribute this extra electron and stabilize the oxy radical, so then the oxy radical is less stable, since that oxygen-hydrogen bond is stronger and harder to break, meaning scavenging activity is higher. Some polyphenols have both aromatic and aliphatic OH groups. There are exceptions based on solvent, chirality, access to an OH group, etc. Today people can use quantum chemistry to compute order of 900 polyphenols for various free radical scavenging potentials in various complex environments. However, basic chemistry knowledge tells you that 6 phenolic (OH) groups will scavenge a lot more than 3. ☺☺☺

11.3.4. ANTHOCYANIDINS and THEIR GLYCOSIDES (ANTHOCYANINS) Deactivate AGEs

5). ANTHOCYANIDINS or FLAVYLIUMS: Maqui Berry 690 mg/100g, Purple cauliflower 250, Purple Cabbage 210, Purple carrot 25 to 150 (depends on cultivar), Blueberry 109-165, black currant (dried tiny grapes) 158 (white only 1), Purple/Indigo Concord Grape 120, golden currant 109, Purple Kale 107, Cranberry 104, Blackberry 101, Eggplant 86, Cherry 80, Red Currant 75, Radish 63, Red Grape 48, Raspberry 39, Strawberry 34, Plum/Pear 12, Banana 7.

Anthocyanidins are flavyliums obtained by losing 3 hydrogens, so dehydrogenated catechins: 3,3',4',5,7-pentahydroxyflavylium or cyanidin (cyan means blue, these flavonoids are blue-red, purple), the strongest anthocyanidin activator of sirtuin 6 enzyme hypothesized to help us live longer. Peonidin is 3'-methoxy-cyanidin, delphinidin is 3,3',4',5,5',7-hexahydroxyflavylium or 5'-hydroxy-cyanidin, apigenidin is 4',5,7-trihydroxyflavylium. The berry section has more info. The previous page helps you understand all flavonoids (all 5 classes, not just anthocyanidins) are derivatives of flavan or apigenin. Api = advanced pharma ingredient, genin = genesis. Apigenin= natural medicine. The 5th grade fat, sterol (hair section) & amino acids mnemonic of centralized education make it easier to learn chemistry for the geniuses of tomorrow, who know more about Vitamin P, Polyphenols, at 20 than Nobel Winners today at 65. The point of these names (prior 2 pages too) derived all from apigenin is that the same basic antioxidant power is in every colorful blue, purple, red produce, legume, grain, and that you don't need to eat 98 foods to get

the same antioxidant power as from 3 deep purple/blue/black foods. So, don't stress about "experts" telling you you need to eat every day "10 g of lethal flaxseeds, 5 g of useless olives, 10 g avocados, 50 g coconut and 24 g of this and that blue or purple thing", companies trying to take advantage of your ignorance to sell you their snake oil. The less educated, the easier to fool. Once you understand the chemistry, you can't be duped by commercial fake science anymore, whether about polyphenols or seed oils, or nuts (except walnuts) you can skip. Stressing about which "purple" stuff to eat will do more damage than eating any and paying attention to things far more critical, like sleep quality, exercise, omega 3/6 nut or oil ratio. However, the geometry of these molecules changes, the distance between certain enzymatic or molecular pockets, so this determines how effective flavonoids are in killing microbes by shutting down enzymes, etc, or neutralizing 5-alpha-reductase in humans, killing free radicals in some cells with peculiar properties. Cyanins are glycosides of cyanidin, for example cyanidin galactoside. Big Business pushes different foods we don't need such as avocado, olives, coconut, etc, and many herbs and supplements. But once the working class realizes the flavonoid structure, googles "main polyphenols in food/herb x" and the chemical structure of said "miracle compounds" in Ginkgo biloba and other "super foods", one realize plain old fruits and veggies offer the same free radical quenching and same exact flavonoid core as exotic herbs costing a fortune. Don't fall for the scam, biloba got plain old flavonoids quercetin, kaempferol, isorhamnetin mentioned above, and biflavonoids (with few OH groups vs quercetin in veggies) like amentoflavone (5 OH for double the carbons), ginkgetin/bilobetin (4 OH for double the carbon, so weak total scavenging potential/mg). Biflavonoids are simply 2 flavonoids joined, which can be less effective as they can't sneak in small pockets where free radicals hang around. Pricier isn't better always.☺☺☺

An anthocyanin is anthocyanidin glycoside (3-glucosides), or a glucose bound to anthocyanidin. Glycosides are compounds containing a sugar, which can be glucose (for glucosides) or ribose (for ribosides, important for RNA, R from ribo). Anthocyanins (together with anthocyanidins) are mainly responsible for the bright red, blue, black, purple colors of fruits, veggies, wild rice, black rice/beans/sorghum. They appear black, but when you soak them, you will notice the water turns purple. Anthocyanins, the most abundant flavonoid in plants, are anticarcinogens ► CL 2008;269(2):281-90. Purple cauliflower has more brain protecting anthocyanidin flavonoids than any other fruit or veggie: 250 mg/100 g, 7 times more than strawberries (34 mg), 52% more than blueberries (164 mg). 0.32 g/day of anthocyanin extract for 24 weeks raised HDL by 19.4%, lowered LDL by 7%, TG by 23% ► JN 2015;145(4):742-8. The more anthocyanins, the fewer heart events ► Circ 2013;127(2):188-96. Anthocyanins protect against β amyloid induced neurotoxicity in vivo/vitro, decreasing neuron death ► NI 2015;80:51-9. Anthocyanins protect against β amyloid toxicity thru diversion of molecular forms ► NNS 2016;19(1):32-42. Anthocyanins

protect SK-N-SH neurons against acrolein-induced toxicity, besides protecting them from β amyloid induced oxidative stress ► JAD 2016;50(4):981-98. Anthocyanins decrease postprandial blood glucose ► JNB 2016;38:154-61. ☺☺☺. Purple carrots got up to 1.74 g anthocyanins/100g dw or 204 mg/100 g fresh carrot, higher than most produce ► EFRT 2004;219:479-86. Other studies found up to 243 mg, or 150 mg anthocyanidins. Purple Kale data comes from PCR 2012;31:281-9, which says 1.73 mg/g anthocyanins, which is about 1.07 mg/g anthocyanidin (no glucose), or 107 mg in 100 g. Purple or blue concord grapes improve memory ► BJN 2010;103(5):730-4, just as blueberries do ► JAFC 2010;58(7):3996-4000. Why? Because they have anthocyanidins that improve memory, brain performance, since free radicals are killed. Blueberries prevent cancer ► AAMC 2013;13(8):1142-8 due to inhibiting AGEs. Dairy inhibits the absorption of anthocyanins ► 5 min video & FRBM 2009;46(6):769-74. ☺☺☺

11.3.5. AGEs and TOR enzyme inhibiting flavonoids, bee pollen, tea, herbs

AAMC 2013;13(7):1025-31 is a paper about the inhibition of the mTOR signaling (too much mTOR activity can lead to cancer, diseases) by quercetin, one of the most common flavonoids (see list above), found in onion etc, fisetin found in onion, isoflavones from soy. For a list of more flavonoids that inhibit TOR, see AAMC 2013;13(7):967-70. Cactus pears have 200-450 mg (depends on cultivar) quercetin equiv/100 g, more than all fruits, as the cactus section shows. Some mangoes have 85mg flavonoids (gallic acid equiv)/100 g ► Ntr 2017;9(5):525. Pollen flavonoids (0.6-1.4g/100 g more than any fruit/veggie) are described in the pollen section. Herbs can far exceed the bee pollen level of phenolics. The best tea brands (most don't offer this) have about 50-90 mg flavonoids/100 g in the form of 3 flavan-3-ols (catechin, epicatechin and epigallocatechin gallate), but tea has no biophotons or fiber; since many fruit/veggies provide more flavonoids than tea (without the heavy metals, some tea brands have lead 4,002x > others as explained in the lead section, it makes sense to eat more fiber, biophotons and veggies than tea, especially since most people get too little fiber. The vegetarian herbalist Li Ching Yuen who lived to be '256' per New York Times 1933 (some say 150-200) got his nutrition from fresh herbs, some of which, when dried, have 100 times more unique flavonoids and other phytonutrients compared to many fruits. If we can discover what works and synthesize them and make a powder that is a good anti-oxidant it might help us to live to 150. We can apply chemistry to the concept of synergistic effects of beneficial plant chemicals to prolong average lifespan to 950. We cultivate the best plants, sweet potatoes got 787 times more vitamin A than potatoes.

11.3.6. Studies showing AGE deactivation by flavonoids and other phytonutrients:

Before the studies on AGE deactivation, it's worth recalling that dried peppermint has the most flavonoids of any food, 10.2 g/100g, followed by cacao bean 8.6 g, dried parsley 4.5 g. Eriocitrin, the main flavonoid in peppermint, was found to be a very potent antioxidant, almost as good as

rosmarinic acid ► ZNC 2005;60(11-12):826-32. Other studies found eriocitrin to be effective against lipid peroxidation. Dried peppermint has 1,800 times more flavonoids than rosemary according to phenol-explorer.eu, 12 times more polyphenols, 2 times more rosmarinic acid (the famous anti-Alzheimer compound). However, pulegone neurotoxin in peppermint limits the safe peppermint intake. All mint family herbs (sage, thyme, rosemary, peppermint, etc) have been found to be neuroprotective (in spite of pulegone), possibly due to the polyphenols (phenolic acid and flavonoids). Peppermint got 3 times less fat and 4 times more protein than rosemary, so it may be overall more effective at promoting health and longevity. Berberine lowers AGEs.

Epicatechin, a common flavanol in fruits and veggies, broke down glycated albumin in vitro and reduced AGE accumulation in the retina of rats ► EJP 2015;748:108-14. Quercetin, the main flavonol in foods, inhibits AGEs by trapping 80% of methylglyoxal, 50% of glyoxal within 1 hour under physiological conditions (these 2 dicarbonyls are precursors of AGEs; they're found in foods, smog and tobacco smoke) ► JAFC 2014;62(50):12152-8. The dicarbonyls bind to quercetin on the phenyl ring A within the flavon structure (the one bound to the heterocyclic ring), the only CH groups of the phenyl ring as shown here. Hydrogen is displaced. ☺

Legumes, nuts, grains and seeds contain phytate, which was found to lower serum AGE levels in diabetic patients: those "who consumed IP6 (inositol hexakisphosphate or phytate) supplements for 3 months had lower levels of circulating AGEs and HbA1c than those who did not consume IP6" ► SR 2018;8(1):9619. 3 Pomegranate phenolics (ellagic acid, punicalagin and gallic acid, found also in many other fruits) inhibit AGEs in vitro by scavenging reactive carbonyl species; the authors say this fruit can probably be used to prevent diabetes and Alzheimer; gallic acid inhibits amyloid fibrils formation in Alzheimer ► FF 2014;5(11):2996-3004. Pomegranate juice has only 0.45 mg gallic acid/100 g, banana got 1 mg, cauliflower 0.69. Gallic acid GA, a known AGE inhibitor, is the major component of grape seed extract GSE that inhibits in vitro amyloid fibril formation in Alzheimer, Parkinson, Huntington ► BMCL 2013;23(23):6336-40. Same inhibition of fibrils, plus plaque reduction by 50% happens in vivo in mice treated with 2% of diet GSE. Total phenolic content of GSE was 592.5 mg/g dry weight: GA (49 mg/g), catechin (41 mg/g), epicatechin (66 mg/g), proanthocyanidins (436.6 mg catechin equivalents/g) ► NTR 2009; 15 (1):3-14. GA is in chestnuts (480 mg/100g), cloves (spice, avoid clove & basil if pregnant or conceiving, both genders) 458 mg/100 g.☺☺☺ Most other fruits and veggies got it below 1 mg/100 g. No wonder cloves improve memory, prevent Alzheimer: they're the highest non fatty source of GA. Ellagic acid in walnuts, pecans, cranberries, raspberries, strawberries, peaches, grapes, inhibits AGEs ► BJ 2012;442(1):221-30. 2026+ NIH papers show epicatechin, catechin, GA reduce all cause mortality, LDL, LDL oxidation and GSE (250g/21$) may be good for people not eating berries, which cost 20x more/g of anthocyanidins. Berries, grapes got high sugar which lowers HDL, raises ApoB. GSE contains polymerized anthocyanidins ACs called

proanthocyanidins PACs (e.g. procyanidin A2, B2 epicatechin(4β→8)epicatechin, A1, B1 epicatechin(4β→8)catechin), that get partially hydrolyzed in the stomach acidic pH to ACs. ☺☺☺ Cranberry flavonoids are procyanidins (the simplest PACs) and other compounds that inhibit AGEs formation. GSE inhibits AGEs ► CJPP 2012;90(2):167-74. "GSE contains… PAC monomers (5-30%) (or ACs like catechin), oligomers (17-63%), (dimers like A/B1,2), and polymers (11-39%) (tannin)" ► BM 2020;10(2):243. Polymeric tannins (PAC polymers) are more effective than monomers at lowering plasma LDL, ApoB and reducing intestinal cholesterol absorption, meaning GSE can help lower the lethal ApoB better than berries. GSE inhibits LDL oxidation and cholesterol uptake better than ACs (berries), but *lowers LDL, raises HDL less than* ACs. GSE, via partial hydrolysis (or even without it, since it contains 5-30% monomer ACs), can thus offer both sets of benefits (of PACs or condensed tannins, of ACs), removing the need to eat any berries. Cyanidin (simplest anthocyanidin) activates SIRT6 antiaging pathway, so GSE may add 1 year to your life. This is the beauty of science, we add these chemically made compounds to our eterni powders to enable all to live to 4000 via a new fetal diet in the first 3 months of pregnancy via the 11 companies. If you eat quercetin or hesperidin, fisetin, naringenin from powders (links above), you only get the more polar monomer flavonoids, but catechin, epicatechin (the cis isomer of catechin with respect to the flavan ring) lack the polar ketone on quercetin, fisetin so they can latch to nonpolar LDL particles better, protect LDL from oxidation better. The paper above said monomers can make 5% of GSE only at times, and that's mostly catechin, epicatechin and gallic acid, with gallic being sometimes 0.1% of the GSE not 2% as with catechin, so you really deal here with catechins when you talk about GSE monomers and their effect on LDL oxidation, with gallic being maybe 5% of the total monomers and catechins 90%. GSE is a much cheaper way to get some anthocyanidins than buying berries, especially safer for prediabetics.

Sulforaphane, destroyed by cooking, found in broccoli, kale (richer than broccoli), cauliflower fights methylglyoxal toxicity (Alzheimer patients have more methylglyoxal in their cerebrospinal fluid). Sulforaphane protects cells against glycative damage by inhibiting activation of the caspase-3 enzyme, reducing the phosphorylation of MAPK signaling pathways, reducing oxidative stress, increasing intracellular glutathione levels ► CRT 2015;28(6):1234-45. Curcumin in turmeric inhibits AGEs-induced inflammatory responses in endothelial cell damage via trapping methylglyoxal ► MMR 2016;13(2):1475-86. This may prevent silent white matter strokes which are thought to lead to Alzheimer. JDMD 2014;13:11 explains that orange seeds polyphenols have significant anti-AGE activity, so making a smoothie with oranges and many other things is good, as pureeing the seed will release the good phenols. B_6 (found in many fruits, B complex pills) blocks AGE formation ► PO 2013;8(9):e72128. See also this great paper on B_6 preventing AGE formation at JBC 2003;278(47):46616-24. Genistein, a soy products isoflavone (a subclass of flavonoids), inhibits AGE formation by trapping methylglyoxal

(O=C(CH_3)CH=O), 98% within 24 hrs (this may be why those eating soy have less breast cancer) ► CRT 2011;24 (4):579-86. Among women with breast cancer, soy food consumption was significantly associated with decreased risk of death and recurrence. Vegetables, fruits, soy foods reduced the risk of breast cancer ► IJCEM 2015;8(1):73-85. Limonene in lemon/citrus, is a great AGE inhibitor ► MB 2013;9(10):2463-72. Red grapes inhibit AGEs, 1 g of dried skin extract has total phenols of 246 mg gallic acid equivalent, total flavonoids 216 mg catechin equivalent, total anthocyanins of 37 mg cyanidin-3-glucoside equivalent ► BMCCAM 2013;13:171. ☺☺☺

Apple flavonoids phloretin and its glucoside phlorizin inhibit AGEs by trapping carbonyl species, like all polyphenols do, see the links for formulas, carbonyl trapping ► CRT 2008;21(10):2042-50 and CRT 2011;24(8):1304-11. AGE accumulation, blood glucose were reduced via phloretin, epigallocatechin 3-gallate (EGCG) and [6]gingerol (ginger) ► BP 2016;84:502-13. EGCG is high in white tea (42 mg/g dried leaves), green tea (74 mg/g of dried leaves). EGCG inhibits AGEs ► FF 2017;8(11):4194-209. If you don't drink tea, no worries, many centenarians never drink tea and some tea brands have 4,000 times more lead than others. Ganoderma Capense mushroom widely used in Asia inhibits AGEs in vitro. The edible green alga Capsosiphon fulvescens inhibits AGEs ► EJN 2014;53(1):233-42. Mango mangiferin inhibits AGEs in vitro ► FRBM 2004;36(12):1575-87. Out of 11.3 mg of carboxymethyl lysine (an AGE) ingested, only 3.5 came in fecal matter (AA 2012;43(2):595-602) and a small fraction in urine, indicating that AGEs accumulate inside over time increasing oxidative stress, aging, disease progression. Hesperidin (glycoside of hesperetin flavanone in limes, oranges, lemons) inhibits AGEs ► PB 2012;50(12):1531-5. 11 flavonoids + 6 coumarins inhibit AGEs; several herbs have coumarins ► APR 2012;35(6):1021-35. Ginger was the strongest inhibitor of AGEs among 17 plants tested ► BJN 2009;101(11):1714-21, see more in the ginger section. Aged garlic extracts inhibit AGEs ► JN 2006;136(3 S):796 -9S. Citrus fruit extracts reduce AGEs and H_2O_2 induced oxidative stress in human adipocytes. Rutin is quercetin-3-rutinoside, a flavonol glycoside composed of quercetin and the disaccharide rutinose. The 2 adjacent hydroxyl groups of the lone phenyl group of quercetin are trapping free radicals and preventing the formation of glyoxal, methylglyoxal and other dicarbonyl AGEs that then create more AGEs. Basically, all anti-oxidants play their role in preventing AGE formation by the same mechanism. So, the ORAC score is helpful in determining which foods may prevent AGE formation. Rutin is found in many fruits (apple especially) and buckwheat. BJN 2012;107(7):941-9 found that rutin prevents the eye lens from becoming less transparent by preventing lens AGE accumulation: AGEs are hypothesized to change the surface charge of the eye lens protein, leading to conformational change that may affect protein-protein, protein-water interactions, leading to decreased transparency of the lens and giving people partial or full *blindness*. "More produce means better eye health" may also relate to the ability of flavonoids to inhibit AGEs. Other studies showing AGE inhibition by rutin are MCB 2003;252(1):141-7, FRBM

2010; 48(5):656-63. Rutin benefits are at SPJ 2017;25(2):149-64. ☺☺☺

11.4. 73 REASONS TO GO VEGAN (34 pages)

Intro: We immortalists view the best diet as some sci-fi future diet made of unknown particles etc that help us live to a trillion, for to understand God or truth we need to become "Immortal", meaning to live a nanosecond of eternity, to a trillion years old. The Seed Oils section explains that to maximize healthspan and lifespan for all, we need at least 4 billion different unique diets, so read the first paragraph there too. In the transition period, a low fat vegan diet seems to offer to some phenotypes (maybe you too), some biochemical and ethical advantages (we need 4 billion people study to see what % of every macro/micro nutrient is ideal), so we're always improving and researching it to create the first immortalist powders, the start of moving humans from 100 to 300, then 4000 year lifespan. Immortalists are eternal students who never "figured it all out". I didn't eat meat for 29 years, no dairy for 20 years as of June 2025. These are total time amounts, as I switched between vegan and vegetarian in my first 15 years of no meat, before being vegan entirely since 2014; 1-6 months a few times I ate fish, *due to no veganism book with 3000 references existing then, like this one, to quell my doubts*. See my food in the "what I eat" section, the daily food table. See a food table pic, or use the free web version of Microsoft Excel, free Google Sheets or the much better (than Google) free LibreOffice to view my food table. Save as Excel, .ods, Google Sheets, create yours from mine, after changing food columns, formulas to lose weight, keep calories < 600/meal. A 2019 survey found 14% of US college students were vegetarian/vegan, same as Germany. Take vitamins/minerals, since soils are depleted. LibreOffice is as good as Microsfot Office and free. Microsoft is pricey. % vegetarians: 92% Jains, 59% Sikh, 44% Hindu, 20% Buddhist, 3% Christians, 0.1% Muslim.

Research diets via many google/PubMed/youtube searches, from every angle: critics & lovers. A high fat processed vegan diet is as deadly as standard omnivore diets. A healthy vegan diet has:

1). soaked legumes as main source of protein, veggies, minimal fructose due to dementia risk

2). no cookies/bread/bakeries/donuts/gluten, no soda (fructose causes arthritis, as fructose becomes uric acid, the crystals screw all joints), no processed/canned/takeout food (restaurants don't soak legumes/grains, don't avoid toxic oils, don't cook food in water to avoid lethal AGEs), no collagen (heavy metals, denatured animal processed protein), you can eat glycine too.

3). no protein powders (due to them being full of lead and deadly also due to low fiber, toxins formed during heat, acid/base/solvent treatment; proof of lethality is the cloudy urine, gas that comes suddenly only after these powders or amino acids, cloudy/gas that vanish once you stop eating the poison), no unsoaked (meaning deadly) legumes/grains like scam diets with unsoaked

protein powders, legumes causing low calcium/minerals, thus low B12, faster aging than before

4). no 4-7 hrs of sleep: sleep well 8 hrs regular hours, deep sleep 5). no hyperbaric oxygen overuse, it can destroy the body: lung/brain damage, seizures, nearsightedness, *lower IQ*. ☺☺☺

6). no bad air: research/question any tech, since the air we breathe is as critical as the diet we eat, fine particles reach very organ thru the blood: some use a cheap 60$ trash air monitor (see it in a video) that doesn't measure 99% of air particles in the air, is inaccurate for even the 1% it measures, like all Chinese trash under 100$, study air quality sensors: see device google AI says is good, same brand devices give 788 & 16 readings. Monitoring only 1% of air particles, 2.0+ µm won't make an air purifier safe, just like measuring only 1% of relevant biomarkers doesn't make a hyperbaric tech/diet safe. IQAir removes 99.5% of 0.003 µm vs HEPA 0.3 µm. Need ULPA (filters 100 times more bad particles <0.3 micron). Ventilate, so a CO2 meter has CO_2 < 500 ppm.

7). no vegetable oils except flax/chia (eat seeds/walnut, way healthier), to avoid fatty plaque (see pic). Read typical biomarker change when switching to a 3-7% fat calorie whole food healthy vegan diet. Dr. Ornish studies show those with life threatening plaque need 2% fat calories (not even 1 walnut, 1 DHA-EPA pill OK) for 90% removal fast before they die due to coronary artery block (water fast needed). Body fat is a marker for (pic) plaque. Try minimize nuts/seeds, see why: nut clip 1, two, three, four, five, six. Ornish found nuts block plaque removal in some even @ 5% fat cal, studies confirm it with pulse wave velocity studies. Some mice get 114 times more plaque at same fat intake, same for humans. Mom high fat diet = high cholesterol, 12x more plaque in fetus. All nuts, except walnuts, are toxic: they got sky high ω6:3 ratio. Lady had 85% heart blockage, went vegan, got 0% block, 2 min clip. US spends 150 billion/yr in preventable (with a healthy *vegan* diet) bypass surgeries: 150K/person. Vegan CAC score 0, perfect. High fat keto diets increase plaque over 10 years. We need large studies to figure out the best personalized % fat. End angina (coronary blockage) via low fat veganism. We've never seen a ketogenic/90% protein person reaching 100-125. Why risk it? We got 110 year old vegans, 101 nutrition vegetarian professor (takes B12+D), 1922 born vegan (since age 69) runner (Mike goes upstairs 24x daily), Loreen Dinwiddie (1903-2012) vegan for 90 years, died at 109. Video shows all low carb gurus die young. Check artery pics: high fat = infarct, Alzheimer. Please behold the fat…☺. FN 2024;11:1481363 shows healthy (as above) vegan diets extend life vs omnivores, while unhealthy vegan diets shorten life (junk food diets kill fast, even if vegan).

11.4.1. The Survival of Humanity Argument

Veganism reduces greenhouse gas emissions, which is key to preventing ocean acidification. If the ocean is too acidic, plankton dies and with that 50-80% of the oxygen we breathe is gone, making life impossible. Our survival depends also on our kindness. This is explained better in the

first paragraph of section 16.3 about desensitization to violence.

11.4.2. The Hunger and Cow Deaths Argument

Millions of people die of starvation; veganism would provide far more food per acre. Cows kill more US people than wolves, mountain lions, alligators and other animals combined.☺☺☺

11.4.3. The Heart Disease Argument

Vegans have the lowest blood pressure, cholesterol, pulse, rate of heart disease (a reason why many people go vegan, since heart disease is number one killer globally). My LDL is 46, TC 105, TG 65, like this vegan got LDL 50, TC 107, TG 80, HDL 41. The reversing heart disease section presents the vegan vs omnivore cholesterol levels and some dramatic reversals of heart disease thru a low fat, high fiber, fruits-veggies rich vegan diet alone. Ntr 2015;7(9):7285-97 explains the hypothesis that casein A2 (sheep milk, human milk, goat milk) is safer. NJ 2016;15:35 found problems with β casein A1 found in most milk. There was an association between ischemic heart disease and A1 milk ► NNMJ 2003;116(1168):U295. Replacing cheese with many types of vegan fats/foods lowers the risk of heart disease ► AJCN 2016;104(5):1209-17; whole grains replacing cheese lower CHD risk by 34% (Figure 1); this study is in a 4 min video on the health of dairy. To see how deception via science studies can be done by the dairy industry, check this video. ☺☺☺

11.4.4. The Type 2 Diabetes Argument (Type 1 Diabetes is argument 55)

Diabetes can be, like many other diseases, an autoimmune disease, caused by immune cells attacking the body: for example you eat meat and it contains similar molecules as your own body but different, so the immune system attacks those foreign animal organs chemicals, making antibodies for them, then those antibodies recognize some parts in your own body as similar to the bad food chemicals and attacks your own organs, so meat causes autoimmune diseases. Vegans have the lowest A1C, see below. Cold foods, like many *vegans* eat (cooked lentils at room temp or fridge) have lower glycemic index, (hot potato 60% higher glycemic index, 89 vs 56, than room temp cold, JADA 2005;105(4):557-62, possibly double that of fridge cold potato), especially with some vinegar or lemon added. Heavy meat eaters have 73 times the risk of dying from diabetes, while those eating moderate amounts of meat have 23 times the risk of dying from diabetes compared to *vegans*. ► CM 2014;19(3):407-17 ► "Among subjects with no diabetes at baseline those in the high protein group had a 73-fold increase in risk (HR: 73.52; 95% CI: 4.47-1209.7), while those in the moderate protein category had an almost 23-fold increase in the risk of diabetes mortality". How can this be so? APSB 2012;2(4):396-402 found that only long chain (>14), with more carbons than myristic acid $C_{14}H_{28}O_2$, saturated fat is toxic to the insulin producing β cells. An older paper has a nice Figure 1 showing how destructive high fat diets are for blood glucose spikes. The USDA % of C_{15}-C_{24} saturated fat out of total fat is: 35% for

beef fat or 6.92/20g, 35% pork (7.37/20.8g), 30% egg (3.18/10.6g), 44% (14.2/32.6g) cheese, 38% (1.23/3.25g) milk, *9.4*% (6.0/65.2g) walnut, *8.5*% (3.58/42.2g) flaxseed, 21% (2.28/10.9g) olive, 13.6% (4.57/33.5g) coconut, 14.5% (2.12/14.7g) avocado, 16.3% (7.97/49g) pumpkin seed, *10.7*% (3.3/30.7g) chia seed. It's a miracle that the *3 foods (walnut, flax, chia)* with *lowest deadly* C_{15}-C_{24} are also highest in the beneficial ω3, with the healthiest ω3:6 ratio in nature, meaning least diabetes. All other foods, even if vegan, are not that healthy. *Vegans eat the most of the 3*, so they got less diabetes. Cheese, meat are eaten in large amounts vs nuts/seeds by omnivores, so they eat 3-7 times more C_{15}-C_{24} saturated fat and total saturated fat. Saturated *fat/*total fat *%, is 8.7% flaxseed, 9.4% walnut, 10.8% chia, 14.5% avocado, 17.7% pumpkin, 21% olive, 57% (1.86/3.25) milk, 64% cheese, 89% coconut. This leads* to 73 times higher diabetes mortality for heavy meat eaters, 23 times higher for moderate meat eaters. Dr. Allen explains saturated fat, dairy, meat can destroy our eyes. More fat in the brain means more Alzheimer, decline.☺☺ JLR 2013;54(12):3322-33 says C_{14} play a "*causative role in insulin resistance and risk of diabetes*". So, when buying vitamin supplements, choose (Amazon has 100s for each) ones with calcium laureate, $(CH_3(CH_2)_{10}\text{-}COO)_2Ca$, C_{12}, not magnesium stearate, $(CH_3(CH_2)_{16}COO)_2Mg$, C_{18}.

A 50,000 people study found that *vegans have* 4 times less diabetes than meat eaters and 2 times less than vegetarians ► NMCD 2013;23(4):292-9. *It's perhaps clear why. Vegans eat a lot more ω3, fiber, and far less saturated fat.* Cases of diabetes developed in 0.54% of *vegans*, 1.08% of lacto ovo vegetarians, 1.29% of pesco vegetarians, 0.92% of semi-vegetarians and 2.12% of non-vegetarians. To measure glucose at home for years with a $28 kit, people can go to the Walmart pharmacy section. The picture at immortals...pdf shows a $9 glucose meter, a $4 lancing device, a lancet (1 cent each if you buy 200), test strip (50 for $9), all supplies cost about 28. These can be used to measure the glucose 1 hour after eating (healthy is below 140), 2 hour after eating (healthy is below 120) and in between meals (anywhere between 70-100 is perfect, but can also be between 100-120 too). Fasting blood glucose is ideally 70-90, but being between 90-100 is OK. You can test your levels 1 hour after eating different foods and determine which among the foods you eat give you the best level, conducive to 110 year lifespan (centenarians have lower than average blood glucose). What is really shocking is that even those who eat 30 times less meat than a "moderate American meat eater"- such as the omnivore Taiwanese, are 2-4 times more likely to have diabetes than Taiwanese vegetarians ► "The crude prevalence of diabetes in vegetarians versus omnivores is 0.6% versus 2.3% in pre-menopausal women, 2.8% versus 10% in menopausal women, and 4.3% versus 8.1% in men." ► PO 9(2):e88547. While maintaining their weight, after 16 days on a vegan diet, former meat-dairy eaters got off insulin and dramatically lowered their cholesterol ► AJCN 1979;32(11):2312-21. The more meat breastfeeding moms ate, the more type 1 diabetes in their kids. Similar associations were found in other studies ► AD 2015;52(4):763-72. A meat burger spiked insulin more than 4 times

compared to carbohydrate rich oatmeal as explained in this video and AJCN 1997;66(5):1264-76. Insulin concentration was 4.96 in vegetarians and 7.32 in omnivores, insulin resistance was 0.99 in vegetarians and 1.59 in omnivores ► EJN 2006;45(1):52-4. ☺☺☺

Vegetarians had lower fasting insulin 35.3 v. 50.6 pmol/l, and lower insulin resistance 1.1 vs 1.56 ► BJN 2006;95(1):129-35. Vegetarians were more insulin sensitive than the omnivores. The degree of insulin sensitivity was correlated with years on a vegetarian diet. Steady state plasma glucose was 105 for omnivores, 80 for vegetarians; fasting insulin, 4.1 omnivores vs 3.0 µU/ml for vegetarians, Insulin Resistance was 6.8 omnivore vs 4.8 vegetarian ► EJCN 2004;58(2):312-6. Most people eat a lot of ω6 when eating meats (meat is fed corn and soy which have a lot of ω6) or ω6 rich oils in French fries or potato chips, and "an unbalanced ω6:3 ratio... contributes to the prevalence of atherosclerosis, obesity, and diabetes". Harvard found that *women eating the most* animal fat were 88% *more* likely to develop pregnancy diabetes ► AJCN 2012;95(2):446. "Frequent consumption of processed meat was associated with a higher risk for type 2 diabetes" ► DC 2002;25(3):417-24. *Vegans* have lower A1C (reflects average blood glucose) than meat eaters, and thus less brain shrinkage than meat eaters. Diabetes, prediabetes and even just higher average glucose than other non-diabetics, shrinks the brain faster, sometimes twice as fast ► Neu 2005;64(10):1704-11, picture at a1c.pdf. A1C or HbA1 is glycated hemoglobin, an indicator of the previous 3 months average blood glucose. On August 17, 2017, I did my first A1C level test (with the Amazon kit) for the glycated hemoglobin and I got 4.7%. The average blood glucose can be computed from the A1C level with the formula Glucose = 31.7*A1C-66.1 = 31.7*4.7-66.1 = 82.9 mg/dL. This is according to the literature very healthy. To test your A1C, you can buy the Amazon kit. This kit matched very well the blood test on August 21, 4.6% for the kit a second time and 4.6% in the blood test. I did it again in December 2017 and it was 4.6, and in April 2018 it was 5.0%, as I ate lots of fruits over the previous 3 months. In May 2018 it moved to 4.9%, in June 2018 it moved to 4.7% as I stopped eating after 5 pm, with first meal at 8-10 AM, only 2-3 meals a day. August 2018 moved to 4.6%. I did eat after 5 pm rarely, but usually not after 8 pm previous 3 months.☺ On August 5 2024, it was 4.8, I used the Walgreens test kit (same tech), 50$, not 72$ as Amazon. The interesting thing is the prior to Aug 5th, previous 2 years, I ate 2 lb of blueberries/day and 4-6 lb/day watermelon, which is high glycemic index. The lentils eaten at almost every meal however, are known to lower the sugar rise. This shows how fake the ideas are, since one guy ate 20 bananas daily for years and his A1C was low. If you eat a vegan diet A1C is low, even if you eat 2 lb blueberries and a 6 lb watermelon daily. If you're omnivore, the animal fat will cause a huge spike in A1C after that much watermelon, as animal fat, AGEs cause insulin resistance. ☺☺☺

A study of 10,232 people between 45 and 79 years old found that over 8 years, 72% of deaths were of nondiabetics with A1C levels between 5 and 6.9%. The higher the blood glucose the

more brain damage and the higher the risk of early death. A 1% rise in A1C above 5% meant a 24% rise in death risk for men and 28% for women. A1C below 5% meant the lowest risk of heart disease. ► AIM 2004;141(6):413-20 (free pdf download on researchgate.net). Another study found that in nondiabetics with A1C above 4.6%, a simple 1% rise in A1C to 5.6% increased the risk of heart disease by 2.4 times ► AIM 2005;165(16):1910-6. There are many studies on A1C and mortality. DC 2015;38(2):249-56 found that for diabetics the lowest mortality is at A1C 5.4-5.6% (36-38 mmol/mol) and a significantly increased risk exists at ≤5.0% (≤31 mmol/mol) and ≥6.4% (≥46 mmol/mol). For nondiabetics however, the A1C was not related to mortality. A 14,099 people 12 year study, CCQO 2010;3(6):661-7, found that for nondiabetic omnivores (not vegans) mortality was lowest for A1C 5.0-5.4%, the 2nd lowest was for 4.5-4.9% (about 10-15% higher mortality than the best 5.0-5.4% range) ► An A1C < 4.0% versus 5.0-5.4% was associated with 3.7 times higher risk of all-cause mortality after adjusting for age, sex and race, and 2.9 times higher risk after adjusting for lifestyle, cardiovascular factors, metabolic factors, red blood cell indices, etc. *A person may have different genes and diet than study participants; thus,* their ideal A1C to live to 150 may be different than the one found in this or that study for other people. Undiagnosed diabetics with A1C > 6.5% had a 1.3 times greater mortality compared with participants without diabetes and A1C 5.0-5.6% ► DC 2017;40(4):453-60. A1C > 8.6% was associated with a 4-fold increase in mortality; each 1% increase in A1C meant a 40% rise in mortality ► J TCS 2008;136(3):631-40. The healthiest A1C for certain fit nondiabetics may be, according to some, 4.2-4.6%, which means average glucose in the 70-85 range. For others, it may be around 5%. Very few people have this of course. Even 5.5 is way better than 6.4. There are exceptions to every rule. There are many markers for health, and sometimes due to some errors and diets, the A1C doesn't reflect true average glucose. With iodine supplements or hypothyroidism, A1C can come out higher. The glucose level is not everything, that's why people can make it to 110 years old many times even if one of two of their markers seems way off, we simply measure very few markers today that really matter for 120 year lifespan. NEJM 2001;344(18):1343-50 found that those who implemented 5 lifestyle changes did not get any diabetes, while those who took metformin (a drug many believe prevents diabetes) got diabetes. Metformin may shorten lifespan in those without diabetes. The lifestyle changes relate to the changes happening when you go vegan: less fat, less cholesterol, more fiber, etc. Glycemic load is how much a food raises glucose levels; it needs be ≤ 250/day. In 100 g we get: Jalapeno 3 g of sugars (sugars 3), 6 g total carbs (carbs 6), glycemic load 2 (load 2), red/green hot pepper sugars 5 carbs 9 load 4, watermelon sugars 6 carbs 8 load 2, ginger sugars 2 carbs 18 load 7, onions sugars 4 carbs 9 load 3, garlic sugars 1 carbs 33 load 16, carrots sugars 5 carbs 10 load 3, kale sugars 0 carbs 10 load 4, spinach sugars 0 carbs 4 load 1, broccoli sugars 2 carbs 7 load 3, apples sugars 10 carbs 14 load 3, bananas sugars 12 carbs 23 load 8, tomato sugars 3 carbs 4 load 1, lentils sugars 2 carbs 20 load 7, grapefruit sugars 7 carbs 11 load 3.☺☺☺

11.4.5. The Obesity Argument (to lose weight, sleep well and water fast)

JAND 2013;113(12):1610-19 study of 72,000 people found that *vegans* were the only group with a healthy (below 25) average BMI (24), body-mass index, being the thinnest group of all, omnivores BMI was 28.7. Nobody who lived past *110 was* overweight. DC 2009;32(5):791-6 study of 61,903 people found similar results: *vegans* 23.6, vegetarian 25.7, pesco-vegetarian 26.3, omnivore 28.8. FE 2014;5:121 found that while in the general population, in America, 69% are overweight, among people 98 years or older, only 25% are overweight; while 2% of people are underweight in America, 31% of those above 98 years old were underweight. A vegan marathon runner with *Masters* in physics explains on youtube the *vegan* BMI well. Those who were overweight and older than 98 were also having higher blood pressure, more diabetes. A 800 person Chinese study of people 90 years or older found that 44% were underweight and 7% were obese. A study found that among 255 people in Portugal with median age of 100 years, 25% were underweight, 13% were overweight. This Table from a review of many studies shows obesity is absent among most centenarians. They studied 124 Japanese and 40 disease-free Italian centenarian males. 80% of Italian male centenarians were normal weight, 20% underweight, 0% overweight or obese. 58% of Japanese centenarian males were underweight, 33% normal weight and 9% overweight, 0% obese. Among the 41 disease-free women Italian centenarians, only 2% were overweight, 83% normal weight, 15% underweight, 0% obese. Out of 343 Japanese female centenarians, 64% were underweight, 32% normal weight, 4% overweight, 0% obese. FE 2017;8:164 found that in non-human primates, *a* high fat diet during pregnancy *affects the* mental health, anxiety, depression *of offspring*. So, a low fat diet may also increase IQ and EQ when compared to the standard diet. 64% of US women of reproductive age are overweight. ☺ Please go to the fasting section to read how to maintain ideal fat/muscle ratio. Poop from centenarian men given to mice led to mice living longer, aging slower than mice fed 70 yr old poop. Poop from overweight daughter given to skinny mom led to mom becoming obese after gaining 40 lb. Mice who're fewer calories became fatter once given the wrong poop. Vegan microbiome is different: obese people poop can cause lean ones to become obese too, it only takes a tiny capsule mixed with sugar. NJ 2019;18:45 found inflammatory macrophages in body fat were much higher in omnivores. Studies suggest carotenoids and polyphenols prevent angiogenesis and this prevents obesity. Fat cells are the most vascularized, so to lose weight, eating plants helps as they got polyphenols. Vegans got 30 times more genistein in their blood, due to eating soy products and it's at a blood concentration that inhibits angiogenesis (thus red eyes), preventing cancer, obesity, etc. You don't need to eat soy to get the benefits, 20+ other polyphenols have even stronger effects. 3 hydroxyflavone (papaya, raspberries) was 11 times more efficient than genistein isoflavone at preventing angiogenesis. Don't overeat papaya as it can damage stomach due to papain, a strong proteolytic enzyme. Dry parsley got 45mg

apigenin/g, dry chamomile 4 mg/g; apigenin inhibits angiogenesis *1.7x* more than genistein and also helps eyesight (chamomile is in many eyedrops), sleep, lowers blood pressure. ***Chamomile/parsley teas are the top*** apigenin ***sources.*** However, the fructans and polyphenols in chamomile can cause too much gas and stomach cramps to be comfortable. Fisetin in strawberry is almost twice as good as genistein. Broccoli, carrots, peppers got luteolin, which inhibits well. 1 mg luteolin/100 g red pepper is a good inhibitor, since red pepper cryptoxanthin also inhibits. Carrots got 1.5 mg apigenin & 0.3 mg luteolin/100g. Broccoli about 1.2 mg luteolin/100g. Because fisetin/others are low in foods, chamomile tea is a better choice for antiangiogenesis for belly fat 'carriers', because it has no calories. *Without* the lethal caffeine, *it is the ideal tea.* How to reduce calorie intake: video one (global obesity epidemic), two, three; the 3 videos explain the link between GLP-1 & Ozempic/weight loss drugs.

11.4.6. The Alzheimer, Dementia and Lithium Argument

Vegans are 2-3 times less likely to get dementia and Alzheimer compared to meat eaters ► NEP 1993;12(1):28-36 ► "The matched subjects who ate meat (including poultry and fish) were more than twice as likely to become demented as their vegetarian counterparts (relative risk 2.18, p = 0.065) and the discrepancy was further widened (relative risk 2.99, p = 0.048) when past meat consumption was taken into account." This may be because vegans eat 10 times more lithium than omnivores and 3 times more antioxidants. "Recent findings that elderly African-Americans and Japanese living in the United States have much higher prevalence of Alzheimer's disease (6.24% and 4.1%, respectively) than those still living in their ethnic homelands (<2%) suggested that environmental rather than genetic factors are the primary agents causing Alzheimer's disease. Recent papers linking clinical expression of Alzheimer's disease to oxidative stress and cerebral infarct suggest that diet is a key factor in the development of Alzheimer's disease. To test this hypothesis, regression analyses were performed on the prevalence of Alzheimer's disease in the 65+ age population for 11 countries obtained from 18 community-wide studies versus components of the national diets. The primary findings are that fat and total caloric supply have the highest correlations with Alzheimer's disease prevalence rates." ► Alz Dis Rev 1997;2:42-55. Kindly watch a 72 minute biochemical explanation of Alzheimer via stress killing neurons that hold memories. High cholesterol, diabetes, obesity and hypertension, which are far more common in non-*vegans*, are 4 major risk factors in developing dementia and Alzheimer. Due to high fat, cholesterol in cheese, sour cream, milk, *vegans* have lower risk of dementia and Alzheimer than vegetarians. Vegans have lower blood pressure than any other group due to intake of more fiber/potassium, less sodium. Vegans have lowest diabetes and obesity rates. "Increased intake of vegetables is associated with a lower risk of dementia and slower rates of cognitive decline in older age" ► JNHA 2012;16(7):626-30. Trans fats, present in meat/dairy only, are linked to poor memory: trans fats help clog the brain blood (nutrient) supply and brain

toxin release via the blood (see pic of fatty blocked demented patients carotids). ☺☺☺

11.4.7. The Osteoporosis and 10 times lower fracture rate argument

Fig 1 shows countries with highest milk consumption have 5-10 times the fracture rate of low dairy countries; see more Figures at OI 2012;23(9):2239-56 ► Tunisia (1.9%), Ecuador (2.5%), Philippines (4.8%), China (5.4%), Denmark (23%), Sweden (21%), Norway (19%) and Switzerland (18%). AJPH 1997;87(6):992-7 followed 77,761 women for 12 years and showed drinking more milk daily was linked to 45% more hip fractures, the more milk the more fractures. More on osteoporosis due to highly acidic foods is presented in the argument 26. The Physicians Committee for Responsible Medicine, led by MD Neal Barnard, explains why dairy is bad. Neal offers more tips for preventing osteoporosis with a vegan diet. All vegan milks on the market are fortified so they have the same calcium as cow milk.

11.4.8. The Environmental Argument

John Robbins "Diet for a New America" states "% of U.S. topsoil lost to date: 75, % of U.S. topsoil loss directly related to livestock raising: 85, # of acres of U.S. forest cleared for cropland to produce meat-centered diet: 260 million, Current rate of species extinction due to destruction of tropical rainforests for meat grazing and other uses: 1,000 per year". A CNN article explains "Food and Agriculture Organization of the UN indicated the contribution of the livestock sector to global greenhouse gas emissions exceeds that of transportation. Emissions from the production of beef and lamb are 250 times higher than those from legumes, per gram of protein, and pork and poultry are 40 times higher than legumes. A large amount of methane and nitrous oxide, gases that are more than 20 times and 250 times more powerful than carbon dioxide as a greenhouse gas, are generated through livestock-raising activities." A forest area the size of Italy was destroyed in 2017 for soy and corn fed to cows. At current rates of deforestation, rainforests will vanish altogether in a century. No oxygen to breathe? Ocean acidification will wipe out ocean plankton, and we will have no oxygen to breathe then? ☺☺

11.4.9. The Cancer Argument

Latinas eating 10 g processed meat and Caucasians eating 10 g tuna have 42% and 25% higher breast cancer risk than women eating 0 g ► CCC 2016;27(4):527-43. Vegan blood, rich in anti-oxidants and phytonutrients from veggies and fruits, inhibits the growth of prostate cancer cells *8 times* more than normal omnivore blood ► JU 2005;174(3):1065-70. The study author, Dr. Ornish, reversed heart disease with a low fat vegan diet. US had 14,000 prostate cancer deaths in 1958, Japan, with half the population, had 18, or 390 times less per capita. The difference was the Japanese diet back then had almost no meat and no dairy. Those reducing saturated fat intake inhibited CD36 cells and had a higher cancer survival; it turns out palmitic acid, 55% of fat

in meat and dairy, versus 6.8% in walnuts, boosts CD36 cells 50 fold (fig 2, image A, 12 hours, 50 fold CD36 mRNA expression) and helps cancer to spread thruout the body; low fat dairy/meat is safer; veganism is even safer, as long as we don't eat junk food with palm oil added to it; 25.4% of cocoa butter fat (chocolate component) and 27% of cocoa powder fat (cocoa powder is 70% of some brain heart shifting chocolates) is palmitic acid; olive oil contains 11% too, 16:00 in the fat table, though some cultivars can reach 20%. Saturated fat boosted cancer death by 51% ► CRFSN 2017;57(10):1999-2008. Those eating *milk protein powder* got 6 TIMES MORE PROSTATE CANCER than those eating *soy protein powder* ► NC 2008;60(1):7-13. As the Koreans ate *8.5 times more animal protein*, their prostate cancer death rates went really high, as you can read in the "Results" section of the abstract at ► Pros 2006;66(12):1285-91, where it says "Prostate cancer mortality increased *12.7-fold over* a 20-year period" or in this video. Studies show that *vegans* have the lowest rates of prostate cancer due to eating foods known to decrease risk such as tomatoes, broccoli, unfermented soy, etc and avoiding foods that increase risk such as meat and dairy. The higher the intake of dairy, the higher the prostate cancer rate. See also the dairy and cancer review of studies at AJCN 2015;101(1):87-117. When people gave up meat, dairy and processed foods and embraced a raw vegan diet, they cured all kinds of cancers, including colon. People who switched from a high meat/fat diet to a low meat/fat (almost vegetarian) diet decreased hydroxyl radicals (free radicals cause colorectal cancer, among other cancers) in their colon *13* times within *12* days of the new diet. Imagine, if they would have gone vegan it would have been even better ► JN 1997;127(5):706-9. According to Harvard researchers, when dairy intake exceeds the enzymes' capacity to break down galactose, it can build up in the blood and damage the ovaries. Women with low levels of these enzymes have triple the risk of *ovarian cancer* when they consume dairy ► Lancet 1989;2(8654):66-71. The World Health Organization has ruled that bacon, sausages, hot dogs cause cancer, while beef, pork, veal and lamb are "probably carcinogenic". *John Robbins "Diet for a New America" states:* "Increased risk of breast cancer: *for* women who eat meat daily compared to less than once a week: 3.8 times; *for* women who eat eggs daily compared to once a week: 2.8 times (even 1 egg can be bad); *for* women who eat butter and cheese 2-4 times a week: 3.25 times; Increased risk of fatal ovarian cancer for women who eat eggs 3 or more times a week vs. less than once a week: 3 times; Increased risk of fatal prostate cancer for men who consume meat, cheese, eggs and milk daily vs. sparingly or not at all: 3.6 times." Forbes explains in Britain, in 2009, salmonella poisonings were 25 times lower than in 1997, due to the vaccination of 90% of hens against salmonella. In 2009 US vaccinated only 33% of egg hens, so salmonella poisoning rates are higher in USA. To prevent issues, one can avoid eggs from farms that don't vaccinate hens, it costs only 1 cent per dozen eggs max today. Call to find out. A 2021 long article on salmonella has updates – seems like not much has changed since 2009. Eat eggs and meat and die of salmonella in 1 week, not cancer in 15 years. Salmonella causes more than 1 million illnesses a year, about as often in 2020 as in

2000. Cornell Professor Colin Campbell has shown that tumor growth in rats was greatly enhanced by diets containing >10% animal protein (casein, 87% of the milk protein is casein) and was *completely repressed with either 5% animal protein or >20% plant protein* at ANY STAGE OF TUMOR DEVELOPMENT ► AJCN 2007;85(6):1667. CARCINOGENIC "Heterocyclic amines (HCAs) and polycyclic aromatic hydrocarbons (PAHs) are chemicals formed when muscle meat, including beef, pork, fish, or poultry, is cooked using high-temperature methods, such as pan frying or grilling directly over an open flame". Stomach cancer is caused by H pylori, and vegans (cruciferous vegies) can reduce the cancer risk from pylori infection.

11.4.10. The Waste Argument

Animal agriculture produces millions of pounds of waste daily in America. A 2,500 dairy cow farm produces more poop than the city of Minneapolis (0.4 million people). This has to be gotten rid of. It can be infected with mad cow disease at times, swine flu, bird flu perhaps if not beef. Fecal matter from dairy farms is starting to destroy our drinking water supplies and it has already been causing huge dead zones from the Chesapeake Bay to the Gulf of Mexico.

11.4.11. The Cholesterol Argument (especially oxidized cholesterol, up to 100 times worse)

John Robbins "Diet for a New America" states:

"Number of U.S. medical schools: 125; Number requiring a course in nutrition: 30

Nutrition training received by average U.S. physician in 4 years *in medical school:* 2.5 hours

Most common cause of death in the U.S. (and worldwide): *heart attack;* (the attack risk):

Risk of avg U.S. man who eats no meat, dairy or eggs: 4% (50% omnivores, 15% vegetarians)

Amount you reduce risk of heart attack if you cut meat, dairy and eggs by 10%: 9%

Amount you reduce risk if you eliminate meat, dairy and eggs from your diet: 90%" ☺☺☺

Eggs can almost *double* cholesterol for *vegans* over a few days, and *quadruple* heart attack risk. Want to remain vegetarian after watching this video? Doubling dietary cholesterol intake from under 966 mg/wk (138 mg/day) to above 1,881/wk meant 20-71% higher chance of a *dozen* cancers ► Table 3 of AO 2012;23(2):491-500. Mouse dads who eat high cholesterol diets (*vegans* eat 0), pass heart disease to their daughters, causing a 2.5 increase in arterial plaque. Human moms who eat high cholesterol diets cause fetal aorta to have 12 times higher arterial plaque (that means before the baby is even born), and plaque is the start of heart disease. Dads also need to eat healthy, not just moms, to sleep well, etc. The illusion is only pregnant moms need to be very careful with what junk they eat or don't eat. Keto diet fanatic ate only cheese, butter

and meat and developed yellow hands full of cholesterol. High cholesterol leads to bumps around eyes, face, elbow, sole of feet and many other areas.

11.4.12. The Natural Resources Argument

"Diet for a New America" by John Robbins states: "Gallons of water needed to produce a pound of wheat: 25; Gallons of water needed to produce a pound of California beef: 5,000; 33% of all raw materials (base products of farming, forestry and mining, including fossil fuels) consumed by U.S. is devoted to the production of livestock; 2% of all raw materials consumed by the U.S. needed to produce a complete vegetarian diet"

11.4.13. The Toxic Chemicals Argument (meat, dairy got dry eye causing histamine)

Meat is rich in bacteria that produce endotoxins which then make us smell when we eat cooked meat. Cooking kills bacteria, but endotoxins remain. Studies found women perceive vegan men smell nicer and are more attractive, since the smell of sweat, etc, body odor is softer. So, when women like you, you're also happier, since meat eaters are also much more likely to smell like sulfur (halitosis) doe to meat protein having 3 times more sulfur. Drink water or sing a World Peace song, as this will cause bad breath to disappear too AOB 2011;56(1):29-34 (page 31). The rotten egg smell of the mouth, plus the stinky underarms, etc will turn off ladies and men alike, so people won't like talking to you. Go vegan and make more friends. Vitamins, foods, makeup, shampoo, shaving cream, deodorants, soap, etc that don't have the Vegan label, even though they cost the same, can have 5-20 times more harmful aluminum, triclosan, triethanolamine, petrolatum/mineral oil carcinogenic PAHs, artificial colors. Most vegan label products say "Fluoride Free, aluminum free, paraben Free, petroleum Glycols free". When you shop at a health food/vegan store for Vegan label, you get healthier stuff, because Vegan companies are health conscious, aware of stuff FDA will ban in 20 years, as *vegans* are the activists that often drive these chemical bans. Among Vegan label products, look for those that have the least chemicals or if any man made, google it to make sure it's not something bad. When you buy Vegan label products, you move the planet towards World Peace and Compassion and save your health too. You no longer put so many toxins in your system. ☺☺☺

11.4.14. The Antibiotic, Infections, Immunity, COVID19 Argument

Animals are fed 80% of antibiotics in America, meaning they ingest huge amounts of antibiotics leading to antibiotic resistance in omnivores, vegetarians, weaker immune system, as the video explains. They ingest hormones banned in the EU. Vegans eat no antibiotics. Many studies show a plant based healthy diet (not processed vegan junk), full of polyphenols, fiber, legumes, etc can lower the risk of COVID19 infection or hospitalization and other infections 2-3 times. "those who reported being on a plant-based diet had a 73% lower risk of moderate-to-severe

COVID-19" ► AJLM 2023;17(1):161-3. High fruit, veggies, nut intake led to 86% fewer COVID19 infections, while daily exercise to only 15% reduction vs sedentary, extra hour of sleep 12% lower, ω3 vegan pills 16%, vitamin D 15%, normal weight 63% (*vegans* are the folks with the highest normal weight%), multivitamins 17%. You always hear the physical education terrorist teachers telling us to exert, be macho, etc, but good diet helps you live to 4000, like queen bees who live 40 times longer. People need to think, *the* Education Department *needs a* total reform. All media tells us is to vaccinate, play basketball and shout like chimps at rugby, baseball games. It's a waste for *all nations* to spend so much money to even have physical education teachers, while ironically, we have no Immortality Teacher, teaching us nutrition, physics of longevity, etc.

11.4.15. The Pesticide Argument

A cow eats 21 times its weight of corn/soy before slaughter, loaded with pesticides, etc that are found in the cow feed (mostly GMO corn and soy). The meat accumulates some pesticides absent in non-GMO lentils, beans, etc, which usually use 3-10 times less pesticides than GMO corn or soy, engineered to be glyphosate resistant; GMO cotton can have 15 times more glyphosate than non-GMO. John Robbins "Diet for a New America" states: "Contamination of breastmilk, due to chlorinated hydrocarbon pesticides in animal products, found in meat-eating mothers vs. non-meat eating mothers: 35 times higher". See also the pesticide section. Omnivores eat ***50 times more dioxins than vegans and this causes*** cancer.

11.4.16. The Ethical Argument

The occupation with highest rate of turnover and on-the-job-injury in the US is slaughterhouse worker, as you can see from the videos in this long paragraph. It's not *boundless* compassion to force people to work there and have telepathy diffusion go out and bring lower vibes in the world. Meat eating leads to real biochemical changes many people have never thought much about that could weaken our health, shorten lifespan or even end our species. If all were vegan we would be able to feed many more people, eliminating malnutrition and enabling more science discoveries due to more scientists around, leading to less suffering in the world, more limitless or infinite compassion. We live 50 times longer than mice; humans can exist without entire mice civilizations having a clue humans exist, let alone a clue that humans have thermonukes that can wipe out 1 million mice civilizations in 10 seconds. Likewise, there could be other lifeforms in this or other dimensions that we don't see (like mice often times don't see humans), who can do mind blowing things, wipe out all human civilizations in a galaxy. Do those lifeforms think that because we live 50 or more times shorter than then that we're soulless pieces of meat that are to be grinded by the billions in factory farms on assembly lines, like humans grind male baby chicks in egg farms? If God or aliens who created this universe exist, then obviously, souls might exist in animals too. God or aliens who create *universes* or souls can

know the nature of souls far better by hiding perfectly their existence, watching what we do in the absence of strong scientific proof animals (or people for the atheists who don't believe in the alien hypothesis or God hypothesis) have souls. ☺☺ The difference between a bee and a human may be much smaller than the difference between a human and some trillion year old Immortal creating galaxies, and we're not even talking about God, the Oldest Immortal, quadrillions to the power of quadrillion repeated a quadrillion times older. We want God and Immortals to help us, have mercy on us, but do we help animals? One can see why, as ethics advances, all humans will quit even veganism and be eterni. Some often make fun of *vegans* by labeling them "out of touch "religious" zealots", but veganism could be seen as a spiritual practice of universal altruistic loving kindness. When humans do certain spiritual practices or even religious rituals or prayers, they do it at times to get favors from God, asking for something, which is selfish, while in veganism for the sake of animals, ☺☺☺ people do it to alleviate the pain of lower helpless lifeforms, which is selfless. Humans build temples, churches, places of worship made of stone or various materials that last a long time (millennia perhaps) and might help other souls to develop some level of boundless *or infinite compassion* indirectly upon hearing or seeing a vegan pastor live that compassion; but when humans are vegan out of compassion for animals, they build a temple or soul pattern of boundless or infinite compassion directly in their own soul that may last trillions of years or Eternity? When we memorize proven or unproven beliefs, we build some memory banks, that we forget, and are useless in the future planets, dimensions, ages, but when we develop questioning everything habits, or hypothesis formulation and testing thinking, we build an "eternally lasting" temple or soul habit of "always questioning everything" inside our souls that brings science innovations that reduce suffering of lifeforms, thus enabling souls to develop more boundless compassion.

Are the positive effects of universal kindness cultivated in many places of worship diminished by nearby slaughterhouses? An animal inflicts pain on many plants to be raised, so eating meat causes more pain the world. Thus, we can argue that veganism helps us to get in touch with universal kindness more. It's easy to be kind to people, since we get benefits from that (people reciprocate), but true character is revealed to God more, perhaps, when we help beings we get no benefits from (just like everyone wants to be kind to rich people, but fewer to helpless homeless people). Veganism is like a spiritual path that makes everyone kinder, sweeter, further removed from bad, mean or cruel behaviors, or even tones of speech. When it is inconceivable to mistreat an animal, it is far more so to mistreat a human. That is why veganism is embraced by World Peace fans many times. When cities in developing countries have a program to get rid of stray dogs or mice because they're in huge numbers and go to restaurants, near people, harass them, etc, many times it is the locals who love a compassionate dog or mouse who adopt that dog or mouse and save its life, solely due to the compassion shown by the mouse or dog

(some people have mice as pets). Likewise, if higher lifeforms exist, the most compassionate humanoid civilizations will be saved in a similar circumstance, as "heaven arms with compassion those it would not see destroyed" Tao Te Ching quote. We thought Earth is the center of the universe, but we may not be the center of lifeforms or highest lifeform wither, so one can see how God could inspire an alien to spare humans if God loves our boundless compassion.

11.4.17. The Survival Argument

Athlete who won Ironman Triathlon 6 times was vegetarian Dave Scott. Vegans had higher maximal oxygen uptake (VO_2) & endurance (lasted 25% longer) ► EJCN 2020;74(11): 1550-5. Higher oxygen use (aerobic capacity) was confirmed by Ntr 2016;8(11):726. ☺☺☺

11.4.18. The Fear-Stress Hormones/Vibrations Argument

Milk has real estrogens, not phytoestrogens like soymilk, and this causes a rise in DHT, dihydro testosterone that brings acne, prostate and breast cancer, and atherosclerosis. So, dairy gives you PLAQUE, ACNE, STROKE, HEART ATTACK. Additionally, when animals suffer for seconds or minutes during the sudden slaughter death, they release stress-fear hormones that age and sicken us and affect our mood (see Chapter 16.3 end for many studies on moods being happier, depression lower in those eating more fruits and veggies). The term fight and flight was coined by a professor who injected happy animals with the blood of frightened animals and noticed the calm animals became frightened too, so when humans eat meat, with all the blood in the capillaries that is never drained (meat is actually beige in color when you remove the blood completely), they get some of those chemicals in their stomach and depending on what happens during digestion, some physical component is there inducing human into a high cortisol response, which is known in hundreds of studies, meat eaters have higher cortisol levels. Not only the animal known matter components carry that signature of all the horror the animals went thru all their lives and also in the last 24 hours of their life, but there is obviously another matter that we feel when we go to a place where a huge number of animals or people have been slaughtered, the energy is there and some stomach hydrochloric acid won't change the energy present, the alter-matter that holds so to speak this matter or is bound to it. Fear hormones, and related chemical structures adapted to high stress (as well as astral vibrations) that contaminate their flesh also prompt us into human-human conflict more often, as we're infected with the horrific feelings these animals experienced at slaughter and before, when crowded in tiny places 10,000 chickens at once, always stepping on each other, pecking at each other (they're debeaked without anesthesia), stressed out, that stuff truly changes things as explained at the link a few lines above; we and animals share a lot of hormonal pathways, as neuroscience shows. Gandhi, Tesla, Edison, Einstein, Newton, DaVinci were vegetarian for part of their lives.

11.4.19. The Amazon and other Key Forests Argument

Rainfall and preventing desertification is achieved thru a complex hydrologic cycle that involves forests. If we wipe out all forests, we're in big trouble, since forests generate 20-50% of the oxygen we breathe and ensure we get rain. Beef uses 160 times more land and 200 times more water per calorie than wheat, lentils, beans, potatoes do. One study found that beef requires 28 times more land and 11 times more water than chicken and pork. If people go vegan or just without beef, they help save lots of water and forests.

11.4.20. ESP-Telepathy Argument

It has been noticed that telepathy and other ESP functions become enhanced when meat is given up as explained at the end of Chapter 16. In empathy we assess others' moods, so naturally if our moods are happier, it will lead to a different reading of others' moods. ☺☺☺

11.4.21. Space Exploration and Living to 900 Argument

How can astronauts go in space and raise cattle on their spaceship to get to Alpha Centauri? The nice thing about veganism is that with vertical urban farms, people can get local food (fresh, picked up 2 hours before, thus very rich in biophotons) easily in any area and Earth can thus feed 50 billion *vegans* easily. Going off-planet or advancing living to 900 science is easier when there are more scientists working on space travel, terraforming planets, molecular simulations for living to 900, creating perfect weather to eliminate natural disasters deaths, etc.

11.4.22. The Longevity Argument

Bama centenarians eat a low fat low sugar vegan diet of corn, sweet potatoes, beans, gourds, herbs, leaves, vegetables and hemp. They don't need "vitamins, vaccines, flu shots, hospitals, wine, coffee, supplements, beer, meat and dairy" to live to 110. There is no hospital in their village. Nobody almost gets sick. Vegetarian Marie Louise Meilleur (2 min video of her) lived 117 years and 230 days, had 12 kids ► vegetarianfuture.com/page31.html. Today, some “don’t want to have kids because they will age faster”, and they die childless at 75, as alcoholic bitches. In 1997, she had 300 descendants spread over 6 generations. She died in 1998 ► Wikipedia. Margie Mackett (1 min video) is a 100 year old vegetarian who believes her diet helped her reach 100 in such a good shape. Vegan (1912-1948 vegetarian, 1948-2015 vegan) Mabel Cluer lived to be 103 and 11 months. Teresa Hsu was a vegetarian who lived to 113, she gave a talk on TED, see her Wikipedia. Vegetarian Hap Fisher (200 articles, 72 patents, PhD) was a World Peace lover centenarian. Vegetarian Olive Watson lived to be 106. Vegan Ellsworth Wareham (born 1914) did surgeries until 95. Vegetarian Christian Mortensen reached 115 and 8 months (he says to live long, drink lots of good water and avoid alcohol). Vegetarians and *vegans* were shown to

live 7-12 years longer than non-vegetarians. The Longest living people in North America are the vegetarian and vegan Adventists in Loma Linda, who reach 105-110 often. Most centenarians are 95-100% vegan. Japanese Okinawa Centenarians are 96% Vegan. Chinese Yimeng Mountains Centenarians are 95% Vegan. Vegan Loreen Dinwiddie can be seen in a 33 second video of her 108th birthday. Fauja Singh (1 min clip) (reached 107 in 2018) did a 26 mile marathon at age 100. He attributed his perfect physical shape to his vegetarian diet, avoiding smoking and alcohol, drinking water and tea with ginger, being active. See also this 19 min clip on vegan centenarians.

11.4.23. The Flu and other Diseases Argument

Without incredibly toxic and filthy factory farms, there will be no frequent epidemics of swine flu, bird flu, mad cow disease. See also the natural antivirals (found in plants only) section. SARS, COVID-19 etc may have originated in wet markets where live animals from dozens of species are crowded in urine, feces. There could be unknown pathogens in wet markets, shortening human lifespan directly or indirectly (thru gene changes that alter meat protein). Stress crowding and filth create suppressed animal immune systems and odd chemicals in meat, that trigger various autoimmune responses or new diseases undiscovered by science for another 400 years, which may affect the immunological health of human consumers in general.

11.4.24. The Poop Argument

There are feces in virtually all American beef according to Consumer Reports. Much of chicken meat has poop in it. Omnivores *may* eat 100g of feces every x years, is it healthy? ☺☺☺

11.4.25. The IQ and Cognitive Function Argument

IQ: A diet high in saturated fat (present mostly in animal foods, 50% of cheese calories are saturated fat) decreases levels of *brain-derived neurotrophic factor* (BDNF, stimulates neurogenesis, prevents depression), compromising neuroplasticity and cognitive function, and aggravating the outcome of brain insult ► EJNS 2004;19(7):1699-707. BDNF went down 28% after a high fat meal given to 21-25 year old males ► DC 2012;35(2):358-62. Fat weakens microglia brain immune cells, making them less able to clear Alzheimer plaque ► Im 2025;58(6):1536-52. Cognitive Impairment Following High Fat Diet is Associated with Brain Inflammation ► JN 2010;219(1-2):25-32. The more saturated fat in the diet, the more Alzheimer & cognitive decline per this Harvard research ► AN 2012;72(1):124-34. See more studies in this video. Saturated fat (meat, dairy, cheese got 50% saturated fat calories), hydrogenated fat (margarine, mayonnaise), cholesterol can *profoundly impair* memory and hippocampal morphology. ► JAD 2008;14(2):133-45. Vegetarians and *vegans* have higher IQ on average than meat eaters, possibly because they're more educated and health conscious, coming from backgrounds with higher IQ to start with. Einstein, Tesla, Da Vinci, Edison, Pythagoras, Plato, Ramanujan were also

vegetarian 1-90% of their life. NHA 2016;4(1):81-93 found high flavonoid intake led to % boost in BDNF (neurogenesis), and *vegans* tend to eat more flavonoids. Curcumin (turmeric) boosted BDNF 50% and this made women's periods happier too ► NP 2016;56:25-31.

11.4.26. The PRAL (Potential Renal Acid Load) Score Argument

Alkaline diets help people live longer healthier lives. The United States Department of Agriculture has come up with the PRAL (Potential Renal Acid Load) Chart to help people prevent over ingestion of acid forming foods, which then lead to chronic secretion of ammonia in the kidneys, and damage to kidneys and other organs. The PRAL score in JADA 1995;95(7):791-7 shows that most nuts, all fruits and veggies are alkaline forming, while meats, dairy, grains and a few nuts are acid forming, calcium dissolving. Thus, if one eats too high PRAL foods that have no calcium, one risks osteoporosis and dental issues. It's worth mentioning that the beef industry study found that legumes and even wheat leads to the same muscle synthesis as beef (video), so why would anyone sane destroy their kidneys just to build muscles? Check out the transformation of a vegan from 120 lb to 200 lb, 80 lb of pure muscle. All raw veggies (and fruits, except a few fruits) are alkaline forming. All nuts, dairy, meats and grains are acid forming. Most legumes are alkaline forming. Tomatoes and all forms of tomato paste, etc are one of the most alkalinizing common foods. PRAL score is +24 for braised beef liver, +29 (or above 20) for many cheese types, +14 for many meats. Foods can be categorized by the potential renal acid loads (PRALs). The best foods are those with negative PRALs, see the United States Department of Agriculture (USDA) table here for each food (per 100 g) ► you can search 8,000 foods for the PRAL score at dietgrail.com/lowaciddiet or see a smaller USDA version. Our renal acid load for overall diet is ideal when it is negative according to many doctors and nutrition experts. Chronic acidosis can lead to lots of diseases, even more acne breakouts which are far more common in people ingesting foods with high PRAL. Alkaline diets (negative PRAL) lower mortality ► JEPH;2012:727630. Positive PRAL foods, like milk, increase urinary and absorbed calcium ► JN 2011;141:391-7. The real concern here is that if high PRAL diet lacks enough extra calcium to absorb to compensate for the loss in urine (calcium loss used to neutralize acid in the body), then it will cause bone loss as some studies concluded below. Hence monitoring the PRAL score of foods would be helpful when there are bone or teeth issues. In patients consuming an acidifying diet (the more protein the more calcium in urine they found) a restriction of calcium intake could increase bone resorption leading to a progressive bone loss ► EU 2001;39 Suppl 2:33-6; discussion 36-7. Those eating more high PRAL foods are 2.5 times more likely to have calcium stones, since more calcium is absorbed to compensate for calcium loss in urine from bones due to the need to raise pH to prevent death. Since veggies are negative PRAL and lower total PRAL, it was natural that those with more veggies in diet had fewer calcium stones. ► EJCN 2013;67(10):1077-80. *Vegans* tend to have alkaline diets, while most people have acidic (positive

PRAL score) diets.☺☺☺ PRAL formula was developed by Thomas Remer and other researchers at the Department of Nutrition and Health, the Research Institute of Child Nutrition, Dortmund, Germany, to assess the acidity of foods and diets. PRAL formula: PRAL = 0.49 x protein + 0.037 x phosphorus - 0.021 x potassium - 0.026 x magnesium - 0.013 x calcium.

11.4.27. The Telomere Length Argument

After a low fat whole plant foods vegan diet (the Ornish diet), Nobel Prize winner Elizabeth Blackburn found that telomerase activity increased by 30% in 3 months (telomerase reportedly helps us live longer by repairing the end of our chromosomes).

11.4.28. Eye health (more carotenoids and polyphenols eaten by *vegans* means less AMD)

11.4.29. Heart Rate (HR) Argument

Vegan HR is 10-20 beats lower, leading to less heart wear, longer life. Many youtube vegans show their HR is 46 lying in bed when waking up. Low fat veganism reversed heart disease.

11.4.30. Water Argument ► *vegans* use 4 times less water than vegetarians and 13 times less than meat eaters. It's clear that veganism is the most compassionate choice. ☺☺☺

11.4.31. The Kidney Stones Argument

Vegans have 2.5 times less kidney stones than meat eaters. The oxalate section explains how stones (calcium oxalate) forms on the tube connecting bladder to the kidney or in the kidney. The reasons and CAT scans of kidney stones are presented by top of Stanford/Harvard class MD in this 7 min video. Basic ideas on veganism by the same MD are here. High protein diet brings risk of kidney stones ► BMJ 2002;325(7361):408. ☺☺☺

11.4.32. Evolutionary History, Enzyme-Digestion Systems Argument

We were mostly vegan for most of 4 million of years. Our natural diet is vegan, as we have been on it for millions of years. We're the only animals who die if we don't consume vitamin C from plants, showing that during evolution we did not eat much meat ► youtu.be...o.

11.4.33. Stress Hormone Argument, Effect on newborn birth weight, height, IQ

Meat eaters have much higher cortisol, stress hormone and this has catastrophic effect on the height, weight, IQ of the kids as explained at the end of Chapter 15; stressed moms don't bond well with their babies, stress the baby (leading to less growth) and this shortens baby height. Many studies show meat leads to higher stress and cortisol. "*vegetarian children were taller than their meat-consuming classmates* (2.5 and 2.0 cm for boys and girls, respectively)" ► EJCN 1991;45(1):51-8; *this may be due to less cortisol during pregnancy and a healthier diet overall*

too, since vegans and vegetarians study nutrition far more. A new study reveals vegan diets are fine in infants, but may need parents to add more ultra soaked (to avoid calcium and mineral depletion) protein and calcium (kale, multivitamin, etc), D_3, K_2, Mg, Zn, to make sure there is enough for bones and teeth, as normal diets and RDA for D3, K2 are low and cna lead to bent fingers, frequent sickness and the need for yearly flu vaccines which only low D3, weak immunity kids need, with ignorant parents. Healthy vegan kids will have lower CRP, < 0.1, so this will help as they age, to live longer. The meat-cortisol section explains more. Raising Vegan Infants and Kids is already common, with many youtube channels presenting what vegan kids eat. There are many books that present vegan recipes for infants and kids. Anyone with a food processor can go 95% raw vegan easily, without any recipe book and eat smoothies all the time, or fruits and veggies in lunch boxes. Just buy what's on sale if short on cash, among the healthiest stuff presented below and rotate, eat a variety of things to get more nutrients and live longer. Below is some scientific evidence from American and British (and many other countries) Governmental agencies about the safety of vegan diets for kids:

33.1 JADA 2009;109(7):1266-82 says "It is the position of the American Dietetic Association that appropriately planned vegetarian diets, including total vegetarian or vegan diets, are healthful, nutritionally adequate, and may provide health benefits in the prevention and treatment of certain diseases. Well-planned vegetarian diets are appropriate for individuals during all stages of the life cycle, including pregnancy, lactation, infancy, childhood, and adolescence, and for athletes." The same position is repeated in the abstract of JAND 2016;116(12):1970-80, written by the same lead author, Winston Craig. ☺☺☺

33.2 The American Academy of Ped approves of proper vegan diets for infants and kids of all ages ► Ped in Review, 2004, 25(5). Videos on vegan pregnancy/lactation: one & two.

33.3 Dr. Benjamin Spock, one of the most influential pediatricians of all time, recommended a vegan diet for all infants and people of all ages, in the 7th edition of "The Common Sense Book of Baby and Child Care", arguing cow milk causes Type 1 Diabetes in kids and many issues.

33.4 National Health Service (public healthcare system in UK) Statement on Vegan Kids

11.4.34. The Omega 3 (ω3) Essential (needed from diet) Fatty Acids Argument

Cow milk ω3:6 ratio is 6:1, breastmilk is 1:1 in the healthiest moms and we know we need 1:1 to keep CRP low, so Republican 'geniuses' proposed we avoid fat free milk, eat more whole milk, more ω6, so aristocrats lower our IQ more, as low ω3 means lower IQ. Aristocrats know they can afford grass fed milk and meat which has more ω3 than corn-soy fed cow milk, so working class gets poisons, to live shorter and have lower IQ, so it's easier to dupe.☺☺☺ After all, they love cows, not humans. Flax and Chia Seeds have 80-100 times more ω3 (as ALA, not DHA, EPA) than

tilapia fish. There are many rich sources of vegan ω3 fatty acids, (without the heavy metals, mercury and PCBs in fish oil) like algal oil (DHA+EPA), algae, flaxseeds, chia seeds, walnuts, canola oil. Plus, recently, they found fish from South America (where 90% of cocaine is produced) contains cocaine. This is due to cartels who leave cocaine to float in the ocean (to be picked) and sometimes it gets lost. Cocaine may be in all world's fish now, since gangs left 3.5 tons of cocaine (worth half a billion $) floating 300 miles away from NZ even, 2 tons off Italy, 0.3 ton off West Australia, not just 3.6 tons off the coast of Brazil only. Spain caught 12 tons (6 billion $) coming from S America, one of similar packs found worldwide. Cocaine in fish for you?

11.4.35. The Fiber Argument

Vegans get 3 times more fiber (more fiber = less mortality), 45 g/day, compared to 15 for omnivores. 97% of Americans don't get enough fiber. See the Fiber section.

11.4.36. The Water Hydration Argument

Vegans get more hydrated as they eat more fruit/veggie minerals, 3x more potassium, etc.☺☺☺

11.4.37. The Asthma Argument

Vegans have the least Asthma. Vegan Diet Cures Asthma ► JA 1985;22(1):45-55 ► "Thirty-five patients who had suffered from bronchial asthma for an average of 12 yr, all receiving long-term medication, 20 including cortisone, were subject to therapy with vegan food for 1 yr. In almost all cases, medication was withdrawn or drastically reduced."

11.4.38. The Protein Argument

The amino acid section presents protein needs and the dangers of animal protein. The proteins section lists 163 vegan foods with more complete proteins than Burger King hamburger.

11.4.39. The Hypertension argument: half of American adults have hypertension and this leads to cognitive decline, more arterial plaque, premature death, and more chance to have stroke or heart attack. *Vegans* have lower blood pressure due to higher intake of potassium, fiber, ω3 and lower intake of sodium. The potassium section presents foods rich in potassium.

11.4.40. The trans Fats Argument: meat and dairy are the only natural food sources that have toxic trans fats which cause diabetes, atherosclerosis (and thus brain damage, aggression, etc).

11.4.41. The Animal Bacteria Argument: Clostridium difficile, found in about 20-60% of the meat (depending on what type of meat), causes 250,000 infections a year, 14,000 deaths a year (about half the people who die in car crashes, more than all gun homicides) in the US alone according to the CDC (Center for Disease Control), many more people hospitalized and having their colon

removed, and 1 billion dollars in excess medical costs per year. *This number dwarfs the 100 deaths or less that come from vegan products (leafy greens, etc) due to animal feed contaminated with salmonella used as fertilizer* (if all would be vegan this would not occur) and people not washing veggies well, etc. Even most salmonella deaths are due to non-vegan products. One more reason to go vegan. 14% of ready to eat sausages and 62.5% of ready to eat pork Braunschweiger were found to be infected with Clostridium, see table on page 2 of the pdf. Cooking doesn't always remove Clostridium, especially the spores.

11.4.42. The Depression and happiness Argument: *vegans* and vegetarians are happier ☺☺☺and less depressed, since they eat more fruits and veggies with more phytonutrients as explained at the end of the book and in the stress hormones ω6 section of Chapter 16.

11.4.43. The infection with Worms Argument: *vegans* are least likely to get infected with worms, see people get worms inside the brain, eyes and body all over, dying from it. Brain eating worm from pork grows in man's eye. Avoid pork?

11.4.44. The mercury argument: *vegans* don't eat fish, so they get far less of the toxic neuron killing mercury in their brain. This is explained better in Chapter 12.5 mercury section.

11.4.45. The AGEs Argument: Vegan burgers have 115 times less AGEs (advanced glycation end products) than McDonald's and other burgers. Most fruits and veggies have thousands of times less toxic AGEs than processed meats and dairy as explained in the section 11.3 above.

11.4.46. Vegan Iron doesn't increase risk of heart disease: heme iron from meat does ► 1 mg/day increase in heme meat iron (Fe) intake was associated with a 27% increase in coronary heart disease (CHD). No such relationship exists with vegan iron. Heme iron is hypothesized to cause free radicals and oxidize cholesterol ► EJN 2014;53(2):395-400 or heme iron is simply a marker for intake of cholesterol and bad fats from meat and dairy.

11.4.47. Vegans get more vitamin C, see benefits in the vitamin C section.

11.4.48. Air Pollution from Livestock Farms is Associated with Impaired Lung Function (Airway Obstruction) in Neighboring Residents ► AJRCCM 2017;196(9):1152-61

11.4.49. AMA, American Medical Association issued a resolution on 6-14-2017 for hospitals to "improve the health of patients, staff, and visitors by (1) providing a variety of healthful food, including plant-based (vegan) meals and meals that are low in fat, sodium, and added sugars, (2) eliminating processed meats from menus, (3) providing and promoting healthful beverages."

11.4.50. AHA, American Heart Association, recommends replacing saturated fat from butter, cheese and meats with vegetable oils or nuts and seeds: "Randomized controlled trials that

lowered intake of dietary saturated fat and replaced it with polyunsaturated vegetable oil reduced cardiovascular disease by approximately 30%, similar to that achieved by cholesterol-lowering drugs, known as statins. (My total cholesterol has been 130 since 2000, due to a low fat vegan diet, feat no statin can achieve). Prospective observational studies in many populations showed that lower intake of saturated fat coupled with higher intake of polyunsaturated and monounsaturated fat is associated with lower rates of cardiovascular disease... coconut oil – which is predominantly saturated fat and widely touted as healthy – raised LDL cholesterol in the same way as other saturated fats found in butter, beef fat and palm oil." ☺☺☺

11.4.51. Crohn's Disease Argument

The best prevention of Crohn's disease relapse in an interventional study was acheived by cutting most meat, 92% remission for minimal meat eaters versus 33% for same meat level. There is no study with omnivores going vegan for 2 years or vegetarian, because asking people to go semi-vegetarian by cutting most meat was far easier to do ► WJG 2010;16(20):2484-95.

11.4.52. Vegans have a lower white blood cell count

Those with White Blood Cell (*WBC*) count *above* 7.9 were *3.37* times more likely to die than those with WBC *below* 6.3. WBC reflects systemic inflammation (of the arteries too), just like C-reactive protein (CRP) and other markers do. ► AJM 2009;122(9):874.e1-874.e7 Never-smokers with WBC counts of 9-10 had a 3.2 fold elevated risk for CVD death compared with those with WBC counts of 4-4.9. ► CJ 2007;71(4):479-85. Mortality was 1.1% for those with WBC<6.8 and 3.9% for WBC >10, or 3.5 times lower ► Heart 2003;89(4):389-92. Those with WBC > 6 had higher mortality than those with WBC between 3.5 and 6, while those with WBC above 10 had the highest mortality of all. ► JACC 2007;49(18):1841-50. Mortality rates for men with baseline WBC over 9 were 1.8-2.5 times those of men with lower WBC ► JCE 1990;43(2):153-7. For each decrease of WBC by 1, risk of cardiac death went down 14%. Smokers on average had a WBC count of 7.75 compared with 6.08 for nonsmokers. ► JAMA 1985;254(14):1932-7. In a routine blood test, one of the numbers they list is the WBC, and you will notice that when people go vegan, WBC often times drops from 8-9 to 4-5. ► RPZH 2007;58(1):23-7. In August 2017 my WBC count came as 4.3, typical for *vegans*. Studies show that this number rises fast to 8 when there is something to fight in the body, but having it low normally has its own advantages for preventing atherosclerosis. People with lowest white blood cell count live the longest and studies show vegans have the lowest white blood cell count, explaining perhaps they they live longer on average by 7-12 years; possibly due to anti-oxidants and other phytonutrients. This other video explains better the association between mortality and high white blood cell count.

11.4.53. Cow milk is for cows, see this video with many science papers on why dairy is bad.

Babies who're breastfed longer have higher IQ, less autism, better eye health and stronger immune system than those drinking cow milk. Milk was forced on everyone after WW1, since the military drove the production of dry milk to send to troops and then the farmers wanted to sell more milk, organized strikes and forced the government to push milk on every school kid after 1946, on every TV channel, and everyone pushed for more cheese on pizzas and everywhere, causing the destruction of USA, via everyone gaining 40 lb due to dairy, all thanks to WW1, which made USA become an obese country 40 lb heavier today. We thus can see how the military destroyed USA via the farmer lobby indirectly. We didn't win WW1, we lost our conscience, torturing cows to steal their milk made us obese and lower IQ. We sold milk even if US knew it was obtained by enormous terror, killing of male calves upon birth, torturing cows. There are dozens of vegan foods with higher protein quality than milk and beef. Cow milk ω3:6 ratio is 6:1, breastmilk is 1:1 in the healthiest moms, and we know we need 1:1 to keep CRP low. Moms eating high ω6 give diabetes/atherosclerosis/low IQ/obesity to kids via higher breastmilk ω6; those giving cow milk to kids do the same. In 2015 vegan milk sales went up 9%, cow milk went down 7%. 54% of kids used vegan milks. *Cow milk has 3.2 times more protein (as do other animals) than human milk*, goat milk 3.6 times (3.6x) more, horse milk 2x more. This is because it takes a shorter time to double in size for cows (47 days), goats (19 days), horses (60 days). Rat milk got 10x more protein than human milk as rats double in size in 4.5 days instead of 120 days. Dog milk got 6x (cats 8x) more protein, as dogs double in size in 8 days (cats in 7 days). Cow milk fed babies cry more, so mothers with a crying suckling baby could eat magnesium Mg, calming foods, chamomile, to calm the baby via milk delivery of Mg & apigenin chamomile polyphenol. *For babies with* intelligence more like cows than humans, feed them formula.☺☺

11.4.54. PREVENT INGESTION OF CANCER tumor enhancing IGF-1 IN ORGANIC MILK OR DAIRY, SYNTHETIC GROWTH HORMONES IN NON-ORGANIC MILK, BACTERIA in all milk, IMMUNE SYSTEM WRECKING ANTIBIOTICS in non-organic milk. ☺☺☺

Harvard article explains that higher insulin-like growth factor-1, IGF-1, can triple cancer risk. Meat and dairy raise IGF-1 levels and thus cancer risk. *A glass of milk from factory farms got* about ☺☺☺*130 million pus cells..*☺☺☺ and *antibiotics* (banned in Europe) *that* wreck our *immune system,* hormones banned *in Europe that* cause *cancer*, etc.... Even organic milk has some of that stuff. *rBST HORMONE* is banned in Canada, Australia, New Zealand, Japan, Israel and the European Union since 2000. Argentina also banned the use of rBST. Pus has neutrophils (white blood cells) mixed with dead bacteria. According to the USDA, 1 in 6 dairy cows in the US suffers from clinical mastitis, which is responsible for 1 in 6 dairy cow deaths. This level of disease is reflected in the concentration of somatic cells in the American milk supply. Somatic cell counts greater than a million per teaspoon are abnormal and "almost always" caused by mastitis. When a cow is infected, greater than 90% of the somatic cells in her milk are

neutrophils, the inflammatory immune cells that are part of pus. The average somatic cell count in U.S. milk per spoonful is 1,120,000. If that is not enough, milk can have about 1 billion bacteria per quart. The Indiana administrative code says "grade A milk bacteria count using the standard plate count, shall be not more than one million bacteria per milliliter, or 1 billion per liter. The somatic cell count shall be not more than one million per milliliter." Pus is found in regions of bacterial infection and it's made of neutrophils, eosinophils, and basophils (3 types of white blood cells) and dead bacteria, as well as inflammatory exudate. Researchers found omnivore kitchen have way more bacteria than the toilet seat, due to meat/dairy being so bad. Meat is covered in fecal bacteria and omnivore kitchen got 500 times more feces than vegan ones. Nothing to worry, because the central AC makes sure the kitchen fecal bacteria go right into every bedroom so that all may enjoy a dose of animal feces in their lungs for shorter lives.

11.4.55. The TYPE 1 Diabetes and Immune System (flu, colds, COVID19) Argument

Several studies show that milk seems to induce type 1 diabetes in many kids, through an autoimmune destruction of the beta (β) cells that produce insulin. Low chromium in cow milk (half the level in human milk) may have a contribution to this type 1 diabetes. The more technical explanation is at DM 2013;30(2):161-9. ☺☺☺ There are many hypotheses about the association between milk intake and type 1 diabetes, but one of them relates to some paratuberculosis bacterium (in milk and meat) triggering *autoimmune attack of pancreatic* β cells, since 63% of type 1 diabetics had this bacterium, while only 16% of the non-diabetics did. Several things in dairy may cause type 1 diabetes, another being casein: 30% of casein in milk is β-casein. A1 and A2 β-casein are the most common of 12 genetic variants of the β-casein milk protein (due to genetic mutations in the bovine β-casein gene) that differ by one amino acid; position 67 got proline in A2 β-casein (209 amino acids total) and histidine in A1 β-casein. β-caso*morphin-7, BCM-7, is produced when people consume casein A1, but not so much when they consume A2* casein found in human and goat milk (BCM-7 produces by A1/2 varies by studies, but A1 *much more than* A2); β-casomorphin-*7 is an* immunosuppressant (COVID19 anyone?) opioid *linked to* diabetes *1 incidence* ► Diab 1999;42(8):1032. EJCN 2006;60:921-6 links autism, heart disease, diabetes to A1 milk (except France, Asia, Africa which make A2 milk mostly). Human milk has 20-50% casein (human beta casein is A2 type) with the rest 80-50% being whey ► casein is 20% of the total protein content in early lactation and 50% in late lactation; cow *milk protein is* 80% casein, 20% *whey* (whey = 67% globulins, 33% albumins: β-lactoglobulin 65%, α-lactalbumin 25%, bovine serum *albumin* 8%, immuno*globulins* 2%). Those "assigned to casein hydrolysate formula had a reduced risk of development of β-cell autoimmunity (diabetes antibodies) [hazard ratio 0.54]... exposure to bovine insulin in cow's-milk formula has the capacity to induce an immune response to insulin... Randomization was to 3 groups: cow's-milk formula (control), whey-based hydrolyzed formula, or whey-based FINDIA formula essentially

free of bovine insulin whenever breastmilk was not available during the first 6 months of life. *Children were followed until age 3 years for the development of diabetes-related autoantibodies… FINDIA formula had a reduced risk of … appearance of one or more antibodies [odds ratio... in the treatment-received analysis 0.23* (5 times lower risk) in the FINDIA group when compared with the cow's-milk formula group]" ► DM 2013;30(2):161-69. Dairy (unless 0% fat) got trans-fats, also linked to diabetes, atherosclerosis and organ damage.

11.4.56. Huge levels of Saturated Fat and Aluminum (Al) in Cheese

Cheese (sour cream, bacon, fatty meats too) has a lot of long chain saturated fatty acids and cholesterol, which are known to contribute to heart disease. 50% of cheese calories come from saturated fat, while 70% come from fat. Cheese often has sodium aluminum phosphate added to it, making it toxic, especially if you can't eliminate Al well. A low fat diet is safer.

11.4.57. MILK can cause COLIC/REFLUX/VOMITING in babies when mothers or babies drink it, animal *saturated fat can cause moms to vomit* (reflux happens in all folks with milk intolerance)

1. **COLIC:** The American Academy of Ped says "If your child is under 1 year old, you shouldn't feed your baby cow's milk". The full pdf is here. Cow milk protein ingested by mom can end up in breastmilk fed to the baby and lead to baby developing colic and crying a lot (one in 5 babies has colic). Removal of dairy from mom's diet led to end of crying and colic as explained at ► Ped 1983;71(2):268-71 which says "Abstract. Sixty-six mothers of 66 breast-fed infants with infantile colic were put on a diet free from cow's milk. The colic disappeared in 35 infants; it reappeared on at least two challenges (cow's milk to mother) in 23 infants (35%). A double-blind crossover trial with cow's milk whey protein was performed in 16 of these 23 mothers and infants. Six infants had to be taken out of the study for various reasons; of the remaining ten infants, nine reacted with colic after their mothers' intake of whey protein-containing capsules. Sequential analysis showed a high correlation between infantile colic in breast-fed infants and their mothers' consumption of cow's milk protein. A diet free of cow's milk is suggested for the mothers as a first trial of treatment of infantile colic in breast-fed infants." Replacing cow milk with soy milk in baby diet (not the mother's diet) removed colic ► JRCGP 1989;39(318):11-4. For more on the cow milk protein allergy, see ► ADC 2007;92(10):902-8. ☺☺☺

2. **REFLUX/*VOMITING*:** Before considering surgery to treat infant reflux (25% infants have reflux), watch this video presenting the GL 2011;5(3):298-301 paper on treating reflux by eliminating milk (for 4 weeks) from the diet of 27 kids (33% of the study population) who were not cured with omeprazole medication. JP 2014;90(2):105-18 states "the consensus of the NASPGHAN/ESPGHAN (*North American/European Society for Pediatric Gastroenterology, Hepatology and Nutrition) on GERD (reflux)* advises a therapeutic trial of 2 to 4 weeks with an extensively

hydrolyzed or amino acid formula, and for infants who're breastfed, with a maternal strict CMP (cow's milk protein) elimination diet". JPGN 2009;49(4):498-547 suggests eliminating eggs, milk protein (dairy) from the mother's diet for a few weeks for breastfed infants who vomit or have reflux, to see if reflux and vomiting disappear. Milk was the # 1 food that adults with *REFLUX* were intolerant to ► MM 2017;108(6):496-501; reflux patients were intolerant to 5 or more foods. AP 2016;105(9):e412-8 found 17% of adolescents with chronic fatigue syndrome were milk intolerant, with symptoms disappearing once off milk. WJG 2014; 20(45):17190-5 found that removing milk diminished reflux more than placebo, as you can see in the Fig 1; T0 shows time 0 at the start, T1 shows reflux reduction is greater in the "*milk* elimination group" than in the placebo group, T2 shows reflux decreasing when the placebo group also removed milk. ☺☺

3. THROAT *INFLAMMATION*: Eosinophilic esophagitis (EoE) has *VOMITING* as a symptom: "Cow's milk elimination may be more desirable for Eosinophilic esophagitis patients who don't want to take chronic, long-term steroid medications." ► DE 2016;29(4):377-84

4. MORNING *SICKNESS:* vegan moms have much less of it, see B_6 and saturated fat paragraph.

11.4.58. MILK CAN CAUSE CHRONIC CONSTIPATION IN KIDS

Cow milk led to chronic constipation in infants ► NEJM 1998;339:1100-4. Breastfeed for 2 years (at least 6 months). Cow milk is void of many benefits of human milk antibodies that build a strong immunity. Human milk is designed for optimal brain and eye development. Children breastfed for 12 months had an IQ that was 4 points higher than those breastfed for less than a month. The first 2 years of life are the critical time for malnutrition, the consequences of which are often irreversible (poor cognitive development, educability, future economic productivity).

11.4.59. PREVENT DIARRHEA, GI DISTRESS due to Lactose intolerance

Lactose (milk sugar) intolerance (gastrointestinal distress, diarrhea, flatulence, etc) affects 95% of Asians, 74% of Native Americans, 70% of Africans, 53% of Mexicans, 15% of Caucasians.

11.4.60. CALCIUM IN MANY VEGGIES IS HIGHER THAN IN MILK AND BETTER ABSORBED

The calcium section has a list of over 15 vegan sources of calcium. They got vegan ice cream ► benjerry.com/flavors/non-dairy, *vegan* cheese, etc. ☺☺☺

11.4.61. Human milk has *3 times* less protein (*its content changes with the age of the infant*), 2-10 (10 times more in the 1st month, 5 g/L vs 0.5 g/L in cow) times more antimicrobial anti-inflammatory cell proliferation lactoferrin, 2x less zinc/selenium, *4x less* sodium, *calcium* and magnesium, 37% more fat (*2x more* monounsaturated fat, *2.4x more* polyunsaturated fat, *3x more* ω6), 2x more chromium, 50% more sugars (lactose), 40% more cholesterol, 2x more

vitamin A & E (eyes), 100x more vitamin C, iron is bound to lactoferrin and other proteins being up to 5 times more bioavailable than cow milk in some studies even if the iron amount is identical (*in cows it's bound to casein mostly, casein content is 10x more than human milk, cow milk lactoferrin is sometimes* even 100 (not 10) times *lower depending on cow, 30% of milk iron is bound to lactoferrin in humans*). Sources: Table 4-2 USDA + PubMed papers.

"Breast-fed infants absorbed an average of 49% of a trace dose of extrinsic iron☺☺ administered during a breast feeding in contrast to about 10% reported to be absorbed from cow milk" ► JP 1977;91(1):36-9, and 8% from ferrous sulfate formula ► APS 1977;66(6):719-22; the same authors suggest in PR 1979;13:143-7 that giving veggie foods too early (month 4-6) instead of exclusive breastfeeding, can cause anemia or low iron if no iron drops are given (tons of them on Amazon). More recently, PR 1992;31(5):524-7 found 48% vs 19% bioavailability. Anemia is more common in infants drinking cow/formula milk, hence IQ is lower. "For every month of feeding with cow's milk, there was a reduction of 2 g/l in the hemoglobin levels of children aged 12 months." ► JP 2005;81(5):361-7. Human milk is optimal for humans, cow milk is not. PCNA 2013;60(1):49-74 Table 1 shows at term human milk (term babies, preterm milk is higher in protein as nature is very smart) got 0.9-1.2% protein by weight, 5.4-7% by calories at the time when we need the most protein as we grow the fastest. Over billions of years nature came with 5.4-7% of calories from protein when we need the most of it, 4 times less calcium than cow milk. Do some obsess with protein/calcium? A protein video explains human milk may have the lowest protein of any animal in the world (min 3:44), 4 times less than cows. This makes sense, since we live the longest of all 14 animals in the table, so we grow the slowest. Human milk got 10 times less protein than rat milk and we live 30 times longer; *3-4 times less protein than cows and we live 4 times longer than natural cows. In 1948 USA recommended 1 year olds get 13.2% of calories from protein, in 1974 only 5.4%. As we reach 900 year lifespan, our milk may have lower protein content if we also end up growing to adult stage slower. Maybe not, because queen bees grow in 16 days versus 21 for workers and yet live 10-50 times longer.*

11.4.62. PREVENT PARKINSON'S DISEASE

Milk consumption is linked to Parkinson's disease (PD) (more milk, more Parkinson's) ► EJE 2014;29(9):613-9, AN 2002;52(6):793-801. Meat got a prion (like mad cow disease prion) like α-synuclein that raises PD risk "α-synuclein in ...meat … contains threonine at the amino acid 53 position, while human α-synuclein has alanine... The A53T mutation of human α-synuclein was the first identified to be associated with PD… ingestion of a close homolog through diet could increase the likelihood of seeding pathology in the gut… Prions are transmittable infectious particles comprised solely of protein (i.e., devoid of nucleic acids), namely prion protein (PrP), that cause fatal diseases... infectious proteins which propagate a disease by causing protein

conformational changes" ► NPJPD 2017;3:33. "higher mortality in women with high milk consumption, *irrespective of milk fat content*" – drinking > 3 glasses/day meant almost double mortality vs < 1 ► Ntr 2020;12(5):1393. "d-galactose, a derivative of lactose, is used in animal studies to induce neurodegeneration. Oddly, human milk has 7% lactose, cow milk 5%, and human neuron count decreases from 200 billion at birth to 100 billion later, as if nature designed galactose as an aid to prune less used neurons. Milk is the primary source of lactose in the human diet...Milk intake greater than 1 glass/day was associated with greater (cognitive) decline" (over 20 years) ► Ntr 2017;9(10):1134. "adjusted (*substantia nigra, the area where most neurons die in Parkinson people*) neuron density in all but the dorsomedial quadrant was 41.5% lower for milk intake >16 oz/d vs intake that was less" ► Neu 2016;86(6):512-9. See more studies in the Parkinson video. Nep 2008;30(3):161-6 found men who ate 1.5 servings of meat/day were 21 times ("adjusted OR = 21.36") more likely to have hand tremor than men eating 0.5 servings/day. Fried meats cause Parkinson via the harmane neurotoxin frying produces, hence aristocrats sell us fried meats.

11.4.63. PREVENT HUNTINGTON'S DISEASE

Milk intake increases risk of Huntington's disease ► JNS 1987;80(2-3):299-306.

11.4.64. The Leukemia, Breast Cancer, Synthetic Estrogen, Hormone, Virus, Parasite Argument

Zeranol is used in the US livestock industry today and is 100,000 times more potent endocrine disruptor than BPA, accelerating the formation of breast cancer. After Italian kids got their breasts enlarged due to meat containing zeranol, the EU banned it. DES, diethylstilbestrol, a synthetic form of the female estrogen, was prescribed to women until being banned in 1971, after FDA found it causes cancer in offspring ► NEJM 1971;284(15):878-81; DES was also used in meat until FDA banned it in 1979, 40 years after it was shown to be carcinogenic ► IJHS 1990;20 (2):277-80. After DES was banned, the industry started using zeranol and other chemicals. Milk/dairy estrogens spike DHT, leading to hair loss, breast/prostate cancer, acne, stroke, infarct. Carbadox is a carcinogenic chemical added to pig feed to speed up growth and profits in USA (banned in EU, Canada, etc), but it leads to cancer and antibiotic resistance. Most people have heard of the rBGH (recombinant bovine growth hormone) free milk, as it's used as a label on dairy products, due to studies showing it is associated with cancer. Most milk also has bovine leukemia (leukemia is blood cancer) virus, BLV, a virus that caused the death of 2 monkeys. Vegans have 3 times less breast and prostate cancer than vegetarians who consume a lot of dairy, and this virus may have something to do with it because the odds of having breast cancer if this virus is present is also 3.1 times greater than if the virus is absent from the diet. This odds ratio is higher than any of the frequently publicized risk factors for breast cancer, such as obesity, alcohol consumption and use of post-menopausal hormones ► Berkeley Univ, and PO

2015;10(9):e0134304. 2 monkeys died of leukemia after infection with BLV ► CR 1974;34(10):2745-57. A USDA study showed 84% of milk (100% of milk from farms with 500+ cows) was infected *with* BLV. Canc 2010;2(2):752-72 shows viruses cause many types of cancer, such as breast. Humans have antibodies reactive with BLV ► ARHR 2003;19(12):1105-13. BLV DNA was found in human breast tissue ► EID 2014;20(5):772-82. "21 nations have eradicated BLV from their dairy cattle... US ... BLV prevalence (is) 40%" ► VMI 2019:3202184. Those with BLV in breast skin are 4 times more likely to get breast cancer ► IJEPH 2020;17 (1):209 (see Table 2, most other risk factors are minor). See more here. Studies found 52% of breast cancers may be due to BLV infected dairy. Keep eye compresses in a fridge free of open dairy containers/packs, BLV is in the air of dairy farms. FDA found 20% of milk jugs were contaminated with bird flu. Pork and cows give hepatitis E to pork, beef, dairy eaters. Vegans can get it by living with dairy/meat eating pets, vegetarians or omnivores. Choose wisely your partner or spouse... Sushi (raw fish), improperly cooked meats are full of parasites and undercooked fish routinely kill people. If you eat meat, avoid beef, especially pork, full of parasites which spread to every organ, see video. 50000 people die from parasites that eat brains out. 50 million worldwide are infected by brain eating parasites. Garlic, pumpkin seeds kill some of these parasites.☺☺

11.4.65. Prevent AUTISM, PSYCHOMOTOR development in kids caused by milk casomorphin

Cow's milk has casomorphins associated with autism, delays in psychomotor development, infant crib death ► Pept 2003;24(6):937-43, type 1 diabetes, see yo.s. Pept 2009;30(10):1854-60 found that "breast feeding has an advantage over artificial feeding for infants' development during the first year of life and support the hypothesis for deterioration of bovine casomorphin elimination as a risk factor for delay in psychomotor development and other diseases such as autism." NNS 2000;3(1):57-72 explains that autistic kids have more β-casomorphin in their urine, see why cow milk produces more than human milk. See also these 6 videos on autism going away after a dairy free and gluten free diet. A kid changed from autistic to normal by removing gluten and dairy (which mess up the speech brain center in many kids, via casomorphin and gluten brain-barrier damage) ► NNS 1999;2(6):435-9. ☺☺☺

11.4.66. Vegan Foods are the only ones with polyphenols

Those eating the most polyphenols live longer cutting all cause mortality by 37-40%: see details. So why isn't the government centralizing all food production and demanding we replace green kale/grapes/cauliflower/cactus/cabbage with the purple analog, white sesame/chia/etc with black/brown one, toxic Bible praised gluten with much healthier grains/legumes, etc? Because the aristocratic class would disappear and we get 11 companies. No more parasites to steal trillions from the working class and use fake miracles religions to drastically lower average IQ.

11.4.67. Vegans are the least constipated group (read more in the fiber section)

Vegan poop travels the fastest, as vegans eat more fiber, and this prevents endless diseases, colon cancer, as fewer toxins linger to be reabsorbed into the blood: Gut 2023;72(1):180-91. Vegans have 3 times more fiber in their diet, leading to the least constipation, lowest heart disease and diabetes, softest stools and fastest bowel movements, 9 *seconds*, opposed to 9 *minutes* for those whose food takes 2-4 days to get from mouth to anus (instead of the 8-24 hours it takes healthy (not junk fatty food) *vegans* usually). *Fermenting* stool *releases up to 10 times more toxic* (see TMAO) metabolites (CJASN 2012;7(6):82-8) *in the* blood, shrinking omnivore or "high fat low fiber vegan" *lifespan*. More fat/protein and less fiber = longer transit time. Avoid overeating dry protein powders, chia seeds, flaxseeds, bee pollen *without increasing water, juice, low calorie watery veggie, smoothie intake dramatically,* as these foods absorb huge amounts of water, giving a slower stool transition time, *increasing blood toxins*. The easiest way to benefit from the effortless (no pushing, etc) bowel movements of *vegans* is to eat more fruits, nuts or veggies full of soluble fiber, if you're not yet 100% vegan. You can do that by making smoothies with a food processor that makes a puree out of strawberry, cauliflower, zucchini, etc. The easiest way to assess transit time is to make a smoothie with beets or to eat beets and see how long it takes for feces to become reddish. The ideal time is 12-24 hours, not 4 days. Healthy *vegans* have 1-2 fast effortless bowel movements a day. The vegans who eat whole foods have odorless stools too (no rotting) and much clearer urine. Odorless stool can be a sign of lower methionine and cysteine (the 2 main sulfur amino acids) intake and very healthy digestion; lower methionine can slow down aging as much as calorie restriction due to not activating TOR. See the odorless stool section for more on gas, constipation. ☺☺☺

11.4.68. MULTIPLE SCLEROSIS ARGUMENT

Cheese has 50% of calories from saturated fat, 70% from fat, hamburgers got 40% calories from fat. Many people reversed MS via a raw *vegan* diet as explained in the curing disease with food section. Youtube has similar stories. *A protein in dairy looks similar to a myelin sheath protein, so the body can think it needs to be attacked due to some autoimmune response*. Lancet 1990;336(8706):37-9 study by Dr. Swank (a neurologist who lived to age 99 and 8 months and published over 170 papers) found those who ate 8 g less saturated fat a day had 3 times lower risk of dying from multiple sclerosis 34 years later. Dr. Swank published MS papers from 1950 to 2003, including about those he followed for 50 years. See more in this video. The other major 5 papers of Dr. Swank can be found at: 2003, 1950, 1953, 1952, 1970.

11.4.69. Prevent Acne and Canker Sores, which are less common among *vegans*

Canker Sores inside the mouth happen in some people from the age of 2. *One girl got rid of*

them only at 17 by eliminating dairy completely. Same thing happened to others ► A 10-year-old girl and an 11-year-old boy, both with 5-year histories of frequent RAU episodes, with multiple ulcerations, underwent dairy elimination trials. Both were free of oral ulcers within 2 weeks of discontinuing CMP (cows milk protein) and remained so with a CMP-free diet. ► JADA 2017;148(8):614-7. For many acne studies, see the acne section.

11.4.70. The Sperm Count Argument

Men who ate the most low-to-moderate-pesticide fruits and vegetables *(≥2.8 servings per day)* had a 169% higher *total* sperm count *and a* 173% higher sperm concentration than men who ate *the least of those fruits and veggies* (most omnivores don't eat a lot of low-moderate fruits-veggies, *vegans* often do) ► JN 2016;146(5):1084-92. Dairy and animal foods FAT lower sperm count/quality: intake of full-fat dairy was inversely related to sperm motility and morphology. These associations were driven primarily by intake of cheese, being independent of overall dietary patterns ► HR 2013;28(8):2265-75. *Men in the* highest 3rd of total fat intake *had 43% lower total sperm count,* 38% lower sperm concentration than men in the lowest third. This association was driven by intake of saturated fats *(present mostly in animal foods)* ► HR 2012;27(5):1466-74. ω3 fat intake was good for the sperm, like flaxseeds, chia seeds, algal *vegan* DHA-EPA pills, etc. RED AND PROCESSED MEAT lower sperm count/quality: processed meat intake was associated with lower total sperm count ► Epi 2014;25(3):323-30. Processed meat *lowers sperm count*, especially red processed meat ► JN 2014;144(7):1091-8. Omnivore monkeys had lower sperm count and quality than *vegan* monkeys ► AA 2001;46(2): 145-51. Dr. Ornish explains at 17 seconds in this 3 min video after eating *vegan* food men had *3-5* times more erections that were 10 times harder than after eating meat. This actually is not surprising since better blood flow hardens it more. The reversing heart disease section has some dramatic pictures of brain arteries of those with Alzheimer, some with 95% blockage. A low fat low AGE *vegan* diet will make blood flow to penis, brain, heart better, so *vegans* got 3 times less Alzheimer ► Nep 1993;12(1):28-36. Obesity lowers sperm count & vegans are the thinnest.

11.4.71. Vegans eat more greens (kale especially), thus vitamin K, leading to better teeth health

As vitamin K section explains, K takes Ca out of the arteries and puts it in the bones and teeth. Therefore, omnivores, notorious for eating lots of calcium, have stiffer, more calcified arteries.

11.4.72. Vegans tend to have fewer twins (premature, short limbs, health issues) and read more

Vegans study more on nutrition to make sure they got it right, being more proactive about things, see a long list of common nutrients in Chapter 12.4. ☺☺☺ "Vegan women, who exclude dairy products from their diets, have a twinning rate which is one-fifth that of vegetarians and omnivores" ► JRM 2006;51(5):405-10. 10% of identical twins have birth defects, twins got 40%

higher birth defect rate vs singletons. Short limbs, premature birth (weeks earlier) and low birth weight are ultra common for twins and can lead to lifelong health issues, not to mention mom can get diabetes, even die during birth more often, a risk not acceptable for Immortals, even if some male twins may live a little longer than average due to having a close friend. While one may get 2 lifespan years/identical male twin (fraternal 1, girls 0.4), mom loses 5-70 years of lifespan if she dies or has lifespan shortening effects. Dairy/meat can also cause premature puberty in kids, with issues, due to sex hormones in animal foods.

11.4.73. Vegans have lower hs-CRP (biomarker for inflammation, stroke, infarct, plaque risk)

hs-CRP (high sensitivity C reactive protein) is a blood marker for inflammation in the body and for mortality risk ($30 to add to a blood test, mine nondetect in 2026). Each time we go thru an infection, injury or bad air pollution period (indoor or outdoor, etc), we see CRP rise. Go vegan argument 3 above (heart disease) shows sedentary *vegans* had CRP 0.52 vs 2.61 for sedentary omnivores, 5 times lower. Those with higher CRP were 2.5 times (if lean) and 3.4 times (if obese) more likely to die from any cause ► PO 2015;10(8):e0135713. "CRP were 1.51, 0.83, and 0.37 mg/L, respectively" when ω6:3 ratios were 9.5, 3.5 and 1.5, showing the effect of flax/chia seeds ► JN 2004;134 (11):2991-7. Breastmilk ratio is 1:1 in the healthiest moms, so many people will die before their natural years due to high ω6 oils intake. The lower the hs-CRP is, the better it is as it shows less body and arterial inflammation. Sick people with CRP < 1 + BNP < 110 meant 16 times lower cardiac mortality than CRP > 1 + BNP > 110 ► CJ 2006;70(7):857-63. Atrial fibrillation patients with higher CRP had 2.5 times higher all cause mortality ► AJC 2012;109(1):95-9. Those with CRP > 10 were 3 times more likely to die vs CRP < 1 ► AHJ 2009;158(2):277-83. In a review of studies covering 83,995 people, highest CRP meant 75% higher risk of dying vs lowest (> 3 vs <1 usually in most studies (US), but can be > 10 vs < 1 or 0.5 in UK, > 1 vs < 0.2 Japan), double the risk of cardiac mortality ► Ath 2017;259:75-82. Japan CRP is so low, no wonder they live 5 years longer. In a 2,200 people study, CRP > 3 meant 55% higher all cause mortality vs < 1 ► Neu 2009; 73(16):1300-7. A 39,242 Japanese study (have lower CRP than Americans, since fish has ω3 that lowers 3:6 ratio and thus CRP, since ω3 create antiinflammatory eicosanoids, while ω6 proinflammatory, causing diabetes, plaque, fast aging), ages 40-79, followed for 13 years, found that those with CRP > 0.85 were 1.6 times more likely to die from stroke, 3.7 times more likely to die from coronary heart disease, 2.3 times more likely to die from any heart disease than those with CRP < 0.19 ► Ath 2009;207(1):291-7. To lower CRP we can replace nuts with walnuts (highest ω3 nuts), oils with ω3. To lower CRP 4 times or more, we can eat flaxseeds/oil (cyanide raw, eat few) and/or chia seeds/oil daily to drive ω3:6 ratio to 1:1 to 1:2. With "CRP level of 2 mg per liter or greater as the threshold for defining high cardiovascular risk... 52 % of the adult population in the US would be considered at high risk." ► NEJM 2005;352:1611-3 with the %s of CRP for many groups (most have CRP > 1, which is very bad; it shows what a horrible healthcare

we got, with criminal TV-radio saturating us with junk instead of health info we need☺☺☺). When we eat more produce, especially colorful, we reduce inflammation and bring CRP below 1, so that's why some people go vegan, to bring down inflammation in the body.

Final note: "dairy free" milks, lab meats or vegan meats that imitate animal protein are linked to cancers, and inflammation. The interesting thing is that some companies want to make "vegan" cheese or "vegan" meat by using microbial factories to synthesize β-casein A1 and other animal proteins which were shown to cause cancer tumors in animals when overeaten, besides other problems. Some of these burgers have too much fat because they imitate the "beef burgers exactly" and possibly too many AGEs. The Impossible Burger has 56% calories from fat, and it has a lot of saturated fat from coconut; it's very unhealthy, having more salt than meat burgers and 3 times more saturated fat and salt than many vegan meat products. Thankfully, each year new products emerge, so now we got dozens, even meat from mushroom protein, hopefully free from agaritine posible carcinogen and other rash causing chemicals (always cook mushrooms if you eat them, or eat mushrooms only once a year). It would be better to create proteins, nutrient, mineral mixes, as in human milk and to replicate the human milk formula, which is very different than cow milk. You know how bees produce "bee milk" that helps queens live 50 times longer, what if we discover a milk like drink (very enriched with tons of nutrients absent in human milk), eterni milk that can double human lifespan if drank 1-2 liters daily for life? More research is worth doing, by seeing effects in mice or rabbits raised on eterni mouse/rabbit milk, etc. That future "vegan" eterni milk doesn't have antibiotics, pus, hormones, saturated fat, oxidized cholesterol so it's better than real cow milk. But it is only better by a wide margin probably only if it simulates partially human milk (the version that comes for 2 year old baby perhaps) casein etc, not cow milk casein. On the other hand human milk month one has 20% casein, month 12 has 50% casein, everything changes, so protein needs for adults or people over 12 months probably change too. A lactating baby needs far more protein than an adult who grows far slower or a kid of 1 to 3 years. In the animal kingdom animals only drink milk as a baby, humans are the only animal drinking milk after baby stage, except for honey bee queens. Do adults really benefit from a product that imitates human or cow milk perfectly? It would be healthier than cow milk, but anyway, it is hard to answer. A lot of research is needed before deciding which protein, peptides to make in microbial factories if this even becomes very popular in the next 20 years. Bacteria can make amino acids directly, so in the future it will be possible to optimize this and make milks made of amino acids, easier to digest peptides, essential fatty acids like DHA, ARA, EPA, etc, overcoming an issue of many people: lacking strong enough hydrochloric acid in the stomach after age 30 sometimes and the enzymes to digest protein as we age, leading to problems. Not to mention it takes energy to split proteins into amino acids, which taxes the body resources. Some amino acids can be digested well in free

form. Any vegan "meat or milk" is still better than meat/milk, but I'm just stating the obvious to those who may have severe autoimmune response to the proteins of animal type due to allergies created as a 2 year old ingesting cow milk casein protein. Finally, there are many vegan dating sites and resources if you want to meet other *vegans* to create more synergy or organize local events, spread the word, help vegetarians go vegan, or you can create your own *vegan*☺☺ ☺☺ Immortality outreach fliers (5,000 fliers cost about $180 vistaprint.com after discount) and meet people that way on college campuses. In person it is 900 times better than online, as people can play games online, wasting your time while they do nothing for a more vegan world, pretending to "be/want to be vegan". Use online stuff only to meet at real life vegan events, not to send info: vegspeeddate.com, veggiedate.org, vegetariandating.com, veggieconnection.com, veganpassions.com, Vegan Mobile Apps ► grazerapp is for *vegans* and vegetarians; setup profile and specify "only *vegans* contact me please", book signings, meetup 0.86 million *vegan* or wanna be *vegans* attending, google 'vegan fests' for your area; Washington, LA, Berlin, London; google 'vegan activist websites' veganoutreach.org, mercyfornimals.org, peta.org.

11.5. HOW to calculate amino acid scores (8 # to recall: *7, 18, 25, 27, 32, 47, 51, 55*), PROTEIN DIGESTIBILITY & daily requirements of protein:

The 100 score refers to the ideal protein, that has the minimum ideal amount of the least abundant of the 9 essential amino acids. It doesn't refer to how much of this is digested, that is another score, not in this book, since those scores are not objective, but subjective, done by odd experiments in rats, etc and bioavailability of protein varies WILDLY from one person to the other at times. The classical score, in this book, as defined by the National Academy of Medicine, refers to the actual scientifically universal amount of the least abundant amino acid. JAND 2013;113(12):1610-9, a 72,000 people study, found that *vegans* get the same amount of protein eaten as omnivores, 15% of their calories or 76 g/day as seen in the left set of bars in Fig 1. Vegans also got 3 times more fiber than omnivores, 97% of Americans don't get the minimum of fiber. The 1950 protein RDA was double what it is today. In 1850 people believed only animal foods have protein. In any supermarket, you will find frozen beans, lentils (which you can cook in 2 minutes using a microwave) and many vegan "meat" products with very high amino acid score, 100-125, with fiber, low fat, 0 saturated fat, and as much protein as 5 Burger King Hamburgers for the price of a hamburger and much more complete protein. ☺☺

WHAT LEVELS OF AMINO ACID in mg/g PROTEIN mean AMINO ACID SCORE of 100?

If we go to the next page, NIH.gov & other sites we see that when METHIONINE + CYSTINE is 25 mg in 1 g of protein, ***amino acid score*** is 100. Soymilk protein has 16 mg methionine+cystine in 2.6 g protein, or 16/2.6=6.15 mg/g. The score is 100*(mg/g in protein divided by mg/g in protein

with score 100), so 100*6.15/25 or 100*16/(2.6*25)= 24.61 or 25 *rounded, ultra low, useless, while soy burger is 100+. The protein score is the* limiting essential amino acid score, which is the smallest number obtained by dividing each of the 9 essential mg amino acid/g protein in a food over the mg/g in protein with score 100 below. Thus, the score is also, using USDA data for 100 g, mg low amino*100/(g protein*# mg/g below) or % of low amino acid*100/% below *which are* from the Institute of Medicine until 2015 (now renamed National Academy of Medicine) definition of complete protein, 1st column of the Table:

Essential Amino Acid	3 letter code	*mg/g of Protein with SCORE 100 (% of total protein)*
1. Tryptophan	Trp	7 mg (*0.7*%)
2. Histidine	His	18 mg (*1.8*%)
3. Isoleucine	Ile	25 mg (*2.5*%)
4. METHIONINE (+CYSTINE, made from Met)	Met+Cys	25 mg (*2.5*%)
5. Threonine	Thr	27 mg (*2.7*%)
6. Valine	Val	32 mg (*3.2*%)
7. Phenylalanine (+Tyrosine, made from Phe)	Phe+Tyr	47 mg (*4.7*%)
8. LYSINE	Lys	51 mg (*5.1*%)
9. Leucine	Leu	55 mg (*5.5*%)

Cysteine or Cystine (dimer of cysteine) and tyrosine are nonessential, the body can make them from Met and Phe, but for some reason, they made this computation of score including them, because they become conditionally essential during time of stress or illness when the body can't make them easily. Hence, they say we have 9 essential amino acids only. Another example: peanut butter has an amino acid score of 52; the limiting (lowest) amino acid is lysine as can be seen from the graph on nutrition data. In 25.1 g of protein we got *669* mg LYSINE (select 100 g to see this), so it got 669/25.1=26.65mg lysine/g protein. 100 score protein got 51 mg lysine/g, as shown above, so peanut score is 26.65/51*100=52.25, or *rounded* 52.

HOW TO CALCULATE AMINO ACID SCORE OF A VEGAN PROTEIN POWDER

Health Food stores have *vegan* protein, for example, the cheapest *vegan* protein per 500 g at Sprouts store has 30 servings of 20 g of protein (this one is slightly cheaper than Boca soy burgers, which are 80 cents each and have more sodium/20 gram of protein). The bottles of all protein powders, including the sprouts.com one, list the amino acids in a 20 g (or whatever the

protein weight in one serving is) protein serving, so by dividing by 20, we get the mg of essential amino acids per gram and can calculate the amino acid score. The 3 letter codes are next: ☺☺☺

Essential Amino Acid		mg/g protein with score 100	mg/g Sprouts.com Protein
Tryptophan	Trp	7	11
Threonine	Thr	27	39
Isoleucine	Ile	25	51.5
Leucine	Leu	55	86
Lysine	Lys	51	70
Methionine+Cystine	Met+Cys	25	28.5
Phenylalanine+Tyrosine	Phe+Tyr	47	89.5
Valine	Val	32	53.5
Histidine	His	18	24

As you can see, if we divide sprouts.com right column by the left 100 score column, *the lowest number is* Met+Cys (this is the limiting amino acid that determines the score), i.e. 28.5/25=1.14. Thus, the score of this Sprouts *vegan* protein is 1.14*100=114, much higher than 69 for Burger King hamburger beef or hamburger beef 67. The sprouts protein powder is healthier than many others, uses stevia for sweetness and contains pea protein isolate, organic brown rice protein concentrate, chia seed & flaxseed powder (ω3s), sprouted black rice powder, more vegetables powders, digestive enzymes, etc. However, urine becomes non-transparent at times, stool has odor after eating it and some bloating exists, so I gave up on it (and all protein powders like soy and pea protein isolates, which caused the same issue) and switched to lentils which give clear urine and no stool odor. If you go to Amazon to check 1 & 2 star reviews of most protein powders, *vegan* or omnivore, tons of people have bloating and gas issues. It's better to eat the real food, as it often has 100 times more potassium and 50 times less sodium.

DAILY REQUIREMENTS OF PROTEIN

nih.gov...22 is a booklet with useful tables showing how many g of reference protein (amino acid score of 100 or above and 95% True digestibility, or 100% Relative Digestibility) per kg of body weight we're supposed to eat, 0.75 g/kg for adults, more for kids, see Table 6-4. ☺☺☺

PROTEIN DIGESTIBILITY

Table 6-6 (scroll down) lists reference protein True Digestibility as 95%. Relative Digestibility (right column) with respect to Reference Proteins for many foods is then the True Digestibility (left column) divided by 0.95. This yields 101 for refined wheat, 93 for polished rice, 82 for beans, etc. FSN 2017;5(4):896-903 states that "True protein digestibility was lowest for black beans (70%), and highest for the split red lentils (90.6%). Previous investigation into the digestibility of autoclaved pulse flour found similar digestibilities of peas 88%, common beans 79% (average), lentils 85%, and black beans 72% (FAO/WHO, 1991)." Thus, green lentils true digestibility is 85%, and 90.6% for split red lentils, so Relative Digestibilities are 89.5 (85/95)% for regular, 95% (90.6/95) for split red lentils. Regular lentils got an amino acid score of 86, Relative Digestibility 89.5%, so a 135 lb person (61.4kg) needs to eat 0.75*61.4=46 g of reference protein equivalent, that is (100/86)(100/89.5)*46=59.8g regular lentils protein, which is about 663 g cooked lentils. However, if the person is older or more active, they need more than 0.75 g protein/kg weight, so the requirement will rise to say 1.25*61.4=57.5 reference protein or 74.7 g or 828 g cooked lentils. A+ blood types have low stomach acid and digest protein less efficiently, so they may need 0.85-0.95g/kg weight if sedentary. Some fitness fanatics claim you need 2g/kg weight, so then that's 159.5 g lentil protein or 1768 g cooked lentils. Note however that these 2g/kg weight never live to 100-110, since that activates fast aging Tor. The individual digestibility of food amino acids is unknown. Digestibility is only for the overall protein and computed often from rat and pig studies, so it's not very accurate. Bee pollen true digestibility is 63%. Future centuries may give us much more exact databases. In real life, *vegan* diets get the limiting amino acid from other foods than lentils, so the actual amount of lentils needed to be eaten can be much lower than 56 g for a 135 lb person. These calculations are to illustrate how much one needs to eat of a food to get the limiting amino acid in the same amount as if one would eat 46 g of reference protein. The reason split red lentils have score 90.6% (vs 85) is that taking off the *coating (which contains most antioxidants,* hence avoid red lentils, stick to green) and splitting them in two makes it much easier for the body to digest the protein in early phases of the digestion. Red lentils when cooked become a puree type of thing (just a few stirs and it's 100% puree) that sticks to the pot, making it harder to clean than regular lentils that remain whole after cooking. Likewise, if we mix whole lentils in a smoothie with fruits, veggies, we increase digestibility too by 6-8%, reaching almost that of fish and meat.

THE IMPACTS OF AMINO ACID SCORES

100 is the perfect score for a protein and anything above 100 is even better. We need to pay much more attention to the amino acid score, since if an amino acid is not present, whether Relative Digestibility is 75%, 90% or 95% is irrelevant. The amino acid score can tell us roughly (since scores are rounded to the closest integer, and since lowest amino acid in high score food may not always be the same as the lowest in the low score food), how much more of a low score

food protein *(NOT FOOD, since some foods have 1% protein, others 20% protein)* we need to eat to get the same lowest amino acid as in a high score protein, disregarding digestibility. That's why amino acid scores are SO IMPORTANT. The higher, the better. Below are 4 examples of amino acid score impacts: ☺☺☺

1. tofu has an amino acid score of 68, so we need to eat *roughly* 125/68=1.8 times more tofu protein to get the same amount of Met+Cys (the limiting amino acid, lowest) as in soy burger protein that has an amino acid score of 125 (not all soy burgers do), disregarding digestibility. *This amino acid division calculation is valid only in cases when the lowest* (limiting) *amino acid* (with respect to 100 score protein) for both foods is the same, such as this case.

2. soy sprouts have an amino acid score of 90, so we need to eat *roughly* 90/68=1.3 times more tofu protein to get the same Met+Cys, because both have the same low amino acid.

3. soymilk has an amino acid score of 25, the lowest of any soy food, so we need to eat *roughly* 118/25=4.72 times more soymilk protein to get the same Met+Cys as in defatted soy flour of score 118, because both have the same limiting essential amino acid. Soymilk has 38.77 mg Met+Cys in 6.3 g protein, soy flour has 186.4 mg Met+Cys in 6.3 g of protein. 186.4/38.77=4.81. The actual unrounded scores, calculated exactly, are (1391/47.0)/25*100=118.38 or *rounded* 118 and (16/2.6)/25*100=24.61 or *rounded* 25. The reason we get 4.81 when dividing amino acid amounts and not 4.72 as when dividing 118/25 is that these amino acid scores are rounded and introduce an error, hence I always write *roughly*. If scores were not rounded, we get 118.38/24.61=4.81 which is same as 4.81 from dividing actual amino acid amounts.

4. rye has an amino acid score of 80, and as we can see from the blue graph, limiting amino acid is lysine, and we can confirm that, in 100 g rye we got 14.8 g protein with 605 mg lysine and 248+329=577 mg Met+Cys, so we got 605/14.8=40.88mg Lys/g. 100 score protein got 51 mg/g, so score of rye is (40.88/51)*100=80.15. Soymilk, as seen above, got a score of 25, and 76 mg of Lys and 16 mg Met+Cys in 2.6 g protein (select 100 g food). This means in 14.8 g soymilk protein, we got 432.6 mg Lys. If we would rush and think we can divide scores, we would divide 80/25=3.2 times and think "3.2 times more soymilk protein needed to get all Lys we need" (wrongly assuming Lys is lowest for soymilk too), but if we divide 605/432.6=1.4 times for Lys. In 14.8 g soymilk protein we got 16*14.8/2.6=91mg Met+Cys. So, to get the 577 mg Met+Cys in 14.8 g rye protein, we need to eat 577/91=6.3 times more soymilk protein. 6.3 times is much more than 3.2 we would get by dividing 80/25=3.2. So for both Lys (1.4) and Met+Cys (6.3), dividing amino acid scores doesn't work being way off from the incorrect 3.2. ☺☺☺

DANGERS OF EATING TOO MUCH PROTEIN (*especially* animal *protein*: kidney damage)

No muscle mass increased by eating more protein without exercise, only exercise increases

muscle mass. If you're a muscles lover, think again before eating 5 steaks a day. FGF21 hormone rises when we eat 9% of calories as protein (since most eat 90g protein, this is 360 cal, so 4000 cal total needed), and FGF21 seems to delay aging. No studies exist that research the effect of plant protein increases within "*vegan* only" diets. CHF 2018;11:e004531 found that among omnivores, those eating 82g animal protein got 43% higher risk of heart failure compared to those eating 49g animal protein. Eating 109g total protein meant 33% higher risk vs 78 g total protein. The risk was 49% higher for the most dairy vs least dairy, 70% higher for the most fermented dairy, 17% higher for the most plant protein (within omnivores, that 17% may be due to eating more animal protein when they ate more plant protein). Ntr 2016;8(9):564 found that *vegan* centenarians of 93 lb (BMI 20) ate 39 g total protein, which means 57g protein for a 135 lb person. While in rodents mortality increased only for animal protein increases, it could be that even among *vegans* overeating *vegan* protein leads to higher mortality due to kidney overload. A study of 131,342 adults found that a *10% increase in animal protein consumption was associated with a 2% increase in mortality* and 8% rise in risk of cardiovascular mortality. *A 3% increase* in *vegan* protein led to a *10% fall in mortality* and 12% decline in cardiovascular death (this "*increase*" refers to the percentage of protein omnivores eat, i.e. if they swap animal with vegan protein they get lower mortality *(logical, since animal protein is a market for sturated fat, cholesterol, oxidized cholesterol, etc which are very bad for the heart), it doesn't mean* eating *more vegan protein for a vegan leads to longer life*) ► JAMA 2016;176(10):1453-63. On the contrary, it data suggests that *vegan* centenarians eat less protein.

Activation of the mTOR (Death) pathway, the ROTTing path, the rotten egg smell (violence) path:

Ntr 2009;1(2):263-75 and JISSN 2015;12(S1):P35 explain that animal proteins activate the mTOR biochemical pathway. Animal proteins got 3x more sulfur from Met or methionine (and cysteine), mT & Met, easy to recall, since mTOR is like Rot-them, rot-m, the omnivore stool and gas is rotten egg smell, fat in animal protein rots their stool as it slows digestion so much, omnivores get more colon cancer as that sticky fatty biofilm rots, putrefacts them. In the made up Essene Gospel of Peace, fictional Jesus says to do enema to remove the demon smell, (see fasting/enema sections) to remove the smell of rot/disease, hence the myth of devils smelling like sulfur. Part 4 has a fiction Jesus saying to avoid meat: "He shall not invoke the power of Satan by eating the flesh of beasts, for he who kills, kills his brother, and who so eats the flesh of slain beasts, eats the body of death. Tell him to prepare his food with the fire of life (sun that grows produce, seeds, sun fermentation of bread), not the fire of death, for the living angels (The Immortals) of the living God (of Eternal Life, or Immortality *for* All) serve only living men (the compassionate species get more help)." Hence Jesus told them (it's a forgery, like all Gospels) to not fry/barbecue food, it creates AGEs as we know, because it is demon worship to eat blood (meaning meat, which is 0.4% blood). This is like Isai 66:3: "He who kills an ox is as if

he kills a man". Dead people smell, the more one eats death, the stinkier one is. Thus, the virtuous is selfless, he dedicates his life to ending animal slaughter, ending agriculture via the science based divine eterni foods of Knowledge, Wisdom and Grace, he knows God's first goal is ending bloodshed by war/violent crime/animal killings. God is Eternal Life so God's goal is ending bloodshed, ending death: every spank, slap, punch, etc of humans/animals breaks blood vessels, spills blood inside, and is seen as murder by God, murder that removes the Grace of The God of Resplendent Magnificent Ever Ecstatic Bounteous Radiance of Eternal Immortality *for* All, The God of the gentle tender soft nurturing loving healing kindness for All or Immortality *for* All. Thus, the virtuous human brings that world and makes that 0 violent crime the #1 goal, not wasting 1.4 trillion/year in selfish vanity. Will you ☺☺*lovingly tenderly gently kindly*☺☺ walk in virtue from now on and help us create a world with no bloodshed of animal/human blood? The virtuous becomes the angel of Immortality *for* All, he wants to not pollute the human quantum field with any bloodshed of similar species, he's the greatest lover of science for Godliness, he supports science, God's tool to bring God's Kingdom of Immortals on Earth, the beautiful colorful telepathic radiant teleporting genderless shimmering shapeshifting Immortals aged 800 trillion years☺☺☺. The mTOR accelerates the division of cells and then cells reach the Hayflick limit (60 times), then die. So, animal proteins accelerate aging. Another way to block mTOR is to exercise to force the body into the ATP restoration/rest phase of regenerating ATP energy, so AMPK (adenosine monophosphate kinase) pathway is activated, which blocks the mTOR pathway (exercise stores glycogen in the brain, produces new neurons, synapses). JMCB 2010;2(1):17-9 explains why many believe aging speeds up when mTOR is too active. Fasting also turns off mTOR and activates AMPK. Some mTOR inhibitors (temsirolimus, everolimus) are used in the treatment of cancer ► Onc 2006;25:6436-46. Ramapacyn inhibits mTOR and helps preserve neurons ► NRN 2011;12(8):437-52. That's why TOR activation is linked to cancer and neurological diseases (Alzheimer). "Ingestion of a *leucine-enriched essential amino acid* nutrient solution rapidly and potently activates mTOR" ► CONMC 2008;11(3):222-6; *vegan* protein rich in leucine (*not just free leucine amino acid)* could also activate TOR, so avoiding eating too much of any protein (unless a senior) may be smart. CM 2023;35(11):P1976-95.e6 found that mice who eat less isoleucine lived 33% longer, were much healthier: humans may live longer too if they restrict this or other branched chain amino acids that activate mTOR.

The cancer section explains the dramatic carcinogenic effects of animal protein in mice and humans; mice fed 10% milk protein *got cancer*, those fed over 20% vegan protein *got their tumors* disappear. *Methionine (thio is sulfur, nine atoms different than H)* Met also activates mTOR, and one feature of vegan foods is 3-3.5 times lower Met $H_3C\text{-}S\text{-}CH_2CH_2CH(NH_2)COOH$, which was found to lead to longevity. Met *restriction had similar longevity effects to caloric restriction in several model organisms* ► ANYAS 2016;1363:116-24. Met restriction means

cysteine Cys HS-$CH_2CH(NH_2)COOH$ restriction too. This may be a reason *vegans* live longer as the Independent says. TOR is inhibited by many polyphenols, richer in *vegan* diets. Animal proteins contain high Met+Cys, tiny higher level of the 3 BCAAs (*branched* (alkyl group is not straight, it branches) *chain amino acids: leucine* Leu $(CH_3)_2CHCH_2CH(NH_2)COOH$, *isoleucine* Ile $CH_3CH_2CH(CH_3)CH(NH_2)COOH$ Leu isomer, *valine* Val $(CH_3)_2CHCH(NH_2)COOH$ Leu minus CH_2. Met (and to a lesser degree BCAAs) are known to activate TOR, high TOR activation leads to disease. Lentil protein got *0.85*% Met, 7.25% Leu, 4.32% Ile, 4.97% Val, *16.54*% (7.25+4.32+4.97=16.54) BCAAs, chicken protein *2.77*% Met, 7.51% Leu, 5.28% Ile, 4.97% Val, *17.76*% BCAAs, pork protein *2.65*% Met, 8.02% Leu, *18.13*% BCAAs, fava beans (broadbeans that can cause favism disease or hemolytic anemia in people with unique DNA) *0.82*% Met, 7.53% Leu, 4.03% Ile, 4.45% Val, black beans *1.50*% Met, 7.99% Leu, 4.41% Ile, 5.24% Val, red kidney beans *1.50*% Met, 7.99% Leu, 4.42% Ile, 5.24% Val, chickpeas *1.31*% Met, 7.12% Leu, 4.29% Ile, 4.20% Val, *15.61*% BCAAs. Lentils are the best, *lowest* Met, superior to chickpeas, which are superior to black/red kidney beans, red kidney being identical in % to black. Lentils also have more antioxidants, least antinutrients, half the soaking time, half the gas, and more protein in 100 g, 9.02 g vs 8.67g red kidney, 8.86 g black/chick, 7.60 fava, so immortalists avoid beans, cultivate only lentils. Hence, I eat lentils daily, see how to soak them here, if you want to become a happy vegan. The animal vs *vegan* difference is ►►► Met (3.3 *times higher in* meat) ◄◄◄, that's why most papers on precise amino acid restriction for longevity mention Met, not BCAAs that much. Salmon protein = *2.96*% Met, 3.5 *times higher*. Avoid hyacinth beans, as even after boiling them twice and changing the water, cyanide releasing chemicals remain causing asthma, seizure, kidney failure. Mice fed a diet without Cysteine lost 30% of body fat in a week, even on a high fat diet. A vegan explains how humans might lose weight if they're obese like the mice: eat less protein.

Muscle building enthusiasts tell you that you need to eat tons of meat and dairy to do that, but look at these numbers, *BCAAs ("rich in BCAAs" written on animal protein powders), 35% of muscle, are almost equal in vegan and animal protein.* ☺ BCAAs can also cause insulin resistance and diabetes in the long run, animal protein causes more insulin spike than sugar, see all 20 studies about it in this video. They may want to talk to *vegan* athletes. One reason for this disease causing effect of methionine or cysteine is that as proteins incorporate sulfur, more abnormalities occur, more transcription errors, since the free electrons on the sulfur are more able to roam around (than O) and change the structure. O is more electronegative, holding its valence electrons tighter. Sulfur is also bigger, which causes several problems: proteins can't fold as easily and freely to complete enzymatic and transcription steps, leading to more errors and lower enzymatic yields. In the stool odor section we have seen the problems of too much sulfur: *gut damage*, *nephritis*, tiny *hemorrhages* in many *organs* (caused by endogenous sulfite made from cysteine and methionine), *immune system and brain weakening by destroying the gut*

good bacteria. Genomes with weak sulfite oxidase activity upon aging are in *big trouble* (die 20 years early) *when eating animal proteins*. Sulfite oxidase deficiency is fatal. In KI 2002;62(1):220-8, omnivore type 1 diabetics, eating 2.5 times more protein, 1g/kg vs 0.4, had 5 times higher risk of death and dialysis, meaning either the protein intake is a marker for oxidized atherogenic fats, TMAO, oxidized atherogenic cholesterol and AGEs from cooked meat *or* the animal protein itself damages the kidney via another mechanism, related to high sulfur, antibiotics, hormones, etc, since with *vegan* protein, they didn't observe this in other studies.

PROTEIN POWDERS = POISON (due to primitive food extraction tech that adds toxins)

Soy protein isolate has the highest protein digestibility adjusted amino acid score of any *vegan* protein, same as highest meat protein. The hope is one day all processed foods will be required to list the amino acid score, digestibility adjusted one, so people know how much they're getting. Pea protein isolate (PPI) *(7 lb for $45 on Amazon processed in China, stripped of all potassium, but having 50 times more sodium than cooked at home peas)* has a score of 95, as you can calculate by dividing the limiting methionine+cysteine 23.7 (569/24) mg/g by 25mg/g to get 0.95. However, other brands got a score of 85, 92, etc. Soylent food made from soy has a score of 92 based on their website data. You can also cook peas at home using an automatic pressure cooker and the amino acid score is 102. PPI doesn't cause gas and bloating if eaten in small amounts, while the peas cooked at home is bloating for many people, due to oligosaccharides and soluble fiber that are still present (50% of the pea is starch, and starch takes a while to digest, so it lingers in the GI tract, causing bacterial fermentation that produces CO_2). Cooked peas score 102 is higher than cooked lentils 86, and about same as several beans like chickpeas 106 (they got 12 g ω6 and 0.5 g ω3, so gently try to eat some ω3, if you eat chickpeas often, to get ratio in healthy range), black and white beans 104, etc. The removal of fiber and starch from peas for making pea protein is explained in sections 3.5 and 3.6 of this paper. Some methods (NOW Foods) use filtration only with no acids, which is better as protein is not denatured. If you add protein powders to a smoothie, you never need add any sweetener, since adding some sweet fruits will make it sweet.☺ I tried myvega.com protein powder, but it was as gassy as the sprouts protein and when I ate 3 scoops instead of one, it gave the worst gas ever almost, but I did try the Gut Health version with fermented veggies which would overwhelm the gut with new gas forming bacteria for next 7 hours or so. The issue with these is they don't soak pea protein etc first before making the powder, so raffinose, etc remain. ☺☺☺

ALTERNATIVE WAY TO CALCULATE DAILY AMINO ACID NEEDS

Add the amino acids from the *vegan* stuff you eat and get an idea if you eat enough of each essential amino acid for your age and gender: rda.htm. These values are minimum, you need more if protein digestibility is lower than that of the reference proteins. The way we get similar

daily needs values to globalrph.com is we multiply the amount of protein one needs to get if a young adult 0.75 g protein/kg body weight/day with the weight of the person in kg and the ideal amount of amino acid/g protein (see the list in the columns above) found in a protein with amino acid score 100: 14 mg/kg/day of histidine (180.75=14.4), 19 mg/kg/day of isoleucine (250.75=18.7), 42 mg/kg/day of leucine (550.75=41), 38 mg/kg/day of Lys (510.75=38), 19 mg/kg/day of methionine + cysteine (250.75=18.7), 33 mg/kg/day of phenylalanine + tyrosine (470.75=35), 20 mg/kg/day of threonine (270.75=20.2), 5 mg/kg/day of tryptophan (70.75=5.2), 24 mg/kg/day of valine (320.75=24). That's why when you get their values custom for your weight they will say "RDA for young male adults is 14 mg/kg/day of histidine" instead of 18 mg/g protein below (from nutri...#protein-quality), since units are different. For other ages and genders and pregnancy and etc, the g protein/kg/day values are different, they're listed at nih.gov...22 in Table 6-4. globalrph.com values need to be multiplied by 100/82 if one got those amino acids from a protein with the digestibility of 82% of the reference protein, such as beans. We can calculate individual amino acid intake using the nutrition data website (for example kale in 100 g has 197 mg of lysine) with values for each amino acid so we KNOW, and don't assume.

THE "RICE and BEANS ARE A MORE COMPLETE PROTEIN THAN BEANS ALONE" MYTH

A popular myth (debunked decades ago) has been "to get complete protein you need to eat rice and beans or rice and lentils". The myth means that "if you eat 100 g of lentils and 100 g of rice you get higher protein quality (more of the 9 essential amino acids) than if you eat 200 g of lentils". Let us look at the science data now. 100 g of cooked lentils and 100 g of cooked rice contain the following mg of the 9 essential amino acids, per USDA rice & lentil tables: ☺☺☺

1. Methionine CH_3-S-$CH_2CH_2CH(NH_2)COOH$ ► 77mg/100g lentils vs 63mg/100g rice
2. Valine $(CH_3)_2CHCH(NH_2)COOH$ ► 448mg/100g lentils vs 164mg/100g rice
3. Histidine $C_3N_2H_3$(5-imidazole ring)$CH_2CH(NH_2)COOH$ ► 254mg/100g lentils vs 63mg/100g rice
4. Tryptophan C_8H_6N(3-indole ring)$CH_2CH(NH_2)COOH$ ► 81mg/100g lentils vs 31mg/100g rice
5. Leucine $CH_3CH(CH_3)CH_2CH(NH_2)COOH$ ► 654mg/100g lentils vs 222mg/100g rice
6. Isoleucine $CH_3CH_2CH(CH_3)CH(NH_2)COOH$ ► 390mg/100g lentils vs 116mg/100g rice
7. Threonine $CH_3CH(OH)CH(NH_2)COOH$ ► 323mg/100g lentils vs 96mg/100g rice
8. Lysine H_2N-$(CH_2)_3CH_2CH(NH_2)COOH$ ► 630mg/100g lentils vs 97mg/100g rice
9. Phenylalanine C_6H_4-$CH_2CH(NH_2)COOH$ ► 445mg/100g lentils vs 144mg/100g rice

As science says in the 9 lines above, eating 200 g of cooked lentils provides you with a far more

complete protein than eating 100 g of lentils + 100 g of rice. Even when you look at 6 other amino acids, that are sometimes harder to make by the body in certain people, lentils beat rice:

1. tyrosine 4-OH-C_6H_4-CH_2CH(NH_2)COOH ► 241mg/100g lentils vs 90mg/100g rice

2. arginine HN=C(NH_2)NH$CH_2CH_2CH_2$CH(NH_2)COOH ► 697mg/100g lentils vs 224mg/100g rice

3. proline penta ring-$CH_2CH_2CH_2$CH(NH-)COOH ► 377mg/100g lentils vs 127mg/100g rice

4. glycine H-CH(NH_2)COOH ► 367mg/100g lentils vs 122mg/100g rice

5. cysteine HS-CH_2CH(NH_2)COOH ► 118mg/100g lentils vs 55mg/100g rice

6. glutamine ► H_2N-C(=O)CH_2CH_2CH(NH_2)COOH ► 1399mg/100g lentils vs 524mg/100g rice

Most beans beat rice too, as they're very similar to lentils. Lentils have more fiber and less carbs, lower glycemic index than beans. They're easier to digest than beans. ☺☺☺

To understand biochemistry of living to 80,000, we need to know the above (scroll up) basic formulas of amino acids, the names end in *ine* because they're all am*ine*s of carboxilic acids. *Mnemonics*: allyl is -CH_2-CH=CH_2 (allyl is from Allium, alliin, allicin, see all important unsaturated fats build from *allyl* and can be derived from *ALA* by removing H or adding stuff, in the fat mnemonics section). Alanine, *Ala*, same symbol as *ALA* fatty acid, built on the same allyl 3 carbon structure (see B_3), is CH_3-CH(NH_2)COOH; all 15 important amino acids derive from the above highlighted blue-purple CH_2CH(NH_2)COOH *Ala*. Chemists use the *first 1 or 3 letters* (recall B3+3=B6) of the name usually in protein amino acid sequence. *Phenylalanine* (*Phe* or F) replaces *Ala* methyl H with phenyl, tryptophan (*Trp* or W) with 3-indol (indol is adenine with only 1 NH on the 5 ring), *tyrosine* (*Tyr* or Y) is para-hydroxy-phenylalanine, *cysteine* (*Cys* or C) with SH, *serine* (*Ser* or S) with -OH, *valine* (*Val* or V) 2 H with 2 CH_3, threonine (*Thr* or T) 2 H with OH and CH_3, *methionine* (*Met* or M) replaces *Ala* methyl H with -CH_2-S-CH_3 (2 *methyl*s bound to thio, S), *glutamine* (*Gln* or Q) with -CH_2-CO-NH_2 (amide/amine group at end and only amino acid name ending in amine, easy to recall it ends with NH_2, from name, *lysine* (*Lys* or L) with 3-amino-propyl H_2N-$(CH_2)_3$ (sort of 2 *Ala*, so 3+3, C_6 like leucine and isoleucine), *leucine* (*Leu*) with C_3 isopropyl, *isoleucine* (*Ile*) isomer of leucine (methyl jumps 1 carbon towards COOH), the 3 *Leu*, *Lys*, *Ile* are 2 *Ala* or *3+3* (like B6=B3+3, see 3 triangle) or 3 C_6 (6=3+3), or 3 C_{3+3} contain LINE in name, or 3 *LINE*s like triangles, start with l for *lines* of double bonds in many amino acids [all amino acids contain ine at the end], *line* for tri(3)angle]. Other amino acids contain line in the name, but they don't start with l, ly or le, as in *LINE*; which of *Lys*, *Leu*, *Ile* has NH_2 at the end, since all end in ne? Lysine name has 6 letters, leucine 7, swap: Lysine is like C_7 (NH_2 replaces an imaginary CH_3), leucine (and its isomer isoleucine) like C_6), *histidine* (*His* or H) is a C_6 *Ala* where H is replaced by 5-imidazole, 323, $C_3N_2H_3$ (5 ring, with 2 alternating double bonds like in benzene, 2 carbons

replaced by N, position one is NH, position 5 is carbon, 323 is like the C_3 of *Ala* 2 times in *Leu*, *Lys*, *Ile*), *proline* (*Pro* or P) is *Ala* where 1 H on NH_2 and 1 H on CH_3 are replaced by CH_2 groups to form a penta ring called pyrrolidine, so COOH is in position 2 from the NH' proline is the only one ending with LINE, but is the only one that has no line, it's just a penta ring with one group, the other ones have 2-6 carbons on a straight line, *arginine* (*Arg* or R) is a C_6 *Ala*, with H replaced by $HN=C(NH_2)NHCH_2CH_2$ (allyl like (double = bond at end), C_3N_3, total 6 (like a C_9 with CH replaced by N, 9 is inverted 6, 6C+3N=9=3*3), where last C is bound to 3 N only, so one has to be = bond, the last one, one double bond only). We got 9 (3*3) essential and 6 (3+3) non-essential. ALA fatty acid, alpha linolenic acid, is C_{18}, 3*(3+3)=18. All DNA base pairs contain 6 (3+3) rings (and some 5 too). The most common # of C in the 15 essential or semi-essential amino acids is 6 (3+3); # of C is: 2 for *Gly*, 3 for *Ala*, *Ser*, *Cys*, 4 for *Thr*, 5 for *Pro*, *Val*, *Gln*, *Met*, 6 for *Lys*, *Leu*, *Ile*, *His*, *Arg*, 9 for *Phe*, 11 for *Trp*. So, for all # of C, it's only 1 amino acid, except for 3 # that each have 3, 4, 5 amino acids; 3, 4, 5 are *consecutive*, and start with 3. 3+3=6, 33. All 15 build from *Ala*: in *Gly*, *Ala* CH_3 is replaced by H; in the others, 1 H or 2 H of *Ala* CH_3 (or NH_2 for Pro) are replaced with: -SH *Cys*, $-CH_2-S-CH_3$ *Met*, -OH *Ser*, $(-OH)(-CH_3)$ *Thr*, $(-CH_3)_2$ *Val*, $-CH_2-CONH_2$ *Gln*, $-CH(CH_3)_2$ *Leu*, $(-CH_3)(-CH_2CH_3)$ *Ile*, $-CH_2(CH_2)_2NH_2$ *Lys*, $-CH_2CH_2-NH-C(NH_2)=NH$ *Arg*, phenyl *Phe*, 4-OH-phenyl *Tyr*, 3-indole *Trp*, 5-imidazole ($C_3N_2H_3$) *His*, $(-CH_2-)_2$ (1 binds to NH) forming 5 ring *Pro*. Chem is easy.☺

11.6. 163 *vegan* foods *with higher amino acid score* (70-136) than Burger King hamburger 69 score (from actual USDA data that was removed from US public, see the nice amino acid chart)

Stanford Professor made a graph of all amino acids in meats and plant foods and showed vegan sources have the same and all 20 amino acids. Before the list of 163 foods is a brief 4 page discussion about Burger King score of 69 (68.4, due to a rounding error in calculating it by using rounded numbers), and hamburger beef score of 67. We divide the % of limiting essential amino acid by 7, 18, 25, 27, 32, 47, 51 or 55 to compute the score. After 4 pages, the yellow font, magenta highlight 71 amino acid score, is on the left before a list of foods with that ## score listed as "food name" links to fdc.nal.usda.gov. The nutritiondata.self.com section is gone, because they *exposed too* obviously *the Food Industry* Mafia, which is the US government branch actually (every spy knows big companies in any nation are government companies, the 'private company' is a mere label so we might as well get 11 companies, since the military decides the stock price of any major company in most nations, it's not a free market, but a military market everywhere in every nation, all big business CEOs are actually soldiers or spies or fully controlled by the spy agency and military of that nation) *(amounts of limiting amino acids removed from USDA database, the low ones, like tryptophan for some foods) and the low amino acid scores of junk foods that are sold in 200 nations, so now you have to calculate the* amino acid score yourself using the formula above. The regular burger score is 69 per the old USDA site, because they divided the limiting amino acid % by the % in the ideal protein of score 100, so

0.48%/0.7% =0.6857 or 69 so they did not round 0.48 up to 0.5% which would have given 71 score. They did round it up to 0.48 instead of 0.4785 (0.0015 extra), since 0.4785 gives 68.36 score. The scores from old nutritiondata site that everyone knew, that are below also, were correct, plus minus 1. There can be a 0.0015/0.7 difference in the computation due to rounding 0.4785 to 0.48, so you end up with 68.57 not 0.6836, which rounds to 69 not 68. If the rounding difference is higher, real 0.45 and rounded 0.5, we got 0.05/0.7=0.071, which when multiplied to 100 is 7.1, a big difference of 7 for amino acid scores. This would be for extreme cases, Tryptophan foods mostly. Largest errors are for foods with Cysteine and Methionine rounding since these are low in vegan foods, as that doubles the error or even triples it. For example, if the low IQ nutrition site rounds to 1 digit, 0.45 becomes 0.5, so we get 0.05 for Cys and 0.05 for Met, meaning 14.2 error if % are rounded a lot. If the mg of Cys and Met are rounded too, say from 0.0249 to 0.02 and 0.0248 to 0.02 g, the errors can be truly gigantic if they round the fake % before dividing by the % in ideal protein, since we get the unrounded % much lower than it is 0.04 g instead of 0.0497g. The gap between the actual score and the calculated (by low IQ sites score) can be of more than 20, so you can see the gigantic errors and disinfo that can occur by guys who pretend they round stuff without knowing. Either way, 68 is low vs 140 in real home cooked meat. This high error for scores is because for Tryptophan we divide by the lowest number, so a 0.55% is 5.5/7 not 5.5/55 as for Leucine, so for most foods, rounding has an effect 2.6-8 times smaller and the amino acid score remains the same, plus minus 1 when the score is close to half way between 2 integers like 0.6851 vs 0.6844, except for foods low in Tryp where rarely the difference is big. When the result is that close to 0.xx51, any amino acid, any food can give the result higher. That's why it's best to use old USDA amino acid amounts, not the rounded % of amino acid in calculating amino acid scores, as all non USDA sites do, since they use the new rounded data for protein. Only the protein data is an issue, the other data is unchanged, actually USDA often gave 3 digits for many vitamins like niacin, 0.594 mg while some sites rounded it to 0.6 mg. You can double check "burger king" (or any food) with fdc.nal.usda.gov to see all burger king entries that still are public (*most of the USDA site data for multinational companies that sell foods outside of USA, if not all, have cysteine data removed, since they're branches of the CIA and need to look good (all NGOs, companies, religious stuff, etc are all spy agency hubs for all nations, not just USA, so if you see a "Spiritual place of etc" it's a KGB, PLA, etc thing), so nobody on Earth can calculate the amino acid score with 100% certainty, though the ratio of methionine:cysteine is pretty constant, so you can calculate an approximate value, plus minus 1*), when a mistake is obvious, since USDA also has protein data in 100g of food. ☺☺

We pay taxes (instead of paying none without representation as the Revolution demanded) and we get slapping (see damage) competitions on TV, as reminder of Hitler the slapper, endless useless sports to distract us from our slavery, endless fake violence (FBI makes fakes 'shootings'

etc), endless fake news about voting rights (all elections are faked), etc instead of the real data hidden from us. To enslave others they need to torture us with microwaves, sleep deprive us so they can mind control us perfectly, distract us all the time, malnourish and poison us all the time, with junk food, etc: check out the McDonalds USA vs UK fries difference. The stone age NIH site lists some "sources of vitamin etc", but when you see the name there is no hyperlink to the central Immortality *Nurturing* Agency site about that food with all the nutrients, amino acid score, heavy metals and all variations of that processed 'vegetable" sold, etc), so Big Business rules us. Who cares about these sports teams if our arterial plaque is 10 times it could be and we die 30 years earlier? We see sedentary *vegans* (who're not tortured 24-7 by FBI rats) who eat healthy have less plaque than those who exercise 20 times more. Bees live 40x longer by a different diet, they mimicked it with normal worker diet plus some chemical, just more food, larger cell, and it grows into a queen. Why not vote for the Immortalist Party and require every food sold to have its barcode scanned via a phone app, to tell us all 800 important nutrients, the amino acid score, the arterial plaque score, the AGEs/100 g, the diabetes score (which would be written on the label too, these 4 scores; *diabetes score is not just glycemic index, but also the amount of insulin producing cell destroying chemicals in the food, such as saturated fat, etc*), etc, trans fats, ω3, ω6, 9, etc. We have no rights to know. For produce, etc, the price tag will have the barcode to scan and numbers to see and enter if scanning doesn't work. Nobody anywhere in the USA would be allowed to sell anything, without this number (farmers market, food trucks, ANYTHING, ANYWHERE), so all can make informed choices and stop blaming the government or Big Business for "poor healthcare": eat better, get sick 10x less. If people know it's bad, they don't buy: the market selects healthy products, supply & demand. How does the US government run by Jewish British gangsters for 250 years deceive the Americans? By 'listing' cauliflower amino acid score as 83 when it is 103. Cauliflower (new deceptive USDA numbers that round the data) would give us an amino acid score of 83 [100*(40/1.92)/25=83], compared to 67 for hamburger beef. This 20 points lower score is based on the new deceptive version of USDA database (taken over by spies, like USA from 1776), to hide data for the limiting amino acids like tryptophan (or all in case of Burger King) that determine the score, where they round the former data to give wrong results or hide the amino acid data completely, as with Burger King or hamburger beef etc. Previous (archive.org) USDA data reported Met + Cys to be 215 mg Met and 174 mg Cys/15.1g protein, not 40 mg in 1.92 g protein, giving a score of (100*(215+174)/15.1)/25 =103.0 for both green and white regular cauliflower, so it is 103 actually, since they rounded 24.9 mg to 0.02 g and 24.9 mg to 0.02 g, not 0.03 g, so that they deceive as much as possible. 24.9 + 24.7 = 49.6, which is (100*49.8/1.92)/25= 103. *This rounding is now across 100s of foods, so nobody has the old data except archives.org or who has the old links* (me in earlier versions of the book or you if you got an older version). Met & Cys are listed on the new fake USDA database as 0.02g for 100 g (meaning 20 mg), and 0.118g and 0.118g for 588 g medium head

cauliflower, meaning 103 mg and 103 mg for 511 g cauliflower used in the 174 and 215 mg old entry, 0.168g and 0.168g for 860 g large head cauliflower, while all other amino acids with 3 digits, like 0.071. So, you see how they can go from 215 and 174 to 103 and 103, just like they steal everything, by paying British/Jewish aristocrats 50000 an hour the average wage. You see, Met and Cys never have identical numbers, it's never true for any food: the values for a cup in SR 21 or 64 g were 21.8 and 26.9 mg. If using the large head, for less error, score is (100*(168 +168)/16.1)/25=83.47 or 83. The numbers on the large and medium head are derived by multiplying the numbers for the 100 g, to give the fake result, since this data they used for USDA is the exact same old USDA data that had 3 digits. Sabotage within USDA by corporate mafia spies from outside USA or inside. Jews keeping gentiles ignorant? Maybe, now 80% of us trim penises and some countries without penis trimmed live longer. Instead of correct data about nutrition that can help us live to 9000, government trims our penises and creates fake Jewish studies about the benefits of circumcision. Removing the 3rd decimal (it if was removed, and not simply displayed without the ending 0) only from the limiting amino acids can introduce gigantic errors in computation, make scores 10-25 points higher or lower. Evil spies have infiltrated US government. We have a criminal government of terrorists, murderers & psychopaths who only serve the aristocratic class that runs the government and fakes elections. After 250 years of hooliganism, we might as well try something new. Let's vote for the Immortalist Party. FDA is the revolving door, where industry guys work for FDA and go change records to make industry look good, Big Rich Guys from UK, Israel own USA government or who runs these??? ☺☺☺

Choose SR Legacy Foods, when doing the USDA searches, since SR Legacy alone have the amino acid data for some of the 50 foods you get when typing a word "McDonald" etc. Not only that, but for some items with low score, they removed the actual USDA amino acid data, so the amino acid score can't be calculated anymore, total ignorance, like 1984. They make it hard, so it's hard to find out the truth. The rich get rich, while feeding poisons to the poor, in a nutshell, you only need to watch what they sell in some fast food chains. Nations of the world and slaves (99.8% of people) in USA eating junk food are not allowed to know the trash quality of some of the hamburgers so amino acid score data is gone from the Internet now, obviously, meat quality in those burger slices changes too, so we need Immortality *Nurturing* Agency to restore and improve those data sets. The entire planet is so ☺abysmal in IQ☺, not just Americans, they have no idea what they're eating, even google removed nutritiondata sets from the search engine now, that site was ultra slow for 4 years, 2019-2023. Most humans live in a Totalitarian State run by Big Business (run by local military and spy agency). Check out the foods banned in the EU/UK and allowed in the USA. To enslave the people, they remove all information, Big Business mostly broadcasts lies, hype on TV to sell stuff, no data shown, no accountability: 50% at least is useless trash. The government needs to run ads "Immortality *Nurturing* Agency found Burger King

company sells in some burgers protein of amino acid score way lower than 200 vegetables: *malnourishment for the whole PLANET.* Burger means aristocrat. *We also found 200 other companies worldwide are scamming the workers of the world, their names are: X, Y, Z... their meat patties have amino acid score below 70.* The AGE levels in most burgers tested from major companies are truly toxic and lethal. *Boycott Burger King* please. Cook at home using a pressure cooker for 30 times fewer AGEs". They don't do that, since big companies are making USA look low IQ. The *SR Legacy USDA average values which are the exact values on the now defunct nutritiondata site,* which has 100 g selected by default, then it lists g of protein, so if I write 45% protein below in the list of 163 foods, it means 45 g protein in 100 g. 2.4% ω6 means 2.4 g in 100 g. Commonly eaten foods with protein above 20% are highlighted in blue, protein above 7% are highlighted in magenta, common foods protein % below 7% in lavender. The rest protein % are unhighlighted. Archive.org has all nutritiondata scores too, which you can confirm. Below I removed from the 163 vegan foods deadly granola bars with peanut, etc (see Table 1 on AGEs as to why), nut protein bars (some have the deadly cacao or chocolate) and nut mixes, even if some got OK score, roasted/salted nuts, peanuts, almonds, because those nuts are DEADLY for reasons explained in the WALNUT SECTION. *The LOWEST score is 67, JUNK hamburger* AGE rich *toxic MEAT, see in increasing order the scores of 163 foods richer in protein* (based on original USDA data, because 5 of the *163* display rounded or missing data thanks to US aristocrats; most USDA links give correct amino acid score written on the left, when amino acid data is present, except for some ultra low protein foods where margin of error due to rounding becomes huge: after stealing resources/slave labor from 190 nations, all US gives is fake rounded numbers: US/UK gov motto: steal everything (50000 times the average wage for aristocrats, 5000 for semi-aristocrats, 500 times for vassal aristocrats, 50 times for sub aristocrats, 10 times for facilitating mini aristocrats), give 3% back, high ethics/bright future, world hates US/UK/similar systems):☺

►►►►67 ☺☺Hamburger Beef (watch original data now missing, so all continue buying meat burgers to become malnourished)☺☺ Green tomato raw (limiting amino acid is leucine, 3.7%, so you divide 37 by 55 and get 0.67, or 3.7/5.5, *5.5% is Leucine in 100 score protein*; 37/55 is easier, less typing of 2 dots), Yellow tomato raw (Leucine 3.7%, so 67 again), Red tomato is 52 for reference, select 182 g at old site and see 3 numbers for Met 10.9 mg and Cys 16.4 and how new criminal USDA (Republican Party style, remove regulations/all info, round data up, obsfucate everything, keep all ignorant as slaves of Big Business) took those numbers in 2020 (Republican times, they defund everything that checks aristocrats, so Aristocrats can lie, cheat, obsfucate, hide everything, loot everyone, place the lowest IQ/most evil to work at USDA, EPA so they can be easily manipulated and round things up, not realizing that totally changes amino acid scores for many foods by 20%, etc) and rounded the Met/Cys to 11 (from 10.9) mg and 16 (from 16.4) mg in the present USDA version for tomato 182 g, most foods below have more protein so

amino acid score is not changed and USDA is too low IQ to even have the amino acid score listed like old site, why list niacin (B_3) 0.594 mg, with 3 digits, and Cys (CIS, the shrunk USSR, the communist state that wiped out aristocrats, "ate them", gave all a free house, 100% house ownership vs 65% owning houses in US-Australia-UK-Canada today) as *0.016* g instead of *16.43* mg or have the protein digestibility adjusted amino acid (PDAAS) score listed too, Turnip raw (Leucine 3.7, so 67), Eggplant raw (add to smoothie) 67, Brazil nut 15% C_{15}-C_{24} harmful long chain sat fat 67. (Lysine is 3.4%, so 34/51=0.67). *67 is a low score, 85-140 is a much better score for protein sources.* Hammer is the communist symbol of the worker, ham-burger is the hammering of the aristocrats (burger means aristocrat in German) until all are free from war & oppression.

►►►►68 Tofu 8.2% protein, Romaine lettuce 1.2% protein, Boston, Bibb or butterhead lettuce

►►►►68 ☺Burger King basic Hamburger (old data here)☺ *(the one for which amino acid data was removed by USDA, in the new listing, since it made Burger King look bad, Burgers (aristocrats) own the gov,* 'democracy' is a farce we '*enjoyed*' for 250 years*)*, you can see the 69 score at archive.org, 82.3mg in 17.2 g protein/121 g burger, so 0.4785% Tryptophan, score 82.3*100/(17.2*7)=68 (68 mg/100g), 69 if dividing 4.8/7=0.69 hence they wrote 69. 14% protein. Burger means aristocrat and the first burger was called 'Aristocrat', then finally Big Mac. Hence both Trump and Kamala were all about McDonalds in the 2024 election, and eating/cooking the 'Aristocrat', if Trump is a covert leftist in reality (he might be), role playing he's a billionaire Republican, hence his cover is that he loves "Big Macs", big aristocrats.

►►►►69 Chinese cabbage raw (pak/bok choi), Rye bread

70 Raw Peanuts 24% protein peanut butter score 52. PEANUTS are poison, avoid, see why here.

71 White Rice cooked 2.7% protein, Nopales cooked raw 70, raw Beets (smoothie, don't cook them as all goodies deteriorate and get lost in the water) 1.6% protein.

72 Bamboo shoots cooked, Ginko nuts low sat fat, Acorn winter squash cooked (raw 71) 1.1% protein, Brown rice cake multigrain 8.5% protein

73 Cooked Winter Squash all varieties, Barley cooked 2.3% protein

74 Savoy cabbage raw, cooked 73, Plain unsalted brown rice cakes 8.2% protein

75 Raw Parsley, Brown Rice 2.6% protein, Laver seaweed raw 5.8% protein (called nori in Japan, gim, zicai in China), UK makes even bread from this, Oyster mushroom raw 3.3% protein

76 Yam cooked, Wheatgrass has 29% protein, 0 fat, Brown rice with rye cake

77 Hickory nuts 13% protein, 7% sat fat, 64% fat, ω6:3 ratio of 20:1 unhealthy, Pine nuts 14%

protein (ω6:3 of 294:1, poison, AVOID)

78 Enoki mushroom raw (2 digits not 3 as before), Cooked lupin seeds (toxic if eaten raw)

79 Kelp, seaweed, raw, Okra raw or cooked, Adzuki beans 7.5% protein, Hyacinth Beans (toxic if not boiled twice) 8.1% protein, cooked Oat Bran, Tempeh ► wikipedia...Tempeh 18.5% protein

80 Rye raw 80 ► 15.5% protein & 1% ω6. The 80 rye score is not as high as 108 amaranth, 99 buckwheat because of lower rye lysine %, but if you eat a lysine rich food, score rises to 108. 300 g of watermelon has enough lysine to raise 100 g of rye score to 108. Rye is half the price of buckwheat/amaranth. Raw corn is 3.3% protein of score 82, raw amaranth is 13.6% protein.

81 Pineapple 0.5% protein, Carrots 0.6% protein, Cooked yellow corn 3.4% protein (lysine is the low amino acid, 4.13% of protein vs 5.1% for 100 score), Cooked regular/quick Oats 17% protein

82 Cooked Sweet Potato 1.4% protein, Bread, banana (banana raises the *low bread amino acid score* via lysine, otherwise, bread score is in the 50s)

83 Raw Broccoli 2.8% protein, raw Radish 0.7% protein, Cooked white corn 3.3% protein, cooked Mung Beans 7.0% protein ☺☺☺

84 Green Peas cooked 5.4% protein, Garlic, Peppermint fresh, Spearmint dried, Fava Beans 7.6% protein (causes hemolytic disorder in some), Wild (black/purple) Rice cooked 4% protein

85 Breadnut tree seed 6% protein 1% fat-0% sat, 46% carbs, ω6:3 ratio of 3.3:1 better than walnuts, but @ 1% fat, 5% of humans eat them, Milk 3.2% protein, Raw Rosemary 3.3% protein

86 Yellow Sweet Bell Pepper Raw, Oat Bran raw 17% protein, Lentils cooked 9.0% protein, raw Italian Brown/Crimini mushroom 2.5% protein, Yellow/Mexican/Green Squash raw 1.2% protein

87 Coconut 3.3% protein, Cooked Green Sweet Bell Pepper 0.9% & raw green pepper score is only 65, cooked red sweet Bell Pepper 0.9% protein & raw red pepper score is only 66, cooked Green Flat Beans 1.9% protein, cooked Taro 1.5% protein, Canned pimento or cherry peppers

88 Sunflower seeds raw 20.8% protein

89 Zucchini raw 1.2% protein, Scallop Summer Squash raw, Jalapeno Pepper raw, Taro chips

90 Raw Green Leaf Lettuce 1.4% protein (red leaf lettuce score is only 66), Raw Cacao 19.6% protein (avoid if pregnant or immortalist), Soybean sprouts 13.1% protein, Unsalted Brown Rice Cake with buckwheat 9% protein, 4 mg sodium, only 0.6 g sat fat + 4 g of fat, way healthier than 6 g protein, 11 g sat fat, 37 g of fat, 550 mg Na in potato chips. Score is 90 due to buckwheat. Rice cakes have 15x < toxic AGEs than Kellogg Rice Krispies, 21x < AGEs than Frito Lay Potato

Chips, one can eat lower amino acid score puffed rice which has about 5x < AGEs than rice cakes.

91 Cooked Navy Beans 8.2% protein (the popular Soylent has score 92 from their website data)

92 Raw Kale (2.3% met+cysteine, so 23/25=0.92) 3.3% protein (cooked 91), Hemp protein powder 45% protein, hemp seeds score is 79 (hemp may contain THC, cause failure of drug tests and brain damage, avoid hemp for food), Flaxseeds (lysine 4.7%, so 47/51=0.92) 18.3% protein original data has 622 & 571 mg for Met & Cys, just like new USDA for 168 g (a cup): 0.622 g & 0.571 g. The old data has 4 # for other amino acids 2075 mg Leu vs 3 for new data 2.08 g Leu. For foods with so much protein, losing the 4th makes no difference.

93 Asparagus 2.2% protein, Red Chili Pepper, Edamame young green soybeans 10.9% protein

94 Cooked or raw Collard Greens 2.1% protein

95 Dry Rolled, Quick or Cereal Oats 13% protein, add to smoothies, Cactus Pears estimated value see Cactus Pear section, Cooked Lima Beans 7.8% protein

96 Cooked Pinto Beans 9.0% protein, Cooked Leeks 96 (raw leeks 93) 0.8% protein ☺☺☺

97 Natto Japanese fermented soybean food 97 (at Asian stores). 17.7% protein. 65 times less sodium (if unsalted), 3.2 times less saturated fat, less total fat, 2.5 times more fiber and 6 times more ω3 than hamburger; the richest natural source of K_2 which *vegans* need more of.

98 Water lentils (duckweed) (ω3:6 ratio 2:1) *world's fastest growing protein used by NASA on ISS, uses 10 times less land than soy, 100x less than beef/kg protein, you eat all of it,* while with soy, legumes, grains, you trash the rest of the plant (roots, leaves, etc): 45% dry weight is protein. The digestibility adjusted PDCAAS score was 0.93 for Lentein duckweed farm protein powder produced in a factory in Florida (sort of like soy protein isolate made from soy). This 0.93 is higher than 0.92 for beef, as shown on page 66 of the FDA pdf on Parabel Lentein protein. For typical lentils the PDCAAS is 0.895×0.86=0.77. If you eat duckweed, not the 'Lentein' powder, PDCAAS may be higher. The issue with this B_{12} rich lentil is the high fat content, which can kill, A blood types especially. Several startups work on water lentil protein: plantiblefoods.com, LemnaPro (gentile Parabel, the main one with endless ponds that made all news in 2011-2023, went bankrupt in 2023, 95 Lentein patents, assets, acquired by Florida Jews), greenonyx (Israel). America's first and only water lentil company, Parabel, was acquired by Israel, is USA free? Nature's Vault channel has videos about other high score proteins that were banned by the Jewish-British greedy Chemical Industrial Complex, eager to poison USA with herbicides. See also Buried Garden, AncetralYields, FamineFood, many other youtube channels. They want to patent seeds, to make all dependent on deadly seeds, that can resist 15x higher pesticides use.

99 Soy protein isolate 88.3% protein (some brands have score 102 or 108), raw Buckwheat the only grain that can be eaten raw without soaking 13.2% protein; cooked has only 3.2% protein and score 100; to reduce phytic acid soak it at 148°F 2 hrs like with lentils, to activate phytase enzyme that breaks phytic acid, if you eat it daily. Amaranth has 2.8 times, quinoa 3.1 times the ω6 in buckwheat; quinoa has 50% more C_{15}-C_{24} saturated fat than buckwheat, so buckwheat is better. Oats also have double, amaranth triple the C_{15}-C_{24} fat in buckwheat.☺☺

100 Cashews 18% protein, 7.8% C_{15}-C_{24} sat fat, ω6:3 ratio is 126:1, pure POISON, avoid. ☺☺☺

101 Chlorella seaweed dried (avoid it), 58.4% protein more than all foods, even spirulina, but has less protein per calorie than spirulina, see spirulina below, Yardlong beans 2.5% protein

102 Cooked split peas 8.3% protein

103 Raw/Cooked Cauliflower 2.0% protein (real data), Cooked Red Kidney Beans 8.7% protein, Cooked Black Beans 8.9% protein, Spirulina (avoid, see why) 57.5% protein. Iodine/B_{12} levels in spirulina vary by brand, better buy those that indicate exact amounts to avoid thyroid issues.

104 Cooked White Beans 9.7% protein, French Beans 7% protein, Great Northern Beans 8.3% protein, Pink Beans 9.1% protein, Yellow Beans 9.2% protein, Winged Beans 10.4% protein

105 Kiwi 1.1% protein; bromelain + sulfur amino acids; eat many = gas + asthma from bromelain

106 Cooked Garbanzo Beans 8.9% protein, Cooked Quinoa 4.4% protein

108 Soy protein isolate 80.7% protein, Amaranth 13.6% protein, 2.74g ω6 42mg ω3, ω6:3 65:1 Beechnuts ω6:3 11:1, 6.2% protein, Chestnuts 3.2% protein, 2% fat, 0.4% sat fat, ω6:3 ratio 8:1

109 Cooked potatoes 2.5% protein (cook well, eat little, toxic alkaloids, like tomato, eggplant)

110 Pistachios 21.3% protein, ω6:3 ratio is a deadly 49:1 AVOID at all costs, see why here

112 Broccoli cooked 2.4% protein (raw is 83), Moringa (drumstick) tree leafy tip (causing death?)

114 Vegan Protein Powder from Sprouts.com 114 (shown in the amino acid section) ► in health food stores they got a lot of *vegan* protein powders that *vegans* add to their smoothies

115 Chia Seeds 15.6% protein 80x the ω3 in tilapia fish, ω6:3 is 1:3, Breadfruit seeds 7.4% protein 1.5 g sat fat/100g, ω6:3 is 3:1, Lotus seeds dried 15.4% protein, 2% fat, 0 sat fat

116 Cowpeas cooked (blackeyes) cooked 3.2% protein

118 Soybeans cooked at home 16.6% protein (soymilk 25), Defatted Soy Flour 47% protein

119 Spinach 2.9% protein

121 Potato chips, made from dried potatoes, REDUCED fat 121 4.6% protein, 7% sat fat, 26% fat, 760 mg potassium, eat NEVER, unhealthy level of AGEs and ω6:3 is a deadly 31:1. Plain potato chips with reduced fat got score of 110, 7.1 % protein, 4% sat fat, 1740 mg potassium, 21% fat. Plain potato chips got a 35% fat, 11% sat fat, deadly ω6:3 ratio 31:1, 7% protein, score 109, Frito Lay Chips got 170 times more AGEs than boiled potatoes. ***Avoid Potato Chips like the PLAGUE.***

122 Soy chips of crisps 26.5% protein, 7% fat, 0% sat fat, Acorn nut dried 8.1% protein, 4% sat fat, the raw acorn nuts got only 6.2% protein and 3% sat fat

123 Cereals, plain Wheat Germ 29.1% protein Fenugreek seeds (antidiabetes) 23.0% protein

125 Veggie or Soy Burger 15.7% protein, 2.5 times more tryptophan than B. King hamburger

127 Nutritional Yeast score calculated using Kal brand box amino acid values (50% protein)

128 Raw Turnip Greens 1.5% protein, cooked score is 127, 1.1% protein ☺☺☺

129 Avocado 2.0% protein, Wild spinach called pigweed, lambsquarters, goosefoot 4.2% protein

136 Pumpkin and squash seed kernels 18.6% protein, 5x more tryptophan than B. King burger, ω6:3 ratio 173:1 unhealthy, so only eat 5-7 seeds max daily to prevent hair loss.

Watermelon has a lot of threonine, so with watermelon zucchini protein score becomes 129, not zucchini 89. Same for other veggies, some low score fruits make the veggie score way higher.

11.7. SOME OF THE HEALTHIEST FOODS

The first word of each of the next 51 sections has a link to USDA nutrient list. USDA is where all the other nutrition websites get their data from, using a software. I listed here amino acid scores for 163 common vegan high protein foods. The USDA allows searching by nutrient, from richest in lycopene, etc food/100g to lowest (right most column shows amount in 100g). If you spend 10 minutes, you can create a spreadsheet like I did, with your daily vegan food intake (common foods you eat) weights to calculate how much of each amino acid, vitamin, carb, etc you eat, without having to go thru websites, allowing you to enter in the table the grams to give you only data you really care about, like vitamins/etc your diet may be lower on. For polyphenol data and variations among different brands of raw produce, see the USDA list by entering "food name" at fdc.nal.usda.gov to get full list with 133 entries for flavanols, flavones, anthocyanidins, flavanones, proanthocyanidins. You get the USDA *SR (Standard Reference) Legacy* (7800 foods) 4-1-2019 average values for that food, and the USDA *Foundation* (few foods only so far, the most basic raw produce, food items) values for that food (Foundation database has a lot less data for each food, so ignore it, use SR Legacy, which is good until 2050). The phenol-explorer.eu database is more complete than the USDA one for non-flavonoid polyphenols (USDA limits itself

to flavonoids mostly, ignoring hydroxycinnamic, phenolic acids, lignans, stilbenes, etc), so for blueberries, cranberries and high polyphenol foods you can google "food name phenol explorer" to see more polyphenols fast. Google "food name polyphenol content nih" to get latest papers phenol explorer didn't include. On phenol explorer you can search all foods that contain a given polyphenol like quercetin, the pharmacokinetics, metabolites, retention factors after processing (how much left after freezing, cooking, etc). For some foods, USDA lists more flavonoids than phenol-explorer, so use both. As the AGEs section shows, the USDA kale entry doesn't list the full list of polyphenols, and USDA lacks the purple/red kale data that the anthocyanidin section has. The latest polyphenol data is in latest NIH papers. All USDA/Phenol Explorer data is from PubMed. The first 22 foods (except overhyped flax, olives, zucchini) are the healthiest, foods 23-51 don't have important stuff not found in the first 22, so I no longer eat 23-51. Kale/carrots are made into smoothies. I eat some garlic too. In parenthesis is the protein score defined here.

11.7.1. KALE (*3.3% protein*, protein *score* 92): The Best Food

Kale (nutrient list) is the richest food in brain microplastic remover sulforaphane (7-12 times more than broccoli, no need of growing broccoli sprouts that can cause food poisoning, so 174-303 mg/100g vs 26 mg in broccoli, 1 mg in cabbage, 0.26 mg in brussels sprouts, 0 mg in cauliflower Table 3) when chewed properly or pureed in a smoothie, one of the richest sources of lutein+zeaxanthin, the isomers that protect the retina from blue light and UV, the brain from Alzheimer and cognitive decline, as explained in the lutein section. Microplastics accumulate mainly in the brain (7 g), but also in our blood vessels causing infarcts and strokes: "Plaque buildup increased by 63% in the aortic root, the portion of the aorta connected to the heart, and by 624% in the brachiocephalic artery, which branches from the aorta in the upper chest. Female mice exposed to the same conditions did not experience a significant increase in plaque formation.." While humans are not mice, this is truly frightening, given that microplastics are known to damage human brains. Removing microplastics is thus essential for longevity. Sulforaphane in kale "can be highly effective in the preservation of the integrity and function of the blood–brain barrier (better than D_3 or ω3)" ► Ntr 2025;17(8):1353, "enhanced the integrity of the blood–brain barrier by suppressing oxidative stress through diminishing the expression of MMP-9... As a result, it safeguarded the levels of crucial proteins such as claudin-5 and occludin, which play a vital role in preserving the integrity of the blood–brain barrier " ► Antioxi 2024;13(2):147, "preserves blood-brain barrier integrity after brain injury" ► DN 2020;42(2-4):124-34. Kale (soil grown, not vertical farm without lithium) has 9.4 mg/kg Li vs 0.03 in meats, or 313 times more essential for high IQ and no dementia lithium. Kale has 1050 times more lignans (that prevent hair loss, strokes, infarcts via anti-androgen activity), than spinash and 131 times more than lettuce/100g, being literally the healthiest veggie on Earth. In fact, kale has 126 mg

lignan/100 calories, more than 2 times more than chia and pumpkin seeds, two "well known" sources of lignans. Kale also has a lot of fiber and helps turn hard stools made of balls of feces (10-20 balls) into one hot dog style normal stool, especially if you puree the kale with carrots, water or watermelon. Redbor kale has the most anthocyanins, but scarlet kale produces its own seeds, so in case of seed shortage, war, etc it's safer. If this smoothie doesn't work, add vinegar to kill the bacteria that makes it into a ball. Eating just lentils and some root veggies as some do can lead to hard stool, you need 5% fat, polyphenols, soluble fiber too, not just legumes and squashes: it's not the amount of fiber that matters for normal stool, but the type too, plus other kale, etc polyphenol, etc compounds that kill the bad bacteria. You can eat 100 cal of kale easily, but chia seeds got too much fat. Broccoli and Brussels sprouts also have high lignans, red cabbage and cauliflorwer also have medium lignans, but kale got 10 times less deadly oxalate. Kale, like all leafy greens, helps diminish insomnia. Kale delays the absorption of fat, reduces our apetite and aids weight loss, as do all greens via the thylakoids (purple kale still has them, the green thykaloids are masked by 150 mg extra purple polyphenols). Since at many stores green kale bunches are twice the weight of purple kale for the same price, buying green makes sense if you eat blueberries (some stores sell 510g/4$ organic), since blueberries, purple cabbage, plums have all anthocyanidin polyphenols purple kale got. The $ you save on green can buy organic berries at cheaper places. Kale is rich in vitamin A (29% of vitamin A in carrots/100g, 241 vs 835 RAE) and has more ALA ω3 than most fruits and veggies, helping prevent dry eyes. Purple kale has almost the same amount of flavonoids as blueberries (green kale has about half the flavonoids of purple kale). Kale got 32 times (x) the vitamin C, 2.5x the protein, 2x the vitamin A, β-carotene and amino acid score, 6x the vitamin K, 4x the calcium, 2.4x the potassium, 2.8x the magnesium, 23x the lutein+zeaxanthin in red leaf lettuce, 12x the C in blueberries, 494x the lutein+ zeaxanthin (isomer of lutein) and 74x the vitamin A in blueberries as you can see at the links after selecting 100 g. Purple kale is even higher than green in many nutrients. Kale got 155x the lutein, 62x the vitamin K, 90x the ω3, 3x the magnesium, 6x the iron, 20x the vitamin C in carrots. Kale got 180 mg ω3/100g, highest of any common veggie, except 400 mg in purslane, a very expensive leafy green with 35x higher oxalate (too much causes kidney stones) that is impractical to eat much of while still eating carrots. Kale has more calcium Ca and protein than milk, plus its protein is more complete than milk protein ► 135 mg Ca/100 g versus 113 mg for milk, 3.3 g protein in kale (of higher amino acid score 92 versus 85) versus 3.15 g for milk. Raw kale is among the richest (except some dried spices, which are lower than dried kale) common source of vitamin K (817 µg/100g), behind only parsley (1,640 µg or 208 times more than tomatoes). All greens (spinach 483 µg) are very high in vitamin K. Eat some flaxseeds, chia seeds, DHA-EPA pill, a walnut with kale to increase vitamin A, D, E, CoQ10 and K absorption. Kale is a great source of nitrates that relax vessels, lower blood pressure, fight infections, clear sinuses. Doctors noticed that humming can also clear sinuses, as the video explains.

Green kale may be among the richest in polyphenols common veggies together with purple cauliflower and purple cabbage, with 575 mg/100 g greenkale, but other papers give lower estimates. Purple kale has even more☺☺☺ polyphenols than green kale (I always buy organic purple from sprouts.com as it's the same price as conventional green at pricier stores), due to 107 mg/100g brain protecting anthocyanidins (comparable to blueberries 163 mg) which is equivalent to 173 mg/100g anthocyanins, around 682 (575+107=682) total perhaps in some varieties, meaning 14 mg/calorie, more polyphenols than most blueberries sold. Raw Kale has 3 times more lutein-zeaxanthin than spinach, more β-carotene than carrots and about 48 times less oxalic acid than spinach and less oxalic acid than most veggies far less oxalic than broccoli and cauliflower (oxalic acid that when overeaten can lead to kidney stones in certain people). Kale has amino acid score 92 vs Burger King hamburger 69. Kale has more iron than beef. Kale got 2.3 times more vitamin C than oranges even. Purple kale is much tastier than the green one, can be easily used in a smoothie, for example smoothie #7 in the smoothie section. ☺☺☺

11.7.2. FLAXSEEDS (contain cyanide, so make flax oil @ home)

Flaxseed (nutrient list), the richest source of essential ω3 fats/gram, can be fatal or very damaging (ER visit) if given in large doses freshly ground and mixed with liquids to small babies or kids. Since flaxseed ruins pregnancies and has cyanide in flax oil too in trace amounts, it may be safer to eat chia seeds instead. Eating 10-20 g of ground flaxseeds hardens the stool instantly (a good thing for those with watery ultra soft stool) and in some people they cause allergies, and hives. Flax oil by Barleans (bought from Whole Foods cold storage, not Amazon hot warehouses) or made at home, stored in a dark bottle in the fridge is 100 times better, since flaxseeds contain cyanogenic glucosides and oddly, the US is even allowing the sale of flaxseeds that can damage our organs. When using flax oil, simply go to the fridge with a spoon, squirt some from the air tight Barleans type of bottle on the spoon and then go to your smoothie to add it, don't take the oil out of the fridge, since you can forget it outside and it will oxidize. Make 15-25 g of flax oil using an Amazon device (discard the meal, it has cyanide, ventilate well the area) for a week at a time, to get the least oxidation and no cyanide. Discard the pulp, due to cyanide. Politely ignore MDs or filif 'giraffe IQ' Swedish government websites/studies saying "10g daily flaxseeds is safe" or "eat a spoon of ground flax daily, part of daily 12 super healthy foods", because cyanide is not healthy, flax can slowly destroy our lungs and mitochondria. All lignans in flax are present in many veggies and seeds, as explained in the hair loss reversal section. I got 9 hives one time on my left foot, after eating flax first time in 5 months, the worst breakout ever. For adults, flax is safe ground 5-10 g daily short-term. When given to diabetics flax reduced fasting blood glucose by 19.7% and glycated hemoglobin (A1C, the marker for average blood glucose last 3 months) by 15.6%; drops in total cholesterol (14.3%), triglycerides (17.5%), LDL (21.8%), plus a rise in HDL

good cholesterol (11.9%) were also noticed ► J Diet Su 2011;8(3):257-65. Flaxseeds got 27% fiber. Patients were provided 15 and 20 g/day of flaxseed powder for a period of 2 months. Post-prandial blood glucose decreased by 7.9 and 19.1 %, respectively ► JFST 2014;51(9):1633-53. *Results are far less dramatic in healthy subjects.* My ω3 intake is here. Flax oil/chia can lower CRP 4 times. Having CRP 4 times lower can mean 16 times lower cardiac mortality.

Flaxseeds reduce the development of atherosclerosis ***by*** 46% in rabbits ***due to*** lignan ***content.*** Flaxseeds varieties with low ALA (the ω3 acid), alpha linolenic acid, suppress atherosclerosis by 69%, even more, so it's not the ω3 that does it, since flaxseed oil had ***no effect, unless it was the flaxseed with high lignan content***. Lignans in flax (with no oil or ω3) reduced atherosclerosis by 73% in rabbits ► JCP 2009;54(5):369-77. The beauty is that you can get equally amazing lignans from 50 other common foods, at the same mg/calorie. Flaxseeds are an option, not a "required" or "superfood". The paper explains that *in many other human studies, both normal and high cholesterol people experienced a drop in the bad LDL cholesterol and total cholesterol after eating flaxseeds*, especially the high cholesterol group. Whether in humans flaxseeds prevent atherosclerosis as much as in rabbits is unknown, but if you eat healthy, eating 10g of flaxseeds won't change much lignan wise. There is one issue with lignans (phytoestrogens), and that is they can cause gas and pimples, due to hormonal shifts in some folks, which means acne could break out on the inside of the arteries too (they often go hand in hand), so if you experience pimples from any food, stop it immediately, since it may also increase your arterial plaque points by 50% in the long-run. People who respond hormonally oddly to lignan estrogens are not RABBITS, and in those folks, flaxseeds may do more damage than good, not to mention slower stool movement due to clumping (due to flax or chia seeds) will dump so many toxins in the blood that it will possibly cancel all benefits. To avoid stool hardening from water loving flax/chia, try vegetables with high lignans or use flax oil only, as it has fewer lignans. Rabbit studies don't apply to ALL or any people sometimes, and that quality sleep and low stress is far more important than anything, since ***stress is the main driver of atherosclerosis*** (including poor sleep when repairs happen daily) as many papers show: when stressed or sleep deprived, your T-cells are 3 times fewer so they can't attack bacteria and things that cause plaque, you get PIMPLES, on the face and ON THE ARTERIES, when stressed you lose hair, which is a marker also of atherosclerosis, since both are caused by oxidative cellular stress. Two things to watch: gas and pimples, indicators of cellular stress and the need to rest, eat and sleep better. Why do poor people often live 25 years shorter? Tons of stress that increases arterial plaque 10 fold destroying every organ. We have to see how polyphenol extract from other foods compares to lignan polyphenol extract in reducing atherosclerosis. As shown in the section on reversing heart disease and angina with diet, only a very low fat (no ω6 oils, olives, coconut, avocados) diet removes fatty arterial (see pic) plaque in certain people. Too much fat means too much long-

chain saturated fat (C_{15-24}, 15-24 carbons, more than myristic acid $C_{14}H_{28}O_2$) which harms insulin producing β cells as explained in the section "less meat/dairy means less diabetes". Even too much C_4-C_{14} saturated fat can cause cognitive impairment via *other mechanisms than diminishing blood flow to the brain via arterial plaque*. Among nuts and seeds, only flax and chia seeds have more ω3 than ω6, helping lower inflammation*, the number one killer (atherosclerosis)*. ☺☺☺

Flaxseeds have 10x the ω3 in salmon, 14 times the ω3 in sardines, *103x the ω3 in* tilapia*, 125x the ω3 in kale,* 200x the ω3 in most legumes and high ω3 vegetables like spinach, so you only need to eat little flax oil to get ALA for conversion into DHA-EPA, *80x the ω3 in* tuna, 2.5x the ω3 in walnuts, 4x the fiber in walnuts (fish has no fiber), 5-10x cheaper than walnuts, 6.3 times less ω6 than walnuts. Table 1 (EJCN 2010;64:S112-20) shows *flaxseeds have 55 times more* polyphenols *than walnuts, 100 times more than carrots, grapes, 150 times more than wine*. However, many polyphenols are not in the flax oil, which is fine, since you can get polyphenols from many other foods. 100 g of flaxseeds have 18 g protein (amino acid score 92, higher than Burger King ham beef 69) and 124% of Mn, 98% of magnesium RDA, 26% of Ca (51 times the Ca in banana), 32% of iron, 29% of zinc, 36% of selenium RDA. Flaxseeds contain less lignans per calorie than kale, less of other nutrients/calorie than other foods. Thus, we only need the cyanide free flax oil for ALA ω3, not the cyanide rich flaxseeds.

LIGNAN INTAKE AND ALL-CAUSE MORTALITY

Lignans are in many veggies, so you don't really need to eat cyanide rich flaxseeds to get lignan benefits. Flax oil has much fewer lignans. In 100 g we have 1294 mg in sesame oil, 252-1276 sesame seeds, flaxseed 258-1500 mg, chia seed 25-150 mg (10% of flaxseed level), pumpkin seed 256, broccoli 99, kale 63, brussel sprout 50, red cabbage 18, green pepper 13, green bean 23, carrot 8. Other papers claim flaxseeds have 0.7-1.5% lignans or max 1500 mg/100 g ► VP 2012;81(3):4-10. Even so, it's easier to eat 100 g of broccoli 34 cal, than 100 g of flax, 534 cal. *In the studies below (with one exception)* the daily highest category is 1 mg (1,000 µg) or less, or *1% of a 10 g spoon* (easy to get 1 mg lignan even with *15% of a 10 g spoon of chia seeds*). Women eating > 187 µg/day lignans had a 40-50% lower breast cancer incidence vs women < 119 µg/d lignans, regardless of menopausal status ► JN 2012;142(1):91-8. Postmenopausal women in the highest (> 257 µg/day) versus lowest quartile (<128 µg/day) of lignan intakes had 51% reduction in all-cause mortality and 71% reduction in breast cancer mortality ► BCRT 2010;122(1):229-35. A 7,447 people study found those with higher lignan intake (0.94 mg/day or 940 µg/d) had 40% lower mortality than those with 0.44 mg/day (440 µg/d) intake ► BMCM 2014;12:77, see Table 4 for Additionally Adjusted HR (hazard ratio) 0.60. AJCN 2006;84(2):400-5 and its Table 3 show decent (16% for example) reductions in heart disease for SECO (lignan in flax), but only a statistically insignificant 3% reduction for all-cause mortality. Epi 2013;24(5):726-33 Table 3

found a weak link between 0.5 mg/day lignan intake and mortality, lower mortality at 1 mg, but flavonoid intake at 448 mg/day reduced mortality. Lignans reduce breast cancer and all-cause mortality by 33%-70% and 40%-53%, respectively at 50 mg/day ► APNM 2014;39(6):663-78. So, maybe taking lignans, without flaxseed, is all people need or just more polyphenols.

ALA rich Flaxseed Oil drove hs-CRP to 0.37, almost 8 times lower than many omnivores:

ALA (ω3 in flax) caused hs-CRP to drop 4 times in 6 weeks in 23 people with TC Total Cholesterol 226, LDL 154, BMI 28 (overweight), TG (Triglycerides) 136. CRP 4 times lower can mean living 25 years extra: "The medians of serum CRP were 1.51, 0.83, and 0.37 mg/L, respectively, after subjects consumed the AAD (Average American Diet), LA (Linoleic Acid) Diet (Walnuts), and ALA (Alpha Linolenic Acid) Diet (Flax Oil). CRP *levels decreased 75% when subjects consumed the ALA Diet*, and 45% when subjects consumed the LA Diet" ► JN 2004;134(11):2991-7. LA (ω6):ALA(ω3) ratio was 1.5 in ALA diet, 3.5 in LA diet, 9.5 in AAD diet. ALA was 0.8% of energy in AAD diet, 5.2% of energy in ALA diet (11 g ALA/2,000 calories). LA and ALA came from walnuts, walnut oil and flaxseed oil in this study. "TC, LDL-C, TG, and apo B levels were 10.9, 12.3, 18.4, and 9.4% lower, respectively, when subjects consumed the LA Diet, and were 10.8, 11.0, 18.4, and 9.7% lower, respectively, when they consumed the ALA Diet compared with the AAD". CRP is a measure of systemic inflammation. ω3:6 ratio going up lowers inflammation.

FLAXSEED/CHIA/Any SEED ω3/6 Absorption Optimization via Automatic Coffee Grinder

Plasma ALA ω3 increased 58%, plasma EPA ω3 increased 39% in ground chia seeds versus insignificant changes in whole chia seeds and placebo groups ► JACM 2012;18(7):700-8; thus, to absorb any *ω3* grinding flaxseeds and chia seeds is essential; grinding them with *a coffee grinder* increases bioavailability of ALL phytonutrients and lethal cyanogenic glucosides in flax too. Thus, unless you want to destroy your mitochondria, eating ground flax is a NO NO. It takes a min to grind chia/flax; it's best to add the chia powder to a smoothie or water immediately to prevent oxidation; store bought chia is not ideal, since oxidation increases AGEs. Use a silent automatic grinder to prevent noise that damages body, wakes people, shortens their lifespan via sleep interruption and vibrates your hand on manual button press, which damages joints, tissues via strong vibration. Automatic means you set the knob to fine, it grinds it in 2 min while you're away from the noise, cleaning another room. Walk away from the noise that kills. Ground flax/chia is used to make the stool harder, especially chia (30 g chia in a meal with little liquid turns soft stool into hard instantly) as it absorbs more water. If you buy/make cookies, cakes, smoothies, etc that contain whole flax or chia seeds you waste $, as almost no *ω3* (and etc) is absorbed. It seems like no big restaurant chain in the world has a *vegan* burger, or any smoothie (omnivore or *vegan*), etc that contains a lot of *ω3* as vegan algal *ω3* or ground flax/chia seeds, to help people move their *ω3:6 ratio to* a healthier range of 1:1 or 1:2 instead of 1:20. The

soylent.com powder has a tiny amount of canola oil, which has 1:2 healthy ratio of *ω3:6.* *The restaurant industry is too* unscientific. Likewise, carrots and other harder veggies, when pureed (instead of chewed) with a food processor, have bioavailability of many nutrients increased dramatically, by 2-4 fold. Hyp 2013;62(6):1081-9 found that taking 30 g of *ground flaxseeds*, at 1 and 6 months, plasma *ALA ω3 increased 100%,* while enterolignans (mammalian lignans derived from plant lignans) enterolactone went up 10 times, enterodiol 50 times (enterodiol $C_{18}H_{22}O_4$ is the flax lignan secoisolariciresinol $C_{20}H_{26}O_6$ where the two CH_3 groups and the two adjacent OH groups were replaced by gut bacteria with 4 hydrogens). Hyp 2014;64(1):53-9 found that blood pressure decreases with the decrease of oxylipins; oxylipins are metabolites of *ω6* ARA that increase inflammation in older people. ALA inhibits epoxide hydrolase enzyme (that produces oxylipins) and lowers blood pressure. After 4 weeks of 30 g *ground flaxseeds*, some *oxylipins in old people were down 3 times to the level of young people*, while lowering blood pressure (systolic 10, diastolic 7). ALA (in flax/chia oil/seeds) inhibits oxylipin formation. ALA lowers blood pressure thru lowering oxylipins, not thru cardiac involvement as some pills do (Hyp 2016;68(4):1031-8). This is diet reversing aging biomarkers, such as high oxylipins.

AVOID EATING GROUND RAW FLAXSEEDS due to CYANIDE CONTENT (current safe levels are 0.5 g ground flax max for 11 lb kid, 7 g for 154 lb adult)

JFST 2015;52(4):1857-71 explains in 100 g we got 250-550 mg cyanogenic glycosides (CG) which can release cyanide upon *hydrolysis* (dissolution of powder into water/smoothie). Store flax meal is *reportedly* free from CG, but is also less healthy, as oxidation started. A company selling flaxseeds told FDA in this letter that cyanide levels are harmless. Most people combine flaxseeds with pumpkin or other seeds in their grinder, eating no more than 5-10 g a day. Flaxseeds release 124-196 µg cyanide/g ► FAC 1995;12(4):527-33. This becomes almost 2 mg for 10 grams, almost lethal dose for a 4.5 lb baby, but not an adult (50 mg fatal dose for 50 kg). This means that 1 g of flaxseeds releases 1,500 times (75 times, if 100% B_{12} absorption) more cyanide than a 100 µg *cyano*cobalamin B_{12} pill (that's why I eat the natural 3 forms, not man made cyano form) would, since there are about 2 µg cyanide total in 100 µg B_{12} and only 5% is absorbed, so 0.1 µg cyanide. This 0.1 is in theory (recall how approximate these studies are on absorption with current tech), in practice, the cyanoB_{12} may not be so stable as Pharma tells us, and release cyanide in certain conditions (undetectable by current tech) as it is eliminated by kidneys, damaging kidney cells. "We conclude that up to 50 g flaxseed/d (day) is palatable, safe" ► BJN 1993;69(2):443-53; the study found that *baked flax flour or products they tested (not all; check if flax companies paid the study) have no CG*. If we bake flaxseeds, we produce lethal AGEs that destroy every organ, *so* promoting such ideas is counterproductive, a food needs to have 0 toxins: *you either want to live to 200 or to 85.* Beware a lot of studies are faked by flax powder selling corrupt companies, as with the olive oil scam. We need to raise our standards 100 fold to

be able to reach 300 year lifespan some future century. AT 2016;90:559-74 found that 1-2 tablespoons of ground flaxseed are very safe as this video shows. *However*, if we worry about the *depletion* of cellular reduced glutathione levels *(critical to health) to detoxify cyanide*, we can eat chia seeds, which have the 17.6% ω3, close to 22.8% in flax; or try algal oil, flax oil or chia oil made at home to bring ω3:6 to 1:1. If low on ω6, you can eat pumpkin seeds or walnuts (3:6 ratio is 1:4 so 1 walnut enough).

I no longer ate flaxseeds daily (I did that for 2 years) since 2021 (only 5 times/year until Sep 2023 when I stopped entirely) since I worried long term even 5-9 g daily is not safe for maximum lifespan at our tech level; I even gave up chia seeds, due to acne breakouts and stool hardening. I get acne from flax oil, which has ?500? times less cyanide than flaxseeds; flax oil is totally different than flaxseeds, it softens the stool and eases stool movement, while flaxseeds harden the stool due to hydrophilic fiber. I tried in early Dec 2022 to eat only flax oil and no flaxseeds, without *vegan* DHA-EPA for about 4 days, 5 g daily and got a huge acne breakout, one of the worst top 7 breakouts in my entire life, but later in 2025 I tried it again and acne was only minor due to taking acne killing antibiotic called doxycycline for a tick bite, doxycycline also kills acne bacteria. So, the breakout may have been due to lack of DHA-EPA too, and only 80% due to flaxseed oil. Don't be surprised if chia or flax give acne, since they do suppress immunity via high ω3 which can cause pimples to overrun the immune cells. Buy a 10$ flax oil bottle or flax oil caps (8$ if autoship) first, to see if you're OK with it, if not try phytoestrogen free chia oil caps (11$ if autoship) or chia oil bottle (5.2x cheaper/L than caps). If your estrogen drops, you may get dry eyes; *vegans* have slightly lower estrogen, so eating flax oil that boosts estrogen is good for low estrogen dry eye sufferers (high D_3 lowers estrogen). ☺☺

Flax oil > 1g, flaxseeds > 3g can cause acne breakouts, so if acne prone, gently kindly increase amount slowly above these levels. Our body needs DHA; if male, less able to make DHA from ALA per blood DHA-EPA test results, lovingly consider trying vegan DHA-EPA softgels. Flax lignans is where all benefits are for anti atherogenic effects, flax oil without lignans did nothing; keep CRP level low via ω3:6 ratio 1:1. PubMed papers *say flax oil usually has no CG or the* β-glucosidase *enzymes to release cyanide, since CG are water soluble. Choose a softgel brand (for fish oil, flax oil or vegan algal oil) with totally opaque bottle, with tocopherols (vitamin E), vitamin C, as these delay oxidation a lot (avoid plain oil and semi-transparent bottles, as these oxidize fast sitting in light 24-7 in the store)*. Call flax oil *manufacturer*, ask for pubmed studies showing no *CG* detected, *chemical* analysis report. Don't ever buy flax meal, it is so oxidized and toxic, you can get 50 times more lignans, estrogens from other foods, as the table shows (10g of flaxseeds got 25.8 mg lignans, as much as 40 g of kale, don't waste your money, the flax meal industry is one big mafia feeding on the gullibility of the masses, selling cyanide to us: ruthless liars, parasitic aristocrats living in palaces built on genocide). ☺☺☺

The aristocrats heat flaxseeds or mill them (sitting ground 5 months on shelves), which increases AGEs, oxidation which shorten lifespan. Why unify, centralize and get 100x more science, when they can poison us with their tone age food industry? Table 1 shows raw chestnuts got 2723 AGEs, roasted chestnuts 5353 AGEs, *do vegans really want to double daily AGE intake from flaxseeds, just to get rid of cyanide, many vegans get 80% of daily AGEs from flaxseeds, their only fatty food.* Death 30 years earlier than maximum achievable lifespan can occur with only a tiny increase of AGEs, only 2 to 5% even, just enough to increase oxidative stress beyond the capacity of daily clearance of apoptotic free radicals by the body, which would cause strokes, heart attacks, organ malfunction, diabetes. A dam only breaks and causes billion $ in damage if we just put 1% more water, the same happens in our bodies many times: another flax meal, cooked meat, dairy, pizza, roasted nut and the chance of living to 90-125 is blown away. ☺☺☺

Each little thing can shorten lifespan by 1-3 months, so it becomes 30 years lost over 50 years, 80 vs 110. "Flaxseed is used to fortify bread… to reduce CG… ground flaxseed was incubated at 30 °C and heated in a kitchen microwave oven. The CG… were reduced to 13.4%. (*did the bakers inhale cyanide*?).. flaxseed was added to wheat flour… at 25% levels… provisional tolerable daily intake has been set at *12 µg cyanide/kg body weight*… flaxseed should be limited to 10–20 g whole flaxseed per day… Food Administration in Sweden advises against usage of crushed or milled flaxseeds (in order to avoid poisoning yourself, to diminish the CG bioavailability)" ► JFST 2015;52(8):5102-10. This means that Swedish gov says "eat flax whole, so no benefits are gained, since ω3 won't be absorbed much at all". Why not avoid and eat the oil only (the filtration goes to farm animals, or fish feed, etc) until they develop a safe method of removing 99.9% of cyanide without heat (which creates AGEs)? This means 120 µg for 22 lb kids, or *1* g of freshly ground *flaxseeds is the* only (current knowledge, in the future, safe level may be 10 times lower, as with lead, etc) safe amount for kids of 22 lb, *5 g for adults of 110 lb,* 6 g for 132 lb, *etc*). The food industry doesn't ever process flax properly (the paper explains they don't remove even 90% of cyanide usually, 30% at times) before including it into many products, so you may overdose with cyanide even if you never buy flaxseeds; if eaten without being ground, as suggested to diminish CG absorption, you get no ω3 or little lignan absorbed, so might as well never eat flax, since ground chia seeds got no CG. You can get lignans, fiber from kale, red cabbage and many other sources, read the hair loss reversal section. We need to take them to court, bankrupt via fines their companies and bring the Age of Science and Truth, not Fraud.

But given the food industry culture (every chemically illiterate mom and dad, CEO, businessman sells food products), removal of only 60% or 80% is not safe, if bread can contain 25% flax flour. But don't try to heat flax meal at home, the heating of ground flax etc since inhaling HCN is more dangerous than eating it. Let a future high tech company do it, if you really want ground flax daily, Eterni Food Inc, the one company whose standards are 5 centuries ahead of every food

company on Earth. Companies would be required to provide Certificate of Analysis with 0 cyanogenic glycosides and 0 AGEs (from treatment) to sell any product in the future, but until that era, we're on our own… Also, *no human studies exist to prove benefits of flax lignans are not due to confounding factors like other polyphenols and antioxidants eaten, flax fiber, etc; most studies deal with 1 mg lignan intake for the "lower mortality quintile":* that 1 mg anyone can get that by eating less than 2 grams of kale. *There is no evidence that the flax lignans are any better than chia and other food lignans either, in fact some are the same.* Likewise, there are at least 200 nutrients *vegans* eat that prevent DHT/plaque formation, we don't depend on lignans for that. 90% of the benefits of flax mentioned above apply for chia seeds too, since most of the benefit derives from ω3 (almost identical amounts/100g) ALA bringing down inflammation and blood glucose in fat diabetic people. If you're skinny, healthy and vegan, the benefits of flax over chia/kale/etc are 0, since you can get way more lignans from other foods that you can eat 100-200g of, but the damage to lifespan from cyanide is far greater than the 'benefits'. Many *vegans* eat 3000 mg polyphenols/day, so 10 mg flax extra lignans is negligible; in 10 g of flaxseeds you get 150 mg of polyphenols, but in 20 g of blueberries you get that too, for 10 times fewer calories, so flaxseeds are overrated, flax oil is enough. On top of that, chia seeds contain 42% more total polyphenols than flax ► Integr Food NM, 2017;4(3):1-4. ☺☺☺

Many foods contain toxic levels of cyanide if overeaten, such as almonds (some died from bitter almonds, which contain 50 times more than normal almonds, cheap companies may ship bitter amonds and not write so on label), ►► *lima beans* ◄◄, *cassava*. I only eat walnuts, please stay away from almonds, since they got 12300 mg ω6 and 3 mg ω3, or *6:3 ratio of* 4100:1, when we need 2:1 to 1:1. Elderberries got cyanide too, causing vomiting if eaten raw. Apple seeds contain amygdalin which releases cyanide (cyanide blocks cellular respiration) into the blood when the apple seed is chewed in the mouth fully and then digested at the rate of about 60-200 mg of cyanide per kg (0.06-0.2 mg/g) of apple seeds ► FC 2015;170:437-42. For a 60 kg adult, 90 mg cyanide can kill (but even double may be needed), so you need to eat and finely chew every single seed within a sample of at least 450-1500 g of apple seeds (a seed weighs 50 mg, each apple has about 6-7 seeds). So, since in 1 g we got 20-30 seeds depending on seed size or apple variety, we need to eat at least 1,350-6,000 apples at once with all seeds finely crushed to release all amygdalin/cyanide in the stomach before any danger arises. Seeds of peaches, plums, cherries can also release cyanide. Bitter almonds are eaten by people who don't know the difference between sweet and bitter. Kids eating *5-10 bitter almonds* can *die*, adults die after eating 50 bitter almonds ► ISRNT 2013:610648. The FDA found imported sweet almonds were contaminated with bitter almonds, with *bitter almonds* contained more than 350 times (could be even 700 times, we don't know since cyanide in sweet almonds was below the cyanide 4 ppm detection limit) more cyanide compared to sweet almonds ► JFS 2012;57(5):1313-7. To be safe,

buy US almonds because they're sweet. Apricot kernels contain 2.9 mg cyanide/g, so a 1.3 ounce/36 g serving of such kernels can be *lethal* (got 106 mg cyanide) if eaten at once, see more at youtu.be..U; people ended up in ICU/*died* because of *apricot seeds*. To be safest, avoid all nuts, except walnuts, for reasons detailed here. Almonds are pretty deadly.

Avoid FLAXSEEDS if *THYROID* issues exist *OR* if *pregnant,* lactating or trying to conceive

Those with thyroid issues or conceiving/pregnant women can get about the same ω3 amounts from chia seeds, which are free from the goitrogenic cyanogenic glycosides and plant estrogens in flaxseeds. As explained above flaxseeds have 2.5-5mg/g cyanogenic glycosides, which get metabolized to about N≡C-S^- thiocyanate ion, which competes with iodine for the sodium iodide symporter, and can lead to iodine deficiency, which causes low IQ or even mental retardation in offspring. However, as the goitrogenic cruciferous veggies section explains, it takes a lot of N≡C-S^- to diminish iodine uptake, so one would have to eat ground flaxseed in large quantities daily to cause severe effects. Due to estrogens and iodine interference, flaxseeds are not recommended during pregnancy, chia seeds have ω3 without the iodine interference and cyanide. PDS 2009;18(6):454-61 found flaxseed *oil* raised *premature birth risk* from 2-3% to 12% as Science Daily explains in simpler terms. No effect was found for flaxseeds, but Ntr 2019;11(5):1171 and *other papers advise to avoid flaxseeds during pregnancy/lactation*. Plant estrogens may become more bioavailable in oil form; ***higher estrogen absorption may also happen during grinding flax*** or eating some foods with flax that enhance the plant estrogen bioavailability in flaxseed. There are estrogens and IGF1 even in dairy, so some say stay away from dairy to prevent cancer ► IJPH 2015;44(6):742-58. Women diagnosed with low estrogen may benefit from some flaxseeds per some studies, ask a doctor or read 90 papers. ☺☺

11.7.3. CHIA SEEDS (*15.6% protein*, protein *score* 115)

Chia seeds (nutrient list) are the safer than cyanide rich flaxseeds and the *richest* source of ω3, on a per gram of fat basis, second richest source of *ω3 fatty acids*, on a per gram basis. Chia seeds are only 8$/lb in some places, organic, like the iherb always 74-75°F, ideal for nuts/seeds, warehouse (unlike Amazon 95°F warehouse). However, chia seeds can cause surgery if you eat them without first ***using a coffee grinder to make them into a powder and pour it into a glass of water with 20 times the water volume or a big smoothie***, since they absorb water and can cause in old or even young people hard stool or esophagus blockage. Sadly, chia oil causes pimples (flax 10x more than chia) in many, so algal DHA-EPA is the only healthy vegan oil for humans. ω3 are not absorbed unless you grind chia into a powder as explained here, so don't waste time eating chia/flaxseeds whole. Always dilute chia with lots of liquids or watery smoothie and maybe even let it sit 3 minutes to absorb water, to prevent any lumps inside the stomach or

colon requiring surgery. Chia seeds are richest seed/nut in *fiber* (4x the fiber in peanuts) and polyphenols, 42% more phenols than flax *(at least some cultivars of chia vs some cultivars of flax, since not all studies may agree on this)* ► IFNM 2017;4(3):1-4, *plus no heavy metals, PCBs, dioxins, pesticides, radioisotopes in fish*. Flaxseeds contain 22.8% ω3 vs *17.6*% for chia, but flax got cyanide and reduces estrogen levels, see previous 2 paragraphs; the only issue with chia and any acne causing food is that it causes acne often, so that puts you at risk of dry eye, as acne and MGD (42% of kids, 70% of older adults have it) can develop at once, eyelid glands produce lipids in our tears that prevent tear evaporation, and chia absorbs water, slows digestion, if not enough watery stuff eaten, so it helps dump toxins into the blood 3 times more, due to hardening stools 3 times more, than flax. Reduced estrogen from flax helps prevent dry eye in people with high estrogen by bringing it to normal, and causes dry eye in low estrogen patients whose estrogen gets too low. So, before you eat a lot of chia, *gently* kindly *recall*☺☺ that flax oil is far cheaper (buy it from the fridge/cold area of health food stores, not Amazon, store in the fridge), and almost free of cyanide, though the "almost" part is unclear, 0.1% of cyanide in flax or 2%?? The vast depletion of water by chia fiber, and to a lesser extent flax fiber, can cause dry eyes, so flax/chia oil may be safer; flax oil got 35 mg lignans/15g, flaxseed 230 mg/15g spoon, chia seed 15 mg/15g, pumpkin seed 38 mg/15g. A 5g pill of flax oil a day is good. Grinding chia is essential for getting the ω3 absorbed, as explained in the grinding chia seeds section. The polyphenols in chia seeds vary a lot from cultivar to cultivar. One cultivar's values are presented in Table 3 at JFF 2017;35:622-34: the 2 main polyphenols (each about 45% of total) were rosmarinic acid *(0.1/100g, also found in rosemary and mint family spices, though in spices rosmarinic is 0.4g-1.9g/100g, 1.9g in peppermint)* and daidzein (the 2nd most abundant isoflavone in soy, 37% of total soy isoflavones, after genistein 57%: we always hear about soy isoflavones being beneficial, we can get one from chia, without the downside of phytoestrogens and high ω6 in soy). Other cultivars may have different main polyphenols.

To avoid the stool becoming too solid/slow moving, use an oil maker to turn chia seeds into oil (far fresher and less oxidized, more artery protecting than any from Amazon, keep it in dark bottle in fridge, 20 ml at a time, fox max freshness, 3-4 g daily max) *or only eat a 3-7 g/day, the ground chia poured into a* very watery smoothie*, perhaps adding 100-300 g* pineapple (has the bromelain enzyme *that breaks protein in chia faster, speeding transition time, further enabling* "odorless" stool*); it's better to avoid chia in smoothies without pineapple/papaya (papain enzyme breaks down protein fast too) or without a very large amount of watery produce, as it won't be fast digestion, and stool will smell more (*more toxic metabolites released into blood too*) like* omnivore stool does due to increased transit time*. Chia absorbs a huge amount of water, 3 x > flaxseeds, so 5 g of chia is like 15 g of flax in terms of stool hardness; for those with watery stool, 9 g of chia will fix the stool*. Chia got 57.0% of total fat as ω3, while flax only 54.1%.

A diet high in ALA (main fat in chia) lowered *CRP 4 times* from 1.51 to 0.37 in the previous page discussed study. As explained with study references in more detail in the hs-CRP section, *CRP > 0.85* meant 3.7 times higher coronary heart disease mortality than *CRP < 0.19* and *CRP > 1* meant 16 times higher cardiac mortality than *CRP < 1*. 97+% of Americans have CRP > 0.19. Thus, ω3:6 ratio being 1:1 or 2:1 is essential for Longevity, as it can lower CRP 4 times at least. My ω3 intake is shown here. DC 2007;30(11):2804-10 found that versus wheat bran, 37 g/day of chia seeds lowered CRP by 40%. Higher ω3:6 ratio also makes people happier, less aggressive as shown in the ω3 behavior section. Because flax and chia seeds are the ONLY foods with high ω3 on Earth, they're fundamental, since *most people have high CRP leading to short lives*. *Because flaxseeds can't be used by pregnant or conceiving women due to phytoestrogens, chia seeds are a good option, as no other food (except flaxseeds, fish oil and algal oil) has that much ω3*. For people with thyroid issues, chia is way better than flax, as they produce a negligible amount of thiocyanates (a type of goitrogenic compound which can interfere with iodine uptake) compared to flaxseeds. That's why the flaxseed section has a study claiming up to 50 g of flax is safe daily. Chia seeds have 80x the *ω3* in TILAPIA fish, *5.6x the* calcium *in* milk, 4.5x the calcium in kale, 11x the calcium in lentils, 15x the magnesium in broccoli, 55x > selenium, 2x > potassium, 126x > calcium than bananas, 11x the selenium in walnuts, 2x the selenium in flaxseeds, 8x the ω3 in salmon. Chia seeds got 38 g fiber/100 g vs 6.7 g for avocado or walnuts, 2.6 g for banana, 27 g for flaxseeds, *that's* 5.6x > fiber than walnuts *and* 14.5x > banana. 100 g of chia seeds provide 63% of daily calcium needs, 82% of magnesium needs, 31% of zinc, 108% of daily manganese needs. The brown seeds (ORAC 9,800) have more quercetin, anti-oxidants than the white (ORAC 7,000), just like purple cabbage has 2,830 times more anthocyanins than green cabbage. Chia seeds have ω3:6 in ratio of 3:1 better than all nuts and seeds, except flax (4:1). Walnuts ω3:6 = 1:4. Chia have 31 g fat instead of 65 g of fat for walnuts (42 g for flaxseeds), more ω3 than walnuts per 100 g (17.5 g versus 9.1 g), higher quality protein (amino acid score 115 vs 55 for walnuts, 92 flax) and 2.5 times more calcium than flax, 6.4 times more calcium than walnuts.

11.7.4. PINEAPPLE (*0.5% protein*, protein *score* 81)

Pineapple (nutrient list) prevents flu, inflammation, infections, arthritis, cancer, dissolves arterial plaque (breaks the collagen and other proteins of the plaque), reduces or eliminates angina, dissolves β-amyloid plaque proteins, improves heart function, dissolves stuck feces on the colon after fasting enabling you to turn "hard balls feces" into normal "soft long hot dog" stool, but it can dissolve proteins on your throat too, so eat it in a smoothie with other greens, blueberries, lentils etc to diminish its acidity and corrosive action or eat it first, before all other items for that meal, so all throat residues are removed by the other foods. A video explains how to choose sweet juicy pineapples: avoid the dark green ones or with brown leaf tips or leaves hard to pull

out. However, if you eat pineapple for bromelain enzyme that shortens the duration of injuries, flu, cold, etc, then it's better to get less ripe pineapple, which has more bromelain. You will get sensitive teeth (areas that have less enamel) from pineapple, as bromelain softens some areas you chew on a lot, so to avoid that you can make a smoothie, to avoid chewing it. When peeling pineapple, please make sure to remove all the brown skin traces of little holes that remain on the surface of the pineapple, since those are hard to digest and they could cause tears, ulcers, sepsis inside stomach or intestines, requiring life threatening medical treatment. Only eat 100% yellow soft stuff, not any of the skin. Glycemic index is 62, so eat in moderation. However, 1% of people have allergy to it, and develop rhinitis (swelling of nasal or even eye tissues), asthma symptoms: CA 1979;9(5): 443-50 "bromelain is capable of inducing IgE mediated respiratory and gastrointestinal allergic reactions... there is evidence for immunological cross-reaction between the two plant proteases bromelain and papain (*in papaya*)". Workers in Pharma, food industries get asthma from this bromelain dust ► PNE 2007;61(3):159-61. ☺☺☺ You can become sensitized to it, if you eat 1-2 pineapples a day; 2 pineapple cans are fine, since cans got no bromelain, so no allergy. If you have trouble breathing after eating pineapple, remove the bromelain rich center (they got tools to do it) and try it without it; if 'asthma' still happens, then eat 0-100 g daily if allergy to 500-900+g develops.

As much as this allergy is an issue, it is the bromelain that protects us from a ton of issues; it's always like that in life, the most beneficial stuff comes with some risks. Hypothesized to even help the body in dissolving atypical collagen type 2 polymers (eye floaters) formed due to free radical damage caused by many factors, even dry eyes that don't wash junk out of the eye leading to oxidative stress. The "dissolving proteins" benefits come from the bromelain enzyme (which can make up to half the fruit protein). Due to the bromelain helping us digest protein better and the special fiber in pineapple, it seems a good *fruit for* improving digestion (but don't eat it on empty stomach without protein as it may start digesting proteins on the GI tract lining). There are 2 types of bromelain, the stem (used to tenderize meat) and the fruit type (the acidic form). *Most bromelain is in the stem*, that's why, if our body needs more bromelain of the stem variety, when we eat pineapple we benefit far more if we eat the central stem part too. *Canned pineapple has almost 0 bromelain*, as the 80+°C (pasteurization) or 100+°C (sterilization) heat destroys it. The stem is removed from the canned pineapple rings, because it is hard, less sweet; stem bromelain can neutralize stomach acids causing problems in people with low stomach acid secretions; therefore, it may be better to not eat too much pineapple (with the stem). ☺☺☺

Angina is often caused by arterial plaque, bromelain dissolves plaque removing angina, preventing atherosclerosis, a main driver of heart disease, Alzheimer. Pineapple has a PRAL score of minus 2.3. Bromelain is a protease that cleaves proteins, making the digestion of proteins easier. ☺☺☺ The reason the stool of *vegans* (maybe omnivores too) loses its odor

many times when eating pineapple may be that bromelain cleaves proteins, speeding up their absorption as amino acids before they reach the colon where bad bacteria feed on undigested proteins, peptides, carbs, etc. To test this hypothesis we would need a placebo controlled study with placebo identical taste and color pills and real bromelain pills (use an ingredient that tastes stronger than bromelain in both pills, of the same color), measuring bacterial and volatile content of stool right after elimination. Omnivore food transit time is up to 5 to 8 times longer than *vegan*; protein can linger thus much longer in the digestive system, leading to more putrefaction and smell. But even *vegans* have protein that is undigested.

Bromelain (sold on Amazon as pills) cleaves virus envelope glycoproteins, structural (in the capsid) and nonstructural viral proteins destroying viruses and their multiplication mechanism (the genetic material of a virus is stored within a viral protein structure called the capsid, often made up of multiple copies of just one or two viral proteins). That's why people who eat pineapple (only fresh fruit has bromelain) obtain better protection from colds and flu (shorter, less fever, fewer symptoms once the flu sets in) than those eating canned pineapple or oranges, which get only the manganese and vitamin C protection (fresh pineapple has 48 mg C/100 g, canned pineapple 9.5, fresh orange juice 50, orange juice bought 34, raw orange 53). No other fruit has that much bromelain and manganese, but papaya has the papain enzyme which also helps digest protein, being used by the food industry to tenderize meat. We die without manganese, it plays a key role in fighting huge oxidative stress during a flu:

1. FEWER COLDS, FLU BOUTS, INFECTIONS IN KIDS ► JNM 2014:861659. Pineapple boosts immune function, fights viruses, bacteria, infections, because it has 48 mg vit C/100 g vs 48 mg C for oranges. Fresh works better, as bromelain isn't removed during canning/heating.

2. LESS LEG EDEMA, SWELLING ► BR 2016;5(3):283-8 "Bromelain was administered to patients with arthritic joint swelling and a significant to complete decrease in soft tissue swelling was observed... bromelain administration resulted in significant decrease in pain and stiffness in patients with knee *osteoarthritis*... sinusitis patients that received bromelain demonstrated complete resolution of breathing *difficulties and inflammation of the nasal mucosa*" They found less swelling after fractures and surgeries. Oral bromelain is absorbed by the gut without losing its biological properties and significantly reduces the edema in traumatically-induced hind leg edema in rats ► FM 1981;99(15):554-6. ☺☺☺

3. LESS ARTERIAL PLAQUE, LESS ANGINA, LESS HYPERTENSION ► Bromelain is not completely destroyed by stomach acid. The estimated plasma half life of bromelain is 6-9 h. After taking 3g/day of bromelain, blood concentration reached 5 ppm by 48 h ► AJP 1997;273(1Pt1): G139-46. Pineapple leads to less angina ► BR 2016;5(3):283-8 ► "*bromelain* facilitated functional recovery of the heart by limiting (human)myocardial injury in ischemia experiments. Bromelain

also increased aortic flow, and reduced the infarct size and the degree of apoptosis... bromelain dissolved *atherosclerotic* plaque in rabbit aorta (in vitro/vivo studies) and it clearly explains the potent fibrinolytic activity of bromelain, which functions by *breaking down cholesterol plaques*. In experimental animals, bromelain exerts an anti-hypertensive effect when administered for prolonged time periods.... it increases vessel wall permeability to oxygen and nutrients while increasing blood fluidity (in humans)... was used in the treatment of ulcerative colitis and patients showed rapid improvement of symptoms". I noticed digestion improves.

4. SKIN HEALING ► FACIAL BRUISING GONE IN 4 DAYS ► "bromelain administered to boxers completely cleared all bruises on the face and haematomas of the orbits, lips, ears, chest and arms in four days (Practitioner 1960;185:78-9.)" ► BR 2016;5(3):283-8. ☺☺☺

5. HIGHER BRAIN PERFORMANCE, LESS ALZHEIMER ► RPS 2017;12(3):257-64 ► pineapple had a protective role against induced amnesia in mice. Bromelain dissolves human blood amyloid β which can cross the blood brain barrier and *deposit* in the brain ► EN 2001;167(2):385-92. Pineapple has 48 mg vitamin C/100g, oranges 53 mg. Vitamin C removes brain free radicals and heavy metals. Polyphenols protect the brain from oxidative stress due to radicals, AGEs from foods, and pineapple has about 40-75 mg gallic acid equivalent polyphenols in 100 g as explained at Mol 2014;19(6):8518-32. ☺☺☺

6. KILLS GASTRIC & COLON CANCER CELLS ► OTT 2013;6:403-9. In mice, "bromelain reduced the development of... tumors" ► MNFR 2014;58(3):457-65.

11.7.5. GINGER may cause dry eye (*1.8% protein*, protein *score* 46)

Ginger (nutrient list) (score 46, Met+Cys 21mg, so 21/(1.82*55)=0.46), helps prevent cancers, colds/flu, diabetes, high blood pressure, high cholesterol, Alzheimer, immune system weakness, inflammation. Each food chemical affects millions of biochemical pathways, in a complexity that is hard to imagine or map. That's why designing the new medical system with NDs above MDs (live to 4000 via ND) is logical, we change the eterni food powder formula to cure almost any disease, by the 1 million effects of each of the 50,000 components of the formula replacing 80 main foods a person may eat. Excessive ginger may cause dry eyes in the long run, per Ayurveda and the IJOVS 2023;8(2):33-8 report on lower TBUT. Ginger can cause dry eyes in 3 ways:

1). anticholinergic: exocrine glands (lacrimal, salivary, etc) are regulated by the parasympathetic nervous system, via muscarinic acetylcholine receptors (mAChRs). When acetylcholine binds to mAChRs, it triggers tears. 6-gingerol, 6-shogaol, have mild, transient antimuscarinic properties, downregulating acetylcholine binding on the lacrimal and meibomian glands via 3 mechanisms:

1.1. Interruption of the G_q Protein Cascade: receptors in the lacrimal glands are M_3 receptors,

which are coupled to G_q proteins. When acetylcholine binds to M_3, it activates Phospholipase C (PLC). PLC then releases intracellular calcium, which forces the gland cells to secrete tears. [6]-shogaol etc inhibit PLC activity and block voltage-operated Ca channels, so tears stop even if acetylcholine binds to mAChRs. PLC block is functionally identical to an anticholinergic block.
1.2. Non-Competitive Allosteric Modulation: When gingerols etc do reach mAChR, they favor allosteric sites (secondary pockets on the receptor) rather than the orthosteric pocket where acetylcholine attaches. 6-gingerol, 6-shogaol are highly lipophilic with hydrocarbon tails, phenyl rings, that lack the polarity and affinity for orthosteric mAChR site of highly polar acetylcholine, so instead, they weakly dock into lipophilic side-pockets of mAChR. This allosteric binding induces a subtle conformational change in mAChR, and now acetylcholine can't bind as tightly or trigger mAChR effectively, resulting in a weak anti-muscarinic effect.
1.3. Presynaptic Feedback Manipulation: ginger acts on presynaptic muscarinic autoreceptors M1, M2 that serve as a braking system; when stimulated, M1-2 tell the nerve to stop releasing acetylcholine. By altering the feedback loops of M1-2, ginger can disrupt the steady release of acetylcholine needed for tears.

2). TRPV1 (capsaicin) Receptor Activation: gingerols are agonists for the TRPV1 receptors, the same sensory receptor that responds to heat and chili peppers. Activating TRPV1 tricks the body into thinking the body's internal core temperature is rising. This triggers increased peripheral blood flow (vasodilation) to take hot blood from the core, send it to the cooler, faster cooling hands, feet. It also causes mild sweating/evaporative cooling that dries the eye. The heat dissipation, blood shift draw moisture away from the delicate mucous membranes like eyes.

3). COX inhibition: blocks PGE2 synthesis, blocks anti-inflammatory LXA4 from protecting eyes, alters the surfactant properties or viscosity of the oil secreted by the meibomian eyelid glands, making the lipid layer unstable, incapable to prevent water layer of tears from evaporating.

If you puree ginger in a smoothie, add some lentils to the smoothie, otherwise, it's too caustic on the throat, let the smoothie become a paste first by adding properly soaked and cooked legumes. The same applies to garlic, onion and other "throat burning" spices. Eat ginger in a paste smoothie or the first in a meal (not last, so more swallows will clear its corrosive chemicals) and mixed with other foods, then swallow other foods 10 times. Ginger can damage the vocal chords and the esophagus, so be careful to eat it by chewing it a little (not too much as the liquid will irritate the throat) first, then to wash any residue off with foods you eat afterwards, same for any spicy thing. For some, who don't make thick smoothies using lentils, spies are best eaten first thing, chewed slightly, otherwise, they will irritate throat 30 times more. Ginger is a powerful agent against several forms of cancer, as 100s of papers show. Recently, a paper came out showing that 6-shogaol, present in ginger, was found to be effective

against spheroid cancer cells at concentrations 10,000+ times smaller than those of Taxol, a chemotherapy drug. Even at concentrations 10,000 times higher than the ginger ingredient, taxol was ineffective against those cancer cells. To find this data use Ctrl-F to search for 10,000 at ► PO 10(9):e0137614. Since some brands of tea have 4,002 times more lead than others, it may be best to buy ginger from less polluted countries. ☺☺☺

► INHIBIT AGEs (Advanced Glycation End Products) ◄

Ginger was the *strongest* AGEs *inhibitor* among 17 plants tested ► BJN 2009;101(11):1714-21 (Table 1 page 1717). Ginger reduced AGEs by 93% in the fluorescence test, compared to just 43% for apple, 31% for garlic, 29% for orange and 5% for onion. In the carbonyl test, ginger inhibited 64% of protein carbonyls, while apple only 7%, lemon 13%, orange 14% and onion 24%. In other tests, ginger was also much stronger than green tea, black pepper, cinnamon. ☺

► ANTI-OXIDANT POWER to Neutralize Free Radicals & Slow Aging (centenarians used it) ◄

Raw ginger has ORAC antioxidant score of 14,840, 38 times higher than wine. Powder ginger has ORAC score of 28,811, 73 times higher than white wine (ORAC value 392 at the bottom of the list). Orange/red wine has only 2-5 times more antioxidants than white one. The ORAC values published by the USDA show the amount of anti-oxidants (that neutralize free radicals) in food.

► CANCER ◄

Ginger prevents prostate cancer ► BJN 2012;107(4):473-84. Ginger prevents lymphoma (lymphatic cancer), colorectal cancer, breast cancer, skin cancer, liver cancer, bladder cancer ►NC 2013;65(2):263-72. Ginger prevents ovarian cancer ► BMCCAM 2007;7:44. Ginger prevents liver cancer ► Clinics 2008;63(6):807-13. Ginger fights lymphatic cancer ► CL 2003;199(2):113-9.

► ALZHEIMER ◄

Ginger prevents the formation of brain plaque that could cause dementia after 50-80 ► DDDT 2014;8:2045-59, RR 2013;16(2):124-33, JACM 2004;10(6):1009-13, Rejuv Res 2015;18(5):413-21. Ginger improves *cognitive* function in *healthy* people ► EBCAM 2012:383062. Ginger attenuates dementia related neuroinflammation and cognitive deficits ► BBRC 2014;449(1):8-13.

► WEAK IMMUNE SYSTEM ◄

Ginger is an antiinflammatory antioxidant ► IJPM 2013;4(S1):S36-S42. Ginger boosts *immunity*, and helps with a myriad of health issues ► FF 2013;4(6):845-55. Ginger was the best spice (with turmeric) among about a dozen in a test of several *inflammatory markers. Ginger* performed much better than many common spices. ► JACN 2012;31(4):288-94. See also youtu.be..B4.

► HEART DISEASE ◄

Ginger lowers blood pressure ► JCP 2005;45(1):74-80. Ginger lowers cholesterol and blood sugar ► BJN 2006;96(4):660-6. 0.25 mg ginger extract reduces cholesterol (LDL down 58%, TC down by a third), inhibits LDL oxidation (LDL-associated lipid peroxides down by 62%), diminishes atherosclerosis (aortic atherosclerotic lesion areas were reduced 44%) in atherosclerotic, apolipoprotein E-deficient mice ► JN 2000;130(5):1124-31.

► LEAD TOXICITY ◄

Ginger diminished the effects of lead in rats by enhancing the levels of reduced glutathione, glutathione peroxidase, glutathione-s-transferase, catalase ► JFST 2014;51(5): 908-14.

► COLDS ◄ See the Natural Antivirals section

► DIABETES ◄

Ginger is anti-diabetic, lowering blood sugar: IJPR 2015 14(1):131-40, IJFSN 2014;65(4):515-20, JCIM 2015;12(2):165-70, CTM 2014;22(1): 9-16. Ginger helps prevent heart issues in diabetes ► DMJ 2016; 40(1):46-53. Ginger prevents neuronal damage in case of diabetes ► AA 2014;196(2-3):119-28. Ginger delays cataracts in diabetes ► MV 2010;16:1525-37 ☺☺

► PREGNANCY ◄

Ginger alleviates nausea and vomiting in early pregnancy ► JABFM 2014;27(1):115-22. Comparison of the effectiveness of ginger and vitamin B6 for treatment of nausea and vomiting in early pregnancy: a randomized double-blind controlled trial. Ginger was better than vitamin B6 ► JMAT 2007;90(1):15-20. A 68500 women study found that the use of ginger during pregnancy to alleviate morning sickness did not lead to birth defects ► EJCP 2013;69(2):269-77. "Among the 68,522 women in the study, 1,020 (1.5 %) women reported using ginger during pregnancy. The use of ginger during pregnancy was not associated with any increased risk of congenital malformations. No increased risk for stillbirth/perinatal death, preterm birth, low birth weight, or low Apgar score was detected for the women exposed to ginger during pregnancy compared to women who had not been exposed." Ginger reduces menstrual pain & can cut blood loss in half. Some claim it can cause miscarriage.

11.7.6. PLUMS (*0.7% protein*, protein *score* 39)

Plums (nutrient list) (15mg Leu, 15/(0.7*55)=0.39, score 39) got the highest mg of polyphenols /cal of any common fruits (377mg/100g ► EJCN (2010) 64, S112-20), except blueberries *(which have 20-80% extra (depending on variety) polyphenols, have 10% more pesticides than plums,*

cost 90% more than plums). Plus are very high in phenolic acids, like CGA. Because of these acidic polyphenols, always eat watermelon or some other stuff after eating plums: *avoid eating berries, plums or high polyphenols fruits, as the last item, especially in the evening, since the phenols can corrode your throat and make your voice hoarse next day*; women who drink tons of coffee or cacao/chocolate also destroy their voice via the same mechanism, as well as their brains and offspring via caffeine. You can tell who drinks coffee a lot or alcohol, by their voice. Plums contain fructans, which cause a lot of gas if you eat more than 1 a day, so if you live in an area where blueberries (that cause way less gas) are not around, due to a government of low IQ slaves of foreign or local aristocrats, you can get the same benefits of blueberries by simply eating mostly the peel of plums and a little flesh (to get some fiber, so maybe 10-20% of the flesh only), since fructans are concentrated in the flesh. This way, you can per calorie 4-8 times more polyphenols than even the most expensive blueberries that 95% of the planet has no access to and are giving yourself a chance to have a functional brain to bring immortality capitalism, that gives all eterni foods to all with good antioxidants. Don't underestimate your ability to overthrow the dictatorship of the war mongering complex. In the fight against hyenas, you need more polyphenols and antioxidants. Because purple kale, cabbage, cauliflower have thyroid disrupting glucosinolates if eaten in large amounts, plums are the best option for anthocyanin polyphenols in most of the world for the poor enslaved workers, especially in winter when blueberries cost 5-15 times more/100g, due to only the most expensive stores having them fresh (frozen has too many mold spores to be safe). Plums have also polyphenolic acids in large amounts, acids that are in negligible amounts in berries (except blueberry) and in purple cruciferous veggies and pretty much all other foods. You may be poor, but information is often worth 20 million dollars and can help you outlive the rich selfish aristocrats who give us eternal wars. This book is leveling the field, it's like you get 20 years of extra life via information alone, so money is proven to have less value. Sleep well, at regular hours, 10-7, that's the key to longevity besides good nutrients. Avoid overeating any sweet fruit, as insulin spikes, body inflammation spikes and acne erupts (styes too). Plums protect the brain and body against oxidative stress, reduce inflammation, prevent diabetes, hair loss, hypertension, heart disease, formation of Alzheimer β-amyloid plaque. Studies give different mg polyphenols in any plant, depending on the cultivar analyzed. phenol-explorer says 100 g plums got *190 mg polyphenols (low bush blueberry 274, high bush blueberry 310, Canada blueberry 656) on average* (min 50 for yellow plums, the useless ones, orange-red are in between, max 544 for the dark blue/black with dark purple pulp, not light green; shop wisely to drive market towards the healthier cultivars via demand): *47%* or 89 mg *chlorogenic* acids (also found in blueberry (87-131 mg), cherry 53mg, tea, coffee 50 (5 if too processed), *15+ times less in blackberry, prune, nectarine 5 mg, peach, strawberry*), *25%* or 48 mg *anthocyanins* (*the main polyphenols in berries*, 42.5 mg cyanidin anthocyanins), *21%* or 40 mg *proanthocyanidin* flavonols, 7% or 13 mg other flavonols

(4.6 catechin, 2.2 epicatechin, 6.7 quercetin glucosides). Below are 3 sections for the 3 main polyphenols: 1. chlorogenic acids 2. cyanidin anthocyanins 3. proanthocyanidin flavanols ☺☺☺

1. CHLOROGENIC ACIDS (CGAs)

Plums are the 2nd richest source of chlorogenic acid CGA, after blueberries, which have slightly more. Cherries are the 3rd richest source, followed by coffee, yet among coffees, the variation is very big, some may have more than cherries others may have 5 times less. Most benefits of coffee come from CGA, as you can see from the science papers. Plums, blueberries, cherries offer these benefits without the *caffeine* harmful effects. There are 3 CGAs in plums: 88% 3-O-caffeoylquinic acid (CGA), 10% 5-O-caffeoylquinic acid (neoCGA), 2% 4-O-caffeoylquinic acid (cryptoCGA); caffeoyl is 3,4-dihydroxycinnamyl. Because 3 & 5 on quinic acid are symmetrical, CGA and neoCGA are sometimes both called 3-O or 5-O; they're stereoisomers with OH groups 1 & 4 being S, R in CGA & R, S in neoCGA, while 3 & 5 OH are R in both since quinic is 3R, 5R; thus, depending on the free radical position and local geometry, protein folding, etc, one may work better or slightly faster than the other, *yet both* CGA *(main in plums) and* neoCGA *(main in blueberry) work quite well since both have free radical quenching OH groups on both sides of the ring*; cryptoCGA got the caffeoyl group bound in the para or 4 position, instead of the meta or 3/5 for CGA/neoCGA. Chlorogenic acid is the 3,4dihydroxy*cinnamic* (*cinnamon*) acid ester of quinic acid (3R,5R-1,3,4,5-tetrahydroxycyclohexanecarboxilic acid); however, the generic term CGAs refers to ferulic (caffeic with 3 OH group being OCH_3) and coumaric (monohydroxy *cinnamic* acid, or caffeic with only one OH group on benzene ring in positions 2, 3 or 4, and double bond can be cis, not trans like caffeic) esters of quinic acid also, not just caffeic; caffeic, ferulic, coumaric are important phenolic acids in foods, so when reading papers we can understand the biochemistry of preventing oxidative damage via hydroxy groups better now. ☺

Since CGAs have 7 free OH groups (ferulic CGAs only 6), they can quench a lot of free radicals, just like anthocyanins (with 6-8 OH groups), the main berry (except blueberry which has a lot of CGAs too) polyphenols, can too. *Due to* CGAs *being smaller*, they're probably more effective at eliminating free radicals overall, being able to sneak in in tighter molecular cavities where free radicals may be ready to damage DNA, membrane phospholipids and proteins. However, the specific configuration of each polyphenol (some not even in berries, plums) gives it clear advantages in certain molecular environments where the negative-positive electrostatic interactions, hydrogen bonds etc make DNA defense easier against the main corridor of free radical attack from a nearby enzymatic system that produces free radicals in the cell; thus, studies show we we live longer if we eat a diverse diet, polyphenol/nutrient wise, not fruits that have the same exact polyphenols. Raspberries (I rarely eat them) got 3 polyphenols that make up 70% of polyphenols: cyanidin 3-O sophoroside with MW 611, sanguiin H6 MW 1871,

lambertianin C MW 2806 vs MW 354 for CGA; the bulk makes them less able to move around and trap free radicals prior and even after to the hydrolysis of the other moiety from the cyanidin or hydroxybenzoic acid. Prior to hydrolysis during digestion, they got less OH groups per 100 molar mass units too. Thus, among berries, blueberries are better *(most papers say due to more polyphenols, but I'm saying due to these other reasons too)*, often same $/kg as plums (plus organic, plums rarely organic), more complete than all the other berries; 2 plums can compliment blueberry polyphenols with catechin, epicatechin oligomer flavanols. However, the plum oligomeric polyphenols (21% of total) have high MW (578 procyanidin dimer B1, B2-B7, 867 trimer C1, etc), so are probably overall less valuable, so eating only blueberries may lead to longer lifespan, but in some areas blueberries are expensive/rare; other times, plums are rare. It's very easy to recall the cinnamic acid part of CGAs, it's a benzene ring with the famous allyl (as acrylic acid) from protein and fat 3 mnemonic bound to benzene. *Cinnamon (monnn cia, "my CIA" in French, chlorogenic acid) prevents diabetes (as many read online) because of these cinnamic acids that bind the AGEs and free radicals formed when glucose rises a lot, so CGAs prevent fruit sugar damage, while pure added sugar is deadly*. CGA contains no chlorine; however, Greek word for light green is cloros; chlorine got its name from this due to being yellow-green; when oxidized, CGAs turn green; *the inside of blueberries, many plums is greenish, only the peel is blue*. ☺☺ The most abundant polyphenol in blueberry is neoCGA (87 mg/32% low bush, *131 mg/42% high bush*), 5-O-caffeoylquinic acid, not the 76 mg CGA (76 mg/40% of polyphenols) in plum. Humans absorb about 33% CGA from food ► JN 2001; 131(1):66-71. ☺

NEURON PROTECTIVE EFFECTS

The CGAs prevent oxidative stress, brain inflammation, the onset of Alzheimer, depression in vivo ► Mol 2016;21(3):260. CGA protects neurons against glutamate neurotoxicity ► LS 2015;139:69-74. CGAs control oxidative and inflammatory stress conditions ► Ntr 2016;8(1):16. CGA protects against aluminum-induced cytotoxicity (and neuron cell death) through chelation and antioxidant actions in primary hippocampal neuronal cells ► FF 2017;8(8):2924-2934. CGA prevents H_2O_2-induced cell death in primary cortical neurons ► NI 2012;60(5):466-74. CGA ameliorates brain damage and edema ► EJP 2012;689(1-3):89-95. CGA intake is linked to weight loss, neuroprotection, anti-inflammation, lower blood pressure/insulin resistance, anxiolytic /antihyperalgesic effects, cardioprotection ► NNS 2017;20(1):32-39. CGA inhibits LPS-induced microglial activation, improves survival of dopaminergic neurons ► BRB 2012;88(5):487-94.

PREVENTING HEART DISEASE ► In CGA-treated rats, fasting plasma cholesterol and triacylglycerols decreased by 44% and 58% respectively ► JNB 2002;13(12):717-26.

PREVENTING DIABETES

CGA is antihyperglycemic ► GPB 2010;29(1):23-30. CGA reduces the plasma glucose peak in the oral glucose tolerance test ► CBF 2008;26(3):320-8. CGA lowers blood glucose ► JMF 2013;16 (3): 211-5. CGA improved biomarkers related to diabetes, heart disease ► EBCAM 2013:801457.

PREVENTING FLU & viral infections ► see the Natural Antivirals section for 3 studies

2. CYANIDIN ANTHOCYANINS (a type of flavonoids, cyan= blue) ☺☺☺

90% of anthocyanins in plums are 2 glycosides (80% Cyanidin 3-O-rutinoside, 20% Cyanidin 3-O-glucoside). The benefits of anthocyanins are in the anthocyanin section.

3. PROCYANIDIN FLAVANOLS (subclass of proanthocyanidins which are flavonoid oligomers)

Procyanidins are dimers, trimers, oligomers of catechin and epicatechin. As the wiki links show, catechin and epicatechin are hydrogenated cyanidins. The most common procyanidin in plums is the epicatechin trimer called procyanidin C1, followed closely by EEC, B1, then B2 and B7. These procyanidins are also found in cacao (known for its polyphenol benefits), making up 58% of polyphenols in cacao OMCL 2012:906252. The main polyphenol in green tea is epigallocatechin gallate (EGCG). All major polyphenols are extremely similar in structure. Gallocatechin is same as catechin except for an extra OH group. Epicatechin makes up about 35% of polyphenols in cacao.

Procyanidin B2 shows up in blood within 30 minutes of ingestion, with a peak value at 2 hours ► AJCN 2002;76(4):798-804. Procyanidins Reduce Plasma Cholesterol Levels ► JCBN 2009;45(2): 131-6. Procyanidin dimers and trimers have antioxidant effects ► JAFC 2005;53(12):5041-8. Trimer procyanidins contribute to the protective effects of cinnamon extracts on pancreatic β-cells, and thus against diabetes ► APS 2016;37(8):1083-90. Procyanidins boost the immune system ► EBM 2007;232(2):293-300. Procyanidins protect neurons ► CMSJ 2017;32(2):92-9. Procyanidins suppress amyloid β-protein aggregation ► BRI 2011:784698. Procyanidin B2 promotes hair growth (3 times more growth versus control) ► BJD 2002;146(1):41-51.

11.7.7. NEBULA PURPLE CARROTS (*0.6% protein*, protein *score* 81)

Carrots (nutrient list) are the richest raw sources of α-carotene and vitamin A, those with lower α-carotene had 46% higher all-cause mortality and 77% higher cardiac mortality (see the α-carotene and vitamin A sections). Due to high oxalate (50 times the lowest cultivars) levels in some cultivars, it's ideal to take Mg with high carrot meals or at least high Mg/Ca foods, such as kale in a carrot-kale puree: the Mg will bind carrot oxalate and take it to the colon instead of to the kidneys (to cause kidney stones). Purple varieties have 2x the carotenoids of orange and among the purple, the black nebula (seeds) are 100% purple inside (see pics: 2, 4, 5 are purplest) with the highest anthocyanin content. JAFC 2011;59(7):3385-90 found a 12 times higher

anthocyanin in cultivars they evaluated (177 vs 15 mg/kg) than the orange core light purple types most are 65% purple with an orange core. "Black or solid purple carrots had the greatest TAC (total anthocyanin content) and total phenolic content (TPC), and the strongest antioxidant capacities" ► Pl 2023;12(9):1796. Pusa Asita cultivar had anthocyanin 115 on day 45 and 5193.9 mg/kg on day 108: "519.39… (most 'black' carrots have) "1750 mg kg^{-1} anthocyanin" ► FSB 2023; 33(4):721-47. As orange core purples got 5 mg/kg, the purplest carrots have 1039 times more anthocyanins (5194/5). "range for total anthocyanin content of 0.5–191 mg/100 g (1910 mg/kg)" ► Genes 2020;11(8):906, see carrot pictures to understand the 1039 fold differences. Analytical errors, days left in the ground account for the wild fluctuation in "max anthocyanin" in papers from 177 in 2011 to 5194 in 2023. If you grow these, leave them in the ground longer to increase anthocyanins 50 fold, but not too long as they may go bad. You no longer need to wait 5 years for blueberries bushes to grow, plus labor for purple carrot/kale is far less. In 100 days, carrots with the same level of polyphenols as blueberries can grow. It shows how science evolves and how "fragile" is the data we get at times, to be disproven 12 years later as wholly inaccurate. These are the same artery and brain protecting anthocyanins in berries, but don't overeat them in pregnancy, because too many polyphenols cause fetal iron, zinc, mg and mineral deficiency, leading to low IQ and sickness. Purple carrots may have more oxalate at times, so do test it first before eating too much. The α-carotene section shows that steamed has more carotene and is easier to digest, so 1 second (after pressure was reached to soften it) steaming with butternut squash in a pressure cooker will give you high levels of carotenes and β-cryptoxanthin, otherwise unavailable in other year round sources. Let it depressurize on its own, press cancel after 1 second when it beeps to indicate that pressurization is done. Letting pressure come down slowly without venting will make it so soft by the time it/s done and it will be so soft without wasting electricity. No venting means less noise, less chaos, more patience and virtue, and also less food particles creating biofilms that trap bacteria in the kitchen area. Then, use a wood (not plastic) cutting board to break them in pieces so they cool in 2 minutes, ready to eat, so soft, like eating softest raspberries. 1 second under pressure is key, as that damages the least amount of polyphenols and you will eat them easily. If you chew them, they stain your teeth a lot, like kale, so it's better to steam them or to puree them in a smoothie. Over chewing on any hard veggies can wear your teeth and weaken them over time, so let technology extend the life of your teeth. Carrots have provitamin A in the form of β-carotene, α-carotene, etc which are converted into 11-cis-retinal. We see due to 11-cis-retinal as explained in the "Mechanism of Vision" section. That is why carrots improve eyesight and prevent dry eyes. A big carrot (100g) a day, keeps the eye doctor away. Carrots are easy to eat raw mixed in a smoothie. Costco sells organic carrots (58cents/lb in 2020), mushrooms, figs, grapes, English cucumbers at 40-90% of the price of conventional equivalents at many pricier supermarkets; Costco has the coldest produce section, where stuff doesn't rot as it often does at some other

health food stores due to room temp storage of organic ginger, etc. Sprouts cucumbers are cheaper organic/lb if normal cucumber, not English ones. Check carefully all supermarkets and discount wholesale stores in your country and find the best deals to help your brain last; Costco organic carrots are 17% cheaper than Sprouts organic ones and stored better; however Sprouts has a lot more variety of cheap organic produce (Costco has no organic kale, ginger, etc), so you need visit both to eat healthier produce free from pesticides. By weight of produce, Costco is world's number one seller of organic produce, sprouts and whole foods may be by variety; Costco is better than Sam's Club which has less organic stuff, and warmer temps, less lasting produce; why not live longer without toxic pesticides that kill insects and incidentally, humans too, albeit slower (20 years early due to Alzheimer, etc), as we share biochemistry with them. Carrots have 828 times more β-carotene than eggs. Carrots have 27 times more β-carotene, 3500+ times more α-carotene, 69 times more sodium, 32 times more lutein-zeaxanthin than watermelon. Carrots also have polyphenols that are not present in most other veggies as you can see at phenol-explorer.eu...269. The main polyphenol is chlorogenic acid. ☺☺☺ Carrots have 6.6 times more calcium than bananas per 100 g, and less than half the calories of bananas. Avoid store carrot juice, since sodium benzoate preservative is a known carcinogen and during heating it releases benzene, another carcinogen.

Carrot rhamnogalacturonan-I or cRG-I or cRG1, in pill form, fights the rhinovirus of common cold, reducing cold severity/duration ► Ntr 2021;13(12):4395 & Ntr 2022;14(20):4258. cRG1 is one of 6 main components of pectin. Pectin is 65% galacturonic acid. This acid is bound to α-L-rhamnose (an isomer of galactose, called 6-L-deoxy-mannose, rh-amnose, easy to recall) and other sugars, so pectin (which is 1.4% of carrots) is called rhamno-galacturonic acid. Thus, eterni foods can take off, contrary to 'whole foods' folks, ultra high tech powders can extend human life 9000 times longer than nature's 'whole foods', just as rockets work 9000 times better at transport speed than nature given human running speed, and you don't need eat 10-15 lb of food. Carrot juices reduce inflammatory cytokines ► Ntr 2023;15(3):632. That's why knowing which chemicals work in pill or powder form is useful, most will, since the powders will mimic food by having fibers, carbs, proteins, fats. Fanatics will realize God's foods got poison. "Purple roots possessed, on average, almost nine times more phenolics than roots of other colors, 311.5 and 34.9 mg..." purple got 50-243 mg/100g anthocyanins, more than most produce ► PFHN 2013;68(2):163-70. "Purple carrots contained 2.2 and 2.3 times more α-carotene and β-carotene (pro-vitamin A, trace in yellow; not detected in white) than orange carrots, respectively" ► JAFC 2001;49(3):1410-6. Carrot diacetylenes (falcarinol, falcarindiol, falcarindiol-3-acetate) kill leukemia cancer cells ► AAMC 2012;12(6):640-52. Carrot and beet juice can be used to treat Chronic Lymphocytic Leukemia (blood cancer) ► OAMJMS 2015;3(2):331-6. Carrots prevent gastric cancer ► JGC 2015;15(4):256-61. Carrots prevent lipid oxidation and have strong anti-

oxidant properties ► NJ 2011;10:96. A study of 20,069 people found that Deep Orange veggies and fruits (the edible part, not the skin) are the most protective for the heart, while *carrots are the most protective among orange fruits and veggies;* each 25 g/day increase in the intake of deep orange fruit and vegetables lowered the risk of coronary heart disease by 25%, while each 25 g of carrots lowered the risk of coronary heart disease by 32% (highest % of all fruits and veggies); the red, green, yellow, white, purple fruits-veggies as a whole lowered risk by only 2% ► BJN 2011;106(10):1562-9. Carrots are anti-diabetic ► FF 2015;6(7):2135-44, anti-bacterial or antiseptic against many food pathogens ► JAB 1994;76(2):135-41, lethal against Listeria bacteria ► JAB 1991;70(6):479-88. β-*carotene* in carrots, cantaloupe, watermelon, kale, lettuce, collards, turnip greens improved *cognitive* function ► AIM 2007;167(20):2184-90.

KIDNEY STONES, Lifelong Dialysis 2hr/day, OXALATE ARTHRITIS from Oxalate Rich Foods:

Below is shown why we need eat Ca (kale, greens have it) with oxalate rich (carrots) foods. Super high vitamin C is converted into oxalate and can increase risk of kidney stones. Unsoaked lentils got way less oxalates, 21mg/100g than 95% of legumes. Spinach is 970mg /100g. The USDA shows lettuce has 16 times (16x) more oxalate than kale (20mg/100g), spinach 48x, collards 22x, celery 10x, radish 24x, carrots 25x, cassava 63x, beet greens 31x, chives 74x, sweet potato 12x, Brussels sprouts/snap beans 18x, so eat these in moderation or sparingly (cassava is full of cyanogenic glucosides too) amaranth 54x (*1090 mg*/100 g so 545x more than *2 mg*/100 g in corn at OHF.org & oxalate.org Harvard 2008, so keep eating corn, Native Americans claim of the "grain of the Gods" (they ate their God made of amaranth) would kill us all before age 90 as kidneys fail: *Spanish Empire* banned amaranth amino acid score 108, which has 4 times more (13.6 vs 3.3) protein than corn (*amino acid score 82) because amaranth survived droughts when most crops failed, so to starve natives, destroy unity* (community revolved around amaranth use in foods/ritual cannibalism of their God like cannibal Christians eat Jesus during 'Eucharist') and make them weak, unable to develop muscle to fight being enslaved, *Christians* (Christianity is an army of 'Jewish genocide of gentiles via fake miracles deception' disguised as religion, like Islam is, a terror group) *banned amaranth* since it allowed Christians to practice genocide of malnourished natives easier, as their demonic Jewish Bible Yahweh 'God of Israel, Cannibalism, Genocide, Mass Rape, etc' mandates: "Kill billions to Spread Jewish World Domination, you low IQ Christians, Muslims" *is the Bible,* Quran *summarized).* The oxalate.org page gives 8 entries for carrots, if you type carrot in the search bar, which vary from 5.6-500 mg in oxalate content. A sketchy short table claims carrots are about 10 mg (the ideal varieties, some may be 300 mg) and winter squash just 1 mg. Because carrots might have 100x more oxalate than butternut squash, and squash also got a huge level of α,β-carotene, plus β-cryptoxanthin carrots lack, it is best to eat squash daily to avoid carrot oxalate overload. Sadly, the chimp gov we have, doesn't require aristocratic bandits to list oxalate on veggies to prevent kidney damage. OHF.org has a

PDF with the oxalate level in foods. Spinach gives 10 entries: 300-970 mg. Some *carrot cultivars have about half (0.5g) the oxalic acid in spinach, so the calcium* (Ca) in spinach binds to oxalic and forms Ca oxalate which is eliminated or forms kidney stones*; thus, to prevent kidney stones when eating more* carrots, it's best to eat carrots with kale or high Ca foods to prevent free oxalate going into urine, so eating all your vitamin A in one smoothie: carrots, kale, squash, etc. "When calcium and oxalate are consumed at the same meal, a calcium-oxalate complex forms within the intestinal tract limiting the intestinal absorption and subsequent urinary excretion of free oxalate (instead of going into feces, oxalate goes into urine, which increases risk of stones as urine oxalate reacts with excess urine calcium)... with dietary calcium restriction, free oxalate becomes increasingly available for intestinal absorption, leading to greater urinary excretion of oxalate"☺☺☺ ► TAU 2014;3(3):235-40 ► Too little (400 mg led to 50% more stones vs the more normal 1200 mg Ca) or too much calcium (supplements) can cause stones. A food table helps us see exactly how many mg of Ca (*total, not bioavailable*) we get before we even eat them if our tablet is in the kitchen by writing the tentative number and seeing the total Ca. Kale got 135 mg Ca (spinach 120 mg) but if we mix 150 g kale with 150g carrots (150 g carrot can *contain* same oxalate as 75 g spinach, but it also can contain 10 times less) we bind oxalate/Ca a lot better, because the bioavailability of Ca in kale (42%) is way higher than spinach (7%). You avoid kidney stones, but you also avoid overloading with arterial plaque forming Ca. Some carrots can have 0.5 g oxalic/100 g, 25x more than zucchini @ usda.gov (expired, all data at oxalate.org). Uro 2014; 84(3):555-60 found "oxalate *contents of spinach (364-*1145 *mg/100 g)", very close to* 970 *mg USDA reported.* IJFP 2011;14(1):241-9 *found "oxalate content of raw spinach,* carrot*...* 978, 49 (16 if boiled) boiled vegetables can be an effective strategy for reducing the dietary intake of oxalates in individuals predisposed to the development of kidney stones*", i.e.* carrots 49mg/100 g (not 500mg in USDA table) if fresh, 16 if boiled. If the oxalate level of your carrots is < 70mg/100g, mixing carrots with high Ca foods (kale) is not needed. "Soaking (legumes)... *decreased... oxalate* (17-52%)... cooking *was...* more effective *in reducing levels*" ► FRI 2018; 107:660-8. Ask the carrot supplier what the oxalic content/cultivar is, if you eat carrots to avoid kidney stones, dialysis 2 hrs/day for 40 years or losing 25 years of your life.

This video shows chard, beet greens, chaga mushroom powder, starfruit, rhubarb, cashews (130 g/day, CMAJ 2017;189(10):E405-8, doctor told her to limit to 50g/day), almonds (most nuts are high in oxalate), and spinach are better eaten in tiny amounts, if daily, as they can cause kidney damage, failure, stones or the need for dialysis. A guy damaged his kidneys by drinking a gallon of tea daily (instant tea is 4 times richer in oxalate than brewed tea, see video). The reason calcium absorption is 10x lower in spinach vs kale is because oxalate binds calcium, forms calcium oxalate kidney stones. I never drink tea. RPZH 2007;58(1):61-7 found tea and coffee were main sources of oxalate for kidney stones. Cooking destroys most oxalate if done for a long

time only (30% destruction if short boiling), so the kidney stones issue is less severe. Boiling spinach led to a 30-87% drop in oxalate (discard the cooking water, as all soluble oxalate goes there) ► JAFC 2005;53(8):3027-30. Steaming led to a 5-53% drop.

Go to oxalate.org, choose oxalate column to list from highest to lowest and minimize high mg oxalate foods/100g: spinach 970mg, beet leaves 610, plantain banana 524, cacao 500, radish 480, collard 450, almond 407, brussels sprout 360, lettuce 330, cashew 318, sweet potato 240, broccoli/celery 190, cauliflower 150, bell pepper 117, shiitake mushroom 101, cabbage/fig/Brazil nut/hazelnut/pine nut/beet 100, potato/corn grits/wheat 97, bulgur 86, soybean 77, navy bean 76, rice 64, millet 62, onion/pea 50, raisin/date walnut/oats 40, orange 30, tomato 26, lentil 21, kale/squash cucumber 20, coffee 15, watermelon 11, tea 10, some carrots 5-500. Without soaking lentils, beans, grains, avoiding some foods, you get oxalate arthritis, kidney stones. The good news is with immortalism, US foods will get 0 antibiotics, growth hormones, antinutrients, heavy metals, bacteria, viruses, poisons, oxalates, purines, trypsin inhibitors. Praise the Anthem.

11.7.8. Watermelon lycopene rich; high fructose=dementia, protein *score* 53

Watermelon (nutrient list) has 4532 times more lycopene (essential carotenoid in the eyes) than carrots and almost twice the amount in tomatoes, plus 12 times more β-cryptoxanthin than grapefruit. ***Lycopene*** prevents heart disease, depression, Alzheimer, brain inflammation, cancer, oxidative stress, macular degeneration. Ripe watermelons have more lycopene, the main reason we eat it, so choose watermelon with a small navel (it means thin rind), strong dark green rind, dark green stripes, clear stripes and a yellow spot, not the light green watermelons or those that make a dull sound (no echo, no resonance) during tap with finger. However, high fructose is associated with 60% higher risk of Alzheimer, so don't overeat it, or eat tomatoes if you got no dry eyes. Tomato has histamine which dries the eyes. High blood glucose spikes after meals are linked to 69% higher risk of dementia. Fructose may inhibit 3 mitochondrial enzymes in certain tissues and circumstances, diets, etc, and may shorten the lifespan of Americans overall, so avoiding high fructose corn syrup or 5 lb watermelon daily may be a smart move. Watermelon is spiking glucose, being bad, so to get the benefits of watermelon without the issues, simply buy citrulline and lycopene. Fructose turns into uric acid, which causes dementia, diabetes, high blood pressure, arthritis, while fructose joins the unregulated half of glycolysis by turning into 3-phosphate-glyceraladehyde, then pyruvate (end of glycolysis), then AcetylCoA (Krebs cycle), then fatty acids (belly fat), high TG/LDL, fatty liver, diabetes. Fructose causes diabetes via 2 pathways: uric acid and pyruvate ⍰ acetylCoA ⍰ lipids. You have to exercise after a high fructose meal, otherwise, it becomes fat ultra fast via AcetylCoA becoming malonyl CoA, then fatty acids via FAS. To see how fructose causes dementia via uric acid, read point 4 of the soaking section: fructose causes vasoconstriction by uric acid inhibiting nitric oxide production (vasodilation

agent) and uric is clumping red blood cells making glucose transport harder to muscle cells, glucose can't be stored as glycogen in muscle cells as capillaries are tight and unable to take glucose, glucose remains high, insulin is high trying to lower glucose and the enzyme that removes amyloid protein is depleted as it tries to bind to insulin to lower it, blood amyloid goes from liver to brain, dementia sets in. Sadly, same enzyme preventing dementia also binds easier to insulin to lower it. FRUCTOSE, in soda, cookies, all processed foods and fruits, can thus be DEADLY and the cause of Alzheimer spike from 2000 to 2025. So, replacing HFCS with sugar in soda in 2025, after 41 years of HFCS, is a better choice (UK, Mexico, *Aussie still uses sugar, in the US profits for criminal CEOs making 389 times the average workers meant no sugar, but mercury and endless disease, dementia, retinopathy, diabetes, foot amputations, obesity for the working class)*, though naturally, the ideal thing is to eat sugar in its complex form, some starches solution with fiber, polyphenols, by creating thick 'sodas' without acidic carbonate that ruins enamel, with minimal sugar and more complex carbs and maybe ketone bodies to feed the brain, amino acids, peptides, etc, a real drink way healthier than soda poison, with vitamins, etc. HFCS has mercury traces too, which destroys neurons too. Thus, the food industry needs to be dismantled via 500 trillion in fines, its aristocrats demoted to tomato pickers in California, with all companies being taken over by Eterni Food Inc, one of the 11 companies of ethical immortalist capitalism. Limit watermelon to 150g/day, due to high fructose. USDA says tomatoes got 0.53 g fructose/mg lycopene, while watermelon got 0.74 g fructose/mg lycopene. Since watermelon is cheap, we tend to eat more than tomato, spiking brain fructose levels. In 100 g we find in g of fructose, g of sucrose: .27 lentil (0 glucose) s 1.5, .55 carrot (sucrose (s) 3.6, sucrose becomes 50% glucose, 50% fructose fast), .68 broccoli s 0.1, 1 butternut squash s 0.2, 1.4 tomato s 0, 2.1 pineapple s 6, 2.4: blackberry s 0.1, strawberry s 0.1, raspberry s 0.2, 3.1 plum s 1.6, 3.4 watermelon s 1.2, 3.7 papaya s 0, 4.9 banana s 2.4, 5.0 blueberry s 0.1, 5.9 apple s 2.1, 6.4 pear s 0.7 (avoid, high gas). MD shows in 4 min how sugar adds 5 lb in months, drinking cherry juice 170cal/8oz instead of beet juice 110cal/8oz. The same is true for any sweet fruit, like watermelon: use the food table. *If you have diabetes, limit watermelon intake, as it has a high glycemic index that spikes* blood *sugar*. Watermelon is in the clean 15 produce items, fewer pesticides than tomato which are number 25-10 over the years, sometimes even dirty dozen. Use organic tomatoes which have 2.57 mg lycopene/100g, *vs 4.53 mg for watermelon*, if diabetes exists. The benefits of lycopene (and thus watermelon) are covered in the lycopene section. It's well known that high simple sugar intake, such as watermelon, grapes, apples, etc or sodas, juices, etc cause a huge increase in acne breakout risk. When I cut watermelon intake 12 fold, from 1200g/day average to 100, most acne vanished. *Cut all foods with added sugar too.*

To get the best watermelon, try buy it from colder stores and feel by pressing how soft about 4 watermelons are to get an idea if it's a fresh batch or a rotten one: if 4 of them are very hard,

then it's safe to take one *after* knocking on it. Even very hard watermelons (not soft) can be totally rotten and you can tell that by knocking on it with your knuckles to hear a *dampened softer duller "thud like" lower pitch sound* of a rotten watermelon, which is far less audible than the *hollow bass drum like (similar to a knock on a door) louder deeper sound* of a ripe watermelon. It's a little tricky, because if the sound is "too hollow", it often is over ripe, but not totally mush and totally rotten yet, moment at which the hollowness disappears, being replaced by the duller softer sound. Not too loud, not too dull seems best. A final test, if sound not very hollow, *grab a watermelon with both hands and shake it near your ear*: you will often hear liquid bouncing if rotten. Many grocery stores (cheaper or upscale) have frequent rotten watermelons. Watermelons rot within 1-2 days after being shaken a lot during transport or handling, and most stores fail to store them at 55°F required. Melons last 5 times longer if after you pick them up from your garden, you leave a vine piece attached to the weak spot of the rind, the connecting 'tail' point (vine to watermelon) that cracks and causes rot instantly during rough handling. In 2023, I went to a reputable store, Stater Brothers, and within days 4 watermelons were bad. The knock test doesn't always work, just choose a store that cools them better. Watermelon can spike glucose levels, so it is best to eat watermelon (and other high glycemic index fruits) only tiny amounts and mixed with fiber and protein, never alone, to make the meal glycemic load and index lower. Sweet fruits destroy your ability to walk after 60, due to glucose spikes that damage the leg blood vessels. Stick to berries, the only safe fruits, besides tomato, avocado, cucumber. Oranges damage via high sugar and citric acid. Watermelon, grapes are high in fructose and that excess fructose converts to uric acid in the liver, which is then depositing in your big toe, ankles, knees and all joints, causing sharp pain as uric crystals cut into your joint tissues. MINIMIZE fructose in your diet. Yes, that seemingly healthy grape, banana, watermelon, orange, mango can cause severe joint damage. Watermelon is really bad for older people with insulin resistance and weak fructose metabolism. It can get so bad, they won't be able to walk. Uric acid can come from meats, seafoods or unsoaked beans.

You can get sick if you eat rotten produce, as that mold will poison you. Always store melons in the fridge. Seedless watermelons are created by crossbreeding a 22 chromosome watermelon with a 44 (unnatural, GMO sort of, chemical treated) chromosome female watermelon. Seeds are good, they got "protein, fat, and moderate levels of iron and zinc… high arginine content" ► Mol 2020;25(22):5258. The triterpenoids, alkaloids in seeds also kill molds and bacteria. You can place watermelon in a food processor to make a smoothie with carrots or kale for your eyes, and it will puree the seeds too. Don't swallow *seeds, you need to chew them to absorb the seed nutrients, so eat watermelon slowly to catch all seeds if you don't do* 1-2 smoothies daily like me. *Seedless melon* may have bad quantum effects, on fertility or health, only known to science in 100 years. *So, if a store offers* seeded, *which is often* cheaper, *buy seeded to be safe*.

Watermelon also has L-citrulline, an amino acid known to lower blood pressure and boost nitric oxide (NO) synthesis. ***Citrulline*** (watermelon is the highest food source of it) lowers blood pressure (NO relaxes arteries) of hypertensive people ► COCNMC 2017;20(1):92-8. Watermelon juice for 2 weeks improves NO bioavailability ► NO 2016;59:10-20. Citrulline reduces "serum inflammatory cytokine concentrations, such as IL-6, tumor necrosis factor (TNF)-alpha, and C-reactive protein" ► Ntr 2018;10(7):921. Watermelon got 50 mg ω6, but spikes ***glucose if you eat plenty, which leads to acne,*** ocular styes (a form of pimples, same mechanism). Eat watermelon with cucumber, fiber rich foods, kale, walnut, polyphenols, protein (lentils) ***to slow digestion*** and halve the sugar rise. In eterni foods we can place some citrulline, lycopene, fiber, complex carbs, protein, polyphenols without eating 500 fruits/veggies.☺☺☺

11.7.9. PURPLE ONIONS (helps hair grow)

Red (or Purple) Onions (nutrient list) are healthier than white or yellow ones. Onions release alliinase enzymes when cut, causing alliin (allyl cysteine sulfoxide, HO-C(=O)-CH(NH_2)-CH_2-S(=O)-CH_2-CH=CH_2) to become sulfenic acid derivatives, such as diallyl thiosulfinate (sulfenic acid thioester) or allicin CH_2=CH-CH_2-S-S(=O)-CH_2-CH=CH_2 or Allyl$_2$$S_2$O. To recall this allyl, scALLIon, gArLIc, leek like LIC, the Allium plants class contains garlic, scallion, leek and onion and it's like like Ala or CH_3-CH(NH_2)COOH the alanine amino acid the building block of most amino acids and proteins and Allyl -CH_2-CH=CH_2 a part of important fats; Ala/Allyl both got 3 carbons, Ala is an ally of allyl in building proteins, carbs (glucose is 2 units of C_3 together), fats. Ally is pronounced like a lie, Alla-h is a lie. Allicin is the garlic supplement, the irritant in garlic, onion that can make voice hoarse if you overeat it as last item of a meal, which then, via the lacrimatory synthase factor enzyme in onion, becomes syn (or cis or Z)-propanethial S-oxide volatile gas, which reacts with ocular tears to form sulfuric acid. Garlic is 13 times more effective at thinning blood than onion, so it can prevent clots better. Raw garlic is 20 times more effective at blood thinning than cooked garlic, just like with onion. Raw garlic is better than powder garlic at preventing heart disease and blood thinning. This gas release stops after 1 cut. Because sulfuric acid is toxic and low pH, it triggers the nerve endings to generate tears so the acid is washed away. Thus, to avoid the stinging pain (similar to anesthetic eyedrops rich in sulfuric acid) and ocular damage from the onion caused sulfuric acid, place onions in a food processor to make a smoothie, so that this gas and sulfuric reacts with 50 other alkaline compounds and won't be a gas anymore when you take the lid off the food processor. Don't cut the onion, place it whole there, covered in many other produce items. If making a salad, then you may need sealed safety glasses to avoid eye damage. The saliva has a lot of water, and this water can react with the gas when you chew onion, forming tiny amounts of sulfuric acid that are immediately neutralized by the alkaline baking soda (sodium bicarbonate) naturally present in the saliva, besides other carbonates, etc.

The sulfoxides in onion can irritate the nerves in your mouth and throat, causing pain, so it's better to make a smoothie to neutralize these irritants before they enter the mouth. Cut onions can be used to repel insects in the house or garden, all ants, flies, bugs, will run away as they do with garlic, mint oils, etc. See hair section on onion juice helping hair grow. They're healthy when eaten raw only, but due to their taste, the easy vegan way to make onions lose all pungent taste and odor is to use a food processor and make a 2 min smoothie with cooked beans or lentils, until all becomes a paste easy to eat. Onions prevent flu and colds (contain antiviral quercetin), weight gain, asthma, inflammation, infertility, acne, cancer. Onions lower blood glucose ► PNFS 2013;18(3):169-74. Quercetin (red onion flavonoid with 5 OH groups and thus super strong free radical scavenging ability on your hair follicle and inside bodies) improves insulin sensitivity and fights weight gain☺☺☺ ► GN 2015;10(1):2. Onions have anticancer, *antiplatelet*, antibiotic, antithrombotic (anticlotting), *antiasthmatic* effects ► PR 2002;16(7):603-15. Red (*purple* in reality) onions have double the flavonoids of yellow onions ► JAFC 2007;55 (25):10067-80. Red onion quercetin is 1 reason for lower blood pressure☺☺ ► JN 2007;137(11): 2405-11. *Antiplatelet activity* was destroyed after 3-6 min of steaming, *and* at 10 min of steaming, cooked onions stimulated platelet activity. Because *antiplatelet activity* was lost and reversed with steam-cooking, *it's better to* eat onions raw if you want anticlotting effects. Steaming doesn't change flavonoid content much. Quercetin is the main flavonoid in onion ► NJ 2012;11:76. The boiling of onion leads to about 30% loss of quercetin glycosides, which transfers to the boiling water; thus, after boiling, drink the cooled water ► JNSV 2001;47(1):78-83. See more on the loss of health promoting properties of onions which are precut and left to sit in the store or fridge in the smoothies section. Onions, garlic, ginger are caustic for the throat in a smoothie, so you can mix this smoothie with cooked lentils to reduce this caustic effect 20 fold.

11.7.10. PURPLE CABBAGE & how to eat sauerkraut

Purple cabbage (nutrient list) (called red cabbage in most stores) has about 2830 times more brain/arteries protecting anthocyanins than green cabbage (more anthocyanidins 210 mg than blueberries 163 mg too), 600 times more (than green cabbage) anti-androgen lignan phyto estrogens (a polyphenol) that inhibit 5-α-reductase, the enzyme that hydrogenates testosterone to dihydrotestosterone (DHT, being a cause of arterial plaque, stroke, death, infarct, beside hair loss, on the scalp especially). Purple cabbage has more polyphenols per calorie than all fruits and veggies except purple kale (393 mg GAE/100g ► IJFSN 2004;55(3):191-9) and *4x more polyphenols + 54%* more vitamin C than green cabbage, more vitamin C than oranges, 4.5x more vitamin C, 15x more ω3 fatty acids than tomatoes, 329 µg lutein-zeaxanthin in 100g vs 256 µg for carrots. It lowers blood glucose, fights diabetes, lowers cholesterol (more so if steamed for 1 minute), prevents macular degeneration (more so if eaten raw), cancer, Alzheimer, obesity,

inflammation. Purple cabbage tastes much better than green cabbage, and it's actually deep purple (usually more purplish than the picture), but most call it red cabbage. Purple cabbage has 322 mg anthocyanins (glucoside bound cyanidin, the most common anthocyanidin)/100 g, vs only 90 mg in 5x more expensive blackberries. We find 2-25 mg anthocyanins in plums and far less in other fruits ► Ntr 2013;5(10):3779-827. Purple cabbage prevents Alzheimer better than green cabbage via polyphenols which inhibit amyloid Protein-induced neurotoxicity ► FST 2006; 39(4):331-7. Purple cabbage lowered rat cholesterol, so did S-methyl-L-cysteine sulfoxide in cabbage ► Lipids 1998;33(5):499-503. Purple cabbage lowers blood glucose levels, restores renal function, ameliorates diabetic nephropathy ► EBCAM 2008;5(3):281-7. Purple cabbage has 393 mg gallic acid equivalent of polyphenols in 100 g, 108 mg catechin equivalent of flavonoids. Kaempferol, quercetin, apigenin are the major flavonoids in cabbages except for red cabbages, where cyanidin is the predominant flavonoid (74-118 mg/kg). In the red cabbages, cyanidin was the major contributor to the antioxidant capacity as well as the content of total phenolics and flavonoids. The antioxidant capacity of raw/processed cabbages was highly correlated with their polyphenol content ► IJFSN 2004;55(3):191-9. To get the benefits of all anti-oxidants, it is best to always eat red cabbage raw, not steamed. Certain compounds are destroyed after steaming even, so adding it raw to a smoothie or chewing it alone is better. Heating above 50°C or steaming anything destroys many enzymes: without enzymes food can't be properly digested, leading to problems, weaker immune system. ☺☺☺

SAUERKRAUT: probiotics and the 100s of dead who ate improperly fermented foods

Before you eat aged garlic, 100s of "miracle brain boosting" unrefrigerated fermented foods, let's read 5 papers about 100s of deaths from one single bacteria. There are 100s of such bacteria, most unknown to us with death wrongly attributed to other causes. Poor storage and shipping at higher temp (normal today due to zero regulation) can cause the growth of bacteria, like the lethal bacteria strains (B. gladioli). Contaminated tempe bongkrek has lethal levels of bongkrek acid and toxoflavin produced by B. gladioli. "consumption of contaminated tempe bongkrek has resulted in... at least 150 deaths" ► JMT 2017;13(2):173-9. "75 died from an illness linked to drinking pombe (corn beer contaminated with B. gladioli)" ► CID 2018;66 (9):1400-6. "9 persons... died after consuming a homemade fermented corn flour product, sour soup, with a case fatality rate of 100%" ► CCDC 2020;2(51):975-8. "patient with severe bongkrekic acid poisoning after consuming Auricularia auricula (mushroom).. died" ► BMCCMT 2024;24:419. Minimize/avoid mushrooms, they often give unknown diseases via fungi. Man ate "home-fermented cornmeal pudding.. died on hospital day 8." ► TC 2024;8 (1):2377524. If you're not a microbiology expert, it's best to not ferment foods at home, as you may get sick or die.

Consider taking MgO if you're constipated to make bowel movement 20 times faster, stool

softer, since probiotics often will make things worse, giving you 40 times more gas only. Tudca is a natural bile acid our body produces, that some take 300 mg of as capsules (not powder, due to horrible taste), to help heal their gut, for 1-2 years. PEA (palmitoylethanolamide) is a mast cell stabilizer that prevents the release of histamine and inflammatory cytokines in the gut (gut health aid), eyes (dry eye aid) and other areas: real drop in "histamine, IL-4, IL-8, IL-10, and TNF" ► Ntr 2023;15(23):4940. Mast cells play an important sentinel role in recognizing bacterial and fungal pathogens, so only take PEA if you're free from any current infections (toenail fungus, etc). Before you go buy probiotics, you may want to watch this clip and the MicroBiome channel, as it references 100s of studies on the fake science and corruption in the probiotics pill and fermented products industries, who have an interest to sell what's most profitable, not best for health. Today, many obese☺☺☺ or fat MDs advertise Reuteri Lactobacillus (see failure of L. Reuteri; swollen eyelids each time fermented foods are eaten), but data shows it is most present in obese people, no healthy people. Fermented foods contain and raise serum histamine, which causes dry/red eyes. Most prebiotics sold have high levels of Lactobacillus which is prevalent in people with gut diseases, no wonder 300 million fermented food eaters in cold climates are chronically constipated and live short lives, all that Lactobacillus from winter fermented veggies kills them. Russians live to 72, others to 84 and never eat fermented foods. Lactobacillus is changing gut pH to that of sick guts, killing the good bacteria. The health bacteria, seen in healthiest people, are too oxygen sensitive to be able to be sold in a pill. So, we need fiber and healthy foods to nourish the good bacteria. Anything that come in contact with oxygen kills us, be it foods cooked in dry heat or bacteria that survive oxygen contact (useless probiotics on the shelves and fermented foods). Healthy bacteria die in the presence of oxygen, there is no oxygen in the colon. Other probiotic brands produce β-glucuronidase enzyme that takes off the glucuronic acid (glucose whose CH_2OH became COOH) off the estrogen/hormones, toxins the liver attaches it to, to prevent enterohepatic recirculation (toxin resorption). This is the endemic corruption issue in every US/world industry, nothing specific to probiotics, the truth often is buried for decades, centuries until enough harm is done to cause class action lawsuits, etc. Rarely, for probiotics, I ate 3 fermented foods: a few olives (in 2017-2019, extra Na from those too), capers, sauerkraut (1 lb can have more good bacteria than 8 bottles of probiotics), maybe 10/day, about 4 times home made fermented garlic (added sauerkraut bacteria, salt, water, let it sit 1-2 weeks in a closed jar with no air) to remove its smell and get probiotics that way, besides the plaque prevention benefits of raw (not all pills) garlic. My experience with fermented foods has not been ideal due to the types of bacteria they have, the cheapest air resistant Lactobacillus that are new to a vegan microbiome, free from yogurt. The new microbes feed on the 5-6 times more fiber in the vegan gut and cause insane levels of toxins and gas, even acne from slow moving stools (defecate thrice weekly instead of once daily, spend 10 min defecating, instead of 20 seconds as high fiber vegans). Omnivores are already full of

Lactobacillus from yogurt, so taking probiotics can't cause gas, as they eat 5x less fiber anyway, but it may help kill some really nastier bacteria, hence the "I feel better" real or placebo feeling, due to perhaps less toxins entering blood as Lactobacillus produced fewer toxins than the ones they had, causing less acne perhaps in omnivores too. This is the misconception, just because acne vanishes with some Lactobacillus, it doesn't mean that's the best microbiome one can achieve or lifespan length. Saying "take probiotics" is like saying "take minerals, you need hydration". But any mineral in high or wrong ratio, mixing, etc can screw us up. There is too much commercial science in the "probiotics sales" pitches of companies. So, no, if you're a vegan of high fiber whole foods cooked at home, fermented foods won't help that much, you need 0.5 g MgO before bed, plus more water, to cure any constipation. Another mistake everyone is forced to make (by product design) is each time they buy sauerkraut cans, they leave the can open in the fridge, allowing air to kill the good anaerobic bacteria (everyone does it, nobody can eat one can at a time) and causing aerobic ones to take over. If you buy the glass jar ones, you CAP the jar by reflex and *the air exposure is 5000 times* lower, that oxygen from the *fridge & fridge opening is totally going to ruin your microbiome*, causing stinky gas. Also, if you overeat it, it has sometimes as many bacteria *in a spoon as 1 bottle with 100 pills of* probiotics. So, please don't make the same mistake and avoid sauerkraut in cans (or transfer at home into a small jar, add water to prevent oxygen), buy it in jars and cap the jar instantly after eating 1-3 spoons in 20 seconds. The PubMed papers explain improper prep at home or factory, can disturb the microbiome and cause gas or acne, so eat them rarely. In 2023 I tried the purple cabbage one and it was the best ever, because it was a jar, and I followed the Polish German instructions (absent on US cans): keep it in the fridge and eat it within 3 days of opening, before I would eat it within 10-20 days of opening, vented, allowing 5000 times more oxidation. We're bad at labeling our foods, see the protein section, etc.☺☺☺

Glucosinolates found in cruciferous veggies (broccoli, kale, cauliflower, collards, cabbage): fermentation changes them, so the stuff below refers mostly to raw stuff in salads, smoothies:

Glucosinolates (β-thioglucoside N-hydroxysulfates, R-C(S-Glucose)=N-O-SO_3) have antioxidant, anti-inflammatory, anti-cancer properties ► CPR 2015;1(1):46-51; *they're water soluble, being present in "vitamins from food" obtained via water extraction of water soluble vitamins* ► this poses an issue in calculating iodine uptake interference. Kale, cabbage, broccoli, cauliflower, brussels sprouts have about 1% glucosinolates (see Table 3), so they all affect thyroid about the same. Their anticancer effects are so famous, that the 'dimer' of I3C or indole-3-carbinol, the 3,3'-diindolylmethane or DIM metabolite 200 mg pills are even sold on Amazon with the web indicating women notice huge changes in menstruation, hormones, etc. "DIM *also* inhibited *the growth of primary* goiter *cells by* 70*% compared to untreated controls*. Contrary to traditional belief that cruciferous vegetables are "goitrogenic," (genesis, genic, goiter, goitro) DIM has anti-

proliferative effects in glandular thyroid proliferative disease" ► BBRC 2005;337(3):1019-25. Cornell has a useful article on these compounds. BJN 2003;90(3):687-97 Table 2 shows mg glucosinolate in 100 g raw veggie (cooked is 19-59% lower see Table 3): Brussels sprouts 80-445 (most got 200), broccoli 19-128 (most got 60), cauliflower 11-77 (most got 62), cress 121-658, collards 201, horseradish 160, kale 7-317 (most got 70), cabbage 109 (a few got 50), red cabbage 19-77 (most got 30), bok choi 58, radish 68, turnip 140. In plants, glucosinolates and the enzyme that breaks them down into glucose and highly reactive sulfur compounds are physically separated, but when we chew veggies or puree them via smoothies, we bring the enzyme near the glucosinolates, into contact, thereby releasing the sulfur compounds.

It is part of the plant's defense against animals chewing them. When eaten raw, there is no heat to inactivate the myrosinase (β-thioglucosidase) enzymes, so they can break the glucose–S (S is sulfur) bond of glucosinolates hydrolyzing them to sulfate (see Figure 2) and thiocyanates (–S–C≡N), isothiocyanates (–N=C=S) (e.g. erucin (sulforaphane without oxygen) and sulforaphane), indole derivatives (indole smells like feces) that feed the hydrogen sulfide (rotten egg smell, H_2S, H–S–H) producing bacteria and compete with iodine for uptake by thyroid, leading to hypothyroidism (if we eat 2-3lb/day of raw broccoli). Boiling cruciferous veggies for 30 minutes reliably destroys 90% of the goitrogens (the glucosinolates that interfere with thyroid sometimes). Each glucosinolate class metabolizes to different sulfur compounds (as shown in the ***glucosinolate hydrolysis*** section of FPS 2015;6:831) in the presence of specific myrosinase versions and associated proteins; some of these sulfur compounds may be more bioavailable for the H_2S (H–S–H) bacteria that give the rotten egg smell to our stool; when eating broccoli my stool loses its odorless quality present when eating cauliflower, kale or purple cabbage, so I avoid broccoli sometimes as explained in the last paragraph of the broccoli section. This may be because of different sulfur metabolites or other compounds that make H_2S production easier. When we puree cruciferous veggies in a smoothie, we can release immediately far larger amounts of these reactive sulfur compounds than by chewing and this may speed up certain biochemical cascades that increase the H_2S production. ☺☺☺

By messing up the digestion of animals with upsetting smelly gas, plants devised a strategy to deter animals from eating their leaves in large amounts. If you don't eat iodized salt, and are ***vegan***, it's important to eat vitamins with iodine (or sea weeds with iodine) even if you almost never eat kale, collards, mustard greens, red cabbage or broccoli, as explained in the iodine section.☺☺☺ They did some animal studies and noticed feeding huge amounts of raw kale causes hypothyroidism. However, Dr. Jeffrey Garber, chief of endocrinology at Harvard Vanguard Medical Associates, and lead author of the latest clinical practice guideline on hypothyroidism in adults, says the risk of minimal in getting hypothyroidism, unless you're already iodine deficient and you eat kale raw in huge amounts daily. This article explains how

low the risk is. NR 2016;74(4):248-58 explains "a single serving of brassica vegetables with less than 70 µmol of progoitrin would be unlikely to result in decreased thyroid hormone production in humans. Specifically, ingestion of commercial broccoli and broccoli rabe (and most kale cultivars), which each contain less than 10 µmol progoitrin per 100-g serving, would appear to pose minimal risk of thyroidal toxicity". The author explains that the contribution to plasma thiocyanate from eating 100 g (typical amount some eat daily) of kale is estimated at only 10 µM, much less than the normal plasma level of 40-70 µM; collards, Brussels *sprouts contain a lot of goitrin and may disrupt thyroid if eaten daily in larger amounts.* An 88 year old ate 1-1.5 kg (2.2-3.3 lb) of raw bok choy daily for several months and went into a coma due to severe hypothyroidism ► NEJM 2010;362(20):1945-6. She didn't know if you eat more than 200 g/day of these veggies you absolutely need to take iodine from salt☺☺☺, seaweed or vitamins. Other goitrogenic foods are: spinach, cassava, peanut, soybean, strawberry, sweet potato, peach, pear, canola, mustard greens ► Toxin 2010;2(9):2289-332. Another problem with isothiocyanates is that they will bind to glutathione, so in some people with low glutathione this could be an issue.

11.7.11. PURPLE CAULIFLOWER (2.0% *protein*, protein *score* 103?)

Purple Cauliflower (nutrient list) is much healthier than white, it lowers LDL, blood glucose, oxidative stress, brain inflammation, prevents cancer, heart disease, diabetes and weight gain. Eat a little, since too much causes gas, especially dark purple one that has gas forming polyphenols. It has complete protein, amino acid new score is 83 [100*(40/1.92)/25=83], compared to 67 for hamburger beef. This score is based on the new deceptive version of the USDA database, by criminal gangsters in the US government who want to keep us ignorant. Previous USDA data reported Met + Cys to be 51 mg/2.0g protein, not 40 mg in 1.92 g protein, giving 103, so it is 103 actually as in the archived old data, since they rounded 24.9 mg to 0.02 g and 24.9 mg to 0.02 g, not 0.03 g. 24.9 + 24.7 = 49.6, which is (100*49.8/1.92)/25=103 Well, it doesn't matter if it's 83, 93 or 103, since nobody eats cauliflower as a source of protein, since you need to eat 2 pounds for 17.4 g protein and get sick from it, as it causes thyroid issues if overeaten. 83 is great for a veggie, the real one in year 2100 may be 89. We have poor data, few data points, pathetic science. Due to suspect changes to USDA site on Met and Cys to avoid making Burger King look bad, I will leave score at 103 it used to be in other book areas, since all other foods remained the same for the most part or changed by 1 at the mos, not 20. It has 10 times the vitamin C in apples. On top of that, cauliflower has 2.3 times more fiber and 6.5 times more protein than blueberry per calorie, and the protein is score 103, versus 34 for blueberry (34 is very low). Today you can find a 1-3 lb purple, orange or white cauliflower for 1 $ only at some $ stores. Purple cauliflower is much better than white or orange one. The orange one has just a little more β-*carotene*, but no anthocyanidins. Purple cauliflower has more brain

protecting anthocyanidins than any other fruit or veggie 250 mg/100 g (or 404 mg anthocyanins/100g), 7 times (others say 19 times, possibly because of different varieties and methods of calculation) more than strawberries (34 mg), 52% more than blueberries (164 mg) ► usda.gov...2 gives 2.5 mg/g fresh weight. (Am Soc of Plant Biol Annual Meeting, 7-16-2005, p. 628) and PP 2010;154(3):1470-80 which gives 375 mg anthocyanin or 234 mg/100g anthocyanidin. Raw cauliflower has glucoraphanin glucosinolate that hydrolyzes to sulforaphane (its anticancer benefits are in the broccoli section). The antiviral action of sulforaphane is in the Antivirals section. Cooking cauliflower removes sulforaphane because it destroys the myrosinase enzyme required to produce it by breaking the sulfur-glucose bond. Cauliflower causes no smelly stool or gas, see last paragraph of broccoli section on the smell. It has anthocyanins, unlike broccoli, so I eat purple cauliflower, no broccoli.☺☺☺

11.7.12. PURPLE CORN (purple is much healthier)

Popcorn (nutrient list) gets some USDA praise. Corn has no gluten and causes no gas, like oats do, so it can be used as a source of energy after you had enough protein from lentils, etc. Cornmeal is rich in linoleic acid, 1.6 g/100g cornmeal, and 1.84 in dry oilless popcorn, and at 2$/lb organic, it helps you avoid eating pricy nuts or seed oils for linoleic, to avoid the issues of high fat diets. Cooked kernels, at 96 cal, have 4 times fewer cals than 100 g propcorn, or 382 cal, so they also have less linoleic acid, 0.586/100g. Corn expands during cooking, absorbing water weight. Cook cornmeal with water in a pressure cooker to obtain polenta (it's yellow like pollen). Extreme dry heat during corn popping could form unwanted AGEs. Corn meal is better made at home using a coffee grinder right before boiling, just buy corn bags from the store, this way nothing got oxidized during the storage in that bag. Whole corn is only 1.7$/lb, cheaper than the more toxic cornmeal and you can boil kernels at home in a pressure cooker (the best way to eat corn or any grain/legume is boiled kernels, don't crush it into cornmeal first as that will oxidize it slightly). Canned corn is oxidized and full of tin, heavy metals, salt, plastics. Try find Amazon organic or glyphosate free corn kernels, as those pesticides may cause issues. Purple corn is 2.8$/lb on Amazon. Non-GMO is safer, as it has 10 times less pesticides, GMO is so they can spray the hell out of it. Ask the company selling it if it's GMO or if they use glyphosate herbicide, the Alzheimer ingredient. ☺☺☺ Purple popcorn may be the healthiest grain, having the stuff blueberries have, a ton of fiber (absent in other purple cereals) and being the most satiating snack (great for weight management, if no oil/fat added, just air pop it). The only comparable non-gluten grain is black (called wild) rice (double the price of purple corn, *it's actually purple compounds that appear black due to high concentration, just like purple corn can appear black at times)*, but rice needs long cooking (30 min, not 2 min with popcorn, which destroys the purple anthocyanin polyphenols partially (popping doesn't destroy polyphenols),

and loses most of them if soaking/cooking water discarded) and can lead to weight gain. Popcorn has 15.1 g of fiber in 100 g, brown rice cakes 4.2 g, white rice cake 1.3g, wild black/purple rice 6.2 g. In 100 g, cooked rice has only 1 g of fiber, 15 times less than popcorn. No wonder people get fat on rice, but almost never on plain popcorn. Amazon carries 25 lb purple corn (big kernels from Andes mountains Peru species, not tiny kernel of blue corn), while health food stores may have mixed one, yellow and blue one mixed that has 10-20 times fewer anthocyanins and half the polyphenols and higher price. Wikipedia got a purple corn pic.

"Besides anthocyanins, quercetin, luteolin, and rutin were the dominant anti-inflammatory and anti-diabetic components" (of purple corn) ► FC 2019;289:739-750. After wheat and rice, corn is the third most cultivated grain. "Corn had the highest total phenolic content (15.55 µmol of gallic acid equiv/g) of the grains tested, followed by wheat (7.99 µmol...), oats (6.53 µmol...), and rice (5.56 µmol...)... Corn had the highest total antioxidant activity (181.42 µmol of vitamin C equiv/g), followed by wheat (76.70 µmol...), oats (74.67 µmol...), and rice (55.77 µmol)." ► JAFC 2002;50(21):6182-7. Purple corn flour had highest protein among 9 types of corn, and lowest fat, while offering highest *TPC* (total phenolic content); even yellow corn has higher *TPC* than wheat and rice ► JFST 2018;55(6):2334-43; this paper deals with flours and muffins, so a lot of anthocyanins are lost during processing, no wonder purple corn had only 73% more total phenols (which is more than anthocyanins) than the lowest white-yellow corn. Antiox 2019;8 (1):22 found that on average, unpopped kernels (of the yellow variety) contain on average 593 mg catechin equivalents/100g polyphenols after basic hydrolysis, one brand even 747 mg; they found "the pericarp of the raw popcorn kernel contains 98.3% of the *TPC* and 97.8% of the antioxidant capacity of the entire kernel… Popcorn is also the most satiating food among the snacks and desserts".When doing an alkaline hydrolysis and in vitro digestion, popped corn had 64% higher antioxidant capacity (125 vs 76) and 3.5% higher (266 mg/100g vs 257) *TPC* compared to raw corn, as you can see in Table 4; popping increases polyphenol content, just as cooking tomatoes can increase lycopene by 50%. Some papers report *TPC* in mg *g*allic *a*cid *e*quivalents (mg *GAE*/100g) not *c*atechin *e*quivalents (mg *CE*/100g), so it's a slightly different number, because catechin molar mass is 290 and gallic acid mass is 170. FC 2017;231:332-9 found that purple corn has 493 mg anthocyanins/100 g dry corn (10 times more than blue corn). Anthocyanins are only one type of polyphenols. They sell blue tortillas, blue corn chips. Blue corn tortillas, chips, boiled kernels had about 31 mg anthocyanins/100g ► FRI 2006;39(6):696-703 vs 322 mg/100g in raw purple cabbage. This 31 is comparable with 49 in blue corn from the previous paper. Many are deficient in lifespan extending anthocyanins. ☺☺

Most *vegans* enjoy the benefit of having rather soft stools, i.e. it takes 5-20 times less time to defecate, due to eating 3 times more fiber on average, some 7 times more than omnivores. Sometimes, if you eat too many watery foods, your stools may become too soft. What food can

we eat to immediately regain normal stool consistency? A waterless food that is nutritious, has 0 processing, can be prepared instantly in 2 minutes at home, like purple, blue or yellow-blue mixed corn that has polyphenols no other grain has, except some very expensive and hard to find purple (or black as some call it) rice that takes forever to cook into a waterless rice cake and offers only a third of the fiber after 3 hours wasted on rice caking it. Purple corn is found mixed with yellow organic corn at health food store bin section. I don't eat grains much, since most grains have too little protein, no polyphenols, or the controversial gluten. Popcorn doesn't cause gas or stool odor (like rice, oats, etc can) and it's the least processed of all cereals, you make it at home. Purple corn (JMF 2012;15(2):206-15) is the only grain I eat actually now, as it's the easiest one to make instantly and gluten free. I only eat it a few times a month (organic yellow with purple corn, sprouts.com), when stools become a little soft or too soft, or want to try some variety. Unlike other grains (except purple rice), purple corn has lots of anthocyanin polyphenols (not sure how bioavailable they're in humans on average, it's not a very studied topic, PubMed had in 2019 about 3,000 papers on corn, but only 200 on purple corn), and in Peru they have chicha morada purple corn drink, thought of as nutritious, made by boiling corn and pineapple peels (not sure how many polyphenols are left after this boiling). Living to 500 means using food colors that enhance lifespan, not synthetic colors that shorten it. "Anthocyanin pigments from maize offer a natural yet economical alternative to artificial dyes… Replacing artificial dyes with natural colorants is becoming increasingly popular in foods and beverages. Purple corn is rich in anthocyanins and offers a scalable and affordable alternative to synthetic dyes ranging in color from orange to reddish-purple." ► TAG 2019;132(11):2927-46.

11.7.13. KIWI (*1.1% protein*, protein *score* 105)

Kiwi (nutrient list) lowers blood pressure and triglycerides, fights inflammation, asthma and respiratory infections, boosts the immune system, has a higher protein quality than all fruits except avocados (kiwi amino acid score 105, burger king ham beef 69). Raw *vegans* add them peeled to their smoothies (if you eat them unpeeled, you may get stomach upset or gas, peeled it's much better, *but too many kiwis may cause some issues even if peeled*). Kiwi helps digestion of protein due to an enzyme called actinidin ► JAFC 2010;58(8):5068-73. ☺☺☺

The standard green kiwi has more vitamin C than any other fruit (93 mg/100g). New Zealand Zespri SunGold golden kiwi has even more: 161 mg/100g or 3 times more than oranges, 35 times more than apples) and vitamin C rich fruits were shown to prevent asthma, flu, colds ► Thorax 2000;55:283-8. The USDA database has many brands of raw kiwi and some have slightly more than 93 mg/100g vitamin C even for green types. Gold kiwi got hairless skin, is more yellow (not green inside), available May thru January. The normal kiwi people buy is the darker green hairy skin one available year round. Kiwi boosts the immune system and prevents respiratory tract

infections ► AFNR 2013;68:301-20. Gold kiwifruit reduces severity and duration of selected upper respiratory tract infection symptoms ► BJN 2012;108(7): 1235-45. ☺☺☺

Kiwi lowers blood pressure and triglycerides ► CJPP 2013;91(6):442-47. Kiwi reduces blood pressure more than apples ► BP 2015;24(1):48-54. Kiwifruit decreases blood pressure and blood clotting ► JHH 2013;27(2):126-30. "One kiwi/week is associated with lower plasma (levels of) fibrinogen and improved plasma lipid profile in the context of a normal diet and regular exercise" ► NJ 2015;14:97. Kiwi has anti-inflammatory, anti-oxidative stress effects ► CEI 2014; 175(3):476-84. Kiwi has stronger antioxidant effects than orange and grapefruit ► BPB 2011; 34(1):128-34. Kiwifruit protects against oxidative DNA damage in human cells and in vitro ► NC 2001;39(1):148-53.☺☺ In 2017 I ate 5 lb of kiwi/day (on sale, $0.2/lb) for 5 days or so. Due to the high sulfur level in kiwis, the stool smelled, there was a lot of gas.

11.7.14. LENTILS (26% *protein*, protein *score* 86)

Lentils (nutrient list) come in several colors: green, red, *brown*, black. It's ideal to take Mg with big lentil meals, due to the Mg flush (excretion out of urine) that happens after lentil meals (high lentil potassium forces kidneys to flush potassium/Mg in urine, lowering Mg levels and causing muscle cramps if Mg is low). Mg also binds oxalate in lentils, preventing oxalate from reaching the urine and going into the stool instead, to prevent kidney stones from calcium oxalate. Aldi sells Dakota lentils for 1.55/lb, Walmart in house 1.41/lb (change default store to get lentils drop to 1.41/lb if Walmart shows 1.49/lb, 5.98/4lb) free ship if Walmart+ member, if order < 35, free ship in 1 day (vs 8 days Amazon) for > 35$ even if not a member, colder storage, transport), Safeway 1.5$/lb (has small stones like most Springfield, Aldi and other brands, says USA made, cleaner soil than some nations loaded with heavy metals, so better than Amazon and all EWG brands tested in 2020, these were found to have only 8 ppb glyphosate versus 544 ppb in the much more expensive Harris Teeter (HT) conventional brand or 13 ppb in the organic HT French lentils or 17,718 ppp in organic HT chickpeas, 76 ppb in Dakota chickpeas, 2,379 in Whole Foods hummus) free ship if instacart member over 10$ for 40+ grocery chains too, Amazon (free ship for orders over 35$, but takes a week, unless you pay 180$/yr for prime) 1.73/lb amazon lentils got stones 1 cm long 6 mm wide at their highest (amazon got the biggest stone of any brand so far: deadly stones that would crush many teeth if you chew fast or injure gut lining), El Super 1.27/lb in bulk section (& other Latino stores), may have more heavy metals/pesticides if from Mexico due to less regulation. All lentils worldwide are nonGMO☺☺☺, free from the 13 times higher use of herbicide glyphosate that is standard for GMO corn/soy genetically altered to be glyphosate resistant. Thus, lentil crops use less glyphosate to control weeds, the cancer causing glyphosate so common in soy, corn. However, many US-Canada companies use glyphosate *(due to being cheaper, profit over health)* to dry lentils right before harvest and contaminate them

with this carcinogenic, so you can buy "glyphosate free" lentils on Amazon or organic ones, or use baking soda (1 teaspoon per liter) in the first soaking cycle for 15 minutes to get the pesticides out and discard this baking soda, glyphosate rich water. The European Union restricts, recalls glyphosate dried lentils from Canada, since EU limit was 0.1 ppm, vs 4 ppm for Canada. "Canadian lentils were rejected in 2011 by the EU because of glyphosate residues exceeding 0.1 ppm" Weed Technology 2016;30:629-38, but in 2012, following pressure from US company Monsanto, the EU limit rose 100 fold to 10 ppm, double the 5 ppm US level in 2026. Money speaks. The EWG found in 2020 that most organic lentils are free of glyphosate, while the rest have glyphosate in 60% of cases. They need to be soaked first, like all legumes, to remove many classes of anti-nutrients that give gas and disease by blocking mineral absorption. Lentils are the healthiest source of protein and carbs for vegans, the food I eat daily. They prevent hair loss and arterial plaque via sterols, as explained in the 10 page section on hair growth. If you need extra carbs, eat veggies and the healthiest grains like sorghum (gluten free) which got 16 times more fiber than rice. Small lentils are easier to soak and cook, requiring only 1 water change during soaking, not 3.

NJ 2010;9:3 shows green unsoaked lentils (also known as French lentils) antioxidant level is 4 times greater than (4x >) red lentils, 1.5x > *black*, 3x > *brown*, 7x > yellow/white, 10x > pink/some yellow (Ctrl+F "lentils" in the PDF). In USA, 95% of sold lentils are (greenish) *brown*. However, a newer paper, possibly newer better instruments, FB 2023:28(3):44 shows the green and *brown* are far closer in 1 antioxidant assay: "in •OH-RSA assay, green... 3.87, *brown*... 3.74, *black*... 3.14, red... 2.49". Brown cost 2-3 times less than the other types, so most people just eat brown. So, don't get too caught up in any paper, since you need to read 50 papers to get a real feel of the averages for 100s of subspecies of green, brown and red lentils, which may not be the ones at your store. Just eat any lentils, better than junk food. Black have more polyphenols before soaking, but maybe fewer antioxidants after soaking as all purple anthocyanins are discarded with the water and the lentils become green, so there's no need to pay extra more for black or red. For people who don't like the somewhat plain nutty sweet taste, they can *puree lentils* with pineapple (helps digest protein and build collagen, 30% of human protein, due to vitamin C) to make a very soft puree that is so sweet and tasty, even kids and babies will love it over meat much more. Pressure cooking lentils removes all lectins. *Pureeing* lentils after cooking by mixing them into a smoothie has a big advantage: we can hear the stones making noise, and can know the company selling the lentils didn't sort all stones before bagging them; this happens a lot, and as we move to eterni foods, *our brains will expand, our mouths, stomach and teeth will shrink, since* all will be a puree type of soft thick drink; pureeing everything gets us into the 2 minute routine of pureeing, washing the processor afterwards and eating like the future. We'll no longer need to waste so many brain resources chewing, and having the stomach

puree the food, freeing brain space for meditation & higher abilities. To see how I soak lentils before cooking them, to remove all gas forming oligosaccharides, go here. Lentils provide the fiber you need daily to have regular stools daily, this fiber feeds the good bacteria (probiotics, fermented foods are often rich in bad bacteria that survive contact with air). There are 10^{90} ways to any outcome, tudca helps the good bacteria, gut health too. If you eat no legumes or lentils, you get too little fiber, stool becomes thick and lingers long in the intestine, dumping toxins, while fiber helps reduce blood sugars and protect the colon from cancer. When you eat enough fiber, your defecation is effortless, easy. Buy green or light brown, as those are most common and cheapest in stores. In reality, coated unsplit red lentils are so rare, that nobody buys them. Black are $4/lb at Whole Foods or Amazon.

Table 1 Antioxidants b footnote at EJCN 2010;64:S112-20 explains lentils (they probably examined the green common ones), without polyphenols, have 6553 mg antioxidants/100 g, close to spearmint 6575, the number 3 in the table after cloves and cinnamon. With polyphenols added, antioxidants are even higher than 6553. Black beans antioxidants are listed in the table right most column, as they got the polyphenol data. 6553 mg (number is higher) is *4.7 times* higher than black beans 1390 (the richest of all beans in antioxidants) and 47 times higher than white beans 138 mg. Broccoli has a mere 198 mg antioxidants, white wine 32 (*205 times less*), red wine 205, rose wine 82, so much for "wine antioxidants". This means among those 100 foods, lentils are the richest in antioxidants. IJMS 2017;18(11):2390 confirms the papers above ► "*Lentils* have *the highest* total *phenolic content in comparison to* six other common *legumes*, such as green pea, chickpea, cowpea, yellow pea, mung bean and peanut… A wide range of in vitro evidence implies that *lentils have the highest total antioxidant capacity when they're compared to chickpeas,* common beans and soybeans... Lentils are known to be a good source of prebiotics and prebiotic carbohydrates that prevent gut-associated diseases."☺☺☺

Additionally, Table 2 of Foods 2017;6(9):80 shows black beans and red lentils have about same level of polyphenols (a subclass of antioxidants), and that cooked *unsoaked black lentils have 3 times (1834 vs 629 mg gallic acid equivalents) more polyphenols* than red lentils, making them possibly the healthiest (if antioxidants (not just polyphenols) in black lentils exceed the ones in red lentils by a big amount, but no paper has indicated that so far, even if it makes sense it might be so), just as black beans are the healthiest beans with lots of anthocyanins. These statements we make about "healthier cultivars" are based on general trends and the primitive era we live in. In the future medicine with 24-7 human individual molecular simulation and monitoring of thousands of biomarkers, the artificial intelligence will be able to tell how many antioxidants (may not be 4,500 mg, but only 2,000 mg) and what type we need next meal and make them while we sleep in the molecular assembler from raw neutrons and protons. However, since many people can't eat lentils (black included) unless they soak them to remove

bloating-gas causing oligosaccharides and since soaking may remove most extra antioxidants the black ones got versus red/green lentils (since the polyphenols are mostly in the coating, and soaking makes the black coating green within minutes, as it rapidly loses all anthocyanins in the discarded soaking water), it's impossible to know which lentil is the healthiest after soaking (plus, what is best for one person may not be for all genomes), because each lentil type will retain different polyphenols and antioxidants based on solubility in water, cell structure, etc. Red lentils are orange inside, while black are white-yellow, so the red may retain more after soaking (since most anthocyanins are lost during soaking, and most extra polyphenols in black ones are anthocyanins), hard to tell, no paper exists for polyphenols and antioxidants of highly soaked lentils. Because of that I decided to stick to whole red lentils, not the split "orange" ones (all "red" lentils are orange inside, but red-brown on the outside) which lose antioxidants when the seed coating is removed and are harder to cook/soak, becoming mushy, since 6,553 mg antioxidants is way more than an extra 100 mg of polyphenols one may or may not get from soaked black lentils vs soaked red lentils. Besides, red are 3-5 times cheaper than black ones. After cooking without soaking, black lentils become green (with soaking they become light green), as the blue anthocyanins mix with the yellow-white inside to give green inside and coating. Urine after eating unsoaked black or any lentils is cloudy often (like after protein powders), but clear when eating soaked lentils. So, soak the lentils to protect your kidneys. In apples most antioxidants are in the peel, in seeds most antioxidants are in the hull.☺☺☺

It seems to me that for beans, for certain DNA types at least, no matter how hard you soak them *and cook them will give you some bloating/gas. This is not the case with properly soaked lentils* which when eaten with fruits, veggies in small amounts, don't cause any stool odor. For some people, soaking may not be needed to achieve maximum lifespan from eating some lentils. For all lentils, if we soak them, we may remove some hull polyphenols (notice water getting green or purple-blackish). Whole Foods black lentils 1 lb (454 g) bag says "11" servings of 43 g each with "13" g protein, which is misleading, for that would be 143 g protein. When you do the math, the black lentils have 132-137 g protein (10.56 not 11, servings of 43 g = 454g, each with "13" g protein, which could actually be 12.53 rounded to 13, which gives 10.56*12.53=132 or 10.56*13=137) in 454 g of dry lentils, while the red-green ones have 117 g protein, 117.0 confirmed by USDA (9 servings of 50 g, each with "13" g protein, 9*13=117) in 454 g lentils. Since black lentils look so different in shape, they could have higher protein. The black ones become green after cooking (unlike black beans which remain black), as the yellow-white inside mixes with the blue-purple anthocyanins of the black hull to give green. Due to possibly higher protein content of black lentils, they may also have less bloating oligosaccharides. ☺☺☺

The problem with a lot of processed foods, even those containing eggs, milk, meat etc is they add these grains, beans, lentils, soy products without soaking them to remove oligosaccharides

and causing gas in the people eating them. When we eat cooked lentils 2-4 times a day in portions of 200 g, we get 36-72 g of protein (maybe 17% more if black lentils) if lentils are cooked a lot over the stove (not recommended, because air causes AGEs formation) and they break. If lentils are cooked in a pressure cooker, they minimize air exposure and AGE formation, they don't break and are more packed as my video above shows, with 40 g protein in 400 g instead of 36. We also get 32-64 g of fiber a day, more than most people get from all their foods. One can take a glass and weigh in it 200 g (18 g protein) of cooked lentils, mark it and use it daily to measure 200 g of lentils from a bigger container in the fridge that gets refilled with the even bigger one from the freezer. We need about 40-70 g of fiber for best prevention of diabetes, digestive tract issues, colon cancer and heart disease. ☺☺☺ Lentils have almost no sugars, lots of fiber that regulates blood sugar, cholesterol. They're also sold precooked and frozen at many supermarkets, like the frozen 13foods.com/tag/lentils. It's possible that by blending the lentils into a puree like I do when adding to smoothies, we further improve the digestion of lentils (eliminating bloating) as they become a paste, not lingering unbroken in the certain parts of the digestive tract that assumed the protein digestion part already took place. I'm semi raw *vegan*, lentils being the only cooked thing I eat. Properly soaked lentils don't cause the bloating or stool odor protein powders do. My stools are odorless when I eat soaked lentils with my smoothies (which is always since June 2018), see more in the stool odor section. This is probably because eating lentils (instead of 0 fiber powder) doubled my fiber intake almost, speeding transit time, and special lentil fiber fed the good bacteria (that produce methane upon sulfate reduction, not hydrogen sulfide). The properly soaked lentils were free of oligo saccharides, still present in those powders. In May 2015-August 2016 I ate lentils daily too, 2 times more than I do today, (beans daily for many years before), but the stool was not odorless always, as my main fruit was tomato, which is not really a digestion booster, while pineapple (my main fruit now) contains bromelain enzyme, which helps digest lentil protein better. I never ate raw pineapple, except very rarely, until October 2017. It may be that eating lentils with lots of other veggies-fruits reduces to minimum fermentation (which is due to long transit time) and stool smell.☺☺☺

In 100 g, cooked lentils have *366 times less saturated fat* than cheese, 68 times less than beef, 25 times less than salmon, 51 times less than Burger King hamburger, 137 times less than bacon, 9 times less than tofu, 13 times less than cooked soybeans, 4 times less than soy protein isolate. Some people develop atherosclerosis (precursor to Alzheimer) at much lower fat intake levels. Too much saturated fat from any source (even *vegan*) can lead to diabetes. Diabetes mortality is 73 times lower for *vegans* vs heavy meat eaters. Too much saturated fat can lead to cognitive decline. Some vegan burgers out there have a lot of saturated fat (Impossible Burger using coconut oil has 54% calories from fat, the *worst*) and most meat burgers are far worse than any soy burger, having 5-24 times more fat. Most vegan sausages, etc have 30% of saturated fat of

real sausages. Burger King hamburger has 40% calories from fat. 75% of cheese calories come from fat and 64% of cheese fat is saturated, while only 14% of cooked soybean fat is saturated. Fat calories % in soy foods vary: 46% in soy sprouts, 30% in soymilk (which has amino acid score of 25 only, not a good source of protein), 50% in tofu, 43% in soybeans, 8% in soy protein isolate, 10-15% in many *vegan* fake meats and soy burgers, etc. For comparison, only 2.6% of lentil calories are from fat, *that is why I use* lentils, not soy, *as my main protein source*. Soy has a high 7.5:1 ω6:3 ratio, forcing you to eat flaxseeds (see issues here) to bring ratio down. The red lentils come in 2 varieties: the ones that had the greenish red coating removed and were split in two, so they look orange, and the ones with the coating that look more red-green, not orange. The non dehulled are retaining more nutrients and are healthier, are only $1 at many stores, while split ones (I avoid those as explained above) are pricier since they spend extra energy to remove coating and split them. They're both the same lentil, as you can verify by crushing a red one and seeing the orange color inside. FC 2017;221:689-97 abstract states dehulled red lentils have 0.3 mg/100g of 14 specific polyphenols vs 1,829 mg/100g total polyphenols in black lentils in the paper above and "samples with dark testa (or seed coat), namely black lentils and diavoli beans, had higher antioxidant activity than those with pale testa".☺☺☺

Amino acid score in lentils is 86, higher than barley and much higher than wheat or rice, meaning you need eat a lot more rice or bread to get certain the essential amino acid lysine, which is 6.5 times lower in rice than in lentils as shown in the amino acid section. In 100 g, cooked lentils have glycemic load of 7, versus 15 for cooked white rice, 30 for white bread, 8 for cooked black beans. Cooked lentils have ω3 to ω6 ratio of 1:3.7 which is healthier than the ratios in quinoa 1:10, cooked white rice 1:5, cooked brown rice 1:22, white bread 1:9, cooked barley 1:9. In 100 g, cooked lentils have 20 times the *fiber* in cooked white rice, *4.4 times the fiber in cooked brown rice,* 2.8 times the fiber in cooked quinoa, 2.1 times the fiber in cooked barley, *3.3 times the fiber in white bread*. Fiber is key to blood sugar and cholesterol, triglycerides control, obesity and colon-stomach cancer prevention. In 100 g, cooked lentils got 3 times the protein in cooked white/brown rice, 1.8 times the protein in cooked quinoa, 3.4 times the protein in cooked barley (score 73), more protein than white bread (score 52). Lentils got more protein than all beans per dry weight, but in 100 g of cooked beans we find about same level as in lentils 9 g of protein (some beans have 7-8 g). In 100g, cooked lentils got 10.5 times more potassium than cooked white rice, 4.0 times more than cooked barley, 2.1 times more than cooked quinoa, *4.0 times more than white bread*, 8.6 times more than cooked brown rice. *Lentils have the lowest level of phytic acid (5-18 times lower, phytic acid can hinder absorption of many minerals)* and oxalate level (the stuff that causes kidney stones JFCA 18(2005):723-9) among beans, nuts, grains and legumes. Potassium intake (anti-hypertensive), ω3:ω6 ratio (ω3 anti-inflammation), fiber intake, glycemic load are the 4 key elements that can prevent obesity, diabetes,

hypertension, heart disease and many forms of cancer. As you can see, lentils are healthier (easier to digest too) than quinoa, barley, grains, breads and beans. A healthy (also evidence and science based) global move is updating nutritional guidelines charts to include far more LENTILS (too many calories come from meat, dairy, grains and beans in these charts) and replacing a lot of grain and bean crops with black and red lentil crops. ☺☺☺

A pound (454 g) bag of dry red/green lentils is 1$. It contains 4.54*24.6 g of protein in 100 g of dry lentils = 112 g grams of protein (you get only 17.2 g/1 burger king hamburger, 118 g means 6.5 hamburgers) of score 86, which is a more complete protein than burger king with score of 69 for 28 times less $ than 7 hamburgers. Compared to Burger King hamburger, in 100 g of cooked lentils, we get 0.4 g of total fat (30 times less fat than hamburger) and 0.1 saturated fat (50 times less than burger), 0 trans fat (not 1 g as in burger), 9 g of protein of higher score, 7.9 g of fiber (almost 4 times more than the burger), 2 mg sodium (228 times less than burger, super-healthy for the hypertensive one third of humankind, choose no salt versions for cans), potassium 369 mg (2 times more than burger, very healthy), iron 3.3 mg (more than hamburger 2.5, no heme iron that causes cancer and heart disease), sugars 1.8 (2.7 times less than 4.9 in hamburger). In 100 g burger king hamburger we get 14 g of incomplete protein (only 68 mg of tryptophan in 14 g of beef or < 81 mg in 9 g of cooked lentils, so more beef is needed to get enough tryptophan to synthesize neurotransmitters), fiber 2 g, 455 mg sodium (65 times more), 35 mg cholesterol (beans are vegan so no cholesterol), potassium 182 mg, iron 2.5 mg, sugars 4.9. I never ate or plan to eat sprouted lentils. It may be best to not eat sprouted lentils in amounts above 200 g/week for years, as no safety studies were done for people with more allergic gut lining on the effects of lectins (carbohydrate-binding protein) in lentils (even if they're non-toxic compared to lethal lectins in many beans), that is people eating 400-500 g of sprouted lentils a day for 20 years. Eating 400-700g/day cooked lentils is common and many did it for decades without an issue; *cooking above 100°C (212°F) destroys 95% of lectins, sprouting doesn't.* The beans section explains the *dangers of eating sprouted/undercooked or slow cooked (at 80°C (176 °F) beans*, due to toxic lectins in beans (another reason to choose lentils); it even has a study saying lentil lectins are non-toxic. CM 2015;10:25 presents anti-cancer activity of a green speckled lentil lectin (lectins can prevent cancer); this paper explains that certain sugars (glucose and mannose in this case) inhibit the hemagglutinating activity of lentil lectins. Some bean lectins can cause red blood cell clumping by binding to sugars on the cell surface. Some lectins can cause cancer cells to die by binding to sugars on cancer cell surface. When there is a lot of sugar similar to the one on the surface of red blood cell or cancer cell, that sugar molecule can inhibit the action of lectins in vitro. Thus, eating sprouted lentils as part of smoothies with fruits *may* ***partially*** block this binding in vivo. There are always new toxins discovered in raw "natural foods", so today there may be toxins we know little about too. That's why eating pea protein powder in huge

amounts daily, Soylent, etc can be tricky as they have lectins too, not just gas causing sugars removed by soaking. JBC 1971;246(6):1590-5 found that lentil lectins LcH-A and LcH-B (molar mass 49,000, polypeptides, somewhat similar in structure to the toxic lectins in beans) react with red blood cells in several animals. ☺

11.7.15. OLIVES (57% calories = oleic acid, 18:1(ω9), cis-CH_3-$(CH_2)_7$-CH=CH-$(CH_2)_7$-COOH)

Olives (nutrient list) have 230 phytonutrients: a few aren't found in other foods, but are similar in structure/function with those in common seeds, veggies, so eating olives is useless. To better understand why olives/olive oil need to be avoided, read the walnut, avocado, seed oils, coconut, to see the fake science papers. Olives can help starving people, but chia seeds, walnuts are way healthier. Olives/olive oil are scam foods promoted by Greek/Italian/Spanish Mafias, whose benefits are exaggerated via the Mediterranean diet scam "cult/religion", which is a 3rd grade fairy tale that "kid IQ adults" spread to stall progress towards eterni foods. In 100 g:

1). Walnut got 38.1 g essential ω6 LA (linoleic acid), olive 0.544, 70 times less, olive oil 9.8 g

2). Walnut got 9.1 g essential ω3 ALA (α-linolenic acid), olive 0.041, 222 times less, olive oil 0.8 g

3). Walnut got 8.9 g useless ω9 OA (oleic acid), olive 5.1 g, olive oil 73 g (OA becomes belly fat)

4). Walnut got ω3:6 ratio: 1:4, while olive & olive oil 1:13, olive causes brain/body inflammation

5). Walnut got 15.2 g protein, olive 0.97 g, olive oil 0. Walnut 6.7 g fiber, olive 2.5 g, olive oil 0 g.

You have to eat 22 kg (48 lb) of olives and become obese, to get the same ω3 as in 100 g of walnuts and 50 g of chia seeds. Likewise, you need to eat 3 lb of olive oil daily to get a mere 10 g ω3. Most humans worldwide are ω3 deficient and ω6 overdosed. So, no olives are not healthy, chia seeds, walnuts are MUCH HEALTHIER. The epidemic of ω6 overdose causes diabetes, Alzheimer, heart disease, atherosclerosis, arthritis, etc. Olives help you die faster. Even the keto diet lovers don't understand that walnuts have way more fat to burn and much healthier than olives and even for keto people, avocados are a waste of money. Not to mention that in many studies olive oil slows blood flow versus canola oil, has ω3:6 ratio 1:13 vs 1:2 in canola oil, 14g (double) of saturated fat in olive oil vs 7g saturated fat in canola oil (saturated fat raises LDL, damages the brain, Holocaust against USA). Canola oil got 12 times more ω3 than olive oil. Olive oil = Poison. An expensive poison too, if extra virgin. Compared to canola oil, olive oil reduced FMD, flow mediated dilation, a marker of blood flow to organs, by 31%, being less healthy; replacing olive with canola meant fewer cardiac events ► JACC 2000;36(5):1455-60. It's logical, since canola oil has 62 g OA, 18.6 g LA, 9.1 g ALA (the 3 inhibit DHT), 260 mg campesterol, 368 mg β-sitosterol, 2.4 mg stigmasterol, 0 β-sitostanol, 25 mg δ-5-avenasterol, 15 mg other sterols)

vs olive oil 68 g OA, 8.4 g LA, 0.65 g ALA, 6 mg campesterol, 126 mg β-sitosterol, 1 mg stigmasterol, 2.6 mg β-sitostanol, 23 mg δ-5-avenasterol, 27 mg other sterols. Canola has 746 mg sterols, olive 186 mg, 4 times more. Please read about sterols that blocks DHT formation (a main driver of cardiac events), see hair section for foods that block DHT hair loss/arterial plaque, as it explains ALA, which is 14 times higher in canola, inhibits DHT more than OA (62 vs 68). Olives, avocados, many fatty foods (canola/sunflower/corn/safflower/soybean oil, many nuts) also turn on the fast aging mTOR pathway, via oleic acid, as shown in many papers: FASEB 2023;6(1):1-11, JBC 2017;292(15):6303-11, JLR 2013;54(3):725-33. Not all fats are the same.

Since most olive oil has much fewer polyphenols than olives, it's best to eat minimally processed olives. See the diabetes, DNA, heart disease and fat link, before eating too many olives, oils or any fatty food. Below are described: 1. olive benefits *(10 compounds we will create in labs and introduce in the 25000 amazing compounds immortalist powders to survive supernova γ-ray blast, supervolcano that cools the planet making agriculture impossible, etc)* 2. olive processing (very few olives are easy to eat raw, but some people eat them raw anyway, as part of a salad with sweeter stuff to cancel the bitterness, etc) 3. polyphenol levels in different olive varieties

1. Alleged Cosmic Benefits of OLIVES (the Power of Fake Science to Brainwash people)

Uncanned green olives have 44 times fewer polyphenols than dried cloves, 10 times fewer than cocoa, 4.4 times fewer than flaxseed, like a true "superfood that costs 10 times more than flaxseed", to enrich the Spanish-Italian cartels. In 95% of USA/world canned olives, polyphenols, and even sometimes ω3, are 0, as USDA shows, due to processing, as shown below too. So, you're paying 10 times more for pure oleic acid that you can buy from safflower or sunflower local US made oil. It's a Mafia Business making billions off scientific illiteracy. The main olive polyphenol is $(HO)_2C_6H_3CH_2CH_2OH$ hydroxytyrosol, whose name comes from the fact it's basically the amino acid tyrosine, except it has an extra OH hydroxy group on the benzene ring, and the amino acid ending $CH(NH_2)COOH$ of tyrosine is simply the alcohol, hence tyros-ol CH_2-OH. Others include tyrosol, flavonoids (found in almost every plant), lignans (few), secoiridoids (oleuropein). "phenolic content of 232 mg/kg in virgin olive oil versus 62 mg/kg" in refined olive oil ► FN 2014;1:18. Many vegetable oils also have 100-250 mg/kg polyphenols, so why pay extra? So, you need to eat 2.2 pounds of virgin olive oil (10$) to get the same polyphenols in 7 g of cocoa or 15 g of flaxseed (20 cents) or 28 g blueberries (25 cents). Why pay 50 times more for polyphenols? Did you get the olive oil "benefits" now? It benefits ORGANIZED CRIME. If you love seed oil, buy cheaper vegetable oils, use saved $ to buy blueberries to be healthier. In 100g olives got 0.04 mg lignans, broccoli 99 mg, kale 63, cabbage 18, pepper 13, green bean 23, carrot 8, chia seed 25-150 mg (10% of flax), flaxseed 250-1500 mg, pumpkin seed 256, Olive oil = BS. A 2021 study showed canola oil ω3:6 1:2 vs 1:13 for olive, improved biomarkers more than olive.

☺☺☺Typical Olive STUDIES that don't prove it's worth eating olive oil/olives:☺☺☺

There has never been a double blind placebo controlled randomized study, with sweet sugar capsules (to mask taste of various food extracts) and polyphenol extracts from many foods to prove that the 10 olive polyphenols that are different than the rest are better than the other 9000 polyphenols at lowering oxidative stress, etc. Until that huge study, we have to believe the lies of the Olive Lobby: that somehow most olive polyphenols, found in other foods too, are magical due to 10 different polyphenols. Olive oil intake is inversely related to cancer prevalence, since olive oil is a marker for socioeconomic status, meaning richer people eat more produce and buy more vitamins too ► LHD 2011;10:127. Income meant healthier diet and habits and less cancer. This correlation is not causation: income led to oil purchase, it wasn't the oil that gave them less cancer. You know, in one study people of IQ 140 ate some junk food, all of them. Would this mean the junk food caused their high IQ? No. These are useless observational studies that can have 5 million explanations. Olive oil "OO could be beneficial" for type 2 diabetes ► ND 2017;7(4):e262, but this is simply a nonlinear correlation as authors state, due to healthier people reading in health articles that olive oil is better than corn oil, due to having a few extra polyphenols if extra virgin. So, no, such a study, as many similar ones praised by olive fans, doesn't prove CAUSATION. Hydroxytyrosol is the major anti-inflammatory compound in aqueous olive extracts and impairs cytokine and chemokine production in mice macrophages in a Petri dish, but so do 10000 other (50 times cheaper) polyphenols, so don't get deceived by such fake papers published in the millions by the Big Olive Oil Industry ► PM 2011;77(17):1890-7. Mouse cell studies don't always apply to people, in vitro studies are not in vivo. Not to mention, they got 1 million 10-25 people pilot studies where the conclusions could be false due to many confounding factors due to tiny sample size. Your ☺☺☺fraud detector☺☺☺ just got upgraded to version 80.0. Oxidative DNA damage is prevented by hydroxytyrosol in human blood PBMC and HL60 cells. At 10 micromol/L, the protection was 93% in HL60 and 89% in PBMC ► JN 2008;138 (8):1411-6. The same is true for 5000 other polyphenols: Big Olive puppets in academia produce endless papers that sound so convincing, due to using fancy terms for markers or LDL oxidation, but once you realize (from reading 2000 papers) that other food antioxidants do the same, the whole mirage falls like the Jesus miracles mysterious scam itself.

CN 2004;23(5):1113-21 found virgin *olive* oil was related (didn't cause) to blood pressure drop by 10-14 mm versus sunflower oil (which causes allergies in some, thereby raising pressure) in 31 hypertensive elderly subjects, though the 4 week period before the 4 weeks of Sunflower or 4 weeks of Olive could have included foods with more fiber that caused a lower blood pressure so the study is useless as they didn't monitor for confounding from the different diet in the break period; the paper explains that the subjects were trusted to eat as planned during each 4 week period of olive or sunflower oil, with only random inspections in the kitchen, so they could have

eaten stuff that canceled the results. Pre-study 4 week period was based on weak elderly memory self-reported diet, making the study truly useless, since 4 weeks of a diet can lower systolic easier next period. It's details like these that invalidate most studies. What people miss is this, even if this conclusion is causation, if you ate blueberries, you got *more polyphenols and better outcome.* Olive oil polyphenols (30mg/day) linked to lower blood pressure (8 mm systolic, 7 diastolic) and improved endothelial function in hypertensive women ► AJH 2012;25 (12):1299-304; poor ladies didn't realize blueberries or lentils could do the same, just a lot better, without so much fat to clog the arteries via plaque. 1 month of 4 mg/kg hydroxytyrosol (& other cheaper non-olive polyphenols) led to a 130% rise in good HDL (in rabbits), less plaque, 50% drop in Total Cholesterol ► Ath 2006;188(1):35-42, 4 mg/kg a day is 1 gallon virgin olive oil for a 61kg human. Ready to drink a gallon daily? High olive oil intake was linked to 48% lower cardiovascular mortality in those eating more olive oil than omnivore humans eating a highly toxic high fat diet incorrectly labeled as "low fat" (they replaced some meat/dairy with olive oil, got 48% due to removing fat/oxidized cholesterol) ► BMCM 2014;12:78: authors tell us "arsenic (olive oil) is better than cyanide (meat/dairy)", but 48% was due to removing meat, not due to olive oil. 10 million similar studies were done by other frauds, for other "miracle foods", they replace dairy and meat with Almost Any Plant Food and they get always BETTER OUTCOME: 48% drop. So, don't be fooled, this trick is used by Big Business to promote endless junk foods always. 95% of science papers are fraudulent junk paid by Industry to Sell Products to Gullible Masses: 'Potato chips are 48% better than bacon. Go buy' ☺☺☺

Hydroxytyrosol prevents bone loss in vitro in mice cells and mice ► EJP 2011;662(1-3):78-84. Well, so do 200 times calcium, K_2 supplements. Tyrosol and hydroxytyrosol in olive oil (like 2000 other polyphenols in much cheaper and healthier foods with fiber and ω3, as shown in 90000 other studies) protect N2a cells against amyloid-β-induced toxicity. ► CAR 2011;8(5):543-51. So what? Olive oil is not healthy: it lacks fiber, ω3, etc. Maslinic acid in olives tasted different in mouth once chewed than placebo corn starch capsules and the guys felt it and the placebo effect worked much better, so then study authors said that "olives seem to alleviate mild knee joint pain and weight loss", but in a 20 person study you can flip the coin and the placebo can be strong, they're happy and walk more because they desperately want to see if that olive tasting water will help them walk more and they lose a few grams extra, then this is on CNN, placebo works, 'drink a gallon olive oil daily' ☺☺☺ ► JCBN 2016;59(3):220-5. To eliminate auto-suggestion, one needs 20000 people studies, not 20. The JCBN 2017;61(1):67-73 didn't even have placebo control group, so it may have been all PLACEBO: give anyone any capsule with any polyphenol extract and any knee pain subsides due to lowering inflammation, why pay 50 times more for extra virgin olive oil vs blueberry polyphenol? Come on, even if these studies were not fraud, why get ripped off? TV headlines don't even tell you study details that make them invalid

or inconclusive. Extra virgin olive oil improved learning and memory in mice versus ultra toxic coconut oil and ultra toxic butter, both of which are mostly saturated fat known to destroy the brain of non-ketogenic diets, so the authors tell us "arsenic (olive oil) is better than cyanide (coconut, butter, bacon) for the brain" ► JAD 2012;28(1):81-92. Any plant food that replaces pure saturated fat, any 50 times cheaper than olive oil food is better than coconut/butter, you don't need 5 million 3rd grader studies to see that. "Good use of taxpayer $". A cognition improvement in mice was observed when their 0 polyphenol diet got a few polyphenols from olive oil, but authors don't mention the same improvement would happen with flaxseed oil, chia seed oil, walnuts, etc, just a much bigger improvement, especially with fresh blueberries, etc: ACTN 2017;4(8):564-74; to extrapolate this study to humans is wrong, it's like taking a human diet, removing all polyphenols and then adding 100 times less polyphenols than from flaxseeds or blueberries in a spoon of olive oil and saying this makes you smarter when it doesn't and won't prevent Alzheimer. It's the ultimate fraud, but this is the type of study many use, another example in mice is adding a few olive polyphenols to a 0 polyphenol diet results in some improvement, of course: snow is colder than water, a great revelation: Extra-Virgin Olive Oil (and 9000 other plant foods with polyphenols) diminishes brain Amyloid-β ► JNB 2015;26(12):1479-90 & ACSCN 2013;4(6):973-82. The key to deception is to surround it in 400 technical terms, many tables to hide what goes on, then flood the media with 90000 redundant junk studies to create the myth that Olive oil is The Superfood. This is rich mafia brainwashing. ☺

2. PROCESSING AND POLYPHENOL CONTENT OF OLIVES: Most US sold olives lose all Polyphenols and get 300 times higher carcinogenic acrylamide, besides 100+ other toxic compounds, AGEs

Olives can be eaten raw even if bitter. They can also be stored for 1-2 months in a ventilated area can make them much less bitter and easy to eat. After that, they can be saved in a glass container for years. To remove the bitter polyphenol called oleuropein which makes raw olives bitter and unpalatable for most, olives are sun dried (left on the trees to "cure" where light helps oleuropein to turn into hydroxytyrosol) or they're soaked in water or salted water for months, which allows oleuropein to move out of olives or hydrolyze to hydroxytyrosol. In industrial settings, they speed this process to 7 days by using NaOH and air for oxidation, creating a useless olive full of acrylamide, AGEs and void of polyphenols (the good stuff). Avoiding canned olives is best, as most have been industrially processed and washed until no polyphenol is left. ☺☺☺

This 3 min video explains how all "California Ripe Olives" start green and they're chemically made "black", actually very dark green that appears black at first look, (or left green if no air added, just hydroxide) via treatment with NaOH + air for 7 days. These chemically oxidized black olives also lose all polyphenols (that are the ONLY reason for eating olives in the first place), since the oleic acid (73% of the fat in olives) is present everywhere, in meats (40% of chicken fat

is oleic), canola oil (63%), sunflower, safflower, corn, etc oil. It's all about profit margin because what happens is this: naturally black olives, ripe ones that is, have up to 4 times more healthy polyphenols than green ones but are more expensive to pick up when ripe and they fall easier on the ground etc. Instead of giving the public the healthiest naturally black olives, they take the ones with 4 times less polyphenols and process them until nothing good is left, except fat you find in all kinds of meats and canola oil and every other vegetable oil, nut, seed, veggie, fruit.

Most black olives sold in cans are chemically (not naturally) black (meaning healthy polyphenols are destroyed, toxic compounds created and sold to you to poison you) have the "California Ripe Olives" written on the top of the can. What happens with "California Ripe Olives" olives during exposure to air is they remove the beneficial compounds more, just like when dry heat cooking creates 10 times more AGEs. These formerly green, now black olives, are finally processed for color fixation with iron gluconate and this takes away 99% of hydroxytyrosol and all other polyphenols. Therefore, it's best to avoid those olive cans that say "ferrous gluconate to stabilize color" on the label since they went thru this industrial washing process and the ferrous gluconate will further oxidize anything left. In most US stores we find manzanilla Spanish green olives (595g drained) which are less processed (not with air, and iron) ► high levels of hydroxytyrosol found in Spanish-style green olives ► JAFC 2002;50(13):3688-92. Whole olives have more polyphenols than pitted ones, pitted more than stuffed ones according to ► JAFC 2004;52(3):479-84. ☺☺☺ See this article on why olive oil is bad.

Artificially black olives have 300+ times more carcinogenic acrylamide: "Antioxidant levels in table olives also vary widely. A 10-fold or more difference was found in levels of hydroxytyrosol between olive cultivars. Particularly dramatic is the almost complete loss of hydroxytyrosol, due to oxidation and polymerization, during the California-style oxidation method for converting green olives into black olives. Pitting of olives is also influential: an additional washing step is required when olives are pitted, and this process was found to almost half the content of hydroxytyrosol that had been present in the un-pitted olives... Acrylamide is classified as a probable human carcinogen by the International Agency for Research on Cancer. Concentrations of acrylamide in California-style black olives varied between 410-512 µg/kg in this study and these concentrations are comparable to levels of acrylamide found in French fries, a better known dietary source of acrylamide.. (unprocessed) Spanish olives and Greek olives were found to have very low levels of acrylamide (<1.4 µg/kg)." ► Ntr 2015;7(9):7925-64. 460:1.4>300

Therefore, due to this genocide by the Cancer Giving Olive Industry, the USA needs to mandate the amount of acrylamide, AGEs and polyphenols per 100g in every jar, bag, box or can of olives, which has to be 100% opaque to prevent light degrading vitamins and polyphenols.

3. WHICH OLIVES HAVE THE MOST POLYPHENOLS? The ones costing a fortune. ☺☺☺

Naturally black olives have 4x more polyphenols than green ones, so about 210 to 2890 mg/kg, depending on brand (processing), per EU polyphenol database. This table shows high/low popyphenol olives. "hydroxytyrosol... in Kalamata olives and Spanish-style green olives, cultivar Chalkidiki (250-760 mg/kg)." ► JAFC 2002;50(13):3688-92. Hydroxytyrosol 5610 mg/kg in some ► BJN 2007;97(5):1012-20, free paper at cambridge.org, pg 1018.

11.7.16. PUMPKIN SEEDS (18.6% *protein*, protein *score* 136)

Pumpkin seeds (nutrient list) lower blood glucose, kill some parasites, worms, bacteria (millions are full of worms inside without knowing), prevent atherosclerosis, hair loss, infertility, cancer via 256 mg anti-DHT lignan (anti-androgen phytoestrogen) polyphenols/100g or 46mg/100 cal (about the same mg as chia seeds) versus 291mg/100 cal in broccoli, 126mg/100 cal in kale, 58mg/100 cal in purple cabbage. Lignans are present in many foods, broccoli 99mg/100g, so you don't really need to eat pumpkin seeds to get the lignan arterial, hair, etc benefits. The whole seeds, with the shell, got 18g fiber/100g, vs 6 g for the seed alone. Freshly separated, from the orange fiber, inshell pumpkin seeds can't be properly ground by a food processor or coffee grinder, but they're far easier than dry seeds to break with your molar teeth, you can eat 5-20/day that way, not too many as pimples and gas can emerge. For dry seeds you buy, you can use an automatic coffee grinder (see why, besides grinder making it a finer powder that the food processor can't do). Never eat the shell, unless it a pure powder via coffee grinder, since the shells scratch the stomach, intestine, colon, creating ulcers, cancer later, bleeding (garlic peel, pineapple side brown holes, etc need to be removed too). It's recommended to always eat the seeds only, because the shells of dried seeds, if pulverized with a coffee grinder release chemicals that cloud urine, indicating a stress on the kidney. We got no have long-term safety studies showing that the seed shell is safe if eaten daily. The powder hull hardens the stool. To understand why pumpkin seeds need to be eaten in tiny amounts, please visit the walnut, olives, seed oils, coconut, avocado sections, to better see thru the fake science papers. ☺☺☺ If *you eat 5-20 seeds/day it's fine, but 150-200 seeds can cause hives, gas or* rise in triglycerides, ω6:3 ratio, cholesterol *for ultra healthy vegans with* 4-8% of calories as fat *diets.* The seeds got 114 times more ω6 than ω3, meaning they're deadly if you overeat. If you got walnut allergy however, and are looking for a healthy seed to eat with good protein, nothing beats pumpkin in providing linoleic during skin injuries or to balance your ω3:6 ratio if too high in 3 due to chia seeds or if you need to avoid suppressing the immune system by high ω3 vs 6. Flaxseed oil can provide ω3s. Chewing any garlic with skin, inshell dry seeds daily (wet are fine, they're far easier to break) for years *is not a good idea,* as it can damage your teeth or gums, beside the fact that teeth cleaning become much more difficult, when flossing etc. Carrots, kale, etc stain your teeth too, so it's better to make smoothies sometimes. The limiting amino acid is threonine, so the

amino acid score is 100*683/(18.6*27) = 136. They're present in butternut squash too, so if you eat some butternut squash daily like I used to, you eat about 15-25 g of seeds a week too when you get to the wider squash area; pumpkin seeds from squash are *1000 times fresher than any other seed or nut you buy at the store,* so this places squash seeds well above the rest that way. *Pumpkin seeds have the highest quality protein of any vegan food (and most foods),* with way more complete protein (amino acid score 136) than Burger King hamburger (69). Eating a 5-15 g/week seems a great idea (add seeds from squash to smoothie). See the heart disease and fat link, before eating too many pumpkin seeds, oils. Inshell seeds (4 lb for 28$, US grown, less pesticides) are healthier as the seed has oxidized less, just like inshell walnuts are healthier.

HAIR REGROWTH and Prevention of Hair Loss, Atherosclerosis, Many *Cancers*

Fig 2 of EBCAM 2014:549721 shows the picture before and after 24 weeks of 0.4 g of pumpkin seed oil daily (about 10 seeds equivalent), have had their hair count increase 40% (measured scientifically), vs 10% placebo; the appearance also showed (see the picture) real improvement. See more about hair regrowth, preventing baldness in the hair loss section.☺☺ *Pumpkin seeds lignans inhibit the enzyme* (5α-reductase) that converts testosterone to DHT, which causes atherosclerosis, prostate cancer, as shown in the hair section. Lignans inhibit prostate/breast cancer cells, colorectal adenocarcinoma cells ► Fitot 2016;110:150-6.

Rich *in antioxidant zinc to prevent:* infertility, *diabetes, oxidative stress, low sperm* qualit y:

100 g of pumpkin seeds got 69% of the daily zinc needs, compared to 29% for flaxseeds. Insulin storing cells can have 1 billion times more zinc than mitochondria, zinc lowers blood glucose. Pumpkin seeds lower blood glucose ► CRFSN 2014;54(10):1322-9. ☺☺☺ Sperm quality improved, sperm protected from damage ► And 2014;46(8):927-35 and ASI 2016;91(4):382-90. ☺☺☺ Zinc *repairs* DNA. Pumpkin seeds reduce oxidative stress markers, glucose, lipid levels in humans ► SWJ 2014:563576, rats AJTCAM 2012;9(1):131-7 and JFMA 2013;112(11):676-90. Flax and pumpkin seeds mix ameliorates diabetic nephropathy in rats ► FCT 2010;48(8-9):2407-12

PREVENT FREQUENT URINATION/URINARY INFECTIONS ► JTCM 2014;4(1):72-4.

SPEED UP WOUND HEALING ► Rats treated with pumpkin oil had 97% wound contraction, versus 58% for the controls; the oil increased collagen production 65%. Since hair, follicles got collagen, this may be also why pumpkin helps prevent hair loss ► PB 2016;54(4):581-7.

PREVENT HYPERTENSION ► In rats, pumpkin seed oil exhibits an antihypertensive and cardioprotective effect through a mechanism that may involve generation of NO ► JMF 2012;15(2):180-9. Pumpkin has secoisolariciresinol, a lignan many foods listed in the hair regrowth section ► JAFC 2003;51(5):1181-8. ☺☺☺

PREVENT KIDNEY STONES ► fewer calcium-oxalate crystals: AJCN 1987;45(1):115-21.

ELIMINATE TAPE WORMS ► Pumpkin seeds got rid of tape worms ► ZM 1976;9(1-2):31-5. Pumpkin seed and areca nut combined led to an increased rate of effect on tapeworm expulsion (2 h for combination vs 6-21 h for individual extracts) ► AT 2012;124(2):152-7.

ALKALINE FORMING ► Pumpkin seeds are the most alkaline forming seeds with a PRAL score of minus 14. The many advantages of an alkaline forming diet are detailed in the PRAL section.

11.7.17. ROSEMARY

Rosemary (nutrient list) has been used for centuries to boost memory, improve digestion, prevent brain aging and cognitive decline. It's used (like turmeric, sage, mints) to prevent or manage Alzheimer and dementia. Peppermint which has 12 g polyphenols/100g, vs 1 g for rosemary, double the rosmarinic acid levels in rosemary, spearmint, mint, thyme (causes abortion) and other spices, so I ate dried peppermint leaves for 2 years instead of rosemary (I used to eat rosemary almost daily for 7 months until I learned about peppermint), but almost all benefits of rosemary are in peppermint too (except carnosic acid). Rosemary (and peppermint and most in mint family) is anticancer, antidiabetic, anti-inflammatory, antistroke, antioxidant, antiulcerogenic, anticlotting, antidiuretic. Oddly, the only place in the world where people eat rosemary daily, Acciaroli in Italy, has about 45% of the people over 100 years old and 12% above 110, a world record. Could rosemary prevent free radical damage of the brain to such an extent that it protects all other organs too, since the brain health affects organ health? This discovery has led to hundreds of articles online about how rosemary helps these people live to 110 ► nypost...town. The 650 person village Acciaroli, allegedly got 300 people over the age of 100 and 75 above 110. They eat the Mediterranean diet like tens of millions of much shorter-lived people, except they also eat rosemary daily. This has led many to hypothesize that rosemary helps prevent brain damage, aging a lot which naturally prevents organ damage/aging too. herbco.com has rosemary powder for $2.70/lb (cheaper than turmeric). There are other similar sites selling turmeric or rosemary powder. You can pour hot water over the powder or leaves and make instant tea and the tea is even used to treat digestive problems via enema. It's also used topically, on the face to fight acne, etc. 100 g of powder has 1 g of ω3 fatty acids and 1 gram of ω6, a ratio of 1:1. This is very healthy, most veggies have less than 0.1 g of ω3. Rosemary powder has 43 g of fiber in 100 g, 15 times more than cooked broccoli and cooked collards, 21 times more than cooked kale. With 5 g of protein, it's 2.5 times more than cooked collards, kale and 2 times more than cooked broccoli. Rosemary dried got 11 times more calcium than cow milk. Because all oils go rancid in the presence of oxygen, it is best with rosemary, herbs to eat them fresh, and not as powder, add it to a puree or smoothie you make with a

blender. All cooking oils go rancid, same for ground spices which have a lot of oily fats in them, like rosemary. Ingesting oxidized oils causes atherosclerosis, so powder rosemary is ideally fresh, frozen, eaten fast, not being stored eons in the fridge or outside of fridge. ☺☺☺

FERTILITY

Rosemary increases sperm count in males ► Cryob 2010;61(1):142-7, but it causes *miscarriage* in pregnant women who overdose with it ► Gruenwald J, Brendler T, Jaenicke C, Mehta M. PDR for Herbal Medicines. Medical EconomicsCompany. 2000:645-6. Coffee is abortive (miscarriage) in women (even if used weeks before conception) ► nih.gov..affeine.

ALZHEIMER, COGNITION, MEMORY

Rosmarinic acid, the 3,4-dihydroxycinnamic (cinnamon) acid ester of 3,4-dihydroxyphenyllactic acid, protects against impairment of memory ► BBR 2007;180(2):139-45. Rosmarinic acid prevents fibrillization and diminishes vibrational modes associated to β sheet in tau protein linked to Alzheimer's disease. ► JEIMC 2017;32(1):945-953. Clovamide and rosmarinic acid induce neuroprotective effects in in vitro models of neuronal death ► BJP 2009;157(6):1072-84. Rosmarinic acid has been demonstrated to be effective in preventing the aggregation of amyloid peptides in vitro and to delay the progression of the disease in animal models ► CAJ 2013;8(3):596-602 (free paper on research gate); it alleviates neurological symptoms in a mouse model of Amyotrophic Lateral Sclerosis, ALS ► ENE 2015;24(4):341-50.

Rosemary prevents Alzheimer by inhibiting certain plaque building enzymes and by chelating metals that lead to plaque formation. Rosemary abietane-like phenolic diterpenes ($C_{20}H_{32}$) also prevent the death of brain neurons ► EBCAM 2016:2680409. Rosemary improves memory ► Fitot 2013;91:261-71. Carnosic Acid (main antioxidant in Rosemary) protects neurons in a model of rat Alzheimer's ► CJ 2011;13(1):39-44. Rosemary has 2% carnosic acid, a phenolic diterpene with anti-tumor, anti-diabetic, antibacterial, neuroprotective properties. Rosemary protects against Parkinson's disease too ► CBI 2015;225:40-6 and CRT 2012;25(9):1893-901. Rosemary prevents cognitive decline ► CPD 2006;12(35):4613-23. Several essential oils were shown to prevent cognitive decline. Rosemary has several dominant essential oils such as 1,8-cineole, α-pinene, camphene, α-terpineol, and borneol.☺☺☺

CANCER, DIABETES, PAIN, ANTIOXIDANT, STROKES, ULCERS, ANTIDIURETIC

Rosemary fights cancer ► PFHN 2010;65(2):158-63, diabetes ► JET 2008;116(1):64-73, pain ► JET 2007;111(3):476-82, microbes, free radicals ► JAFC 2007;55(19):7879-85, has polyphenolic antioxidants JAFC 2010;58(1):161-71, prevents blood clots that can lead to strokes ► Ntr 2005;21(5):580-7, prevents ulcers, hence its ancient digestive tonic fame ► JET 2000;69(1):57-62,

is antidiuretic ► JET 2000;71(3):465-72, protects the liver ► EJGH 2002;14(9):1001-6.

11.7.17.1. HAIR LOSS REVERSAL (12 pages): Vitamin S (plant steroids and estrogens) Steroids (phytosterols are steroids with OH, estrogens are steroids with/without OH) & DHT blockers Prevent Baldness, Atherosclerosis, Frequent Urination, Prostate Cancer:

"the degrees of graying of the hair, baldness, and facial wrinkles are not predictive of a shorter life span" ► JG 1998;53A(5):m347-50. The 660-850-940 nm caps work to stimulate hair folicle mitochondria and regrow hair, as explained in the acne removal by light section. "study also showed that LLLT and minoxidil had similar efficacy in hair growth and that combination therapy was even more effective" (so peppermint or rosemary oil with IR will be better) ► JCAS 2021;14(4):385-91. Google says 940 nm helps hair regrowth by penetrating deeper than 850 and many websites sell 660-850 or 660-850-940 caps. Some say 940-950 inhibits COX (cytochrome oxidase of mitochondria), while 630-850 boosts COX. Regardless, 940 inhibiting COX also inhibits oxidative stress, and the free radicals are the main source of follicle loss. It gets confusing as google info is sketchy and AI gives 180 degree opposite answers depending on how you ask a question. Research more, for months, to see if 660-850 is better/worse than 660-850-940. You need a huge study, so people don't know which cap it is and see if 940 helps or not. Rosemary (and other spices) helps with hair regrowth in mice and people *(dormant follicles regrew hair)* ► PHR 2013;27(2):212-7. Rosemary contains 12-methoxycarnosic acid, a compound that prevents DHT binding to androgen receptors in the dermal papilla cells of hair follicles (this binding activates genes and signaling pathways that cause the miniaturization and eventual loss of hair follicles). Rosemary 12-methoxycarnosic and carnosic acids are also 5-α-reductase inhibitors (95% inhibition at 500 ppm), preventing the hydrogenation of testosterone to DHT or DiHydroTestosterone. 100s of papers explain this inhibition. 5-α-reductase inhibitors, common in *vegan* diets, may also prevent overproduction of aqueous humor, which means they may prevent glaucoma, while not helping much with dry eyes. DHT hormone speeds up atherosclerosis, prostate cancer, prostate enlarging, hair loss, that's why hair loss is sometimes indicating atherosclerosis. Inhibiting the conversion of testosterone into DHT can thus prevent strokes and heart disease, not just hair loss. There are many inhibitors of DHT, such as lycopene, soy, polyphenols, zinc, GLA, EPA, DHA. ☺☺☺ Some of the *main inhibitors* of 5-α-reductase are the anti-androgen *lignan* phyto*estrogens* (polyphenols) found in many foods (see the lignan tables) and especially the next foods in decreasing order of *mg* lignan/100 calories: broccoli 291, sesame seeds 133 (unhealthy ω6:3=57:1 ratio, impractical), kale 126, flaxseeds 206 (impractical, got cyanogenic glycosides), brussel sprout 117, purple cabbage 58, pumpkin seeds 46 (unhealthy ω6:3=173:1 ratio, impractical), zucchini 41, chia seeds 21, carrot 19. 900+ foods got the 5-α-reductase inhibiting lignan secoisolariciresinol diglucoside ► JE 1995;147(2):295-302. Lignin is the part of plants where lignan name comes from, sort of similar to lignite, a soft coal type

obtained by plant decomposition over millions of years. Many lignans inhibit 5-α-reductase. Vegans on low fat (4-9%) diets (safest for heart) can lower DHT levels fast by eating lignans/polyphenols from purple kale/cabbage + only 1-3g flax/algal oil, + 2-9 g un/hulled black sesame/pumpkin seeds (eat them with wet foods or as smoothies, chew well, to prevent colon scar from seed hull). Monocytes *attach* faster to the *endothelium* causing arterial plaque when blood DHT is *higher* ► Cir 1999;99(17):2317-22 & End 2004;145(4):1889-97. Flax lignans (0 oil/ω3) reduced by 73% the atherosclerosisin rabbits ► JCP 2009;54(5):369-77. Any lignan source works.☺☺ Isoflavones in soy products lower DHT, improve heart biomarkers: JN 2005;135(3):584-91. That's why the American Heart Association suggests eating soy instead of meat. Avoid dairy, as milk estrogens raise DHT, causing hair loss, acne, cancer, plaque. Hair loss can rarely even be caused by the Demodex mites who feed on the hair follicle sebum (see video), so in those cases topical $20 ivermectin 1% cream seems to work. Why is the scalp hair greying, but the eyebrows, chest hair, leg and genital hair don't? It's very simple: we usually wear long sleeves, pants and sunglasses, which protect eyebrows and the other areas from the harsh UV rays that destroy the melanocytes (pigment producing cells) in the hair follicles, so to avoid that oxidative stress and damage that depletes the blood's antioxidants to fight the UV scalp damage, causing a slightly shorter lifespan in the long run, as the blood didn't prevent a blood clot from forming near the aorta leading to infarct, but it fought scalp oxidative stress, we need to teach all kids to wear a hat or cap each time they wear sunglasses, since that means it's sunny enough to thin or grey the hair, so they live longer and look younger. A slight deficiency or big overdose (of fat soluble vitamins or selenium) can cause hair loss ► DT 2019;9(1):51-70.

β-sitosterol (which was "shown to inhibit the 5-α-reductase enzyme" ► AJCEU 2023;11(6): 467-80) is a rival substrate (competitive inhibitor) of the natural substrate (testosterone, T) of the 5-α-reductase enzyme converting T into DHT, so it uses up the enzyme, before it can turn T into DHT. DHT is not just a cosmetic annoyance, but a genocidal chemical that kills billions early via plaque & prostate cancer. Hair loss is not about vanity, but a marker of severe oxidative stress or high DHT, nutritional deficiencies, which all shrink healthy & total lifespan. USDA has on the last column the highest food sources of β-sitosterol. This section is not due to vanity, but due to the fact DHT happens to be one of the most deadly endogenous chemicals. Flaxseed oil (the only oil I eat) is a wonder food, because it helps lower inflammation which, besides DHT, drives atherosclerosis and hair loss. High ω3 lowers inflammation and flax is the richest high ω3 food in β-sitosterol, a DHT inhibitor, double the β-sitosterol level in flaxseeds (flax oil same as sesame seeds), 2.2x higher than walnuts. Canola oil has ω3:6 ratio of 1:2, the healthiest ratio of all nonflax oils, 2x the β-sitosterol in flax oil. That's why canola came as healthier than olive oil in many studies, having 4x more sterols, protecting the heart. Olive oil is worse than canola, see sterol/fatty acid comparison. "Insulin has been shown to increase DHT levels through activation

of 5-α-reductase" ► JAADCR 2024;50:123-5: insulin rises when you're fat, around the belly especially, so fast to lose belly fat to grow hair, prevent arterial plaque killing you 20 years before your ideal time to go. "Low levels of carotenoid astaxanthin inhibit 5-α-reductase" ► JHP 2005;5(1):17-26. Lycopene is a 5-α-reductase inhibitor too, found in watermelon, tomato, grapefruit: lycopene "decreased Srd5a1 and Srd5a2 (encoding 5-α-reductase 1 & 2)" so both types of reductase were inhibited☺☺☺, unlike many nutrients that inhibit only type 1 ► CAP 2014;7(12):1228-39. ALA/ω3s lower DHT. Table 2 of a 2021 paper has some phytonutrients that inhibit 5-α-reductase: phytosterols (β-sitosterol, stigmasterol, lupeol), phenolics (quercetin, fisetin, kaempferol, myricetin, catechins, soy isoflavones), linoleic acid (found in walnuts, pumpkin seeds, flax, etc), oleic acid (found in every oil/nut/seed). Zinc, saw palmetto inhibit too, palmetto inhibits via gamma linolenic acid GLA ω6: "fatty acids are known to inhibit 5-α-reductase activity of which GLA has highest inhibitory potency" ► IDOJ 2022;13(6):721-4. BJ 1992;285(Pt 2):557-62 shows 5-α-reductase inhibitory potency is decreasing in this order: GLA (ω6 in palmetto) > ARA=ALA (flax) > palmitoleic > oleic > miristoleic. ALA ω3 inhibits DHT better than DHA-EPA ω3 per some studies. Flaxseed oil contains most sterols and many lignans in ground flax that inhibit 5-α-reductase, as shown in JE 1995;147(2):295-302 for enterolactone (a lignan that goes up 10 fold in those eating flax, as flax lignan SDG is turned into enterodiol, enterolactone). The main lignan in flax is SDG, secoisolariciresinol diglucoside ► CR 2010;9(3):261-9, 50-150 mg SDG/spoon of ground flax, 35 mg lignans/flax oil spoon (Barleans at Whole Foods). Avoid flaxseed, eat flax oil, see why in the cyanide section and the flaxseed section.

Rosemary oil led to similar hair regrowth (after 6 months of scalp application) to minoxidil 2%, but led to less itching ► SM 2015;13(1):15-21. Rosemary extract inhibits 5-α-reductase "82.4% and 94.6% at 200 and 500 mg/mL... finasteride at 250 nM (93 mg/mL) ...81.9%" ► CCID 2024;17:2495-503. Finasteride (most used baldness pill) structure is similar to β-sitosterol, except finasteride had NH-C=O at one end and another NH, which are reactive☺☺☺, causing unwanted side effects. Finasteride causes dry eyes, so avoid it. Finasteride is smaller too, can fit into more pockets to do damage to big molecules. Nature's sterols have aliphatic CH, CH_2 instead of reactive N, O, so they disturb the body's molecules far less. Finasteride, due to reactive NH, NH, O can cause (years after stopping using it) depression, panic attacks, insomnia, anxiety, memory loss, suicide, infertility, small penis, small testes, brain fog, slow thinking (like when you slept 3 hrs not 8). In chemistry, one small change has catastrophic effects, but finasteride is VERY different from plant sterols. It may have been designed to sterilize people, to depopulate. The caffeine section explains how they use coffee to sterilize and depopulate too: in the theobromine section you see the big difference between caffeine 1,3,7-Trimethylxanthine, theobromine 3,7-dimethylxanthine, theophylline 1,3- dimethyl xanthine from just one change of CH_3 position or adding a CH_3 group: imagine what a dramatic change happens in body effects

when making 15 changes like finasteride vs sitosterol.☺☺☺ Stigmasterol is β-sitosterol dienol analog with 1 extra double bond, so 2 less H, campesterol is β-sitosterol without a CH_3, β-stigmastanol is saturated β-sitosterol, so 2 more H. The main 13 plant sterols are: β-Sitosterol (+ its double bond isomer, 7-δ-stigmastenol), stigmasterol (+ its isomer, 5-δ-avenasterol), campesterol (+ its double bond isomer (shifted to next carbon) ergosta-7-enol, + its tri-en-ol analog, ergosterol, with 4 less H or 3 double bonds, + its dienol analog, brassicasterol, with 2 less H or 2 double bonds and brassicasterol isomer ergosta-5,7-dienol and brassicasterol isomer ergosta-7,22-dienol, + its saturated analog campestanol with 2 more H), stigmastadiene (stigmasterol without OH and double bonds shifted: many possible structures: one, 3,5, etc, depending on where the 2 double bonds are located, hence diene), and they're almost the same, vastly different from the 'Nazi' finasteride poison. Finasteride is like a virus that tricks the body into accepting it, mimics a natural diet compound and sneaks into cellular places with its higher reactivity, doing total destruction of the body. GENOCIDE. Pharma can't make & off a natural compound, so they need to invent a poison to patent and extract money from millions of ☺puppy IQ workers☺ who don't know natural way safer foods and topical solutions exist.☺☺☺

It's suspect, because you can get similar results to finasteride with much safer man made sterols, maybe their goal was DEPOPULATION, STERILIZATION. Big Pharma is a Mafia, making billions off genocide in order to build palaces, so we need immortality capitalism. Hominid fossils are 7 million years old, and monkey ones 25 million, so the pre monkey mammals ate same plants and sterols for eons. Then, suddenly, we come up with a new sterol our bodies are not used to and it will obviously cause disease. The masses are guinea pigs for this stuff, when honey bees lived 50 times longer via royal jelly with natural compounds worker bees eat during larva stage too. Why spend so much time with creating new sterols, instead of isolating the best natural combo of sterols that works way better than finasteride and making that in the lab? Because our country is run by low IQ aristocrats. 14% of US women use birth control pills, toxic man made estrogens, instead of natural meditative bliss and sex for pro-creation only. Why? Because those "14% filif chicken IQ☺☺ women" got no real centralized education on synthetic estradiol causing uterine cancer, liver damage, blood clots. Ergosterols, ergostadienols you see on USDA component search (scroll to bottom, after fats) are in mushrooms in tiny quantities, so they're almost negligible in most diets. The vast majority of sterols in plants (70% by weight) are only 3: sitosterol, campesterol (demethylated sitosterol) and stigmasterol (dehydrogenated sitosterol) and you see above 10 of the 13 are derivatives of the 3, or all derive from sitosterol, the number one. Sometimes a small change of 1-2 groups makes a compound a neurotoxin. Menthone is a main component of many essential oils and its analog, pulegone (1% of peppermint oil), that only differs with 1 double bond, so 2 less hydrogens, is a neurotoxin. Now, finasteride is WAY more different than 2-6 hydrogens, an OH, or CH_3. So don't even think to use finasteride,

dutasteride (dutasteride is "100 times more potent at inhibiting type 1 5-α-reductase compared with finasteride", but all those fluoride groups could cause some big issues) or minoxidil, if you want to be safe. Only put on scalp what is edible. Peppermint oil inhibits 5-α-reductase, TR 2014;30(4):297-304 found after 4 weeks topical scalp peppermint oil worked 67% better than minoxidil, so peppermint is 67% better than rosemary. That's not what you hear from youtubers or companies charging 10-90 times more for a cure, peppermint oil 9$/4oz is 90 times cheaper. Peppermint/essential oils on scalp means you smell them 10 hrs daily and this may prevent dementia. Peppermint has pulegone neurotoxin, so it's safer to use other topical oils below: sesame, pumpkin, rosemary perhaps or onion juice. ☺☺

δ-7-phytosterols, the main phytosterol class in pumpkin seeds, lower 5-α-reductase activity and led to strong hair growth and less prostate swelling in rats (FNR 2021) and men (see Table 2 hair pics of EBCAM 2014:549721: pumpkin seed oil ingestion, 400 mg a day, about 10 seeds worth of oil (it probably works with seeds too, or maybe even better), led to 40% more human male hairs after 24 weeks). Topical use (be careful, sesame, pumpkin attract house mice that can lick your hair during sleep if house holes exist, while rosemary, peppermint repel mice; mice have brown feces the size of rice grains, if you see those, you got mice hidden somewhere) will cause the skin to absorb and pass to blood the beneficial oils that then cut DHT synthesis and prevent atherosclerosis and prostate problems too. Topical safflower oil, ginger juice, etc were used for centuries in Thailand to treat hair loss: JE 2012;139(3):765-71 found that safflower, the most potent of 17 hair plants used in Thailand, inhibits 5-α-reductase the most. USDA first page for phytosterols, last column/100g shows safflower oil beats most foods in phytosterols with 444 mg, behind sunflower seeds 534, sesame oil 865, sesame seeds 714, showing why Chinese traditional cuisine with sesame oil led to few bald Chinese guys. Soybean oil got 250 mg sterols, 59 mg stigmaterol, the most of any food, and East Asians ate soy foods for millennia: 50+ year old whites have 5x more baldness (50% vs 10%) than East Asians who eat sesame (Chinese) /soy (East Asians) daily. CMJS 2015;42(3):669-80 found sesamin (main lignan in sesame oil, 0.5% ww, whose main metabolite is enterolactone), a fat soluble sterol in sesame seeds and obviously sesame seeds oil (higher in the oil), is 1.54 times more effective than finasteride at blocking 5-α-reductase in DU-145 in vitro human prostate cell line (not hair follicles). Taiwan research looking into roasted sesame seeds and the oil derived from these roasted seeds *(any oil obtained from roasted seeds/nuts is* toxic*, due to lipid oxidation and* lethal AGE formation by protein-sugar, protein-fat chemical reaction in the presence of oxygen*, even if popular in Chinese/other ethnic cuisine anti-science traditions of 5th century* primitives who valued taste more than health and knew nothing*)* found 82% of roasted sesame seeds/oil lignans is sesamin, 15% is sesamolin (sesamin with an extra oxygen between the phenyl and penta ring), 3% is sesamol (sesamin is made of 2 sesamol units joined via a 5 penta ring mostly, though some sesaminol too, sesaminol

is hydroxy-sesamin; however, roasting seeds before extraction converts sesaminol into sesamol for the most part). Sadly, Taiwan still make dozens of brands of toxic roasted seeds oil and sell it in China/Taiwan, hence they investigated 17 oil brands in FC 2007;104(1):341-4. So much for Chinese lead in science, no wonder Japanese live 7 years extra vs Chinese. Foods 2020;9(4):394 shows in section 3.2. the lignan content in sesame seeds and sesame oil from several nations and studies, with sesame oil having 50% more lignans, some differences are due to roasting of seeds before extraction, analysis or other oil treatment, not due to using a new sesame subspecies. Sesamin, sesamol, sesaminol, sesamolin are the 4 main lignans in sesame. SDG (secoisolariciresinol diglucoside) and 3 derivatives (matairesinol, lariciresinol pic, pinoresinol, pic) are the 4 main lignans in flax/chia seeds. In pumpkin seeds the 4 main lignans are SDG, (the largest %) as in flax, pinoresinol, methoxy-pinoresinol or medioresinol and a tiny bit of lariciresinol. So, really, pumpkin seeds and flax are almost identical lignan wise, if you look at the chemical structures. Almost all the lignans in sesame/flax/pumpkin seeds are also found in cruciferous veggies. They're all derivatives of each other, since sesamin is the SDG with phenyl OH & OCH_3 merged into O-CH_2-O and the furan -O-$(CH_2)_4$- rings open. Essentially, if pumpkin seed oil works, so will flax and sesame to some degree, as studies above confirm for sesame. Shocking how simple it all is.

French ☺puppy IQ aristocrats☺ in California destroy the USA by roasting seeds/nuts (video of raising lethal AGEs 10 fold) obtained from US land and selling this POISON Oil to USA, while FDA "low IQ staff" don't fine the aristocrat pigs of "La Tourangelle Nut Oil Company" $2 trillion for genocide and nationalize all nut/seeds farms to create amazing oils and properly stored (frozen if more than 30 days, fridge otherwise) and packed nuts/seeds via Eterni Food Inc, world's biggest grocery store chain with world's healthiest foods, unlike the aristocratic poison sold by 0 IQ aristocrats today. Hey, even 3rd graders know better, they see flaxseed oil stored in opaque pitch black plastic in the fridge section of health food stores, but what about other nuts, seeds, oils? Stored in clear or very light permeable oxygen rich bottles, for max artery damage, so we spend 150 billion year in coronary bypass surgeries. Way to go, the 600-990K a year aristocrat surgeons can then build a palace. Why prevent surgeries by better sleep, decent work hours and less instant relocation and company (33 million vs 11) changes, free education on low fat vegan diets, 0 processed foods if they can make 0.15 trillion by conning (they gain your con-fidence, then betray your trust/con-fidence in them) everyone? Aristocrat profits would be too small, palaces too small if they did the right thing for public health. The 1789 French revolution was undone by the aristocrats almost 90%, just like US 1776 revolution ideals were fully reversed. Only buy COLD PRESSED oils obtained from raw seeds and recall hair loss is also due to oxidative stress, these roasted nuts/seeds oils, adding oils before cooking, cause in your blood. So, use a pressure cooker, soak all foods in water and never add any oil during cooking. Never heat oils,

not even in a microwave, add oils after food is heated, if you heat foods (no need to, just let food warm to room temp 5 minutes, keep fridge warmer, so eating it cold is fine). Minimize oils, unless chia oil, for eating, for obvious reasons. Warm foods left around the kitchen 20 minutes double bad bacteria and the toxins they produce that make you lose hair too, so cold foods are better, especially because they also diminish appetite, though if you eat foods right after warming in 5 min it's fine. Think again about ARISTOCRAT owned restaurant foods taken from one of those trays, after they sit there 5 hrs while they waited for a customer, you eat poison, bacteria toxins rose 128 fold. Bacteria toxins jump 16 fold after 80 minutes at the tray 90+°F temp. Avoid restaurants. Stop being lazy (it takes 1 min to add water and press cook, come on), or you lose all hair. ☺Low IQ workers☺ without good centralized free health, nutrition education can be killed easily by aristocrats, so education is $$. The evil wild dogs make trillions by knowingly killing the working class, so protect yourself, use pressure cookers only food prep.

Native Americans' staples were 1. pumpkin, squash (plus seeds inside), 2. corn (corn oil has highest β-sitosterol 621 mg, 2nd highest stigmasterol 56 & campesterol 153 mg of any food), 3. beans (high in sterols) and the seeds inside daily, 4. chia and wild flax often, so they got huge levels of sterols and lignan estrogens, having the least baldness of any race. Beans sterol content was "5136 mg/100 g of oil, ... ΔS-stigmasterol (1351 mg/100 g oil). Soybean has... 350 mg/100 g oil" ► AOXI 2024;13(6):636. Some legumes reach 8542 mg sterols/100 g oil ► PFHN 2021;76(1):53-9. Lentils are "smaller beans", they're high sterol legumes too, the staple of 400 million South India vegetarians who also lack baldness. PFHN 2007;62(3):85-91 says lentils got 123 mg β-sitosterol/100g, chickpeas 160, while flaxseeds only 57, corn 34, kidney beans 87, sesame seed 139, walnut 174 (Table 2 of IJVNR 2013;83(5):263-70), so of course, soaked lentils are easier to digest than beans, seeds, nuts in large amounts without gas; lentils got 15 mg campesterol (flax 19, chickpea 21, pumpkin seed 0) and 20 mg stigmasterol (flax 22, chickpea 23, pumpkin seed 8) higher than most foods. Lentils are the best food for vegan protein. Red lentils got only 47 sitosterol per USDA, so eat normal brown-green ones. Those eating lots of legumes outlive the rest, possibly due to this DHT issue. Whites emerged in cold climates, *eating potatoes, grains, meat, dairy, stuff with way lower plant steroids*. "in the potato, the content of total phytosterols is only 4.3 mg" (vs 175 mg in lentils) ► Mol 2022;27(2):523, while lignan content is 2.9 mg (vs 63 in kale, 0.3 sweet potato, 0.005 celery, 2.1 tomato, spinach 0.06, 3.8 cucumber, 0.5 green lettuce, 0.02-0.04 olive, 0.03 green cabbage, 18 red cabbage, 0.06 collards). The Genocidal Aristocrats only put the least nutritious foods in our Burgers, Salads to enslave and brain damage us. All the crap they put in these Burgers, Salads is DEATH, BALDNESS, PLAQUE, no phytosterols, no lignans. The meat, dairy and potatoes diet is a scalp & brain/heart disaster. Half of white males over age 50 have serious atherosclerosis due to high DHT, unless they eat the inhibitors from vegan foods.☺☺☺ Go Vegan?☺☺☺ Studies show those eating more plant

sterols are happier, potato junkies are angrier, more depressed; all junk food diets are low in phytosterols , create unhappy people. Those Junk Foods Fries and Meat are Poison. Thus, whites have not developed genes that block DHT formation well and need to eat more sterols to avoid baldness and arterial plaque. Cold climates means you need to boil fruits, veggies, in the summer and pack them as jams for winter, and marinating veggies, fruits in the summer for winter time, etc. All high heat cooking destroys plant steroids and polyphenols that inhibit 5-α-reductase. Sterols are mostly fat soluble, lignan glycosides are water soluble, while plain lignans (aglycone lignans as some call them) are fat soluble, so do eat some fat if a low fat food to absorb more sterols. Sesame seeds help with hair growth as much as pumpkin seeds: AJDV 2019:8(2):28-32, see these 2 sets of 3 pics of topical oil: A, B (2 month pumpkin), C (3 mo) & A, B(2 mo sesame), C (3 mo); based on this paper, a combination of both seeds will lead to better outcomes for some people who don't respond well to pumpkin (30% of people) oil, though sesame oil itches (unlike pumpkin). You can't eat much sesame like flax oil, because high ω6:3 ratio will cause issues, showing why Chinese still don't live as long as Japanese who eat way more ω3. Sesame seeds/oil have huge levels of lignans (buy black sesame as they got way more lignans, polyphenols, sterols e.g. 4lb/28$ raw) that inhibit DHT in addition to sterols, just as soy isoflavones inhibit DHT. Few Japanese got bald heads. ☺☺

Campesterol, 260 mg, is highest in ω3 rich canola oil, so we live longer if eating canola/flax oil, not high ω6 oils (soybean got 62 mg campesterol, flaxseeds 45, safflower oil 35). Brassicasterol is 78 in canola, 0.4 in corn and 0 in all other oils. 5-δ-avenasterol is 25 mg in canola, 0 in most other foods. 7-δ-stigmastenol is 59 in sunflower oil, 51 in safflower oil, 0 in most other foods. Flaxseeds got cyanogenic glycosides, so you need eat flax oil for ω3, as flax oil has 900 times less cyanide. Never eat any seeds or nuts/foods that are roasted/toasted, as heat creates AGEs, destroys sterols/estrogens creating poisons. *High lignan flax oil (which you can make at home with an oil machine) combined with unhulled* black sesame or unhulled dark pumpkin/squash seeds will extend lifespan more than walnuts bought from a store (you need to buy them from a farm around October upon harvest and freeze them after that, see details here, which farm). This is because 99% of walnuts are stored improperly and have a lot of air and tiny holes at the poles of the sphere in the nut that allow moisture/light in, causing mold/oxidation. This never happens with the tight seal pumpkin, flax and sesame seeds. Not only that, but flax oil/sesame combo in the right ratio, has way more DHT blocking sterols and estrogens than pure walnuts, while providing you with an ω3:6 ratio of 1:1, far superior to 1:4 in walnuts. However, you can get the 1:1 ratio with chia oil (chia seeds harden stool too much) and walnuts, since chia oil causes less acne than flax oil and flax oil is forbidden for lactating, conceiving or pregnant ladies or people with thyroid issues. Due to air contact and improper storage (not in the freezer) of walnuts, they oxidize in bags killing us slowly. The other nuts are far worse than walnuts, due to

bad ω3:6 ratios. Eat walnuts only if fresh or frozen right after collection (or within 3 weeks). Walnuts and pumpkin seeds are harvested in September-October in USA (Oregon, California) mostly, so buy them around Oct 15 from a farm directly (sesame Texas Sep-Nov harvest), to get real food, instead of Amazon/grocery junk nuts. US organic nuts use cleaner organic pesticides, transport is short, local, soil less polluted than India, China, Mexico where coal fired plants exist. Long transport from India, etc means more heat oxidation of fats and more mold, invisible mold.

Luteolin, which EU found in sage, thyme, mexican oregano, is also capable of turning grey mouse hair into colorful mouse hair, as this paper pic shows. Other sources of luteolin (fenugreek, chamomile, etc) are in this table. Pennyroyal (Mentha pulegium) sage essential oil can contain 90% pulegone, a potent neurotoxin, so avoid sage, since regular sage (Salvia officinalis) has pulegone too. Perhaps eating some fenugreek seeds rich in luteolin may do the trick, just get an oil expressor and use the oil topically too and eat the left over after oil extraction, though too much fenugreek powder can harden the stool. JAOCS 2011;88(10):1603-10 says: *"Lipid content in fenugreek seeds ranged from 5.8 to 15.2%. Major fatty acids were: linoleic LA.. (45.1–47.5%), α-linolenic ALA (18.3–22.8%), oleic (12.4–17.0%), palmitic (9.8–11.2%)... stearic (3.8–4.2%)"* ...ω6:3 ratio: 2.1 to 2.7, so 2.4 on average, way better than any nuts (walnut 4.2) or any seeds, except flax/chia. Fenugreek, 6.4% fat, 3% LA, 1.3% ALA, 33.5 mg Fe & 23% protein of amino acid score 123 (Met-Cys low), 25% fiber vs 65% fat, 38% LA, 9% ALA, 3 mg Fe & 15% protein of score 55 (Lys low), 7% fiber in walnuts. Fenugreek is 6$/lb, cheaper than walnuts, have better ω3:6 ratio (2.4 avg vs 4.2), 0.65-8.5g polyphenols/100g vs 1.6 for walnuts. Whatever works to restore hair heals 500 other things in the body, since these are the most potent free radicals inhibitors. Hair loses its density and color due to free radicals mostly. Hair color/density are real markers for aging, unless one is low IQ and goes in the UV sun always without hats to have UV destroy the hair follicles. Luteolin is a phenol with 4 OH groups, more antioxidant power than those with 1 OH group. Quercetin is luteolin with an extra OH group, so 5, hence we always hear about quercetin and its strong effects, or purple onion containing quercetin, *onion juice restoring hair color or density:* at 6 weeks, *"hair re-growth was observed in ... males (93.7%) ... females (71.4%). In the tap-water treated-control group, hair regrowth... in only 2 patients (13%) at 8 weeks"* ► JD 2002;29(6):343-6. 94% of males had regrowth. The chamomile tea flavone Apigenin is luteolin minus an OH, so you hardly hear much about it, since its antioxidant power is low, only 3 OH groups. Peppermint has 2% pulegone, so use with caution since skin can absorb it, lungs too. Pulegone causes miscarriage, stillbirth, avoid eating rosemary and all mint plants (oregano too), as you may abort by accident your baby if pregnant. The grocery chains need warning about miscarriage on all rosemary, oregano, sage, mint, thyme, peppermint, spearmint. Toothpaste, chewing gum with peppermint, etc oils may contribute to a fall in global fertility rates. To speed this up, please support the universal advent of the 11 companies, like Eterni Food Inc who

require 9000 chemicals listed for any food sold and fines existing companies trillions for fraud. ☺

IJPD 2022;23(4):297-301 (scroll to Fig 1) found kids with Mg, Zn, Cu, Fe, B_{12} deficiencies had grey hair. Other hair loss causes are chlorine, chemicals in water or shampoo, genetics, bad sleep, etc, not just DHT. Avoid washing face or scalp with chlorinated shower water as it ruins skin and follicles fast (use portable shower filter in hotels) making bald heads 20 years earlier for some, disallowing you to see when balding happens due to DHT. Weddell Duo is a good shower filter, apply 10% coupon, buy a set of two and subscribe to get about 18$ off, and get it for 72$, as you can see in the video white and beige filter vs dark brown due to sediment and pipe junk condition of shower by the color (transparent casing). When brown you know you need flush your water heater. This transparency of filter casing needs to gently be required worldwide by the Immortality Building Inc, one of the 11 companies worldwide of the future world of Immortals of one nation, one language for all, so people know when the city or main pipe got some junk and filter changed color from beige to dark brown at 2 weeks not 5 months, to avoid toxic stuff getting absorbed by the skin or cornea. Unlike the garbage brands on Amazon with 0 USA certification, Weddell Duo and Aquasana are certified for chlorine removal☺☺☺. Deoxyribose was shown to prevent hair loss in mice, they even sell it on Amazon. Treating B_{12} deficiency, reversed (AD 1986;122(8):896-9) skin/nail pigmentation and grey hair to brown, because B_{12} brings blood to the follicle. Low copper causes grey hair since copper superoxide dismutase fights free radicals and the copper enzyme tyrosinase helps make the melanin hair color. High zinc prevents copper absorption, so eating dried shiitake mushrooms, lentils may reverse grey hair if blood analysis shows low copper. Low catalase (found in cruciferous veggies) low antioxidants, polyphenols intake no longer removes superoxide O_2^- free radicals well, so hair folicle melanocytes (pigment cells) die. Spermidine also helps prevent grey hair, as well as arginine, which turns into ornithine and spermidine. Hair loss can be due to low B_7 (biotin was used for decades to regrow hair, return hair color, 10-20 mg a day). Low catalase also shrinks lifespan, so, grey hair is a signal something is not working perfectly inside your body. Many dye the hair, but this often poisons the body and thins/greys the hair. UV also kills melanocytes, so wear a hat to prevent grey hair. Almost everything that causes grey hair also causes shorter lifespan, *since grey hair is a marker for aging*. MnSOD and CuSOD (SuperOxide Dismutase) are 2 key enzymes that prevent baldness and greying, plus aging, by scavenging the superoxide radical. Poor sleep can also cause hair greying and thinning, since sleep is the body repair time for hair folicle. If we live to 5000, like queen bees living 50 times longer, hair greys only at age 2500. Grey hair reflects lack of nutrition knowledge in our society, our short lifespan. ☺☺☺

2 guys went thru immunotherapy for lung cancer (with Anti-PD-1 + anti-PD-L1 agents, immune checkpoint inhibitors (ICIs) used in cancer therapy to boost the immune system's ability to fight tumors, PD programmed death of bad/infected cells caused by PD-1 protein on T-cells means

immunity can kill melanocytes (thinking they got cancer or are bad cells) that produce hair melanin/color) and grey hair became brown again JAMAD 2017;153(11):1162-5 (scroll to see pics). 14 out of 52 patients got grey hair turn brown. Try the 0.5 GPM shower head I use for less chlorine (which destroys skin collagen) and less harsh chemicals and some chlorine filter (10$ only filter (replace monthly or bimonthly, due to risk of mold growth), 20$ first time with filter). For chlorine, Aquasana shower filter is possibly the best, but too expensive at 50$ to replace and too much mold grows there in 6 months, removing 90% chlorine when new (at least Aquasana claims so on their website) and 50+% at 6 months. With the water for life program, you get free shipping every 6 months and a 50$ filter, which is the same price as the Amazon uncertified junk that has half the materials of Aquasana. The issue with most Amazon shower filters is that they don't verify the claims by NSF, so check brands on this page, with NSF lead certification for lead reduction for example, where Aquasana and most filters don't even make it, as confirmed by Aquasana by email "*the shower system is only certified to reduce Chlorine, no lead*". Weddell Duo is certified to remove chlorine, microplastics PFAS etc, the most of any shower filter allegedly. You get chlorinated warm water in 2 ways: no shower filter or no fresh magnesium anode rod, magnesium anode rod needs be 0-3 years old to remove all chlorine in showers effectively (recall to only use 7% of water flow as cold if any, as cold water will always have chlorine, when you have no filter, you can use warmer shower water without worrying about filter damage), the anode costs 20$, you can replace it yourself and saves 300$ in shower filters which come with the risk of bacterial growth as many PubMed papers explain; after I replaced my anode rod with a brand new one, the chlorine smell of hot water vanished (due to Mg) without a shower filter (so I stopped using it, especially as the city replaced 100s of old rusty, filthy, bacteria loaded pipes last 10 years), since old anode was covered in white scale mix of $MgCO_3$+$CaCO_3$. Shower filters treat warm water and lose chlorine filtering ability faster than whole house filters, so use shampoo sparingly (not daily) and briefly. Shampoo chemicals are not going thru 10 year safety studies to prove "high DHT producing genomes" follicles are not destroyed. It's good to use little shampoo, to minimize chemicals damage to all organs, via skin penetration, absorption into the entire body, leading to arterial plaque, stroke, death. Why get bald when you get a free cap, good marker of oxidative stress, DHT production? Not all balding is genetic, some is 50% environmental. ☺☺☺

Rosemary oil led to hair regrowth in 44% of people who tried massaging their scalp with it daily ► ADE 1998;134(11):1349-52. In mice, rosemary ethanol extract led to hair growth, while other extracts Plants 2020;9(5):651 helped reduce pimples, acne, dermatitis, etc: "Carnosol was able to reduce the amounts of immunoglobulin E, neutrophils *(cells that fight infections)*, and inflammatory cytokines (TNF-α and IL-1β) in the blood of mice" (hair loss, pimples, dry eyes, often happen due to excessive inflammation). So, boil water in a kettle, place it in a glass, add

rosemary and let it become brown, then place in a spray bottle (opaque to prevent polyphenol degradation, tape with aluminum foil, + clean tape) and spray this rosemary extract on your hair, as it's not as bad as peppermint oil that stays with you for 12 hours at least; the catch is that the essential oils are absorbed more into the skin than the leaf kettle water extract. This is because some carriers in the oil are having polar and nonpolar properties, so to avoid plucking hairs, spray oils or water extracts with an Amazon spray bottle that is food grade plastic for highest safety: (200 mL 4.7 stars, highest rated, food grade plastic/6$, 2 pack 454 ml 12$ (blue 14$), big bottle means more air to oxidize it, so store all in the fridge in a big bottle and use a smaller spray bottle to refill and spray oil or water: 120ml/5$, 230ml/5$, or 6 pack 60 mL/14$ or 25 pack 5 ml min air oxidation 8$, or 105 pack 18$ for chemical experiments or biology ones for longevity of worms and short lived lifeforms), don't massage scalp too much (glass won't release microplastics into air, hair, saving your lungs, ensure glass has no lead, can check it with a scanner). You can also find a bottle at the $ store in the food (not cosmetic, since that plastic is not food grade) section, just empty and clean it, though it's hard to find GLASS spray bottle for 1$ to avoid inhaling so much plastic; what is easier though is to find amber avocado or olive oil glass bottles for storing the bulk of your plant extract to refill the 200 ml one with extract when needed, to prevent oxidation of the entire thing at room temp, store it in the fridge.

Choose stainless steel $10 short handle colander style strainers (not one long handle, as those handles break so fast, due to heavy lentils, plus increase risk of wrist injuries and finger injuries if you use it for a few days after handle came off instead of recycling it) etc since *aluminum, plastic leak* toxic aluminum *or microplastics.* Some teas can work for acne/eyelid issues, chamomile and marigold are in so many eyedrops and eyelid products by major eye product companies, you can try tea like that, spray with eyes closed (never open, since tea is not sterile and thus it can cause conjunctivitis), then rinse within 2 minutes or eye doesn't like it, as long as you find papers showing benefits, *for eyes, do it only with fresh boiled tea that has been cooled, since that water is sterile after boiling. Check with 20x mirror before and after, and make sure all is well. This is not something that is good to do unless you send to a lab that brand of tea and it confirmed to be free from any dangerous microbe, since* pharma companies do sterilize plant extracts: 15 min at 121°C or membrane filtrations *or* they sterilize it for you (some future lab perhaps). However, the heat methods can destroy the polyphenols. When we have eyes open, we get from wind and pollen 1000s of microbes, far more than from eyelid chamomile tea (as long as no mold in it, etc, this tea needs to be stored at 62°F or lower, which no store abides by almost), so those few polyphenols can help a little perhaps, as they do kill many pathogens. *Choose* smaller bottles for spraying, since those are 50 times less likely to drop from your hand and break the glass or hit your toes and oxidize things less, though you can keep it in the fridge too, the small one, to minimize air oxidation. Unlike rosemary extract, rosemary oil is very

germicidal; just don't spray on your eyes. *Since hair loss is often caused by stress, which induces free radical formation and oxidative stress*, those that got vitamin E in form of tocotrienols got 35% increase in hair, while those receiving placebo got 0.1% decrease in hair (tocotrienols probably help the brain neurons to survive free radical attacks) ► TLSR 2010;21(2):91-9. d-α-tocotrienol possesses 40-60 times higher antioxidant activity against lipid peroxidation than d-α-tocopherol (the most common vitamin E in supplements) possibly due to better distribution in the fatty layers of the cell membrane, trapping more radicals ► FRBM 1991;10(5):263-75. However, too much vitamin E can cause a disruption of the thyroid hormones, which can ultimately lead to hair loss, so everything needs to be in the perfect range, though d-α-tocopherol thins blood more than tocotrienols, thereby blocking the clotting activity of vitamin K more, leading to other hemorrhagic strokes types of issues due to internal bleeding. To create a good AI model based on 10000 biomarkers of aging and oxidative stress, enabling all to live to 150 by personalized nutrition powders changed weekly, we need to realize when 1 biomarker goes up 10% to help with one issue, 5000 go down and 5000 go up and this affects a myriad of health conditions and states, and we simply don't have the tech to measure those 10K biomarkers daily via a pic of molecules in the body or blood. Eating more fresh fruits and veggies high in antioxidants can be used as a complementary route to blocking DHT, a route that will also benefit the overall health. Women who got lysine + iron were able to increase hair count ► IJCS 2002;24(1):17-23, because some women lose a lot of iron (thus hair) during menstruation. To advance medicine to the stage of super complex AI models for daily nutrition, we need to centralize nutrition as the Universal Immortality Inc section explains in detail, besides the other 10 companies. Our stone age computers are not even able to deal with simple stuff, let alone modeling the body of 10 trillion cells with 100000 chemical reactions going on each SECOND IN EACH CELL. That's why we need to have a discussion as to why our taxpayer money is wasted with religious frauds who obviously have no proof for their claims of miracles and etc. Is it not the time to Declare our Independence from the Italian, Israeli Mafias running US for 5 centuries?

Another way rosemary might help hair regrowth is fighting oxidative stress (since it has a very high ORAC score 165,280, which is 421 times higher than wine) and giving a break to reduced glutathione and glutathione peroxidase, which become very low in cells when we're flooded with free radicals, heavy metals, toxins, etc. CBF 2000;18(3):169-73 found that β-carotene increased the levels of reduced glutathione (GSH); the activity of glutathione peroxidase (GPx) in blood was much lower in hairless patients, and TBARS (a blood marker of lipid peroxidation due to oxidative stress from AGEs in diet or junk food) was much higher in patients without hair. Vitamin E was slightly lower, so authors proposed eating more selenium (for peroxidase), vitamin A and E. Anti-oxidant enzyme superoxide dismutase was less active in people with alopecia ► MSM 2005;11(6):CR296-99, while malondialdehyde (MDA, a marker of lipid

peroxidation and oxidative stress) was more than double in those with alopecia and xanthine oxidase was 3 times higher in those with alopecia. Xanthine oxidase is a marker for oxidative stress and a marker for myocardial infarction; many studies noted those who get bald are sometimes more likely to have heart issues, probably due to increased oxidative stress that destroys the blood vessels and hair follicles ► IJCB 2007;22(2):90-2. Confirming this OXIDATIVE STRESS hypothesis, JID 1996;107(2):154-8, found that in the scalp sebaceous glands the TBARS levels were double in those with alopecia and glutathione was 2.5 times lower. This led the authors to propose that baldness is due to free radicals, just like many other diseases are caused by oxidative stress. JDS 2002;29(2):85-90 found that TBARS was 3 times higher in those with alopecia (lipid peroxidation), even when glutathione peroxidase was 3 times higher and superoxide dismutase was 2 times higher, indicating that even when enzyme activity is high, they're sometimes unable to contain the free radicals and the damage they do. So, it can be that even when selenium for glutathione is there, the glutathione system is incapable of fighting free radical damage to hair follicles, arterial blood vessels, brain neurons. A 2 min video explains the link between baldness and iodine; iodine deficiency can cause problems with many organs, the teeth, bones, not just brittle or no hair; sheep with low iodine in their diet had much thinner and poorer quality wool; it is hypothesized that the biochemical pathway in humans and sheep is similar; many have reversed hair loss by just taking iodine containing vitamins or KI/I_2 form (potassium iodide/ elemental iodine tincture, $5 from Walmart or Walgreen) like the MD in the video is talking about. ☺ Linoleic acid (first paragraph of DHA-EPA section) is also important for hair health, since it helps follicular health. GHIGFR 2007;17(5):408-15 found about 1 cup of soy beans equivalent (75 mg isoflavone) or quarter of Jalapeno pepper (6 mg capsaicin) can also stimulate hair growth by boosting IGF-1, but IGF-1 boosting has pro aging effects sometimes, plus capsaicin in hot peppers can damage the heart, so I would avoid those. Eating too much tuna can cause hair loss, as hair absorbs mercury; one woman regrew her lost hair once stopping eating fish as this video explains. Too much of Se, vitamin A can also be bad. "*Iron, vitamin D, folate, vitamin B_{12}, and selenium are vitamins and minerals that may be involved in hair graying/whitening during childhood or early adulthood.* Supplementing these deficient micronutrients can improve premature graying." DT 2019;9(1):51-70.☺☺☺

11.7.18. Strawberries, *blue*berries, maqui & other berries

Strawberries (nutrient list), blueberries (nutrient list), etc *lower cholesterol*, glaucoma risk, macular degeneration risk, inflammation (IL-6 cytokine pro-inflammatory marker down 50%), *blood glucose, DNA damage* (need 300 g every 8 hrs to prevent DNA aging), *triglycerides, cancer/obesity risk*, *raise* insulin sensitivity 4 fold after 300 g of blueberries, mental *performance and blood antioxidant status*. More details are in the 50 videos on blueberries. Maqui berries

contain .69 g anthocyanidins vs .107 for blueberries (6.4 times more): 0.66-1.5 g cyanidin-glucoside equiv/100g or 1.08g anthocyanin, or .69 g cyanidin; maqui total phenols are 1.07-2.05 g, or 1560 mg avg, vs 560 mg blueberries ► JSFA 2014;94(13):2639-48. Blueberry anthocyanins were 53-322 mg/ 100g in 71 cultivars, mean 167 anthocyanin (cyanidin glycoside) or 107 mg cyanidin (ORAC 4,803) ► Table 3 HS 2022;57(8):901-9 or 167 anthocyanin in Table 2, 35 high bush blueberries (ORAC 3,509) and 259 anthocyanins (165 mg cyanidin) in Table 1 for 16 rabbiteye blueberries (10% of US sales, ORAC 4841, more drought resistant, more UV oxidative stress, so more anthocyanins) ► JNSV 2021;67(3):201-9. Freeze dried maqui ORAC is up to 16 times higher, 55,971 (82,500 or 24 times if mixed with 5.5% murta) than raw blueberry (3,509) and goji. Freeze dried blueberry is 15,000, about 3.7 times less. Maqui are 4 times cheaper than organic blueberries/g anthocyanins, with way more fiber/g sugar than blueberries, assuming freeze drying keeps all polyphenols during transport from Chile to USA, if half are lost, then 2 times cheaper than Aldi organic blueberries. Polyphenols feed the good bacteria, draw water if eating powder, and for hard stools or rare bowel movements, maqui help all defecate daily; maqui works 20x better than MgO in softening stools, and 90x better than blueberries; your stool will be longest it's ever been (10-18" depending on person size) and soft, coming out 20x faster if somewhat hard now (constipation is often due to bad bacteria, these phenols feed the good guys so the bad ones are wiped out). Maqui berries contain delphinidins, among the strongest antioxidants of the anthocyanidin & flavonoid classes, thanks to the 3 adjacent OH groups on the lone phenyl ring, offering more electron donor OH to neutralize radicals than cyanidins (2 OH, delphinidin minus 1 OH) or pelargonidins (1 OH, cyanidin minus 1 OH) ► FN 2022;9:746881. Delphinidins activate NrF2, lower H_2O_2 levels, lipid peroxidation in skin cells better than other flavonoids ► AAPSJ 2019:21(5):83, boost glutathione in endothelial cells ► OMCL 2017:9260701. Maqui berries are known to have the strongest effect on making dry eyes wetter. Blueberries, blackberries, etc lack a measurable effect on tear volume, unlike maqui or to a lesser extent goji. Blueberries delphinidins make up "20.8–56.6% of total anthocyanins" ► Mol 2026;31(5):793 or 29% average, out of 164 mg, or 47 mg/100g, confirmed in JAFC 2012;60(23):5772-8: between "45.0 and 74.9 mg". 80% of maqui anthocyanins are delphinidins, so that's about 552 mg, 12 times more delphinidins (than blueberries) our eyes like. Food anthocyanidins comprise of 50% cyanidins, 12% delphinidins or hydroxy-cyanidins, 12% pelargonidins or deoxy-cyanidins, 12% peonidins or methyl-cyanidins, 7% malvidins or dimethyl-delphinidins, 7% petunidins or methyl-delphinidins. The structure of the 6 food cyanidins is here. 50% of maqui powder is insoluble fiber that provides bulk and peristaltic action. Maqui lowers blood pressure by supporting vessel dilation via nitric oxide. Drink plenty of water with the powder, min 5x the powder weight, to avoid dehydration that can raise blood pressure. Maqui anthocyanins are 80% of total phenols. The benefits of berries are explained in detail at AN 2019;11(2):224-36, which shows in Table 1 that in 100 g we find in mg of anthocyanins: maqui

berry 1080, wild blueberry 487, *purple* cauliflower 404, normal (high bush) blueberry 387 (2019 study uses a 2006 paper, not sure how reliable the analytical data or sample, did they choose the highest anthocyanin blueberry?, other papers, 2021, 2022 above give 167 or 259), *purple* cabbage 322, blackberry 245, purple kale 173, cherry 122, *purple* grape/ raspberry 120, black plum 116, red grape 27, strawberry 21, red plum 20, red apple 12, yellow apple/plum & banana 0. All berries have similar effects due to sharing a lot of polyphenols ► IJMS 2018;19(2):461. All berries protect the brain, endothelium, eyes ► NRR 2014;9(16):1557-66, AO 2026;15(2):204 & Ntr 2025;17(24):3888, just as purple veggies do. Blueberries have high pesticides if not organic. In 100 g of raw fruit EJCN found these mg of polyphenols: maqui berry 1560, wild blueberry 836, blueberry 560, dark plum 377 (467/calories in 100g blueberry), strawberry 235 (419/100g blueberry cal), blackberry 260 (344/100g blueberry cal), raspberry 215 (236/100g blueberry cal).

Bananas, apples, mangoes, potatoes, apricots (useless foods that have way too much sugar, brain damaging fructose and no high polyphenol), lettuce, mushrooms, the deadly (see why) avocados contain polyphenol oxidase, an enzyme oxidizing berry/blue-red/purple produce polyphenols, so definitely avoid these in smoothies or same meal with berries as explained in the polyphenol section. Bananas cause indigestion, being the food of the lowest IQ *humans, monkeys,* which remained brain dead, versus monkeys who ventured out, ate polyphenol rich berries and became more intelligent than monkeys. Eat berries with onion, as onion is anti-bacterial and berries grow bacteria fast. The companies freezing berries are not sorting out well the moldy berries (too expensive to feel every berry to see if soft and scan it with lasers for mold), so you end up eating tons of mold without knowing, since mold spores and mold are not dying during the freezing process, mold can thrive and multiply the moment you unfreeze the berries, taking over your lungs, brain, destroying your immune system. While many studies show freezing doesn't reduce polyphenols if done without drying, the risk of mold born brain/lung damage or sickness is too high, so you can kindly ignore youtubers who make videos to justify their eating frozen berries: the truth is these young naive well meaning folks don't understand the genocidal aristocratic mass murderers running the US/world industries, as shown in the olives, avocados, coconut, seed oils and fake science sections. As this video shows, many frozen berries are moldy and deformed (see the image at minute 10:54) and not all companies even use laser AI to remove moldy ones. Blackberries contain large amounts of indigestible sorbitol, so if you eat 1 pound daily or 2, you will get a huge amount of gas that is not happening with blueberries. Berry enthusiasts can ☺☺*lovingly gently avoid eating* mold and soft berries (where nutrients, polyphenols were lost due to becoming soft) from *blueberries*, fruits from big brands like Driscoll, etc they buy at many good stores that, upon extremely careful inspection before swallowing, have 1 out of *5 to 100 berries* etc full of mold or ultra soft and rotten, or sometimes more, so much so, that at times I had to trash the whole pack or half

of it in California (where they sell it cheap in some stores), though that was one pack a year or so. If you eat any big fruit or a walnut, discard the whole fruit even if only a part of the veggie or fruit is moldy, because mold is there even if not visible, in the entire fruit.

Please don't eat berries fast without feeling them in the hand or at least mouth, as you will eat tons of mold, *about 3%* of blueberry packs I buy are 100% "rot (softness) and white mold" free, *about 12%* are white mold free, even among good stores and good brands. If you eat a plum, you sometimes come across some rotten one where the inside is very dark, as opposed to the bright green inside in most plums. And you discard that rotten bad tasting part of the plum. However, with blueberries, people don't take the time to crack open in 2 the berry and see how dark a soft blueberry is versus a blueberry that is fresh and very hard. The soft ones have already started to rot, but may not be really soft like the ones where mold has grown to such a degree that you can see the white mold. So, contrary to beliefs, a lot of soft berries have tiny levels of mold, which will become a lot more as the mold grows and becomes white and visible. Before buying, always feel some berries in a pack to see if they're soft or hard and don't eat soft ones as they most likely have a lot of viruses and molds that damage us too. It took me years to realize that, by doing meticulous inspection of every berry in 90 packs. So, before buying berry packs in speed, open the pack, inspect, look for deformed berries, white mold is visible if you pay attention; if all is round and white mold free, try feel some to see if they're too soft, that's a sign of rotting and possible mold even if no white is seen; berries are meant to be firm when fresh; you can even move a berry or two to see berries under where the white mold can hide if not sure if to buy 3-7 packs or less. Usually, with jumbo organic and jumbo size ones, it's obvious without opening if the berries are fresh or not, so it's a waste of time to open. If any berry is not a perfect sphere, then you know it is not a good pack and you're not going to waste too much time. Jumbo berries are usually higher quality and sometimes higher price anyway. If 2 berry packs have the same price, choose jumbo as they usually have far less mold.

So, *before you go to Jamba Juice* (bad idea since to increase sales, they can add sugar (diabetes) or toxic xylitol, erythritol artificial sweeteners known to cause blood clots, strokes, infarcts) *and smoothie places using berries, think again, those guys won't be as careful as you, since they don't* eat the mold *and could care less if you get sick; they move so fast, they can't check and filter moldy berries out*. Likewise, frozen berries are not mold free either, as you can tell when they become warm, they look like those less healthy berries often. Endotoxins produced by bacteria grow rapidly if the truck refrigeration fails during transport and small rips in the skin of berries during defrost or freezing allow bacteria to enter and to grow inside, producing berries full of toxins. While frozen are half the price while out of season, they also are at times half the polyphenols, due to freezing, so you really eat the same price for the nutrients, except frozen got a lot more mold. Simply recall the polyphenol list of foods that have the same level of

polyphenols/calorie (not the same variety) as blueberries and in the coldest months, eat more red cabbage, purple cauliflower, purple kale, indigo skin and red flesh (not beige) plums (those got 2-3 times more polyphenols), etc. *So, stay away from frozen fruits or dried fruits, they're oxidized, or moldy*. Use your brain to navigate the jungle until quality immortality capitalism food emerges and we eat eterni foods, free of mold. While frozen has fewer pesticides, that's because frozen berries are more washed and processed, flash frozen upon harvest, while the fresh have to stay good for a week, so require more pesticides to keep mold at bay. Thus, you need to wash berries well and get organic when possible. Fruits and veggies need to be inspected carefully at home when eating, which is not possible in the store, due to inability to remove all wrapping, peppers on the inside (top is where most mold develops, where the 3 or 4 parts join) and outside; feel and inspect berries, etc before you gulp them without looking, pour all berries into a container and inspect, plus feel them to see which ones are soft, rotten and to be trashed; if all packs are good, then don't need to check all packs, but do check at least 1-2 packs before buying or eating, and eat a few at a time slowly to ☺☺*lovingly tenderly gently kindly*☺☺ avoid swallowing soft rotten moldy ones in speed without realizing. If you eat mold, you may get sick. Perhaps, you can try puree firm, not soft and rotten, strawberries into a smoothie, if you want to avoid burping due to air the inside the fruit we swallow; no other fruit has so much air; if you don't puree them, maybe eat max 100 g/meal or 200 g/day, they got too much *soluble* fiber that cause bloating *independent* of the air inside the fruit. Strawberries and blueberries are available in the US most months of the year, while other very healthy berries, like blackberries, raspberries, cranberries are more seasonal. However, we can find year round berries at Costco or in the grocery frozen sections (Aldi etc), which are 2-3 times cheaper than fresh even if they lose some of the polyphenols; "the frozen samples did not show any significant decrease in anthocyanin (30% of polyphenols in blueberries) level during three months of storage" ► JBB 2004;2004(5):248-52, but dried blueberries (like with all dried foods) showed 49% loss of polyphenols (that's why I never eat dried fruit: oxygen, light screw everything up, including fats added to dried fruit that go rancid). Not all studies found negligible loss of anthocyanins (FSTQ 2007;5:231-8 found minimal loss), some found 59% drop in anthocyanins in 6 months ► JFCA 2014;33:111-6. Could it be due to freezing method? Walmart 3 lb Canada blueberries are $5, cheaper than plums at pricier stores.

"Foods… identified as goitrogenic include… strawberries" ► Toxins 2010;2(9):2289-332 (section 4.2.4. got the full list). Most foods lose the enzyme that turns progoitrin into goitrin during cooking, but we eat strawberries raw. The reason people avoid goitrogenic raw purple kale, cabbage, cauliflower as polyphenol sources at times is they have thyroid issues, but few people know strawberries are goitrogenic too, even if less; so the argument for other berries is strong, given the huge pesticide level in conventional strawberries and the fact blueberries have double

the polyphenols in strawberries, while costing the same in the frozen section. AC 2006;5(1):59-68 found C elegans worms lived 28% longer when fed blueberry polyphenols. The polyphenol section explains those eating most polyphenols had 37% lower mortality. Strawberries *and* blackberries *got* 10-20 times (cultivar depending) less chlorogenic acids *compared to plums and blueberries, having mostly anthocyanin polyphenols. Plums have more flavanols than berries. The plum section has a* long discussion on polyphenols *found in* berries (anthocyanins, etc), similar to plum ones explaining why blueberries are the best berries and why plums can compliment blackberries and strawberries, if blueberries are not for sale where you live. When in season, any berry can be ultra cheap, so you can eat those and compliment with *plum*. In 100 g, *blackberry got* 6 mg Mn, twice the Mn of blueberry, 1.5x the Mn of strawberry, *6x the* Mn *of plums*, so don't overeat if Mn intake is already high that day (can be if you eat pineapple). Due to high Mn, I eat mostly blueberries, avoiding blackberry/raspberry (they got many polyphenols, so Mn is less absorbed than pineapple) usually. Raspberry got *7 times the* Mn *of plums*, 7 mg. In 100g we got fiber in g: raspberry 6.5, blackberry 5.3, blueberry 2.4, plum 1.4. If you're low in fiber, blackberries work. Blackberry + plum 1:1 will provide almost same stuff as blueberries, Mn/fiber/polyphenol wise. 1:1 purple cabbage/cauliflower or 100% purple kale (not the green kale with purple stem called 'red kale') + plums got same phenols/calorie as blueberry, but limit goitrogenic cruciferous to 350g/day. Table 1 at EJCN 2010;64:S112-20 has a Folic assay method of estimating 'antioxidants' in mg/100g, but this is wildly inaccurate, since this reagent reacts with endless compounds: lentils 6553, white bean 138, capers 3600, raspberry 980, blackberry 570, lowbush blueberry 471 (highbush 205), plum 411, strawberry 268, carrot 58. Folin is irrelevant, as it's not the actual mg of polyphenols or any clearly defined 'antioxidants', but it's why some eat raspberries when on sale, and to move stool (detoxify) faster, since they got 12.5 g fiber/100 cal, vs 12/3 blackberry, 6.3 strawberry, 4.3 blueberry. Folin sounds like 'fooling': doesn't tell what class of compounds, 1000s of compounds react with the reagent to give a blue color complex. Reactivity in vitro with a reagent is not in vivo trapping of free radicals, but this is what they're trying to say. Strawberries have too many pesticides, so it's best to eat them organic ($ or cheaper stores have them organic at times) or opt for any other berries which have way less pesticides if not organic. Strawberries have the most fiber per 100 calories (double the fiber in banana) among common fruits and 13 times more vitamin C than apples, 6x more flavonoids than apples. Strawberries (like plums, berries, purple veggies) prevent cognitive decline, due to the anthocyanins. 454 g or 1 lb of strawberries got 9 g of fiber, 5 times more than watermelon. Ellagitannins in strawberries kill colon cancer cells but not normal cells ► JNB 2006;17(9):611-25. Strawberry achenes (the "seeds" on the outside) got 41% of total fruit antioxidant content and 81% of antioxidant capacity (TEAC). If someone wanted a super-strong anti-oxidant/gram, they could use the outer layer only. Strawberries have strong anti-oxidant effects ► FF 2014;5(8):1939-48. Strawberries (and berries) lower glucose levels (strawberries

lower it via more fiber, blueberries via way more polyphenols that dampen AGE formation) ► BJN 2012;108(10):1789-99.☺ They improve insulin sensitivity ► BJN 2017;117(4):519-31. The antidiabetic and other benefits of strawberries, berries are also at IJMS 2017;18(1):124. This 4 min clip explains that adding berries to a high carb meal actually helps diminish the blood glucose due to the fiber and phytonutrients that slow down the absorption of sugars by the intestine. The same thing was noticed with fructose: from banana you get a far lower insulin response versus fructose from a can of soda. Some eat 10 bananas/day for years with glucose 98 1-2 hours later. But if people eat same fructose from soda, they get diabetes. Strawberries and berries lower cholesterol ► NJ 2009;8: 43. Strawberry consumption (500 g daily for 1 month) reduced total cholesterol, bad LDL cholesterol and triglycerides levels (-9%, -14% and -21%, respectively; P<.05). It also increased plasma total antioxidant capacity measured by both ferric reducing ability of plasma and oxygen radical absorbance capacity assays and vitamin C levels (+25%, +41%, +41%, respectively; P<.05). Spontaneous and oxidative hemolysis were significant reduced (-32% and -39%, respectively; P<.05). Strawberries ameliorate cardiovascular risk, oxidative stress markers and platelet activation in humans. ► JNB 2014;25(3):289-94.

11.7.19. BUTTERNUT SQUASH (year round) & PUMPKIN

Butternut squash (nutrient list) (available year round) and pumpkin (nutrient list) (available only before Thanksgiving raw, but year round canned) are the richest sources of β-cryptoxanthin *(carrots have 0 cryptoxanthin, most fruits have 0 or 40-200 times less)* and the second & third richest raw sources of α-carotene after raw carrots. If these squashes are not at the store, you can use carrots for α-carotene, papaya/red bell pepper for β-cryptoxanthin. Butternut squash is #1, it got 1764 times the cryptoxanthin in *eggs*, *the only non-vegan source*. Because it's hard to chew, you can steam it 1 minute in a pressure cooker (let it reach pressure then 1 more minute) to make it soft, then place in a glass of water to cool them instantly, or use a food processor to make a puree with softer produce. Steam a whole 3-4 lb one and then cut only 400 g that you use that day, use it over 4 days from the fridge, same for carrots you steam once to save time if you feel like steaming. Don't steam the seeds, remove the pumpkin like seeds first, eat them raw, as seed fats get damaged in the heat, while the carbs don't. The butternut seeds are similar to pumpkin seeds in nutrition, almost identical (since pumpkin is same as butternut squash, same taste, texture, color, etc, winter squash just smaller seed) in the widest part of the squash, in an orange mix of fiber (eat it), like in cantaloupes. Eat seeds when wet and fresh, chew them very very well to avoid any scratch of stomach or intestine, they're super soft and easy to digest when fresh and wet, unlike the ultra dry store bought ones. You can save the seeds that you don't want to eat today in the fridge, eat them over the next 4 days (8/day), to avoid buying far less fresh pumpkin seeds that are oxidized in comparison. These seeds, eaten about 10 a day,

will help prevent baldness too, as seen in the hair section. As explained in the α-carotene and β-cryptoxanthin sections, those who have lower levels of these carotenoids have 40-50% higher mortality, poorer cognition/vision. I have been eating butternut squash daily for years. ☺☺☺

Other winter squashes: *t*he vitamin A section values for vitamin A in fruits/veggies show that only pumpkin and butternut squash are good sources of vitamin A. Acorn squash is garbage: 30 times less vitamin A, less vitamin C/E than butternut, 0 cryptoxanthin, α-carotene (very low in all foods, except *carrots*, *butternut* squash and *pumpkin*). Raw spaghetti squash is garbage too: has 177 less vitamin A than butternut, while raw hubbard squash 8 times less. Thus, I never ate any squashes, except *butternut squash in 2018-2022* (tastes much better too, see smoothies section) and pumpkin in October/November if on sale, so cheaper/lb than butternut. So many people are deficient in α-carotene, that it makes no sense to cultivate so much of the useless squashes that have fiber and carbs mostly. When low IQ folks are in power, everyone is sick and malnourished. Smoothies can be made with raw (takes longer) or 1 minute steamed butternut squash (becomes very soft with a pressure cooker). Acorn squash has 20% more calories in 100 g, for almost 0 vitamins. Both have the amino acid score of 72 which is > burger king hamburger 69. Butternut squash has 67% of the vitamin A in carrot.☺☺☺

11.7.20. ZUCCHINI (& yellow/green squash) 1.2% *protein*, protein *score* 89

Zucchini (nutrient list) or Italian squash has 8.3 times more lutein-zeaxanthin (2125 µg) than carrots (256 µg per 100 g). The same is true for the yellow summer squash and the light green Mexican squash. Zucchini has 7.5 g of protein/100 cal with amino acid score 89 (Thr: 100*(29/1.21)/27=89), more water than tomatoes to hydrate the body. In 100 calories we find cow milk has 5.3 g of protein of score 85, cooked lentils 7.75 g protein of score 86, tomatoes 5 g protein of score 52, watermelon 2 g protein of score 53, bananas 1.2 g protein of score 62. Zucchini has 16 cal/100 g vs 18 for tomatoes and 12 for peeled cucumbers. The pectin fibers in squash help maintain a healthy blood glucose level. Homogalacturonan in zucchini is hypothesized to keep insulin metabolism in balance. Zucchini is part of the curcubit family known to have compounds that lower blood glucose. The only issue is some chemicals in all related squashes (Mexican, summer or yellow skin, Italian or dark green skin) can cause acne; while I can't prove causation, quite often I get acne after it, so I eat it less, especially Mexican (light green skin). Some online articles talk about this too; however, it seems zucchini causes this more than summer squash, so if hives or acne appear, try summer yellow one, as some of the green varieties may be too sticky and irritate the gut, they got that resin like liquid coming out after you slice it, perhaps more in the green ones. When I swapped eating 5 cucumbers a day with equivalent in zucchini, the stool went from too watery to much more solid, without causing any stronger acne eruptions, so if you want a thicker stool, it may help, the sticky compounds

help. On Apr 11 2022, I did 2 enemas within 12 hours and then stopped eating cucumbers and pineapple, replacing them with red peppers and zucchini, and the gas and diarrhea disappeared, returning to normal solid (not hard, easy to break, ideal) stool. When I switched to zucchini other times, without enemas, nothing happened, but when I did enemas and ate cucumbers, pineapple still, stool didn't solidify. ***Zucchini is best used with peel when trying this, because that fiber makes stool more solid.*** Oxalate (see oxalate section) in zucchini is 20 mg/100 g or among the lowest as you can see at the USDA list (though Harvard 2008 found 1 mg in yellow squash), 2.5 times lower than tomatoes, same as cucumber, lower than virtually all of the listed foods, except sweet corn and coriander. Compared to 20mg/100g, some carrots got 25 times more (25x) oxalate (or as much if a certain low oxalate cultivar), spinach 50x, broccoli 10x, beans 18x, cauliflower 8x, collards 23x, lettuce 18x, potato 12x, peppers 2x. Zucchini also has ω3:6 in ratio almost 2:1, unlike tomato 1:27, avocado 1:17, etc. Most veggies/nuts got high ω6:3 ratio. ☺☺☺

11.7.21. WALNUT (regular, not red/black): the only healthy nut

Seed oils (except chia/flax), nut oils, all other nuts are useless or 'poison', as 11.7.21.1. explains

Walnuts (list of nutrients) are the nuts with the highest ω3, content per 100 g (lower than chia seed or cyanide rich flaxseed), almonds 3027 times less, besides some cyanide in some almond varieties. Storage in fridge is OK for 1 month, freeze if longer, order them in November, because most walnuts are harvested in September-October and call retailer to make sure they're fresh, 1-3 weeks old max and store the 10 lb of in shell walnuts in the freezer (whatever is not eaten within 1 month is frozen, the rest is refrigerated) as experts require for a whole year, taking out only 20 at a time from the freezer, for 20 days in the fridge, if you eat one a day. You won't believe the huge difference between 1 year old walnut (bought within days of harvest) kept in freezer (essentially the same ultra fresh, crisp, unoxidized) and the rotten rancid walnuts sold in all stores in USA that most people (who are clueless) think of as fresh or normal: it's like eating freshest blueberries versus ultra moldy ones, life of 4000 vs death at 80, immortalism vs capitalism, universal pay vs 350 million pays. The fake news media won't tell you this, as they make billions by distracting you with lies, they get paid by the mafia food companies selling you deadly rancid nuts, seeds, foods, etc. Don't order from Amazon as those are worse than the junk at grocery stores even, as those sit for months and rot at high temps, even those with high 4.7 ratings are rancid and lethal, especially Whole Foods, read the 1 star reviews to see the black mold pics or reports. Limiting amino acid is lysine, 424 mg/15.2g protein, so 27.9mg/g protein, vs 51mg/g in ideal protein, so amino acid score is 100*(27.9/51)=55. You can see from this paragraph that walnuts are the only nuts with a healthy ω3:6 ratio, so avoid all the other nuts. The 6 videos on nuts (nut clip 1, two, three, four, five, six) explain why those with heart disease need to eat only 1-2 walnuts max, and why the non-free 'How not to Die' book by Dr. Greger

(with his wonderful science backed studies, though many studies can be faked) may have 3 mistakes about nuts. 12 walnuts can have 350 calories, so if you overeat calories at your 3-4 meals daily and those extra calories are just the nuts, you deposit this fat fast, as belly fat, since fat is 10 times easier to deposit as fat than carbs/protein, since no chemical conversion that eats up calories is needed. 1 walnut is great to get linoleic acid if you have none from your foods, but 12 is insane for a vegan or non-keto diet. In 300 days you get 300*350/(9cal/g*454g/lb) = 26 pounds of body fat in 10 months. The filif crocodile IQ☺☺☺ Loma Linda researchers, following the fraudulent Ellen White Cult Starter who made up all her miracles, in the footsteps of Jesus the Ultimate Con, got millions of $ from the Nuts Industry and used it fraudulently deceive the American people that eating more nuts will help you, when that only is true if you eat very unhealthy fats full of cholesterol, not if you have the best heart health biomarkers from being a low fat vegan (who always have better biomarkers of heart health than vegetarians if a healthy vegan). Same low IQ folks from Loma Linda say "1-2 servings of walnuts a day lower cholesterol by 10%". Dr. Sabate got endless money from the Nut Industry, attended endless conferences, etc, to promote his fraud. This 10% claim is false, it only applies to unhealthy people who eat high cholesterol animal fats by the kg and then substitute that for 0 cholesterol walnuts; for healthy low fat vegans, cholesterol RISES sometimes 40%. This is what happens when criminal Christians, promoting a Mass Rape, genocide Cult of Slavery, kid Beating, Cannibalism, run our Universities, instead of separating Education/State from religion as the US Constitution says. Only walnuts are really healthy 6:3 ratio (4:1, see below all nut ratios), yet they promote all nuts, and most nuts are not protected from light by clear packages, leading to LDL and heart disease in super healthy people. They do studies on unhealthy people (control group) and healthy people (nut group) and then claim the nut eating people live longer due to nuts, but it was due to their other healthy habits, meaning nuts are a marker for higher income, and better health choices, it's not due to nuts the nut eating group get better outcomes. Pure fraud is then sold on all TV that "nuts are good, don't cause weight gain" and "eating a lot of them for all, even healthiest vegans, is good for them", until they gain 40 lb of body fat. On Aug 13 2025 I noticed no big acne breakouts after I stopped eating walnuts for 2 months, without replacing ω6 LA with other nuts/seeds. Acne is inflammation, so the high ω6 in walnuts (39%) causes pimple eruption, as seen on 4-25-26 when moving from 1 walnut/day to 2 for 2 days caused 2 pimples to emerge.

High intake of walnuts (even just 3-5 daily) can increase hs-CRP by driving up ω6:3 ratio, other nuts are far worse. An ethical researcher would say, in any ad approved by the Immortality *Nurturing* Agency: "If you replace high cholesterol meats and dairy with walnuts or nuts, cholesterol goes down by 2.8-10% in 100 studies hs-CRP drops 10%, but if you replace the animal foods with lentils, greens, DHA-EPA algal oil, cholesterol drops 50%, hs-CRP drops 5 times". To deceive the healthy people and kill them via wrong advice is GENOCIDE VIA GREED, to sustain a

Fraudulent genocide Promoting "University" by Millions of Dollars from the Nut Industry. It's grounds for removal of License to be a University. Similar tactics are used by fatty meat, dairy industries to push bad foods ('cyanide vs arsenic') because "they lower cholesterol in (5% of the most unhealthy people in USA) the subjects by 10% (versus the most deadly margarine way worse than fatty pork full of parasites)". Then everyone becomes OBESE. The ad "forgot" to mention "replacing THE FATTY foods with green, DHA-EPA algal pill, lentils, blueberries lowers cholesterol 60%, improves most heart biomarkers and cognitive function 100%, reaching 3 times fewer Alzheimer cases and 3 times less heart attacks and strokes than pork". Loma Linda Uni is like Yale University, getting millions from the Seed Oil Industry that causes 90% of Americans to be obese by more stringent definitions of obesity. Thanks Yale, these entire universities for profit are a mere scam that needs to dissolve with real centralization.

It must be illegal for ads to say "olive oil or some food lowers cholesterol 10%" without saying in what type of diets/folks in that study and what was the control diet they compare the alleged superfood or superdiet with, without providing the sci.gov short URL for their 200 research papers supporting that. Equally criminal is to say "an avocado diet led to lower cholesterol vs a low fat diet". This is fraudulent marketing, since the "low fat" doesn't define what it is: it's 24%, which is gigantic and high fat by other definition (see how avocado industry makes fake studies that only apply when compred to unhealthy diets and for unhealthy people. Low fat is 2-5%. This "low fat diet" of 24% fat, has half the fiber of the 34% fat "avocado diet", so it causes slightly higher cholesterol than Mexican cartel unhealthy avocado with unhealthy ω6:3 ratio. The JAHA 2015;4(1):e001355 fraudulent study financed by the Avocado industry and authored by a spoiled member of the Avocado Board, had double saturated fat in the "low fat" 24% diet, so saturated and fiber alone can explain why "avocado diet" got 10% lower LDL, but the mafioso disguised as scientists, didn't even adjust for fiber and saturated fat as an obvious confounding factor, so now all ☺puppy IQ workers☺ will buy avocados. Most US and world research is FAKE SCIENCE paid by Industry. It's MARKETING, SNAKE OIL SALES, DISGUISED AS "peer reviewed studies". That's exactly why American lifespan has increased only 1 year over many years RECENTLY, versus 15 over the same amount of years last century: CEO pay was 20 times worker pay in 1965, and 389 times higher in 2021, everything is PAID by the Corporate Mafia, SCIENCE IS FRAUD, TV IS FRAUD, RADIO IS FRAUD, GOV POLICY IS FRAUD, FDA IS FRAUD, Elections are FRAUD by Big Business. Result? 90% are Obese by real standards we don't have. "Arsenic is better than cyanide folks, so eat arsenic": modern 'research' pushed by Mexico (avocado) or Italy-Greece (olive oil). Ads need to state what % fat it is, everything needs to have a number to avoid misleading people who then get worse biomarkers by eating the unhealthy avocados. Adventists live a few years longer than US average only due to eating less meat, less fat, less alcohol. Lower fat and lower cholesterol simply means longer life. It's funny for these phonies to believe their

pseudoscience will add 50 years of healthy lifespan, or let alone 300 years or 300 billion years to our lifespan. Check out pics of 40-80 lb weight loss by removing oils and nuts from their life. Algal DHA-EPA pills and ground (5-10g) chia seeds got all fat you ever need, if you also use 5-10 pumpkin seeds to keep arteries/hair younger and boost linoleic acid intake, the key ω6 we also need that is not high in chia seeds. Chia keeps hs-CRP 5x lower, healthier than walnuts and 10-100x lower, healthier than other nuts. The Adventist "cult members" don't realize their "special diet" gives many CRP 3, while the healthiest vegans can have CRP 0.1, 30 times lower. This is the result of being part of a cult: no new ideas come in. The food table shows how much linoleic we consume just from regular legumes, veggies. Nuts are not used in any food addiction treatment program, as they're addictive: you can't lose fat. People with no heart disease can probably eat 1 walnut daily without an issue, to boost linoleic (LA) and alpha-linolenic (ALA). Our enemies know the fatter we are, the lower our IQ, the less nutrients go to the brain: SEE IT. Today, you can destroy an empire with bogus FAKE SCIENCE, no war or bullets are needed.

Heart.pdf has pictures of impact of low and high fat diet, so before you start eating many walnuts (1-3 daily seems OK for most people, especially sedentary) think again, since Dr. Ornish could only remove all plaque when removing all nuts in some people (only DHA-EPA pill and whatever fats are in veggies/legumes/grains). Do tests, of many types before you eat a lot of fat, especially plaque tests. The arterial pulse velocity wave shows nuts can ruin arterial elasticity. Sedentary people who have bad genes related to fat deposition, like mice who get 114 times more plaque on the same diet via a gene turned off, may need 3% max calories as fat, while others thrive at 20%. Some people need 100 times more B_{12}, as they lack intrisic factor, others need bioactive B6, P5P, since they lack the enzyme to turn pyridoxine B_6 into P5P etc. There isn't a one size fits all diet, for all DNAs/lifestyles. Sedentary people need far lower fat, as exercise removes some plaque and fat, as the heart burns fat when beating fast. Watch the nutrient recycling video if stressed and you need a laugh, but do realize in the future we will have 20000 biomarkers measured effortlessly via one pic of your wrist and then Amazon will ship the right powder to you to help you live to 200, so we do need to think about nutrients and the ideal amount of each macronutrient and micronutrient, create studies that account for *100,000 confounding factors*, etc. High 6:3 ratio causes rapid aging via inflammation. Walnuts have the highest level of antioxidants among all nuts, as the supplementary PDF for NJ 2010;9:3 shows, or 65-109 times more than almonds, depending on what type of walnut. Never eat any nut or seed roasted because heat forms deadly AGEs. Walnuts are best bought with shells intact, since most companies pack them poorly, with air and tons of light getting in, and by the time you open the pack, they smell like a piece of crap and taste like rotten walnuts – at all stores without any exception. You simply can't compare the walnut in a shell with the one that has the shell removed, it's far less oxidized. After harvest, at 70°F (21°C), walnuts will last 3 months before

some start to go rancid or moldy. In the fridge, walnuts last 1.0 months after harvest time in top shape (so find an airtight container to store the rest in the freezer). Cold temps block the growth of black mold and prevent oxidation that is not as easy to notice as rancid or moldy taste are. A walnut cracker is cheap and some models (see next page) work 20 times faster and 1 million times safer; it takes a few tries to learn how to crack them effortlessly, with minimal calories wasted, so that it's way faster than other methods and the kernel simply pops out easily and can be removed with your hand, without even using those extra 2 tools they include in some kits to "scoop" the nut out. This cracker, sold in many stores, is unsafe and allows walnuts to slip, since the 'teeth' are not grabbing it well, sometimes pieces fly out in all directions, creating a safety hazard for anyone around, or messing your fingers, this type ought to be banned by the Immortality *Nurturing* Agency (only allow those that hold the nut well and prevent these sharp pieces flying around and damaging eyes). The issue we have is millions of workers waste their lives producing useless products that waste our time and achieve the same end in 10 times the time/energy spent: this is due to decentralization. If we get Eterni Food Inc, we automatically select the very best products for production that were proven by the reviews.gov data from millions of people to work much better. The watermelon, berries, walnuts (in shell or shelled) rot in stores that oversupply the shelves and other stores lack them completely. This is due to low tech and poor quality software to predict purchases, thanks to decentralization. It's like having 10000 *Windows Operating systems, each with 10000 fewer programmers, you get the ultimate trash.* ☺☺☺ The pliers designs, pliers with holder, or simple pliers (round is better than straight as it doesn't slip so much), are very bad as they slip and make a huge eye debris risk, require brute force and are wasting your time, taking 10 times longer than the cup type below.

***Safe crackers don't cause flying debris, don't slip and do it all in one 1 second like the amazing* 6$ orange silver, the very best of the cup types (other Amazon sellers sell the same exact thing for 10 or 15$) silver, easy to see dirt and keep free from dirt, microbes with anti-slip orange handle or other lighter colors to see dirt and keep clean and free of grey dirt, mold, not all of these appearance work, since some have a thin spring that causes the arms to not return to position that gives maximum opening and angular momentum. This amazing silver orange is making opening a nut so effortless, you won't believe it takes 5 times less than using a tiny less sharp knife to pry open the soft brown top *(the method many use when lacking tools, like those tiny 3 inch long, quarter inch wide pocket or tiny kitchen dull knives that some use to cut carrots or watermelon)*. This bad design cup type nut cracker, as pics show, has a 3 times thinner spring than the orange handle one, and, as a result, it is a disaster, unable to crack easily any nut except big ones, so buy only ones that have free returns, in case it looks good but takes more than 2 seconds to crack a nut and have all pieces fall into your hand once you invert it, without you having to waste time to pull nut out like with the 0 IQ ones that provide you with tools to**

"take pieces out" (no need of that if nut cracker is designed well). Three other that seem like a waste of time and less efficient are pliers Texan type (never tried it), crusher type (never tried it, seems safe as far as debris goes, but some nuts may not fit or crack easily due to the cup being tiny), the squirrel (never tried it). Find the store near you that sells walnuts with intact shells, as that protects them from oxidation by air and light. Buy in bulk to save and end up paying roughly the same as with shelled ones, *except you create 40 times less* arterial plaque *from the oxidized lipids,* due to the non-existent regulations of a system that doesn't care about people.

Supermarkets often have inshell walnuts 4$/lb, but only around Thanksgiving or Christmas and even then they're not the best quality. Your best bet is searching "state or town in shell walnuts" to see who sells them or to go online and buy 27 lb at once to save shipping costs to get 2.64$/lb, or 5 lb for 3$/lb. 99% of USA walnuts are grown in California. Crain of California sells 22lb/44$ (15-35$ shipping to any US location), or 7-10 lb of walnuts once shelled, which is cheaper than any walnuts oxidized you buy from supermarkets, that kill you. This lasts 1 year at about 2 walnuts a day (since 5-20% of walnuts are discarded due to mold and rancid condition) or 9 g of walnuts or 3.4 g of linoleic acid LA, the main fat we eat walnuts for. If you eat pumpkin seeds, for 49 g of fat, you get 21 g of LA, while in 65 g of walnut fat you got 38 g of LA, so walnut allows us to keep fat intake lower (5-9% of calories) to get 1-2% of calories from LA as required by body needs, or 2.5% if you get 2 g LA from other foods daily like other low fat vegans. 9 g of walnuts is about 2.5% of calories for a 2000 cal diet. Walnuts have 9 g of ALA ω3/100g, so they help more than any nut to reach a low ω3:6 ratio of 1:1 or 1:2 via chia and algal DHA-EPA oil. IJFS 2020;20(sup3):S1711-20 found "540.08 ('Chandler') and 1067.81 mg GAE/100 g dw ('Howard'),", so always buy Howard walnuts (the richest in polyphenols among 9 cultivars analyzed), with twice the polyphenols of Chandler, as the walnut polyphenols are healthy and prevent the oxidation of the fats during storage and while you digest it. Around October 15-20 each year, everything on their website is the new crop harvested in September-October, but you can call 530-529-1585 (ask for sales, or 530-727-2585, a sales rep) to confirm if all online orders are the new crop. They said all are stored in the fridge at 55°F thru the year, so this proves that all walnuts should be stored at 25°F, as many say, in the freezer, because their walnuts that are not fresh, and ordered 3-8 months after harvest are having a huge amount of moldy ones. You'll notice when you buy "fresh" walnuts from Sprouts or etc that if you leave half outside the fridge and half inside, the ones outside become very rancid and bad tasting very fast. This confirms the California Walnut Board website idea that any walnut stored more than 30 days needs to be frozen at 0-25°F, not refrigerated at 55°F. Use a ziploc bag or some airtight container, since shelled walnuts oxidize fast, while inshell walnuts have tiny holes in the shell at the poles quite often and air will oxidize them too, so they too need ziploc bags in the freezer. So you need to order your yearly walnuts right at harvest and then freeze most of them. Crain arrived from

California to Washington DC in only 9 days. Crain inshell walnuts are better than Stater Bro supermarket inshell walnuts, so buy from the wholesale source grocery stores use, as it's cheaper and not exposed to so much store light/oxygen that often can get inside if the nut has a tiny hole in the soft spot. Australia walnuts are grown in Tasmania (see factory) and NSW, which are colder climates, since 1831, meaning they rot and get mold a LOT less than California (99% of USA walnuts) ones (in the summer, Tasmania average max temp is 75, California 90; harvest time is early or middle fall, when the temp difference is huge too: 65 vs 80). Australians can order here from various farms. Avoid shelled ones, as Australia is equally low IQ as USA, the shelled walnuts are allowed to be in transparent packs that damage them. In high California temp, the fats oxidize way faster. Avoid roasted walnuts, as the low IQ Walnut manufacturers make videos about it. Heat creates lethal AGEs. Kindly use your gentle brain, with dedicated altruism for the health of self and all. Don't worry about the weight if you drive with the car some place soon, you can always shell 20 lb and store them in ultra air tight containers and eat them in 2-3 months, and it will still be way better than eating supermarket or bulk bin junk. Gently recall that shelled walnuts expire in 1 month at room temp, 2 months in fridge unless frozen upon harvest, yet stores keep shelled walnuts rotten on shelves for 1 year, the expiration date of frozen inshell walnuts. So, shelled walnuts are more like poison when bought from any store, as are all nut mixes. You don't need to "trust me or anything in this book", simply go *buy fresh* inshell *and* shelled *and see how rancid, oxidized and rotten the* shelled *are*. Their standards are of 0 IQ chimps who live to 80 on average. Shelled nuts (not walnuts, mostly others) often have the antioxidant rich skin almost entirely removed by the shelling industrial machine, so you get less polyphenols that prevent atherosclerosis. Moreover, those shelling machines can spread E. coli from poop on one nut to the other 500 after, but at home, you can see and prevent that, if it ever happens once in 9000 shelled walnuts, same for moldy nuts, the mold can spread and contaminate the rest. Shelled walnuts go thru a lot of air exposure, mechanical stress that oxidizes the fatty acids, as the video shows. The most essential thing to health, diet-wise, is the nature of the fat you eat as that kills you faster than anything else. Others offer free ship at 18lb/65$ or 3.6$/lb. Most walnut weight is the shell, so 27 lb is really only 9 lb, and they last 5 months unlike the bag ones that rot in 5 weeks. If you google "in shell walnuts" 100s of options appear, like 1 lb bags for 4.4$, free ship if you order 75$, or 18 bags. They also have a 45 lb case for 3.58/lb, 5$ shipping. They even have red walnuts, which may have more polyphenols than conventional ones, but may have a very health destroying ω3:6 ratio of 1:13 like the black walnuts have. At USDA.gov, we see PUFA 18:2 n-6 c,c (LA) (linoleic acid, ω3) 38.1 g & PUFA 18:3 n-3 c,c,c (ALA) (alpha linolenic acid, ω3) 9.1 g for walnuts ω6:3 ratio 4.2:1, for black walnuts (too expensive for most) ω6:3 ratio 12.6:1. When 6:3 ratio is 13:1 or higher, we got diabetes, systemic inflammation, etc as the ω3 chapter explains. Thus, never buy black walnuts, as you support damaging the human quantum field.

11.7.21.1. Five REASONS WHY WALNUTS are 10-3000 times healthier than all other nuts

1). The first reason why WALNUTS are the best nuts is that walnuts are ☺☺THE ONLY NUTS☺☺ with a healthy ω6:3 ratio, so try, if possible, to dramatically minimize or 100% avoid all the other nuts to live longest, to damage the quantum field of humans the least. The ω6:3 (LA:ALA) ratio (& g or mg in 100g) is in increasing order: walnut 4:1(38.1g:9.08g), macadamia 6:1 (1.3g:206mg) mostly oleic acid (which you get plenty of, 8.8g, from walnut) the useless overpriced macadamia got 44 times less ω3 than walnut, chestnut 8:1 (776mg:93mg) *can cause liver/kidney damage if not cooked well to remove the skin+tannins, lack the protein of nut-like soy* 7.5:1 (4.46g: 598mg) ratio, beechnut 11:1 (18.4g:1.7g) black walnut 13:1 (33.8g :2.68g), acorn nut 14:1 (677mg:47mg) hickory nut 20:1 (20.6g:1g) pecan 21:1 (20.6g:1g), pistachio. 49:1 (14.1g:.3g), hazelnut.. (filbert) 90:1 (7.83g:87mg), cashew.. 126:1 (7.8g:62mg), pine nut.. 294:1 (33.2g:112mg), Brazil nut.. 677:1 (24g:36mg), almond... 4100:1 (12.3g:3mg), peanut... 5200:1 the most lethal nut, (16g:3 mg) and eating peanuts during pregnancy doesn't diminish offspring allergy. Peanuts ought to be banned. Walnuts got 3033 times more ω3 than almonds, when did an almond milk ad tell you that? Never, they're liars... ***Nut mixes,*** potato chips with corn oil etc (ratio is 31:1) that have oil oxidize in the bag in the presence of huge air levels and during industrial processes, granola, protein bars with all kinds of nuts, are deadly, they sit in bulk bins or clear package and oxidize too, have salt added, heat treatment of nuts or oiled chips create AGEs: ***they're pure poison,*** AVOID 100%. Most seeds also have very high ω6:3 ratio: sesame 96:1 (25.2g:.26g), sunflower 383:1 (23g:60mg), pumpkin 172:1 (20.7g:.12g). The only ω3 rich seeds are flax 1:4 (5.9g:22.8g) & chia 1:3 (5.8g:17.8g). Grains also have high ω6:3 ratio: quinoa 11:1 (974mg:85mg), corn 33:1 (586 mg:18mg), oat 22:1 (2.2g:.1g), wheat 9:1 (1.5g:0.159g), millet 17:1 (.48g:28mg). Legumes have good ratios: lentil 4:1 (137mg:37mg), black bean 1:1 (.126g:.105g), chickpea 26:1 (1.11g:43mg). Cruciferous veggies have amazing ratios: kale 1:1.3 (.291g:.378g), broccoli 1:1.3 (49mg:63mg), purple cabbage 1:1.3 (34mg:45mg). To boost ω3 and bring ω6:3 ratio to 1:1 from the walnut 4:1, you can happily eat chia seeds or chia oil since Earth has an epidemic of high 6:3 ratio which raises CRP and causes fatal heart attacks, rapid aging, and inflammatory diseases. Flax (which can poison you if you overeat it raw, the only way to avoid AGEs) and chia make stool hard (especially chia) and increasing toxin dump into blood if you overeat due to stool transit time increase. Flax ends pregnancies early. You can eat flax/chia oil for ω3 to avoid hard stool.

2). The second reason why WALNUTS are the best nuts and the best food for the essential ω6 linoleic (LA) is that we need to eat the lowest amount of total fat to get the same g of LA, so this helps reverse heart disease in the belly fat rich folks who aim for 4% fat calories. The richest sources of LA are in decreasing order of % of LA in the total fat of a nut/seed/legume/grain: walnut 58, black walnut 57, quinoa 51, soybean 50, pine nut/millet 48, sunflower 45, chickpea 43, pumpkin seed 42, sesame 41, corn 39, beechnut 37, lentil/Brazil nut 36, chestnut 35, oat 34,

wheat 33, hickory nut/peanut 32, pistachio 31, pecan 29, almond 25, black bean 23, red cabbage 21, kale 20, chia/acorn nut 19, cashew 18, flaxseed 14, broccoli/hazelnut 13, macadamia 1.7 (avoid this scam nut like the plague unless you desire to become obese).

3). The third reason why WALNUTS are the best nuts and the best food actually for the essential ω6 linoleic (LA) is that on a per calorie of food base, walnut provides the most mg LA/cal of food, so you don't gain weight trying to get LA. Since most adults need 2-4 g of LA, you can just eat 1 walnut and get the rest from your other foods, but eat the walnuts with lots of lentils or legumes to get that fiber to lower triglycerides, slow digestion and prevent belly fat. However, your food table, blood work, skin, joints, hair, cornea condition, health status, tell us, depending on how fatty the other legumes and grains are, if we really need that walnut or not. We certainly don't need the other nuts. Click on the USDA links to go to the food table, if you doubt the shocking numbers below. The richest common sources of LA ω6 are in mg/cal: walnut 58.4, black walnut 54.6, pine nut 49, sunflower 39, pumpkin seed/Brazil nut 37, hickory nut 31, pecan 30, peanut 28, soybean 26, pistachio 25, almond 21, cashew 14, chia/hazelnut/acorn nut 12, flaxseed 11, kale 8.3, quinoa 8.1, chickpea 6.8, corn 6.1, sorghum 6.0, oat 5.8, wheat 5.5, millet 4.0, chestnut 3.2, broccoli 1.4, lentil 1.2, red cabbage 1.1, black bean .95, potato .37, rice .35.

Males need to eat 117 lb (53 kg) of peanuts daily *to get* the 1.6 g NIH recommended ALA intake (if no fish), how is that for understaffed or "revolving door" (most work for companies/after before FDA) FDA? Or 10 foods banned in EU and China, but sold in USA? It's time to replace the FDA with the Immortality *Nurturing* Agency. FDA has no warning on the label that peanuts, almonds, almond milk could cause heart attack by making CRP so high. Even soy products are 100 times better than peanuts/almonds as vegan fat sources, ratio is only 8:1. Males need to eat 3.5 pounds of Parmesan cheese (has 1878 times more AGEs than rice cooked at home) or 53 kg peanuts (your weight in peanuts for many) and become obese in 1 month, in order to get *1.6 g* of *ω3*, as opposed to only 17.6 g walnuts/day if no other *ω3* from veggies, fruits or EPA algal oil pills and only 8 g walnuts if you eat no fatty dairy/meat and just legumes, produce, algal oil pills. All non-walnut nuts *ω6:3* ratios are WAY higher than 4:1 walnut, *so to the grave you will go fast.* All in the name of tradition and TASTE. ☺Abysmal IQ☺. Americans are enraged at the 100000 nut selling companies (who can't pack them right or cultivate what is ethical) *and* the USDA central planning of crops. Thus, all will support Centralization by the Immortalist Party. The 33 million companies, government have failed us, so let's try something new. With the amazing & beautiful Eterni Food Inc, to correct the high CRP in US, that leads to 100$ billion/year wasted in coronary (to the heart) bypass surgeries, we can ☺☺*lovingly tenderly gently kindly*☺☺ ban all nuts (or at least new cultivation, until all get grants to switch crops to *walnuts* or healthier crops) except walnuts. We can take US back from the vampires, recall the housing analogy. The 11 companies act as regulatory agencies, since they would be 11 national companies-federal agency

hybrids monitored by the Immortality Nurturing Agency. *A global campaign of cultivating walnut trees in every garden needs to start to bring ω6:3 ratio down*. Forget about "nice looking trees", LIFE *and HEALTH* are number 1 for immortalists, use our backyard for a good cause if we want trees for oxygen or shade. Fresh English Walnuts *for* All, Immortality *for* All. Health first, taste *last*. My ω3 intake in 2021 is shown here. With 9 g *ω3*, 38 g *ω6*/100 g, *walnuts* (soak if any digestion issue) got 4x the *ω3* in salmon, 5.4x the *ω3* in sardines, 41x the *ω3* in tilapia, 32x the *ω3* in tuna. The *ω3* in walnuts is the ALA (α-linolenic acid) form, not DHA as in algal oil or fish.

4). The fourth reason why WALNUTS are the best nuts is that they got the lowest % of saturated fat/total fat *in food* across most foods and among nuts: 9.4% *walnut* (6.13/65.2 g), 10.8% chia (3.33/30.7), 9.5% soy curd cheese (1.17/8.1), 14.5% avocado (2.13/14.7), 17.7% pumpkin seed (8.66/49), 8.7% flaxseed (3.66/42.2), 21% olive (2.28/10.9), 58% milk (1.86/3.2), 89% coconut (29.7/33.5). Cheese % are 40% cottage (1.72/4.3g only, *ω6:3 ratio: 5:1*), 63% ricotta or urda (6.42/10.2g, *ω6:3 ratio: 5:1*), 59% Swiss, 59% cream (20.2/34.4g), 64% cheddar, 69% goat (24.6/35.6g). Most cheese, except ricotta, 0 fat or cottage has truly deadly levels of saturated fat most adults don't need. Parmesan cheese ratio is an inflammatory 8:7 to 1 (0.87 g LA, 0.10 g ALA), not a good source of essential LA and ALA at ALL. That's why vegetarians have 2 times more diabetes than vegans and why more vegetarians go vegan these days. ☺☺☺

5). The fifth reason why WALNUTS are the best nuts is that walnuts have more PUFAs than the other nuts, and PUFAs lower heart disease risk way more than MUFAS in olives, most nuts, seeds, avocado, etc. Based on JACC 2015;66(14):1538-48, "Replacing 5% of energy intake from saturated fats with equivalent energy intake from either PUFAs (*polyunsaturated fatty acids*), monounsaturated fats (MUFAs), or *carbohydrates from whole grains* was associated with 25%, 15% (MUFAs), and *9%* lower risk of CHD (Coronary Heart Disease), respectively. Replacing saturated fat with *carbohydrates from refined starches/added sugars* was not (lowering risk)", so the American Heart Association suggests everyone ditch cheese: "if the cheese is replaced with walnuts, a rich source of polyunsaturated fat, risk (of CHD) is reduced *25*%." AJCN 2016;104(5): 1209-17 found replacing 5% of daily calories eaten as dairy, with PUFAs (walnuts are 72% PUFAs), lowered CVD risk by *24*%. ☺ MUFAs are high % of fat in olives 74%, avocado 67%, some oils: avocado 68%, olive 73%, canola 63%, safflower 75%. Want more proof? 8 hours later, oxidized LDL (the main driver of atherosclerosis, # 1 killer worldwide) was 10 µg/L *lower* after walnut meal, but almost 60 µg/L *higher* after junk fat (refined olive oil, with about 100 times less polyphenols/50 g fat as seen in table 1) meal, both meals had same amount of total fat ► NJ 2014;13:4. This makes perfect sense since serum gamma tocopherol vitamin E (gamma is not found in most supplements) went up and this protects LDL. Olive oil has 0.76% ω3, walnuts got 9.1%. Refined olive oil has 70% oleic acid (a monounsaturated fatty acid or MUFA) and almost no polyphenols. Even among extra virgin olive oils (highest in polyphenols among

oils), the polyphenol levels vary a lot by brand, storage light and moisture exposure, temperature, etc. It makes sense to eat more walnuts and trash old oil bottles/habits. Think. It's far healthier to eat walnuts than walnut oil, olives (the scam food, details here) than scam olive oil, and, if any oil, only opaque container, fridge stored or chia/faxseed caps oils, in cool places away from light (i.e. chia oil). Walnuts have more polyphenols that are almost absent in most oils most people use. That's why people who eat walnuts have longer lifespan than oil users, it's not just the fat ratio that gives life, *but the polyphenols and ω3 without oil peroxides*. ☺☺☺

6). The sixth reason why WALNUTS are the best nuts is that walnuts have the least oleic acid, which is hypothesized by many to speed aging via mTOR, as explained in many papers, such as FASEB 2023;6(1):1-11, JBC 2017;292(15):6303-11, JLR 2013;54(3):725-33. Alpha linolenic acid, ALA ω3, richest in walnuts, however, turns off the mTOR pathway, as do EPA-DHA. EPA-DHA are stronger inhibitors and they're the products of ALA metabolism. Having the least oleic acid, walnuts have the most essential linoleic ω6+ALA ω3 acid/calorie of any nut. Why get extra nonessential fat, when you want to lose belly fat? Some mice eating the same amount of extra fat get 114 times more plaque than others, so some people will get 5-50 times more plaque for the same amount of nonessential fat they eat. It's all about the body's ability to regulate blood lipids and other metabolites that trigger atherogenic biochemical pathways indirectly, etc. Some papers (possibly financed by the oleic food olive oil, avocado industry, etc, see fake papers section) suggest oleic may suppress mTOR at times, depending on "how much is eaten, what else is in the diet, etc". Likewise, linoleic acid can either turn on or off mTOR, depending on diet. Nobody quite knows, as we need millions of subjects to see what happens in certain vegan diets, etc or omnivore diets, etc, and draw more exact conclusions, maybe 5000 papers required☺. Since most studies are not on vegans, vegans need to do a lot of research themselves on mTOR. We need some ALA too, it has its own benefits, besides EPA, DHA and walnuts provide the richest source of ALA/calorie and calorie fat of any nut. Thus, walnuts always win over any nut. Finally, even if the mTOR argument is not believed, the ALA argument is the 6th irrefutable one.

7). The seventh reason why WALNUTS are the best nuts is that walnuts got one of the lowest amounts of oxalate that causes kidney stones. See the nuts at page 8 of this PDF. Seeds are on page 7. Sesame seeds (oxalate.org) got 30 times more oxalate than pumpkin seeds (most oxalate is in the hull, so remove hull or buy hulled), almonds 6 times more than walnuts.

The immortalist government duty is to protect its people, not aristocracy, and to ban imports of foods used in hybrid wars of extermination. Only fat free chips are safe, if proper industrial processes occur, so given the AGEs, better boil potato at home in a pressure cooker, 100 times safer. Kindly avoid oils, they oxidize, unless it's some flax/chia oil you eat right away, read the Eterni Food Inc discussion. Peanuts cause the most allergies among nuts, our body possibly

devised a mechanism to warn us against the most deadly nut. Bitter almonds (they contaminate normal ones sometimes) can kill kids/adults due to cyanide, again nature designed a warning system: *stay away from peanuts and almonds, nature says*. People laugh at the idea of banning bad nuts or reducing arable land use by 90000 times for non-walnut nuts, but would you eat kale greens or iceberg lettuce greens? Kale is 10000 *times* healthier, even if *both are greens*. The same is true with almonds-peanuts (iceberg lettuce analog) vs walnuts (kale analog). Nothing different, *both are nuts*, but walnuts are 10000 *times* healthier than peanuts. Come on, how many people buy iceberg lettuce to boost their health? None. It's just junk restaurants put in salads to kill us all early. Same with peanuts, ultra cheap, so everyone mass produces the junk to poison us all. Isn't it about time for We the People to decide what is planted, not the profiteering *vampires*? The land belongs to the people, not corporations, so the immortalist government will only plant what boosts longevity for all to the maximum degree. We can wipe out ☺abysmal IQ☺ in USA, *lovingly tenderly gently kindly*.☺☺☺ The time for Centralization is here & now. Today *earthlings can unite under* the Immortalist Anthem. ☺☺ The people of tropical Asia Pacific eat betel nuts and get highest oral cancer rate, so the low IQ Indians and Taiwanese sometimes also eat it, and it destroys the entire human quantum field. So, yes, not all nuts are healthy, some are PURE POISON, like betel or, less evidently, peanuts. Billions worldwide masticate many almonds believing that almonds are healthy. Why do people think all greens are healthy? Some are poisonous plants, 100s of greens. Same for nuts.

UNDERSTAND CONTEXT: DECEPTION HAPPENS BY COMPARING WITH THE WORST DIET
(walnuts are fine, but overeating them can shorten lifespan)

The risk of coronary heart disease is 37 % lower for those consuming nuts more than 4 times/wk compared to those who never or seldom consume nuts ► BJN 2006;96 Sup2:S61-7. This is in unhealthy people who eat lethal animal fats with lots of saturated fat and *no fiber and they replace that deadly fiberless fat with fiber rich nuts, so they get better outcomes,* recall all nut benefit studies refer to unhealthy omnivores with sky high cholesterol, CRP and other biomarkers, these studies here don't refer to healthy vegans, who, even when sedentary, got better biomarkers than runners. For healthy vegans, eating a lot of avocados, coconut or nuts suddenly, even if walnuts, will ruin their perfect biomarkers. Nuts contain the important linoleic acid too (shown in other studies to be linked to lower risk of heart disease) and very little saturated fat compared to cheese, bacon or meat, eaten in industrial quantities by most people. Those eating 28 g of nuts/day had 78% the all cause mortality of those who didn't ► BMCM 2016;14:207. "Compared to non-consumers, subjects consuming nuts >3 servings/week (84+ grams) had a 39% lower mortality risk" in an interventional study (more valuable than observational studies where confounders can be the cause) ► BMCM 2013;11:164. This is because the fats in processed meats, cheese containing bakeries, pizza etc is heated and forms

the ULTRA DEADLY AGEs *(Rice Krispies (Kellog) for 222 times more AGEs than home cooked rice, the AGEs destroy every important cell in your body, the food industry commits national genocide and needs to be happily replaced with Eterni Food Inc)*, so when the study cohort swaps deadly fat for raw nuts, they're better off, but with walnuts they will be MUCH BETTER OFF. Compared to those unhealthy OMNIVORES never eating nuts, the all cause mortality of unhealthy OMNIVORES EATING NUTS was 45% lower for 84+ g of walnuts weekly, versus 34% lower for 84+ g nuts (different than walnuts), 34% lower for 28-84 g walnuts weekly, and 20% lower for 28-84 g nuts (different than walnuts) a week (28 g = 1 oz), as you can see from Table 2. The more walnuts (FIBER, LESS SATURATED FAT) for these unhealthy OMNIVORES, the lower the mortality, due to ω3/polyphenols, since most Americans are starved of ω3. Once again, healthy vegans of 0 processed foods, this would not apply to YOU, you don't need to move from your 2 walnuts to 15 walnuts and gain 50 lb of body fat. They're already FAT, i.e. so called "normal". Always recall, 99% of studies are done on OMNIVORES WHO EAT THE ULTIMATE TRASH, designed by the corporate Mafia who fattens the pigs☺☺☺, the slaves they loot to build 8 million palaces. They take good food, and make it 10-100 times worse than if you cooked it at home, sell it to you to brain damage you and thus, much more easily keep you as a caged rat, eternal slave of the Imperial bastards. Don't worry, one day, we might have 11 companies and end these parasitic networks of vultures and leeches. The longer the study length, the easier to see results, so we need more 70 year studies, to see people who ate exclusively walnuts for 50 years and those who ate mixed nuts to show that when walnuts or nuts are your ONLY (besides EPA=DHA pills to replace fish) source of fat, there is a bigger difference than *45*% vs *34*%, or 34% vs 20%. Right now, omnivore fat intake is mainly cheese and meat, toxic fat, so nuts or walnuts won't make any difference, as long it's raw nuts (never roast them). But when you go to low fat *vegans*, you're looking at a cohort that has no other fat and you eliminate the confounding factor of the deadly fat and you compare people with CRP 5 and people with CRP 0.5, which means 10 times less infarcts etc. Vegetarians eating nuts > 5x weekly (REPLACING DEADLY CHEESE WITH HIGH SATURATED FAT, with low saturated fat, high fiber nuts) got 40% of the risk of ischemic heart disease of vegetarians eating nuts less than once a week ► Table 3 of AJCN 1999;70(3 S):500S-3S; likewise, those eating more nuts got 18-44% lower mortality, living thus longer, healthier lives. Nuts help vegetarians to replace toxic dairy with cholesterol and oxidized cholesterol, so we need studies with *vegans to determine at what level of nut intake, in the absence of any processed food (with more AGEs/calorie), the benefits plateau: probably just 5g chia seeds, 1g algal oil, 1 walnut*. Most walnut/nut benefits studies are done in omnivores, not vegans and never vegans who eat 0 processed food (low AGE diet). Few long term low AGE vegans exist. How many nuts are enough, to avoid weight gain? ☺☺☺

See the heart disease and fat link, before eating too many walnuts, nuts, oils or any fatty food,

because many studies on walnuts are done comparing people who eat unhealthy ω3/polyphenol deficient diets with people eating more walnuts. Evidently, if we already eat healthier, an extra 8% ω3 or polyphenols won't have the same % of lower mortality risk, maybe FAR higher if bad walnuts or if that person has genome that creates atherosclerosis past a level of fat, like mice who get 114 times more plaque after same fat intake. Walnut consumption is associated with 24% lower risk of type 2 diabetes in UNHEALTHY OMNIVORE women who consume 56+g/week vs those eating 28-84g/month ► JN 2013;143(4):512-8. Walnuts prevent osteoporosis ► NJ 2007;6:2. Walnuts prevent prostate cancer in unhealthy omnivores ► BJN 2012;108 (10):1764-72. Walnuts lower cholesterol in deadly diets folks ► AJCN 2009;89(5):1657 S-63S. A few people's immune system has a strong antibody reaction to lectins found in most grains, nuts, seeds, legumes, so for them, soaking nuts is best. People with leaky gut are advised by MDs to usually minimize or avoid grains, soak legumes/grains and nuts-seeds to prevent further irritation. If you eat no other fats, then 2 walnuts would be helpful, to get the much needed ω3 and ω6. Walnuts prevent frequent bath trips at night, when eaten at night, reducing it to 0 or 1, even when you eat at night a lot of zucchini or watery stuff. Walnuts are the healthiest nuts (richest in polyphenols and ω3), but they also contain the highest level of PUFAs (*poly**u**nsaturated **f**atty **a**cid**s***), which make them prone to oxidation, toxic peroxide formation. The gamma tocopherol vitamin E found in walnuts prevents this oxidation, but transparent packages allow light in stores to destroy vitamin E and speed up walnut oxidation. Likewise, higher humidity and room temperature storage speed up oxidation a lot, so in just a few days (not even weeks or months on a shelf in a warehouse), organic walnuts can accumulate peroxides, become soft and lose the benefits of having lower pesticides when compared to fresh unoxidized non-organic walnuts. Therefore, when buying walnuts buy in shell walnuts, or if not available, go to a store with bulk section where they refill shelled walnuts daily, so you get the freshest (hard, not soft) walnuts possible and avoid ingesting oxidized fats, which are unhealthy. Go 1 hour after store opens, as they just open the bag and the bin has had contact with oxygen only 1 hours. If you go before closing, those have been oxygenated for 10-15 hours. Store them in a fridge bag. You will be shocked the bulk sections of many health food stores sell walnuts at half the price (4$/lb, not 8) of supermarkets (in sealed bags) and of higher quality. ☺☺☺

Buying in supermarkets you often pay double and get unhealthy oxidized walnuts. If you do studies with oxidized walnuts you get far worse results than with the freshest walnuts, since light, heat moisture and unscientific storage by antiscience mom and dad "organic or conventional farm" people, lead to poor quality walnuts with low vitamin E, low polyphenols and plenty of oxidation products. These people don't read science papers, there are so many in proper storage of walnuts, oxidation, etc. Don't buy organic if they're soft and rancid, easy to tell, as you may do more damage to your body than eating fresh conventional. Humidity has to

be very low, below 5%, so, store walnuts in the fridge in a sealed bag, in total darkness, and only buy small amounts, 200-400g that you can eat in 1-2 weeks. ☺☺*Lovingly tenderly gently kindly*☺☺ avoid oils, as they're super oxidized, worse than nuts, having sat for months on shelves.

It's a good idea to eat *fat* rich walnuts and chia seeds with the polyphenol rich foods (purple "kale, cabbage, grapes, plums", berries, etc), with the *fat* soluble vitamin rich foods (carrots, vitamin A, E, D, K, since absorption increases), since some polyphenols are less water soluble and *fat* increases their absorption, protecting our bodies and brains (better memory, cognition). So, if you want to live to 100, please pay attention to how you store foods, and whether your walnuts, seeds, oils have 10 times less vitamin E, polyphenols and 10 times more peroxides due to improper storage by warehouse or you. Lower cooking temps and avoid dry heat. We read a study and see how people/twins ate same stuff but one lived 20 years longer, maybe his cooking temps were lower, so he got 10 times less AGEs from fat oxidation, ate fresher oils, nuts, seeds, better stored multivitamins (A, D, E, K didn't disappear due to light, heat) etc. ☺☺☺

The foods below I eat far more rarely than the first 20, some because they're not available year round (cactus pears) or have high pesticides if not organic (organic pricey, rancid or hard to find):

11.7.22. VINEGAR (acetic acid, CH_3-COOH, 5% in H_2O)

Vinegar (nutrient list) is only $3.9/gallon on Amazon: never eat it alone as it will damage your throat; dilute it with at least 1 liter of smoothie slurry, if you use 2 teaspoons or so and then rinse mouth with water + baking soda to bring pH from 3 to normal 7 again and avoid cavities many get due to rinsing with water only. People may puree lentils with kale, etc in a smoothie and add 25 ml vinegar in one meal, but that is far too acidic (25 ml is too much for one meal and needs far more water to dilute that meal to make kidneys less acidic) and will irritate your bladder and urethra with so much acetic acid, causing the urine flow to slow and damaging temporarily the lining of the urine path. While it returns to normal once you stop the vinegar, this should never be done more than once, as repetition can permanently damage the kidneys and lining of the urine path, plus causing an enlarged prostate which would make your pee pressure much lower permanently. Vinegar is acidic and contains histamine and histamine liberators, so people with dry eyes need to avoid it as lower sugar can also make eyes drier. It works much better against mold than bleach, see why. Protein digestion requires an acidic pH. Thus, vinegar improves protein digestion. Our bodies eat more until all amino acid needs are filled after digestion. Thus, without acidic stomach, we can gain weight fast, as we want more and more protein that is not digested. Some older or A+ blood type people have less acidic pH. By lowering stomach pH, vinegar (or any acidic fruit, like oranges, pineapple, berries, etc) helps digest protein and prevent hunger for more protein, which would otherwise lead to severe

weight gain, as protein rich foods come with a lot of other calories. Vinegar also lowers apatite, so it has a double positive effect on weight gain. Add 10 ml to smoothies to kill the *bad* bacteria *that cause* diarrhea, soft stool, hard stool (8 balls instead of 1 hot dog) or excessive or smelly gas when a quick 2L enema fails *(after you tried more chia seeds, popcorn, summer squash, less cucumber, to add stickiness to stool and none of it worked)*; on 2-23-2022, I was blown away *how* super soft stool of 2 weeks ended with normal stool after 10 ml/day, 2 days after enema led to minimal improving. Vinegar can also turn hard stool made of balls into normal soft hot dog one, by killing bad bacteria that cause stool clumping into one ball, especially when you add 25 ml (5 spoons at least) vinegar to a smoothie of kale, carrots, water. Adding one spoon won't do much to *reset microbiome if you're a vegan* eating tons of fiber. Raw vinegar, undiluted one can be burning and damaging the throat, vocal chords, the main tool to eterni music. Adding vinegar to a salad doesn't have the same effect, as adding to a smoothie in puree form, acetic acid reacts with everything instantly, killing bad bacteria 1000 times faster and turning some chemicals into others that feed the better bacteria. A chemical compound, like acetic in vinegar or catalysts, work 5000 times better in certain sizes and crystal forms: it's the same principle of reactivity and enthalpy. Those acetylated chemicals will get to the colon and heal it way better than acetic acid. Vinegar restored ovulation and got rid of toenail fungus (drops on the sock, then antifungal ointment), normal menstruation in women with rare or nonexistent ovulation. White vinegar *reduced glucose* response *by 31.4%, so* use daily *if* diabetic *or* prediabetic *to* avoid high glucose spike after meals ► EJCN 1995;49(4):242-7. Vinegar lowers cholesterol ► BJN 2006;95(5):916-24. Vinegars of all types (it is the acetic acid that drives all this, not the other stuff in vinegar, since they noticed same effects with pure acetic acid) reduce glucose levels after eating ► MGM 2006;8(2):61 which explains that "In the insulin-resistant subjects, vinegar ingestion reduced postprandial (after meal) glycemia 64% as compared with placebo values". It seems smart to consider the risks of colorful vinegars that got 100x more polyphenols that have been oxidized by exposure to store light, since companies keep it on shelves for a year, in bright light; *some apple ciders* got 105x (V10 vs V6) ► Mol 2022;27(3):770 more polyphenols than others; eating oxidized polyphenols can do more harm than good. These are bacteria, and apple cider often has particles on the bottom that can contain all kinds of deadly chemicals, like rotten blueberries, so white vinegar is safer, less prone to causing side effects. Vinegar inhibits the proliferation of human cancer cells ► JECCR 2004;23(1):69-75. Rice vinegar (white vinegar is made from grains) inhibits azoxymethane-induced colon cancer in male F344 rats ► NC 2004;49(2):170-3. Vinegar inhibits *candida* growth ► JAOS 2008; 16(6):385-90. Vinegar is antimicrobial. When people have a digestive issue, they often add vinegar to their smoothie to reset the microbiome *(like genome is the genes of all human cells, the microbiome is the genes of all the bacteria, eukaryotes, archaea and viruses in the human gut, for every human cell in the body, there are 9 bacterial cells, living in the gut mostly).* It's not safe to eat vinegar daily, as it kills good bacteria, allowing

bad ones to proliferate, cause digestive issues via metabolites and even acne. However, when a digestion issue exists, vinegar can help to wipe out bad bacteria. ☺

Eat smoothies with vinegar fast, rinse mouth with baking soda solution *immediately* to prevent enamel damage from the acetic acid. I use vinegar rarely, mostly when digestive issues appear. Vinegar is very effective against food poisoning with E Coli ► JFP 1998;61(8):953-9. Compared to placebo vinegar decreased plasma glucose (p = 0.0279), insulin (p = 0.0457), and triglycerides (p = 0.0439) ► JDR 2015:175204. Vinegar is highly diluted with water, to reach 5% acidity. Some vinegars are 12 times more expensive, since they're organic and take longer to make (slow fermentation with the solid "*mother*" at the bottom of the bottle), but most benefits come from acetic acid present in all forms of vinegar, so one doesn't need a specific type of polyphenol present in only one type of vinegar, most scientific studies on the benefits were done on the cheapest white transparent vinegar made from grains. Some people don't buy the organic unfiltered apple cider vinegar due to the possibility of naturally occurring eels (worms) ► Turbatrix aceti. The slow fermentation process leads to that solid "mother" at the bottom of the bottle made of yeast and acetic acid bacteria, which are the food for vinegar eels. Most manufacturers filter and pasteurize their product before bottling to prevent these organisms from forming. These tiny worms are harmless and non-parasitic, unlike hookworm or roundworm. There might be certain advantages to the organic slow fermentation vinegars, due to specific polyphenols (absent in clear vinegar) affecting specific diseases, but the scientific literature on that is lacking, and blueberries got 100 times more polyphenols than the most colorful apple cider vinegar, so there is really no point in risking, for a tiny polyphenol intake. The reddish apple cider vinegar at supermarkets (*filtered, without the mother solid stuff*) probably has more antioxidants than the white clear grain vinegar, since colored fruits have more antioxidants, but it also costs more. However, since the reddish color comes from the peel of the apple, which contains 90% of pesticides, since apples that are not organic are pesticides rich, for some the good from antioxidants will be < the bad from the pesticides. People with type A blood have less stomach acid, so they would benefit even more from vinegar, which lowers the pH and helps the low pH to kill Helicobacter pylori which can cause ulcers and cancer of the stomach (type A blood has 26% higher chance of that) ► BMCC 2019;19:164. Low acid is a problem for 1 billion people, it causes seniors to have lower protein digestibility score as low pH is needed to efficiently split proteins into amino acids the body needs. ☺☺

11.7.23. PAPAYA (avoid if trying to conceive)

Papaya (nutrient list) is the third richest common source of cryptoxanthin, the nutrient who gives 52% higher mortality if their serum level is half as explained in the β-cryptoxanthin section. Papaya β-cryptoxanthin/100g is 109x > green pepper, 127x > grapefruit, 7x > orange, 85x > egg,

10x > watermelon, 11x > peach, 1.55x > red bell pepper. Most produce lacks β-cryptoxanthin. Papaya has 308x > β-cryptoxanthin/calorie than the only non-vegan source, eggs. Glycemic index is 60, eat in moderation to avoid dementia due to fructose. Topical Papaya is great for skin and burns too ► BJ 1999;25(7):636-39. Papaya carotenoids prevent prostate cancer ► CEBP 2004;13 (2):260-9.☺☺☺ β-carotene, $C_{40}H_{56}$, in papaya is present in the same amount as in watermelon and it protects the eyesight, as does β-cryptoxanthin, another form of pro-vitamin A. Papaya is the only common fruit or veggie with an ω3 to ω6 ratio of 4:1, most fruits have a much lower ratio of ω3 to ω6. Bananas have ω3 to ω6 of about 1:2. The more ω3, the better, as most people get too much ω6. Papaya seeds are very soft and easy to eat (most people discard them), have benefits related to protein digestion, getting rid of bad bacteria, parasites, liver detox, but they're not for pregnant women, kids or men trying to conceive. Some studies suggest it is best to avoid papaya for pregnant women, just to be safe ► BJN 2002;88(2):199-203. Large amounts of papaya seeds given to pregnant rats led to miscarriage ► NPMJ 2002;9(2):95-8. Papaya seeds 50 mg/kg of body weight given orally to langur monkeys for 360 days led to 0 sperm count after just 90 days. 5 months after the end of the 1 year program, they noticed the measured sperm parameters were all back to normal (but not everything was normal), as explained at AJA 2002; 4(1):17-26. Rabbits given papaya seeds in the same doses 50 mg/kg did not affect their sperm quality at all RTO 1999;13(1):59-66. Same 0 effect on rabbit sperm was seen at JET 2000;70(1): 17-27. Humans are closer to monkeys though. A significant decrease in sperm concentration was observed in a group of dogs treated with extracts from washed papaya seeds, but no decrease was observed in the group of dogs treated with non-washed seeds ► RDA 2010;45(6):1126-9. Rats fertility returned to normal after 30 days of no longer eating papaya seeds, but there were some other changes too that took longer to reverse ► PM 1994;60(5):400-4. In vitro (test tube, not a human body), papaya seeds do lower sperm count dramatically at even 2% concentration ► AJA 2000;2(2):103-9. On Nov 2 2016, glucose was 85, 2 hr after eating some papaya, lemon, ginger, zucchini smoothie. 85 is the best value I ever got after a meal. Papaya has a lot of fiber, 3 times more than watermelon in 100 g. Perhaps because of the fiber, papaya doesn't spike blood sugar as watermelon does. But I had eaten watermelon and got 95 for glucose. Papain enzyme can damage digestive tract if you overeat papaya, so always eat it with heaviest protein meals.

11.7.24. SOY SPROUTS, SOY BEANS, SOY PROTEIN ISOLATE

Soybean sprout (nutrient list), tofu (nutrient list) amino acid score 25 low, soybeans (nutrient list) have isoflavones which can lower fertility if eaten in large amounts. The most talked about thing about soy is high fat (hence I no longer eat soy) that causes atherosclerosis if overeaten, goitrogens (which can cause goiter, hypothyroidism) like those found in cruciferous vegetables, infertility and unhealthy ω6:3 ratio of 8:1 if eaten as the main source of fat:

MALE Fertility, DHT, Cardiac Health, Prostate Cancer & SOY ISOFLAVONES:

WSYJ 2011;40(6):727-31 found that equol producing men (*vegans* were found to be more likely to produce it than omnivores), who have the right bacteria to produce equol, experienced lower testosterone as a result of isoflavone intake. Low testosterone is associated with a poorer reproductive function in some studies, so this study is of concern for men who try to conceive, even if many other testosterone studies found no effects, due to testing *omnivores* who don't produce equol. *Lower* testosterone *is not always bad, it could lower DHT, dihydro* testosterone, *the* chemical that can speed up atherosclerosis (and Alzheimer (see pic of carotid when DHT is high, ω6:3 ratio is high leading to high hs-CRP and faster plaque building) via that), *prostate cancer,* hair loss; "both T (testosterone) and DHT can have effects that could lead to the development of *atherosclerosis*" ► VHRM 2008;4(1):11-21. "30% of the Western population can produce S-equol after consuming soy *isoflavones*, whereas approx. 60% of adults in Asian populations are equol producers" ► Gut 2016;65(1):63-72. *Vegan* diet is the lowest in DHT, the most protective against atherosclerosis, so *vegans* have the lowest plaque.

HR 2008;23(11):2584-90 found that men who already had fertility problems (not healthy men as in most other studies on soy and sperm) and who ate the most soy (more than 2 servings a week) the previous 3 months, had 41 million less sperm/ml (sperm count) than men who did not consume soy foods; however, *men who ate soy 2 times a week or less got* 4% higher sperm motility, 8.6% higher ejaculate volume *(same sperm count almost, 2% lower, within statistical error)* than men who did not consume soy foods. The abstract does conclude that "Soy food and soy isoflavone intake were unrelated to sperm motility, sperm morphology or ejaculate volume." The data reveals either some complex biochemistry being turned on at higher levels of soy or confounding factors, since, at low levels of soy, sperm count drops a lot, then it returns to normal for medium soy level and drops less at high level. In the infinite complexity of the human body it's not always that higher intake means lower level of a biomarker. Yet, *confounding* factors (which caused the men to visit the infertility clinic in the first place) may play a big role here, making it a weaker study. Even so, obviously, if someone has infertility issues they're safest if they stay away from soy if trying to conceive, per 500 studies. The relationship is probably very complex and dependent on genetics and what people eat besides soy, due to synergies of other semen boosters that cancel out soy effects and also inhibitors of isoflavone absorption. This is a bad study, a better one would have all eat the SAME EXACT DIET, except some eat tofu, soy bean sprouts, etc, to compare effects of different soy foods on sperm. That way we can eliminate other diet confounding factors. We need an interventional study in healthy men, to draw a conclusion; an observational study in infertile or semi-infertile men is the worst type of study to base conclusions on for healthy men. ☺☺☺ However, JN 2009;139(4):796S-802S (and other interventional studies) found no relationship between soy

food intake and sperm count or properties even at 480 mg/day isoflavones or 1,371 g of soy bean sprouts or 176 g soy protein (nobody almost eats that daily, unless a body builder).

FS 2010;94(5):1717-22 found that soy protein isolates SPI (for 57 days) of varying isoflavone content don't adversely affect semen quality in healthy young men. Semen parameters, including semen volume, sperm concentration, sperm count, sperm percent motility, total motile sperm count, and sperm morphology, were not significantly affected by consumption of either low 2 mg or high 62 mg (or 177 g soybean sprouts or 48 g SPI) isoflavones SPI compared with MPI (milk protein isolate). Thyroid 2007;17(2):131-7 found that SPI of varied isoflavone (1.6 mg or 64 mg a day) content don't influence serum thyroid hormones in healthy young men compared to MPI. AJCN 2006;83(2):244-51 found SPI (1.6mg and 62 mg/day), regardless of isoflavone content, modulate serum lipid ratios in a *direction beneficial for cardiovascular disease risk* in healthy young men compared to MPI. 40 mg isoflavones daily for 2 months had no effect on semen parameters even 4 months after supplementation ► CSC 2001;100(6):613-8. SPI with almost no isoflavones or a lot of it, both types, decreased DHT, the hormone that causes prostate cancer and hair loss ► JN 2005;135(3):584-91. A man took 80 mg/day soy isoflavones (same as 62 g of SPI): his sperm improved dramatically after 3 months, *leading to being able to conceive and* give birth to a 3300 gram baby, *sperm improved even more after 6 months, sperm* returned to bad shape after 6 months of no longer eating soy ► GE 2006;22(7):399-401. 66 mg isoflavones (51 g SPI or 640 g tofu) in 200 people did not change testosterone, but improved cholesterol, C-reactive protein, hemoglobin a1c, endothelial function ► JCEM 2017;102(2):425-33.☺☺☺ EP 2008;14(4):415-8 found some 60-year-old man ate *3 quarts of soymilk daily*, same as *6 pounds of tofu daily*, or a maximum of 300 mg isoflavones, developed breast tenderness and enlarged breasts which apparently stopped after he stopped soymilk. Enlarged breasts can occur due to many things and soy overconsumption may have just sped up that process in this case. This is a very high level of isoflavones, same as eating 150g soy protein, triple the daily protein needs of many, which no *vegan* does. The literature doesn't have a lot of cases of breast growth in men after soy, if any, besides this. Since most (short-term) studies show safety for men even at 60 mg isoflavones/day, and only 2 studies show issues (the men already had fertility issues though) at normal levels of soy intake (not 3 quarts of soymilk), it's probably OK to eat 30 mg isoflavones daily long-term, or 150 g tofu, 30g SPI, 300 ml soymilk. People with fertility or thyroid issues could eat max 40g tofu? Some SPI has 9 times lower isoflavone content, so those SPI can be eaten in larger amounts. ☺☺

FEMALE FERTILITY (goes up, like in males, after moderate soy)

High levels of soy (> 2 servings a day) lead to reduced ovarian function, lower circulating levels of hormones, especially lowered gonadotropin levels ► JN 2010;140(12):2322S-5S. However, at 1-2

servings of soy a day, no such effects were found. FS 2015;103(3):74-55.e2 315 women study found that females using in vitro fertilization were almost twice as likely to have a child if they ate more than 2.6 mg isoflavones daily or about 7.4 g of soybean sprouts. Compared to women who ate 0 mg/day isoflavones, the increase in live births was 32% for 0.54-2.63 mg/d, 87% for 2.64- 7.55 mg/d, 77% 7.56- 27.89 mg/d. IJWH 2014;6:377-84 Adventist study of 11688 women found that those who ate the most soy (> 40 mg isoflavones daily) were 3% less likely to be a mom (live birth) and 13% more likely to never have been pregnant than those who didn't, showing a different outcome than the 87% higher chance of being a mom in the previous study above for in vitro moms at 2.6-7.6 mg isoflavones. *This study confirms the first one above, that found for females high soy is harmful, while 2 servings or less of soy are harmless.* 40 mg is way more than 7.6 mg. It may be that women who were infertile to begin with ate more soy, not that soy made them infertile. The only way to know is to randomize people over decades and see if those eating soy instead of lentils, with all else the same, would become less fertile. Designing an interventional study on such a 30 year time scale is very expensive. The isoflavones content of foods is listed in this USDA pdf. Regular, soft, firm tofu and firm tofu prepared with calcium sulfate or nigari (Mg) got about 23 mg/100g, tofu with Ca and Mg got 30, while soybean sprouts 35. Soymilk got a max of 10.73 mg/100g. Soy Protein Isolate 91 mg. AJOG 2008;198(2):210.e1-210.e7 found that *replacing animal protein with vegetable protein such as soy increased fertility and diminished* risk of low ovulation rates. Consuming 5% of total energy intake as vegetable protein rather than as animal protein was associated with a more than 50% lower risk of ovulatory infertility. ☺☺☺

Conclusion (hypothesis): for females trying to conceive, soy isoflavones seem to have a stronger effect than for males, so females can limit soy isoflavone intake to about 10-20 mg/day or 50-100 g tofu, 10-20 g soy protein isolate or 30-60 g soybean sprouts or 100-200 ml soymilk/day. Males who try to have babies can probably be fine even eating 4 times more than females. ☺☺

SOYBEAN SPROUTS (not easy to digest)

Soybean sprouts (made by fujinf.com) are only $1/340g bag at many grocery stores; a bag has 44 g of protein of amino acid score 90; mung bean sprout bags have 12 g protein of score 67. 100 g soybean sprouts = 13 g protein of score 90, 100 g tofu = 8 g protein of score 68. Sprouts are much healthier than tofu (besides being 2-3 times cheaper as protein source), having fewer AGEs. If you eat too many soy sprouts, you can get bloated, and since they have quite a lot of fat and some potentially toxic (to the gut lining) lectins left as explained in the beans section; I no longer eat them or any sprouts at all. 46% of soy sprouts calories are from fat, so it's best to not overeat. Soy sprouts still contain trypsin inhibitors and a lot of phytic acid, making digestion of proteins and the absorption of certain minerals harder; only boiling destroys 100% trypsin

inhibitors and lectins in sprouts, tofu, soy protein isolate. That's why I will avoid tofu or soy foods always if I don't know they're lectin free and stick to home soaked/cooked soybeans if I ever want soy for some variety. Those with gut problems may benefit from minimizing intake of soy products that are not lectin free. Tofu is cooked at 100°C to 110°C only 3-10 minutes, not enough to remove all lectins many times. Tofu has much fewer lectins than soy sprouts though. The soybeans cooked at home at 100°C to 120°C for 40 minutes are very lectin free and safe.

SOY PROTEIN ISOLATE (SPI)

SPI (nutrient list) has only 8% of calories from fat, the lowest of all soy foods. Vegan Yogurt company sells the cheapest 5 lb (2.27kg) SPI for only $21 plus shipping (12.5), much cheaper than anything you buy at any store, because you get 92% pure protein, or 1921 g protein, as much protein as $800 of Burger King hamburgers (lower protein quality, score 69 vs 108 for SPI, more needed) or $129 of Boca soy burgers made from SPI. The Walmart Boca Original Vegan Soy Protein Burgers, 4 ct, $3.22, 13 g protein each, so 52g total, only 280mg sodium (half the Burger King burger), made since 1979, have 20+ times less fat than most burgers & are healthier than all meat burgers, *lowest fat/AGEs of any vegan burger*, have about 116 times less AGEs than McDonald's Big Mac, 7.6 times less fat calories or 7% fat calories for Boca vs 54% for the vegan Impossible Burger, 2.15 times more protein/calorie than the Impossible Burger. Boca is now a Kraft Foods brand, see ingredients and nutrition facts here. SPI is much better for reproductive health for some because some brands (check label) have 2-4 times less isoflavones than soy flour and tofu, soy sprouts ► JAFC 2003;51(14):4146-55. Many 97% raw vegans add SPI to their smoothies. ☺ I tried adding 20-30 g of SPI to smoothies and sometimes urine was muddy, which is not healthy and it caused some bloating, so cooking soybeans or lentils or other beans is healthier until they figure out how to process soy to avoid that. I noticed the same bloating and urine issue with pea protein and rice protein, so I stopped adding them to my smoothies, replacing them with lentils. SPI amino acid score is 92-108 depending on brand. "FDA agrees that 25 g per day of soy protein may reduce the risk of heart disease. The quality of protein from soy equals that of protein from animal foods." 20,000 g (44 pounds) of SPI can cost $128, this is equivalent to 1,000 Burger King hamburgers (cost $4,000) of amino acid score 69.

SOYBEANS IN A CAN OR PREPARED AT HOME

Always cook soybeans at high temperatures to destroy all lectins, as the bean section first paragraph explains. Soybeans have the most complete protein of any bean and of any soy food, except some soy burgers. Soybeans have 43% of calories from fat, with ω3:6 ratio an unhealthy 1:8, but it's mostly unsaturated fat, only 14% of soybean fat is saturated fat. Soybeans are best digested if they're soaked in warm water. Cooked soybeans have 242 mg tryptophan, or

242/68.4 = 3.5 times more tryptophan than hamburger from Burger King/100g. Cooked soybeans got 268/47 = 5.7 times more cystine than hamburger. Cystine is used for the synthesis of reduced glutathione (the master antioxidant in cells) and metallothionein, both of which bind heavy metals. If you buy 1 lb of soybeans, 2$, cook it at home, you get 163 g of protein (score 118) vs Burger King hamburger (score 69). A $3 burger got 17 g of low quality protein, *soy protein is 30 times cheaper*. Soy is healthier too, as it has no sodium, more fiber. ☺

TOFU

Tofu (nutrient list) is much easier to digest than soybeans prepared at home or soy sprouts. The bloating some experience with SPI, soybeans or soy sprouts is not present with tofu at all. However, you will instantly notice tofu makes your stool harder and bowel movement slower, leading to toxin release into the bloodstream due to longer transit time of stool. Tofu is a toxic vegan food. The tofu amino acid score is only 68 vs 118 for soybeans, 108 for SPI, 90 for sprouts, 25 for soymilk. Additionally, 50% of tofu calories are from fat. Tofu is a source of calcium, they add it. However, that Ca is not natural, it is $CaSO_4$, and SO_4 can cause rotten egg smell, ER visits for people with a genetic deficiency in some sulfur compounds elimination. SO_4 can also cause ulcerative colitis and IBS, inflammatory bowel syndrome, so listen to your body and buy brands without sulfates added. Proteins denature and AGEs form during the heat treatment of soybeans to create tofu, so tofu is not an ideal food, but OK for thrice a year at a hotel.☺☺☺

Omega (ω) 6:3 ratio in soy foods and saturated fat content:

One issue with non-SPI soy foods is that they have a lot of ω6 fat. The ratio of ω6 to ω3 in tofu is 9:1 and in soybeans, SPI, soymilk or soy sprouts is 7.5 to 1, when the ideal ratio is 1:1 or 2:1. Thus, if one eats non-SPI soy foods, one would need to eat high ω3 foods, like flax or chia seeds (foods which have more ω3 than 6 and a lot of ω3) to maintain a non-inflammatory ω3: ω6 ratio in the body. The reason why I use lentils, not soy, as the main protein source is explained in the 1st paragraph of the lentils section. It's about fat, soy is too much ω6 inflammatory fat.

Vegan MEATS made from SOY

The freezer section of supermarkets have many vegan meats. Since reversing heart disease arterial plaque buildup is often done by low fat diets, limiting most soy foods (except those done with SPI, like some vegan meats) or eating fake meats or the Boca vegan soy burger with ultra low fat is a good proactive measure to prevent atherosclerosis plaque (*read the food label to see how much fat is there*). Some soy burgers, like Boca vegan one, have only 14.3% of calories from fat. We need some ω6 fat, but most people eat too much ω6 fat, yet need ω3 fat. Gardein..d has nutritional info for the Beefless Ground made with SPI. Only 12.5% of its calories come from fat.

100 g of this vegan “beef” has 2 g of total fat (6 times < burger king hamburger), 0 saturated fat (5 g in burger king), 0 trans fat (1g in burger king), 21 g of protein (14 g burger king), 5 g of fiber (2.0 in burger king), calcium 115 mg (twice the burger), Iron 3.1 mg (2.5 mg burger king). ☺☺☺

11.7.25. BEETS

Beets (nutrient list) are the most well-known blood cleanser, they lower blood pressure, heal acne, help boost the liver, colon, gallbladder. One can puree beets together with watermelon or a soft fruit using a blender and obtain an amazingly healthy and awesome tasting smoothie. "As a source of nitrate, ***beetroot ingestion provides a natural means of increasing in vivo nitric oxide (NO) availability and has emerged as a potential strategy to prevent and manage pathologies associated with diminished NO bioavailability, notably hypertension and endothelial function.*** Beetroot is also being considered as a promising therapeutic treatment in a range of clinical pathologies associated with oxidative stress and inflammation. Its constituents, most notably the betalain pigments, display potent antioxidant, anti-inflammatory and chemo-preventive activity in vitro and in vivo." ► Ntr 2015;7(4):2801-22.☺☺☺

If your urine is pink or red after eating beets, you may have low stomach acid, a risk factor for 25 diseases. Low stomach acid can cause acne, hair loss, and increase the risk for developing other diseases. You can confirm this with the betaineHCl test (you can get some from Amazon, 7.7$ minimum), take a little of this and if no stomach acidity felt, then you're low in stomach acid, a condition affecting half of people over 50 and many people under 50 or even under 30. Google it and you'll get more info, there is even a really advanced Heidelberg test that measures exactly your pH in the stomach. People take betaineHCl to correct stomach pH. ☺☺☺

Beets get their color from betanin which is found at a concentration of 45mg/100g. "Betanin decreased *protein glycation* indicated by the decreased levels of protein glycation reactive intermediate (methylglyoxal), AGE product (N(ε)-carboxymethyllysine) and receptors for AGEs" ► CBI 2015;227:37-44. ***Beet juice antioxidant capacity in both the DPPH and FRAP assays was far greater than tomato, grape, carrot, cranberry, rhubarb, orange and pineapple.*** By FRAP pomegranate was the only one higher, but by DPPH assay beet juice was better than pomegranate. By FRAP assay beet juice was 5X better than carrot juice ► Ntr 2015;7(4):2801-22. However, if you use the deepest purple (‘black’) carrots, beets may be equal to carrots. This may be due to betanin/betanidin in beets/purple cactus, absent in the other fruits/veggies.

11.7.26. PURPLE CACTUS PEARS (avoid green ones)

Cactus pears (nutrient list) are one of the least appreciated fruits, with 8.8g fiber/100 cal. The purple ones are much healthier. On 10-28-21 I ate 600+ g of them, 200 g pineapple and next day,

after also eating 1500 g cucumbers + 600 g pineapple first time in 4 days, I had the first more solid normal (50x less smell than prior week) stool in a week, after ultra soft and smelly stools (very rare for me to have diarrhea) that started 10-22-21 and which made me try more solid foods and avoid cucumber/pineapple 100% for 4 days without success. Pineapple helps with digestion too. I eat cactus pears often some weeks when they're in season (the only time you can find them). They have almost the highest level of flavonoids among fruits (hard to say exactly as fewer papers exist on them) and the most magnesium among fruits/veggies. The purple varieties got the most polyphenols and phytonutrients, having more phenols per calorie per dollar than plums (which cost 2-3 times more) and most blueberries (which cost 6-10 times more/kg). JERS 3(2);2012:60 Table 3 says that some cactus pears varieties have up to 12 g of flavonol (kaempferol, quercetin, and isorhamnetin) derivatives in 100 g, more than any other food. Given this journal is not very global and well known, the quality of its data may be off since other papers found 0.2 g (60 times less) polyphenols than flavonols (but it could be a low polyphenol variety). A paper in a more professional journal found some varieties have 0.2 g polyphenols/100 g in the pulp, which is higher than most fruits and veggies (the edible part, since the peel is taken out with a knife to lose fewer antioxidants than by hand peeling; peeling by hand is not a good idea as it throws away too much of the fruit and the peel area has more good stuff than the pulp, as with most fruits) ► Antiox 2013;2(2):37-51. The same 0.2 g level was found by PFHN 2010;65:253-9, which also found quercetin derivatives accounted for 58.7-54.3% of total flavonoids, isorhamnetin derivatives 31.7-18.8%, luteolin derivatives 11.5-5.4% and kaempferol derivatives 11.0-4.8%. Other studies showed the ORAC antioxidant score of cactus pears is more than double that of grapes, strawberries, apples, etc…

Cactus pears boost the immune system, prevent the formation of AGEs, prevent cancer, Alzheimer, neuron damage due to oxidative stress, help keep a healthy weight, prevent osteoporosis, improve blood glucose response and digestion. They got 8 times more vitamin C than apples, and an amino acid score of 95, higher than 69 for burger king hamburger; that is a much more complete protein. It's better to buy the purple ones, as they're healthier than the yellow, orange or green ones. The dark purple ones are extra loaded with betalain antioxidants. Cactus pears have 9 times more fiber, 8 times more calcium, 8.5 times more magnesium and 2 times more potassium than watermelon. Cactus pears got more calcium than most fruits, 11 times more calcium and 3 times more magnesium than bananas for example. Magnesium is an essential nutrient. You can add them to a smoothie to speed up the blending process for harder veggies or fruits such as zucchini, carrots, cauliflower, etc or use a knife to peel off the skin (peel only minimal thickness as the skin area has valuable nutrients). Purple ones are healthier than green ones. This “purple better than green” idea holds true for grapes, cabbage (purple has 2830 times more anthocyanins), onions, pears, apples, artichokes, chia seeds, beans, etc: the darker

the color, the more antioxidants. Fig 1 in Antiox 2013;2(4):257-64 shows that antioxidant power (the red bar in the graph) is strongest in the most colored grapes: dark indigo (concord) > purple (more transparent than the indigo ones, less pigments) grapes > red grapes > green grapes. Purple cactus pears have the most antioxidants (compared to yellow, green, orange) with the most antimutagenic (DNA protection) activity. ☺☺☺

Purple cactus pears have a lot of betacyanins (like beets) ► Ntr 2013;5(10):4145-58 while the other color pears have betaxanthins. Cactus pears prevent cancer. Arizona cactus pear extracts effectively inhibited cancer cell growth, suppressed tumor growth in mice. These effects were comparable with those caused by a synthetic retinoid currently used in chemoprevention trials. ► NJ 2005;4:25. Cactus pears are rich in antioxidants ► PFHN 2010;65(3):253-9. Cactus pears protect against oxidative stress, genotoxicity and cell death ► BMCCAM 2012;12:111, kill ovarian cancer cells ► NC 2010;62(5):692-9. Betanidin (found in purple cactus) significantly reduces blood glucose ► NPB 2012;2(4):154-5. Beets (blood cleansers) get their color from a betalain pigment called betanin (a betacyanin) which is found at a concentration of 45mg/100g. Purple cactus pear has about 39 mg/100 g betacyanins: betanin and betanidin (which is betanin with glucose replaced by OH) and 37 mg vitamin C/100g, about the same as beets, as shown in Table 2 at Antiox 2015;4(2):269-80. Not all varieties have that much betanin though, only some of the purple ones. Cactus pears have pH of 5.9 when ripe as shown in Table 1, which is much more alkaline than many other acidic fruits, making it far less damaging to tooth enamel compared to oranges, soda, vinegar. ☺☺☺ After eating cactus pears with betanin, red blood cells are more able to cope with oxidative stress ► JAFC 2005;53(4):1266-70. As shown in the previous Beets section, betanin inhibits the formation of AGEs. JAFC 2001;49(11):5178-85 found that betanin was 12.5 times more effective than vitamin E and 3 times more than catechin in inhibiting lipid peroxidation by cytochrome c. Cactus pears contain a lot of pectins, which are known to trap heavy metals ► PFHN 1998;52(3):263-70. Indicaxanthin (a betalain) from purple and other cactus pear fruit exerts anti-inflammatory effects. Leukocyte tumor necrosis factor (TNF) decreased 82% at 2 µmol/kg xanthin. All cactus pears have indicaxanthin, purple ones about half the level of betacyanins ► JN 2014;144(2):185-92. Since raw eggs have an amino acid score of 136, cactus pear biological value of protein is 72.6 with respect to eggs, the cactus pear amino acid score may be somewhere around 0.726*136 = 99. This score, if accurate, is much higher than all fruits except kiwi 105, avocado 129, hamburger beef 67, milk 85, most veggies.

11.7.27. BEANS: CHICKPEA, BLACK, NAVY, WHITE, RED KIDNEY

As far as mg ω3 /mg ω6 in 100 g of raw lentils/beans, we got: 112ω3/412ω6 lentils (0 gas if soaked at 148°F for 8 hours, easiest to digest of all legumes), 538ω3/335ω6 navy (they're white, gassy), 278ω3/332ω6 black (not too gassy), 358ω3/228ω6 kidney, 237ω3/170ω6 pinto (very

gassy), 102ω3/2620ω6 chickpea (some gas, Mediterranean humus fraud, like the olive oil scam, oily diet causes plaque/death: 6 g fat/100g vs 1 for lentils, plus deadly 3:6 ratio), 213ω3/263ω6 northern. In cooked beans, we got (raw 3:6 is more reliable than cooked 3:6 ratio): 37ω3/137ω6 lentil, 177ω3/136ω6 navy, 105ω3/126ω6 black, 168ω3/102ω6 kidney, 137ω3/98ω6 pinto, 43ω3/1110ω6 chickpea. Beans have the same benefits of lentils explained above, but have the *disadvantage of having* much higher trypsin inhibitor *and* hemagglutinin *lectins* (the bad type of lectin, *coagulates or* agglutinates hem *or hemoglobin in red blood cells, causing red blood cells* to stick together, *like* glue *sticks things together, to* agglutinate, causing strokes, clots and infarcts, creates arterial plaque via clots), beans being harder to soak, cook (2-3 times longer soak time) and digest and many of them containing lethal *lectins if slow cooked at 80°C, sprouted or eaten raw (soaked)*. Stroke and infarct, plaque, etc are not worth the risk, most have no patience to properly soak beans 12 hours. Green bean, French bean or garden pea as it is called can contain 100 times more lead, cadmium than many beans, due to its capacity to trap lead in contaminated soils, so, it may be best to avoid it. Please avoid lima beans, as they release cyanide, as explained in the last paragraph of the flaxseed cyanide section. Please read the soaking lentils section for ideas on soaking beans well, to avoid gas. I used to cook black beans daily for 3 years with my pressure cooker at 120°C, before discovering green/brown regular lentils. Before becoming low salt, I used to eat canned kidney beans, chickpeas. Replacing rice with beans leads to lower blood pressure, blood glucose, risk of heart disease and diabetes due to more fiber, protein, fewer sugars ► AJCN 2011;94(3):869-76. Red kidney beans need to be cooked well due to the special red kidney *hemagglutinin, a lethal* lectin *that can sicken or even kill people who eat them raw, undercooked* or *slow cooked* at low temperatures ► EI 1990; 105:485-91. Beans have a lot of trypsin inhibitors and hemagglutinins, and are best avoided if sprouted (or eaten ultra rarely), as sprouting doesn't remove all these antinutrients. "*Peas, lentils* and broad beans had the *lowest* content of *trypsin inhibitors* and *hemagglutinins (the* bad type of lectins*)*. Cooking destroyed these substances." ► AIM 1978;9(1):1-14; "many lectins are non-toxic, such as those from tomatoes, lentils, peas, chickpeas, faba beans and other common foods" ► CRFSN 2005;45(6):425-45. This is not true for the *hemagglutinins lectins* in black beans, kidney beans, white beans, etc, which are toxic. No legume is safe when eaten raw, even if soaked for 2 days. I don't plan to ever eat any sprouted legume, because lectins are not fully destroyed. "Heating presoaked beans at 100°C (212°F) for 15 min… decreased the hemagglutinin activity to below detectable levels… Commercially canned beans have lectin levels similar to beans pressure cooked for 30 min" (in red kidney beans) ► FS 1983;48(1):235-36. Pressure cookers today reach 120°C (248°F). "A raw, red kidney bean can contain up to 70,000 hemagluttinating units (hau). Most lectins are reduced by moist, but not dry heat. Therefore, steaming or boiling causes a significant reduction in concentrations of lectins in beans. Boiling for at least ten minutes has been shown to reduce hau in beans *200x*.

Because cooking temperatures under 80°C (176 °F) don't destroy lectin, use of slow cooking and/or a crockpot is not advised for cooking beans." ► Toxin 2010;2(9):2289-32. Hemagglutinins "can be deactivated by boiling beans for 10 min at 100 °C (212°F) and *the FDA recommends (not requires) an initial soak of* at least 5 h *in water which is meant to be discarded*. If the beans are cooked at a temperature below boiling (i.e., without a preliminary boil), as in a slow cooker, the toxic effect of hemagglutinin is increased. *It was therefore found that* beans *cooked* at 80 °C (*176*°F) are five *times* as *toxic* as raw beans. *In studies of casseroles cooked in slow cookers, internal temperatures often did not exceed 75 °C" and "Illness is* usually *related to the ingestion of raw (e.g., fresh, soaked, or sprouted form as a part of salad), flour (e.g., porridge for infant food), or little processed (e.g., steamed or prepared in* dehydrators, slow cookers, or crockpots*) beans*". Even so, lectins can "*have protective effects against DNA damage, and are potent modulators of immune response, cell growth, and mitosis, and can cause cancer regression*" ► TR 2018;5:46-55. When cooking beans, use high temp pressure cookers or boil 20 min to be safe. *Being alive is more important than "killing a few cancer cells everyone has now and then".* It was shown the body can easily wipe out a few cancer cells when they show up. Water boils at 212°F. FS 1983;48(6):1796-800 found that the sprouting of white beans led to "Highest decrease in stachyose + raffinose (76.40%) was observed at the end of the third day of germination. Trypsin, chymotrypsin, and α-amylase inhibitory activities and phytic acid were reduced respectively by 62.9, 73.4, 67.1, and 57.8% after 5 days of germination." This means sprouting reduces gas causing raffinose, stachyose and a large part of antinutrients, but not all. PFHN 1994;45(3):213-22 found that "Results indicated a decrease of the lectin content by 85%, a loss of binding capacities of functional lectins towards brush border membranes by 91%, and a decrease of trypsin inhibitors by 76%, in (white great northern) bean flour after germination for seven days." Sprouting for 7 DAYS thus can remove most, but not all lectins. When you boil for 10 min, you reduce lectins 200 fold, as shown above, that means *99.5% of lectins are gone, not 85%. That's the difference between cooking 10 min and sprouting 7 DAYS.* Boiling 30 min will remove probably 99.99%. FC 2007;103(1):161-72 makes it clear that *only cooking at high temp (not sprouting) removes all trypsin inhibitors, saponins too,* improving digestibility the most. ☺☺

For low fat vegans who eat lentils, chickpeas are the healthiest beans, because of ω6:

☺☺☺CHICKPEA (garbanzo bean), the Linoleic ω6 Source making seed oils & nuts obsolete☺☺☺

Chickpeas (nutrient list) cost $1.08/lb on Amazon raw (becomes 2.5 lb cooked at home after soaking), which has about 25 g of protein (you get only 17 g from a burger king hamburger) of score 106, which is a much more complete protein than burger king with score of 69 for a much lower price than the 1 to 5 dollar burger ($1 dollar store burgers). They got 1.11 g LINOLEIC essential ω6 acid/100 g cooked (vs 0.14g for lentils) so with chickpeas, you don't need to eat any

nuts or seed oils, just chia seeds for ALA (or chia oil caps if chia seeds make stool too hard) and some algal oil for DHA, since ALA converts to EPA well and at 0-4% into DHA for males. However, chickpeas need to be bought organic, since the conventional/organic ones can have a lot of glyphosate, way more than black beans or lentils, 17,718 ppb in Harris Teeter organic chickpeas vs 8 ppb in Safeway dry lentils, 7 ppb in Goya dry chickpeas. Hummus is tasty, but also far more lethal than lentils, as its glyphosate level is so high, 2,379 ppb in Whole Foods brand. If you cook them at home, the same 25 g of protein cost 20 cents, making this bean protein 7 to 35 times cheaper than hamburger per gram, depending on the burger price. 100 g cooked chickpeas got 2.6 g of total fat (4.6 times less fat than burger king), 0.3 saturated fat (17 times less than burger king), 0 trans fat (not 1 g as in burger), 7.6 g of fiber (almost 4 times more than the burger), 7 mg sodium (65 times less than burger, super-healthy for the hypertensive half of American adults, choose no salt versions), Potassium 291 mg (almost twice the burger level), Iron 2.9 mg (more than hamburger 2.5, no heme iron that is associated with cancer and heart disease). Chickpeas lowered TC by 3.9%, LDL by 4.6% after 5 weeks when vs wheat bread ► ANM 2006;50(6):512-8. Eating 728 g (drained, no liquid) chickpeas a week, for 4 weeks, led to a 7.7 mg/dL drop in TC, a 7.3 mg/dL drop in LDL. Fasting insulin dropped too ► JADA 2008;108 (6):1009-13. ☺☺☺ "Butyrate is a principal short chain fatty acid produced from the consumption of a chickpea diet (200 g/day) in healthy adults. Butyrate has been widely reported to suppress colon cancer cell proliferation"► Ntr 2016; 8(12):766. I ate garbanzo canned almost daily for 4 years.

☺☺☺ BLACK BEAN (the lowest glyphosate beans: Goya and Bush's is ND) ☺☺☺

Black beans (nutrient list) are the healthiest beans after chickpeas for those wanting to avoid nuts, seed oils as ω3 sources and their rotten oxidized oils due to genocidal aristocrats unable to store those properly (opaque containers, in the fridge or freezer if storing over 1 month) via a fraudulent food industry. *For those eating nuts/seed oils, black beans are better than chickpeas, as black beans got* 3x less saturated fat vs chickpeas, 5x less total fat vs chickpeas, most antioxidants among beans (10 times more than white beans, 1390 mg/100g vs 138 mg/100g as seen in Table 1 at EJCN 2010;64:S112-20), ω3:6 ratio of 1:1 versus 1:26 in chickpeas. A can contains about 25 g of protein. Cooked at home black beans are 7 (if hamburger is $1) to 35 times (if burger is $5) cheaper than hamburgers as protein source per g, besides score being 103 not 69. In 100 g of cooked black beans we get 0.5 g of fat (24 times less fat than burger), 0.1 g saturated fat (50 times less than burger), 0 trans fat (not 1 g as in burger), 8.7 g of fiber (4.5 times more than the burger), 1 mg Na (455 times less than burger), 355 mg K (2 times more than burger), sugars 0 (4.9 in hamburger). Black beans ratio of ω3:6 is much healthier ► 1:1.2, instead of the inflammatory ratio of ► 1:9.5 in burger. Black beans lower cholesterol in rats ► ALN 1998;48(4):299-305. Rats eating black & navy beans lowered their colon cancer incidence 4 times ► NC 2002;44(1):60-5. Black beans are rich in anthocyanins which lower TC, LDL as explained in

the polyphenol section. A beneficial colon-function priming effect of beans that mitigates colitis severity is observed ► JNB 2015;26(7):752-60. Black beans, lentils, black soybeans, red kidney beans may prevent atherosclerosis by inhibiting LDL oxidation ► JFS 2007;72(7):S522-7. I ate black beans (400-900g/day) daily for about 3 years, pressure cooked.

White/Northern, KIDNEY, Navy Beans (waste of $, avoid these legumes)

White beans (nutrient list) provide more bioavailable iron than red beans ► IJVNR 2010;80(6):416-29. White bean iron is more bioavailable ► IJVNR 2010;80(1):24-31. Most men got too much iron anyway. Hemagglutinin levels in white beans are tiny vs colored beans which need to be cooked very well to avoid problems. However, all beans need long cooking, due to many antinutrients not removed by soaking. Red kidney beans (and all others) improve colon health ► JNB 2015;26(7):752-60, but like the red lentils, they contain a lot of bacillus cereus bacteria, so are best avoided due to the high incidence of deaths/sickness via kidney beans improperly cooked. Navy/all beans fiber prevents colon cancer ► NC 2016;68(8):1269-80, cut inflammation during colitis ► BJN 2014;111(9):1549-63. White, Northern, Pinto, Navy, Blackeye, Cannellini, etc cause a LOT of gas and are best never cultivated☺☺☺. However, since navy are the smallest diameter of the white (white, northern, cannellini, they're easier to digest and cook, so for white bean lovers, navy is healthier, but still pure trash you can simply avoid.

11.7.28. OATS (eat whole/rolled to avoid diabetes), protein *score* 95

Oats (nutrient list) are an overrated food, as concluded in the last paragraph. The oats mafia uses fake science to push oats, simply because oats are cheaper to grow. Profits always trump science in societies of bandits, liars and conmen run by genocidal aristocrats. Rolling of oats destroys some nutrients and creates lethal compounds, while not soaking it first to remove antinutrients. It's much healthier to eat the burgundy or black sorghum, after soaking it, boiled in a pressure cooker, to minimize arterial oxidation/destruction. Purple/black sorghum bran has 10-20 times more antioxidant activity than oat bran. 3-deoxyanthocyanidins (40% of these are apigeninidin and 7-methoxyapigeninidin) in purple/dark sorghum are similar to the beneficial phenols in blueberries and all polyphenol rich foods absent from oats: the black sorghum is the healthiest, having 2-3 times more brain/artery protecting polyphenols than red sorghum, which has way more cyanins (blue pigments) than white sorghum. See the cyanidin section for more. With immortality capitalism and centralized science based decision making, all crops need to justify their presence to the Central Agriculture Department of the Eterni Food Inc, the most important Company on Earth. Each food must list its most vital 1500 nutrients and then argue over 50000 pages why it's better than other legumes, greens, nuts, seeds or grains or etc to be

cultivated. We Deify Science, not nonsense. However, oats lower after-meal blood glucose by 24 points in some diabetics (but not in healthy vegans who have perfect sugar), blood pressure, cholesterol, hunger, skin inflammation and dryness in other unhealthy subjects, prevent cancer and obesity, support immune and hair-cartilage-skin health. They cause a lot of gas, making it a useless food.☺☺☺ Oats also have 2.4 times more protein than rice and more protein in 100 g than all other grains (quinoa and buckwheat included) and the amino acid score 95 (Lys is limiting, so (0.637g lysine/13.2g total protein)/(0.051g Lys in perfect protein)=0.946 is higher than hamburger beef 67, Burger King hamburger beef 69, rice 71, wheat 52, barley 73. They can be eaten whole oats soaked in water (this is 100% raw) or as rolled oats (they are steamed so that enzymes are destroyed at high temp, making them semi-cooked). Soaked Raw Oats or rolled oats can be added to smoothies. Rolled oats are the least processed "cereal" one can buy in a store (they only steam them a little at 215°F to inactivate enzymes that would make oats go rancid within 4 days otherwise after the bran is removed) with no additives, no chemicals and the awful stuff they add to bread sometimes, etc. Oatmeal and rolled oats, quick oats have the least AGEs of the store bought cereals out there (13 vs 17 for puffed wheat, 20 for canned corn, 9 for cooked rice). Rolled Oats glycemic index (GI) is 54, quick oats 66, oatmeal 80 (most cereals are in the 80s, air popcorn 55, spaghetti 40s), thus rolled oats are best for those with diabetes issues. High GI foods lead to high glucose release, then to high insulin secretion which then lowers blood glucose so much, that the person gets hungry and then overeats that day; this is the only reason many gain too much weight. Whole raw soaked oats (bulk bin section at whole foods stores) have even lower glycemic index and are ideal for pre-diabetics. That's why many 90-100% raw *vegans* are adding raw soaked oats (the whole grain) to smoothies or even unsoaked rolled or quick oats, especially since steel cut oats, quick or rolled oats are $0.7/lb. Oats can promote weight gain in those without food table to count calories.

By weight, rolled or quick oats have 114 times more (x >) cystine and 103x > methionine than onion, 38x > cystine and 12x > methionine than zucchini, 16x more cystine than broccoli, 50x more cystine than tomatoes, 228x more cystine than watermelon. Cysteine or cystine (*as the Cys-Cys dimer of* cysteine *is listed on most nutrition websites*) is a nonessential (conditional essential, in some people only) amino acid made from the essential amino acid methionine that is often low in veggies, but abundant in grains, seeds, legumes. The reason books mostly use the scientifically correct cysteine is because in proteins or peptides with many amino acids, we use Cys to write the protein formula, as in Cys-Thr-Ala-Trp-Tyr-Ile-Ala-Phe, and Cys that refers to one chiral unit of Cys. The Cys-Cys emerging in some proteins is denoted as Cyx or Cym sometimes if Cyx is deprotonated. Cystine is important for optimal cartilage, skin, hair, arterial health. Hair and skin are made up 10-14% Cystine. 300 g of rolled oats added to a smoothie adds 40 g of protein. It's not good to eat soaked raw oats (or any cereal) often or ever, as some do, because

of lectins as explained in the beans section. Even grains have lectins, not just legumes ► Sci 1983; 220(4603):1290-2. Due to the high cystine (sulfur) and lectins, as well as gluten that irritates the gut slightly, eating high amounts of oats (150+g) can cause some people's bad bacteria to multiply, digestive system to be upset, toxins to pass thru the gut barrier into the blood and the stool to smell. I noticed oats cause gas and bloating, and they also contain partially oxidized fats that can trigger atherosclerosis (compared to instant popcorn you make at home) due to being heated during processing to become rolled oats, so I avoid oats. ☺☺☺

Oat lowered systolic blood pressure by 7.5 mm Hg, diastolic by 5.5, total cholesterol by 9%, LDL cholesterol by 14% in unhealthy subjects, with no change in the "low fiber cereal" control group ► JFP 2002;51(4):369. Avenanthramides, polyphenols in oat, kill colon cancer cells and fiber in oats prevents colon cancer ► NC 010;62(8):1007-16. Oats may reduce asthma in children ► BJN 2010;103(2):266-73. Oat β glucans boost the immune system, but these glucans are found in much healthier sorghum varieties too that cause less gas ► MM 2009;100(3):237-45. Oats help reduce laxative use in nursing homes, while improving nutrition, body weight and well being of seniors ► JNHA 2009;13(2):136-9. β Glucan in oat has anticancer properties ► IJBM 2015;80:23-8. 3 g of β glucan in oat/daily lowers LDL (bad cholesterol) 7% and total cholesterol 5% percent ► NR 2011;69(6):299-309. Instant Oatmeal Increases Satiety, Fullness and Reduces Obesity, Caloric Intake Compared to a Ready-to-Eat Oat-Based Breakfast Cereal, so eating rolled Oats is much better than eating cereals with oats ► JACN 2016;35(1):41-9. Health Canada agrees that β glucan in oat lowers cholesterol ►APNM 2015;40(6):535-42. After only 5 weeks, oat milk led to 6% lower total/LDL cholesterol vs the rice milk control group ► ANM 1999;43(5):301-9.

Oat-bran cereal (equivalent to 25 g of oat bran/day) lowers serum total and LDL cholesterol in hypercholesterolemic men by 5.4 and 8.5% ► AJCN 1990;52(3):495-9. 100 g of oats daily for 30 days given to overweight type 2 diabetics lowered the after meal glucose by 24mg/dL, total cholesterol by 13 mg/dL, A1c by 0.64%. It also lowered serum lipids ► Ntr 2016;8(9):549. Colloidal oatmeal is an effective anti-inflammatory topical treatment for irritated or dry skin. That's why people use the milky oat water resulting from mixing water with rolled or quick oats (and colloidal oatmeal) on their face at times ► JDD 2015;14(1):43-8. Oat in colloidal form is a centuries-old topical treatment for skin rashes, erythema, burns, itch, and eczema. JDD 2007;6(2):167-70 explains that "colloidal oatmeal is available in various dosage forms from powders for the bath to shampoos, shaving gels, and moisturizing creams". ☺☺☺

Oat intake significantly lowers fasting insulin concentrations in unhealthy folks (most) ► BJN 2014;112(3):457-66. Vegans have lowest A1C, insulin, so for them oats are a less healthy food, with lentils and chickpeas being the best. Table 4 shows that those eating more than 21 g of oats daily had 9% less mortality compared to those eating less than 21 g of oats daily, among

unhealthy omnivores eating the ultimate American trash diet of ultra processed lethal foods ► JN 2011;141(4):639-44, while those eating > 63 g of rye bread daily had 16% less mortality of those eating < 63 g of rye bread. Most Americans eat so little fiber, that a little rye or oats dramatically lowers their sugar and LDL, etc.☺☺☺ This doesn't mean for healthy vegans, oats are needed at all, it's just marketing and brainwashing, like with seed oils, olives, avocados, coconuts, and all nuts (except walnuts). Newbies don't understand most studies on these "healthy foods" are done on omnivores eating the lethal Standard Poison Rich American diet, not on the healthiest vegans with ideal biomarkers for LDL, sugar, BP, HR. So, add a line to every statement above saying "in unhealthy omnivores"... and to every study almost published worldwide. Some are allergic to gut inflaming gluten (wheat, rye, barley, triticale) that leads to autoimmune diseases (like type 1 diabetes), which often disappear when avoiding gluten.

11.7.29. AVOCADOS (avoid/minimize, it's a scam food)

Avocados (nutrient list) lower cholesterol in omnivores eating fiberless dairy/meats while raising cholesterol in ultra healthy vegans. Avocados have only 2g of protein/100g vs 15.2g in walnuts, 18.3g in flaxseeds, 16.5g in chia seeds or 25g in lentils, 0.46g fiber/g fat vs 10g fiber/g fat in lentils, 0.65g fiber/g fat flaxseed, 1.12g fiber/g fat chia, 14.7g total fat (mostly useless oleic acid 9.8g, causing instant belly fat in non-ketogenic or regular people who don't exercise heavily daily). Avocados are a very poor source of the much needed linoleic acid LA (1.7g essential ω6 LA /100g) for those who get high ω3 from chia seeds or need LA, due to job or exercise. In 100 g:

1). Walnut got 38.1 g essential ω6 LA (linoleic acid), avocado 1.67 g ω6 LA, 23 times less.

2). Walnut got 9.1 g essential ω3 ALA (α-linolenic acid), avocado 0.125 g ω3 ALA, 73 times less.

3). Walnut got 8.9 g useless ω9 OA (oleic acid), avocado 9.8 g useless ω9 OA (becomes belly fat)

4). Walnut got ω3:6 ratio: 1:4, while avocado 1:13, avocado causes brain/body inflammation.

You have to eat 73 avocados and become obese, to get the same ω3 as in 100 g of walnuts and 50g of chia seeds. Most humans worldwide are ω3 deficient and ω6 overdosed. So, no avocados are not healthy, chia seeds, walnuts are MUCH HEALTHIER. The epidemic of ω6 overdose causes diabetes, Alzheimer, heart disease, atherosclerosis, arthritis, etc. Avocados help you die faster. Even the keto diet lovers don't understand that walnuts have way more fat to burn and much healthier than avocados and even for keto people, avocados are a waste of money. To easily understand the hype behind the Avocado 'Benefits studies' and ads everywhere and their link to Mexican Cartels, please read the Walnut section. Avocado "superfood"☺☺☺ got 0.7 mg lignan polyphenols, broccoli 99 mg, kale 63, flaxseed 250-1500, chia seed 25-150 mg (10% of flaxseed).

Avocados or many nuts/seeds mixed with high glycemic index produce lead to much lower glucose 1 hour after eating as fatty foods slow the digestion. However, high fat meals destroy endothelial function for many hours, so you may die from heart attack or stroke sooner due to thicker blood, even if glucose is lower. Death or a little higher glucose? Which one is better? Avocatin B, a lipid from avocados, kills blood cancer cells without affecting normal blood cells in a Petri dish, but the same can be said of other compounds in much healthier foods ► CR 2015;75 (12):2478-88. Petri dish studies become meaningless if the miracle compound can't reach in vivo the target cancer cell. Avocados kill oral cancer cells in vitro, just not as efficiently as walnuts, greens, blueberries, legumes perhaps ► NC 61(3):348-356. So what? That's not a reason to eat avocados because Cartels financed a study. Avocados are anti-inflammatory when added to a deadly hamburger meal, versus the deadly hamburger meal itself (the study is like most avocado (and other deadly foods in the media) studies: cyanide mixed with arsenic is healthier than cyanide alone) ► FF 4(3):384-91. This is the Age of Fake Science, don't stress, most papers are fake marketing Powerpoints of 4th-7th grade IQ, to please the Aristocratic Industry who funds for profit Universities. Avocados enhance the absorption of provitamin A 2-13 times, just like any other fatty food, so you don't need to eat avocados, walnuts would be way better for this, don't let conmen deceive you ► JN 2014;144(8):1158-66. Avocados make overweight people eating deadly junk food feel full faster, but legumes achieve this much better and with far better biomarkers as the outcome (lower cholesterol, arterial plaque), so avoid avocados for feeling full ► NJ 201312:155, unless obesity or protein deficiency is your health goal. To understand fake marketing science, read this: avocados lower total cholesterol TC 16% in "normolipidemic" (sky high TC, LDL almost double the healthiest people) folks who replaced the deadly fiberless fats with fiber rich avocados, while hypercholesterolemics (folks with high TC) got TC 17% lower, LDL and triglycerides 22% lower, good HDL 11% higher. Fiber lowers blood lipids, as 4th graders know and this is what millions of studies try to conceal, while claiming a "food (Industry paid the study for) is healthy because of a slight lowering of lipids from insanely deadly to slightly less deadly". So, as other studies show, arsenic (avocado) replacing dairy/bacon/margarine (cyanide) leads to better biomarkers. But, if you use other foods, legumes, or even walnuts, you get better results for ω3 index, blood lipids, as there is way more fiber, etc ► AMR 1996;27(4):519-23. This is How Big Mexican Cartels brainwash all to EAT AVOCADOS. In rats (CTR 1991;26(1-2):1-10) avocado seeds nobody eats modify the collagen slightly, and this is irrelevant to humans, but it becomes another science paper. In any plant food, 50000 compounds can exist, and one of them will have a positive effect on one or 30 types of 10 billion types of human cells or killing effects on 4 million types of unwanted, cancer or sick cells. By the same logic, we pick the most lethal poisonous flowers, herbs, fruits on Earth, we isolate 20 good compounds out of 50000, and show via studies they help 10 out of 10 billion types of human cells, by having 1 out of 10 biomarkers improving instead of worsening versus some other food extract compound they compare it to.

Should we then eat that food? NO. So, does it mean now we produce 5 million junk papers about that and use that to decide if to eat a food or do we go after the big picture? **Assistant professors want to publish as much junk as possible to become a tenure professor and get a raise. Another example of junk paper: bovine chondrocytes are protected by avocado oil in vitro (cell culture)** (EBCAM 2008;5(2):191-7), but the same cells are protected by endless extracts from another 9000 vegan foods. So what? In rats wounds heal faster with avocado oil than with petroleum jelly ► EBCAM 2013:472382, in other words: **arsenic is better than cyanide**: petroleum jelly contains toxic carcinogenic, oxidative stress inducing HYDROCARBONS, like PAHs, which block the repair of wounds. **They didn't compare *flaxseed, canola, soybean, chia seed or walnut oil* with avocado oil, only with the worst oil, the one made from "engine oil type of industrial junk". They compare the Food Industry Item with the worst possible stuff and get A STUDY, and more funds to LIE TO USA**. Petroleum jelly is so unlike skin of rats, that's how you get **ANY FOOD TO PASS THIS STUDY and show "amazing benefits"**. They pick the most incompatible with biology, most unhealthy crap to ensure victory. "**Bacon is bad vs avocado, we need 5000000 studies to show this please. More taxpayer funds for that**". A classical example of **BACON**: JAHA 2015; 4(1):e001355 Table 5 has the LDL details of a study of 45 healthy overweight people eating a typical deadly **BACON** US diet with BMI 28, total cholesterol **TC 200 LDL 128** TG (triglycerides) 114 who spent 5 weeks on 3 diets: "low fat" diet (24% fat vs 34% in the other diets) gave TC 190 LDL 121 TG **134**, "136g avocado/day replacing some saturated fat" diet gave **TC 182 LDL 114** TG 109, "canola or sunflower oils replacing some saturated fat diet" gave TC 188, LDL 119 TG 111. Avocados (avocado fat is 61.8% oleic acid) lower TC and LDL more 182vs188 and 114vs119 compared to canola oil (= 61.8% oleic acid) or sunflower oil (= 82.6% or lower oleic acid). The oil and avocado diets were nearly identical (both had nuts/cheese), except for the avocado/oil part. **The 6.7g fiber, 78 mg/100g phytosterols (grow breasts for guys), lowered TC/LDL.** Obviously, they replaced high cholesterol animal fats with 0 cholesterol avocados and cholesterol went down. The same would happen for any vegan high fiber good, just a lot faster and better, so don't bother to eat avocados, eat legumes instead which will lower cholesterol more. youtu.be/a...0k shows why **walnuts are healthier than avocados: most avocado studies are substitution studies**.

HOW TO RIPEN ROCK HARD AVOCADOS (and other fruits) 30 TIMES FASTER:☺☺

Avocados are often hard like a rock and take weeks to ripen if ever. If you want them to ripen in 24-48 hours, place all avocados in a closed paper bag (not plastic bag, since paper allows oxygen inside a little) and place the bag in a warmer room (not the fridge), so ethylene (released by avocados) is concentrating in the bag. **Avocados, bananas and many other fruits (apples, apricots, cantaloupes, honeydew melons, kiwis, mangoes, nectarines, prunes, papayas, peaches, pears, plums, tomatoes) are ethene producing fruits, they release ethene** (or ethylene as it is

called by some) $CH_2=CH_2$ in the ripening process and ripe much faster in the presence of ethylene (which is used commercially to ripen some of these fruits). Many plants do that. So, when the bag concentrates ethylene, it increases the ripening speed by 50 times even. Left in a room in the open, the concentration of the plant ripening hormone (ethylene) is too small and many people trash unripe avocados which don't ripen fast enough, not knowing how easy it is to ripen them. That's why if you store a lot of tomatoes in a bag in the fridge, since ethylene concentrates, it will cause those tomatoes to go bad, whereas if you left the tomatoes in the open in a cool place outside of the fridge they can last longer since the ethylene did not concentrate and did not cause them to go ripe ultra fast. Ethylene is used commercially to ripen tomatoes, bananas, pears, etc. That's why banana peels are super loaded with ethylene and adding any ripe banana or ethylene producing fruit to the avocado bag helps avocados ripen faster. The more avocados in the bag, the more ethylene generated, the faster they ripen. Once ripe, you can take them out of the bag and start eating them to prevent them going bad. Ethylene has been called the aging hormone of plants, and many fruits and veggies go bad really fast in the presence of ethylene so ethylene sensitive fruits and veggies need be stored away from ethylene producing fruits and veggies to maximize shelf or fridge life. Ethylene damaged (they go bad way faster if around ethylene producing fruits in closed spaces like the fridge) fruits-veggies are: asparagus, broccoli, carrots, cucumbers eggplants, green beans, lettuce, other greens, potatoes, zucchini, summer squash, Mexican squash, watermelons. The idea is to never place ethylene producing and ethylene sensitive fruits in the same closed bag unless you will eat them really soon. Don’t microwave avocados or any produce or food, as some enzymes, proteins disappear. Eat it cold, after it came to room temp a little. “It was observed that over 80% PPO (polyphenol oxidase) could be inactivated in 80 s at 11.0 W/g.” ► IFSET 2016;37(A):61-7.

11.7.30. SUNFLOWER SEEDS (use sparingly, lecithin allergy)

Sunflower seeds (nutrient list) have protein quality score of 88 which is higher than Burger King hamburger 69. They got have more selenium than all other readily available vegan foods, except chia seeds. Never eat roasted seeds/foods. 100 g provide a large % of the daily needs of several nutrients: 170% for vitamin E, 21 g of low amino acid score protein, 76% for selenium needs, 81% for magnesium, 97% for manganese, 90% for copper, 29% for iron, 33% for zinc. The ω6:3 ratio is a deadly 311:1, so don’t eat more than 2 g, mix them with chia seeds or high lignan flaxseed oil to achieve a healthy ω3:6 ratio. Sunflower seeds can cause allergy in some, so stop eating if you're allergic. To understand why sunflower seeds need to be eaten rarely or never, please visit the walnut, olive, coconut, avocado sections, to better see thru the fake papers. ☺☺

11.7.31. GREEN, RED & YELLOW SWEET BELL PEPPERS

Peppers are on the infamous dirty dozen list of high pesticides, unless organic. They're also very expensive. They also can cause gas if overeaten, you can choose the yellow type since less is providing more vitamin C. It's useful to know that hot peppers have capsaicin which can cause a heart attack, and CH-19 sweet peppers can contain nonpungent chemicals called capsinoids, that cause fat loss, body warmth, but no heart rate or blood pressure rise, so sweet peppers are a much safer way to get some of the hot pepper benefits: BBB 2007;71(3):671-6, see hot pepper section for more. "Capsinoids (some sweet peppers) are found to be less toxic than capsaicinoids (hot pepper) and possess anti-cancer, anti-obesity, and anti-oxidant biological properties." ► Mol 2016;21(8):966. In some stores organic price is < conventional. The difference between pungent hot and sweet CH-19 peppers is that CH-19 got capsiate with $(CH_3)_2CH\text{-}CH{=}CH{=}(CH_2)_4$-bound to vanillyl group via an ester bond, not amide (see pic), while hot contain capsaicin (amide bond). See this pic for capsaicin vs capsiate difference.

GREEN PEPPERS (avoid: least healthy & cheapest to produce)

Green peppers (nutrient list) have way more vitamin C than oranges/limes/spinach/tomato (80 mg versus 53/29/28/13 mg). They got less vitamin C than kale 93 mg, 18x less lutein than kale (0.341 vs 6.26mg). Green peppers are orange, yellow, red peppers picked up before they develop color. Green peppers are unripe peppers, having much higher alkaloid content. Many alkaloids are toxic, upset our gut (tomatoes, unripe potatoes have alkaloids too). All benefits from green are in the other colors, so avoiding green is best, to prevent acne, toxic overload due to gut lining damage by alkaloids (toxins in the brain too). "Potato glycoalkaloids adversely affect intestinal permeability and aggravate IBD", hence I never eat potatoes, but the healthier yams or sweet potatoes (which I avoid) aren't from the nightshade family, having fewer toxic alkaloids. Green peppers, due to being unripe (increase profit), unlike the others, have high levels of FODMAPs, Fermentable Oligosaccharides, Disaccharides, Monosaccharides And Polyols, which are indigestible, ferment in our colon, causing high levels of gas, bloating, discomfort.

RED PEPPERS (the healthiest, eat them the most)

Red pepper (nutrient list) has *70 times* (70x) the β-cryptoxanthin (which decreases mortality) in green one, 3.6x the β-carotene in tomato, 14x the β-carotene in yellow pepper and 8x more than green, 10x the vitamin C in tomatoes, 2.5x the vitamin C in oranges, 4x the vitamin C in limes, 15x the vitamin C in bananas, 160% the vitamin C in green pepper (128 vs 80) and broccoli, 10x the vitamin A in green pepper. Red pepper has 117 times more lignans than yellow pepper: lignans are the anti-androgen polyphenols that prevent arterial plaque, stroke, hair loss, death. Amino acid score is 86 for cooked, 66 for raw. Red bell peppers got 249x the β-cryptoxanthin in the ONLY non-vegan source, eggs. Red ones are the healthiest for those not eating butternut

squash (1764x the cryptoxanthin in eggs), pumpkin or papaya (390x the cryptoxanthin in eggs), because red peppers got cryptoxanthin and C. ☺☺☺

YELLOW PEPPERS (pretty useless)

Yellow peppers (nutrient list) have 3.5x more vitamin C than oranges (183 vs 53 mg), 14x more than tomatoes, 6x more than limes, 2x more than green pepper, kiwi and broccoli, 42% more than red pepper and kale. *Yellow pepper is the healthiest pepper* for those who get cryptoxanthin from other sources; it has 6x the vitamin C/calorie of oranges. The amino acid score is 86, vs 65 for green, 66 for raw red pepper, higher than most fruits except kiwi.

ORANGE PEPPERS (almost as healthy as the red one)

USDA and other nutrition database don't list orange peppers, so we need papers to estimate nutrient content. PNFS 2019;24(3):327-37 shows orange peppers have almost the exact same amount of vitamin A (carotenoids) as red; Table 4 shows all 4 peppers inhibit BACE1 (beta amyloid cleaving enzyme, the enzyme that creates beta amyloid peptides) and BChE (butyryl cholinesterase) to a similar degree; the yellow inhibits AChE (acetylcholinesterase) (ChE are choline esterases that cause memory loss) 6 times better than orange, 3.3 better than red. The paper explains many polyphenols in fruits and veggies inhibit these 'bad enzymes'.

11.7.32. GRAPEFRUIT (can turn-off liver detox enzymes)

Grapefruit (nutrient list) has 1419 times more lycopene than carrots, 3x less than watermelon, glycemic index 25 (vs 47 orange). The benefits of lycopene are in the lycopene section. 35-45% of the citrus white pith is pectin. So when you eat it, it's better to peel only the outer layer and eat the pectin which provides good fiber to lower cholesterol and blood sugar. The heavy metal detox effects of citrus pectin are presented in the detox section. Pectin is a fiber that reduces the glycemic response of foods by delaying gastric emptying and therefore delaying absorption of glucose by the body. Pectin also plays a role in normalizing blood lipid levels, especially cholesterol. Pectin is a bio polymer of (among other constituents) D-galacturonic acid. Apples, bananas, carrots etc also have pectin, but in lower amounts. Due to pectin and other fiber, grapefruit can cause gas if eaten in > 100 g amounts, especially > 500 a day. Oranges are even worse due to having 50% more fiber (and more of that insoluble indigestible, thus fermenting, fiber), hence I don't buy citrus except a few times a year. Yellow pepper got 9 times more vitamin C than grapefruit, 6x more than orange per calorie, and similar gas issues, but you need eat far less to get same C. There is no peculiar polyphenol in citrus that is vastly different than others. Gas is not a big problem if vegan, since it's odorless if no junk foods with sulfites, SO_2 eaten and there is enough fiber in the diet to allow daily defecation (not junk food *vegans*).

Grapefruit contains compounds that, like black pepper, can turn off the liver detoxifying enzymes, leading to living a shorter lifespan, as toxins are not removed. Don't overeat.

11.7.33. CILANTRO

Cilantro (nutrient list) (also called coriander or Chinese parsley) has 3.4 times more lutein-zeaxanthin than carrots, more β-carotene than all fruits and most veggies, half the β-carotene in carrots, 9 times the β-carotene in tomatoes. Cilantro has ORAC antioxidant score 5141, 36 times higher than watermelon, higher than most fruits and veggies. Cilantro pulls heavy metals out of the body, as explained in the detox section. Cilantro is anti-anxiety ► IJP 2011;43(5):574-7, analgesic ► IJBS 2015;11(1):23-8, anti-diabetic ► BJN 1999;81(3):203-9, anticancer ► BMCCAM 2013;13:347, anti-fungal against candida ► PO 2014;9(6):e99086 and PM 2011;19(1):42-7 ☺☺☺

11.7.34. CANTALOUPE (skip it, watermelon is much healthier)

Cantaloupe (nutrient list) causes high blood sugar spike (glycemic index 65 vs lentil/carrot 25, kale 12), has 4x less β-carotene than carrots/kale, 241x less lutein than kale, 3.3x less vitamin C than red bell pepper, 50000 times less lycopene than watermelon. Cantaloupe (like 900 other vegan foods) reduced the diabetes-induced oxidative stress, renal mesangial cell injury in mice ► Biof 2005;23(2):85-95.☺☺ Cantaloupe has 46 mg ω3, 35 mg ω6/100 g, negligible amounts, but at least a healthy ratio. Tomatoes 80 mg ω6, 3 mg ω3. I stopped eating cantaloupe in 2018.

11.7.35. APPLES (an overrated fruit I no longer eat)

Apples (nutrient list) can lower cholesterol, but are also a high glycemic index food full of fructose that can lead to brain damage/shrinking due to high A1C, to arthritis due to uric acid from fructose, so don't eat many. High fructose intake is linked to Alzheimer. I no longer eat apples since 2022, due to high fructose, 5.9g/100g. The sorbitol and pectin cause excessive gas and the glucose without high polyphenols spike the blood sugar way more than berries, world's healthiest fruit. They contain polyphenol oxidase, so never eat apples with berries and other colorful veggies, as they will destroy those polyphenols as explained in the polyphenol section. Most benefits come from the peel, so eat the peel of organic apples. Cooking/juicing removes most of the useful compounds. Apples prevent oxidative stress induced by amyloid-β (Alzheimer plaque) in culture, but so do 500 other produce items ► JAD 2004;6(1):27-30. Apples prevent cancer, heart disease, asthma, type 2 diabetes, weight gain, but so do phytochemicals in 500 other amazing fruits and veggies ► NJ 2004;3:5. Some researchers get money from the Apple Industry, so be aware. Apple pectin lowers cholesterol, but so does fiber from 500 other foods, like legumes, without having 20 times higher fructose and simple sugars ► EJCN 2012;66(5):591-9. 75 g of dried apples/day for 6 months lowered cholesterol by 13% and LDL cholesterol by 24%,

but so do 500 fruits/veggies ► JAND 2012;112(8):1158-68. Apples are associated (causation is unclear) with less heart disease, but so are 900 other fruits/veggies ► Ntr 2015;7(6):3959-98. Apples may prevent cancer ► PM 2008;74(13):1608-24. Oligosaccharide from apple induces cancer cell death (apoptosis and cell cycle arrest in HT29 human colon cancer cells), just like 900 other fruits/veggies ► IJBM 2013;57:245-54. Apples prevent mammary tumors in rats ► JAF 2005;53(6):2341-3. Moms eating apples while pregnant was linked to less asthma development in their kids, though correlation may not be causation ►Thor 2007;62(9):773-9. The Natural Antivirals section has a paragraph about apple polyphenols with antiviral action. Apples lower oxidized low-density lipoprotein/beta2-glycoprotein I complex (oxLDL-β2GPI) after 4 weeks from the level of heart disease to the level of no heart disease, but so do other foods☺☺☺ ► JFF 5(1):493-7: apples are more effective at lowering *oxidized LDL markers* than tea, citrus: whether this lower oxLDL-β2GPI means less heart disease is unclear: they didn't measure plaque, only a transport complex for the oxidized or 'bad' LDL. Most pesticides/antioxidants of an apple are in the skin, non-organic apples are sky high in pesticides, as explained in the pesticides section on Alzheimer, asthma: apples can thus cause asthma. RED apples are richest in antioxidants. Apple seeds got amygdalin which releases cyanide: don't eat the seeds, see flaxseed cyanide section. Conclusion: apples are not the best or healthiest fruit, which is berries, blueberries especially.

11.7.36. BANANA (useless fruit for low IQ chimps), protein *score* 62

Bananas (nutrient list) have gas forming indigestible starches, ruining your social life, cause stool to smell. Yams (6 ug RAE vitamin A) and 0.5 g simple sugars (vs 12.2 for bananas, high glucose spike), got 87% more potassium: so much for fake internet articles about "bananas the king of potassium", see right hand last column for richest potassium foods. Freeze dried parsley got 18 times more potassium. Bananas contain polyphenol oxidase (takes out polyphenols in berries, as explained in detail in the polyphenol section), the enzyme that destroys all the benefits of colorful fruits and veggies full of polyphenols. Never mix bananas with colorful fruits in smoothies or meals, as you may lose polyphenols and all money spent on those healthy fruits. Monkeys are low in IQ, they eat bananas, not berries like humans. I stopped eating bananas in 2020, as berries and other colorful veggies, fruits are way healthier and fructose damages the brain. IJEB 2014;52(12):1173-81 found after 4 weeks of eating 2-4 bananas in the morning, the fasting blood glucose dropped from 99 to 92, the 2 hour post meal glucose dropped significantly too, the bad LDL cholesterol dropped about 10%. Adiponectin levels went up from 37.5 to 49, which is good, since low levels of adiponectin are associated with inflammation, diabetes, insulin resistance, cancer, heart disease; all of this is minor, other vegan foods get way better results. IJMR 1999;110:27-9 found "Banana decreased the rise of ...blood pressure in healthy volunteers subjected to cold stress.", just like 500 other foods. Banana fiber promote weight loss

in type 2 obese diabetics, like fiber in 500 other healthier foods does ► IJERPH 2010;7(5):1953-62. Green bananas reduce diarrhea, fever and stomach cramps due to amylase-resistant starch that promotes the production of colon short chain fatty acids► PIDJ 2009;28(5):420-5. However, plantain bananas also have high levels of oxalate, which cause kidney stones and arthritis. Bananas alleviate asthma (34% less current wheezing) in children possibly because bananas got more water soluble phenolic acids (a subclass of polyphenols) than other fruits, including apples, though this observational study based on self-reports of asthma and banana intake is not reliable ► ERJ 2007;29(6):1161-8. We need large double blind, placebo controlled randomized control studies to be sure. Bananas were associated with a lower risk of renal cancer, among fruits, but due to an observational study based on self-reports about foods eaten and other confounding factors, this correlation doesn't prove causation ► IJC 2005;113(3):451-5.

11.7.37. CAPERS

Canned capers (nutrient list) got 10 times more polyphenols/calorie than flaxseeds, apples, green olives, black grapes. They're the richest source of polyphenols/calorie and antioxidants/ g of all common foods, except peppermint (30% more) and cloves (68% more). They prevent oxidative stress, inflammation, infections, heart disease, diabetes, Alzheimer, cancer. The AGE inhibitor section shows in 100 g, raw capers got 492 mg (quercetin 233 mg) flavonols, canned capers 304 mg flavonols (quercetin 173 mg). However, in some canned or cured capers, the values go down a lot just like with olives and different processing methods and cultivars having different levels of polyphenols. You can find them in 4 oz jars at the dollar stores. Raw ones are harder to find. Capers have ω3 to ω6 fatty acids in ratio 1.7 to 1, which is super-healthy. They got 47 times less fat/weight than flaxseeds and 2.4% protein. ☺☺☺

Capers prevent gastric cancer ► ETM 2015;10(6):2403-9. The caper essential oil and aqueous infusion have anticancer properties ► FC 2012;132(1):261-7. Capers kill SGC-7901 gastric cancer cells ► APJCP 2014;15(21):9153-7. Capers protect the heart and kill cancer cells. They increased the ability of myocardial tissue to scavenge free radicals, inhibited lipid peroxidation, increased recovery activity of antioxidant enzymes, adjusted the energy metabolism of myocardial tissue, inhibited free radicals. Capers killed HepG2 cancer cells and prevented their proliferation ► OR 2017;37(1):357-67. Capers have anti-tumor activity ► ETM 2015;10(6):2403-9. Capers can down regulate inflammation-involved genes in Alzheimer ► NNS 2016;25:1-8. They reduce doxorubicin -induced cardio-toxicity in cardiomyoblast cells ► AJP 2016;6(5):488-94. Capers can ameliorate cognitive deficits induced by D-galactose in mice and the antioxidant activity may partially account for the improvement of learning and memory function ► TJMS2015;45(5):1127-36. Capers prevent diabetes ► BP 2017;92:293-302. Capers help increase glucose uptake ► BMC 2010;18(11):3940-5. Results showed a significant decrease in fasting

blood glucose levels and glycosylated hemoglobin in caper treated patients compared to control group at the end of the study. Triglyceride level also decreased significantly in caper treated group at the end of the study compared to baseline. ► CTM 2013;21(5):447-52. Capers are antibacterial ► NPR 2011; 25(4):417-21, anti-arthritic and anti-inflammatory ► PHR 2015; 29(12):1901-9 and YZ 2011;131 (3):423-9, promote anti-inflammatory response in vitro through the control of cytokine gene expression in human peripheral blood mononuclear cells ► BMCI 2016;17(1):26. The many health benefits of rutin in capers ► SPJ 2017;25(2):149-64. A problem with capers is that the store ones are fermented; if the fermentation was not done properly, the bad bacteria multiplies to upset the digestion. Once you open a glass jar of capers, refrigerate & cap them immediately to prevent aerobic (oxygen feeding) bacteria from multiplying. Eat only 7 at a time, to give time to the GI tract to get used to so many new bacteria. A can of sauerkraut has the probiotics in 80 bottles of probiotics, so increase intake slowly to prevent diarrhea/gas.

11.7.38. COCONUTS (avoid, especially LDL raising coconut oil)

Coconuts (nutrient list) kill many gut bacteria and reverse Parkinson's, ALS, Alzheimer symptoms in people who use a ketogenic diet. To understand why coconuts need to be avoided by most people, visit the walnut, olive, seed oil, avocado, fake science sections. ☺☺☺ Coconut oil raises LDL *cholesterol* significantly due to the lack of fiber/protein (in coconuts) and high saturated fat content, causing atherosclerosis. Coconut water has little fat, and 19 times fewer calories/g than the white meat. Saturated fat (89% of coconut white meat fat) is inflammatory in general, damages the brain, changing the gut microbiota when eaten in large amounts. The most deadly fat is Long Chain Triglycerides LCT C_{14}-C_{24} saturated fat ► Ath 2016;244:211-5. Coconut oil was labeled unhealthy by the American Heart Association, AHA, who says replacing saturated fat with non-saturated fat cuts heart disease risk by 30%. In the West, saturated fat comes from animal foods, rich in atherosclerosis causing TMAO and cholesterol, TMAO producing microbes and carnitine, choline TMAO precursors, oxidized cholesterol, so this 30% drop of risk may not be always true in populations where whole coconuts *(*cholesterol, TMAO precursor free, TMAO producing microbe free if vegan*) are replaced with vegetable oils, since they got used to coconut fat for 10 millennia and coconut fiber/protein*. Kindly avoid the deadly McDonald's Impossible Burger which has 11 g of coconut oil in it, labeled unhealthy by AHA. Monkeys fed coconut oil had total cholesterol (TC) rise by 176% (351 vs 127, see Table 2), VLDL by 236%, HDL by 148% compared to corn oil, due to the saturated fat, but triglycerides remained the same ► Art 1990; 10(1):119-28. In humans, coconut oil "increased LDL-cholesterol by 10.47 mg/dL and HDL by 4.0 mg/dL" vs normal seed oils ► Circ 2020;141(10):803-14. Tricaprin, 5% of coconut oil, the glycerin ester of capric acid C10, 10 last number (cap at the top) of the decimal system, CH_3-$(CH_2)_8$-COOH was shown to remove plaque. This works, not the coconut oil itself. Without science, we

couldn't separate the tricaprin coconut oil. Kind Science = God. Every bad food has 2+ good chemicals, that we'll include in the immortalist powders of eternity version 1.0. In 8 studies "coconut oil... increased TC levels compared to baseline.. or a comparator (safflower, soybean, palm, corn, olive)... (in) 7 studies... *significantly* increased ... LDL... (in 6) studies HDL... significantly increased." ► EBCAM 2017:7251562.☺ AAMS 2001;30(5):499-502 found coconut milk impairs endothelial function, enhancing atherosclerosis. AJCN 1981;34(8):1552-61 found "Tokelauans (where life expectancy is 69.7 years < 181 nations) obtain a much higher % of energy from coconut than the Pukapukans (where life expectancy is 76.9 years < 99 nations), 63% compared with 34%... cholesterol levels are 35 to 40 mg higher in Tokelauans than in Pukapukans." Doubling the coconut % of calories was linked to a 7 years shorter life, though causation is uncertain. Coconut lovers study authors found both coconut and coconut oil intakes were negatively correlated with CVD death rates, in Sri Lanka (life expectancy 77.8 < 84 nations) ► CMJ 2015;60(3):97-9 (pdf here) in a weak observational study. Correlation is not causation.

Due to Sri Lankans having eaten that for 10 millennia, they have genes adapted for that level of plant saturated fat that nobody else has in the West, so don't assume you eating coconut won't get stroke or heart disease, if not ketogenic, since statements about healthy peasants in there refer to people who work 5 hours a day in the fields and are highly ketogenic, and don't apply to the West, where most are highly sedentary, nonketogenic in comparison. Coconut is "80% of the fat intake" in Sri Lanka ► "CMJ 2006;51(2):47-51, so they have adapted to a high plant saturated fat intake, which is easier because plant fat has no cholesterol and saturated fat is a marker for cholesterol and oxysterol intake in the West. Cholesterol is lower when West replaces saturated fat with seed oils because saturated fat in the West means cholesterol, oxysterol (5-100 times more toxic, LDL raising that is, than cholesterol)/TMAO, so we get these meat/dairy substitution studies that state "data suggests vegetable oils, coconut oil, olive, canola oil, avocados, nuts or seeds are healthy", but it's just the removal of cholesterol, TMAO, oxysterol that lowers TC, LDL cholesterol in super unhealthy people with double the ideal cholesterol, so these fake studies say "arsenic (coconut, olives, avocados, etc) is better than cyanide (fatty meat/dairy)", in order to push sales of the Big Olive/Avocado/Coconut industry lobby that controls, pays, spoils professors in charge of 3 million fake studies. Coconuts are way worse than Avocado/Olives, so try to understand the scam of the Olives and Avocados Mafias. *These frauds never explain that if instead of coconuts or olives/avocados, you would have used walnuts, chia seeds, lentils, blueberries, veggies you would have gotten way better results.* They need $$$ for grants and it only comes from industry, lentils are cheap, they don't push fakery. The idea of needing avocados, olives, coconuts, sunflower and endless highly inflammatory ω6:3 ratio nuts and seeds, to drain your wallet, is similar to the overtesting that leads to shorter life: why not keep it simpler, get plenty of fats from algal vegan DHA-EPA, walnuts, chia/flax only and take care of

things 1000 times more important such as regular sleep hours, deep sleep, air quality, air purification, exercising, good fiber intake, good protein, low AGE intake, etc. Talking of insane fat levels in world diets, check your Lp(a) and LDL to make sure plaque is not sky high. If you're that 0.2% of Americans on a whole plant foods, home cooked, low sodium, high fiber vegan diet, your TC, LDL values are 70+% lower than the omnivore diet, so eating coconuts will shorten lifespan, as you substitute much healthier walnuts/chia seeds for bad fats. All coconut studies were done with omnivores who have LDL/TC almost double of the healthy vegans. ☺☺☺

Coconut water is the healthiest part of a coconut, as it has very little fat. Unlike cheese with 6.4% of fat being MCT and 52% bad LCT C_{14}-C_{24} saturated fat which can cause diabetes and CVD, coconuts got 59% MCT (10 times more) and 31% of LCT C_{14}-C_{24} fat, so coconuts are less deadly. C_6-C_{12} or MCT, medium chain triglycerides (MCT) are "easily absorbed and metabolized by the liver, and can be converted to ketones. Ketone bodies are an important alternative energy source in the brain" ► BJN 2015;114(1):1-14. Coconut oil has 29% myristic C_{14} and palmitic C_{16}, which raise the LDL cholesterol, being the only vegan food that is somewhat similar to animal fats, one that all vegans need to avoid, unless one is a rare ketogenic vegan. JMF 2020; 23(7):689-98 Table 1 shows 100% of the coconut oil fatty acids: lauric C_{12} 54% (raises LDL a lot, other papers give 48-52%, but always about half of fat), butyric C_4 4% (feeds good colon bacteria), capric C_{10} 5%, myristic C_{14} 18% (raises LDL a lot), palmitic C_{16} 11% (raises LDL a lot), stearic C_{18} 2%, oleic C_{18} 5% (ω9, 1 double bond, 18:1), linoleic C_{18} 1% (ω6, 2 double bonds, 18:2). Coconut oil is not MCT oil. Some sites claim coconut oil is MCT but it's not, it's 31% (or 73% if lauric included) LCT and 59% MCT (or just 17% MCT if you define MCT C_6-C_{10}). There can be coconut oil derived MCT that's just C_8 + C_{10}, with no C_{12}-C_{18}. MCT definition fluctuates, some include C_{12} in MCT. "South Seas cultures in which coconuts (hence C_{12}) are the predominant dietary fat source, cardiovascular disease tends to be relatively rare." ► OH 2016;3(2):e000467, possibly due to lower cholesterol intake. This may also be due to lower free radicals generated by the metabolism of MCT versus LCT. JIM 1993;233(3):269-75 found "apparent *absence of stroke and ischemic heart disease in a traditional Melanesian island*" (life expectancy is 67.4 years, < 177 nations, *coconut* = youth elixir? (dead at 67)?) eating many coconuts, very little meat (fish thrice weekly), so very little cholesterol, oxysterol, TMAO forming microbes. This lack of stroke/heart disease was probably due to eating mostly veggies (whole foods) with only about 90-300 g coconut/day (unclear if this 300 g was including the coconut water, if so, the amount of bad C_{14}-C_{24} LCT fat is negligible) per 10 MJ (10 mega joule is 2390 kcalories or about how much many eat daily). APJCN 2004;13(4):377-84 found "the consumption of total fat or saturated fat, including that from coconut, was not a predictor for CHD (coronary heart disease) in this food culture. However, the intakes of animal foods, total protein, dietary cholesterol and less plant derived carbohydrates were predictors of CHD." TD 1997;27(4):215-7 found that both

healthy and CHD people ate the same g of coconuts/coconut oil, so the authors said coconuts don't cause heart disease in populations that got used to C_{14}-C_{24} LCT for 10 millennia. A rat study found that compared to low fat diets,☺☺☺ MCT diets can induce insulin resistance almost similar to LCT diets ► JNB 2011;22(4):366-71. Is it true in humans too? In human intestinal cells, the MCT C_{12} + C_{10} increased gut permeability 7 times to sodium fluorescein in vitro, just as LCT fat does ► JPET 284(1):362-9. However, C_{12} kills bad bacteria in vivo, which helps the gut barrier. Obese people who eat coconut can lose a little weight, because the MCT in coconut oil behaves differently, being used for energy not for adipose storage; the gut microbiota of rats and piglets improved (see section 4.2.3 of the paper, rat feces had 10 times fewer bacteria); gut permeability decreased in piglets, so fewer toxins got through, gut health improved ► Ntr 2016;8(5):281. *In humans, "It has been well established that* lauric acid (50% of the saturated fat in coconuts) represents the strongest antimicrobial activity among all fatty acids" ► BRI 2013:954542. Coconuts kill candida in vitro, but so do 1000 other plant foods, so what ► JMF 2007;10(2):384-7. Plaque can begin due to bacterial attack, so some islands have less plaque. AJCN 1982;35(4):678-82 found that in rats fed 50% of cal as fat, MCT meant 15% less weight gain than LCT and their metabolic rate was higher too, 38 vs 22%. AJCN 2008;87(3):621-6 found BMI 29, almost obese, subjects eating 18-24 g MCT oil lost 3.2 kg vs 1.4 kg for those eating 18-24 g olive oil, due to this higher metabolic rate. ☺☺☺

Coconut water is great for rehydration ► JPAAHS 2002;21(2):93-104, but you can do it at home for 50 times less as explained in the fasting section. Coconut oil raised TC (180 to 194), LDL (115 to 125), HDL (39-42), TG (127 to 134), showing how useless it is ► APJCN 2011; 20(2):190-5 Table 2. Coconut oil/milk (in a can) are deadly for healthy vegans who're not ketogenic, and for most non ketogenic people. Corn fakes mixed with coconut derived fiber (from coconut flour) reduced serum total and bad LDL cholesterol and triglycerides of humans with insanely high cholesterol levels (double of healthy vegans) ► JMF 2004;7(2):136-40, as would another 50000 higher fiber foods mixed with corn flakes, so what? See, they try to argue that coconuts are healthy, the Big Coconut Industry uses the same old techniques of fake studies detailed over 20 pages in the walnut, avocado, olive, seed oils and fake science sections. It's big business, so they flood you with the alleged benefits of coconut and palm oil, another lethal fat. Follow the money. It's pure genocide for USA to import coconuts for anyone, except ketogenic people, since chia seeds and walnuts are way healthier, see more on high tariffs on coconuts/other nuts, except walnuts. Coconuts (any MCT sources) are only useful for 'brain diseased' people with impaired glucose metabolism: in dementia the brain doesn't get enough glucose due to insulin issues, switching to ketogenic diets saves these people: coconut MCT is turned into ketone bodies (β-hydroxybutyrate, acetoacetate, and acetone) in the liver; the 3 ketones are alternate fuel for the Alzheimer-Parkinson brain preventing thus cell death due to glucose shortage ► BP

2006;17(5-6):431-9. NIH is working on an 'MCT' 10 times more effective than coconut oil in reversing Alzheimer in mice, so science will win over nature again, as with the ISS traveling 9000 times faster than nature human running speed, etc.

11.7.39. CUCUMBERS: eat only if organic or peeled, high pesticides

Cucumbers (nutrient list) are hydrating, but the bitter cucumbers can have 7 times more cucurbitacin than the sweeter types, leading to 7 times more burps (10 burps if you eat them at every meal), so try to buy burpless cucumber seeds from Amazon and plan in the backyard or to buy sweet cucumbers (Asian stores may have them, since Asian varieties got 3-7 times less burp chemicals). One article says Persian cucumbers, or even English (long, also called European or Hot House) cucumbers sold for 1$/lb only sometimes, are in the burpless category, having fewer seeds, so less gas, less burping, so if you want to eat cucumbers, definitely go Asian, Persian or English to avoid gas and burps. I now eat only English ones (cost 0.7$/lb at $ store) since they cause 10 times less burping than the regulars I ate before. Also, Persians ones cost twice as much and are harder to peel, as you need peel 5 to get same cucumber weight as with English, due to tiny size. English ones an come in bags of 3 and some bags are weighting 50% more than others even if same price, so sometimes you can get them 3 times cheaper than Persian. Costco has organic English ones too, though those are pricey. Check food4less weekly ad or local store to see prices; 1st time I checked (2021), they had 4 cukes for 1$. Cucumber is part of the curcubit family known to have compounds that lower blood glucose. This PDF has a chart that shows that cucumber is almost as good as metformin (antidiabetic medicine) in lowering fasting blood glucose. Thus, it's good for people with high fasting glucose, but deadly for people with very low fasting glucose as they may have 0 energy and enter coma, so perhaps, measure your fasting glucose if you eat cucumbers a lot to make sure it's OK. "Peeling procedure (not washing) also led to highest loss of 93.4 and 63.7% in ethion and imidacloprid residues, respectively" ► IJPH 2016;45(11):1481-90. Some online articles explain greenhouse cucumbers can have more pesticides: "the greenhouse cucumber contained the highest value of total pesticide residues (1.016mgkg(-1)), followed by organic (0.442mgkg(-1)) and then conventional (0.415mgkg(-1)) cucumbers. Heavy metal contamination in the three cucumber types accounted to 4.968, 5.350 and 6.248mgkg(-1), respectively." ► Chem 2009;75(5):601-9. The skin of English cucumber is so thin and weak, they dehydrate, so they wrap them in plastic; another issue is that pesticides will migrate inside the fruit easier for English, so peeling an English cucumber will probably remove fewer pesticides than peeling a traditional cucumber. Just because pesticides are organic *(if you buy organic English cucumber which is often times 5x more expensive at least)* or natural, they don't necessarily produce less or far less damage to humans than artificial pesticides. *Peeled cucumbers have half the glycemic load of unpeeled cucumbers*. I always peel cucumbers, unless

organic. After reading these papers it's clear even organic ones are better peeled, if eaten daily. If you eat conventional cucumbers, it's best to peel them, since most pesticides are in the peel and cucumber have almost the highest amount of pesticides in their peel of any other fruit or veggie. Traditional cucumbers may have more biophotons than English ones, being fresher from the field; as cucumbers sit, they lose biophotons by 2-7 times depending on the storage time. I personally felt more biophotons in field ones than plastic wrapped. ***Peeling will reduce levels of some pesticides 14 fold, giving you something better than organic, which also uses natural pesticides, not man made ones***. If you eat non-organic fruits and veggies, it's best to wash them well: it can reduce content by 50%. Cucumber peel is not where the anti-diabetic benefits come from, so it can be discarded. Peeled cucumbers have 12 cal/100 g vs zucchini's 16 cal. If you want more protein zucchini is way better, as protein score is 89 instead of 19 for cucumber, and protein amount is double (1.2 g) the one in cucumber (0.6 g). ☺☺☺

The next foods I never eat, but they're healthy:

11.7.40. ARTICHOKE (PURPLE IS HEALTHIER THAN GREEN)

Artichokes (nutrient list) got 5.4 g of fiber in 100 g, 14 times more than (14x >) watermelon, 5x > zucchini, tomatoes. They got 3.3 g of protein, more than any other vegetable except 3.4 g for Brussels sprouts (though B. sprouts can't be eaten in large quantities due to goitrogenic compounds), almost 6x > protein than watermelon, pineapple, carrots☺☺, 3x > protein than zucchini, tomatoes. Eat it raw, as a smoothie or steamed. Artichokes lower oxidative stress ► PHR 2010;24(4):565-70. Artichokes lower blood pressure for hypertensive people ► JDS 2009;6(4):328-41. Artichokes protect the liver and digestive system ► PFHN 2015;70(4):441-53. Artichokes benefit for the circulatory system ► Mol 2014;19(3):3654-68. Artichoke is a Herbal Medicine in the Treatment of Atherosclerosis and Liver Diseases ► PL 2012;69(10):1129-31.☺☺

11.7.41. COLLARD GREENS

Cooked collard greens (nutrient list) have 30 times more lutein-zeaxanthin (carotenoids in the human eye macula, essential for good vision) than carrots, 20% more protein per calorie than cooked broccoli, 3% more protein per calorie than cooked lentils, 11% more protein than cooked kale and higher protein quality than lentils, kale or milk (amino acid score 94 versus 91 for kale, 86 for lentils, 85 for milk). Collards also have 3 times more absorbable calcium and many other nutrients than broccoli. However, they're high in oxalate. Collard greens are easy to steam and unlike other cruciferous vegetables, have far fewer goitrogens (compounds mostly destroyed during cooking, which interfere with the thyroid when some foods are eaten raw in large amounts). Steamed/cooked broccoli has 47% more carbs than steamed/cooked collard greens

per 100 g. Steamed/cooked kale has 14% more carbs than collard greens, collards have more absorbable calcium and 11% more protein than kale, besides higher quality protein (94 vs 91 amino acid score). Steamed collard greens etc prevent cancer and heart disease. Steamed collard greens lower cholesterol more by binding bile more than steamed kale, mustard greens, broccoli, Brussels sprouts, and cabbage ► NR 2008; 28 (6):351-7. Collard greens, broccoli, cabbage, mustard greens, and bok choy prevent prostate cancer ►NC 2002;42(1):1-9.

11.7.42. TOMATO, protein *score* 52 (cucumber score is 19)

Tomatoes (nutrient list) got 2,576 times more lycopene than carrots; tomato paste has lycopene too. When watermelon is not available, tomato products can be a good source of lycopene, whose benefits are in the lycopene section. Tomato has histamine, causing dry eyes. Tomatoes have 80 mg ω6 and 3 mg ω3 acids. Tomatoes that are conventional have a lot of pesticides, so it's best to eat watermelon or grapefruit for lycopene if one can't buy organic, or buy organic tomato extract lycopene (10$ first subscribe, unsubscribe each time to make it 1st subscribe/120 caps of 30 mg, 30 mg = 2.5 lb tomato). 120×2.5=300 lb tomatoes for 10$. Tomatoes reduce platelet activation and thus atherosclerotic plaque more than all fruits tested in this study ► Plate 2001;12(4):218-27. Tomato juice (but not lycopene alone) improved post-ischemic ventricular function, and reduced myocardial infarct size☺☺☺ and cardiomyocyte apoptosis ► FRR 2005;39(4):449-55. Tomatoes prevent obesity, diabetes, coronary heart disease, and hypertension ► MI 2014:139873. Some may be allergic to the tomatine alkaloid in tomatoes, which *may damage their gut/stomach cells*, so if people get acne or rash, they can switch to watermelon or organic tomato extract lycopene via supercritical CO_2 extraction that removes tomatine (very polar alkaloid incompatible with nonpolar CO_2 extraction). Green tomatoes have 100 times more tomatine, so avoid them like the plaque, same for green peppers. Don't try to ferment green tomatoes, etc, like some di, too toxic. Avoid unripe fruits as they have very lethal compounds to protect the plant from animals eating them.

11.7.43. BRAZIL NUTS (eat only very small amounts)

Brazil nuts (nutrient list) have 10,000 times more of the essential nutrient selenium (Se) in 100 g than zucchini. For heavy metal poisoning, they could be useful, since Se traps heavy metals, though 1920 µg Se/100g Brazil nuts can poison you.☺☺☺ But Brazil nuts also have 1,000 times more radioactive Radium (Ra) than other foods, most of which is not retained by the body. The problem with Ra is that nobody knows exactly at what levels it starts to do damage, but it's known that it can cause blood and bone cancer as explained in the free book about Radium at nih.gov..26. To understand why Brazil nuts need to be avoided to prevent Selenium and Radium POISONING, please visit the walnut section and the avocado section, to better see thru the fake

science papers. ☺☺☺Bananas, carrots, meat, get about 3,000 pCi/kg, sweet potatoes 4,450, Lima beans 4,640, coconut 6,400, spinach 6,500 from potassium (K) 40 (an isotope of potassium), and Brazil nuts about 6,600 pCi/kg from Radium. Lima get 4 pCi/kg from Ra226 and the rest from K40, bananas and carrots and many other foods get 1 pCi/Kg from Ra226, rest K40. Brazil nuts have deep reaching roots which suck Radium from the ground. That's why people correctly say "Brazil nuts have 1,000 times more Radium than most foods". Potassium is used by the body (most cells have about 5 mmols of it) and that's why we're slightly radioactive as humans, potassium 40. But Radium 226 is a different story; the body doesn't use Radium for anything. Brazil nuts have 15% C_{15}-C_{24} saturated fat (more than any other nut, 6% for walnuts) that can cause diabetes, have a deadly ω6:3 ratio of 1142:1 instead of the ideal 1:1 to 4:1, so they're best avoided. High ω6 causes inflammation. I never ate them, and wish they stop growing them.

11.7.44. HOT PEPPERS (can cause dry eye) (powder is far less hot than pepper)

Chili peppers (nutrient list) (red, orange, green, yellow, Jalapeno, Cayenne, etc), whose main active ingredient is capsaicin, lower all cause mortality if eaten a few times a week. However, excess chili peppers may cause dry eyes, damage tear glands, corneal nerves, see ginger TRPV1. Chili peppers may help those with low heart rate and kill those with higher pulse. No food is "good for all". "ranging from 0% capsaicin content (bell pepper) to 0.9% (red chili cultivars)" ► Mol 2022;27(3):898. "The 'hotness' of a pepper is measured by the Scoville scale that considers the number of times the chili extract must be diluted to make the pungency imperceptible. The piquancy of different peppers depends on its capsaicin content ranging from 0 Scoville heat units (SHU) in bell pepper (sweet) to 16 million SHU in pure capsaicin." ► Mol 2016;21(8):966. "When capsaicin and menthol... were used together (in vitro), their anti-inflammatory effect increased several hundred-fold" vs using each compound alone" ► Nutr 2026;18(3):376.

Cayenne pepper pills for weight loss were associated with myocardial infarction in a healthy 25 year old, but other diet factors could have caused it ► IJEM 2012;5:5. Capsaicin raises heart rate and causes heart issues for people with heart conditions, so research it more before eating too many or read sweet pepper section on some sweet pepper varieties that have similar benefits to hot peppers without the heart risks. It's best to eat peppers organic, as they're high in pesticides if conventional. Jalapeno peppers are the least "hot" in this category and easiest to eat in larger quantities when having stuffed nose (to unclog): Sinus Buster is a nasal spay with about 10 ppm capsaicin (can make a tea with peppers and inhale steam or steam it in a pressure cooker and inhale once done or rub some tea/water off your nostril to inhale, to save $). Red chili peppers have 709 µg lutein+zeaxanthin, green chili 725 µg, Jalapeno 492 µg per 100 g, but red chili have 50% more carbs. The only issue is you can't eat much chili raw, it's too hot. β-carotene is 455 µg in Jalapeno, 671 µg in green chili, 534 µg red chili, 449 µg tomato. Capsaicin-containing chili

improved postprandial hyperglycemia (lowered blood glucose after a meal), hyperinsulinemia, fasting lipid disorders in women with gestational diabetes mellitus and lowered the incidence of large-for-gestational-age newborns ► CN 2016;35(2):388-93. Total mortality for participants who consumed hot red chili peppers was 21.6% compared to 33.6% for those who did not (absolute risk reduction of 12%; relative risk of 0.64) ► PO 12(1):e0169876. Capsaicin reduced blood pressure of hypertensive persons by increasing IGF-1 levels in the blood ► BBB 2009;73(6):1456-9. Capsaicin lowered dog blood glucose ► PHR 2001;15(5):391-4, lowered obese mice blood glucose by about 50% ► JOS 2012;61(9):515-23, restored blood glucose to normal in mice with lung cancer ► NPR 2009; 23(8):763-74. Capsaicin reduced pain without affecting immune parameters ► RAMI 2012;1(4):221-54. Capsaicin prevents mast cell inflammation ► IJIP 2013;26(3):597-600, is anti-inflammatory ► JBRHA 2007;21(1-2):1-4, had other benefits ► OH 2015;2(1):e000262. Capsaicin-sensitive sensory nerves may control blood pressure ► CHDDT 2007;7(1):37-46. In obese mice fed a high fat diet, capsaicin reduces obesity-induced ***insulin resistance, hepatic steatosis*** ► Obe 2010;18(4):780-7. It lowers LDL cholesterol in rats being a good antioxidant ► PHR 2003;17(5):454-8, attenuates metabolic dysregulation in genetically obese diabetic mice ► JMF 2011;14(3):310-5. Capsaicin ***stimulates lipid mobilization from adipose tissue***, lowers the perirenal adipose tissue weight and serum triglyceride level in lard-fed rats ► JN 1986;116(7):1272-8. BMJ 2015;351:h3942 found those consuming spicy food < 1 day/week had 6.1 deaths/1,000 people, 1-2 days/week 4.4 deaths/1,000, 3-5 days/week 4.3 deaths/1000, 6-7 days/week 5.8 deaths/1000. Maybe eating spicy food daily is worse than eating 1-5 days/week, which is matches studies showing too much capsaicin can increase heart rate, which in of itself tends to lower lifespan. When taken in large quantities or in pill form (not peppers), 2 individuals reported problems. Moderation is key, but usually people don't overeat chili peppers due to bitter taste. Capsaicin boosts fertility, can cause more night sperm discharges, so stop taking it if you have more discharges during sleep. Large studies however, not 2 individual cases (there is always an exception to every rule or a food allergy issue perhaps), have showed positive health outcomes of peppers as explained above. Cooking peppers, steaming, boiling, etc doesn't have a significant impact on capsaicin ► FC 119(4):1619-25. ☺☺☺

11.7.45. NUTRITIONAL YEAST

Nutritional Yeast (nutrient list), amino acid score 127 (see amino acid score section), found at many health food stores, has 50 g complete protein and 24 g of fiber in 100 g, tons of the 8 B vitamins, twice the daily needs of essential selenium (more selenium than any other food, except Brazil nuts). Many buy these in bulk (10-20 lb google it) to get them at half of a third of the usual price and use them as a protein source in smoothies, since a Burger King hamburger has only 14 g protein of score 69 in 100g. Nutritional yeast was used successfully to treat colds in

children (β glucan stimulates our own immune system) as explained in JNFS 6(4):518 or in the 5 minute video (colds dropped in half after 1/16th of a teaspoon). However, those with Crohn's disease are advised to stay away from it. People with some acne related disease (Hidradenitis Suppurativa) got much better by avoiding yeast, dairy, beer, pizza and other yeast rich foods. Yeast has more protein than seaweeds (spirulina, chlorella, etc) per fat calorie and any other food on Earth. Yeast is a much more complete protein than Burger King ham. This means you need to eat 2.4 times more burger king hamburger protein to get the same amount of essential amino acid tryptophan as in the nutritional yeast protein. In 3 spoons of yeast, you get about the same tryptophan as in 1.25 burgers. See the lead section for 0 lead brands.☺☺☺

11.7.46. ASPARAGUS

Asparagus (nutrient list) is potentially anaphylactic (deadly), antibacterial, anticarcinogenic, antidiarrheal, antidiabetic, anti-inflammatory, prevents cataracts and arthritis, aids digestion, lowers blood pressure, triglycerides and cholesterol. As with all fruits and veggies, cooking destroys many of these benefits, but raw asparagus is causing more allergic reactions in some people than cooked one. In some people the allergy is so bad that they can be sent into anaphylactic shock and die, due to some chemicals in it; the theory is we vomit because of 1,2,3-trithiane-5-carboxilic acid, hexagonal -S-S-S-CH_2-CH(COOH)-CH_2-, which also causes skin allergy ► AJCD 1996;7(1):41-6, so if you never ate it, it is best to eat a tiny bit at a time and increase the amount gradually if no nausea, vomiting, stomach pain, etc; asparagusic acid (which causes specific urine smell due to its metabolites) is the same formula minus a sulfur, so a penta ring. Philosophy = love of sophia or wisdom; philo means love, like, hydrophilic = likes water; "an aphyla reaction" is mnemonic for "an unloved reaction", we don't love vomiting or dying due to asparagus, since antonyms often are formed by adding a, typical, atypical. I vomited twice after eating it raw, so I avoid it. Asparagus protein has a lot of methionine and cysteine compared to most vegan foods and canned one causes stool odor and rotten egg gas, due to the sulfur compounds (like the deadly one above) being made more bioavailable for the colon bacteria. People can die from allergic reaction from fish, dairy, chocolate (milk in it), and nuts all the time. Spinach has 7.5 times more oxalic acid than asparagus in 100g. Grams of protein/100 calories: 11.0 asparagus, 5.3 milk, 7.5 zucchini, 4.4 quinoa, 2.0 rice, 3.4 cooked buckwheat, 7.8 cooked lentils, 8.8 eggs, 6.7 cheese. Asparagus has 10.5 g fiber/100 calories, versus 0 for dairy. It may be wise to not eat more than 3 lb raw asparagus daily (cooked no more than 6 lb), since some may not be able to eliminate fast all oxalic acid it has. Asparagus has no goitrogens. Asparagus saponins kill human liver cancer cells ► CO 2012;19(Suppl2):eS1-9 and human blood cancer cells, preventing leukemia ► CL 1996;104(1):31-6. Asparagus lowers blood glucose in rats ► BJN 2012;108(9):1586-95, lowers blood pressure in rats, helping cure hypertension ► JAFC 2013;

61(23):5520-5, lowers bad and total cholesterol, plus triglycerides in rats ► IJMS 2013;14(11):21227-39. It helps flush out the kidneys preventing the formation of kidney stones. It's also used to prevent menstrual cramping, increase fertility and milk production in nursing mothers ► PR 2010;4(8):215-20. Asparagus prevents coughing and is used at times for tuberculosis even ► Fitot 2000;71(6):686-9. It prevents stomach ulcers ► JET 2003;86(1):1-10, has strong antioxidant effect, scavenging free radicals and preventing aging ► JCMA 2016;79(4):205-11. It has 5 main antioxidants: ferulic acid, kaempferol, quercetin, rutin, isorhamnetin ► JFST 2015;52(5):2690-700. Asparagus prevents diarrhea in rats ► JEP 2000;72(3):421-7, has antioxidant effects on rat liver cells ► JEP 2000;71(3):425-35. It had the highest radical trapping antioxidant power among 34 Italian veggies, the TRAP assay test for antioxidant power ► JN 2003;133(9):2812-9. ☺☺☺

11.7.47. SPINACH (minimize to avoid kidney stones/arthritis)

Spinach (nutrient list) has 48 times more lutein+zeaxanthin than carrots (256 µg carrots, 12,197 µg spinach) per 100 g. Kale has 1050 times more lignans than spinach (lignans prevent hair loss and arterial plaque, by blocking DHT formation), more β-carotene than carrots and about 48 times less oxalic acid than spinach (oxalic can lead to calcium oxalate kidney stones), so spinach is useless, as oxalate can cause arthritis too. However kale has more goitrogens, so from that point of view spinach is better. I gave up eating spinach in 2018. All the benefits of spinach are found in kale. Spinach contains a little α-lipoic acid. β-carotene in spinach (5,626 µg/100g raw, 6,287 µg cooked) is high, close to the top sources: carrots (8,285 µg), kale (9,226 µg). Papaya got only 276 µg, tomato 449 µg, raw broccoli 361 µg. Spinach has 7-8 times more magnesium Mg than tomato /carrot, kale 3.5 times more Mg than tomato/carrot. Spinach has about same iron as cooked lentils. Adding lemons to spinach meals can help prevent kidney stones to some degree, but also ruin your throat, vocal chords and teeth. Cooking spinach increases two nutrients: β-carotene by 12% and vitamin E by 5%. Cooking also decreases 5 nutrients: folate by 25%, vitamin C by 65% (28 mg becomes 9), potassium by 16%, ω3 fatty acids by 33% (139 mg becomes 92) and Lutein+zeaxanthin by 7%. Conventional kale and spinach have far more pesticides than organic ones, so cooking does help to reduce pesticide content; raw spinach is best eaten organic. Tenderly gently kindly read the oxalate section before eating spinach, to avoid kidney stones, dialysis 2 hrs/day for 40 years of your life. ☺☺☺ It may also save 25 years of your life. Spinach also got histamine, which causes dry eyes, another reason to avoid it. Spinach is an overrated food, pushed by Big Spinach Mafia using fake science.

11.7.48. BUCKWHEAT (gluten free)

Buckwheat (nutrient list) is anti-Alzheimer, anti-cancer, anti-hypertension, anti-diabetic (glucose drops 19% in rats, less in humans), skin protecting, cholesterol-lowering, rich in antioxidants,

memory, and cognition boosting ► FC 2016;203:231-45. Buckwheat *the only grain that can be eaten raw without soaking* (not a good idea to eat often raw, because of lectins as explained in the beans section), and tastes like roasted sunflower seeds. It has very little fat, less than many grains. Oats, wheat and rye can only be eaten raw after a longer period of soaking (buckwheat becomes very soft and ultra easy to eat after just one hour of soaking, those with digestive issues would benefit by soaking it 2 hours; can be added to smoothies). The amino acid score is 99 unsoaked compared to soaked wheat score of 52, soaked oats 81, rye 80. Buckwheat is the best grain overall (protein score section explains more why it's best) with lowest saturated and ω6 fat among common grains. The bulk bins section of many stores carry buckwheat. Buckwheat products induced lower postprandial plasma glucose in humans ► NJ 2013;12:64. Consumption of buckwheat induced significantly lower postprandial blood glucose and insulin responses compared with the wheat bread in humans ► JAFC 2001;49(1):490-6. Buckwheat offers lower cholesterol, lower blood pressure, neuroprotection, anticancer, anti-inflammatory, antidiabetic effects ► JAFC 2015;63(36):7896-913. Buckwheat anti-cancer activities in vivo and in vitro ► MMR 2015;12(2):1777-82. Buckwheat reduces glucose by up to 19% being anti-diabetic ► JAFC 2003;51(25):7287-91. Buckwheat lowered glucose readings in mice, but rutin (in buckwheat did not), indicating it's not the rutin polyphenol who does the lowering ► JNSV 2011;57(6):441-5. Buckwheat lowers triglycerides in diabetic mice ► JMI 2014;61(3-4):345-52. Buckwheat lowers cholesterol in diabetic mice ► JFS 2010;75(9):H294-9. A study of 3,542 Mongolians from 2 regions, one with buckwheat as staple food and another with corn as staple food revealed the buckwheat group had lower hyperglycemia (1.56% vs 7.70%),☺☺ hypertriglyceridemia (26.56% vs 31.04%), hypercholesterolemia (4.02% vs 7.76%), abnormal LDL (4.66% vs 8.81%). Thus buckwheat is much healthier, which may be because 100 g of cooked buckwheat has 0.6 g of fat, while 100 g of cooked corn has 1.3 g of fat. Corn has 2 times more C_{16}-C_{24} saturated fat, known to spike glucose by destroying insulin producing cells. Corn also has 3.2 g sugars, vs 0.9 sugars for buckwheat ► CEPP 2007;34(9):838-44. Buckwheat lowers blood pressure and nitrotyrosine immunoreactivity in rats ► PHR 2009;23(7):993-8. Buckwheat lowers hypertension and high cholesterol in humans ► AJCN 1995;61(2):366-72. Buckwheat improves cognition and memory function in an Alzheimer mouse model ► FCT 2013;53:105-11. Rutin found in buckwheat improves cognition, memory in an Alzheimer model ► JMF 2015;18(6):631-41. Buckwheat rutin, phenolic compounds protect the skin from UV ► Ph 2006;61(3):237-40. ☺☺☺

11.7.49. TURMERIC/CURCUMIN (can cause liver damage/abortion)

Turmeric (nutrient list) has many health benefits besides preventing cognitive decline, though the curcumin pills sold are allegedly mostly useless, having too little curcumin to be effective, though it inhibits Covid19 in silico and in SH-SY5Y cells ► SR 2024;14:10696. It increases LLT,

TBUT in dry eye patients, so it helps diminish dryness ► IJO 2025;73(S3):S428-34; it also aids in vitro cornea cells in overcoming oxidative stress EER 2025;260:119584, so one day it may be in artificial tears. The cheapest USP brand is Kirkland, 0.3$/gram curcumin, Costco 43$ 320 caps of 95% extract, 475 mg curcuminoids/cap, so 475 mg/cap plus 5 mg bioperine (95+% piperine) to "increase absorption 20 fold". However, many amazon reviews show that curcumin makes 10 year long knee pain vanish, so it must work in some people, because curcumin inhibits NF-kB, the master switch that turns on inflammation inside humans. When joints experience friction or minor wear, they produce inflammatory proteins called cytokines (TNF, IL-1, COX-2). Curcumin works identically to OTC NSAIDs by blocking the COX-2 enzyme, so it stops the production of TNF, COX-2 inside your knee's synovial fluid, turning off the swelling and erasing the local pain signals. Section 3 of BRI 2014:186864 lists 20+ papers on curcumin antiviral action: blocks flu virus infection, haemagglutination activity. 30 µM curcumin reduced viral yield 90+% in cell culture. Unlike amantadine drug, viruses did not develop resistance to curcumin ► FC 2010;119 (4):1346-51. Ebay sells a lot of Kirkland, some at 20$ due to fast expiry date, but Kirkland offers a per g price 10-30 times cheaper than other brands. The cheapest brand with zero inactive ingredients is Micro 24$ for 120 caps of 320mg curcuminoids/cap. The 'piperine boosts curcumin bioavailability 20 fold' is a hypothesis that has recently come under scrutiny, as one study found piperine (5% of black pepper spice) doesn't increase curcumin bioavailability ► iSci 2025;28(6): 112575: "Piperine doesn't enhance curcumin bioavailability or systemic uptake". Piperine simply turns off liver detoxifying enzymes, placing you at risk of organ damage from other toxins you eat: sure, it lets more curcumin into the blood allegedly, but it can also let in deadly chemicals. Moreover, many turmeric pills were linked to liver damage, since pills are more bioavailable and the extract of many plants is obtained by chemical treatment or solvent extraction methods that change the chemistry of the compounds in the extract, turning them into poisons. So, it is critical to realize pills often fail due to higher dose or bioavailability or denaturing of compounds, not because "powder form of nutrition doesn't work". This is important if we will develop eterni foods. Turmeric can cause abortion, avoid if pregnant. Turmeric, ginger, rosemary, sage, oregano, etc are very good at preventing and removing β-amyloid plaque in the brain, but doctors advise against using some of these if you're pregnant as they can cause miscarriage or even birth defects. In some people the effect of 760 mg turmeric powder (100 mg curcumin equivalent) on Alzheimer was amazing after 3 months and people were able to recognize their family within 1 year. In 100 g turmeric powder has 21 g of fiber (7 times more than cooked broccoli and collards, 10 times more than kale) and 8 g of protein (4 times more than cooked collards/kale and 3 times more than cooked broccoli). ω3 to ω6 ratio is 1:3.5, better than walnuts, 482 mg ω3, 1694 mg ω6. Turmeric has 161 times more ω3 than tomato. Herbco..ic sells turmeric for $4.25/lb. However, because unsaturated fats in powders become oxidized with time (like all cooking oils go rancid if left in transparent bottles to endure heat, light), and can

form atherosclerosis causing compounds, turmeric powder is best fresh, always frozen in an air tight package; raw turmeric root is way better than powder, to be sure you're not ingesting rancid powder (this applies for all ground spices). Turmeric prevents Alzheimer ► Ayu 2012;33 (4):499-504, lowers blood glucose ► IJEM 2014;12(4):e18081, lowers LDL in coronary syndrome patients ► AMI 2008; 40(4):201-10. Curcumin fights psoriasis ► BJD 2000;143(5):937-49, cures IBD, pancreatitis, arthritis, chronic anterior uveitis ► AMR 2009;14(2): 141-53, rat arthritis ► CT 2011;162(3):201-7, prevents mice cancer ► Biof 2000;12(1-4):107-12. Curcumin free turmeric fights cancer, so turmeric is more than curcumin ► MNFR 2013;57(9):1529-42. It's antimicrobial, antioxidant, astringent ► IJDR 2009;20(1):107-9, antiinflammatory ► JACM 2003;9(1):161-8.

"the increase in bioavailability (of curcumin active ingredient) was 2000%" when they added black pepper to the curcumin☺☺☺ ► PM 1998;64(4):353-6; curcumin is allegedly (though proven false in the 2025 study, done 27 years later) absorbed 20 times more when eaten with black pepper, due to the inhibiting of curcumin transformation in the liver by the peperine in pepper. Raw turmeric has some fat and this increases the curcumin absorption 7 times (see this 4 min video) vs curcumin pills. There is one issue with turmeric, not present with peppermint, ginger and other spices with similar effects: it can cause gas/stool odor, so I never eat it since 2024. When I tried it in October 2020, I got a big acne breakout, after 2 weeks of no acne, with biggest eruption after I ate the most raw turmeric ever as a test to see if turmeric (curcumin byproducts from liver?) can cause acne. Turmeric also stains anything used to make smoothies with, with its orange tint (teeth if you chew it too long and don't rinse/eat after); it is very hard to clean the food processor afterwards, so perhaps you can add it last in a smoothie if raw and don't run the food processor more than 30 seconds with it or better yet, chew it, as it's soft.

11.7.50. BROCCOLI (removes the 7g brain microplastics, though kale has 10 times more sulforaphane, removing 10 times more)

Broccoli (nutrient list) prevents many forms of cancer, lowers cholesterol and blood glucose, has 5.5 times more (5.5x >) lutein-zeaxanthin (if raw, 4 times if cooked) and 15x > vitamin C than carrots, 7x (5x if cooked) > vitamin C than tomato, 3x (only if cooked, raw it has only 60% more) > vitamin E than tomato, 3x > protein per 100 g than most produce, half the protein in beef per calorie (maybe make a big smoothie with 18 g of protein from broccoli alone). Broccoli amino acid score is 83 raw, 112 cooked, higher than 69 for Burger King hamburger. Broccoli sulforaphane was shown to remove microplastics from the brain. Broccoli sprouts have 20-50 times more sulforaphane than broccoli itself, see how to make broccoli sprouts from 1lb/17$. Cooked broccoli has more sugar, less protein, raises blood glucose faster. Cooking destroys the Microplastic remover Sulforaphane, (broccoli 26mg/100g, kale 174-303mg, cauliflower 0, cabbage 1, brussels sprouts 0.26 (table 3), while broccoli sprouts 1153 mg/100g) all biophotons

and certain anti-cancer compounds, phenols, flavonoids, most enzymes, phytonutrients. Those eating more cruciferous veggies have lower risk of mortality, heart disease ► AJCN 2011;94(1):240-6. Broccoli lowers cholesterol, triglycerides ► DRCP 2012;96(3):348-54, improves insulin resistance ► IJFSN 2012;63(7):767-71, contains α-lipoic acid, a cellular antioxidant that raises glutathione, the master antioxidant in all human cells. Broccoli attenuates nasal allergic response to diesel exhaust particles, something very useful to those with asthma or those living in a smoggy area ► FF 2014;5(1):35-41. Broccoli sulforaphane lowers diesel asthma attacks ► AJPLCMP 2007;292(1):L33-9. Broccoli helps antioxidant enzymes in the upper airway, helping those with asthma ► CI 2009;130(3):244-51. Dietary broccoli lessens development of fatty liver and liver cancer ► JN 2016;146(3):542. Broccoli fights many forms of cancer: breast, prostate, colon, hepatic, bladder, bone, brain, leukemia, pancreatic, and melanoma ► CL 2008; 269(2):291-304. Selenium from broccoli protects against colon cancer ► JN 2000;130(9):2384-9. Broccoli prevents colorectal cancer ► AO 2013;24(4):1079-87.☺☺☺

Glucoraphanin in cauliflower and broccoli protects against cancer ► PPS 2010;9(4):597-600. When we chew or make a smoothie with raw broccoli, the myrosinase enzyme breaks the sulfur-glucose bond in glucoraphanin leading to sulforaphane and glucose. Sulforaphane is a famous compound about which hundreds of papers exist, related to cancer, heart disease, diabetes. Sulforaphane in raw broccoli protects the insulin producing β cells of the pancreas ► OMCL 2017:3839756. Sulforaphane in raw broccoli attenuates obesity by inhibiting adipogenesis ► JNB 2014;25(2):201-7. Sulforaphane in raw broccoli inhibits breast cancer stem cells ► CCR 2010;16(9):2580-90. Sulforaphane in raw broccoli attenuates the development of atherosclerosis ► EBM 2016;241(4):426-36. Sulforaphane reduces autistic behaviors much better than any known drugs: a study of 44 males ages 13-27 where the pills given were equivalent of 2 cups of broccoli for those weighing between 100-200 lb, 3 cups if above, 1 cup if under 100 lb. "After 18 wk, 15 participants receiving placebo experienced minimal change (<3.3%), whereas those 29 receiving sulforaphane showed substantial declines (improvement of behavior): 34% for ABC etc. We report here that in a placebo-controlled, double-blind, randomized clinical trial, daily treatment with sulforaphane for 4-18 wk resulted in significant improvements in aberrant behavior and social impairment in a majority of young males diagnosed with moderate to severe autism, and that *this improvement* regressed *upon cessation of treatment*. Dietary sulforaphane, of recognized low toxicity, was selected for its capacity to reverse abnormalities... associated with autism, including oxidative stress and lower antioxidant capacity, depressed glutathione synthesis, reduced mitochondrial function and oxidative phosphorylation, increased lipid peroxidation, and neuroinflammation." ► PNAS 2014;111(43):15550-5. The antiviral effects of sulforaphane are in the Natural Antivirals section. The cooked broccoli ratio of ω3:6 of 2.3:1 is superior to any high protein veggie. ω3:6 ratio of 1:1 in raw broccoli is highly antiinflammatory.

Broccoli is often 2$/lb, but organic 3.4$/bunch, with a bunch being 1.5 lb (if you find the heaviest one) or 3$ if not organic. For 40 cents extra, 3.4 vs 3, you get far fewer deadly pesticides. For me, raw cauliflower, purple cabbage, kale never cause stool/gas odor, but when I eat the same amount of broccoli, odor (or huge odorless burping) happens usually (not always if small 15g-100g amounts), possibly due to higher levels of sulfur compounds, different goitrogen glucosinolate metabolites (easier to uptake by hydrogen sulfide producing bacteria) or less digestible compounds that ferment. Goitrogens can cause blood clots, if you eat raw cruciferous veggies. Google search shows broccoli is notorious for causing burps; part of the reason is that when making smoothies with certain things (not very liquid) the little flowers trap huge amounts of air, unlike anything else; so make it a paste if a smoothie. Almost each time my diet was the same with (> 150 g) broccoli being the only change from day to day, the stool smell change from odorless to some odor the day I ate broccoli. Vegans have fast transit time so odor change is fast. Kale has 28 times more lutein than broccoli, 1.35 times more vitamin C; cauliflower, cabbage, kale have sulforaphane too. Because all broccoli benefits can be obtained from kale, red cabbage, cauliflower, I only eat kale (with carrot in smoothie form) to remove microplastics. The purple cabbage, purple kale and purple cauliflower have anthocyanins (no sulfur) that lower blood pressure, which are absent in broccoli, though Amazon got purple broccoli seeds.☺☺

11.7.51. BEE POLLEN (flower pollen) & Propolis (tree resin)

I avoid both: always eat bee pollen with foods and never at night, since when you sleep the body doesn't drink a lot of water, etc to detoxify and this stuff is full of fungi, molds; some people even get asthma/COVID like effects; stop eating it if so, or switch brands. More than *half spoon/day* can cause gas, smelly stool/gas, pimples, styes. Most bee keepers let pollen oxidize in moist heat in the hive, without picking it up daily, freezing it up fast, causing the *oxidation of* lecithin *(5-15% of pollen), free fatty acids, polyphenols, leading to organ* damage, hair loss, pimples, *due* to TBARS going *high, if eaten*: IJCB 2011;26(2):154-60. Always buy pollen that is frozen or refrigerated (Amazon pollen is toxic, full of molds, drying creates toxins too). Besides the dangers (of dying from grayanotoxin), there seem to be some benefits too: boosts immunity and reproductive health, is antimicrobial and as effective as antibiotics in livestock.

Is pollen vegan or not? Most (me included) consider pollen to be vegan, it's the sperm producer of plants (each grain is a tiny male plant that makes sperm cells only when meeting the female cell on a flower; it's not the 'sperm of plants' as some write online), unlike *honey, apilarnil, royal jelly (bee milk) which are "*vegetarian (produced by bees, like milk is made by cows, but 1 kg royal jelly leads to discarding 2500+ young bee larvae (4-9 mm long, vs 1-1.8 mm long 0.25-3 mm wide for bee eggs laid by the queen, 30-120 times the 0.12-0.22 mg weight of an egg, sort of like 5 month old fetuses weighing 10% of a new born. Big larvae can be up to 1500 times heavier

than a small egg and, see 1 min video egg to bee, we see sometimes a big larvae discarded, sort of like 7 month fetus) who die in the collection process as this 2 min video shows (see how unsanitary it can be, get some virus?) or this, bee larvae can be also be put in cells automatically, ☺☺☺ and the bee larvae filtered automatically, not manually discarded) or almost vegan" if insects are not animals, but more like 50% plant-50% animal. Royal jelly collection is, unbeknown to most, *thus creating a lot of killing of bees that are similar to humans in many ways, leading to shorter human lifespan due to cross species entanglement. 1 kg pollen may only kill 0.1 bees, not 3000. Many think we can save the bees and discover a better tech, that adds 500 years to human lifespan not a few weeks like daily royal jelly may do for many. It's clear that royal jelly is bee milk obtained in a brutal way, so it can't be thought of as vegan.* Before we talk about pollen after this paragraph, a few things on propolis: it is vegan too: 400 mg propolis extract reduced COVID19 hospital stay from 12 to 7 days, 800 mg to 6 days ► BP 2021;138: 111526. Propolis is 50% tree resins: triterpenes, $C_{30}H_{48}$, 6 isoprene C_5H_8 units, resin acids and diterpenes $C_{20}H_{32}$ (4 isoprene units) sesquiterpene $C_{15}H_{24}$ (3 isoprene units, biosynthesis from isoprene $CH_2=C(CH_3)–CH=CH_2$ units; propolis got "triterpenes (50% w/w), waxes (25–30%),☺☺☺ volatile mono- and sesquiterpenes (8–12%)", 10-18% pollen+ polyphenols + phenolic acids; and a tiny bee saliva, so 99.9% vegan too. Waxes are esters of several saturated fatty acids mostly; terpenes are alcohol soluble, so propolis ethanol extract (cheapest on Amazon, 20 quality tests, extract made from 760 g organic propolis, also organic and filler free) gets most bioactive compounds, though raw propolis (112 g raw propolis with beeswax possibly removed using heat that degrades some bioactive compounds *(about same price as the extract from 760 g)*, not organic, plus no lab tests to make sure all is well, no dangerous mites, fungi, etc) (ground and dissolved in water or smoothies) may work well too (better in some studies) – though ethanol extract has more bioactive compounds/g of powder vs raw. Propolis contains 600+ compounds, 5% pollen; after 90 days of 30 drops/day of 3% propolis HDL (good cholesterol) increased 22%, GSH (reduced glutathione) increased 175%, TBARS (thiobarbituric acid reactive substances, lipid oxidation products) decreased 67%, all being good outcomes ► EBCAM 2017:4272940. You can simply dissolve a cap of propolis in a smoothie, 365 caps/19$, no additives.

Bee pollen is *99.9%* vegan*, since it's just plant pollen, flower nectar and a* tiny *bit of bee saliva, 0.1% or* much *less*. Because of that, I and many others think one can still eat bee pollen and even 300 mg royal jelly, and still be a vegan, well, 99.995% vegan, so vegan by all standards. *I noticed 1 spoon of pollen improves my stool, but 3-4 makes it too hard, increasing transit time without more water, so if you take more than the typical 1 spoon (10g), you may need drink more water or watery veggies to maintain the shortest (thus healthiest) stool transit time.* The coating of pollen grains is made of a stable polymer called sporopollenin, which may cause the gas (besides the polyphenols inside the grain and the polymer itself), since it is not digesting the stomach

byproducts well maybe. Sporopollenin protects the nutrients inside in hot weather somewhat, but it is safer to *only buy pollen shipped in colder days and that has been picked up in colder months or weeks*, to avoid degradation of pollen components which then *makes* it do more damage than good in theory, via lipid peroxidation caused by damaged polyphenols, fatty acids, etc. Bee pollen traps need to be collected daily, to avoid mold growth, and to prevent nutrient degradation by cross reactions, since between 70 and 90°F pollen mold (in our houses too, 60-80 is ideal temp for growth, but you need high humidity for that, 65-75%) is growing wildly; so you will realize that bee keeping for pollen is very labor intensive, hence most pollen is imported from China with cheaper labor. However, before bees get to flowers to remove pollen, the pollen can be stuck to the flower for weeks, so it's not really as simple as 'if trap collected daily' all is good, since if it starts rotting on the flower itself, it's bad from the start, though bees are only attracted to nice smelling flowers. Pollen still pollinates even after 4 weeks, so the pollen a bee gets can sit on a flower already for weeks before it is taken. However, most bees revisit the same flowers and plants know it and can release new pollen, so most pollen bees collect is truly hours fresh, thus beekeeper need to collect pollen from traps daily for the best outcome. Beekeepers take out pollen to grind it and refeed it to colonies in the winter and also to prevent the colony from running out of space; the traps can be inserted just for 1-2 days a month and collected within 24-48 hours, as the video explains, so it's not about how often they collect pollen, but about how long the trap was placed in the hive for before it was collected, since it can fill in 1-2 days. So call your beekeeper and ask him how long that trap sits there, before you order pollen from him. Some may have 700 hives, but only use the most productive and easy to drive to in order to collect pollen, since he needs to revisit that hive in 1 day to prevent mold and remove trap for weeks until he's ready to revisit daily that area. Ask him if any deadly Ericaceaae family (Rhododendron, Pieris, Agarista and Kalmia) plants are nearby, since that honey (maybe even pollen???) can kill or permanently disable people. Same for cannabis crops, they can damage the honey and pollen with hallucinogens. How will he know within 5 miles there are not poisonous plants that cause some organ damage? Beekeeper needs very good drones for that, and most don't check it. Pollen comes with a lot of risks, due to 100s of toxic wildflowers. It's probably *safer to get one from an orchard and edible fruits, flowers, safe trees.* Hives placed in the wild are dangerous; at least on agricultural land, you know they go to a farm or orchard mostly, etc, but in the wild or village? Lots of decorative plants got damaging pollen.

California Bee Pollen company, selling to Whole Foods, said on the phone they collect it every 5-7 days, so mold growth may be huge (even if it passes some ultra lenient "high mold threshold" before being shipped to wholesalers, test which most companies don't even bother with), or maybe not since Sacramento area is so hot that mold will grow slowly in such a dry weather; this is the same pollen collected by BackroadBeeKeeping family who collects all CaliforniaBeePollen

sold at many California stores; they also sell irradiated pollen (that's for bees usually, not people), which is free from fungi, molds, viruses and most, but not all, spores, etc, but may also have many toxic new chemicals formed (if radiation is above 10 kGy), besides the slight reduction in polyphenols as RNC 2021;327:713-9 explains; O-centered free radicals form and remain there for *5 months at least, decreasing each month as the radicals react with the polyphenols, fatty acids creating* toxic *compounds*, but "*phenolic content and antioxidant power can increase or decrease,* as measured with DPPH assay"; this means irradiated pollen may form toxic compounds in the stomach, oxidize fatty acids and cause arterial plaque via *trans* fatty acids that are deadly and banned by FDA in foods. Buy North Canada honey, cheaper, no tax, no shipping, 6.6 lb for 75$, way cheaper than California or any US buckwheat honey, North Canada has no pesticides or antibiotics (says so on the label, unlike US honey) and buckwheat honey is the healthiest, better than Manuka for throat, helps throat (that lab made Covid19 destroyed for all humans). The Natural Antivirals section has more details about buckwheat honey and Covid19. "gamma-rays (see FDA notes) provoke reactive oxygen species and other radicals which cause changes firstly in the lipid molecules"; bee pollen has 5-15% lipids; conjugated dienes (2 *double bonds, separated by 1 single bond, measured as 232 nm UV absorption*) increase 4 fold in peanut oil, at *25 kGy,* so the risk of *trans* fatty acids formation goes up; even though they meet some edible criteria for oil acidity, irradiated peanut oils (which have 70% of fat unsaturated) can still have traces of trans fatty acids, *other deadlier compounds, free radicals, which may escape FDA oversight* ► BCC 2019;51(A):263-9. Conjugated dienes rise in a linear fashion with *peroxide* concentration, which indicates how many other toxic compounds can be formed. ☺☺☺ "Bee pollen samples were treated with target doses of 0, 2, 5, 7 and 9 kGy of gamma radiation emitted by a ^{60}Co source and then analyzed for microbial content. Neither fungi nor coliform bacteria were detected in samples irradiated at *5 kGy* or higher. Yeasts and aerobic bacteria were not detected in the samples irradiated at *7 kGy* or higher (<10 CFU/g). Bacterial species capable of sporulation were most resistant to gamma irradiation and were identified. Taxonomic analysis indicated that the genus Bacillus, represented by fourteen species, was the most common, followed by Paenibacillus (AFB) with six species" (these are spores that give bees diseases, like AFB, but don't infect humans, nor cause any issues in humans by non-disease mechanisms (to some chemical substrates, cell types, of GI tract, kidney etc), as far as we know *so far, since* they're not zoonotic). ► RPC 2020. ☺☺☺

We need☺☺☺ eterni food, free from molds, bacteria, oxidation, free radicals, etc. It's not clear what other companies do, but research is important by users or FDA when they got more $, since obviously with so many hives across Central Valley there is no way one family can collect daily, and pollen needs be regulated too a little, to make sure the nutrients still exist unchanged, AGEs are low, mold low; sun drying pollen, a common practice, to remove moisture, is

detrimental, as it encourages the formation of AGEs that ruin our health, but it's one method to remove moldy stuff; trap pollen sitting at 85-120˚F 7 hours/day will obviously degrade fast vs trap pollen at 70; perhaps, buy pollen from cold states who collect trap pollen daily or raise bees yourself to collect it mornings before sunny temps degrade it fast and again at night, though 100s of papers and studies need be done to determine the safest pollen treatment that doesn't make new toxins, besides the toxic producing sun drying and irradiation. So, ask company via phone, when answer is more genuine in real time, not voicemail, if they collect it daily, since by email they think it over and will give a fake answer most likely. Choose the cold pack shipping option, if shipped from far away in warm months, as mold grows fast, though outside temp of only 50-65°F and shipping 1 day may be safe; in cars it can get to 80 when outside is 65, during transport. 107°F weather for 3 days can lead to not only mold growth, but destruction of the polyphenols, fatty acids, etc inside, which then create oxidative stress inside your body. The higher the temp, the more damage. "Fresh pollen is high in moisture and protein and, especially when brought into the hive – which stays around an internal temperature of 95˚F – it enters an ideal environment for mold growth. When the pollen is not consumed fresh, honey bees ferment the pollen through the process of making bee bread."

Pollen contains fungi that can produce toxins, so authors mention the "presence of different mycotoxins in pollen..., to propose possible aflatoxin contamination pathways, and to emphasize the importance of a regular mycotoxicological analysis of pollen...a suggestion is made regarding the legal regulation of pollen as a food supplement and the proposed tolerable limits for other mycotoxins." ► Tox 2019;11(2):64. "*Fresh bee-pollen has high microbial contamination which is* potentially *harmful to humans.* For this reason, it is often marketed as dried pollen... freezing doesn't reduce the initial potentially hazardous loads of microorganisms. Furthermore, any failure in the cold-chain integrity, either temporary or permanent, can lead to microbial growth which poses a potentially significant safety threat to public health" ► Foods 2021;10(11):2593 and "*results on microbial contamination of fresh and frozen bee pollen* show that a more comprehensive microbiological risk assessment of bee pollen is required. On the other side, *dried pollen showed very low microbial contamination and no pathogen survived after the drying process and during storage*." ► PO 2017;12(9):e0183208. Bee farmers use objects, structures, trees, to create shade and place water nearby, to make sure the hive doesn't get too hot, since at 107, half the male bees will die in a few hours. So, *imagine how bad the pollen sold from Amazon etc can be*, due to insufficient drying, sitting with residual moisture in a hot warehouse where temp fluctuates and creates moisture, etc. Never buy pollen stored at room temperature. Even the pollen that is dried, is bad, since drying creates more bad compounds and some water remains leading to mold growth as storage is at room temp or higher. True digestibility of bee pollen protein is only 63%, versus 85% for cooked green lentils,

91% for red split lentils or 95% for whole meat (not the junk food meat) ► Mol 2018; 23(10) :2491. Royal jelly is 5 times more expensive (1 kg or 2.2 lb dry is $170 on Amazon vs $95 (China) to $140 for 10 lb pollen) and its benefits more controversial, while bee pollen, if bought in bulk, can provide huge amounts of antioxidants, vitamins (except K "Bee bread contains vitamin K and enzymes which can't be found in bee pollen" ► Mol 2020;25(3):556), ω3, 6, protein, carbs, protein sometimes cheaper than fish or beef, with 100s of nutrients meat never has. We eat 1000s of bacteria, fungi, molds, mycotoxins from fruits, veggies, grains, etc, so don't think now that pollen is deadly, since in animals, it is used as antibiotic replacement sometimes, see below.

Bee pollen has on average as much vitamin A as carrots or 833 µg RAE/100 g ► JAR 2008; 47(2):154-61, sometimes 17,000 IU or 5,100 µg RAE.☺☺☺ PO 2018; 13(7):e0199995 found that Germany meadow pollen had lowest pesticides (max 0.3mg/kg), followed by grain (max 1.5 mg/kg), then fruit (7.2 mg/kg); they found no pesticides in some samples just like the PO 2016;11(12):e0167487 Poland study; this means that you need find a beekeeper who has his hives away from heavy agriculture or pollution areas, if you want minimal pesticides. Stories (true or fake?) exist that poor bee keepers often lived to 100 or even 130, since they ate the left over honey on big containers, which has 100 times more ultra healthy, unoxidized pollen than normal honey, due to gravity precipitating it. They could not afford meat. Bee bread is the one bees make inside the hive from pollen and much higher levels of bee saliva using fermentation. Bees collect pollen in the sacs of their legs (max half of their body weight) and some pollen (not all, the biggest granules humans eat) is rubbed off the pollen trap when bees enter the hive, which sometimes kills the bees or maims them (they lose wings and limbs). Thus, many vegans think pollen is not vegan as its collection kills insects. Some vegans think most bee products are vegan, since it doesn't kill animals, only insects, just as eating kale, etc kills the plant, just as eating corn, bread kills trillions of insects and millions of rodents, small animals in normal agriculture. Eating most vegan products, grains and beans, implies using motorized machines that kill trillions of insects during picking and even more during spraying with pesticides (specifically sprayed sometimes to kill certain crop eating insects by the trillions), even fruit picking by robots or humans kills insects we step on. Are fruits/grains vegan or not?

EBCAM 2015:297425 explains bees "collect pollen from plant anthers, mix it with a small dose of the secretion from salivary glands or nectar, and place it in specific baskets (corbiculae) which are situated on the tibia of their hind legs". Then the screen at hive entrance allows some big granules to fall and humans can get some pollen too. The rest of the pollen goes inside the hive to make bee bread, which has 26% moisture (vs 17% for pollen), 22% protein vs 21% for pollen, twice as much free amino acids, more proteases (pollen plus bee bread together have almost double the proteolitic activity of bee pollen, helping us digest protein), due to 3 months of fermentation in bee hive cells (Mol 2023;28(1):227); however, the bee bread is less likely to

grow mold since it's a tight chunk, brown in color, bigger than a pollen granule, *see the dramatic difference* in this picture; it literally looks like chunks of propolis, because they took the paste and dried it, normally, it's more moist when taken out of the comb; so you need to buy it from someone who doesn't dry it much; finding a close company that stores it wetter in the fridge is a real challenge, without drying it. Many companies say bee bread needs to be in the fridge for storage, so only buy pollen or bee bread if shipping it less than 2-3 days and weather cold or shipped with cold pack, and company stores bee bread in the fridge, not in Amazon warehouse. You can try eat both, since pollen has twice the antioxidant activity of bee bread, while bee bread has more propolis like qualities, antifungal, etc. Bee bread is obviously less vegan, as it ferments 3 months after some saliva is added to the cell, but it's almost vegan, so don't worry, you can eat a little if your immune system needs a boost, it's sold online via 100s of sites, google "organic frozen not dried bee pollen or bee bread in 'your town or county or some less polluted area' 5 lb (for discount)". A good site with 9 types of pollen and 2 types of bee bread, unlike any other site on the planet, is beehealthyfarms.com. They list ORAC value for chestnut pollen 30x the antioxidant capacity of broccoli pollen for example, you can see the chart. Not all pollen is the same. Simulated bee bread (pollen mixed with honey outside of the hive and fermented 3 months) is claimed by one Wisconsin seller to improve dry eyes and remove acne, though this real rural South Portugal bee bread from etsy.com is only 37$/lb (143$/1775g), vs 85$/lb on Amazon. Please don't attempt to make bee bread, since fermentation not done right can poison or kill you. Only people with proper lab tests can make simulated bee bread, to test for molds, fungi. 1 in 100 people gets dry eyes from wind pollen allergy (anemophilous pollen is spherical tiny one carried by wind, while entomophilous pollen is from flowers with colors, nectar, smell, big ovals), so eating pollen primes the immune system to deal with that different pollen and then dry eye disappears. Sort of like you get gas from one food one time, and then after you eat it 500 times you no longer get, as immune system learned how to deal with the allergens or etc in the gut. Edible pollen is not the pollen that causes sinus allergy, it's a totally different type. However, most dry eye won't disappear with bee pollen eating. Bee bread has more bacteria: Insects 2022;13(10):863-76 and has more antibacterial activity too: Antib 2021;10(2):125.

Local people can sell bee pollen for only 20$/lb, so find a pollen collected 2 days or 2 weeks ago, like I did; avoid dried pollen as polyphenols are destroyed and this reduces antifungal antibacterial properties, oxidizes chemicals and simply increases shelf life so they can sell it on Amazon or stores with no fridge. When freezing of blueberries or pollen happens, a lot of the antifungals and antibacterial metabolites of pollen or bee bread microbiome and antimicrobial polyphenols are destroyed, so are the good bacteria destroyed by freezing. However, most polyphenols found in pollen are intact in bee bread, since fermentation affects mostly the proteins and starches broken down into amino acids *(so you get 0.7 g extra free amino*

acids/100 g, more simple sugars, which for bees is important, for us not so much: 90% of studies were on bee pollen not fermented bee pollen or bee bread, but they're very similar in chemicals) and glucose/fructose; the only extra thing in bee bread are the metabolites from lactic bacteria, since most bee bread bacteria die out after 1 month of storage. In animals, pollen *"enhanced growth performance, immunity responses ... was considered an excellent substitute of antibiotics"* ► Antib 2020;9(11):811. Best pollen is 1-20 days old, kept in the fridge, but in winter you can't get it locally. USA got 212000 bee keepers, so you can find within 100 miles a less polluted apiary, need Hawaii in cold months for freshest pollen. The pollen fungi that produce mycotoxins grow 5+°C, so pollen needs be cold; "non-daily harvest" (page 47259) leads to mold, since it sits in the hive at warm temp ► ESPR 2021;28:47251-61. Fungi are everywhere, on all fruits, etc and when fruits rot they get moldy colors, grey, white, black, yellow, and those are mycotoxins, so we always eat these fungi in tiny amounts, it's just when pollen rots you eat these toxic mycotoxins like those in rotten bread, blueberries, etc. Berries and pollen are antimicrobial when eaten fresh, yet they're toxic, moldy if eaten rotten. Pollen rot is subtle.

Some apiaries are far kinder than others, so those are more acceptable as long as bees are not tortured by extra cruel practices to increase profits. Royal jelly helps bees to live up to 50 times longer, so we may discover analog chemicals in the lab that help us reach age of 4,000, chemicals far more effective than royal jelly ones, which are optimal for bees, not humans. Even if vegetarian or “almost vegan”, *honey, propolis are the kindest among vegetarian* products, as collecting them is not always torturing bees as with factory animal farms (royal jelly is kind only if the larvae are taken from queen cups and moved to worker cups after 4 days when queen cup is full of royal jelly, to avoid killing the larvae, there is a tech to do that, by placing a smaller cup under to let the larvae fall there and removing the whole small cup subframe and placing it in the hive to grow workers, see youtube; most don’t do that, it’s too much time to bother, so 99% royal jelly is not cruelty free), where dairy cows are killed or male chicks are shredded alive in egg farms by the billions once born, animals which are far closer to humans in consciousness and whose death affects humanity a lot more than insect death, hens/dairy cows have short lives in filthy conditions, etc. As we evolve to eterni foods, we won’t eat bee products. Every single polyphenol and chemical in bee pollen is found in plants too, so we don’t really need plant pollen; however, if you get pollen from many areas, you get chemicals from many plants that we normally don’t get, useful for lazy people *who don’t eat a lot of fruits, seeds, nuts, herbs/spices,* veggies. Pollen content varies (some got 10x more flavanols, 3x more polyphenols than others), so it’s best to get pollens from many brands for maximum benefit.

Pollen can get moldy fast if not collected daily and refrigerated, so try to ☺☺*lovingly tenderly gently kindly*☺☺ get it from a good source and if possible a source that knows its ω3 to 6 ratio. *This ratio is important, because if we eat a lot of ω6 we increase aging speed and inflammation.*

Antiox 2019;8(12):568 found % of total fatty acids: α-*linolenic* or ALA 33%, *palmitic* 26% and *linoleic* or LA 22%, on average for 16 types of Romania pollen and a ratio *of ω3:6 ratio of* about 1:1. Most ω3 in pollen is ALA, most ω6 is LA and gamma-linolenic or GLA, so about 33% of fat in pollen is ω3, 33% is ω6 and the rest saturated long chain fatty acids. If pollen has 9% fat, which is common (sometimes 5%), this means *in 100 g* we get 1 g of ω3 *and* 1 g ω6. This gives us a basic idea so we know when using our food spreadsheets what kind of nutrition we get. ***However, not all pollen has this ratio, some may have ω3:6 ratio about 1:4; Colombia (the best ratio I found so far, since most people eat way too much 6) pollen*** [RMVZC 2014;19(1)] *had ω3:6 ratio of about* 2.5:1. These acids oxidize rapidly compared to others, so it's critical to eat fresh pollen, to prevent atherosclerosis, see more in the walnut section. Age 2015;37(3):58 found beekeepers who ate bee products multiple times a day had the longest telomeres compared to other beekeepers or non-beekeepers. This is confirmed by other studies that found those eating more polyphenols and antioxidants (healthy *vegans*) have longer telomeres. Queen *bees (not humans) live* 50 times longer☺☺☺ *because of* avoiding bee pollen/honey*, eating royal jelly ONLY since birth; royal jelly has flavonoids too, but lacks phenolic acids (polyphenols with a carboxylic COOH group that makes them organic acids)*. It's unknown if phenolic acids shorten lifespan of multiple species, see more in the royal jelly section. Pollen has about 0.6-1.4 g of flavonoids/100g (some researchers say some varieties can reach 3 g), more than any plant, except dried peppermint (10.2 g), dried parsley (4.5 g), other spices/herbs, raw cacao beans (8.6 g). The polyphenols content ranges between 1,500-5,000 mg according to several papers. Mol 2015;20(12):21732-49 has many references on the chemical mechanisms thru which flavonoids inhibit AGEs and free radicals. There are 100s of papers on the benefits of bee pollen for humans ► nih.gov..pollen. In rabbits, pollen increases conception rate, litter size, milk yield, survival and growth of offspring ► JAPAN 2011;95(3):294-303. Chinese bee pollen had 2,300 mg rutin equiv/100g; rutin is quercetin with 2 sugars, so it's skewing data towards higher values when expressed as rutin not quercetin equivalents ► FP 2017;8:104. Pollens in EU/China got quercetin at 20 mg/100g pollen < 70 in radish leaves. FCT 2011;49(5):1096-101 found Portuguese pollen had phenolics 1,050-1,680 mg gallic acid equivalents/100g. Bee pollen has about 405 mg P/100g (Table 4 of Mol 2021;26(9):2415); assuming we get 1 phosphate mole in lecithin (phosphatidyl-choline, -ethanolamine, -inositol) for 1 mole of choline roughly, we get 250 mg choline/100 g pollen, if 60% of P is in lecithin phospholipids. If all P is in phosphatidyl choline, we get 10 g of phosphatidyl choline in 100 g; pollen can contain 10-15% lecithin in all phospholipid forms, not just choline forms. Choline is important for *vegans* not eating enough legumes.☺☺☺

11.7.52. Free Herbs/Plants/Salts CEOs hide, as they can bankrupt Food/Pharma/Big AC, etc

1). Bacopa Monnieri, used for 5 millennia in Ayurveda, 5$ seedling has same effects as donepezil costing $50,000 a decade, a 'rejuvenator of intellect and memory' in 600 AD Charaka Samhita, 'brahmi' in 800 BC texts ► AIAN 2020;23(6):767-73. No CEO palace can be built if we spend 5$ instead of $50,000. More info is at Ntr 2025;17(11):1939: "enhance memory, mental health... intellect... promote long life... rejuvenation", Antiox 2024;13(4):393, Ntr 2025;17(22):3538. NIH has a page about it too, referencing more studies. "Bacopa significantly improved memory acquisition and retention in healthy older Australians" ► JACM 2020;16(7):753-9.

2). Growing endless herbs, veggies, citrus, kiwi at 5000 ft in snow, using the Big Ag suppressed log + leaves method that removes the need for any irrigation, fertilizer and pesticides. See 130+ other plants at youtube.com/@NatureLostVault/videos.

3). Saw palmetto works as oil, not powder sold in USA. Palmetto is way safer than finasteride. Big Pharma chose the dried berry with 1% fat, instead of the oil extract with 85% fatty acids, to prove palmetto, much cheaper, doesn't work, but lethal finasteride works. Pure Genocide for $.

4). Wild lettuce is much safer and nonaddictive than opiates Pharma sells to kill millions of people worldwide to make trillions in profits and intellectual property. British Big Pharma made every American addicted to opiates, like they did to China. Will USA use Red China method to get rid of all drug use in USA in 3 years?

5). A free Boneset herb was 5x more effective against flu, yet was banned, as no profits were possible. Modern medicine was designed to make aristocrats rich, not give all 4000 year lifespan, German aspirin killed millions during the Spanish flu, which was likely staged, planned, they said "take 25 aspirins daily" which made their lungs fail. Same Bayer company of WW2. 2 German Bion-Pfizer companies, behind Covid vaccine, suspect, when Covid pandemic was staged

6). Orange Osage wood has 2.5% elemol that repels insects (blinds their smell sense), allowing us to avoid insecticides. This info was removed from textbooks by Big Insecticide: Monsanto, etc. Instead of wood beams planted every 12 ft, today solar panels powering a device can be planted every 900 ft to create a barrier using some other way to scare insects away, via infrasound or etc. Insecticides obviously kill humans as they go into the produce, causing endless disease.

7). Ceylon Cinnamon is the real one sold in Canada, Europe, while in the US the criminal FDA allows fake cinnamon cassia to be sold as Ceylon and destroy millions of American livers via coumarin, a food toxin which EU set at 6 mg/day max.

8). Kudzu plant stops desertification and soil erosion, feeds cows, but was banned by the rich.

9). Medical Education Carnegie Foundation Bulletin # 4 Report (the 1910 Flexner Report as Google search calls it, after Jewish Abraham Flexner former school teacher, now a wealthy

owner and operator of a college preparatory school, who evaluated all medical colleges and helped imprison legitimate gentile MDs), made by a non-medical Jew (studied classics for 2 years in college, and took some psychology courses after that, but essentially had no medical or STEM degree in biology, chemistry, or anything related, and this Jew decided America's future, like with PENIS TRIM IS HEALTHY by Jews today at CDC who support it) led to the closure of 80% of medical schools that used free medicines, instead of pills sold by criminal billionaires and today heavily prescribed by the highly Jewish medical profession.☺☺☺ The closure was justified in some cases, but it was mainly about profits. Of course, each plant has active ingredients and bad compounds eterni foods and medicines will eliminate when immortalism ends these billionaire gangs, but the pills chemists made could not instantly replace the effectiveness of many herbs. The mafia won, science lost, anything free would cut into the profits of the mafioso pills, so it would be banned by buying Senators, etc. The Rockefellers bought every herbal school in US in 1913, closed them all by 1925. They wanted to use oil to create chemicals and suppress any knowledge of natural compounds with far fewer side effects as our genes got used to the compounds more. This enables easier extermination of ignorant people (200 non-Brit ethnic slaves, in the 19th century, many US officials, cabinet members called for the extermination of Native Americans, later, the genocide became more covert, behind campaigns of "help all non-Brits"), who don't know which among the new pills cures what old herbs cured, and gives them total control over dosing, efficacy, formulation (tiny differences that invalidate effectiveness 5 fold) and health of the working class, to poison all, lower IQ of all, to make all dumb slaves of the rich. "Grant rejected the wholesale extermination of Indigenous people that was advocated by other generals, such as William T. Sherman and Philip Sheridan". Free plants can't be patented to enslave every American, so these demons took over USA, without a 1776 style Revolution. It was all about turning everyone into a chained dog, a slave of the billionaires. Today, all money goes to research about man made crap Pharma can patent and sell, so 100 times better and safer compounds in 1000 herbs they made illegal or banned from awareness, are not investigated, since it's not possible to patent them. Capitalism = regress, stagnation or 100x slower progress. Only $ moves things, so no funds for investigating existing chemicals, unless an NIH grant, but those get pathetic funds, vs the 1.4 trillion the Genocidal Criminal Enterprises get for poisonous trash products a year. Immortalism alone is real progress, see the reasons why in the 300 page 11 companies section. Lovastatin, is present in red rice yeast extract: statins and many medical pills we made are based on natural compounds, whom they modify in order to patent the chemical, make $. In recent decades US studied more herbs.☺☺☺

10). $Na_2SO_4 \times 10H_2O$ melts and cools homes, solidifies and warms homes as nights get cold, days get hot, to reduce heating/cooling costs easily (built in plaster in Germany). More techs here. The simplest one, used in Canada, etc, is a copper piece that transfers heat from warm waste

water to the incoming cold water pipe, to save energy costs: 50$ to install, but saves way more.

11.8. Caffeine (tea, soda, chocolate, energy drink, coffee), lowers IQ, shortens lifespan, causes birth defects, miscarriage, destroys a nation 100%

This 15 page section is a wake up call to all caffeine users. Prolife ladies shout from the rooftops that "abortion is murder". However, caffeine causes miscarriage, abortion of embryo, sick, short-lived or premature babies that are low IQ and sick for their shorter 70 year lifespan, in old times when people had 5-9 babies, half would die. Dutch just euthanized a 1 year old baby who was a vegetable, which God would have killed far sooner before science replaced God, as kind science is more merciful than "God". Today, science saves billions of babies that "God" would kill before: half babies didn't make it to 18. Prolife ladies appealed by euthanasia of premature sick babies, need to understand they murder millions of babies each year by their caffeine habits, just unrecorded abortions. So yes, most women who have lots of sex outside procreation (taught to be 'holy within marriage' by the "chicken IQ" geniuses within religions' rapist clergy) intent already aborted 1-4 babies, since they are caffeine addicts, and many of them will criticize parents who abort an unviable embryo after genetic testing, proven by science to be a vegetable baby who will drain society of its resources. A religious nut who aborted 5 rather healthy embryos criticizes a scientific couple who aborts a very sick embryo so the nut doesn't have to work as caregiver for 50 years for this "wonder child of aristocratic couples". The caffeine is a symbol of their depraved criminality, covering up their ugly souls with makeup (makeup industry steals chemists that could make safe eterni foods free from 100s of natural poisons that abort babies via the centralization of 11 companies giving us 100x more research) to hide the ugliness of subjugating child labor to produce coffee or cacao (somewhat similar effects). These religious fanatics often fight tooth and nail for "natural organic foods" filled with poisons by 'God', and resist efficient self-sufficient eterni powder foods enabling all to live to 4000, scientific foods that remove a need for coffee from enslaved kids overseas. These hypocrite "religious/spiritual" folks don't understand that sex is for procreation only if you want to avoid abortion (since many other chemicals abort embryos too, especially mint family spices), or avoid sick premature babies, or low IQ kids who destroy a nation's future. All prolife people need to become leftists, as only leftism will bring the massive efficiency via immortalism, to increase lifespan, health, research 1 million fold, as one gov replaces 20,000 gov, 11 companies 33 million, 1 pay 300 million pay levels, zero tax 300 million taxes, 1 eterni food powder 90000 plant and animal parts. Thus, US needs to ban caffeine/alcohol/tobacco sales for anyone who is pregnant (One Bank, block transaction, no cash in society to avoid 1$ trillion in healthcare expenses) or about to conceive via the parent license that approved baby creation. Males too, as male caffeine intake also damages the sperm. Every Starbucks or caffeine beverage needs a WARNING LABEL to

protect US IQ, GDP: don't drink if pregnant, bigger than ALL OTHER LETTERS. Immortalists are truly prolife, religionists are antilife morons who publish the most violent trash and pollute the minds of people with evil scriptures that lead to more murder than all abortions via wars and crime. Coffee lowers IQ by shrinking grey matter. Coffee destroys the brain, like all caffeine rich drinks or teas do. Caffeine diminishes the power of antibiotics to fight infections. Some teas got no caffeine. Caffeine shrinks brains by constricting the blood vessels by 30% and nutrients to the brain, lowering IQ. A 72 min clip on neuron death via caffeine and other junk explains biochemistry for geeks. The same mechanism increases our blood pressure. All coffee is *roasted*, which creates toxic (not natural) polyphenols and deadly AGEs. You can jump directly to studies on miscarriage, stillbirth, infertility, low IQ of offspring or cacao. The next 12 pages explain why during the state of emergency to bring violence down a trillion fold, high caffeine sodas, coffee, energy drinks are banned too (besides alcohol, smoking, high AGE foods), as caffeine leads to brain damage, birth defects (strabismus, crossed eyes, mouth bent one way, because caffeine and strabismus are linked to brain disorders), short offspring lifespan, violent behavior, infanticide (miscarriage, stillbirth, abortion). In the transition, all coffee shops need pay 100% fee to Universal Immortality Inc for every coffee sold. 1 lb of coffee would incur an import fee of 100$, so that Eterni Food Inc creates 10000 blueberry farms to give all fresh Jumboz like blueberries that don't rot and are crisp, firm and 100 times healthier than coffee. Stop imports of drugs hidden in coffee bags. Polyphenol self-sufficiency is virtue that births Immortalist Anthem Ethics. Emergency decree demands all grown cabbage *become purple*, as that one has 2800 times the polyphenols (like those in coffee) in green, and most cauliflower moved to the purple variety, same for *purple* kale, *purple* (not green) grapes, *purple* carrots, *purple* fleshed potatoes (as good as berries), *purple* (not green) cactus pears, to sell fresh smoothies in restaurants of Eterni Food Inc. To say it poetically, green is death (like banks, shouts) via no polyphenol, *purple* is Eternal Life. Coffee beans are green before they roast them, and coffee kills/maims millions. They create millions of coffee shops to depopulate, not to help people live longer. Caffeine causes endless birth defects, low IQ, being used in hybrid warfare against nation states. Coffee prices rose due to severe drought, governments need to artificially quadruple prices. Don't be naive, the rich want low IQ, short lives for workers, not freedom. Coffee is the 6th largest cause of deforestation, removing oxygen/wood we need. EU will ban anything made via deforestation. Fake coffee products began to appear, and as always, 0 IQ CEOs, mindless PhDs roast the date pits to get 'new flavors' of deadly AGEs. ☺Puppy IQ workers☺ chase taste, eating roasted poisons. Chase Life instead, *purple* blue produce. 97% of coffee has industrial amounts of pesticides that kill you slowly: Alzheimer, asthma, Parkinson. *Chamomile tea (used to* deaddict coffee drinkers*) 40 min before bed has 0 caffeine,* improves sleep/*calmness (caffeine worsens it) via* apigenin *that "*binds to benzodiazepine (brain) receptors*" (other chemicals bind to GABA); has anti-*sore throat*, anti-cancer, anti-diabetes, 30% less risk of death in old women.*

Teen died 2 hours after ingesting "pretty normal" amount of caffeine in latte, energy drink and mountain dew. Caffeine raises blood pressure faster than sodium and is joined by other energy drink components rich in caffeine that raise pulse and blood pressure, the risk of infarct. Front Psychiatry 2017;8:80 says that *those with hypertrophic cardiomyopathy and other heart issues can* die suddenly *or* severely harm heart function *after caffeine ingestion,* "ion channelopathies and hypertrophic cardiomyopathy, which is the most prevalent genetic cardiomyopathy in children and young adults (0.2% of the population), are of concern because of the risk of hypertension, syncope, arrhythmias, and sudden death". In 2005, there were 1,494 emergency room visits related to energy drinks in the US; in 2011, about 20,783 emergency room (ER) visits. *This is a 14 fold increase in energy drink ER visits in 6 years.* Energy drinks acutely increase platelet aggregation, decrease endothelial function in healthy young adults ► AJM 2010; 123(2): 184-7. Energy drink induced near fatal ventricular arrhythmia ► AJC 2014;114(7):1124-5. Atrial fibrillation in healthy adolescents after highly caffeinated beverage consumption ► JMCR 2011;5 :18. One energy drink may increase heart disease risk in young adults ► JAMA 2015; 314(19): 2079-82. A 133,811 people study found that the MORE COFFEE (7 cups a day leads to 70% more tumors), alcohol, marijuana people use, the MORE BRAIN CANCER TUMORS they get ► JNO 2004;68(1):57-69. ☺☺☺ Polyphenols in coffee, if coffee is the last thing you drink after a meal or between meals, will stick to your throat and make your voice hoarse. Over time, you will develop a male alcoholic voice, common today in females who're coffee addicts. It's easy to recall: coffee aborts babies and birth control pills make voice hoarse; ladies who abort fetuses with birth control pills have their voice turn more hoarse, sounding like alcoholic gangsters and serial killers. Ladies don't know how to be happy (100-1000000 times happier than even orgasm one does alone without sex), so they kill babies via pills. So if you want to scare off and turn off males, keep drinking coffee last thing after meals, without water after. Better eat some real solid food, to remove stuff stuck to the throat, like lentils or watermelon. Fertility, health, personality is indicated by the voice, tone, a hoarse voice indicates less fertility (since it's natural company of aging), so males are instinctively turned off. Nature has designed a way to warn males away from women who smoke (damages fetus) or drink a lot of coffee and alcohol (that also destroys the fetal brain etc), the female voice. It knows it kills the offspring of the male, that abortion causes cancer and shortens lifespan of next offspring.☺☺☺

As the next 13 pages explain, caffeine in soft drinks, coffee, teas cause about 20 million detected and undetected misconceptions (failure to fertilize the egg), 20 million miscarriages (before or after they know they were pregnant), 70 million birth defects (low IQ, etc) causing quantum field disturbance: it's another tool of mass depopulation and slow national extermination, draining government funds (2 trillion wasted to cure low birth weight, low IQ, health issues): who owns the companies doing this yearly Holocaust? Then people try harder to conceive, wasting time

with sex, instead of meditation. Instead of eterni Food Research Centers to design a drink 300 times more scientific and healthier, we sit there and glorify the killing of babies via caffeinated teas, energy drinks, vitamin drinks, and other tricks. Is this 'satanism'? Those roasted beans oxidize polyphenols and create toxins, AGEs that can cause in self or fetus: atherosclerosis, heart disease, infarcts, strokes, diabetes, blindness, strabismus, eye problems, neurological problems, AMD in older age, amputations. Not with fresh blueberries, blackberries, strawberries though, those don't get roasted. So, read below to understand the dangers coffee shops hide, when the immortalist government would require all caffeinated beverages to list "pregnant women may have kid with IQ 50 points lower (genius monkey), health below average (low birth *weight), take 3 times longer to conceive and 5 miscarriages that increase cancer risk, etc. Males* may suffer from iron deficiency, rapid aging due to zinc deficiency". Hybrid warfare against China means luxury brands sell coffee now, after looting China with useless luxury products. These devils do the same outside of China, they destroy everyone so they remain the Eternal Masters. The filif and ostrich IQ parasites didn't realize everyone could live 4 times longer by now, if democracy would have ever existed last 2 millennia, instead of the eternal war, killings and torture. Some big studies done by "gnat IQ" people, obviously don't adjust for income, sleep hours, sleep regularity, diet quality, job changes per decade, stress level, etc and then conclude that the aristocratic people who drink more coffee, wine, etc have better health outcomes, when it is their *better income, health insurance, food quality, less stress: they* make 2-8 times more $, so they can sleep 8-9 hours, stress free, stop 9 times at Starbucks instead of 0 for the busy guy with 2 minimum wage jobs who sleeps poorly due to stress 5 hours known to cause 3000 diseases, and has the extreme stress in the other 19 hours too. Thus, these fake studies prove nothing except how universities award $8 million pay to their Presidents and waste 100s of billions in fraudulent studies to steal grants that perpetuate the status quo of genocide by aristocrats. Poor people have no time to relax, drink coffee, make coffee or even money to buy wine/coffee. No kid and parent license recipients are allowed to drink caffeine if we want to protect brains from stunted development, brain starvation of nutrients via blood constriction, etc. All coffee polyphenols are in endless foods people can include to improve HDL, LDL values. It's national suicide to drink caffeine if it constricts the brain vasculature as this creates 100s of white matter silent strokes, starves the brain of oxygen and nutrients, etc. Sure, polyphenols can help, but we can get them from much healthier foods that have anti cancer compounds, vitamin C, fiber like purple kale/cabbage/cauliflower, purple cactus pear, berries, indigo plums/grapes. It's criminal to recommend coffee when 60% get 15% of fiber they need to ingest daily and are hypertensive, meaning they actively destroy the brain via artery wall damage from hypertension. Heart disease is the #1 killer: caffeine causes strokes, infarcts via hypertension. Not to mention, kids get insomnia and develop low IQ. Criminal parents give caffeine to their kids. Since brain develops until age 30, coffee needs to be sold only with proof of age 30, same for alcohol,

smoking, weed, until we ban them all completely. Most people under 30 are kid like. Just because polyphenols in coffee lower dementia risk compared to the most unhealthy diets void of any healthy foods with polyphenols (the typical US/worldwide diet) in some studies doesn't mean coffee is good, because coffee does too much damage to the brain, shrinks it etc. Those pathetic studies are like comparing one junk food with another far worse food☺☺☺ and concluding "fried bacon lowers your cholesterol or risk of cardiac events, so trans fats must be healthy" (even if FDA banned them after 5 decades of requests). Same thing, they say "coffee prevents dementia, it must be good", the control group is the junk diets. Getting dementia or not is not a marker of progress, maintaining high IQ is a marker of progress, and that means no coffee, as caffeine shrinks your brain and makes us rat IQ. Aristocrats know that, so every 200 yards we have a tea house, a coffee place, a market selling soda/energy drink with caffeine. The lower the IQ of the working class, the easier for CEOs to keep everyone chained. Wake Up. ☺☺☺Sleep well, regular hours, via the 11 companies system of low stress for all, get no dementia. Get 8 hours of sleep, not 5, all who get 5 hrs only tend to develop dementia at 5 times the rate.

Let all drink coffee without caffeine, there are 400 other sources of the same polyphenols if you want no processing of caffeine out, *process that increases* toxic *byproducts*. Coffee is hard work, uses slave labor often. Besides, the smell is not good, turns off decent people, who associate it with the devilish stench of killing millions of babies (I disliked the coffee drinker mouth smell since a kid, decades before I knew anything about what caffeine does to fetuses). It may be a natural species protection, our natural brains know foods that kill and which women to stay away from to perpetuate the healthy offspring and increase chance of survival. We can argue all bars, vape stores, coffee shops are Temples of 'Satan', as they achieve yearly Holocaust of over 10 million people, possibly 20 million yearly. 'Satan' is linked in mythology with death, short lives, while God with Eternal Life, Immortality. In these businesses, they don't have posters with the qualities, science goals that grant Immortal Life, nor Immortality *for* All posters or music about trillion Year Lifespans & the always ignored by the military controlled *(all multinationals are controlled by the military in country of origin, make no mistake)* companies Eternal Universal Peace in 3 months. These businesses are agents of the government policies (get real, wake up, all multinationals are state companies, every spy or smart person knows that) where they originate from and immortalists can't tolerate the mass extermination and lifespan shrinking by 1 billion fold that such *"enjoy crap now, so you drop dead at 80"* business models bring to the enslaved countries that embrace "die fast as a fake elections 'democracy' bundle of slaves". They sell coffee instead of high tech life promoting properly labeled eterni drinks of the amazingly educational 'Immortalist Universities' (that replace vape stores, bars, coffee places and do research, while offering healthy drinks) 'restaurants'. Deadly dairy added to coffee is rich in pus cells from cow tits and can prevent the uptake of coffee polyphenols, while allowing the

deadly caffeine in, so you get totally screwed. Some say palace dwelling aristocrats own the state, maybe they do, they just want every nation to be slaves, short-lived ones, producing goods for them. So, immortalists want all businesses to promote Trillion Year Lifespans and Science, in every way, to finally liberate all nations from the Corporate Mafiosi who only care about their mansions or 2300 acres palaces or 2130 acre part-time living estates and having a good life of 100 years maybe if lucky. Aristocrats don't care about Immortality *for* All. *This is a battle between Good & evil, Progress & stagnation, Science & brainwashing,* Eternal Universal Peace in 3 months & *the aristocrat greed wars we had forever, Gentleness & violence, Eterni tone & shouting, Love & terror, Grace & torture,* God & '*Satan', Buddhas* & 'demons', *Freedom to live to a Trillion & slavery to 80 year lifespan, Life & death, Immortalists & death/war fans,* Nonkilling & killings, Tenderness & *force, Spirituality* & military spies created fake religions.

Green tea can have 10 times less caffeine than coffee, so many people use it instead of coffee, due to bad side effects of coffee use (sleep is the healthiest way to overcome tiredness, not coffee). Huffington Post has a good article on how one guy quit coffee. There are benefits to 100% decaffeinated coffee due to polyphenols (absent in energy drinks), but the question is why do the longest living North Americans, the vegetarian Seventh Day Adventist centenarians of Loma Linda, reaching the age of 110 often, avoid tea, coffee and other stimulants, not just meat, smoking and drinking alcohol? If people can reach 110 without coffee, do we really need coffee if the risk is brain cancer, higher anxiety, miscarriage, hypertension or infertility? Coffee also increases stress hormones, which are a hindrance to the best telepathy precision. In some cases, it is hypothesized to lead to more sebum production, due to adrenaline increase, which leads to acne. "By doing quitting coffee, you may improve your immune system, lower stress hormones, balance your digestive system, lower insulin, be more hydrated and have more essential vitamins and minerals." Caffeine raises cortisol stress hormone levels, interfering with objective accurate telepathy. ► PBB 2006;83(3):441-7. Caffeine also increases the heart rate or beats per minute or pulse, and the higher the heart rate, the shorter the lifespan in general.

THE Possible ☺*Causation*☺ LINK BETWEEN CAFFEINE, VIOLENCE, AGGRESSION, DEPRESSION

Caffeine makes people impulsive and violent. Caffeine lowers HRV (heart rate variability), causing vascular damage to the brain, making people more prone to violent and psychopathic behavior RPC 2021;40(6):399-406. Given the amount of coffee shops and caffeine in virtually all drinks, it's no surprise USA violent crime is billions of times higher than normal. Court ruled Coca-Cola poisonous. Coca-Cola contains benzoate or benzoic acid, which when mixed with vitamin C forms benzene, a known carcinogen. Coca-Cola was made by a guy who was a morphine addict in his attempt to ease his pain. He put cocaine in it. Coca comes from COCAINE. He also fought for the split of US into two for the Confederate side. He died an addict to

morphine at 57, due to stomach cancer. Coca-Cola and a few medicines used to contain cocaine, just as today soft drinks and a few medicines have caffeine, another psychoactive drug. This is like mercury, the most toxic metal, still allowed in dental fillings. FDA failed to remove caffeine from the GRAS (generally regarded as safe) list when they wanted due to industry pressure. ☺☺

Could CAFFEINE RICH Sodas influence our Mental States and the way we filter our telepathy or thoughts??? Why are teens drinking sodas more physically aggressive and likely to carry a weapon? We all heard caffeine binds to adenosine receptors and moves us into fight and flight response (waking us up for real), but could this replacing of the calming adenosine with the panic mode caffeine shift our telepathy too? Those drinking soda are more violent and AGGRESSIVE ► JP 2013;163(5):1323-8. Higher soft drink consumption *is associated with a range of undesirable behaviors: being in a PHYSICAL* FIGHT, feeling sad or hopeless and having suicidal thoughts and actions: IJICSP 2014;21(3):266-73. The more soft drinks high schoolers used, the more VIOLENT they were, and the more likely to carry a weapon: IP 2012;18(4):259-63. Reverse causation? Poverty caused them to drink the ultimate poison due to lack of immortality capitalism freely provided information? Poverty and targeted (aritocrats owning prisons to workers to be jailed) violent music/movies caused them to be violent? Was it simply the caffeine alone in soft drinks? JYA 2013;42(7):1053-62 study of 3,747 students found the more caffeine 10th graders used, the more violence and misconduct happened for both genders, especially among girls. JA 2011;34(4):665-73 study of 7,377 Icelandic students found that the more caffeine students used, the sleepier they were during the day, the poorer their academic performance. JCR 2011;1(1):75-82 study of 7,348 Icelandic students found that the more caffeine students used the angrier they were. No Blacks/Hispanics in Iceland, just poor. Feeling tired in the morning, insomnia was experienced more commonly in adolescents of high caffeine intake ► JAH 2006;38(4):451-3. It's logical: poor sleep causes irritability, then anger, then aggression. Caffeine impaired such motor learning, verbal memory, while a nap benefited all three types of learning tested by Sara Mednick, PhD, and colleagues at the UCSD: n...l ► BBR 2008;193(1):79-86. Teens who sleep the least drink more caffeine ► NR 2014;72(Suppl1):60-4. Youth with major depressive disorder drink more caffeine, get more insomnia ► JPP 2008; 33(4):358-67. A study of 144 11-14 yr olds found that mg caffeine consumed was highly correlated with sleepwalking, bruxism, and headbanging ► JAH 1999;24(1):16-20. They know how to exterminate.

SUICIDE

A study of 43,166 people found that the heavy coffee drinkers' risk of suicide was 58% higher compared with more moderate drinkers. ► EJE 2000;16(9):789-91. Among bipolar disorder patients those using more *caffeine* were 2.4 times more likely to commit suicide ► BD 2009; 11(5):494-503. Unfortunately, most sodas have some caffeine. Inventor of Coca-Cola was a

Confederate Army member (who wanted to destroy non-whites non-Jews via sodas and caffeine, via increasing violence and then getting them killed or jailed by police) who got wounded and then addicted to morphine and tried to find some alternative and coca cola was it. Don't be fooled, blacks drink more sodas for a reason. Rich people want to destroy the working class too, so sodas do it for them. He died at 57 of stomach cancer, a disease accelerated by all carbonated drinks, still addicted to morphine, having sold the Coca-Cola patent to fuel his morphine addiction. This is the official cover story for the naive masses. Was he a spy? ☺☺☺

LINKS ON HOW TO OVERCOME *CAFFEINE* ADDICTION

Smithsonian Magazine explains how easy it is for anyone to quit in 7-12 days and how the brain gets addicted to caffeine. YouTubers share testimonials on quitting in 5 days ► 5 min clip, gradually ► 3 min clip, with the help of magnesium and ginseng at your own pace ► 5 min clip by doctor. One lady got rid of acne, extra weight, enlarged thyroid ► 3 min clip, another moved from 50 yawns a day to 2 yawns and got rid of her extreme fatigue and anxiety ► 8 min clip, another found new energy and presented 10 reasons to quit ► 8 min clip. A doctor explains how tyrosine and vitamin C can help quit ► 7 min clip. See some scientific reasons for why having caffeine drinks on an empty stomach in the morning is bad ► 3 min clip, fight and flight response blocks digestion and will lead to poor digestion or even skipping breakfast. 3 min BBC video shows what happens after coffee, the heart is stressed, heart rate goes up. ☺

EFFECTS OF CAFFEINE ON FETUSES, KIDS, OFFSPRING, FERTILITY, IQ

Did you know why Chinese Huawei wants to have 100 cafes on campus to 'lure foreign talent' into infertility to drain all brains from nations and wipe them out for Chinese superiority? It's because of what is explained below. The aristocrats use coffee places to exterminate nations, lower IQ, wage genocidal war against the worker class. Miscarriage causes cancer in women. Compared to nondrinkers, high caffeine users can have a 4.6 times higher ***low birth weight rate*** (***means poor health as an adult***), 3 times higher stillbirth rate, 4 times higher miscarriage rate, 4 times lower probability of conception in a menstrual cycle, lower IQ babies, more irritated breastfed babies. Caffeine binds to adenosine A2 receptors and blocks the neuron migration critical to brain development in the first year of life when brain size doubles. Caffeine kills fetuses and adults ► caffeine has a list of non-fetus deaths. The chemical structures of caffeine, theobromine, theophylline and adenine are shown side by side at ..e.pdf ► this similarity in structures is why *caffeine* and theobromine (theobromine is in chocolate, see below) can replace ***adenosine in the adenosine receptors.*** Caffeine is the most widely consumed psychoactive drug in the world. Brain doubles in size in the first year of life and *caffeine* from mom's breastmilk can cause severe IQ damage. Why? In babies, specific types of neurons arise in particular brain regions and then migrate to their target areas. Caffeine slowed the migration of these neurons

by 50% by binding to adenosine type 2A receptors. As a result, these neurons were late at being incorporated into the circuitry, with negative consequences: mice were more susceptible to seizures, and in adulthood, in utero exposed mice had mild cognitive deficits and earlier signs of Alzheimer. Caffeine is eliminated more slowly during early infancy, requiring 70-130 hrs in babies compared to 4 hours in adults. Caffeine works by binding to adenosine receptors located in the central and peripheral nervous systems as well as in various organs, such as the heart (94% of several hundred physicians from Minnesota and Vermont recommended reducing or stopping caffeine for patients reporting heart palpitations), & blood vessels ► Front Psychiatry 2017;8:80. All polyphenol benefits of coffee can be obtained from plums, cactus pears, strawberries, purple cabbage, blueberries, purple cauliflower, purple kale. Decaffeinated coffee is obviously safer as far as caffeine goes (but has toxins from the removal of caffeine with solvents, so many MDs avoid coffee altogether), but not caffeine free, sometimes just having 75% less caffeine and miscarriage risk was 2.4 times higher even in people drinking decaffeinated coffee in one study below. I'm glad I never drank coffee, alcohol and tea, except some tea as a kid. I also no longer eat cocoa and chocolate, after reading all these papers. If caffeine can kill the fetus, as shown below, why can't it brain damage him, some babies may be more prone to damage than others based on DNA? Caffeine increases cortisol, adrenaline, noradrenaline, which raise blood sugar, triglycerides, which causes brain damage via diabetes, atherosclerosis, hypertension.

☺☺☺LOWER IQ OF OFFSPRING ☺☺☺

Kids of moms consuming ≥ 200 mg/day were 2.3 times more likely to have borderline or lower IQ compared with kids of moms consuming < 100 mg/day ► BP 2016;80(9):720-6. Caffeine enters breastmilk to some extent and can have a detrimental effect on the production, volume, composition, and ejection of breastmilk, as well as a direct adverse effect on the infant, such as insomnia (sleep allows baby to repair the brain), fussiness, jitteriness, and poor sleep patterns, irritability and crying for caffeine free breastmilk or whatever pain. Mothers are often advised by their doctors to eliminate caffeine intake if they feel that their infant shows signs of caffeine sensitivity ► BRR 1998;6(2):27-30. Coffee is a factor in iron deficiency anemia, which can cause *13 points* reduction of IQ ► AJCN 1988;48(3):645-51. Mothers don't take more iron when consuming any polyphenol rich coffee (as they need to) which diminishes iron uptake. *Infant obesity was 2.37 times more likely for mothers drinking > 150 mg caffeine vs nondrinkers* ► IJO 2015;39(4):658-64. Adenosine receptor antagonists like caffeine alter fetal brain development in mice, leading to seizures, loss of hippocampal GABA neurons, some cognitive deficits ► STM 2013;5(197):197ra104. For some genes, the intake of caffeine can TRIPLE the risk of glaucoma, a disease that can lead to blindness, by the increase of intraocular *pressure*. The risk of intraocular pressure (via dehydration) in fetus could have lifelong *permanent* damaging effects on the emerging *optic* nerve. Likewise, the entire brain that is forming via neuron migration, could be

lower in IQ via caffeine caused dehydration during womb time or even during lactation. It's thus genocide to drink caffeinated soft drinks, tea or coffee while pregnant or lactating.

DELAYED CONCEPTION & FEMALE AND MALE INFERTILITY

Women in the highest level of consumption had an increase in the time leading to the first pregnancy of 11%. Subfecundity in the first pregnancy was 45% higher in women drinking more than 500 mg of caffeine per day ► AJE 1997;145(4):324-34. Women drinking more than 300 mg caffeine daily were 2.65 times more likely to have delayed conception for over 1 year ► AJE 1995 ;142(12):1322-9. Women drinking 300+ mg/day caffeine were 2.24x more likely to have delayed conception than nondrinkers, 150-300 mg 1.88x, while < 150 mg 1.39x ► AJE 1993;138 (12):1082-92. Drinking a lot of coffee meant 4x the odds of no conception, meaning 4x lower ability to get pregnant in a menstrual cycle (fecundability) ► RT 2006;22(1):13-9. 2 or more caffeine drinks/day meant a *60% greater risk of* ovulatory *infertility* than vs 1/week. The same was true for noncaffeine soft drinks, a marker for junk diets that cause infertility ► Epi 2009;20 (3):374-81. *Men drinking caffeine have their sperm DNA damaged* (chromosome abnormalities, aneuploidy, DNA breaks), causing delayed conception ► NJ 2017;16:37. Sperm count, quality, ability to conceive is lower in caffeine users. Idiots drink coffee☺☺☺ ► AJE 2010; 171(8):883-91.

MISCARRIAGE (can cause cancer, sepsis, immune system failure for mother)

Dissolving dead fetuses (a few grams) in the uterus ages the body and can cause cancer if fetus is big and done often, so drinking coffee while having sex outside of procreation can lead to cancer from miscarried fetuses. Low IQ "bitches"☺☺☺ *may have a big* fetus *inside and not know it, then develop cancer as it is dissolved slowly.* Thus, it's good to have sex for babies only. List of adult caffeine deaths is at caffeine ► to kill an adult it takes 0.5 million times more caffeine than to kill a small fetus weighing 500,000 times less than an adult (week 4), hence stillbirth rate is 3 times higher for heavy caffeine user pregnant moms, miscarriage rate 4 times higher for high caffeine pregnancies. Week 4-6 is when miscarriage is most common. Week 4 fetuses weigh 0.1 g, or half a million times less than a thin mother, week *7 fetuses are the size of a blueberry and weigh 0.5 g* or 100,000 times less than a thin woman. A 12 week fetus can weigh *just 15* g, or 3,000 times less than a thin woman. Adults have a way to easily eliminate caffeine, but newborn babies take 10-30 times longer to eliminate it, and fetuses even longer. Tea, energy drinks, chocolate, sodas, anything with caffeine in it, can be lethal for the fetus, giving cancer to selfish folks who don't practice immortalist sports, but have sex outside of procreation. Tea often times has more caffeine than some lower caffeine coffees, so probably a huge number of stillbirths and miscarriages are caused by tea or excessive sodas without mothers knowing. This list of caffeine in foods is a gold mine, it *shows some Starbucks Teas got* TWICE the CAFFEINE *in some Starbucks coffees*. Some energy drinks got 7 times THE CAFFEINE of the lowest Starbucks caffeinated

coffees. Sodas can have 71 mg vs some coffees of 50 mg. Caffeine binds to heart adenosine receptors, causes heart palpitations, which are far more severe in babies, leading to baby infarct (miscarriage or stillbirth). If the baby is lucky, he may get a weaker heart and survive the womb. Pregnant ladies who drink coffee are thus like serial killers stabbing fetuses.

Women who drank 4 cups of coffee/day were 4 times more likely to miscarry than *nondrinkers* ► HR 1998;13(8):2286-91. Those drinking ≥ 3 cups of decaffeinated (80 to 99% caffeine removed depending on brand) coffee were 2.4 times more likely to MISCARRY ► Epi 1997;8(5):515-23; maybe they drank tea/soda that boosted caffeine intake, but the authors may have adjusted for that. *Decaffeinated* coffee also affects the fetal heart rate and breathing rate ► AJOG 1989;160 (5Pt1):1043-7. Compared with a caffeine intake of < 151 mg/day, > 300 mg/day *doubled the risk of* miscarriage ► PPE 2003;17(4):316-23. Compared to nondrinkers, drinking > 200 mg/day meant 2.23 times more miscarriage ► AJOG 2008;198(3):279.e1-8. In 3,135 pregnant women, 151 mg caffeine daily (half the amount in a stronger Starbucks coffee) meant 1.73 times more miscarriage than 0-150 mg caffeine ► AJOG 1986;154:14-20. Women with the highest level of coffee intake (measured via the blood level of a caffeine metabolite paraxanthine) were 1.9 times more likely to miscarry vs nondrinkers ► NEJM 1999; 341:1639-44. 2+ cups of coffee/day before pregnancy meant 1.74 times more miscarriage (74% higher risk); men who did the same were at a 73% greater risk of wife having a miscarriage ► FS 2016;106(1):180-8.

STILLBIRTH

In 18,478 pregnant women, 8 cups/day meant 3 times more stillbirth (dead fetus past week 28) vs nondrinkers ► BMJ 2003;326(7386):420. In 88,482 pregnant women, 8 cups of coffee meant 59% more stillbirths ► AJE 2005;162(10):983-90. 300 mg caffeine (the amount in a stronger Starbucks coffee) meant 2.33 times more stillbirth than nondrinkers ► PPE 2006;20(2):100-9.

LOW BIRTH WEIGHT, shorter kids (lower IQ/health status permanently) ☺☺☺

If you eat fatty junk food, carotid arteries feeding the brain reduce the brain nutrients, cause Alzheimer as these pictures show brain death by nutrient starvation as it happens to a lesser degree to brains of babies whose mothers drink caffeine. Likewise, caffeine constricts all your blood vessels that transport nutrients from the body to the fetus and this undernourishes the baby and gives him a lower IQ, lower health status, smaller brain, lower birth weight. When moms get old, ☺abysmal IQ☺ babies grow into silly adults unable to take care of their parents. Caffeine rises blood pressure, the main cause of heart disease, the number one killer worldwide. A study of 3,891 women found those drinking over 300 mg caffeine (the amount in a stronger coffee from Starbucks) were ►►► 4.6 times more likely ◄◄◄ to give birth to an unhealthy low birth weight baby. Drinking under 150 mg increased risk by 40%, while 150-300 mg caffeine

meant a 2.3 times higher risk. Low birth weight has been associated with more diseases throughout life and lifelong irreversible lower IQ. ► AJE 1987;126(5):813-21. Researchers found a tripled risk of delivering a low birth infant with caffeine consumption > 300 mg/day ► AJPH 1989;79:1299-300. Caffeine intake of > 300 mg *daily during pregnancy was associated with* lowered *birth weight,* smaller head circumference of the infant ► NTT 1985;7(1):9-17. More caffeine during pregnancy means shorter kids, smaller brains: JAMANO 2022;5(10):e2239609.

Certain FILTERED & especially Unfiltered coffees contain diterpenes that raise cholesterol

"Coffee beans and some types of coffee brew, not the regular types of coffee prepared with a paper filter or with soluble coffee granules, contain the diterpenes cafestol and kahweol. Cafestol and kahweol raise the serum concentration of cholesterol and triglycerides in humans, and they also appear mildly to affect the integrity of liver cells. Both effects are transient after withdrawal of the diterpenes, and it is as yet unsure whether these effects are associated. Patients at increased risk of *heart disease* who drink large amounts of coffee should be advised to select brews low in diterpenes." ► JRSM 1996;89(11):618-23.☺☺☺ Total cholesterol (TC) rose by 26 mg/dL (0.67 mmol/L, from 5.56 to 6.23) after coffee, in a 14,581 people study ► NEJM 1983;308(24):1454-7. TC "rose by 0.42 mmol/l (16 mg/dl), LDL ... by 0.41 mmol/l (16 mg/dl)... apolipoprotein B levels by 8.6 mg/dl in those who *consumed boiled coffee relative to those who consumed boiled and filtered coffee*" ► AT 1991;11(3):586-93. Some studies found negligible rises, due to different coffee cultivars, processing of beans into powder, coffee preparation. But the fact that coffee raises LDL by 16 is scary, perhaps they could remove cafestol, kahweol, caffeine, theobromine. "(28) days of ... coffee .. (NESCAFE brand) were studied in 30 human subjects ... (TC rose by 16 mg/dl) (110.8-126.5 mg/dl) and LDL (rose by 16) (78.4-94.5 mg/dl)." ► AJMS 2001;30(1-2):43-5. 94.5-78.4 = 16.1 mg/dL rise in LDL. Filtered *coffee* raised cholesterol by 10: "(filtered) Coffee abstention for 3 weeks decreased total serum cholesterol by 0.22-0.36 mmol/l. (8.5-13.9 mg/dl)...600 ml of filtered coffee/day during 4 weeks raised TC by 0.15-0.25 mmol/l." (5.8-9.7 mg/dl) ► EJCN 2003;57(9):1164-8. Ntr 2013;29(7-8):977-81 found that filtered medium roast coffee increased several blood vessel inflammation (atherosclerosis) biomarkers called *endothelial leukocyte (monocytes, a type of white blood cells or leukocytes, gather near oxidized LDL fatty streaks soft plaque to form fibrous plaque)* adhesion molecules (soluble e-selectin 12%, soluble vascular cell adhesion molecule-1 sVCAM1 14%, soluble intercellular cell adhesion molecule sICAM1 8%, etc). Table 2 lists other inflammation biomarkers that rose such as fibrinogen, hs-CRP (rose 0.4), IL-6, TNF, MCP-1, sICAM-1, tPAI-1. When atherosclerosis happens, these adhesion molecules reach higher blood levels, as they gather in the blood vessel lining at the site of plaque. Cholesterol rose 12% and LDL 14%. The authors concluded that "Moderate paper-filtered coffee consumption may have an undesirable effect on plasma cholesterol and inflammation biomarkers in healthy individuals regardless of its antioxidant

content." sVCAM1 is a marker for atherosclerosis ► ATVB 1997;17(11):2646-54. ☺☺☺

If some can't quit drinking coffee, they can drink the coffee with the most polyphenols. This video *explains* why adding cow (not soy) milk/dairy to coffee/tea (or chocolate) is a bad idea, as dairy blocks *the absorption of the polyphenols in them, leaving people with severely* diminished *"benefits"* (95% drop in antioxidant effects in one study) from drinking coffee, and only the bad effects of caffeine; another way to destroy polyphenols in coffee is to roast the coffee beans at all or longer. Studies that query folks who add dairy will lead to bad results, as coffee ruins them. FF 2014;5(8):1718-26 found that "The caffeine content ranged from 48–317 mg per serving and CQAs from 6–188 mg", i.e. the main polyphenol (CQAs, a subclass of chlorogenic acids) was 31 times higher in some coffees, caffeine almost 7 times higher; Table 1 shows green coffee had 8 times more CQAs than dark roasted one. Table 7 shows coffee made with Nescafe Green Blend had 4 times more CQAs than Nescafe Classic. Table 3 shows Starbucks coffee they selected had 18 times (7 mg/serving) less CQAs than Artisan Roast coffee (129 mg/serving). Roasting coffee/cacao beans, nuts, seeds is bad as it creates AGEs that destroy our body, besides lowering polyphenol levels. Roasting creates new melanoidin etc antioxidants, but it's unclear what temperatures and which new compounds are beneficial. Total polyphenol levels are here: some Starbucks coffees (Verona Dark K Cup) have 4 times less polyphenols than others (Veranda Blend Blonde K Cup), or 10 times less than Dr. Danger Hard Core. Google it, read 100s of NIH studies, add "nih" to the search, if you're still into coffee poison. BRI 2014:482704 found that green coffee lowers urine cortisol 39%, while normal coffee increases it 5%.

CHOCOLATE & TEA can do THE SAME *damage*, if high in *caffeine*, theobromine, theophilline

(carob, the chocolate substitute, can kill infants, fetuses, cause mental retardation, see below)

Xanthine formula is here. The name comes from xanthos (yellow) in Greek, as xanthine is white-yellow. Caffeine or 1,3,7-Trimethylxanthine, theobromine or 3,7-dimethylxanthine in chocolate (causes acne, see acne studies here), tea, cacao, theophylline (in tea, chocolate) or 1,3- dimethyl xanthine, all 3 are methylxanthines. All 3 bind to adenosine receptors in the heart and brain slowing neuron migration during brain development in mammals (tons of mice studies) and leading to seizures, lower cognitive abilities, lower IQ in humans. They bind easily to adenosine receptors because the xanthine structure is almost identical to adenine part of adenosine (ribose-adenine, ATP is adenosine triphosphate): this is how drugs work, they're designed to bind to these protein receptors on the outside of cells and do their work, for example, a drug can detect cancer cell receptors and kill them. Theobromine comes from Greek: theo = God, broma = food, because the Incas thought cacao is the food of the Gods, no bromine inside, but theo + bromine is a simple recall method, the God of Bromine, a toxic chemical if ingested, or brown chocolate theobromine, the brown, m inverted is w. Theophylline means leaves of God,

from phyllon in Greek, easy to recall. Caffeine is methylated theobromine or theophylline, you "methylate God and get coffee, the devil's food killing 200 million fetuses a year".☺☺☺ 100 g of dark chocolate can contain 810 mg of theobromine and 81 mg caffeine, which may be equivalent to 954 mg caffeine binding to the same receptor sites with potentially greater ease, since theobromine matches adenine more than caffeine, lacking the bulky extra methyl group (caffeine has 3 methyl groups, theobromine has 2, theophylline has 2). Mice given theo*bromine* produced babies with shorter limbs, suppressed immune system, abnormal kidneys, enlarged spleens. Theobromine feeding resulted in significant inhibition of embryo growth. The authors say women need to reduce intake of theobromine and *other methyl* xanthines, during pregnancy and lactation ► IJTR 2004;26(1-2):53-60. Other studies found that caffeine causes growth reduction or retardation, low birth weight in humans, mice. Given some cacao powders can contain 10% theobromine, they could have fatal or catastrophic effects on the fetus if pregnant mothers don't know that when using cacao or chocolates. Chocolate feeding of pregnant mice (equivalent of 200g/day for humans) shortens limbs of their progeny ► PJVS 2003;6(3 S):57-9. ☺☺☺ Carob tastes like chocolate, only better, sweet not bitter, without these toxic effects of caffeine, theobromine, etc, so it's used as a chocolate substitute. Carob flour is 40% fiber. Cocoa powder got 37% fiber, 21 *times* more fat than carob, 4.3x more protein (higher score), 2x the ω6, 81 times more *saturated* fat that deposits fast and causes brain aging due to plaque, plus any organ damage due to nutrient starvation of that organ (heart, etc), even heart attack.☺☺☺ Worse, they add dairy fat, other saturated fat to cacao fat when making chocolate. Carob benefits are in many papers, its polyphenol content varies 100 fold, reaching the level of the best cacao (8.6%), coffee bean (4.3%) or blueberry powder: 5.7% dry ► WBV 2014;5:773-9; it's way safer than cacao/coffee. The only issue is to make powder, they roast it, so it forms AGEs, so best is to eat it dried or fresh, or make your own powder from dried unroasted carob.

Some infants died after ingesting carob, so if pregnant or lactating, don't eat it. Carob tannins, phenols can bind to iron and cause allergy and death in infants and fetuses, causing low IQ and brain damage, as mothers consume carob that binds iron, zinc, other key minerals. Chocolate, cacao, berries, tea polyphenols in excess can also cause IQ lowering by 20 points, or severe mental retardation if eaten in pregnancy. Coffee got way less polyphenols though, since people don't eat the powder. Cacao polyphenol varies 100 fold too, depending on processing, so some chocolate is pure poison, since it has fat, oxidized fat, denatured protein, theobromine, low polyphenols. Without real food labels of the eterni or pre-eterni era, we don't know what's there. Coffee, cacao, carob seeds contain lectins if not soaked first, which may irritate the gut lining, making it more permeable, especially cacao with 81x more saturated fat and way more lectins than carob, leading to toxins entering the blood stream and causing acne in cacao products eaters (e.g.: chocolate is well known for causing pimples). Progeny from the mice fed

chocolate during pregnancy and lactation presented considerable morphometric abnormalities in the kidney structure ► FHC 2006;44(3):207-11. Fetal heart rate was messed up by cacao and chocolate ► JMFNM 2013; 26(15):1465-7 as in the 3 min BBC video about avoiding cacao if heart issues exist. Caffeine *and* theobromine are now known to cross the placental and blood brain barrier, inducing fetal malformation by affecting the expression of genes vital in development ► PFHN 1997;51(3):231-43. Fetal rat brains accumulate theophylline, theobromine, paraxanthine when exposed to caffeine (caffeine demethylates to give theobromine, and theobromine can get into the fetal brain) ► BRDBR 1993;75(2):193-9. In rabbits, theobromine at 41mg/kg/day for 24 days or 0.125% of the diet was associated with missing bones. 41 mg/kg = 41×60kg or 2460 mg theobromine (the amount in 300 g of some dark chocolates, 24.6 g of 10% theobromine cacao powder or 2 big teaspoons pregnant moms place in a smoothie). At higher levels of theobromine or cacao, lower birth weight and more birth defects were noticed ► FCT 1986;24(5):363-74. If caffeine (or methyltheobromine) causes miscarriage, stillbirth, low birth weight, low IQ why can't theobromine (which is a metabolite of caffeine anyway, demethylated caffeine),theophylline (metabolite of caffeine, demethylated caffeine) cause the exact same thing? The methylxanthines are found in green and black teas (herbal teas often don't have any caffeine), cocoa (chocolate) which has theobromine, coffee. Due to the side effects of inhibiting these receptors, and similarity in chemical structure and behavior (caffeine and theophylline are theobromine with an extra CH_3 replacing a H), a lot of the effects from coffee show up for those eating chocolate, cacao. Even some ice creams have as much theobromine as about 200 mg of caffeine. The really exciting thing would be if companies would remove these 3 methylxanthines from chocolate, tea, coffee to protect everyone, maybe in the future governments ***will ban caffeine, theobromine theophylline, etc from all food items***, as we banned trans fats.

A health website says "You may have heard of some of the problems related to the production of chocolate for the workers. **Accounts of child labor, slavery and trafficking abound within the chocolate industry.** Cocoa is grown in undeveloped countries where poverty is high and law enforcement is not on par with that of developed nations. Unprotected children labor long hours in bad conditions to feed the international demand for cocoa so that privileged children can eat chocolate. Instead of going to school, they toil over cocoa pods under the blazing equatorial sun. Many cocoa plantation workers have never even tasted chocolate themselves. In addition, producing cocoa is dangerous work. Many workers have scarring from machetes used to clear natural forests for expanding plantations. Poisoning from unsafe handling of chemicals used on plantations is also not uncommon." Those who love coffee a lot may like watching this video which explains the hypothesis (not all studies are perfect) that slow metabolizers of caffeine (*1F allele, Adenine replaced by Cytosine in position 734 of CYP1A2 gene) were found in a study to be 3 times more likely to have hypertension at 3 cups/day than nondrinkers, while

fast metabolizers (*1A/*1A allele CYP1A2 gene; Cytochrome P450 1A2 (CYP1A2) is the main enzyme for metabolizing caffeine) of caffeine were 2.8 times less likely to have hypertension ► JH 2009;27 (8):1594-601. Those under 50 drinking 4 cups or more with *1F allele were 4 times more likely to have myocardial infarction, while 1A/1A carriers were 19% less likely to have myocardial infarction ► GN 2007;2(1):155-6. Drinking 1-3 cups/day was linked to uncontrolled blood pressure in hypertensive older people ► CN 2016;35(6):1457-63. ☺☺☺

11.9. BIOPHOTONS (the glow of all living beings)

Living animals and plants glow with a barely detectable visible light, biophotons, that vanishes when we die (these are the "auras" that people saw in darkness with their peripheral vision sometimes referred to as third eye, which is not the neuron misfiring called "migraine aura"), in order to protect themselves from attacking humans (common in areas with nights lasting for months). A biophoton (from the Greek βίος meaning "life" and φῶς meaning "light") is a photon of non-thermal origin in the visible and ultraviolet spectrum emitted from a biological system. Since many chemical reactions involve electron jumps and photon emissions (including the vision process), it's natural that all living beings emit a few biophotons. The typical observed radiant emittance of biological tissues in the visible and ultraviolet frequencies ranges from 10^{-19} to 10^{-9} W/cm^2 (approx 1-1,000 photons/cm^2/second). "Recent developments in biophoton research have made it possible to discriminate cancerous cells from normal cells both in vitro and in vivo... Using wavelength-exclusion filters, we demonstrate that ratios between infrared and ultraviolet photon emissions differentiate cancer and non-cancer cell types. Further, we identified photon sources associated with three filters (420-nm, 620-nm, and 950-nm) which classified cancer and non-cancer cell types" ► BBR 2018;13:7-11. This and the studies below have led some to hypothesize that dietary biophotons may be as essential to health as vitamins or phytonutrients. Since everyone is interested in a powder or man made food (Voyager 1 flies 161 times faster than fastest bird) that has every vitamin, polyphenol, phytonutrient, carotenoid, vitamin, mineral, enzyme, best fiber, etc we need, it may be important to add "biophotons" to it, whatever the technology may be in the future when powders replace animal and plant agriculture and all individual components are made enzymatically or chemically and we live 400 years as a result of advances in nutrition with 1 thousand or 1 million biomarkers monitored 24-7 due to much more powerful computers able to simulate human beings at the molecular level. If photons can carry information, far future science may discover how to infuse biophotons in this powder with the "information" of perfect health at age 20, so as to reprogram molecules and systems towards reverting always to a young state. We thought atoms are simple, the we found that they're complex, made of neutrons, electrons, etc and these made of quarks, etc. Photons too may be more complex.☺☺☺

Biophotons were discovered by Alex Gurwitsch in 1923 in the UV region and called "mitogenic rays" because they seemingly stimulated the division (mitosis) of nearby cells. His research revealed "that when pointing the tip of an onion root (inducer) to another onion root (receiver), separated by quartz glass, the receiver root surprisingly shows an increased rate of mitosis (approx. 20-25%). Since this effect was absent when using ultra-violet (UV)-opaque glass, he concluded that electromagnetic radiation in the UV range was responsible. He termed this type of radiation “mitogenetic radiation”" ► AJTR 2013;5(6):586-93. In 1970s other researchers "used a specially designed device to perform the (cellular communication without contact, via photons) experiments consisting of two flasks, which were connected by a window of either quartz glass or a UV-opaque glass plate (with a depth of about 0.2-2 mm). An “inducer” cell culture was placed in one flask and a “receiver” culture in the other. It was investigated how the treatment of the inducer culture with different stressors (e.g. viruses, chemicals or UV-radiation) affects the receiver culture. For example, experiments using inducer cell cultures consisting of monkey kidney tissue treated with adenoviruses demonstrated that the receiver cell culture also shows morphological signs of infection in 72% of performed trails (total number of trials: 170) after 2.3 days of (optical) contact". A similar experiment (picture at viewzone.com/dnax.html) is described in the BEBM1980;89(3):345-8. Later on Albert Popp found visible biophotons too (200 to 800 nm) and coined the term "biophotons". Here is an amazing 12 min video about biophotons with Fritz-Albert Popp, explaining that each cell has 100,000+ chemical reactions, some taking a nanosecond; he hypothesizes that it is at the speed of light that biophotons enable a human's trillions of cells to communicate and determine what to do in what order. This would explain how the body uses the biophoton LiFi (a biological light WiFi) to know what goes on in "distant" places (liver knows what the hand needs, etc), without necessarily needing cytokines and other chemical signals. If the body healing and daily repair uses waves similar to WiFi even or if WiFi disturbs cellular communication, then it explains why plants die when placed 2 inches from WiFi routers. It would be interesting to design similar Gurwitsch onion or other experiments to see if 2.4 GHz signals ever exist between cells or if WiFi frequencies interfere with this biophotonic communication telling the body what to do. Since WiFi affects cells and possibly certain protein conformations☺☺☺, they could trigger chemical cascades that interfere with the normal biophoton emissions (as noticed in cancer tumors). MIT Technology Review mentions a study on biophotons and cellular communication ► arxiv..1.pdf. Albert Popp is a physicist who holds a degree in experimental physics from the University of Wurzburg, a PhD in theoretical physics at the University of Mainz and a Professorship at Marburg University. Popp’s eight books, 150+ scientific journal articles and studies address basic questions of theoretical physics, biology, complementary medicine and biophotons. In 1996, Dr. Popp founded the International Institute of Biophysics in Neuss, Germany.

integral states that "Dr. Popp used his biophoton meter to measure levels in foods and came up with the following startling information: 1. Wild foods gave off the most biophotons and had levels double that of cultivated organic foods. 2. ***Organically farmed foods emitted five times more biophotons than conventionally grown foods.*** 3. Highly cooked and irradiated foods gave off almost no detectable biophoton energy." Here is a biophoton video by Alex Popp, the son of Albert Popp physics professor. See more on mistletoe being used by Albert Popp to cure cancer via biophoton effects and an image of the biophotons transmission of healthy and sick states (an explanation for hands on healing?) at viewzone.com/dnax.html. Physical biophotons may even act as a fractal transducer of astral biophotons (astral light for remote healing and astral travel at superluminal speeds) information and instructions for healing the physical body. ☺☺☺ "Biophotons are the body's "fiber optic" network. If biophotons are lacking, the enzymes are there, but don't know what work they're to do. This is one reason why a high level of biophotons in the body helps the body to regenerate itself… A healthy newborn emits 200 to 220 biophotons per second per square centimeter. Adults emit 80 to 120. A senior adult will transition from 60, to 20, to 10, and then none. When that happens they die." ► water.html. Biophotons are involved in some sort of optical communication between cells and are hypothesized to regulate many cellular processes ► DR 2014;12(4):515-7 and Palacky University 2013 conference upe2013.upol.cz/program/. Biophotons may be an unknown confounder in cell biology experiments. Biophotons are coherent and may be generated by DNA, which may act as an exciplex laser system ► CB 1984;6(1):33-52. Biophotons may regulate all life processes ► Exp 1988;44(7):576-85. Human high intelligence is involved in spectral redshift of biophotonic activities in the brain ► PNAS 2016;113(31):8753-8. Biophotons are used for healing probably, because stressing the skin leads to biophoton emissions ► JBO 2011;16(9):096005. This is also supported by this paper. Meditation led to lower biophoton emissions in a tiny study of 5 people ► FKKN 2005;12(2):107-12. "Bókkon's hypothesis that photons released from chemical processes within the brain produce biophysical pictures during visual imagery has been supported experimentally. In the present study measurements by a photomultiplier tube also demonstrated significant increases in ultraweak photon emissions or biophotons equivalent to about 5×10^{-11} W/m^2 from the right sides of volunteer's heads when they imagined light in a very dark environment compared to when they did not" ► NL 2012;513(2):151-4. "As brain and spinal cord are protected from environmental light by bone and connective tissue, the signal to noise ratio should be high for photons as signal. Fluorescent and absorbing substances should interfere with such a communication system. Of all biogenic amines nature has chosen the ones with the strongest fluorescence as neurotransmitters for mood reactions: serotonin, dopamine and norepinephrine. If these mechanisms are of relevance our brain would have to be looked upon as a "holographic computer" ► MH 2004;62(2):169-72. Biophotons acting as neural communication signals was demonstrated by in situ biophoton autography ► PPS 2010;9(3):315-

22. "in addition to electrical and chemical signals propagating in the neurons of the brain, signal propagation takes place in the form of biophoton production" ► JIN 2011;10(1):65-88. The hypothesis "eating biophoton rich fresh fruits and veggies (partial or full raw veganism), instead of cooked ones, leads to more telepathy" may find some extra support in this article on biophotons and telepathy. Some people think biophotons are involved in self-awareness and consciousness ► JIN 2014;13(2):253-92. More on biophotons and telepathy is here. Reports exist about meditators being able to emit gamma brain waves and infrared (part of chi emissions) waves 100-1,000 times more intense than the average person, biophotonic emissions 20,000 times higher than average. Kruth from Rhine Research Center used a photomultiplier to measure biophoton emissions of 120 people, including meditators, healers and found that an empty room produces 5-8 biophotons per second, a sedentary person 12 to 20, some 60, others 0.2-0.4 million, 2 were > 1 million (energetic healers, Kundalini Yogis were highest). Perhaps, since everything is information, in the future, the way to living to 1,000 years may use some of these biophotonic methods to send cues to cells/organs to return to the state of "20 years old". ☺☺☺

11.10. FASTING (sleep longer) + low WHR (read all 21 pages if you fast)

Former Trump CIA chief/State Secretary Mike Pompeo lost 90+ pounds, look at before and after in 2026. Extra fat can diminish health 40%, cause diabetes (and then leg amputation or blindness), death by infarct/stroke at age 40, etc, living like a disabled vegetable for 50 years. Thus, it's the duty of any gov to mandate biquarterly physical medical exam to at least record a few biomarkers and weight, fat%, etc, and mandate 4 weeks off work if person needs to lose 30 lb (1 lb a day with program explained below), for a safe 1 meal (716 cal) a day fast and major health check every week of the 1 month off. Gaining 30 lb of fat, which is what 2 billion did already, should be seen as more grave than a heart attack as it does just as much damage over time, yet nobody even checks their weight anymore, since BMI guidelines are useless, since muscles can weigh a lot and it forces the 'normal BMI' to categorize fat people as healthy. A 6 month check (mandatory to keep insurance, police comes next day to take person to MD if failing) can prevent $ trillions in preventable expenses, since many don't go to MD for decades and don't know how sick they are, how much damage the belly fat does. One can't force the gov to spend 3 million to maintain the issues a lazy bum can prevent by reporting to the doctor twice a year. We can't have 50 people wasting a life to take care of a lazy fat pig. Everyone needs to be aware that the expenses from belly fat are astronomical. Everyone almost is so spoiled, blaming "hormones, appetite, etc" when a simple scale used twice daily tells you when you ate too many cals and now you go back to 120 or 140 lb, depending on height/muscles present. Not to mention, we create a nation of very low IQ lazy gluttons. The fatter you are, the lower your IQ, watch this lady get violent (belly fat increases aggression and violent crime via brain inflammation), since fat clogs (dramatic pic) the brain arteries, shrinking, damaging the brain.

The fatter you are, the more aged the brain. Weigh yourself twice daily to lose 20-100 lb fast. Most fat is stored in the trunk-belly area, internally (visceral fat) and externally ("love handles" you can grab yourself around the belly, bigger breasts, etc), so the trunk weighs 30-200 lb more, making it impossible to breathe as deeply as before, since lungs push against gravity and 15-100 lb of fat to merely inhale if sleeping on the back. This causes 20-40% less oxygen to be delivered to a brain/heart that need more oxygen due to 30-200 lb extra. This lack of oxygen causes chest pain (low oxygen to the heart), headaches (low oxygen to the brain, made worse by poor ventilation) and systemic inflammation (high triglycerides) which causes arterial plaque that further blocks blood flow to the organs, feet, toes, heart, brain, leading to more chest pains and headaches, toe aches, which causes USA to prescribe trillions of useless medications via misdiagnoses. It's all lack of oxygen and sometimes, lack of nutrients that cause 1000s of "disease symptoms" misdiagnosed by MDs, as plaque formed by being fat now permanently restricts not only oxygen, but nutrients too and toxins build up, unable to be transported back by clogged veins. This $1 trillion/year waste can't happen if any medical visit measures % body fat, makes it an emergency to lose body fat when going above 15%, so all are like a fit supermodel and we don't waste 1 trillion a year in misdiagnoses of nutrient/oxygen deprivation. This brain destruction becomes permanent the longer one is fat, as blood calcium reacts with this soft reversible plaque and turns it in 4 years into calcified irreversible (meaning narrower, so less oxygen/NUTRIENTS going to every organ) plaque that also makes arteries ultra stiff (meaning far more prone to strokes, infarcts), which means lifelong low blood flow to toes, feet, brain and heart, leg amputations, etc. No patient ought to receive any insurance in USA until they fast with 1-2 meals a day for 1-10 months to lose 10-200 lb, as required by federal law overriding any local law, as the next paragraphs explain, so as to eliminate the confounding factors of 80K abnormal biomarkers due to body fat. The age of being a spoiled fat pig with 1000 times restaurants than others is over. We can't be walking like fools and complain all day when we're part of the problem: super fat and pig like eaters. Civilized people have no addiction to taste, color and taste, but eat to live and help all humanity eliminate war, violent crime (lower it a trillion fold) and animal pain via eterni foods powders dissolved in water. Stop eating like a pig, get a food table, think about what you eat, help create Eterni Foods with 50,000 nutrients measured in ng amounts, for real space rocket like personalized nutrition.

This belly fat epidemic can't be allowed, as it shrinks lifespan, speeds up aging, lowers national IQ by 10 points in fat people (already 85% of USA) and will soon run our country into the ground. Walking before or after meals can help you lose belly fat. This is a crisis far more serious than the debt or WW3, it's the end of USA forever, nothing left of it, not even a defeated USA in WW3. We'll all vanish in one blast, 10 second continental blast. That's why we're so fat and gnat IQ in America, because the healthcare system is not attacking the number one killer: body fat. It

only attacks one thing: the poor working class for the profits of the MD Aristocracy (making 10-80 times the minimum federal wage) and Big Pharma Aristocrat Palace Industrial Brainwashing and Fake Medical Education Complex, the Big Junk Food Mafia. Let's fight back with a pressure cooker (to replace all kitchen appliances, except smoothie maker) and some lentil soaking techniques and data. Boycott all restaurants, for 99.9% of them sell POISON. We either fix our diet or nothing will be left of USA. We're our biggest enemies, not China. In the last 35 years China grew their GDP 9 times faster than USA did, thanks to a culture of skinny people. We instead, became gluttons with twice the fat people. Our greed (corruption, pay inequality), arrogance and stupidity are the main enemies to health and 150 year lifespans for all. We're what we eat: fat idiots or skinny geniuses. Look at Japan, China, Vietnam, much skinnier than the NATO fat glutton pigs, arrogant violent ultra low filif IQ rats listening to the violent music we export worldwide, thereby destroying the human quantum field and creating 200 enemy nations: can't destroy other nations' moral fabric without experiencing the effects in future centuries. We make everyone fat, sick and low IQ like us with KFC, McDonald's and other Crap. All current clinic scales, ultra expensive 400-900$ junk, need to be replaced with cheaper and way more useful body fat scales ($45 Whitish, $69 Dark Grey, $66 White, $59 Light Grey, $60 Pink): buy ones with hand sensors (double the BIA electrodes) not foot only scales, because they send electricity thru the whole body (not just lower body) via Bioelectrical Impedance Analysis (BIA) tech. BMI is not that important, since some have muscles. At least get a 17$ normal scale. Fasting 12+ hours increases synapses, IQ and some claim brain works better after the daily sleep which cleared the brain of waste and of metabolic stress of eating that shuts down cognitive ability slightly, meaning before first meal of a day, our brain is at its highest potential for discovery, creative thought, problem solving as glycogen and fat are still there, but with a clear brain, no heavy digestion distracting the brain. Ketones produces 28% more energy/oxygen gram, BDNF surges 50-400%, autophagy clears brain waste, fat cells autophagy (macrophages are taking fat vesicles from fat cells to produce energy via lipophagy). Can walk backwards slowly in your house or garden to boost IQ. Calorie restriction reverts brain ubiquitylation efficiency to that of a younger age, while exercise cuts dementia risk in half. Since 1950, US IQ declined, no real innovation happened in basic physics/chemistry, as CEO pay went up to 400x the average worker vs 20x before, corruption, arrogance exploded due to WW2 win, $ as reserve currency, obesity rate rose 3 fold. Animalism took over, education became a for profit scam.☺☺☺ Greed/gluttony won. US weight rose 29 lb from 1890 to 1980, and another 16 lb 1980-2025, for a 45 lb total from 1890 to 2025, while lifespan increase/year dropped 20 times (28 lb extra from 1950 to 2025). We've become fat bipedal filif IQ 'pigs' in some ways, ethically, and physically.☺☺ USA is at risk of vanishing, as the US adorable piglets fall into a black hole due to so much weight the pig headed aristocrats put on us via junk food, fake science about seed oils.

To lose 1 lb/day, you can rest 9-10+ hrs/day (preserves heart/body muscle mass), exercise only 5-15 min/day as it damages heart due to moderate protein, fast via a 716 cal/day diet made of:

1). Foods: 200g kale (100 cal: relaxes arteries, anticancer, has lutein for gut/brain/eye, healthiest veggie) as kale-water-(carrot) puree smoothie that has all vitamins + 2g chia oil (the healthiest seed/nut oil) + 2 EPA-DHA pills (0.5g ω3) added, 200g carrot (82 cal: anticancer), 400g cooked lentils (468 cal, healthiest legume) for antioxidants, protein, a walnut (2.4g ω6, the healthiest nut), 10g vinegar twice a week (optional, mouthwash with baking soda to bring pH to neutral after eating to protect the enamel; smoothie) for belly fat loss & soft stool (to avoid anal bleeds, use toilet paper with cream on it to wipe before defecation *if stool is hard).* Carrots, kale are good because fasting can increase the risk of some cancers, even if it dissolves most cancers. Can eat garlic, maybe vit E, to detox/thin blood, since moving less due to low cal can raise clot risk, especially for non-O blood types. If having dry eyes, keep blood carotenoids high (= long telomeres), by eating the kale/carrots in 3 meals/day, 6-12 h apart, 2 meals are 100 g carrot + half walnut+ 100g lentils, fat boosts β-carotene uptake. Low "carotenoid levels.. (make) tear film... unstable... (causing) dry eye". "Type I procollagen mRNA levels... increased ...4.4 times (with 30 mg β-carotene)" (30 mg = 200g kale, 200g carrots to boost collagen production to help arteries, cornea). Diet can last 300 days to lose 300 lb. If weight is > 160lb, increase g of each item by weight (lb)/160 factor. If very active, add 70-200g lentils/day to prevent heart damage, muscle loss. If inflammation exists (pain in head, heart, joints, etc), do autophagy, so twice a month eat only once a day the smoothie with kale/carrots above without any lentils, to give 24 h to clear old proteins. When you limit protein, body eats old proteins that cause pain in the body. This diet has high fiber, the key to reducing hunger and making you lose weight fast. ☺☺

2). Vitamins: 16$/lb 0.2 g taurine for heart due to stress of low protein, 20$/lb Choline Bitartrate 1.2 g (=0.5 g choline) for brain, vitamin C 200 mg thrice/day to help collagen production, 0.2-0.4 g CoQ10 for heart, 5000 IU vitamin D to boost immunity, 60 µg Se for detox, 0.5-2 mg vitamin K1-2 to prevent artery calcification & bone/teeth loss, B complex (has adenosyl, hydroxy or methyl cobalamin B_{12} niacinamide B_3, P5P B_6, 5-MTHF B_9), multivitamin with 1 mg Cu, 150 µg iodine (KI), 1 g creatine to aid heart, prevent muscle loss (0.5 g max with meals after fast, to prevent kidney damage, vegans get no creatine from diet, omnivores get 1 g), 2 g glycine for collagen synthesis, 8-18 mg Fe iron (25% of 36 mg pill if not in multivitamin) for vegans mostly, if ferritin < 30 ng/mL

3). 5 Electrolytes: 7$/lb or other KCl 3.80 g, (=2.00g K) since food has 2.832g K, 6$/lb or other $CaCl_2$ 0.90g (=0.32g Ca) since food has 0.655g Ca, 35$/lb MgGly 2.0g (2.0×(24.3/172.4)=0.28g Mg) or MgO 0.28g or 2 pills/3 days, 2/3rd of a pill/day (MgO makes stools softer) since food has 0.242g Mg, 3$/2lb NaCl 0.5g (=0.20g Na) since food has 0.252g Na, 56$/lb ZnGly 50mg (=15.3mg

Zn) for DNA repair since food has 6.5 mg Zn, use scale to see how much is 0.1g, visual weigh OK after first weighing), purified water (2.5-4 L, depends on thirst/sweat/weight) with electrolytes added in some glasses. Dissolve these in 2-3 separate glasses of water, to prevent calcium spike in 10 minutes, as Ca damages the arteries and body. Don't take dry powder in your mouth to dissolve it as the harsh salts can damage your throat. This type of solution also helps you hydrate during normal nonfasting days of exercise, since electrolytes reduce hunger and weight gain. You will feel very miserable without electrolytes during any fast. Make each solution fresh to avoid bacteria growth. Try take Zn^{2+}, Fe^{2+} separately from Mg^{2+}, Ca^{2+} which limit Zn, Fe absorption. The MgGly scoop can be used to take KCl, $CaCl_2$, NaCl (K Na Mg Ca are essential to avoid fainting, dying from heart attack, Mg prevents eyelid/muscle twitches, leg cramps, helps produce ATP, protects the brain) too, since all 4 weigh 2 g/scoop, rough weights OK, half scoop for Na. Sleep 10-12hrs to avoid muscle loss, stress less, relax, take day off to safely get rid of that belly and internal fat that kills your brain, heart, makes IQ drop 50 points from one year to another, causing incredibly poor decisions. IQ fluctuates year to year, month to month, day to day, depending on diet and sleep quality, belly fat, emotions. If troubled by body pains, do deep autophagy for full body renewal, immune system reset, once 1-10 years do 2-3 days as above at a time, minus the protein (no kale, no lentils, total cal 100 max/day) that prevents deep autophagy of plaque/bad proteins, to dissolve cellular waste/bad proteins accumulated over decades causing pain. If water fasting, all is the same except added electrolytes (Na, Ca, Mg, K) rise to make up for the food electrolyte values written above. If you have kidney issues or blood pressure is very low, lower K by 25-35%. The fasting may need 2 pills, so 0.57 g Mg. Before doing that recall that not all pain is due to inflammation, but can be due to the torture by CIA, KGB...

Chinese (skinny, obesity rate 9%) in Hawaii live to 88, Japanese (fatter) to 84, while the fattest group, Polynesia migrants (obesity rate 60% of population), to 69. Fat weight matters. The more belly fat, the shorter our life, the lower our IQ. AMPK activators, such as flavonoids, alpha-linolenic acid ALA (chia/flaxseed oil are 50+% ALA) polyphenols (in ginger, onion, red-blue veggies), acetic acid (vinegar), etc help turn on autophagy (dial down mTOR pathway) and lose weight without fasting even. Thus, when fasting, whenever you eat a small meal between 1-2 day fasts, eat more polyphenols to turn on autophagy even while eating (mostly protein). If you water fast more than 16 hours, please take all above nutrients, to avoid hair loss or a temporary pink nail band due to low iron or low protein (protein is needed to create antibodies against fungus from a nearby toenail injury, allowing a fungal infection to spread to other toes), protein is key, one meal a day is better to avoid vertical ridges for the nail. During fasting, hydration levels change and a lack of protein and some minerals can cause temporary pink fingernail tips. I explain here how I lost 34 lb of pure fat (that I gained in 2 years of eating too many walnuts *and* watermelon, fructose deposits as fat) in 36 days thru 2, 5, 8 day water fasts broken by brief 1-4

day periods of 1-3 meals/day (mostly 500g lentils for high protein to help the body). You don't need to do more than 4 day fasts to get the benefits of autophagy, too much protein starvation can be bad (hair falls, 1-2 nails (toe usually) develop pink upper ridges due to lack of protein nutrients from eating vitamins only, etc), so be gentle with 1-2 day water fasts on weekends mostly, eat mostly protein and lower cals during the week. It depends on how you feel, how much belly fat, etc. It's true that on day 5-6 you can lose sometimes 4 lb in one day due to water weight loss, but usually it's 1-2 lb. It's best to eat huge vegan lentil protein amounts between 2-5 day water fasts, to help body heal, min 100g/day protein (if short, 150 if big) to help stem cells repair the body: pure lentils, kale, garlic, ginger, onion to help plaque dissolve, during the days of eating to restore protein, heal body with high stem cells circulating. BMJ 2025;389:e082007 showed alternate day fasting (eat every other day) improved biomarkers and led to 7 lb of weight loss in 12 weeks, while fasting 16 hours daily (normal calorie load, 2000 cal for example) didn't do much, except worsen some parameters and provide only 3 lb of weight loss. So, to lose weight, you need one 300–400 cal meal a day, as shown above, not these useless "16 hour fasting or eat every other day normal meals". The 1 meal a day helps you lose weight ultra fast, 42 lb in 12 weeks. These studies/videos about "eating almost same calories, but stop eating for 16-32 hours" are just a waste of time, you need to cut calories to 2300 a week, not fool around with timing and still eat 15,000 a week.

When fasting on water only, do nothing physical, don't work/drive, just relax, sleep, listen to nutrition videos or read this book. The body needs rest, reaction time is super slow during ketosis (body burns fat into ketones and also makes glucose out of fat), too dangerous to drive/work. Falls can happen if you get weak, so don't exert physically during a 1-4 day water fast, plan to just walk to bath or fridge at the most, no errands, no gardening, no chores, don't try to talk much either, as vocal chords don't get nutrients either, learn to be quiet. The length of time you fast on water plus electrolytes and vitamins depends on you, stop after however many days it takes to experience any discomfort, be it muscle twitch, headache or any pain (especially old injuries sites, fasting does boost stem cells after 4 days and autophagy increases 20 fold vs a 1 day fast, after several consecutive fasts (eats old junk cellular components that are sick or useless hanging there for 30 years), on day 4 of a fast, it eats old defective tissue, asks for protein to repair, hence the pain), which is a sign you're too low in protein (pain, so stop and eat lentils) or too electrolyte imbalanced. You will be shocked how all pain in a busted toe (busted years prior) disappears immediately after a protein meal, even if it went on and off for days (especially last day before a protein meal, going on every 9 minutes). In earlier fasts autophagy repairs via stem cells other injuries, knees (use the cap to help knees if any pain, so you don't stop the fast) but then those vanish and body moves to other areas to fix.☺☺ See how vegan Jeff explains his LDL dropped 162 to 101, TC 252 to 172, ApoB 111 to 81, LP(a) 236 to 143, BP

140/80 to 106/65, CRP 1.46 to 0.31, after a 10 day water only fast, see it also in FN 2024;11:1418705. Poor sleep means lower testosterone, which is key to preventing muscle loss *and to muscle* building, so those who fast on water and sleep less lose more muscle and less fat. Belly fat in "healthy" people causes thickening of carotid neck arteries (see pic) feeding the brain, leading to brain loss, dementia, low IQ, short life, high stroke risk. ☺

After the fast is over, you may notice, like millions, that areas with chronic occasional recurrent pain (angina, heart due to plaque, knee, toe, temple, skull, any body area etc), have 0 pain now as stem cells and autophagy wiped out the cells/plaque/fat that caused the pain. The stool may be harder first few days, or in the shape of balls, read the kale section on how to fix that (add vinegar). Whenever stool is hard in the post-fast period, to get stool soft instantly in 20 hours, just eat a 5 vinegar spoons carrot-kale smoothie, 400 g lentils, a pineapple a day, plus (if stool not soft yet) 5 packs of blackberries as they got 3 times more fiber/calorie than blueberries (sleep on the left side to increase stool movement, improve digestion) or maybe even 2 small pineapples with the lentils and it will immediately become normal soft hot dog long shape instead of 20 little balls. It works without pineapple/blackberries too, just the vinegar smoothie. This is due to the protease enzyme called bromelain in pineapple, which cleans the colon wall and allows normal stool movement, thereby preventing ball formation. Avoid chia seeds, flaxseeds, fenugreek seeds (got the same chia seed like water absorbing fiber), all protein/etc powders, most nuts/seeds if stool is hard, as they absorb a lot of water and harden the stool. Only eat 1 walnut/day and chia oil, if stool is hard, while avoiding anything that clumps water, like high hyaluronic acid amounts, etc. Blood pressure will also drop by 10-20 points, both systolic and diastolic, while heart rate may drop 5-10 points, meaning you will live 5-10 years longer. After I lost 30 lb the clinic BP was 105/69, with HR 53 (athletes 35) one time, SpO_2 97.6% (blood oxygen saturation, healthy is 95-100), temp 97.5°F (healthy is 96.3-99.3). No drugs, nothing, just free fasting that saves you $$$ wasted on food otherwise. When you eat first time in 4-8 days, your toes may have some muscle cramps first 12 hours, as electrolytes are out of balance due to getting used to water and salts. Listen to the body, but a simple muscle crap on toes due to electrolyte imbalance is not a reason to stop, otherwise, you may take 5 months to lose 30 lb not 35 days. The pain or twitch disappears and then after 1-4 days of eating 1-2 meals a day you continue, only if it is pain free. Can do 4-5 fasts of 4 day each, with breaks of 3 days, for a total of 32 days to lose 30 lb, or fast on weekends, eat half calories on Friday, to lose 30 lb over 3 months. Take 1 day off Friday or Monday to fast from Friday 1 pm till Tuesday morning, 3.5 days or take 2 days off for 4.5 day fast. Call in sick Monday if you feel like turning 2.5 day fast into 3.5 day fast, but 2.5 is enough if calories lower thru the week. After you lose 30-70 lb, try to raise protein % of your diet from the 10-15%, to 20-25% for 3 months, to regain the muscle mass lost by exercising an extra 10 min daily: you need muscles during aging, since after age 35, we

start losing muscles, especially after 45, so we need to get used to a little exercising daily so we never fall in old age and are independent of wheelchairs at age 110. As you age, your digestion of protein decreases, so you actually need to eat more protein to live to 110. When fast is over, you start eating slowly and your stool will be harder than usual, due to it being stuck there longer, so you will need to use the enema to insert 300 ml of water or so to get it out until it becomes soft and typical vegan stool that comes out on its own effortlessly in 10 seconds (this will take more than 1 day, depending on how long your fasts have been and how much that fasting has disturbed the microbiome you had before the fast). Avoid eating chia seeds, flaxseeds, hyaluronic acid and other stool hardening foods (nothing dried, everything wet).

Before you begin water fasting, please buy a 5$ enema kit, clean your colon, since after 3-8 days of water fasting, stool is hard, defecation can be painful/bloody without enema first. After using enema, run 2 liters of tap water thru it, disinfect nozzle with alcohol pads and ventilate all tubing, leaving it in the open position, disconnect tubing for faster drying, etc to prevent mold growth, run 50 ml alcohol thru it and then water again. This is explained in detail in the next 16 pages: *do an enema daily while water fasting*. Making breakfast the highest *calorie* & highest protein meal makes you lose weight the fastest ► Obe 2015;23(9): 1761-4. *Eat most protein in the* morning *to lose weight* fastest ► HRP 2015;83(1):19-25. Walking is the safest exercise for losing fat without losing muscle, but as you age, you need more exercise to avoid stress on knees, joints and avoid falls. While fasting on water, many MDs don't allow even climbing of stairs, let alone exercise and extensive walking, as it can cause falls or muscle loss. After fasting, you can walk all you want: immortalist sports or even immortalist outreach (in safest areas). No need to build 6 pack to lose weight, just build virtue, help World Peace emerge. Fitness only gives us 10 extra years, science can give 4 trillion. In 2 pages you find the proposed change of definition of overweight (15% body fat, 40 lb for 200 lb weight) and obese (20% body fat) to make all slender and healthy as most centenarians. *Please don't think that if you're not overweight*, "you are fine", high functioning men (ages 70-79) *with WHR (waist to hip ratio)* > 1 were 75% more likely to die than those with WHR ≤ *1* ► AE 2009;19(10):724-31 ► "*Central* fat increases the risk of developing both metabolic syndrome and *diabetes* mellitus and contributes to cardiovascular risk by *increasing peripheral vascular resistance* and *secreting proinflammatory cytokines*". Parents have no idea how fat their kids are due to bad diet.☺☺

Men who weigh < 140 lb live 7.5 years longer than men who weigh 200+ lb, regardless of HEIGHT, so muscular/fat men live shorter. All centenarians in every nation have the lowest BMI of that nation. Why? In Japan, centenarians have BMI 17. This is especially true for taller people who became tall via activation of IGF1 in childhood, the growth hormone that speeds up aging. Your heart has to pump for brain and legs longer distances when tall, so its efficiency and health have to be perfect, and not hindered by visceral inflammatory fat. Because the human quantum

field wants kind people who use physical energy to increase the lifespan of other people too, not just buy equipment in one's home, via immortalist sports that increase brain compassion centers, reduce violent crime 1 billion fold and are not concerned with muscles to punch other people, which is a violent crime that sinks humanity into eternal war instead of living to 4000 like honey bees with a different diet and going to other planets in one life to increase species' survivability. A muscleless man always thinks first of a trillion nonviolent ways to achieve anything, World Peace or even arrest of someone moved to a healing city, so he takes the species forward from gorilla violence to civilization of Immortals. Essentially, the quantum field enacts death penalty onto the selfish beast who places himself above others, his muscles above kindness, his sports room with metal above the metal being used to reinforce a dome of poor people and save them from death during tornado leaving nothing behind: he has taken 60 years off someone's lifespan by his selfishness and the super intelligence of the field enacts its punishment. The selfish beast could have helped others to fix their house, of mold, of this and that, that uninsured guy could not fix for 20 years, but he chose instead to be a beast, to pump his muscles, to run 6 miles each morning, like a hideous demon with no heart or compassion. His grave avarice led to that guy dying 15 years early, so the field won't aid him in living long: he has placed himself above humanity. Kempner found mice fed a low protein vegan diet and low sodium lived an extra 200 days, vs 17 days for the normal high salt meat diet, that's why muscle builders live shorter, violence destroys itself. Kempner (1903-97), an MD who worked 3 years with the 1931 Medicine Nobel laureate, published (570 pages) a lot of reasearch on kidney healing by diet alone. Another 410 pages are mostly in German. High protein intake from animals means acidosis, which ruins kidneys, leading to $50 billion/yr in expenses, $90,000/year for dialysis per patient. All preventable by a low fat vegan diet, vegan protein is alkaline forming. This then leads to killings to steal human organs or illegal kidney etc removal surgeries in Mexico and China and human organ markets within animal markets, all for the Glory of Muscle and Protein, the glory of Murdering Animals and Spilling Blood like a Satanist. The human quantum field won't help such Infernal Demons. To live long, losing fat via fasting is not enough, we need to behave like an Immortal who loves all humans as if they're part of his family, as if all are his children, a Family of Immortals, with a *gentle tender soft nurturing healing* graceful compassionate loving kindness a trillion times greater than that of the most loving mom had for her only suckling baby, as the Immortalist Anthem 1st page says. As we ponder on this world of 0 violent crime, we realize a family only exists when separation ceases and we move towards the universal altruism of the beloved 11 companies of the family of Immortals that becomes the US, as a model for unifying humans in the Deification of Life Eternal.

Arterial plaque (born from belly fat releasing triglycerides into the blood daily) reduces nutrients and blood flow (blood carries nutrients) to the brain, heart and other organs by 2-10 fold as

these pictures of Alzheimer brain arteries show. So, not only does fatty food lower IQ, but you can die 40 years early due to heart attack, as heart receives 0 nutrients. This is why Big Junk Food makes fatty food, aristocrats want workers to have low IQ. Most Japan centenarians have BMI 17-18. So bring weight to 140 immediately if possible ☺☺☺, by adding multivitamins, electrolytes to a low cal diet. Higher belly fat leads to lower brain volume, higher risk of dementia/stroke. Higher belly fat was linked to lower brain volume, lower IQ.

A long 3-8 day fast converts all sick cells and deformed useless proteins and molecules into amino acids that body uses for daily functions and can thus do a cleaning no human tech can ever dream of achievin g. To maximize this autophagy, you need to do enemas to remove all feces, as those feces staying there can release toxins in the blood, wasting precious immune system resources, otherwise used for autophagy, to deal with these toxins. Avoid eating hyaluronic acid or anything that hardens stool, since this makes defecating and enemas harder, so flaxseeds, chia seeds, etc are not good before any fast; avoid garlic, vitamin E and all foods that are known to increase risk of bleeding; if you don't do enemas in the first few days to clean colon, on day 4-8 the stool will be so hard, it may scratch your anus causing bleeding, so you definitely must do enemas first 2 days to clean colon out. The bleeding may take 1 week to disappear as you return to normal eating and daily defecation, using cream to heal the area. This 7 day autophagy, which accelerates in day 4-7, clears every organ and blood vessel of many forms of plaque, improving circulation thruout the heart, brain and every organ, it's a total remake of the body. Don't work, drive or shower, exercise, etc during a water fast over 1 day, as the body is too weak and reaction time is too slow, causing accidents. Do it in your 1 week vacation and do an enema 3 hours after the start of your fast with 2L of water, and again 2L about 12 hours later to empty the colon and avoid dumping toxins into the blood during the fast, avoid stool become ultra thick balls that are hard to get out later, insert water into anus before you defecate the first time upon breaking the fast to remove anything that may still be there from vitamins, etc, because the stool hardens a lot and it is hard to come out on its own, use cream on anus to facilitate easier defecation of the enema induced broken hard pieces.

Since you eat a lot of vitamins and minerals, your stool can still become one big hard ball even if you do enema first day of the fast, that is very difficult to get out, so you need to do an enema (at least 1 liter of water) for each day of water fasting to ensure no discomfort or emergency room visit due to hard ball in colon. Buy a 5$ enema kit before you begin the fast, because you don't want to be unable to defecate until you buy one from the store. I did this 8 day (daily electrolytes, 400 mg Na, 400 mg Ca, 4g K, 450 mg Mg in water, no activity or straining, no exercise, just computer work) and a 2 day fast and lost 23 lb one time when I got too much body fat. You absolutely need to get rid of body fat, as otherwise, you become the lowest IQ person around, look how your brain feeding arteries become, your brain will die and you too, soon

after, you lose 10-45 IQ points. You absolutely need to do this, as fat causes systemic inflammation of every organ increasing the risk of getting all major chronic diseases. It's so grave, that 90% of Americans and people worldwide need a water fast now to shed 5-200 lb of useless fat. ☺☺☺ But nobody does it, so we spend 1 trillion dollars a year at least to deal with the consequences. Hundreds of thousands of people worldwide fast daily for 15-18 hours to benefit from autophagy, or the removal of senescent cells that destroy the brain/body. This way, they never get body fat and don't need long fasts. 7 day fasts (take daily vitamins too) are only for people who're fat, meaning they got 20-100 lb of fat around the belly, trunk, legs etc. Thin people can get autophagy by eating all meals within 7 hours and then fasting daily for 17 hours, 365 days a year, sleeping regularly well, etc. How much K to take depends, you can buy a 35$ jewelry balance and weigh however much you want till you reach RDA for your age, if you eat 2 g K from food and are an adult, maybe take 3 scoops, since that's 3.1 g K, so 2+3.1=5.1 g good to help your heart. You lose iron (Amazon, so take a little of a 36 mg capsule depending on ferritin levels and daily intake from food, if multivitamin lacks iron) when eating 20-50% of your daily calorie intake. Japan men live to 82.3 avg BMI 23.7, USA men live to 78.7 & got avg BMI 29.6, Japan women 88.2 BMI 21.8, USA women 83.1 BMI avg 29.1. Ladies who have BMI 6 units lower, live 7 years longer Bingo. BMI is pretty useless if muscle % is not equal, since some people have less body fat%, and a lot of muscles with BMI 27, while others have triple visceral bad fat and BMI 20, living shorter. Drinking water reduces angiotensin levels, which burns more fat, independent of other confounding factors, like exercise, soda intake, etc. Avoid keto diets, as they contain high AGEs that damage every organ, lose less body fat, and make you lose any muscles you still have, since body prefers carbs as fuel, so in its absence, it starts breaking down FAT and PROTEIN, meaning it dissolves your leg, heart, hand muscles. You don't want to be old and fall as muscles can't keep your body frame vertical. Vinegar also helps weight loss. Keto diets lead to 4 times higher arterial plaque progression, due to LDL jumping 50%. So, while for those with terminal Alzheimer keto may add 5 years of life, for most people a low fat, low simple carbs, high fiber/vegan protein (soaked lentils)/complex carbs (from soaked legumes), almost fructose free diet protects heart and brain the most, resulting in minimal arterial plaque. Baseline atheroma was 1.6% and in 1 year it rose by 0.8%, or 50%, while on other diets, by 8%. Keto destroys the carotid artery/brain, by increasing plaque must faster than low fat.

This belly fat inflammation makes midlife obese people 91% more likely to develop dementia later in life ► Obe 2013;21(1):E51-5, since the brain is destroyed, because inflammation destroys blood vessels and nutrient starvation kills, damages neurons leading to brain shrinkage and weakening (every disease arises faster because of atherosclerosis; obesity induces damages all organs via nutrient starvation, vessels clog); "obese participants showed broad impairments on executive function, including on tasks primarily utilizing inhibition, cognitive flexibility, working

memory, decision-making, verbal fluency, and planning; overweight participants only showed significant deficits in inhibition and working memory." ► NBR 2018;84:225-44. The belly fat exercises can help reduce it, but the main thing is to compute calories and avoid eating before sleep. The brain may shrink as our belly fat and waist expand "higher adiposity may be associated with frontal GM (*grey* matter) atrophy across all ages and parietal and temporal GM atrophy in middle and old age" ► ARR 2015;20:86-97. Sleeping regular hours 8.5 hrs makes you lose twice as much belly fat as sleeping 6 hrs, so ***fasting is useless if you don't sleep well.*** ***Fasting while reducing weekday sleep time by 1 hour (and catching up 1 hour on weekends,*** so 3 hour less sleep a week) was very damaging, led to losing 4x more muscles, versus losing 4.8 times more fat (81% vs 17%) if you just fast without sleeping 3 hours less. This is due to the deactivation of some genes and activation ☺☺☺ of others via sleep loss: SA 2018;4(8):eaar8590. **So, if you fast ON WATER FOR 1-8 DAYS, plan to sleep 9 hours daily to lose FAT, not MUSCLES.**

Other studies found the same shrinkage of GM and also faster aging of WM (*white* matter) in obese kids and adults ► OR 2015;16(4):273-81. This is why spy agencies torture people (leg, heart harass, pulse rise, etc) in their regular hours of sleep, to destroy their brains and make it easy to control them, since sleep loss and irregularity leads to weight gain and sarcopenia (loss of body strength, muscles, etc), making it easier to cause little accidents, etc. You will notice those that have been thus "trained" by CIA, FBI, KGB, etc often gain 10% extra body fat, increasing BMI too by 3-5 points. While these brain studies use BMI sometimes, the conclusions probably remain true for belly fat in normal or underweight people: those with highest belly fat have more shrinkage than those without, when all other parameters (brain stimulation, etc) are removed as confounding factors. Obesity (or even just belly fat in BMI<25 people?) has "detrimental effects upon spermatogenesis and subsequent fertility" ► HF 2015;18(3):184-93. Studies suggest you only lose body fat if you exercise on an empty stomach (6 hrs no food). If prediabetic, try light chores after meals, to lower the blood sugar 30% (like a 15 min walk or standing to clean). Being vegan led to less weight gain for the same amount of calorie intake. Cognitive diffusion or being less identified with thoughts that the barain naturally creates or that the spy agencies implant into your brain via nearby people with gadgets, helps people loose weight. When you fast, you stimulate AMPK and this cleans the body of junk. If you can't fast, you can simply exercise to boost AMPK, the Adenosine Mono Phosphate Kinase, the enzyme that produces energy in mitochondria, by facilitating AMP to ATP (Adenosine Tri Phosphate) and viceversa conversion. AMP + 2 PO_4 = ATP. Low calories = fat burns. As we age, fat burns less when low on energy due to decreasing AMPK with age, so lose weight now when you're younger. In mice, AMPK activating chemicals boost longevity 38%, as body is cleaned of junk. The immortalists will redefine overweight as > 15% of weight body fat and obese as > 20% of weight body fat. With this definition (see pictures) we save 1 trillion dollars in healthcare costs

yearly and extend USA lifespan by 10 years: see pic of 10-17% body fat with or without heavy muscles to get an idea of how centenarians often look like. Today, the age of capitalist 0 IQ defines overweight *as* BMI > 25 and obese *as* BMI > 30. However, this is wholly inaccurate, because a fit guy with many muscles, got 5% body fat, BMI 25, while another got BMI 25 and 40% body fat, with 300 biomarkers 50 times worse. This shows the medical *profession* needs a drastic reform from "greedy people want to become MDs to make money" to "intelligent people with highest credit score become doctors". By the immortalist overweight (see pic) definition, most humans are overweight. This explains the epidemic of Alzheimer (pic), stroke, infarct (see fat around your body, clogging 90% of your cognitive ability). You think you're High IQ?

Some tiny studies have claimed being a little overweight is better, but that was proven false when removing the confounding factors of reverse causation via undiagnosed illness (that led to people losing weight) and smoking (that reduces weight) ► a 10 *million* person study found BMI 5 points higher meant 52% higher mortality for ages 35-49, 3 times higher for BMI > 40 ► Lancet 2016;388(10046):776-86.☺☺☺ It's important to eat all big meals 10 HOURS before you sleep, otherwise, all exercise and fasting you do is useless, as it all deposits on your belly the same day. You may want to create a small food table using 50$ 2021 Office, (see a pic, or use the free web version of Microsoft Excel, free Google Sheets or the much better (than Google) free LibreOffice to view my food table; save as Excel, .ods, Google Sheets, create yours from mine, after changing food columns, formulas) to help yourself and your kids live longer; it helps to lower calories intake 20-50% when trying to lose belly fat a lot more than exercising; keep calories for each meal under 250-500 (when trying to lose fat, depends on your weight, most people are between 110 and 220 lb or 50-100 kg), so we don't get so much energy, that it deposits as fat; better eat 1700 calories of 4 (*or even 5*) meals (more calories early in the day) of 500, 500, 400, 300 (*or even 400, 400, 400, 300, 200*) calories, instead of 1700 calories of 3 meals of 200, 900 (big lunch at 1-3 pm that deposits so much fat), 600 (dinner). If 4 meals doesn't work once returning to normal calorie intake to maintain a slim belly, try 5, to prevent fat deposit and exercise, stretch or walk every 30 minutes if possible, don't sit for 2-5 hours straight. This keeps glucose lower, brain less damaged by sudden high glucose, every organ less damaged by super high glucose and triglycerides (atherosclerosis), and no belly fat and you have more energy, since body saves energy if breakfast is low calorie. High calorie lunch causes sleepiness. ☺☺☺

Only eat biggest meals before the 2 longest periods of brain activity or exercise. Even BMI above 20, has been associated with shorter lifespan in many studies, 20 is way lower than 25 limit of overweight, *especially if one has no muscles, just fat*. It's important to not confuse WHR with eating a lot of fiber rich foods. WHR refers to the average person who eats low fiber diet and whose WHR is high when abdominal fat is high. Some may have WHR higher, due to being vegan, yet have way less fat and live longer than omnivores. *WHR can be low, but the person*

may eat some meals very high in calories, leading to plaque forming in 1 day that takes 1 year to get rid of; even if one is skinny, frequent big meals above the calories one uses next few hours will create plaque and shorten lifespan; so it's not like WHR is the magic biomarker for aging or life expectancy, other vital factors are calorie/meal*, how we* sleep at night*, or* rest after meals*, etc*. A building is demolished in 10 seconds, but often built in 10 years, arterial plaque can form after 1 meal, but disappear after 3 months of very careful eating only a lot fat healthy diet. Likewise, % body or belly fat, markers are useless if we eat sudden big meals that form plaque.

Even so, *% of body/belly fat, is a* more precise predictor of longevity *than BMI or WHR*. In Africa, some semi-vegan skinny people with no body fat, have high WHR, but they can outlive meat eaters with lower WHR, but *higher belly fat*. WHR is just a 2 second way to see where you're at, and check your belly fat, it's not a good predictor. BMI is not ideal either, since muscles are fine. Women with heart failure ages 75 ± 11 were *2.23* times more likely to die if WHR was *1.02* instead of *0.84* ► EJHF 2018;20(9):1269-77; longevity biomarkers (lower heart rate, higher HDL) were better with lower WHR. Circ 2008;117:1658-67 *found "normal" (18.5-25) BMI women with WHR 0.88* (WC 35.5") had *3.45 times* higher *risk of cardiac death* versus *WHR 0.70* (WC 27.1").☺☺☺ WC = waist circumference. *You can* make "smoothies" *with a* food processor with 200+ ml water, 20 g watermelon (30 cal/100g), 40+ g peeled cucumber (12 cal/100g) or peeled zucchini (14 cal/100g) to introduce minerals, biophotons, vitamins in reverse osmosis *purified water to trick the brain that you ate a lot of calories* (even water makes you lose belly fat, giving people more weight loss), *hydrate* the body and *lose belly fat* faster. This is such a powerful trick, the hunger disappears (way better than vinegar adding, vinegar erodes enamel) and you can go take a nap or engage in some less intense activity with the brain thinking you ate (even if total was just 10-20 calories, not 200-400 of a meal), helping you lose the waist fat. If more intense activity, add calories to the 'smoothie' via other produce. Read the obesity section on angiogenesis inhibiting foods, since fat can't deposit fast if you eat a lot of those. Consistent *eating times and patterns, i.e. eating less every day instead of suddenly stopping eating for some days and then eating more afterwards*, like consistent sleep times, reduce metabolic jet lag, calorie intake (which ages us faster, *nobody who lived* past *110 was* overweight; centenarians have much lower average BMI than the rest; being *overweight makes* your WHR high in very old age, as muscles atrophy and internal body fat remains), inflammation, increase our productivity, health span, lifespan, IQ, cognitive clarity☺☺☺ ► CM 2015;22(5):789-98. We get same heart, liver, kidney, brain we had at 20-30 (brain always shrinks, while heart may grow a tiny bit if one exercises, etc), but big size body when overweight and this puts pressure on these organs leading to their faster aging, as they got to filter and pump blood, coordinate body processes for far more mass now. This is also explained in the peripheral and central circadian clocks video and the damage of irregular meals video. That is one reason why I'm against regular fasting from

food more than 16 hours if you're thin, for more reasons see below. Most people fast from food (drink water or juice maybe once) for 9-12 hours daily, as they finish dinner at 8 pm and maybe eat again at 8 am. These daily fasts from food (drinking juice or water only) are a form of intermittent fasting that are harmless of course, almost all do it daily. *It's essential to stay hydrated, so always drink water or juice during a short 12-16 hour food fast*. Intermittent fasting is a term used for many things including "water fasting for 14-18hr/day, 24hr every 2-5 days, 48hr rarely", which can be safe for most healthy people who got > 13% body fat. Without time off, 9 hour sleep (short sleep = 4 times more muscle lost instead of fat), *24-72 hr fasting on water (no food, just water) leads to muscle loss, including heart muscle loss* and sudden death *due to the sudden stress on the weakened heart once one starts* exerting. 2-8 days Fasting is not a joke: proper planning, vacation time, enemas within 12 hours etc are needed.

Since we all fast a few hours daily, the question arises, what is the best type of "daily fasting"? It's the "daily fasting" that coincides with our sleep plus a few hours. If you're into fasting/weight loss, you can check out nutriti...org/...diet for 100s of studies. Some doctors eat all their meals within 6-8 hours (early in the day, 8 am to 4 pm for example, not late close to going to bed), fasting 16-18 hours daily on water only (drink plenty of water/electrolytes every 4-8 hours), because it lowers blood pressure, weight gain, oxidative stress, improves insulin sensitivity in prediabetics ► CM 2018;27(6):1212-21.e3. A 5 to 9 pm eating 1/2 meals a day with 20 hour daily fast led to a 20% higher LDL, 136 vs 113, and higher blood pressure than 3 meals/day 9 am to 5pm, because our metabolism slows at night ► AJCN 2007;85(4):981-8, ☺☺☺; these conclusions are for normal people who wake up early and go to bed at normal hours; of course if someone created a 20-50 year habit of sleeping daytime and working night shift, it's a different story and more studies are needed for night shift people (for normal people simulating night shift the results are evening meals fatten us more, glucose rises twice as high at night, but these are simulations of "night shift", instead of using people who worked 2nd or 3rd "night" shift for 30 years), but the effects would be totally different probably, as their night is their morning sort of, but the same idea would apply perhaps, to not eat much (or at all ideally per some MDs) the 3-5 hours before going to bed, whatever hour they go to bed. Same calories eaten at night are more fattening, increase triglycerides/total/LDL cholesterol by 9%, since metabolism slows at night ► AJPRICP 2013;304(2):R94-101. Overweight/obese (BMI 32.4) women eating 700 cal breakfast, 500 lunch, 200 dinner lost 11 pounds more after 12 weeks than those eating 200 cal breakfast, 500 lunch, 700 dinner ► Obe 2013;21(12):2504-12; triglycerides dropped 33% vs increased 14% because glucose can rise twice as much after dinner than after same in the morning as explained in ER 1997; 18(5): 716-38. Simply telling people to fast 16 hrs a day (eat 10 am to 6 pm), leads to weight loss and lower blood pressure compared to controls eating at any hour, since they don't eat at night ► NHA 2018;4(4):345-53.

Eating largest meal at breakfast leads to more weight loss than largest meal at lunch, and far larger than eating it at dinner ► JN 2017;147(9): 1722-8. So if we eat the same exact diet we eat now, but shift largest meal to breakfast and second largest to lunch, we lose a lot of weight, if overweight; if underweight, the body moves less and weight may remain constant; some studies show even eating *500 extra calories at breakfast leads to no weight gain, since people move more and* burn those extra 500 calories ► 5 min video. Skipping/minimizing breakfast tends to lead to weight gain, as people eat more at dinner. So, please eat 9 am to 3 pm if you wake up at 9 am and want 18 hr/day fast: first meal biggest, second middle, last small. Your biomarkers will be the best. More light in the morning and less at night seems to help people to lose weight, if they're overweight. Many believe that fasting from all food for 2 or more days is always great for all people, but some studies below show that it damages some animals and people, it is not recommended for lean slim people. Sometimes our brains don't function in the fast days, so always stay home during 24 hour fasts or longer, relax, don't drive. For lean folks, most "several days" fasting benefits can be obtained from going low fat vegan besides not eating food 16-18 hours daily, 8 hours before going to bed and the 8 hour of sleep. This hypothesis is supported by 100s of studies, see a video showing (last 3 minutes) water fasting leads to 5 times less fat loss and more muscle loss than eating fewer calories daily; the video explains water fasting leads to rapid muscle loss, especially if active during the fast, so don't EVER exercise or exert during water fasts; just drinking some fruit juice during a "water only" fast can reduce body protein loss by 50%. Some people drop dead after fasting on water only a long time, due to losing heart muscle so much, that the heart can't cope with the load of beating faster during eating and normal exercise, after days of doing nothing in the bed. Modern heart imaging is very expensive, but in the future, people who, due to being very overweight☺☺☺ (this usually shortens lifespan), want to lose weight by fasting, will perhaps be able to do a supervised fast in a clinic (some MDs supervise fasts full time, with the program insurance approved) with their heart muscle area and many things monitored every few hours. Changing one's diet to a healthier low fat more fiber one was the only way overweight people retained any short-term weight loss 4-9 years later. Most centenarians were not into total food fasting for days, showing that it is not a requirement for living to *100* or 115. *If one is* underweight, *fasting on water (no food, just water only) for more than 24 hours can turn deadly.* It's better to be gradual and moderate. Water fasting is urgent for obese people, but to retain weight loss, they need to stop eating heavy meals at night, avoid oils, fatty and high calorie foods. *Subway mayonnaise = 737 cal/100g, cheddar cheese 400, Carl's Jr bacon 500, peanut butter 588, cauliflower 25, zucchini 16.* You see why vegans are the thinnest group: they eat low calorie produce, legume plant foods. No amount of fasting helps if one goes back to heavy meat and dairy eating (lots of fat, cheese is 70-80% fat by calories). Buy that scale from Amazon and make sure you never gain any pound, if you do, fast 24 hours and use the food calorie table. Please make science based choices.

The advantages and DANGERS *of longer than 24* hours FASTING on *Water* only (no food, just water) are explained below, with the dangers first so people don't do mistakes:☺☺

1. THE DANGERS OF FASTING without electrolytes or vitamins/minerals (Long Fasts on Water and alternate day intermittent fasting, 1 day eating, one day drinking water only)

Simply because an ancient text or recent text or person says that someone fasted in a certain way for a certain period of time doesn't constitute any kind of peer reviewed science backed proof that that event occurred. Moreover, what one person can do, not everyone can. Probably the longest fasts inspired by other claims occur in Jainism, where monks are reportedly fasting for 6 months at a time on water only. What monks living in a stress free restful environment, with minimal movement, can do normal people can't, so trying to fast for long periods without supervision can be fatal or result in serious harm. JAMAIM 2017;177(7):930-8 explains LDL increased about 12mg/dL after intermittent fasting for 1 year, while HDL did not while both groups lost the same amount of weight (low calorie eating for a year versus intermittent fasting which subjects the body to the shock of no food and sudden food repeatedly, damaging it probably). It seems to me like an abuse of the body to deprive it of food for 24 hours for weeks or a year, every other day, compared to eating the same amount of calories without 24 hours of fasting. This repetitive going to extremes can't be healthy. It's like exercising for 1 hour is much worse than exercising 4 times for 15 min, in terms of longevity benefits. Drink *plenty of water* with Ca, Mg, Na, K electrolytes *dissolved in it, during a food fast,* even 16 hr ones.

1.1. Dangers *of Fasting* many *days:* Many people, ignoring all science studies showing harmful effects of even just 1-2 days or weeks of fasting in some animals and some people (and looking only at the positive stories, which apply quite often to overweight people only), plunge enthusiastically in doing very long fasts of 2-10 weeks unsupervised, ending up dead as the stories below show, due to not ingesting vitamins and electrolytes. The fact people don't die doesn't mean the fast did not do organ damage if done wrong (even if it may help in most cases when done correctly with rest and supervision), even if a fast was only 2-15 days. ☺☺☺

1.1.1. Woman fasted for 26 days and died. She fasted for long periods at least several times before, including 40 days before the fatal fast. The dead folks didn't read science papers to see we need add electrolytes to water: 400 mg Mg, 500 mg Ca, 350 mg Na, 4 g K/150 lb weight.

1.1.2. 73 year old died after 30 days of fasting. You need rest, sleep 9h/day, relax, listen to favorite music, do enemas, no stress/exercise/exertion, 70 lb of body fat for 30 day fasts, take electrolytes. Those with 7 lb of body fat can't fast > 36 hours without heart muscle damage.

1.1.3. 29 year old died after 20 days of fasting. Lack of knowledge is death. Study first, be careful.

1.1.4. 44 year old perfectly healthy Pastor died after 30 days of fasting without food and water, after he bragged that he will be able to fast longer than 40 days. No scientific evidence exists Jesus fasted on water for 40 days, other than some claim in an ultra edited Gospel of Lies.

1.1.5. In 1999, Australian-born Verity Linn, 49, died in a remote part of the Scottish Highlands after attempting a 21-day fast. Another nutcase, clueless of the need of electrolytes and 50 lb of body fat needed for such long 21 day fasts that soon use heart muscles for energy if no fat left.

1.1.6. 13 year old girl died after 68 days of water fasting and 2 days of breaking fast with other liquids. See also the much longer New York Times article. Read the science above before fasting.

1.1.7. Several new age followers of Jasmuheen, the lady who lies she doesn't eat, have died according to the Cult News Institute, for example a 53 year old woman. When Nikola Tesla said we will EVOLVE to live on cosmic energy one day, he was referring to a far future century when our science and understanding of energy and matter will be way more advanced. Just "believing" one can live on energy won't make it happen. Physics laws are hard to break. This doesn't mean that positive thoughts and placebo don't work for minor things and certain types of conditions, but living on energy is something really far out. Knowledge is needed for anything.

Even people who did water only fasts under medical supervision for a very long period ended up dead at times as this video explains. It's critical in any fast on water or juice to take vitamins.

1.2. Dangers *of Fasting* 2-5 *days:* Even during medium fasts of only 2-5 days, most people get tired, weak and dizzy at least some of the time, increasing their risk of falls, accidents, mistakes while driving, etc and that's why longer fasting is safe only when one doesn't work and is resting all day, taking electrolytes, vitamins and stopping fast urgently if any pain in the heart or head area. Alan Goldhamer who has a clinic where they do supervised fasting, with people living in there 24-7 and resting horizontally most of the time, and eating only vegan foods (free of oils, sugar, salt) in the days after the fast to gently get the system used to food again, did 10,000 supervised fasts and nobody died or suffered any problem. He always likes to remind people of the horizontal rule during fasting, i.e. rest, since the body is rebuilding and is tired and one can fall. He managed to reverse cancer in a person, as explained below in the paper about lymphoma. In fact, they *don't even allow showers for people in his clinic, to avoid falls,* even if people stay there just a few days or 20 days. He was able to help people quit hypertension medication and drop their high blood pressure 60 points with fasting and a vegan diet free from oils, sugar and salt. His fasting program is a *medical benefit for the largest California union*. The only thing that is not clear from the article abstract I read about his hypertension study is how do these people manage their blood pressure once out of the relaxing clinic environment and once eating unhealthy stuff 6-12 months later? "Studies of fasting regimens have not been

performed in children, the very old, and underweight individuals, and it is possible that Intermittent Fasting (1 day at a time, once every few days or weeks) and Permanent Fasting (many days in a row) would be harmful to these populations. Fasting periods lasting longer than 24 hr, and particularly those lasting 3 or more days, should be done under the supervision of a physician and preferably in a clinic." ► CM 2014; 19(2):181-92. It's unsafe to drive a car and work during fasting, even if one does a fast under the supervision of a doctor. ☺☺☺

1.3. Dangers *of* repetitive long *fasts*. CM 2014;19(2):181-92 is a paper (by fasting researcher Valter Longo, Professor of Gerontology and Biological Sciences at the UCLA) showing they fasted rodents for a day at a time, but in human lifespan scale, 1 day means 30-40 days. Not all rats lived longer, some lived shorter. The max longevity gain was 30% from these radical "30 day human equivalent" fasts. Unless you're super fat, fasting more than 10 days at a time is not a good idea. Like everything, fasting is complex and one size/duration doesn't fit all body types. Moreover, long fasts of 3 days in rats (90 human days), did not always have good effects in fighting cancer, and fasting can cause cancer. During refeeding after fasting, the growth of cells is so rapid after the fast, cancer cells can grow too. Longo writes "In mouse models of metastatic tumors, combinations of fasting and chemotherapy that cause DSR and DSS result in 20%-60% cancer-free survival compared to chemotherapy or fasting alone, which are generally not sufficient to cause any cancer-free survival. Thus, the idea that cancer could be treated with weeks of fasting alone, made popular decades ago, may be only partially true, at least for some type of cancers, but is expected to be ineffective or only partially effective for many types of cancers. The efficacy of long-term fasting alone (2 weeks or longer) in cancer treatment will need to be tested in carefully designed clinical trials in which side effects, including malnourishment, cachexia, and possibly a weakened immune system and increased susceptibility to certain infections, are carefully monitored." Regarding cognitive effects, Professor Longo writes "rats and mice maintained on an Intermittent Fasting (1 day fasting, which is like 30 days for a human since we live 30 times longer than rats) diet exhibit less neuronal dysfunction and degeneration and fewer clinical symptoms in models of Alzheimer's disease (AD), Parkinson's disease (PD), and Huntington's disease (HD). [HOWEVER, AS ALWAYS, THERE IS A BUT], fasting can hasten neurodegeneration in some models of inherited amyotrophic lateral sclerosis, perhaps because the motor neurons affected in those models are unable to respond adaptively to the moderate stress imposed by fasting" Several researchers believe in the hypothesis that a 1 day fast (while resting) is apparently healthy in most people (without some health issues) since it causes the brain to form new neurons and get better cognition. This hypothesis comes from the idea that evolution needed the person to be smarter and think better to find food when food ran out, so all resources went to new neuron formation for new ideas on finding food. This is like the secretion of endorphins with fake smiling, tricking the brain into releasing endorphins. I don't

think one needs to water fast to generate new neurons, meditating and discovering longevity methods can. In the past, where survival to 25 was key (not getting eaten by lions), this perhaps was truer, but in the future, where the concern is not making it to next day, but living to 250 by ultra organized, scientific, computational, calculated, precise, orderly planning of centuries and decades ahead, we need a new form of neuron creation, not one of crisis of no food, but of highly complex meditative creative thinking born out of deep stillness (not fight and flight of "no food"). People argue that our body needs rest too, so they take vacation to relax and water fast.

2. THE BENEFITS of Fasting OBSERVED IN SOME ANIMALS AND SOME PEOPLE ☺☺☺

2.1. Obesity & metabolic syndrome ► Professor Longo says in his paper (reference for quotes below): "By increasing insulin and leptin sensitivity, suppressing inflammation, and stimulating autophagy, **fasting reverses all the major abnormalities of the Metabolic Syndrome in rodents**."

2.2. Cancer ► "preliminary study of 10 subjects with a variety of malignancies, the combination of chemotherapy with fasting resulted in a decrease in a range of self-reported common side effects caused by chemotherapy compared to the same subjects receiving **chemotherapy while on a standard diet**. The effect of fasting on chemotherapy toxicity and cancer progression is now being tested in clinical trials in both Europe and the US (0S-08-9 and 0S-10-3)." However, not all cancers vanish during ketogenic or fasting diets, some grow much faster, so be very careful.

2.3. Immunity ► Fasting 3 days regenerated a great part of the immune system (according to the current definition of the immune system) and reversed immunosuppression; fasting led to hematopoietic stem cell (stem cells that give rise to all the other blood cells through the process of haematopoiesis, from Greek αἷμα, "blood" and ποιεῖν "to make") regeneration ► CSC 2014; 14(6):810-23. A simpler presentation of the same paper is here. ☺☺

2.4. Improving Cognitive Function ► "After 3-4 months, Caloric Restriction improved cognitive function (verbal memory) in overweight women and in elderly subjects"

2.5. Arthritis ► Longo continues "one of the best demonstrations of the beneficial effects of long-term fasting lasting 1 to 3 weeks is in the treatment of rheumatoid arthritis (RA). In agreement with the results in rodents, there is little doubt that during the period of fasting both inflammation and pain are reduced in RA patients. However, after the normal diet is resumed, inflammation returns unless the fasting period is followed by a vegetarian diet (Lancet, 1991;338:899-902), a combination therapy that has beneficial effects lasting for 2 years or longer" ► rheumatoid arthritis healed ► 6 min video. Other diseases cured ► 5 min video.

2.6. Hypertension ► "13 days of water-only fasting resulted in the achievement of a systolic blood pressure (BP) below 120 in 82% of subjects with borderline hypertension with a mean 20

mm Hg reduction in BP. A small pilot study of patients with hypertension (140 mm and above systolic BP) also showed that 10-11 days of fasting caused a 37-60 mm decrease in systolic BP." The Goldhamer abstracts don't state the BP 6-24 months after, or if they stuck to the vegan diet.

2.7. Longevity ► Mixed Results, mostly positive ► Mice fasting often increase their lifespan by 15-30%, but other times it decreases their lifespan; many websites present only the mice studies that support their belief that "fasting always is a good idea", ignoring the studies where fasting doesn't increase or even slightly decreases lifespan ► CM 2015;22(1):86-99. ☺☺☺

"Cancer marker changed by fasting" is a 3 min video with MD Thomas Lodi about the Japanese science paper about the healthy 5:1 ratio versus the cancer 1:5 ratio of c-AMP to c-GMP and how a 7 day water fast was noticed to take the 1:5 ratio and bring it to healthy 5:1 ratio again. c-AMP is cyclic adenosine monophosphate, basically ATP without 2 PO_4 groups and the phosphate PO_4 cycled. c-GMP is cyclic guanosine monophosphate. The role of cAMP and cGMP in killing cancer cells is explained at Canc 2014;6(1):436-58. Several studies suggest that fasting boosts BNDF (brain-derived neurotrophic factor) production (low BNDF is observed in people with dementia, NMM 2011;13(4):217-22), reduces inflammation and oxidation in the body, boosts neurogenesis (NR 2007;65(9):412-5), balances blood sugar and improves insulin sensitivity, helps body burn fat and improves metabolism, clears out acne, boosts human growth hormone that improves the skin quality, blood vessels repair (key to preventing strokes and aneurysms) and joint function, prevents Alzheimer, can reverse diabetes and can sometimes heal digestive issues and skin cancer (cured skin cancer for David), improves cognitive function and brain structures. Scientists discovered neurons can appear during adult stage ► NM 1998;4(11):1313-7. Fasting boosts neuron genesis or neurogenesis usually, but some studies seem to point to the opposite direction, probably depending on individuals. Some get off caffeine, alcohol, smoking, meat (all these interfere with advanced telepathy) after a 2-7 day fast, like this guy quit coffee.☺☺

This 2.5 min video shows a lady who reportedly cured a 12 mm cancer tumor via a water fast, see watercure2.org for more information. A 4 min clip shows testimonials about using water and sea salt to cure cancer and other diseases. Sea salt has 32 trace elements, not just sodium chloride. A 15 min video of MD Batmanghelidj talking at Thomas Jefferson University presents several hypotheses, like "cancer, pain, coma, angina, dementia, multiple sclerosis, arthritis, aids, osteoporosis, diabetes, asthma (abort an attack with salty water), hypertension, many diseases are often caused by dehydration (which causes autoimmune disorders) and that water can cure cancer and many diseases; caffeine dehydrates the body causing endless diseases and inhibits PDE enzyme, key to memory making; tea, milk, soda, also dehydrate the body. The coffee plant uses caffeine as warfare agent against predators because the PDE enzyme stops and this causes the coffee eater to forget rapidly and they then get eaten by other animals (the coffee thing is at

the last seconds of the video)". The full 2 hour talk covers all the above diseases caused by dehydration including (past minute 14) how coffee damages us and how aspartame artificial sweetener leads to weight gain, seizure, brain tumors, cancer (WHO), optic nerve damage and visual impairment. His other interesting hypothesis is that by proper hydration, America ***and many nations can cut healthcare costs by 60%.*** He says water is the primary source of energy in living cells MgATP only produces 10 times more energy if there is water around to hydrolyze itself. Without water, the bones weaken and osteoporosis also happens. Shortage of salt leads to high blood glucose. Salt and water are essential for hydration of cells inside and outside. Brain is 73% water, while the dry waterless part is 60% fat. All brain functions depend on water and salt. Many people who had symptoms of coma have returned to normal within minutes of drinking water or water plus some sea salt. To prevent Alzheimer, water and salt are essential. Why is MgATP so important? Wikipedia explains "ATP (adenosine triphosphate), the main source of energy in cells, must be bound to a magnesium ion in order to be biologically active. What is called ATP is often actually Mg-ATP. As such, magnesium plays a role in the stability of all polyphosphate compounds in the cells, including those associated with the synthesis of DNA and RNA. Over 300 enzymes require the presence of magnesium ions for their catalytic action, including all enzymes utilizing or synthesizing ATP. Mg^{2+} ion is the fourth most abundant metal ion in cells (per moles) and the most abundant free divalent cation and as a result, it is deeply and intrinsically woven into cellular metabolism. Indeed, Mg dependent enzymes appear in virtually every metabolic pathway: Specific binding of Mg^{2+} to biological membranes is frequently observed, Mg^{2+} is also used as a signaling molecule, and much of nucleic acid biochemistry requires Mg^{2+}, including all reactions that require the release of energy from ATP". Take 400-600 mg Mg daily. Lymphatic cancer tumors disappeared after 21 days of water fasting followed by vegan diet with no oil, salt, sugar added ► BMJCR, 2015:211582. Raw veganism is very hydrating too, many cancers are reversed that way too, not just water fasting, search youtube for lots of cancer, diabetes, heart disease gone with a raw food diet. An MD presents in 35 minutes a way he used to *reverse* type 2 diabetes thru intermittent fasting.☺☺☺

HYPOTHESES ON ENEMA for fasts longer than 24 hours (3 pages with details):

Fasting more than 24 hours is less useful for very thin people (3 day max OK if you got 10 lb of body fat), as the dangers outweigh the benefits, but enemas have among the highest returns on investment for time and $ spent to add extra lifespan years: for just 12$/50 years *(see next page for details on* my favorite enema kit*)* we remove all kinds of debris, like when we clean arteries, teeth, body of many junk that accumulates (or tubes etc in many machines, plumbing systems, drains, etc). Eating stuff, probiotics pills, special diets or fasting, etc don't remove arterial plaque in a few hours, it may take 50 years to remove some plaque or cancer cells – mechanical removal is needed or you may end up being dead in days or months; the same applies to toxic hardened

bacterial buildup in our colon, pills/foods don't remove it, you need mechanical intervention to remove it fast; are you going to have gas for weeks, piss all your family and coworkers, because it's politically incorrect or sounds weird to stick a tube and pour 1-2 liters of water into your anus? It's your brain that gets destroyed first when colon is bad and with that everything else too, all organs as blood is toxic; see what arteries feeding the brain look like with bad diet, this is how our colon looks sometimes (the analog) when we have gas and are bloated and didn't do enema for years, and it destroys our brains like those scary arteries do as brain is starved. Our media is obsessed with cleaning the outside of anus daily or 7 times for hands, weekly the car, daily the house here and there (kitchen, bath), weekly the clothes, etc, but never cleaning the inside that has 10,000 times more bad bacteria, not even twice a year. 100K bacteria on the hands won't kill you much, but the 90 billion bad bacteria in your colon can totally destroy you slowly without you even knowing, while you think you're clean, when you're the dirtiest. ☺☺☺

We obsess with deodorants, washing ourselves with chemically loaded body washes, soaps, shampoos, etc, but inside the smell can be horrible and indicative of serious issues that shorten lifespan; the inside smell, how we're inside is far more important than loading ourselves with deodorant to appear smelling good; how we're inside is what determines our lifespan, not the appearance we fake with perfume; if after an enema the smell is terrible, it's a sign a better diet or more frequent than once 4 years enemas, are a good try. In our world, too often # 1 focus is others' opinion of us, not how we really are inside, but their opinion doesn't determine our longevity: *how much deodorant we use, how we smell on the outside is not reflective of how we smell inside, and the inner smell determines longevity*. The media is obsessed with 12-24 hours intermittent fasting or 20 days special diets or fasting *and* totally ignoring the far more effective way, 5 minute enemas, to remove bloating and gas and digestive issues when transitioning to vegan diet or when going thru stressful times that produce more microbiome imbalance and gas. ☺☺☺ We need enemas to remove COLON HARDENED FECES that increase toxic metabolite release, block nutrient/vitamin absorption/production and *makes overweight people crave nutrients and food due to* hard stuck to colon walls FECES *disturbing various body processes. A* low fat non-junk *vegan* diet makes all lose weight: *vegans* are the thinnest people on average. *We clean our house, cars, etc but not our colon, so we end up dumping toxins into the blood 24-7 shortening lifespan by 20 years in some cases: some people got 40 lb of feces hardened on the colon walls. I was shocked: did an enema once a day, 3 days, Nov 11-13 2021; 1st day gas went from 100 loud gas releases to 0, but soon rebound after 12 hours; that was the loudest and worst in my life (no smell that day, just lots of gas)* due to eating corn bran Fiber One by General Mills cereals to try new fiber sources, to 0. After 3rd enema, when I used not just 2 liters, but 4, stool returned to normal and gas ceased for longer than 12 hours. The stool also became normal after 3 weeks of mostly diarrhea, and even reached the odorless level.

Enema stops gas instantly, so *it's useful to do* before trying to have a baby *if you know you had smelly gas last few days, because both parents can move a lot and have gas, and if it smells it can induce stress response which may diminish sperm quality (oxidative stress) or egg release process quality and fertilization. You want the* healthiest embryo, so add nice perfume and a fan and nice music to the room. Enemas are not recommended weekly, outside of 3-15 day fasting periods, as we can disturb our gut bacteria; enemas is fine when gas is excessive (loud, frequent or smelly) or digestion needs a clean up thrice a year, better than weekly enemas is to change diet to a healthy vegan one. It's probably best to do enemas until all fecal matter is out if you continue a fast beyond 36 hours (ask your doctor or professional friend who watches over you to research enema effects), that way you can enjoy your time of rest, healing, meditation and fasting and benefit the most from it ► $12 enema, 2 L/quart capacity (can hold even 3); this kit that I use when digestion is disturbed, is 50 times easier to use *(very important, since it if annoying, people won't do it and most people desperately need to clean their colon, it hyper drives the overweight and obesity epidemic)* and more effective than disposable ones, since it allows water control easily via 2 methods *(the knob method is way better than most enema devices)*, many spare washers and nozzles, long tube allowing you to relax on the floor, unscrewing the nozzle, solid thick bag and connections that won't break and splash water during use, soft silicone wrapped hook to hang over the bathroom curtain rod or the shower door while lying on the floor to facilitate best water penetration & dislodging of hard feces & bad bacteria. After enema, you need to dry it by unscrewing the 4 parts (3 tubes, container) and letting them air out in a dry area. Trim the enema tube that comes out of the container to about 14-15", so you can use an 8" thin brush (dollar store) to clean it after each use or whenever you think it's dirty. If you don't dry it, mold will grow and cleaning it will require heavy brushing, vinegar, peppermint oil, etc. You can hang this shorter tube by the bath door and you lie on the floor gravity will do the trick. Every piece of tubing can be unscrewed and cleaned with this brush, whether the grey mold is visible or not, ideally not, as you dried it after each use. The lack of a National Enema Uni means that they make these poor quality products that are not easy to clean and lead to endless landfill waste and purchasing enemas 20 times. Instead of living to 900 research, we waste lives with production 20 times the junk products that break. To live to a trillion, we need 11 companies, 1 gov, 1 pay, 1 tax, 1 bank, 1 edu, 1 regulatory agency.

Enemas take minutes to do, just let 1-2 liters/quarts of water in (slowly, initially 200 ml, wait, move slightly, then another 300 ml, then 300 again, then 200, for 1 L, stop when painful) or even 0.75 if 1.0 is too much (*don't put too much, much depends on how much stuff you got there to begin with that day, as that can be too painful, only do a little at a time, maybe 3 times if that's the most comfortable way, the goal is to clean it and not to clean it without causing discomfort or pain*), then, if you can, maybe move around and do some exercises to lift the colon so water

irrigates the entire colon (legs and bottom up etc), hold it *for 1-7 minutes* and mix it well, while doing various stretch movements to use gravity to reach all colon areas, otherwise, if you just flush it right away, most of the bad stuff remains inside – but it's fine, since you can do 3 enemas of 0.5 L instead of one of 1.5L and have *0* pain, the goal is to learn to be kind, gentle and happy with yourself and realize there are a trillion ways to the same end (*clean colon*) *that don't involve* any pain or uncomfortable enema techniques – just like a trillion ways to peace without war, without torture, pain etc – we need to THINK, feel, be kind, healing, soothing, soft, gentle and not behave like robots. The reservoir is better kept 5+ ft above your body lying on the floor *(sit on a soft rug or towel, place the hook on the tallest door hinge)*, otherwise water pressure will be too low. Gently use a very oily cream of vegetable oil on the tip, not a watery cream, to allow best water flow and tip movement. While usually gas stops, sometimes you need 2 enemas for it to stop for a few hours; the nice thing all smell is gone from any gas if any smell was present. Enemas help to make fasting *longer*, detoxify better. Many people have fasted for 40-60 days (some are Guinness records for supervised fasting).☺☺ Smelling foods is a well-known fasting beyond 10-20 hours technique used for millennia. Science found a link between appetite and smell ► medicalxpres...e.html, ► NN 2014;17:407-15. One old ancient technique is to prolong longevity of brain, its telepathic functions, and the longevity of body by eating up to 80% full or so, as many centenarians said on the CNN program on Blue Zones. You can even ask God or the Universe to bless the food, and who knows, the quantum field of humanity (maybe that's what God is) may help. This does have an effect seen "astrally" (in some experiments every time people pray for a person or leaf, the physical biophotons increase on that leaf or person) and the tomato piece which you will eat later is charged with something that science can see. It may even be the case that the food smell patterns change, so as to heal specific overeating brain mechanism that is out of order, to realign itself. Blessing rice may prevent rotting if IR is strong, due to physics (qi destroys cancer ► IJBCB 2006;38(12):2102-13, CPB 2013;31(1):113-22, MCB 2012;363(1-2):245-55, qi IR 3-5 µm wavelength ► AJCM 1991;19(3-4):285-92), like IR detected from healer hands or unknown waves that kill mold, nurture the good bacteria that eat the food of the mold or fungi ► youtu.be..5A. If we shine UV or xxx nm at bacteria most die, while others thrive: 630 and 850 nm help the mitochondria cytochrome oxidase in cells, while ### nm destroy human/bacteria cells, it varies by microbe.

11.11. SMOOTHIES with nutrients covered above & in Chapter 12

Please go to 11.11.1. to read about the best knife for cutting produce for smoothies, as you don't want wrist injuries from using dull knives that require 3-20 times the effort and wrist strain to cut squashes, pineapples, watermelons, carrots. Kale (healthiest food), carrot, etc nutrients are 2-100 times more bioavailable in smoothie puree form, just like chia seeds omega 3 are not absorbed when eaten whole, but when made into a powder, they absorb. Steaming or cooking

kale would eliminate the anti-cancer sulforaphane. Because the healthiest diet is low fat vegan one, the source of this fat has to be included in the morning puree, so that those seeds or nuts are ground (if chia seeds) or pureed in order to signal to the body that this is a fatty meal. If you eat lentils by chewing and then other things and at the end a walnut, the stomach may start pH digestion of food optimized for carbs or protein, not for fat detected later. By eating the puree with unpureed lentils to chew more, you signal that this is a fat meal and it will be digested properly, leading to a healthy stool, not one that is horse like and with undigested food. Therefore, eating one smoothie a day, the morning one, with all vitamins taken out of capsule and nuts/seeds pureed with *kale, carrots (hard to chew those into a puree in the mouth, in order to absorb everything),* etc is essential for low fat vegans, so that little fat they eat can do wonders for the stool and they don't develop essential fatty acid deficiency by improper fat metabolism/digestion. *If you make all meals normal, no* smoothie, a very low fat vegan diet can lead to horse like stools that show food was poorly digested. If you make all meals a smoothie, stool won't be good, but too hard due to lack of saliva. Eat the daily smoothie with lentils that you chew to obtain the perfect stool. In digestion, proper absorption and stool only happen if everything happens in perfect biochemical (it's a fat meal, a protein meal, a carb meal, etc) signaling sequence like in a perfect textbook digestion, so everything is digested FULLY. Chewing releases saliva which aids digestion, as explained in the eterni food paragraph, so it's important to not eat 100% of food as smoothies for years, otherwise, your food won't be digested perfectly, stools will be harder and constipation higher. 1 smoothie a day for kale or hard to chew broccoli is fine, to get the sulforaphane (that removes microplastics, 7 g per brain usually) destroyed by steaming or boiling, but the hard stuff like carrots or butternut squash can also be steamed if your stool prefers that (if stool comes out easier, etc), since carrots don't seem (current knowledge) to have much of anything important destroyed by 30 second steam after pressurization in a pressure cooker. Don't forget to chew a lot daily also, since saliva has 2000 chemicals, like the natural tears, and important enzymes. *Some compounds, like sulforaphane and other anti-cancer compounds are destroyed by steaming, so do eat some raw of each veggie too*. To understand how Big Companies fake studies to push deadly foods, go to the commercial fake science section. This 20 page section discusses the benefits of smoothies (helps people eat more veggies that otherwise are too time consuming to chew), how to make the healthiest smoothies, and also the damage done by food processors due to anti-life standards of the corrupt Demon-crats and Re-pub-licans, mere puppets of the aristocratic parasites who shorten the lifespan of the 99% by noisy and unsafe food processors. Noise from 95% of food processors kills us slowly in many ways, not just cellular chaos as explained below. The mold, dirt and noise issues cause many to get sick and die early, this slow genocide that kills millions of people early needs to stop. Fast global action needs to be taken to rein the profiteering aristocrats who deliver bad products that could be so much better via the 11 universal companies. To diminish

ear damage and body damage from sound vibrations and noise by 10 fold, place a 13 gallon Sterilite (15$ at Target) trash container (not the removable lid) on top of your $250 14 cup DFP-14BCWNY Cuisinart (14 cup type has bigger blade and fits a fluffy kale in one go, finishing doing a puree faster). Amazon sells Cuisinart (founded 1971) or KitchenAid (founded 1919) food processors that are 10 times quieter than the rest (at the common Walmart, etc stores), due to using induction motors. With a Sterilite on top while running, it is super quiet, unlike any processor in existence in any nation. KitchenAid is quieter than Cuisinart in general, but it varies depending on the model. The $160 13 cup KitchenAid KFP1318WH with 1 carrot and watermelon inside makes the following levels of sound if setting is low: 76 dB 1 cm above the chute, 74 dB 1 foot from the chute, 63 dB 2 ft from the chute. On the high setting, 86 dB 1 cm above the lid, 77 dB 1 ft away, 71 dB 2 ft away. The 14 cup DFP-14BCWNY Cuisinart (has only 1 setting, not two) with the same 1 carrot and similar watermelon amount makes 91 db 1 cm above chute (72 dB if you use a 1$ large 1 foot diameter bowl on top of it, since Cuisinart noise is mostly from the bowl not the motor), 80 db 1 foot away (69 dB A if using the 1 ft diameter, 7 inch deep bowl to contain most of the Cuisinart bowl), and 73 db 2 feet away (65 dB with bowl). The bowl placed on top of the KitchenAid leads to only a minor 1-2 dB reduction, since the noise comes from the motor mostly. However, the blade of Cuisinart is 40% bigger and has the little dents, so the 14 cup Cuisinart is wholly superior, since it produces real puree of carrots in 5 minutes, while KitchenAid fails to do so on the quiet low setting. The noise of KitchenAid on high is very high, and the mess it makes by dripping when opening the lid and the extra effort to wash etc extra parts etc is simply not worth it, since the Cuisinart becomes quiet with a simple bowl that is 8 inch deep, 12 inch diameter, while KitchenAid needs a huge 5 gallon bucket to be made quiet on the high setting, making it less practical. Not to mention that with kale and such a big blade will puree the kale way faster as it catches and drags greens way faster than plain blade. Simply use the bowl on top of Cuisinart and you achieve the same level of noise almost, but much better results, plus it's SO MUCH EASIER TO CLEAN.☺☺☺

Puree increases nutrient bioavailability 10 fold, so never get a processor without a blade with dents, grooves that catch the veggies better and chops them way faster. You will notice the KitchenAid are quieter, especially the smaller type that are discontinued now, the white or silver KitchenAid KFP1133CU 11-Cup (has blade with grooves for puree, white plastic for blade to see mold and dirt and when it's time to soak in bleach to remove biofilm, only 1 part for the blade mechanism, the blade itself, unlike the 13 cup with 3 parts and the rod guide on the lid, this one is much simpler, and much more like Cuisinart) or White KFP715 or other smaller KitchenAid models (to see dirt, soak in bleach 10 min once 3 months, to clean the mold). What often happens is good products (KFP600WH, etc) get discontinued (old KitchenAid were much better from some point of view, and sometimes quieter) and a new product manager comes in, without

any knowledge of nutrition, who doesn't do smoothies 2-3 times a day and makes catastrophic decisions, running a company into the ground: changes color from white to black, removes the blade grooves so pureeing takes 50 hours not 5 minutes, etc. In 50 hours all is oxidized, food rots, etc. You want it done fast. To be fast, you need the base where blade is to be wider, so the models where base is smaller than the top are low IQ, as that forces the blade to be smaller and for the process to take longer, which leads to more oxidation and strokes, heart attacks, etc. We need the processors to be shorter and wider for a bigger blade for minimal oxidation: today the diameter is often same as the height, which is not good.

When ☺abysmal IQ companies☺ design these, nothing good comes out, we need a big company with 9,000 scientists from many majors (effects of infrasound on human body experts even, to determine which sounds are damaging human body the least and which sounds extend lifespan for appliances) to design appliances and everyone who makes them daily and knows chemistry makes suggestions. Another real issue with KitchenAid is they got 3 extra pieces to clean after each use (the black rod, the hexagonal plastic thing on top of the black rod and the black guide for the back rod, which is in the center of the lid, making it hard to clean properly due to its color and hard to access areas. Because of this, I suggest soaking it in bleach every 3 months for 10 minutes or getting a white model to see when mold forms. The 3 extra pieces are black which means you won't see mold and dirt, unlike the beige Cuisinart. The cover hanging after use means juice will drain on the KitchenAid and the counter from the open lid, so the Cuisinart design of the lid being removed and placed somewhere inverted is better, it prevents you having to clean the dripping of smoothie juice onto the KitchenAid sides. If noise is a big issue and you eat small portions, you may be better off with the smaller Cuisinart 3 cup (30$) dark grey plastic for blade, 7 cup, 9 cup, 10 cup (not good, noisy, blade is grey, can't see mold, dirt well) or 11 cup being quieter than 14 cup ones. Seems like all Cuisinart almost have this superior blade design with grooves, made to speed up puree making by 10 fold versus plain blade, so Cuisinart wins over KitchenAid overall. Cuisinart is really simple in all sizes, just the blade and no other parts like KitchenAid. In our everyone for themselves hooliganism capitalism, we don't have real cooperation and instead of KitchenAid learning from Cuisinart and vice versa, to make stuff with quiet bowl and good blades, they go separate ways to create trashy products. Why can't the government unify these aristocratic companies to make something way better? To increase speed of pureeing, you need to have the base be very big and blade big, so Cuisinart 14 cup wins over any KitchenAid model. KitchenAid takes 50 hours to reach same puree of 5 min Cuisinart. To use a 2nd grade analogy, if you got a typical $ store knife and you pass it thru a web of bush branches, etc, there is no resistance. Take the same knife and create grooves, big zigzag pattern, like a chainsaw, and you meet incredible resistance and end up breaking maybe 30 thinner 1-3 mm diameter branches as you go down. The same thing happens with the "branches" of kale

that are 1 mm, they get pureed much better, broken into smaller 0.05 mm branches and faster. This means, you get to absorb the nutrients better, saving on food costs. Hunger happens due to lack of nutrients too. ω3 in flaxseeds are ONLY absorbed if you use a coffee grinder to turn them into powder. Otherwise, you just absorb 0.1% at best. Always choose groovy blades.

The reality is in our decentralized system, where aristocrats rule and the government is a toilet paper aristocrats wipe their posterior with, no goals exist to make devices last longer. Drive thru fancy neighborhoods in Florida and California and you get 10000 fewer potholes or sunk drain sewer lids vs near the White House, where every spy can drive by and steal national secrets. For example, on the 14 cup Cuisinart, if that 2 inch by 0.4 inch white lever in the lid breaks, there is no way in the design to replace just that part, you need to buy the whole lid, which is about 300 times more plastic. This leads to incredible plastic waste and lifespan years lost by the slaves making plastic, dying in oil rigs accidents, as no time exists to focus on oil worker safety or longevity science, we just make plastic, to replace gadgets that break so fast. Another issue with Cuisinart and all other brands is that the design doesn't have as a goal to make it easy to replace only 1% of the major parts, that get dirtiest or break fastest, instead, you order the whole thing, as that makes more money for the company. This undermines national competitiveness, as we're peasants making plastic and useless things, instead of biochemists and physicists figuring out living to 9 billion. The back of Cuisinart bowl has a protrusion with the spring and it's exposed to the outside, meaning endless food, water, scale, dirt gets in there and it's impossible to clean without soaking in bleach that ruins the spring. They could have sealed that area like KitchenAid. The lid that sits on top of the Cuisinart bowl is very wobbly, the fit is not perfect, not tight, no rubber band like KitchenAid, so it makes more noise than KitchenAid. Companies don't learn from each other. The obsession with profits and intellectual property undermines the ability to create good products. That's why we need merge all these "wanna be" companies into a truly high tech Eterni Food Inc with 5 million PhDs producing the best appliances and foods. Cuisinart is managed poorly. Many people place orders for items and if it was some mistake, and they want to cancel, like you can easily do on Amazon within 2-48 hours, they couldn't cancel, even if they called minutes after pressing buy and even if it took days for the Arizona staff to ship it. They even lie to customers and say it's only a soft transaction and the bank can cancel it if you call, but it's a real transaction. With these private companies, no customer service exists. They waste resources, as they ship twice same item, and abuse their power to build palaces for the blood sucking parasitic bankers and aristocrats looting the masses of slaves. Why do we need all these thieves to start 33 million companies? For the 10% to subjugate the 90%? We're not even mentioning the truly genocidal companies out there who make ultra noisy processors (90% of all processors), which lead to violent crime, Alzheimer, car crashes. A neighbor has his kitchen near someone's bedroom, he sleeps with window open and is woken up, bad sleep

prevents blood vessel repair and has a stroke next day becoming paralyzed for life by these aristocratic predator scam companies. A kid is woken up from his nap, gets bad grade at exam, dad yells next day at him for the bad grade, kid gets mad and runs away, hitting a car. Bad sleep due to sleep interruption ruins families and causes car accidents, like drunk driving. Genocide after genocide, all at the hands of these wolves in sheep's clothing. Let's take USA back from the parasites.☺☺

You can buy a 10-15 gallon trash container (with no or removable lid) with thick sound blocking plastic from Target, Walmart or Home Depot to place on top of Cuisinart 14 cup, and hear for yourself the AMAZING difference.☺☺☺ That low noise is what any food processor sold in USA should sound like, in the worst case in the transition period until a new tech makes it even quieter than a low conversation. Big containers have thicker plastic and will help your ears and body live longer. Random noise increases biological entropy and shortens lifespan. KitchenAid system with the base rod attached to the bowl, instead of to the motor casing as a spinning device as in Cuisinart leads to some huge issue: the area between the support of the spinning piece and the spinning piece, both made of black plastic, is prone to fast mold growth, as people can't see the food getting stuck there. This leads to spreading mold in every single meal. Cleaning that area requires way too much effort: using a screw to open the area and clean it, but even that is not going to clean it well. Not only does Cuisinart use only the blade piece only, beige blade and beige rotating rod that is not part of the bowl, but the KitchenAid uses black colors which hide the dirt so well. Using 3 parts instead of only one blade makes cleaning very time consuming. The rubber KitchenAid uses on the lid, which causes its bowl to be so much quieter than Cuisinart, is black, another ☺abysmal IQ☺ idea, since all rubber that is beige gets moldy after a while or dirty, but with black you can't see and you don't clean it. Once again fail. It's imperative these companies learn from mistakes and not copy each other's filif toad IQ designs, only taking the good ideas, such as some beige or white rubber on the bowl, a more sound insulating plastic for bowl, etc to match the low decibels of low mode KitchenAid, but the puree quality of Cuisinart groovy blade. A food processor needs to be ultra easy to clean, otherwise, people won't use it. Cuisinart needs to include a brush to clean their blade inner part too and improve sound dampening. Overall, Cuisinart wins again, since with a 1$ brush from dollar tree or home depot you can clean well the Cuisinart blade inner cap, but you can't clean the space between the spinning rod and the black plastic support of the KitchenAid. The design of rod within bowl is deadly as it will sicken people over time due to mold growing in that space. The ☺puppy IQ engineers☺ work full time to design deadly humidifiers, food processors, where did they go to college? FDA is too understaffed to check any appliance. Before any product is made on a mass scale, they need to test prototypes with the most known users of that type of appliance, since one mega company, Eterni Food Inc will have 10 million employees, access to all

data of all citizens' cooking habits, know who uses food processors the most. Those people can review prototypes before we spend millions mass producing crappy designs in China.

Aristocrats have trillions (stolen from the state) to build palaces with profits obtained by slow undercover genocide of the gullible masses. Ironically, the subjugation of people by the aristocrats leads the product managers not caring, even when the issues are explained by 10 reviews over 10 years on Amazon. People have no choice but to buy deadly products, gifted to them by the eternal greed of aristocracy. That's why in immortalism, they use reviews.gov to ensure every product manager is fined and even demoted if he fails to implement changes reviews suggest. However, to ensure product issues are tackled, inspectors need to verify if the issue in a review is real or needs urgent product upgrade and if both inspect and product manager fail to make the change, both are fined and maybe demoted. For Cuisinart 14 cup processor, simply buy a 12$ 13 gallon white trash container to place on top of the processor while it is running, so noise is less. The droplets that may splash on the inner walls of this plastic trash bin can be removed with a wet sponge once a week. To protect our health ☺☺☺ and prevent biological entropy from noise, it is imperative for all immortalist governments to require all food processors to make maximum 50 dB noise, not the crap today. Immortalists need to require the processor to be able to make a puree in 1 minute out of carrots and watermelon for example, not 4 minutes, so all get good nutrition without needing restaurant deadly smoothies. Critics will laugh and say it's not possible, not realizing that their model of 100 times more admin, business, accounting, payroll, manager jobs is what kills all innovation. If you place a kale in a processor after trimming it in 4 big pieces, you need to constantly stop the device to push the kale down where blades are or to simply add a little kale at a time thru a tiny chute, so it will be time consuming and annoying. Most people will eat healthy only if the government makes it easy to do so: since the private sector is made of ☺puppy IQ ☺ companies, we need establish the Immortalist Kitchen Appliances University or Lab, similar to the Humidifier Lab or University. Again, we're back to the 0 IQ of capitalism: you get 100 clueless companies creating 100 trash processors, each having 1-3 PhDs, instead of one company with 500 PhDs (National Food Processor University graduates) making a truly amazing sound insulating processor that is whisper quiet. Always read 1-2 star Amazon reviews for any product as it shows most common issues; choose white so you clean it and avoid getting sick from mold you can't see on those with blue, red, grey, black parts. Use a decibel meter to compare noise, since the US lacks a centralized system that labels every noisy product with the decibel level at 1 feet, 3 feet away. We need easy to clean ultra quiet processors, not fraudulent CEOs using "ultra quiet" words in ads and then being louder than other processors that make no mention of quiet. See, with an immortalist science, honesty, kindness and proof first society, instead of Bible Theocracy of Thieving Ignorant Frauds of "God gave us the ability to lie, obfuscate, hide all bad quotes and

real data on decibels and thousands of parameters of millions of products (bad studies about products) and make the trashiest scripture, product or processor sound like the best, the ultimate fraud sound like a miracle", we have real data, decibels at various distances and with food and without, same food, etc. Same with cars, we get real RF data, real decibel data for every noisy product. All parts need be white to see better or beige, ultra light pastel, almost white with a hue of yellow, blue, purple or whatever. When you clean it, you want to use minimum minutes, and that's not possible when you don't see the dark spots where food is. On a light background, you see clearly the hues of orange from carrots, dark green, black mold, etc grey mold on the plastic part of the blade, etc, and also dark purple or almost black stains from kale etc, biofilm, etc at the blade to plastic interface, etc. With grey and black you can't see those, so you keep eating toxic mold. Sadly, KitchenAid makes many parts dark grey, like the blade plastic thing inside and this is bad, since with the beige color of Cuisinart you can see mold and dirt and clean it much better by soaking in bleach for 2-20 minutes or more depending on hen you see it totally clean. You can simply walk away or use earplugs if noise bothers you. Protect your ears and avoid waking people up with loud motors from Walmart, buy Cuisinart instead. This white bowl you use to diminish Cuisinart noise 2 ft away by 7 db also helps you to wash a kale bunch by inserting up and down in water 10 times and to vent the pressure cooker used to make lentils, if you place a glass jar on top of the vent and this bowl on top of the jar, so fumes decrease 10 times due to condensation if you depressurize it fast.

Always make smoothies fresh and eat them minutes after preparation, to prevent endotoxin buildup. Also, chop only the fruits and veggies you will eat in 5 minutes, don't leave chopped veggies in the fridge and don't buy precut veggies or fruit, since the bacteria grow and with that the endotoxin level: see how fast endotoxins grow in different foods on day 4 and 8 in the fridge. Likewise, lentils, or any vegan foods, if left outside of the fridge for 10 hours, can grow endotoxins, and even in the fridge itself after a week. So, always prepare and eat foods within 5 days of preparation, store produce whole in the fridge. Meat in the fridge will be deadly. Smoothies increase bioavailability (FC 2016;203:23-7 found "3-4 fold increase in liberation of lutein and β-carotene when comparing *whole leaf* and *puree* preparations of spinach", *reduce air intake during swallowing* (of strawberries, the airiest fruits or foods in general), reduce hunger due to higher bioavailability (100 times more for ω3 for example by grinding seeds first), reduce calorie intake, reduce cellular division and its telomere shortening, increasing lifespan, thru more meditation☺☺☺ instead of chewing and belching like cows. If your stool is very liquid, smoothies (or high fiber foods like blackberry, raspberry, cactus pears, etc or harder veggies that ferment in the colon feeding the good bacteria like partially chewed purple cabbage, while other foods never get whole into the colon being too soft or smoothies) can make it more solid; zucchini makes stools far more solid than cucumber for example, even if in

smoothie form, so if you have too watery stools, it helps; *pineapple helps digest undigested protein, so it helps relieve digestive issues too, so keep eating 100-900 g/day along with 7-10 cucumbers/day when diarrhea strikes, as hydration is important*; contrary to what we would expect it's not always that less pureed food gives denser stools, sometimes the other way around is true due to the fact the digestion is impaired by an imbalance and fine puree increases absorption of nutrients that heal the imbalance (lack of "acid, stomach 'chewing' power", etc can mean poor digestion of unpureed foods). *They also allow us to eat in 10 sec what takes 400 sec of chewing; it's a liquid puree of a healthy veggie we would otherwise never eat: you can puree and liquefy a zucchini alone; we can puree hard butternut squash* (it's good to have a blade for butternut squash and other super hard veggies (like the old one I used for 3 years, I saved, not trashed) and one for routine smoothies, to avoid making the routine smoothie blade too blunt, since a sharpening stone doesn't work to get it to the newer condition that it stays in with softer veggies; do get a new blade every few years, because it will save your motor and make it so quiet again) *if we mix it with zucchini premade puree or watermelon; say good bye to cutting fruit/veggies in small pieces for a salad: do it 20 times faster, safer in 7 seconds with the food processor*. If you want to puree carrots, add only a little soft fruit, ratio 1:1, watermelon:carrot, it's easier than 3:1. Avoid mustard > 10 g, broccoli > 30 g daily, as they cause burping. Kale (any cruciferous veggie or leafy green) also causes burping when the smoothie is made in a rush, with something like watermelon whereby it traps a lot of air; to prevent trapping air, you can either let processor spin 7 minutes instead of the usual 2 min, to make it a liquid puree (which is a lot easier to eat, digest and eat, due to a sweeter taste, far less bitter) or first make a carrot-watermelon puree that is ultra fine, air free, then add kale to it to make everything ultra fine again, making sure that in that meal you eat all your vitamin A (vitamin and foods), so you have plenty of veggies to make a big puree to enable the kale to be a minority of the meal, to prevent it from making air bubbles. This way you avoid burping after a pineapple-kale smoothie for example (as long as you don't eat 700+ g of lentils pureed with pineapple, garlic and kale within 3-5 hours, space them out over 8 hours, since lentils have odorless burps producing sugars), because you added the pineapple and kale in a different order with tons of other stuff pureed first; mixing kale with pineapple alone is a recipe for burping all day; never mix kale with pineapple (the airy fruit), first make your carrot:watermelon 1:1 or carrot-pineapple puree, then when it's fine, add kale; the order of addition makes a huge difference in burping, it took me years to realize; if you want to go *vegan* knowing these things is useful, since people give up eating smoothies if they burp too much. *Please* don*'t sit on the* stomach *after meals, as that* increases 900 fold *the burps*. The human biochemistry sucks, these bacteria produce odorless methane, carbon dioxide, hydrogen, and they're often eliminated via burps even if you would eat only a scientifically proven air free "smoothie", with 0 air trapping. When we eat, we ingest huge amounts of air, and it has to be eliminated. With broccoli we need spin it

a lot after adding broccoli to an ultra fine carrot-melon puree, so all air trapping disappears.

We produce tons of saliva when we talk ("An adult person produces from 0.5 to 2 liters of saliva per day, but only 2–10% of the fluid is produced at night. During sleep, the rate of salivary secretion decreases to less than 0.25 ml/minute, while during chewing *or* speech *these values oscillate around* 10 ml/minute" ► BRI 2018:6572381) and when we gently swallow and chew a puree smoothie, and we will adapt to less saliva, growing bigger brains, smaller mouths/teeth. *Obesity is often a result of chewing*☺☺☺ and the anti-smoothie anti-eterni culture, since bioavailability is low, so body craves a nutrient, so people are nudged by the body to eat to get the ω3 that never comes from whole seeds; then they're fat, exercising and even running and walking is hard and they exercise less, muscles atrophy and in older age they can't move, as fat is hard to remove and muscles atrophied; it's a cycle of inactivity that reinforces itself: not making a smoothie (requires standing and doing something), buying it all ready-made and then not being active as a result of weight gain. If we chew less, we can think more about what we eat, make a food table, be mindful and get our calories watched more, increase absorption of important nutrients 5-70 times, get regular meditation after eating, and regular sleep/meal times for less weight gain. ☺☺☺ The smoothie is the way of future eterni foods.

Below are some smoothies I made with a $18 (way better than Walmart ones) scale (don't buy tiny ones, analog buttons ones last longer than digital touch ones), *(this one like 50x better than the tiny ones that cost just $6 less*; the *digits are gigantic and it* does the gram rounding for you; the only issue is it has some delay, so it teaches patience; it allows you to place inspirational quotes, art, etc under the glass, to smile more often: see my scale paper taped to avoid water; since weights are 30-300 usually, it's best to use a scale that has maximum at least 3000 g, more rugged, using rechargeable AAA batteries instead of eco-disaster lithium coin type, 1 g precision is enough, otherwise, tiny scales with max 500g will break in months like mine did, since you can easily run over the 500 g limit to ruin it). The smoothies were made with a Cuisinart 14 cup food processor (worth spending more if you make smoothies daily, because cheap ones break fast and are ultra noisy; *even the quietest food processors with induction motor make noise, but you can do it in your car on a pillow in the garage (extension cord, car doo almost closed) if someone sleeps or in a far away room, bath, etc on some blanket or pillow to absorb noise and make it inaudible; you will be shocked how quiet it is in the car while sitting on a pillow on front seat, 10 times quieter than a bathroom with echo or kitchen*; Amazon has cream, white, turquoise, orange, silver processors too, I love white since you can see dirt easier and you end up cleaning it 10x more oten, just like with counters that are light in the kitchen, bath, tubs, etc – *lighter color for garbage bins, kitchen, bath stuff, doors, appliances, mea*ns cleaner since you see dirt and will clean it a LOT more often; see pictures at smoothies.pdf. Please lobby Cuisinart to make programmable with memory of last time for the smoothie, so we can walk away and not inspect

it; Cuisinart makes programmable coffee makers to reduce population via caffeine, but no food processors of 14 cups or less, which is really crazy, given that it's a quiet processor. We got 1 million things in phones that damage brains and not even a basic 5 min program for Cuisinart. Depopulation first, health and longevity never. It's clever how 100s of companies push caffeine (soft drinks, energy drinks, teas) to cause failure to conceive and miscarriage. Everywhere you go, caffeine products. Not one decent quiet programmable food processor, only deadly food products… The gift that keeps on giving, decentralization and mortal lethal capitalism.

You can see *weights, vitamins* in the food table ► see a table pic, or *use* the free web version of Microsoft Excel, *free* Google Sheets or the *much better (than Google) free* LibreOffice to view my food table; save as Excel, .ods, Google Sheets, create yours from mine, after changing food columns, formulas; on busy days try at least to *weigh high calorie items* (or just compute in your head the total calories for that meal) whose weight varies depending if it's densely packed lentils or with air in between. This way, we don't overeat, especially last meal when weight gain (inflammatory belly fat) is way bigger. In LibreOffice, choose Tools, AutoCorrect, While Typing (□ will appear) to have AutoCorrect settings *changed as you type*, like 3rd becomes 3rd instantly, all mistyped red underline words that you select 'Always AutoCorrect To' via right click will ALWAYS be automatically changed to what you select once only under Always AutoCorrect To. Never pick a suggested word, always go to Always AutoCorrect To to save time when writing an Immortality *for* All book. *We need 8 billion people to write their book*, so we create immortalism vibes fast. I opened food.ods in *LibreOffice Calc* then set Tools-Customize-Keyboard-Insert-Current Date to F_2 Current Time to F_3, ($F_{2\text{-}3}$ work easily on desktops, while Esc (CurrentTime) and Backspace (CurrentDate; backspace not needed, since Delete clears cells faster with one keystroke, not 2) for laptops with tiny keyboards, the assignment is only in the spreadsheet Calc, not the document editor LibreOffice Writer; can move F_2-F_3 preassigned shortcuts to empty F slots if needed) for fast entering of meal time/date, so meal time is the end of the meal; *moving via flash drives one 'excel' sheet from a laptop doc written with one $F_{2,3}$ assignment to another doc on a desktop with the same software with another assignment can cause files to crash when using the assigned keys, so before the move make the desired change by saving as new file*).

If you want to create a food table (see pic) (to lose weight without ozempic that causes blindness and other damage), as explained in the 2 pages above (scale), it helps to have an ERGONOMIC MOUSE (see next page), to use the small Apple Magic keyboard on your Windows desktop like I do (world's quietest keyboard, way more ergonomic), you can assign in LibreWriter F12 (which is near the 'delete' key) to 'Delete to end of word' and F11 to 'Delete Contents' (F11 would be the delete key in Windows, 1 character to the right is deleted only, or the other way around, F12 to classic delete, F11 to word delete, depending on which you use more): go to Tools-Customize-Keyboard tab and in the top left 'Shortcut Keys' click on F12 (or

any you want assigned for that), then go to 'Category' and click 'All commands', then click on the first line of the 'Function' window, type fast 'del' and scroll till you reach 'Delete to end of word', select it and then click on 'Modify' tab to assign 'Delete to end of word' to F12 or F2 if you like F2 better, since the 'delete' key on Mac is backspace of windows. Likewise, you can go type "To Document Begin" in the Function window, and then Modify, after F9 (or F2 if you like it more) was selected. This enables you to set F9 or F2 for example to go to your doc begin, where you have certain formats or table of contents, etc. F11, F12 allows you to have both☺☺☺ backspace and delete of a character or to the end/start of word (another F to delete to start of word if you wish, start of word deletes to the left of the cursor, something most are not used to). You can even assign both F2 and F12 to this function to enable both hands to do it when one is busy with the mouse; no more Alt codes, you can just insert, special character, select open symbol for font (type 'open symbol') and then you get 100s of symbols without having to memorize Alt codes (save your most used symbols to favorites and Libre will add it to recent ones too for easy use of many symbols like ≥); if you use a cheaper keyboard, like x9 for kitchen *(I got one for free due to 5 star review I made, since it's way quieter than any separate keyboard (except Apple Magic or some special IPAD keyboards or laptops) at Best Buy, quieter than even pricier white scissor switch Logitech; plus you use Home key (though you can assign Home to a key if not using a full Windows keyboard in the kitchen) to go to the first column in LibreOffice to put date, then time, etc)* with some old tablet or computer, you can use mostly the numeric pad and assign *backspace to insert date, insert to insert time, F12 to save (since these 3 are near each other and used at each meal)*, etc to make entering data ultra fast with the right hand only (can even place it in a cabinet, with the little tablet, and use right hand only to type, very fast; if the hand gets wet due to washing veggies or handling food, dry it with a towel or use your nail to press on this very easy to press scissor switch keyboard, nails of other less used dry fingers); since the numbers are not usually double typed on cheap x9, etc scissor switch keyboards (way quieter and easier to type, saves your hand some soreness), it can work well, so you use the expensive Apple for your main computer and some junk computer and cheap keyboard for kitchen data entering. You got a white keyboard to see in dim light at night when you turn off blue light with flux software and also to edit your docs much faster because you delete entire words, not just one letter at a time... If computer is slow, replace the 4 factory 2 GB RAM memory cards with 4 GB ones to boost a Dell XPS 8100 RAM from 8 to the max allowed, 16 GB; 3 min: unscrew the panel, slide it, locate the other 4, press the pins downwards on one side to be remove them, there is only 1 way to put them on, push new RAM until the plastic holders snap back in place. Task Manager says under memory column how much RAM you got, how much you use. You can use a $100 tablet/laptop (5w to charge) near food processor, so you keep a tab on calorie intake, to avoid big meals, especially at night when it damages sleep quality. ☺☺

11.11.1. WHICH MICE ARE THE BEST to avoid wrist pain, repetitive strain injury, finger pain?

Before talking about mice (safest keyboards are in the 2 pages above), the first 2 pages below deal with wrist finger pain from everyday tools, handles, kitchenware that can cause severe joint injuries. Kindly avoid hitting keyboard with force as that will damage your finger joints.

11.11.1.1. Handles of pans, fridges, doors, cabinets, showers, etc: Wrist pain or DIP, PIP finger joint swelling (osteoarthritis mucous cyst forms due to keyboarding hard, warm compress, IR heat, sunlight IR, warm water can help it heal, don't press on it as some say online, ginger fights joint inflammation, helps revert it to normal) can be caused by the wrong keyboard (regular keyboards injure your fingers), so read the 2 pages above too, about the comfy Apple keyboard. If you have carpal tunnel syndrome or repetitive strain injury to thumbs, wrists, index finger, etc, it can be due entirely, mostly or partially due to things you use daily that put pressure on wrist or finger joints. An example is a fridge door without handle: bad for DIP, PIP upper finger joints, avoid these, immortalists will ban them. These open from the side requiring more force, like 100s of objects we grab with fingers often at home/work. We stress the hands with keyboards to advance longevity science, so we need less stress from all other objects. Horizontal fridge door gaps focus pulling forces onto the fingertips, creating a high-strain "hook" grip that puts intense pressure on finger joints. For now, buy some suction handle, so you use all 4 fingers, place it horizontally and place all 4 fingers, pulling with the center of the pal, to avoid any extra tension on finger joints, horizontal avoids pressuring the index finger that gets worn from mouse clicks. Two examples: 1). 16$ curved handle 8.6" suction cups design is ideal for slightly non-flat fridge doors, it has lock/unlock mechanism, easy to remove without damaging the glue or straining self, curved handle is not ideal as the ring and middle finger move away from handle when closing the fist and index/small finger get more joint damage 2). 10$ flat handle 8.2", 2.7" height, 2.3" finger gap, widest gap, has lock/unlock for removal. To reduce soft tissue damage, add bubble wrap (Amazon packages) on the inside. More wrap where ring-middle finger are, less where index and pinky are to equalize the pressure, this way you can even make flat cylinder like the band bent shape ones. Flat reduces pressure on index+pinky fingers, more equally pressurizes all 4 fingers to reduce joint injury. For small fridges, buy 4-5" suction handles. For cabinets, buy adhesive: 0.93"×8.35" silver, 1.5" height, 1" finger gap or 0.98×7.87 white 1.4" height, 0.8" finger gap (too little room for fingers) or 1×8.4 gold bad as this textured one tears collagen layers, is hard to clean well, spreads germs; grip design can be silicon rubber, but flat, smooth, easy to clean). These adhesive/suction ones got max area of contact with door fridge or cabinet (total contact area needs be at least 8 square inches, not 4-6 as with cheap handles), so we can close our entire fist: a long handle shifts the pulling strain away from delicate finger joints and onto the stronger forearm, bicep muscles. Flat cylinder handles are safer than concave cylinder or concave band handles, due to even distribution of pulling force across all digits.

Concave handles that bend away from the door create pressure points, forcing the index & pinky fingers into unnatural flexion, increasing soft tissue strain. A flat cylindrical handle distributes the pulling force evenly across the broad, central finger phalanges, while band-like concave handles that curve away from the fridge concentrate the pressure on the softest, most vulnerable hand parts, the sensitive joint creases. This creates high point-loading on the index and small fingers, quickly leading to discomfort and injury. When closing your hand into a power grip, your hand's natural contours align much better with a cylinder than a thin, angular band so common in most fridges. Most fridge have no proper design of a handle (they're not cylindrical) to protect worker safety, as "gnat IQ thieves" rule classic capitalism, instead of etlif IQ for immortality capitalism. An ideal design is far more hand shape like with 4 grooves (than the flat or one curve), that correctly averages the valley depth of grooves of the 4 fingers in the pulling action to reduce joint strain by 60%. It's also made of a softer silicone to avoid damage to the joints, ligaments, rubbery so joints to last 9,000 years. It will have a detachable inner part of the handle that allows Immortality Centers to make a free 3D scan optimized for each hand, for the injured or all interested. "Art history or Biology of mouse tail hairs majors" who didn't find a job due to "33 million crap companies", from 5000 companies design fridge handles, keyboards, etc, instead of 100 PhDs and MDs verifying any design for joint stress, health effects as with 11 companies that produce 1000 times fewer products, but each is 1000 times healthier. To live to 8,000 you need all products designed 100 times better, so the current system won't work. ☺☺☺

11.11.12. Kitchenware, knives. A big finger/wrist joint stressor is a very dull straight knife, used daily to prepare vegan smoothies or meals for the family or self, that takes 10-20 times the effort to cut basic items like apples, watermelon, pineapple, carrot, ginger, squash and strains the wrist and fingers on your dominant hand. It's not arthritis, or even mice many times, but using a dull knife or other tools that are either too heavy or require too much twisting and tension. To reduce mousing wrist pain, make sure any knives or tools are ergonomic and cutting produce is effortless, so you don't create 5 times more strain from non computer tools. Avoid holding carrots or garlic in one hand as you cut/peel them with the knife held in the other hand, as pressing the right thumb on the carrot/garlic/etc or knife can over time cause thumb joint or even nail damage: simply buy a Cuisinart or other food processor and place a carrot broken in 2-3 there to chop it in 10 seconds to chew it and protect hands and teeth (at the other 1-2 meals daily, besides the morning big smoothie puree for kale), without stressing your hands, so that your fingers are used for the computer, not for veggies. Avoid pressing on garlic or things you peel with the thumb: instead, use a knife to separate the garlic cloves (from the bulb) gently without ever pressuring the thumb, then soak the garlic cloves in water 0.5-1 hr (1-3 bulbs you'll eat next 1-5 days) so you don't need apply 10-20x the effort that will damage finger joints/nails, then peel the garlic off, it's 90 times easier. Don't microwave as that denatures the proteins etc.

The right thumb is the most stressed in 100s of jobs as it's used to press against foods by chefs or press against tools in other jobs, not just pressed against the left side of a mouse. The best known knives are serrated Swiss Victorinox (12$/3.8" blade, Amazon says 3.1", but it's 3.8", ideal size for "simple living, high thinking", and have only 1 knife in your house) which can cut the hardest pineapples, squashes, carrots effortlessly, especially if you roll the carrot (that you hold in the left hand) slightly to reduce effort by 50%, as the right hand knife cuts it effortlessly to mix in the smoothie bowl. Avoid those < 3.7" (such as 3.5" Swissmar by a Canada company that doesn't know what they're doing, as Swissmar takes twice the effort to cut carrots and hard veggies vs the real Swiss # 1 knife company worldwide, Victorinox), as the tip doesn't reach beyond pineapple/watermelon center and makes it hard to cut it in slices. Avoid straight knives, of 3-4", like 3" $8 Victorinox, they require 3 times the effort to cut hard fruits, veggies, greens, etc. If you only want 1 knife, a 3.8" serrated one is all that you need. Create a knife holder with some tape and nice material off some wall or cabinet side, for 1 cent if you only have one knife, due to being a minimalist, to avoid dropping it or any injury from cleaning and not seeing where it was on the table. A dull knife can do way more damage to our wrist than a bad mouse.

11.11.1.3. Mice: The best mice are the silent wired quiet click, quiet scroll wheel ones, which means only 3 of the 900 on Amazon: 67gram $9 Corn 1200 DPI (lightest, least friction with mouse pad, smallest), 80g $12 Corn 2400 DPI (the most ergonomic Amazon wired mouse: longer, for bigger hands, quietest mouse (2 times quieter than Logitech M110), adjust DPI up/down with the 2 buttons near the wheel, 5 times quieter and less effort to click than Corn 1200 or Fenisio, so 2400 DPI version will protect index finger 3 times more when highlighting and clicking, 3rd hardest to move, but cursor moves twice as fast on 2400 DPI setting), 72g $9 Fenisio 6400 DPI (3rd loudest click, 3rd hardest to move scroll, so a waste of $ due to causing repetitive strain injury on the index finger, OK only for people who don't scroll much, louder click than Corn 2400 by 5 times means more index finger joint damage). Imagine if we had a mouse with the ease of moving against the mouse pad of 59 g Verbatim, the quietness of Corn 2400, the scroll quietness and smoothness of Corn 1200 and more speeds like 6400 DPI. It would be a decent mouse. This is not possible today, due to the bacteria IQ of capitalism (see next paragraph). Search Amazon for silent wired mice if curious. All these are made in China with lots of Chinese on their box, while the Logitech (US company) mice are 2.5-10 times more expensive and for the only quiet one, that costs 24$, the scroll wheel is moving so hard and the mouse breaks all the time, each year, just like Chinese cheaper mice. US is becoming a 3rd world country, making worse products 2-3 times pricier. The alarm can't be louder. An issue with capitalism is that these companies design trash products without first ordering 100 mice/etc of the existing competitors to see mice issues via customer feedback from people using mice or whatever product, in order to make a product that is superior to all those 100. Everything is about profit, so all waste time and the

government has no regulations, for the 33 million aristocrat companies selling in US, to require:

1). the scroll wheel to move QUIETLY with least resistance to avoid index finger damage to muscle, joints, ligaments. All mice have force required to scroll in Newtons written on box & eterni.i description (eterni.i replaces all online stores), where we buy all things except food.

2). minimal friction off mouse pad like Verbatim 1200 via engineering an ultra smooth mouse underside, so the with friction force in Newtons written ☺☺☺

3). max weight 45g/small, 65g/big mice so it glides easily, with moving force in Newtons written

4). minimum noise like Corn 2400 to avoid waking others up with dB level for all buttons written

5). tiniest effort mouse click that needs minimum muscle of the index finger tip to prevent repetitive strain tip injury and damage of the index joints, with force required to click in Newtons written for all mice buttons (especially left/right). This force got to be maximum 0.6 Newtons. Silent mice obviously require far less effort to click, protect finger joints, prevent finger arthritis, the common index finger pain in computer workers. Normal mice require so much effort to hold the left click down while selecting words to create a web link or to change font, that they damage finger ligaments/finger joints of those editing websites and docs. Such mice need 50 users to describe ease of highlighting, especially users with finger arthritis would be ideal to test some of the mice, or repetitive strain injury from using bad mice.

6). 4-6 DPI settings from 800 to 3000-9000 DPI for people who want to move hand 5 times less for the same mouse cursor move, to avoid repetitive muscle injuries of the wrist and lower arm.

7). wired version of any mouse to prevent wireless 2.4 GHz microwave damage to DNA of all organs and cells, since all blood is recirculated and passes thru right hand each hour or more.

In the future, mice will be designed and perfected at the ☺☺☺National Mice University (similar to the Humidifier Uni, Silent Heater Uni, ☺☺☺) and then mass produced and further perfected by Eternal Utility Inc to meet the Immortality Nurturing Agency product safety standards. Eternal Utility got 4 million PhDs who makes phones, computers, humidifiers, solar panels, appliances, silent electric oil heaters, etc. Read the 1/2/3 star reviews before ordering, as they tell you if wheel is hard to scroll or mouse is noisy in reality. Wired mice are ideal, so you don't get disconnected, hacked. Wired mice are lighter, no batteries, thus easier on the hand, no 2.4 GHz microwaves either. Silent mice are ideal, they don't wake others up, so you get to practice universal *gentle tender soft nurturing healing* graceful compassionate loving kindness. Corn 1200 cursor moves faster if you use the mouse on a smooth surface like regular plastic/wood keyboard tray, since mouse pads slow the movement of the mice. Corn 2400 is the quietest left/right click, followed by the useless (due to being too difficult to move and causing carpal

tunnel syndrome) 87g $8 Chon 3200 DPI (heavy, friction, hardest to move of all mice I ever tried) and Mojo, and all silent mice are quieter if the tip of your index finger when clicking is on the area furthest away from your wrist, close to the mouse center. If a mouse causes thumb pain, use some bubble wrap (can be Amazon envelope), fold it and tape in on the left side so that when you hold the mouse, you hold it with your thumb lower half, not the thumb higher half as when using a typical mouse. Make sure the bubble wrap doesn't touch the mouse pad, so it doesn't create friction. Fenisio is way louder than many silent mice, like Corn, Chon, Logitech or Mojo, it's deceptive to call Fenisio "ultra silent", when it's almost like a regular quieter mouse, but for those used to very noisy mice, Fenisio is fine as it has 6400 DPI vs 1200 Corn, which helps edit docs easier. However, some hands may like the smaller Fenisio more than Corn 2400 or Chon 3200, if 6400 DPI is essential. Mice with concave left side allow more of the thumb to press against the mouse, while mice with straight left side force a higher pressure in one area of the thumb, causing more damage. Mice with higher max DPI or 1000-6400 adjustable DPI, can move more pixel Dots Per Inch DPI (12000 DPI moves 12 times further on monitor for each mm of movement vs 1000 DPI) than 1000 DPI Logitech very slow wheel high friction (hard to move) M110, greatly alleviating carpal tunnel syndrome (repetitive strain injuries), wrist/hand muscle or thumb/index tiredness for those who wish their mouse cursor moved more with each 4 mm of movement. Index pain is gone if you buy a mouse with a smoother scrolling wheel. Logi M110 garbage is 68 g. Some mice got 24000 virtual DPI, but all these high settings are not hardware, only in software, performs as the 3200 DPI mice and changing it in software to a higher setting can lower precision actually, since hardware DPI is max setting via the buttons. McNally is a 4.6* quiet click brand 2400 DPI, but its perpendicular ridges o the scroll wheel are accompanied, as always, by a very loud and hard to move scroll wheel. Once you buy a silent click mouse, you never want to use normal mice. $8 Chon 3200 DPI is another ultra quiet mouse, 10 times quieter than normal, but the Chon scroll wheel is noisier than Corn 1200/2400 when moving the wheel up fast especially, while very silent when moving wheel only 1 page or so, it's not the super smooth to touch round one on Corn, but the flat with a central ridge (all these lighted wheels that are flat not round are harder to move up and down fast, noisier, you don't even need to order the mouse to discover that, any mouse with ridges perpendicular to your index finger (most mice) moves way slower than Chon/Corn 1200, like Logitech etc has a *hard to move* scroll wheel that is noisier than Corn whose ridges are parallel or mice with no ridges) who never scroll that is useless for all other professions that edit docs, reports, pdf etc, especially 3000 page reports or docs like this book. Chon doesn't last many years per some reviews on other pages, but at 8$, can't compare with 40$ mice. If don't mind moving hand a lot and are OK with the terrible DPI, $9 Corn 1,200 DPI 65 g is a very quiet mouse (50% quieter than Fenisio, but 2.5 times louder than Logitech, 5x louder than Corn 2400/Chon 6400, 3.5 times quieter than Mojo) and ergonomic with bubble wrap, truly easy glide on mouse pads. $53 Mojo 12,000 DPI is a little

noisier than Corn 2400 and Chon, but it can break per reviews, so you need 4 year insurance, weighs 127 g, double the typical 64g mouse, so very hard to move when highlighting text and the Mojo scroll wheel is 50 times harder to move than Corn, and 10 times louder, so that makes Mojo useless for anything except gaming, as you need a smooth scrolling to edit big docs to avoid index finger arthritis/injury of its muscle.

The only other wired silent mice (avoid all 5) I found on Amazon in 2025 are $9 Verbatim 1000 DPI (claims to be silent, but is as loud as a regular, but it has the least resistance against the mouse pad of any wired mouse, being 59g only, having the best shape for me, having a really smooth underbelly, but it is the hardest one to press to make a click and to highlight a word you need the highest force to do so, ruining your finger), $17 McNally 2400 DPI (claims to reduce 90% of normal mice noise, low DPI, ridge scroll button that is slow to move and noisy), $9 Cbus 2400 DPI USB-C (scroll wheel got heavy perpendicular dents, sign of slow moving wheel, reviewers say it gets stuck), $20 FBG 2700 DPI (heavy as a brick, uncomfortable, scroll wheel slow/horrible), $8 Rapoo 1000 DPI (claims to reduce 95% of normal mice click noise, but scroll button is hard to move (like all wheels with perpendicular grooves) started to malfunction in 3 months for me and after 8 months I dicarded it as mouse disconnected often starting the 5th week, many report similar issues even when new scroll fails to work smoothly or at all). High quality engineering for capitalist diversity of trash products, because every low IQ loser☺☺☺ will be a CEO of a 1 person company, so we need 8 billion trash companies. ☺☺☺ Wipe mouse weekly with some alcohol pad to clean it, same for keyboard, keyboards were found to be 100 times dirtier than toilets, due to people never cleaning them. Hands are dirty, so clean mice often too, as you touch eyes with hands. Don't download mice software if worried about China spying. Big bulky mice weight 90 g and will stress hands so much. If your mouse is more stone age, with 4 circular rubber "legs" instead of the ultra slippery 2 bands on the front and back, you can take the area of the legs to create a sliding mouse that glides much easier and requires half the muscle effort to move, reducing wrist strain. If that doesn't remove the strain on the thumb tip (the part of our hands that gets the most used and abused when holding objects etc), consider a vertical mouse, which only works for people with strong hands that don't mind a heavy mouse. If you have the wrong mouse for your routine, you can't escape carpal tunnel syndrome or repetitive strain injury to fingers and wrist. Some claim that for 50 years companies designed the mice wrong causing carpal tunnel syndrome, bending the bones and causing wrist and thumb pain, so a new mouse design (see Amazon pic of the twisted bones, twisted nerves that atrophy and cause chronic pain) appeared that allows you to adjust which part of the thumb (the joint, not the nail/tip) is used to hold the mouse (invented in US in 1994 and forces thumb higher than the other vertical mice, by Evoluent San Francisco company, free from Chinese spy hardware), by using some taped bubble wrap you tape to the back of the thumb

side of a $10-20 vertical mouse that allows you to hold and guide the mouse with the lower half of the thumb, instead of the upper half, which often can get sore from being used to hold a million objects over decades, especially mice. If your computer desk sliding keyboard is short, the mouse may be too tall when using a mouse pad, so simply cut the mouse pad and it will work fine with your hands alone resting on the left over mouse pad. These vertical mice are not designed very well for everyone, since some people have a sore thumb tip and they need a bulge where the lower thumb sits, so the upper half of the thumb never touches the mouse to guide it. But you can put the bubble wrap so you relax your thumb tip, that hangs in the air relaxed never touching the mouse, after decades of using tip to press on mouse. You'll absolutely love it. Thumbs and big toes take the most stress, be gentle with them when cleaning, house chores, mousing, etc. Don't bend the toes with respect to the foot, as that can damage the big toe ligaments and cause repetitive strain injury there like with carpal tunnel syndrome. You need to think about being gentle and eterni. Pain returns if you abuse thumb tip or all fingers and wrist by using traditional mice. Rest your elbow too, on the arm of the chair, find an ergonomic position. Thumbs are the first fingers to get "arthritis" like pain from chores or mousing. This way you avoid the twist of the forearm. Thumb bubble wrap rest works at any height you find comfiest, for a custom fit for thumb pain/arthritis. ☺☺☺

Keeping Food Processor Clean: Protect YOUR HANDS: try get these flock lined *4 pairs/$15 (I got 10% coupon from Amazon) amazing 12.6 inch* Pacific PPE lavender purple gloves *26.6* mil or 0.68 mm thick (1 mil=0.001 inch or 0.0254 mm). Be aware, so you don't get disappointed when buying them, that they become orange on areas that are used a lot (*50% of the glove, inner side mostly, after 3 months due to making orange carrot based smoothies daily, but that happens to other gloves, be them white, etc*) and come in contact with orange smoothies, but they do last 3 months before the inner lining becomes soiled and weak and you may get a puncture, so you do save $ and the environment, since you didn't use 90 gloves, only 1 each quarter. 26.6 mil is *thicker than Procter & Gamble purple 14" long 8$* Mr. Clean 20 mil*, or the 12.5" long* 1 pair/7$ *or* 4 pairs/18$ white with silver 'mr clean' written on them 22 mil Mr Clean (4.54$ a pair vs 4.47$ a pair for the purple PPE one, Clean is also sold at Home Depot) *which are ultra comfy with a cotton thicker and comfier than* Pacific PPE, but PPE has a comfier, more flexible glove material providing better dexterity; for kitchen, dishwashing Clean is better as you see dirt easier and are warmer; for high precision tasks, PPE seem better*. Clean &* PPE *are 10 times comfortable than the reusable 'microbifer lining' yellow-blue gloves Home Depot sells for 2-3$ (Depot ones are very thermally noninsulated, so you feel all cold and warm as without gloves, Clean &* PPE *are WAY better, comfier, etc); these gloves are 80x better than the 1$ disposable glove you get from Home Depot or $ stores or disposable junk I used all my life as a chemist, takes 20 times less to put on and off, no more pulling at elastin layers of skin and breaking the skin structure with

unlined gloves, these types of inner linings could be standard to avoid millions of tons of waste with disposables and to protect the hands of workers globally) or 6 pairs/$10 yellow *15 mil thick or 0.38 mm ones (lower quality, didn't try them as they're thin, but still better than unlined 0.25 mm, hence the 27 mil purple ones will last way longer; getting too thin can waste more $ and plastic/CO_2, since you go thru 8 pairs faster than 1 thick pair)* to protect hands while washing the food processor, dishes with chemicals or even plain water, since too much water with chlorine in it can damage skin layers and age skin fast. Our body makes 1% less collagen a year, after age 20, so be gentle with your hands, protect them, wash, handle produce with them, as it will extend their healthy lifespan (water pH is 7, produce, smoothies are 3-5, which destroys the skin).

I now find all I do when making smoothies is much easier with the purple gloves on and am more willing to wash things better, with more rubbing (*sponge against the processor bowl, etc, carrot smoothies are deeply orange and stain these gloves if you try to use the glove to get some of it off or something, so don't touch the smoothie itself that clings to bowl, use sponges instead, etc; so if you buy gloves like these, purple is way better vs white, turquoise or yellow, as smoothies are purple, orange, green usually in color and stains won't be very visible, allowing gloves to appear new and clean much longer*) and water as it is ideal. It's also easy to press and agitate the kale in the soaking water (in a plastic container) to wash it well, since it's got a huge surface area and even if organic it's got tons of pesticides, washing produce is easier, no more need to turn on hot water if it seems cold to you, etc, and overall you tear far less collagen and elastin fibers when handling things with such an incredibly smooth glove that has such high grip, higher than our hands, can ever tear apart kale 10x easier than with bare hands, so with 3 tears, you can place it in the food processor, way faster than the old way of cutting it into tiny pieces.

These amazing purple gloves can make smoothie making much easier, gentler and healthier for your hands. They can also be used for cleaning tubs, toilets, gardening etc too, though for heavy duty weed pulling, tree, bush trimming gardening and house chores, the more puncture resistant heavy duty blue Lanon PVC ones are better to avoid scratches *(wear long sleeves, since the lining is only for the first 12 inches) due to a much smoother hand and upper arm plastic part*; not the nitrile Showa sticky types that have bushes,☺☺☺ leaves, concrete walls, wood beams, window frames, etc objects stick/adhere to the gloves and thus create far redder marks on any bump than smooth gliding blue PVC that diverts pressure and diminishes time of compression/contact by 2-5 times; Showa weigh 245 g vs 400 g blue PVC; Showa is only good for construction workers, plumbers who need best grab of bricks, tiles, pipes; the large for Showa is tight compared to the large for Lanon purple gloves, so uncomfortable (fingers for Showa are 1 cm shorter, much tighter, less air to breathe for skin etc than Lanon blue PVC XL too, but same length as Lanon purple length 9 cm for middle finger). In a world of Immortals, the Immortality *Nurturing* Agency emails every new home owner about the tips and products that extend

lifespan, avoid fast aging of eyes, hands, etc due to lack of safety glasses, comfy dishwashing gloves, comfortable all leather gardening gloves that prevent dust and thorns, wood puncture, tools, etc (they also have long sleeves gardening gloves brand, but these lack soft cotton on the inside for protecting the arms from thorns if you don't wear a long sleeve jacket etc; however, this long gloves brand damage collagen more, as they lack the soft cotton inside to soften the impact of the leather going against the collgen and damaging it). To clean Cuisinart, pour 0.5 gallon of bleach ($0.5) in a plastic container to clean its plastic parts twice or once a year (only place metallic blade 20 minutes max in bleach, since 12+ hours will attack metal; for dirtiest areas use a super thin paint brush to scrap dirt; after initial 20 min soak, soak only the ultra dirty area in bleach to avoid dissolving the rubber if any present in your processor; mine works after all rubber dissolved; rubber contains various chemicals which react with bleach and attack blade if soaked in the same container; so soak blade separately in a small container; *bleach will make it like* brand new, *super clean*, a $ store paint brush (set for $1) can help reach the hard areas to diminish bleaching time; any part can be ordered from Cuisinart, but brief bleaching won't do any damage; don't use bleach on the motor of course.☺☺☺

LEARN TO DISCERN COMMERCIAL SCIENCE FROM REAL SCIENCE:

A video explains the fraudulent science papers. The high omega 6 vegetable oils, walnut, non-walnut nuts, coconut, olive and avocado sections explain in 10+ pages, 50+ fake science methods used by Big Business, Italian, Spanish, Greek, Mexican, etc Mafias to promote unhealthy foods, like olives, avocados, coconut, at the expense of really healthy fats like algal DHA-EPA oil, flax oil, chia seeds, 1-2 walnuts (the only healthy nut is properly stored in the freezer if longer than 1 month, fridge less than 1 month, walnut, other nuts have too much ω6, see ratios) a day max to prevent obesity and plaque from too much fat, etc. For every academia real science study, the industry will fund 50 fake studies to "prove" by the "preponderance of evidence", meaning 50:1 study ratio, that truth belongs to the industry selling POISON. Industry owns various professors, MDs at various universities and schools of medicine and they publish more junk to get more grants and get tenure. The corruption is incredible, truth only an afterthought. This technique, unknown to most, means that most nutrition studies are FRAUD. For example, industry can design a study to prove pretty much anything, by hiding the real cause for a result and making it seem that it was due to swapping "the food they try to sell" for "a competitor's food". This can be applied quick in many ways: give the controls butter for example (butter company) and then give the intervention group vegetable oils (say corn or other high ω6:3 ratio oils) and show that, even though cholesterol went down, mortality rose to make all believe "low cholesterol causes death" (When it is inflammation from low ω3). You can achieve this easily by giving them high omega 3 butter (grass fed) and low omega 3 oils, so by changing the hs-CRP from 0.4 to 3 you increase arterial and body inflammation 7 times and then the rise in cardiac and all cause

mortality is blamed on vegan foods used to replace animal foods the Big Dairy wants to sell. Other ways they can trick it is to have people who would have died on animal foods quit the study, and then only vegans appear worse. Most studies are not taking into account the confounding factors they need to adjust for in that disease investigation, like ω6:3 ratio has to be constant when you compare low or high cholesterol, inflammation and antioxidant status the same, stress and sleep the same, etc. Youtube has a lot of these MD conmen, who even hide the references for these "alleged studies" and charge people to join "the insider view" that offers more of the same commercial science bullshit that makes up 99.9% of scientific literature about food studies. They became MD to get rich and now their business acumen shows up with the same fraudulent and dramatic shows of a street magician who obfuscates and hides the truth. We live in a much more dishonest world than the media would have you believe. Researchers only get funding when the conclusions of a study support selling the BAD FOOD. Millions of studies are presented as legitimate, but they're worth $0.01. The reason is that they rely on the food questionnaires and poor human memory, and food nutrient levels fluctuate: citrulline 300 fold based on watermelon cultivar. Thus, we need eterni foods to get to the truth: citrulline will always be the same, not vary 300 fold. If you have 1 million people who eat randomly, stuff they randomly buy each week, etc, never the same breakfast, etc, or amounts, asking them to tell you what they ate 34 days ago is going to lead to the most unreliable dietary intake. People simply don't pay attention to what they eat to recall it well. Memories also change with time depending on various goals, agendas and beliefs one forms. So, to believe in the conclusions of such studies is to waste our time. We need real studies with exact dietary intake. Our standards are so low, we call bullshit science and we account for zero, let alone 25 most common confounding factors in a diet that could have caused an outcome, instead of the presumed cause. How did ω3:6 ratio, TNF, 20 other biomarkers, hs-CRP and IL-6 impact the outcome? They never look at that, they just choose that the outcome was caused by some random nutrient. Pathetic. This bullshit is called science and wastes $$trillions worldwide. Like with 1 billion companies producing garbage instead of 11 producing 4000 year lifespans. One big real study is worth more than 10,000 trash studies. 1 big company has 10000 times more PhDs and tech. The race to become a tenured professor leads to a publishing frenzy☺☺☺, to kissing the posterior of evil companies and promoting the deadly products, so those killing the most via papers end up leading universities sometimes, they were the best bullshitters of all, not the most honest people. That's how we got obesity rates for adolescents to rise 4 fold 1990 to 2025. Before you sweat about a study conclusion, investigate the links between the lead author and industry, since a link indicates his only way to get grants is to prove the most false conclusions. The way we do research in USA is catastrophic, it incentivizes massive fraud.

Another example is the "you need huge amounts of fat to absorb carotenoids": to sell more junk

fat, nuts or avocados, the Big Food industry created some fake studies of starving people of carotenoids for 4-14 days, and then giving them carotenoid rich foods, with or without some fat from lethal fat spread, avocado or whatever. The scam was that when you're starved, the body wants to absorb so much the carotenoids, that it shoots up 10-30 times more than with normal people, who always eat carotenoids. If you eat carotenoids today, it's stored in the intestinal epithelial cells and then next time you got some fat from vitamin pill oils etc it will be easily absorbed; 2024 paper: "β-carotene metabolism, which includes (1) release from the food matrix, (2) incorporation into physiological mixed micelles, (3) uptake by intestinal epithelial cells, and (4) packaging into chylomicrons that are secreted into the lymphatic system". When you take normal healthy vegans with high carotenoids and give them extra nuts, salad spreads, or avocados, the carotenoid absorption only increases slightly, 50% at best, not 1500%. So, once you understand how the nut industry fakes the nut studies, by comparing nuts with far more lethal foods, you see how this scam Big Avocado study (read the PDF as text is not garbled as in the html version) can be used to push more fatty food sales by various companies, too unethical to care if you die of heart attack or not. Fat can increase *absorption* of provitamin A carotenoids 4-15 times ONLY IN CAROTENOID STARVED PEOPLE (not healthy vegans) as explained in the paper JN 2005;135(3):431-6 ► "All subjects were instructed to avoid carotenoid-rich foods for 2-wk… (to exaggerate by 10-30 times the rise in blood levels)… supplementing 150 g avocado (has 22 g fat) or 24 g avocado oil to salad similarly enhanced α-carotene, β-carotene, and lutein absorption ($P < 0.01$), resulting in 7.2, 15.3, and 5.1 times the mean AUC" (area under curve for the next 9.5 hours after the meal). 75 g avocado resulted in 8.3, 13.6, 4.3 times the mean AUC. *Lycopene absorption increased* 4.4 times after adding 150 g avocado. Other studies show similar results for *vegan* fat, but not all of them since not all starved people of carotenoids first (see vitamin A section on why it's better eat fat *soluble* vitamins with the fattest meal, since some DNAs convert less *vegan* A to A, and odd metabolism of fat malfunction may diminish uptake further). In many studies they noticed we only need 2.4 g of fat per meal, which many get from legumes and veggies, to really absorb well carotenoids; this is 10 times lower than the bogus studies funded by the Italian Mafia Olive industry or Mexican Avocado industry. When Mexican Mafia wants to sell avocados to USA, fake studies paid by cartels emerge. Antioxi 2021;10(3):473 ► "fat consumption of 3-5 g/day guarantees sufficient carotenoid absorption… High consumption of F&V (fruits & veggies) is associated with greater systemic levels of total carotenoids, in particular when fat intake is low-to-moderate rather than very high.", and *any vegan gets 7-10 g fat from their legumes, grains, veggies, fruits alone*, not to mention the DHA-EPA pills, vitamin D, E pills with olive oil in them, etc. So, even without avocados or any salad dressing, nut butters, you're safe. Always research who funds the study, what their employer tries to sell, who got funds from who, etc. The anthocyanidin section explains other types of brainwashing by Big Aristocrats, such as herbs (ginkgo biloba). China wants everyone to buy

ginkgo biloba, but evidence of benefits is sketchy. What if taking 200 mg of blueberry powder is better than brain bleeds and eye bleeds causing ginkgo? See a clip on Mendelian randomization fraud to say Lp(a) correlation is causation about Lp(a), the new "major cause of heart disease".

Procter & Gamble decided to poison Americans by pushing the most lethal food via a fake study in 2004, as explained in this video. The study done by 2 P&G employees pushing P&G products is using the same scam of the Big Avocado study: the 10 participants (tiny study, as always with fake studies) were not to eat any carotenoid foods for 4 days "subjects (AJCN 2004;80(2):396-403) were provided a list of carotenoid-rich foods and instructed to avoid those foods for 4 d" to make the carotenoid absorption increase effect way bigger than it is in normal healthy people by a factor of 10 or more. The study fails to measure if the no fat group got the carotenoids absorbed 5-15 hours later when they did eat some fat at their meal, with a higher carotenoid blood spike vs the other people who ate no carotenoids either at that second meal, since epithelial cells hold on to carotenoids until the next fat meal. So, the conclusion can be very misleading by doing impartial studies and starving people of carotenoids, all a trick to get you to buy P&G canola oil dressing. Obviously, *eat your carrot-kale-watermelon smoothie with the most fat from vitamin pills, etc, but you don't need overeat fat out of fear, unless blood tests show low vitamin A, D, K, E and carotenoids*. AJCN 2000;71(5):1187-93 used 3 g fat (what is in a few pills of D, E, ω3, etc you take with your carotenoid smoothie) and 36 g of fat spreads as delivery of carotenoids (same ratio of fatty acids in vegetable spreads in 2000, about 65% unsaturated fat), and *lutein alone (not carotenes or vitamin E) was better absorbed* when fat intake went up 12 times in the spread (36 g vs 3 g). For α,β-carotenes, absorption decreased when fat intake moved from 3 g to 36 g. This study didn't starve people of carotenoids and was not funded by Big Food, so conclusions were so different. This means bioavailability is, like with flavonoids, far more complex than "fat increases it all the time" and probably depends on total fat intake outside that meal, genetics of gut lining cells, overall diet (*vegans* have different microbiota), microbiome, etc. EJN 2024;63(6):2261-70 found that eating 18 g dairy fat with β-carotene didn't increase absorption of β-carotene, contradicting all fake studies above from 20 years prior, even if they starved people of carotenoids for 7 days: no colorful fruit "for four days. This was followed by three days of a strictly carotenoid-free diet".☺☺☺

The way these people fake everything and can make you believe any POISON is a Health Food is ultra simple: you starve people of a nutrient found in 1000 foods. Then you run a study and pick up the worst food containing some of that nutrient and show that some biomarkers improve. Then, you conclude people live longer healthier lives if they eat that poison. This is fraud, because there are 50 foods with that nutrient that would give 10 times better values for the same biomarkers and 1000 other way more important biomarkers they never mention (since they would appear worse with that POISON FOOD), but those other 50 foods are never

mentioned and this causes people to eat the POISON and avoid the 50 much healthier foods the study doesn't mention. A real study doesn't starve people of carotenoids for 4-14 days. This is how fraudulent researchers can prove anything, even the most illogical stuff like "Chocolate makes you lose weight". This chocolate statement may be true if you're low in cysteine or on a keto diet in some odd cases, but not in the most regular carb rich omnivore diet. This is how they pick red wine, out of 1000 foods, that has 100 times fewer polyphenols and health benefits than other foods and manipulate the data to omit any mention of alternatives and conclude red wine improved some biomarker, while not mentioning the 5000 biomarkers that were destroyed by red wine. See the alcohol section on this scam. 97% of research is marketing fraud, not science. Only 1 in 30 papers is somewhat useful.☺☺☺

Another scam they use to discredit studies (of competing foods) is the vitamin effect: our bodies benefit from taking vitamins (or other foods that contain a nutrient we need) within a certain range: RDA up to UL, upper limit. So, when you go outside that window, the harmful effect of the vitamin or food begins to show up, depending on what else the study participants do or eat. They wrongly conclude then that because "there is no linear relationship between eating more and improved longevity" that food is not good or a "confounding factor exists that may explain the correlation, but there is no causation", but that's not always true: any food is only good in a certain range given what you eat, for example, linoleic acid in walnuts and 500 other foods is good for you if you're severely deficient in it, but the question is how many calories can you add to your diet now to get that 3g of linoleic acid you need, without adding extra fat? By the time you watch the 6 videos on nuts, the Eterni Food Inc section, it becomes clear that there are too many conflicts of interest for researchers to evaluate the best diet to add the maximum amount of billions of years to the total lifespan years of the 350 million or 8 billion nation. The only way to solve this immense drive to fake data and sell a product to pay salaries and to push a toxic product a company makes, is to actually create 1 single food company, out of millions, which doesn't favor any crop, diet, product or anything and looks out for the truth only, knowing fully they control all agriculture, products and retool and replant what is proven to indeed add 40 years to everyone's lifespan. This company has supercomputers, millions of PhDs that can make studies of millions of people, so exact, without estimated "self-reported diet", etc, down to the mg of food eaten, to produce studies 1 trillion times more accurate than the jokes today.☺☺☺ A national company also doesn't favor 90% protein over 90% fat or 80% carbs. It's intelligent enough to realize some people destroyed their pancreas by various diets (20 lb of watermelon daily for example) etc, so their only survival, like with some Alzheimer patients, is ketogenic high fat diet. But they also know via the centralized tone education, they can educate all well, no nobody destroys their insulin producing cells and everyone can choose whatever is found to add 50 years to our 80 year lifespan, with a lower need of extreme diets to triple muscle mass or

avoid glucose metabolism, etc. In the end they will discover how to live to 9000, but until then, we're aware in the transition period we need all types of experts (in this or that diet) as we don't yet have 0 violent crime and 0 wars, so sadly, instead of doubling our brain volume, we double our muscles for cops and soldiers, etc, partially due to inertia and weak laws. The fraud in the food and Pharma industry is apparent in this video (and related of the channel), which shows they sell us the probiotics that are cheap to pack and make profit on, even if they sicken us. They make billions by sickening the 99%, and nobody even knows it, like with AGEs. The reason the people feel "better" after eating these lethal probiotics is that their microbiome is completely destroyed (so anything will be better than nothing, but healthy people feel sick after most probiotics) by antibiotics and other drugs taken to cure high blood pressure, weak immunity caused by Jewish companies selling us high salt or AGE products to raise our pressure, kill immunity, and sell us more drugs. Then, we need Jewish MDs to stick colonoscopy probes, at 40x min fed wage pay/hour, to see how Jewish products causes colitis, cancer and other problems.☺ Instead of one 900x better probiotics pill by Eterni Foods, we got 5000 trash pills by tiny companies. To create the ideal microbiome we need fresh powder eterni foods, under nitrogen… Nutrients get destroyed by dry heat cooking due to reaction with oxygen (AGEs), bacteria get destroyed by reaction with oxygen during storage in air rich capsule, manufacturing.

If you eat a low fat vegan diet for reversing heart disease, adding some oily vitamin pills or 1 spoon of ground chia seeds or 1-2 walnuts to the high vitamin A smoothie is *useful if blood tests show carotenoid deficiency* (our body needs fat for ω3/6, even some *vegan* saturated fat), a few chia or flaxseeds won't cause atherosclerosis, in fact in rabbits they prevent it. If you eat winter squash seeds, those provide fat. *The 8 B vitamins are water soluble, so their absorption is not enhanced by fat. D, K, E, provitamin A carotenoids,* CoQ10 are very fat soluble, fat increases their absorption. *Sometimes, taking these CoQ10, K, D, E crystals or oils out of capsule and mixing them with vitamin A veggies puree, increases uptake by 3 times, if severely deficient due to a fake study starving you of these to boost Nuts, Avocado sales, by 2-10 times vs swallowing the 0 fat multivitamin pill. This is why studies vary wildly in outcome: they don't always account for these 3 confounding factors*, plus others here:

1. meal fat intake (was the fat evenly distributed, the *chia* or *flaxseeds* ground or whole?) - *ground flax/chia can increase fat availability 50 times*

2. meal-pill homogenization (was the pill content evenly distributed in the smoothie, meal),

3. pill crystal size (smaller easier to absorb, some CoQ10 crystals are 20 times bigger than others) or *absorption capacity of the formulation (powder or liquid). "decreasing the particle size of its crystal improved its oral absorption"* ► Foods 2019; 8(10):502; *microemulsion CoQ10 was 7 times better absorbed in rats than powder CoQ10 pill swallowing, so if you get powder (3 times*

cheaper), do these homogenizing steps, remove Q10 from capsule, to give yourself extra time for stomach to homogenize, instead of wasting 5 minutes for stomach to dissolve capsule.☺☺☺

If they ignore *the above 3 factors*, studies will lead to very wrong *conclusions.* It's important to make smoothies well, to avoid too much air trapping, which will lead to belching for an hour or more afterwards, as it happens when eating normal food fast. We want the smoothie to be fast and contain no air; for this to occur we start by first liquefying the softest stuff like watermelon in 5 seconds, or add watermelon and carrots first as I do (weight: 1:1 or 2:1), then add butternut squash (once the carrots are pureed in 25 seconds), then once that is pureed add other things (*cooked legumes are better added last*) gradually and puree it well, adding kale when there is a lot of soft puree there to prevent air building and let it spin 2 minutes after kale, to make sure all air goes out. Kale and leafy greens got a lot of air, and require a much softer puree before addition, and 2-3 restarts within the first 30 seconds, after you use a spoon to the kale into the puree when it's stopped, if you didn't precut the kale well (*you can just tear a leafy green bunch in 2-3 parts, it's a lot faster and less messy than cutting it in tiny pieces first*); so if you forget to add leafy greens, you will have to use a soft veggie or fruit to puree it well, perhaps watermelon and a good 2 min; pineapple got the most air perhaps of any fruit, so pureeing that with other produce is essential, since kale-pineapple combo traps too much air. If you puree the same things you discover the amount of produce and order make a big difference in the air trapped.

These are some tips to avoid frustration or giving up because you didn't realize a smoothie can be made 4 times faster if you place the things there differently, with more watery stuff before the rock hard stuff, so you don't spin 15 minutes, but only 0.5-4 minutes max, 3 min for the leafy green smoothies (my biggest meal of the day) with tons of other vitamin A produce (carrots, squash, etc); if it's not fast, people won't bother making a smoothie. Usually, *I eat 1-2 smoothies a day, 1 takes* 0.5 min to make (puree pineapple 15 seconds, then add cooked lentils, puree 15 seconds), the entire *day,* some meals being cooked lentils plus pineapple made into a puree. Sometimes, my goal is to eat *70-90+*% smoothies, like eternis eating their puree, to see how the body can adapt; though only 40-70% as puree by volume usually, except some days when it's 90-99% for research purposes, most non-puree food eaten is smoothies that are small pieces sized, like a super tiny pieces salad, taking 5-20 seconds, not 30-200 seconds it takes to puree something or to cut it in small pieces; so a food processor is all about not chewing 2 hours/day veggies, we need to puree some of it and chop most of it in small pieces. The bioavailability of many nutrients will be so low if you chew everything. I have noticed due to the programming of millions of years, our body acts like a robot: for example, if you open mouth for a while, you yawn and generate tears, if you fake a smile, you release endorphins, if you eat some regular food by chewing, solid cucumber even only, you trigger the stool to come out faster than if you puree the cucumber, *so you can use this trick to make your stool frequency of a shorter period*

(12-24 hours on average, not 30-72 like omnivores☺☺☺), for a faster transit time, to avoid the stool getting thick and big and smelly, as it sits *without moving in the colon:* this *ensures* you *become a* longer *lived vegan*: we want to eat solid foods, not pureed ones, if we're past 12-18 hour ideal transit time; when you wake up mornings, if you didn't have stool, don't drink water, instead eat some high fiber fruit or veggie, chewing it; this will often cause stool moving in 10 min; solid food presses on old stool, while a liquid can't do that unless it's a huge amount, same food eaten raw push old feces 5-10 times stronger than in puree form.

The food table lentils tab has at the end the explanation of the 4 stool properties (smell, hour, consistency, size as length and thickness) and their recording and how monitoring for a few weeks or months can help you discover the best patterns for longer and healthier lifespan, when all other confounding factors are constant. When I started as a vegetarian, stool stank; then when going *vegan* I used to eat semi-junk foods like the "minimal ingredients" $ store bagels, tofu, which contain unsoaked (lectins to irritate gut) grains/soy (gluten to irritate the gut) without many watery fruits/veggies, and my stool was stinky, even 10 times less than omnivore times. Later, as I learned more, I replaced tofu with soaked lentils, more watery fruit/veggie smoothies that decreased transit time and stool became odorless and easy to move, smelling basically 100 times less than my omnivore childhood, so practically odorless as you sit on the toilet, 2 seconds after you flush it fast (even with window closed, maybe 5 seconds if closed and you stick nose into toilet. High *fiber vegans* defecate ultra fast (unless you ate too few watery veggies that day), so we have an added advantage, *the volatile chemicals have less time to linger, the stool is not hard, so we don't spend 5 minutes, it's over in 15 seconds*, often odorless after 1 second to others who don't know our stool smell at 200x dilution. It's odorless *after 1 minute for sure to the most sensitive noses on our planet even on "smellier days", while omnivore smell lingers 1-3 hours even after the "air freshener" was used, with small window open half way. Smoothies improve ω3 bioavailability in* chia seeds 50 fold*, and prevent the fermentation of unchewed food (*many people chew poorly and their stomach acid weakens with age*) by 100x factor, leading to no more rotting in your intestines, faster transit time than the average vegan (who already has 5 times faster transit time than omnivores) and vegan protein got 3 times less sulfur, 3 times more fiber, all good bacteria happy. It took me 20+ years of perfecting my type of veganism to discover all these, so you don't have to try* and reinvent the wheel, discovering new things and being healthier. That's why sometimes I'm doing 60% smoothies almost by volume, like we all will when eternis eating thick shakes obtained by dissolving a powder into water in 10 seconds, without noisy food processors. Odorless stool means gas is odorless too, pretty cool right? Make the smoothie with ground chia seeds very watery, so it doesn't clog your system by slowing transit time; if too pasty, the smoothie will give stinky stool as chia seeds or flaxseeds harden it and slow transit time. *You don't want to be*

like omnivores getting half the stool out, waiting 5 minutes for the other half to come put exerting like during weight lifting,☺☺☺ while smoothie vegans do nothing and all comes easily by itself. Then the whole house smells if you wait minutes and are omnivore.

Omnivores often have heart attack while defecating, because their diet is so *unhealthy*, stool becomes so *rock* hard, they strain the heart: none of that is natural, stool is to come out effortlessly like with high fiber *vegans* or high water vegans, dehydration also causes rock hard stools; you would think if we live to 500, we need some education on proper stool quality consistency, since we don't want to die while on the toilet; smoothies are better than water drinking; with so many liquid smoothies, you no longer need drink water either, I don't usually (well, I often go for months without drinking it, but sometimes I do drink 8-12.5 oz (224-350mL) daily for a few weeks in a row (add to smoothies, etc). If you live in areas with fluoridated water, at 0.7 ppm, the lower new EPA guideline, it's roughly equivalent to 4-7 times the amount of water you would get from a really "low fluoride spring water". See a huge list of food levels of fluoride here. High produce vegans don't and can't drink the huge number of water glasses omnivores get, since *vegans* get that via produce; if they would, they would pee 15 times/24h, 3 times at night. It's not like if you drink some fluoridated water you would damage your brain; however, if utility fluoride is 1.2 ppm, and you drink 3-4 liters/day, that may do oxidative damage, just like wine can contain 3 times fluoridated water levels, so alcoholics can wipe out their brains fast. Plus, the daily 6-7 lb produce/legumes also contains fluoride, though usually 0.01-0.03 ppm (*unless you used fluoridated tap water to cook/soak legumes, which could bring lentil fluoride to 0.5 ppm in theory if water not discarded*), like in the very lowest spring waters and lower than so called "fluoride free" waters that got 0.05-0.1 ppm fluoride (distilled or reverse osmosis type). *Smoothies* increase absorption*, prevent diarrhea like stools too:* no more that rock hard or diarrhea stool that sticks everywhere on the toilet.

The concept that chewing is better because you produce more saliva *is simply unproven*; first of all, when we talk daily we produce pounds of saliva and when we eat our smoothie with the spoon we can produce about the same saliva amount as before when chewing, just that we don't press so hard, so our jaw muscles won't be as strong perhaps in 500 years as we move to big brains and smaller mouths; it's not like people drink the smoothie with a straw (*impossible for thick smoothies, but possible in the future of* liquidarian eternis *when chewing is nonexistent*), we still have our jaws move up and down releasing saliva; those who eat mostly smoothies will find transitioning to eterni diet SO natural. Our bodies adapt, just like people adapted to being *vegan* or eating modern foods, not raw meat and fruits.☺☺☺ *The concept that making a smoothie out of all meals will increase glucose rise and cause problems is unproven*, because the compounds (polyphenols, zinc, etc) that *lower glucose rise during a meal* are dramatically more bioavailable too, so if we eat those compounds, we may get actually a *lower*

average glucose, which is counter-intuitive. **What I noticed when I started eating lentils and pineapple as a smoothie was less sleepiness after meals (sleepiness is due to glucose rise after a typical chewed meal); the reason pineapple puree mixed with lentils lowers glucose may be this: the bromelain in pineapple becomes 40-400 times more available near lentil protein, and starts splitting it into peptides signaling the stomach to release digestive enzymes far sooner and shifting pH to one more ideal to protein digestion, thereby eliminating putrefaction and lowering blood glucose (that requires a different pH to break complex carbs in lentils, so carbs are digested slower, protein faster). Some berries added to the smoothie can further dampen the triglyceride and glucose spike (though I don't add berries always), providing continuous energy without a sudden spike that makes you sleepy and unmotivated to do stuff. It seems to be more efficient, burden the body far less (*you know that heavy feeling of full after eating, when if you want to do more brain intensive stuff right after, you often get a slight temporary headache, since digestion takes so much brain power the non-smoothie way, due to the free radicals generated in normal energy/ATP production when glucose spikes,* hence the need of manganese and benefits of relaxing 5 minutes after a meal) and cause lower stool smell than eating same lentil-pineapple the usual way, due to faster transit time, protein no longer putrefacts.**

Now imagine how much more putrefaction happens with omnivore meals, where transit time is way bigger and food not chewed well, explaining the stool smell being huge vs vegan. **There is something so different about smoothies, it's like eating a totally different meal, yet it's the "exact same thing, on paper", but not in reality: we know in a chemical flask reaction speed increases 100 fold if you make a smoothie that increases product and reactant interaction, vs barely interacting as in huge chewed bits, 1000 times bigger than puree bits.** ***Catalysis depends on surface area, digestion is better, we eat less, like a 35 mpg car, vs 25 mpg chewing, less wear tear for kidneys, intestines, we live longer, as less belly fats deposits too, which means we exercise more and live longer because of that, easier to move when skinny***. **A phone computer is more powerful than an old computer the size of a room, it's not how big and heavy we are, but how powerful our brain computer is and that depends on digestion a lot. Many centenarians (half in some studies) are "underweight", so being skinny and living to 5 billion are not mutually exclusive, the cultural association of heavy built with longevity is not true, most supercentenarians are way thinner than average people. It's not "the size of our food bits" or "weight" is that determine our longevity, but much more. So, why not embrace the small particles of eterni food? *The stomach enzymes need to immediately access the peptides and proteins, not waste time to separate it from the fiber, otherwise pH shifts to the carb digestion, glucose spikes and protein putrefacts.* In digestion, a series of events happening 5-10 minutes early totally shift how the whole thing will proceed. This is like broccoli only releasing sulforaphane when we make it into a smoothie or chew it very well, because the myrosinase**

enzyme (like bromelain) comes into contact with glucoraphanin and breaks it into two releasing sulforaphane; like garlic alliinase enzyme comes into contact with alliin and turns it into allicin; like many other undiscovered interactions of nutrients who for the first time in decades become 10 times more bioavailable, nutrients we don't know about yet, but will in year 2300. Because our food putrefacts 100 times less the poorly chewed food, for people with low stomach acid (everyone after 50), our blood is far less loaded with toxic metabolites that cause atherosclerosis, acne, organ damage. When we make our smoothie, wash fruits-veggies, we're active, we stand like college professors who stand and do chores in labs daily and live to 105; standing and moving a little in eterni food labs for 1 hr is like doing gym stuff for 10 min.

Why go to gym when we can make foods at home, build infinite bliss relaxation centers and eterni labs and parks and live to 900? Have more time to meditate since we chew less. Some people add protein powder (that one has a tiny bit of fat too) to smoothies, but I no longer did since 2018, due to stool odor they create (*the process of extracting protein means removing prebiotic fiber and oxidizing proteins, denaturing them at times, and this creates stinky gas*); others add to their protein powder container rosemary, ginger, spices as dry powders, so that each time they add protein, they add also those spices and don't have to add multiple powders each time a smoothie is made. By the way, I stopped eating mustard in Jan 2021, due to the realization it may cause some kind of allergy or acne; mustard also interferes with the thyroid, contains unknown extra spices, flavors, turmeric that when mixed to ferment with vinegar over months on a shelf with light and heat, may lead to toxic chemicals or oxidized fats that clog arteries; often times, it's better to go to a cheaper store, buy raw spices as fresh herbs like mint, sage, thyme (induces abortion, avoid if pregnant), with the money you save by buying other things from there; as explained in the onion section, many studies show the effects of onion, plants are canceled or reversed when cooked, so a dry spice, or one that fermenting on a shelf with many chemicals is not same as fresh one. I want my food table to be exact so I know what I ate, but mustard doesn't list the amounts/types of spices, turmeric, flavors, etc. Tiny amounts (like B_{12}) can have huge effects. The protein g below are without any added cooked lentils: ☺

***1. Vitamin C smoothie*: pineapple with purple cabbage tastes amazing. It has a lot of vitamin C, since pineapple has as much as oranges almost, and purple cabbage more than oranges. Tastes better than most ice creams; purple cabbage got 2,830 times more anthocyanins than green one. Pineapple will make a lot of tasteless or weird tasting veggies far tastier. Kale plus pineapple combo is tasty too, it makes us realize how incredibly tasty kale can be in smoothies. For lycopene add tomatoes or watermelon. *2. β-cryptoxanthin & α-carotene smoothie*: kiwi, butternut squash (papaya for cryptoxanthin, if squash not available), watermelon, pineapple, sweet protein powder, beets or carrots to make it sweeter. *3. 14 g protein, 21 mg lutein smoothie:* 1 kg of zucchini + 0.4 kg of carrots. Kale has 20 times more lutein than zucchini, so one**

can add some watermelon or beets to make it sweeter and enable the kale taste to disappear if one substitutes some zucchini for kale. *4. 27 g protein 506 cal:* soy sprouts, broccoli, kiwi, watermelon, pineapple, purple kale, pumpkin. *5. 32 g protein 494 calories:* soy sprouts, broccoli, kiwi, plum, pineapple, ginger, summer squash, purple cabbage 6. Ginger, some grapes, 2 plums, 4 tomatoes, red cabbage, summer squash, raw pumpkin 7. Anthocyanin *Smoothie: Purple* Cauliflower, *Purple* Cabbage, *Purple* Onion, *Purple* Kale, *Purple* Grapes and Strawberries 8. Strawberry, cauliflower, kiwi, watermelon, plum *9. Strawberry and red cabbage* 10. Ginger, Purple Kale (2.3 times more vitamin C than oranges), Purple Cabbage, Strawberry, Pineapple, Zucchini, Carrots, Flaxseeds, Pumpkin Seeds, Walnuts, Cooked Lentils. ☺☺☺

***Eating smoothies right after making them seems best; this is common sense*, since fats (like oils) oxidize rapidly in the presence of air, vitamins are lost (water soluble vitamin B and C are lost faster, since water evaporates faster just like with pre-cut veggies), phytonutrients decompose (polyphenols, vitamin A, B, D, E, K if exposed to light); smoothies are often times exposing the fat inside to air because tiny air bubbles can form. Exposing pre-cut onion to air for a few days (in the fridge at home or in the store) can reduce its anti-inflammatory properties 5 fold (granulocytes *dropped 5 times more with freshly cut onion instead of one that sit pre-cut in the fridge or* store for days), as explained at NMCD 2016;26(3):194-200 and this video. Apparently, all veggies when cut in small pieces and exposed to air facilitate growth of bacteria and the endotoxins (produced by the bacteria) reduce the veggies' anti-inflammatory properties. If you ever buy juices, choose opaque containers as they retain vitamins way better. We have *a LONG way to go in smoothie tech; we got endless useless gadgets, and not 1 single* food processor that makes a puree easily out of air rich leafy greens and air rich pineapple *without air that is burped later; what environmental leadership is this, how can people go 100% vegan* smoothies diet if many expect no burping? Electric cars are not enough.**

11.12. "Odorless" Stools/Gas/Mouth, Soaking Legumes/Grains, avoiding foods that inflame the gut, activate TOR, shorten lifespan by increasing oxidative stress and dumping toxins into the blood.

11.12.1. Introduction **11.12.2. Benefits of Nut, Legume, Grain Soaking**

11.12.3. How to Soak Lentils to Stop Gas **11.12.4. Pressure Cookers = healthiest meals**

11.12.5. Food Chemicals that Cause Gas: especially avoid 3: 11.12.5.2. Sulfur (causes nephritis) 11.12.5.9. Gluten (causes diabetes, IBS) 11.12.5.10. Artificial Sweeteners (cause colitis). See 11.12.5.11. for an example of what I ate for months to avoid any gas/stool odor in 2018.

11.12.1. Introduction. The previous paragraphs explained *vegan* fiber rich smoothies eliminate stool odor, gas odor and *make defecation an effortless 10 seconds, not a 5 minute weight lifting dangerous exertion that can damage our heart*. Methionine restriction deactivated TOR, slowing aging as much as calorie restriction; vegan protein has 3 times less methionine, 3 times less sulfur, so it causes far less stool smell and mouth smell, see video on bad breath and why *vegans* get less. "Bad spirits" (demons, etc) are in mythology smelling like sulfur and too much sulfur really brings faster aging and death as biochemistry shows; ancient people explained disease/death by "bad spirits",☺ and since sick or dead people smell, the myth emerged. Omnivore meat pieces, rich in sulfur, get stuck in between teeth and get fermented by mouth bacteria into stinky sulfur compounds. Being a *vegan* not only makes you more adorable in bed (no stinky mouth when waking up or stinky gas when deep sleeping), but it relaxes you (in social situations) because you're not stressing so much to hold your breath when your mouth stinks (forgot to clean it well) or to hold on to silent tiny gas, since you know 99.9% of the time it doesn't smell, if you eat a healthy *vegan* diet as explained in this section, not junk *vegan* or tons of sulfur smell gas causing veggies, SO_2 enriched dried fruit/nut mixes, etc, no flossing, no high fiber smoothies (chewing a lot gets more food in between teeth). I used to eat meat as a kid, so I know what omnivore gas is like.

I used to not eat legumes for 1 year and stool was sticky and smelly sometimes, once I put lentils (now I eat lentils in smoothie form mixed with pineapple to speed up digestion, reduce putrefaction of undigested protein, also smoothies with vitamin C promote collagen synthesis, so eat C with protein smoothies) with prebiotic fiber in, the stickiness and frequent almost diarrhea like quality (sticks to anus and toilet) disappeared; when I ate beans daily, and nothing else except tomatoes mostly, the transit time was big, so toxins would linger more and smell would be bigger; it took me a while to arrive, see food table, at the perfect stool consistency and minimal smell (0 after flushing), which is indicating that the stool doesn't stick to the colon walls (due to being too hard or too soft), which would cause more putrefaction and blood poisoning (if some *putrefacts 3-7 days instead of just 8-15* hours *transit time*, even if you normally don't have 2 kg of older feces stuck to colon walls, *but only 300 g of lethal gunk*), which gets worst in people with 20kg or 44 lb of feces inside colon that carry them 30 years and living much shorter as a result, since nothing can be absorbed and toxins overrun the blood. So, these things, like feces smell and consistency, how *easily you can clean your anus* (difficult when too hard or too soft, when toilet is dirty afterwards due to too hard or too soft stool, it's a bad sign), are indicative of something very important that most of us ignore: colon health, *putrefaction*, blood *poisoning*, digestion;☺ 70% of the immune system is in the gut and colon can literally kill us 20 years earlier with poisons it releases, even if we drink 5 liters of water daily. It's not about being picky about having stool smell like fresh out of oven mushroom or pepper pizza instead of rotten meat or

eggs, but about living 20-30 years longer. *When I gave up meat first time, little did I know decades later after trying 100s of combos, I would discover how to make my stool smell 200 times less (and gas odorless), 0 smell after flushing usually, and almost pizza-like stool smell instead of the most repulsive rotten egg-meat smell*. It's not about how it smells, but how much putrefaction and bad metabolites that smell is a marker of. A rotten or a little moldy fruit, is just a little brown and has no smell usually or tiny smell, but meat/dairy, if it rots, my God, it smells 200 times stronger; the same exact thing happens with food inside our colon.

The fastest way (150+ times faster than anything else, eating high fiber fruits/veggies takes 24 hours (1,440 minutes) at least) to remove sudden stool/gas odor or bloating caused by some strange food is to do a 10 minute enema (here I explain the better type to use) or two. *You'll feel like* a new person *after an enema in 10 minutes as all gas stops for 8 to 16 hours or days.* If gas returns, you may need to redo enema in a day or two. It always worked for me each time an issue came up. One Hollywood actress did enema daily.☺ The gut hosts 100 trillion microbes (weighing more than 1 kg), 70% of our immune system and "gut bacteria also appear to contribute to *non-infectious immune disorders* such as inflammatory bowel disease and autoimmunity" (*type 1 diabetes cured when gluten gut irritant removed*, see below) ► AI 2010;107:243-74. The gut allows good and bad stuff to go to organs via the blood, renewing organs or aging them before we reach 900. "All the results suggest that Alzheimer *may begin* in the gut, and is closely related to the imbalance of gut microbiota." Lipopolysaccharide (LPS) is a major part of the cell wall of gram negative bacteria, which make up 50-70% of the gut microbes. *People with Alzheimer got 3 times more* LPS (endotoxin) *in the blood, possibly due to* leaky gut that allows LPS to pass and cause inflammation. A lot of bacteria and fungi can secrete *amyloid proteins that can go into the blood and then the brain (Alzheimer is thought to be* caused by these amyloid proteins). ► SCLS 2016;59(10):1006-23. The link between heart disease and the gut is also covered below. Thus, gut health is important. There are 1,000 bacteria species in our gut. If we find the right combo that produces the right metabolites and makes the gut impermeable to toxins, we may live to 200-900, especially with new bacteria (including the best foods to feed this type) that produce co-factors renewing stem cells. One of the least studied things in gut health is the impact of food ratios and food combos on the gut bacteria. In chemistry, to achieve the maximum yield in a reaction we have to combine the reactants in a certain way, at a certain temperature, pressure, with some catalyst at times, etc. Our stomach and gut are like chemical reactors that yield the good bacteria we want only if we combine foods in certain ratios, and in certain ways, avoiding bad food combos that leave stuff undigested and as food for the bad bacteria.☺ Our satellites can fly above Earth at 17,000 mph, Voyager 1 38,610 mph since 1979, 2018 sun probe will reach 430,000 mph, while the maximum bird speed is 240 mph when diving. We achieved this 161 (38610/240) times better result than nature by

very precise engineering, we didn't just "wire the rocket and satellite randomly" and "hoped for the best", like we do when we randomly eat things in random combos. As shown on the page before the previous one, avocados can enhance the absorption of carotenoids up to 15 times, but they slow down digestion. Dairy can block to absorption of anthocyanins as shown at the end of anthocyanin section. We eat very much like monkeys do at times, based on taste and what's easily available, without any deep thought into ratios. There is no study out there on what happens to your gut if you eat 100 g pineapple, 100 g carrots, 100 g melon 100 g purple cabbage, 100 g lentils, versus eating 200 g pineapple, 50 g melon, 50 g lentils, 100 g cabbage.☺☺

While it may seem inconsequential, the ratio of foods is hugely important, as it is in a chemical reactor or flask; so is the choice of foods one combines. Veggies often have similar chemical profiles, but legumes, nuts, grains are different things and require more thought. Animal foods are chemically VERY different than plant ones, and if one combines them one needs to be even careful than when combining legumes or grains and veggies or fruits. Yet if you look at us, we eat all of them at once, in a hodgepodge, almost like pigs who eat anything in front of them. It tastes good, so we eat it: taste and passion first, intellect out of the window; almost like in a land of "not ultra high intelligence". Try do that with a rocket wiring, and you can never reach a speed 161 times faster than any animal can fly. If we want to live 161 longer than monkeys, then we need do things differently. Food companies are often founded by chemistry illiterate people who have done no study whatsoever on the right combos of their foods to optimize gut health. Companies sell individual items, but it's left to us to figure the right combo. Some buy spirulina and may damage thyroid by overdosing on iodine (iodine not even listed on some). People take many pills (birth control etc), but it may destroy their gut flora/health. Companies do safety studies for 1 pill, but when people take many pills or vaccines, there is no safety study done for the combo; same for foods. People without zinc die at 25, we had no idea about it before we discovered the periodic table and found some people who grew mentally retarded and died at 25 with no zinc in the diet. The same ignorance today applies about many other chemicals which we lack. If we would eat them, we could live to 2000. We're what we eat. We have such advanced tech in cars, rockets, computers, but when it comes to nutrition, food combining, eating, we're in the Paleolithic. ☺☺☺ We eat anything that comes in wild quantities. No AI (artificial intelligence) exists to tell us "today would be good to eat 33 g of this, 49 g of that, 222 g of the other one". We get what we put into it. If we treat the chemical reactors inside of us like trash, we get trashy results of short lives. We eat randomly and we hope for the best, as people did with sanitation, etc when child mortality was 20 times higher. But we need knowledge, not just hope. Hope is not getting us anywhere without knowledge coming from *hypothesis* formulation and testing thru hard work of science. We often have studies in nutrition about some food and one gives a rise of 70% in a marker, another a rise of 20% or drop of 10%. Which

is it? Well, the ratio of foods affects the outcome and it's not something they even adjust for in their elimination of confounding factors. They adjust for age, etc… but what about the food combos that neutralize the absorption or increase it 5 fold? ☺☺☺

On June 1st 2018 my stools became "odorless" (maybe 90-300 times less, just undetectable to my nose from 3 feet away, i.e. if you flush it fast, 2 seconds after flushing all smell is gone even when window is closed and no bath exhaust fan exists) for a long period (before it was only a few days at a time), not needing air freshener and it was because I swapped *vegan* protein powder added to my smoothies with soaked lentils which have prebiotic fiber. Probiotics are good bacteria like those in sauerkraut (fermented cabbage), ☺☺☺ natto, tempeh or miso (fermented soy), capers, cucumbers, peppers, olives, many fermented veggies, vinegar, apple cider vinegar, and prebiotics are substances, like lentil fiber, that are food for probiotics; when we eat prebiotics, we help good bacteria to overrun the bad bacteria and improve our health. However, that odorless state didn't last long, since in 2019 the savage military attacks using infrasound, microwaves, etc caused digestive issues, destroying the body as with Syria. Probiotics improve brain function ► PNFS 2016;21(4):297-309. The Japanese, the longest living nation, eat fermented soy more than probably any other nation. This made me very curious about what causes stool odor and what the health implications are, so the next few pages are the result of this curiosity. More on why I think they became odorless is explained in the smoothie and the lentil sections. Due to the low tech that pervades all food industries, and the complete ignoring of the importance of nutrition in making it to 300, there is very little research into making foods that don't cause gas and/or gas smell and eating foods to optimize bacterial outcomes that promote health and longevity. As a result, we're stuck with much of the same "natural" food we have eaten for eons, the equivalent of us using camels for transport instead of airplanes, or crafts that fly at 240 mph (max bird speed), instead of Voyager 1 38,610 mph since 1979. 38610/240=161. As tech advances, we will produce food that causes 161 times less gas, bloating, bad bacteria, that helps us live 161 times longer. In our era, most people, according to WebMD at least, pass gas 10-25 times a day, even if odorless and inaudible and the person not being even fully aware of it. What happens in our gut has a strong influence on our health. ☺☺

Below are presented the main sources of gas, with extra explanations about odorless gas (caused by bacteria that produce carbon dioxide CO_2, hydrogen, H_2 and methane, CH_4) and rotten eggs gas H_2S (caused by SRB (Sulfate (SO_4^{2-}) Reducing Bacteria) bacteria that breathe in sulfates and breathe out H_2S, as we breathe in O_2 and breathe out CO_2). Methane leaks smell because we add methyl mercaptan or methanethiol or CH_3-SH to methane to make its detection easy. H_2S is H-SH, so CH_3-SH smells quite similar. Pure methane is odorless. The SRB can usually also reduce other sulfur compounds: sulfite (SO_3^{2-}), dithionite ($S_2O_4^{2-}$), thiosulfate ($S_2O_3^{2-}$), trithionate ($S_3O_6^{2-}$), tetrathionate ($S_4O_6^{2-}$), elemental sulfur (S_8), and polysulfides (S_n^{2-}). The main

sources of gas in human beings are not SRB H_2S bacteria usually, but odorless gas bacteria. However, when this odorless gas is generated, as it travels thru the intestines, it meets the H_2S (that otherwise would have been oxidized back to thiosulfate or non-gas forms of sulfur) before it has time to convert to other sulfur forms and carries H_2S outside of the colon. Each vitamin has an optimal level, if we go above it, we shorten our life; the same is true for minerals & sulfur.

11.12.2. SOAKING Flours, Legumes (90-800g/day, important to soak), Grains, Nuts/seeds (20g/day, far less *important*) in warm water for 8 h (see how) PREVENTS DEATH, because:

1. soaking *removes* phytic acid (phytic diminishes absorption of calcium Ca, magnesium Mg with catastrophic consequences (blindness, toe curls, muscle cramps, temple/head/facial pain, tingling, numbness, spasms all over the body, arrhythmia, nerve damage, stroke, infarct, hypertension, fatigue, Mg helps cells make energy, no Mg = cell death), potassium K, and other minerals, hypertension/stroke/infarct/death (low K), weak cold/flu recovery/wound healing, diabetes, infertility (low zinc), low SOD (superoxide dismutase) due to low Mn,☺☺ low Cu (early death), low B_{12} status due to the need for Ca to absorb B_{12}, which damages nerves, brain, vessels. Poor men, listening to the priest frauds, thought a "demon took over the toes of someone when it curled", but idiots didn't know it was low magnesium, as the Vatican arrested/killed scientists and told us to say "give us our daily bread", which contains phytates to give endless "demonic possession" and diseases that led to amputations and endless suffering for many, including blindness from low Mg induced glaucoma, etc. This is the gift of Jesus and the "Lord's prayer" that ought to be "Our Source" prayer: sickness/die decades early via unsoaked grains products.

2. soaking *removes* trypsin inhibitors (trypsin is a protease enzyme that splits proteins into amino acids so that the body can make collagen or other needed proteins), so the protein digestibility improves, lifespan increases, as we need eat less protein for similar outcomes. Not soaking can mean poor skin quality, muscles, blood vessels (so heart failure, death via strokes, heart attacks, etc) due to low collagen/elastin synthesis. Boiling for 10 minutes destroys 99.5% of trypsin inhibitors and lectins, as the bean section explains, but that 0.5%? Perhaps that's why FDA recommends industry presoaks legumes 5+ hours and discards soaking water. When protein is not properly broken down, because of trypsin inhibitors, bacterial fermentation sets in and H_2S is produced as amino acids with sulfur have already been converted in sulfate or other sulfur compounds. Unfortunately, most burgers, flours, etc used in making virtually all processed foods have all these antinutrients, which are not removed as few know the benefits of soaking nuts, grains, legumes, seeds or boiling them 10 minutes first and then to make flours, "natural organic protein bars", "organic protein powders from rice powder", canned products, pasta, pizza, bagels, donuts, breads, cookies, granola bars.☺ Soaking/boiling remove some antioxidants, but lentils got plenty antioxidants, so eat more lentils anyway, to get fiber. *Soaking basically makes*

sure even fewer trypsin inhibitors, lectins remain vs cooking alone.

3. soaking *removes* lectins (can cause leaky gut by irritating it, allowing all toxins and bacteria to enter the bloodstream and infect all organs, causing 5000 diseases). PP 1995;109:347-52, IJMS 2017;18(6):1242 and PC 1991;3(1):1-9 explain lectins are used (among several things perhaps) as poisons plants produce *to keep animals, viruses, fungi, bacteria, insects away.* Lectins, like BCM-7 in dairy, cause leaky gut, which allows toxins, microbes to enter the blood, reach the brain and skin and cause acne, strokes, infarct, dementia. PC 1991;3(1):1-9 says on page 1 that "during germination and seedling growth, both storage proteins and lectins are broken down to provide amino acids for the growing seedling... when dry seeds imbibe water, vacuolar proteins and especially lectins are released into the imbibition water. This results in the presence of lectins in the vicinity of the germinating seed, where they can interact with potential pathogens", meaning toxic lectins diminish during sprouting or growing. Soaking removes some lectins (sprouting even more) and most oligosaccharides, but we need to cook legumes and grains, flours at > 100°C (212°F) for 15 min to destroy 100% of *α*-amylase inhibitors *(a lectin)* and other lectins as explained in the bean section, as well as all trypsin inhibitors, saponins, etc. Lectins can prevent cancer, but they can also irritate gut, cause leaky gut, leaky blood-brain barrier via the leaky gut and dementia and neurological diseases via the leaky blood brain barrier (made far worse if you eat gluten praised by Jesus and Christianity in the main "give us our daily bread" prayer, since gluten causes diabetes, mental illness, leaky gut, blood toxin overload, dementia via the destruction of blood brain barrier via leaky gut), leading to inflammation, a cascade of cytokines, etc release that alter the microbiome leading to more gas (CH_4, H_2, CO_2, H_2S), all depending on genome, or early life eating experiences (*we ate unsoaked beans at age 12-18 when we ate meat, eggs, fish, allergens that caused inflammation, this caused a cascade, the organ learned to release a gas producing microbiome changing chemical response in any presence of that (otherwise in identical genomes inactive) vegan lectin or trypsin inhibitor (it wrongly associated it with vegan food, even if it was the animal food that caused the trouble), etc, that cause Pavlov like learning in suborgans and subsystems of immune system to react negatively to chemicals*). Lectins can kill us in 1 minute (ricin) or save us from cancer, most lectins are in between, just like sugars can produce gas by fermentation or be digestible and produce no gas. We can't say all lectins in unsoaked legumes are good or bad, they're mixed and some will react more to them, just like with unhealthy or neutral fats, proteins, etc. Walnuts are healthy for most genomes, but some people can die of anaphylactic shock; lectins in legumes are similar to the lectins in walnuts that can become deadly in certain conditions. If the grains, legumes, nuts, seeds we eat are exposed to water, as when they give rise to a new plant after rain in the ground, the seeds release/break down the toxic lectins and oligosaccharides. When we soak, we mimic this natural process and remove the stuff that can inflame our gut/cause

bloating/gas. Lectins in legumes, grains, bakeries, tend to thicken the blood, to agglutinate the red blood cells, which causes poor peripheral circulation (capillaries are 10 nm at times and a red blood cell can be 5-7 nm, so if they join, they block the blood flow entirely to millions of body areas, in what we term "aging" – the death by starvation of various body areas) and also blood clots, strokes, infarcts, dementia via atherosclerosis born of thrombotic events that start with a clot that attracts immune cells, becomes plaque. Thus, the epidemic of strokes, Alzheimer,☺☺☺ infarct, vascular dementia is diminished by the merger of all food companies to require aristocratic leeches to soak legumes, grains before sale of cans, bread, cereals, baked goods, restaurant foods. *These lectins are especially* potent in beans (red kidney the worst), lentils having far fewer of these "sticky blood" lectins. This is critical for the 60% of humanity (non-O blood folks), who're more prone to clots. Avoid beans, stick to lentils to prevent lethal clot *events*, especially if tests for Prothrombin Time (PT/INR) (how long to clot), D-dimer, Partial Thromboplastin Time (PTT) show thick blood. Non-O blood types have higher levels of the VWF and FVIII proteins that promote blood clotting.

4. soaking *removes* purines which cause gout (*pain in joints,* due *to* uric acid crystals *cutting* into joint *tissue*) (purines are even higher in red meat, seafood, organ meats). Uric acid, the product of purine degradation, (high when eating high fructose too) causes blood thickening, which causes high blood pressure, strokes and infarcts. Uric acid causes blood vessel constriction, raising blood pressure by activating the Renin-Angiotensin System (RAS) that raises angiotensin II vasoconstrictor levels. Uric also blocks the production of nitric oxide vasodilator: this means muscle capillaries can't dilate and receive glucose after meals as glycogen, so blood glucose is high, even if insulin is high after meals, which causes insulin resistance, diabetes: no matter how high insulin gets, glucose is still high. With nowhere to go, glucose is stored as fat, due to ***purines or high fructose fruits or foods with corn syrup***. High insulin means the body uses insulinase or Insulin Degrading Enzyme IDE for keeping insulin lower, and then β-Amyloid Protein in the liver and blood can't be removed by IDE (IDE removes insulin and amyloid), and it ends up in the brain causing dementia. This is how fructose causes dementia via uric acid, so lower fructose intake. Uric acts as a bridge between red blood cells RBC, causing RBC clumping which is the start of clots and plaque formation, slow blood movement, hypoxia, nutrient malnourishment of organs. Uric causes proliferation of vascular smooth muscle cells, causing thicker/stiffer blood vessels (arteriosclerosis), blocking the regulation of blood pressure by kidneys in response to sodium intake. Removing purines decreases inflammation, aging, arthritic like gout attacks, so soak, change the water 3 times. Uric acid "is capable of inducing inflammation, oxidation and endothelial damage… (PLAQUE) serum uric acid and insulin are involved in a vicious cycle that causes the presence of one to induce an *increase* in the other, as shown by experiments demonstrating that physiological hyperinsulinemia acutely reduces urinary uric acid excretion in

healthy volunteers and in essential hypertension" ► IJMS 2020;21(12):4479. So the purines may cause diabetes, stroke, amputation, infarct. Uric acid causes oxidative stress in mitochodria, fueling an epidemic of obesity/diabetes. To dissolve knee or other joints arthritic pain caused by sharp uric acid crystals, you need to eat 5g/day glycine or 2g MgGlycinate. ☺☺☺

5. soaking *removes* oxalates which cause kidney stones. Food industry kills all, they don't soak, *causing* billions of *preventable* misdiagnoses/procedures and trillions of wasted dollars. Oxalates bind minerals and damage our gut lining, they cause oxalate anthropathy, meaning the deposit of oxalate crystals in joints that cause the oxalate form of arthritis. Knee or joint pain? Avoid eating unsoaked legumes, grains, bakeries, cookies as they're high in oxalate. Eat kale instead and don't overeat carrots either, as some carrot cultivars are high in oxalate, 2-24x the level in kale/100g. Spinach has 48x the oxalate in kale *and less nutrition than kale.* Spinach = poison for vegans, because vegans already get enough oxalate from grains/legumes. Eat legumes, grains with vitamin C from *pills or* veggies*, since C prevents* kidney stones from oxalate.

6. soaking *removes* indigestible oligosaccharides that cause gas. One common hypothesis is that "odorless" (90-300 times less smell than the one requiring air freshener, everything has some volatiles even if the human nose doesn't detect it) stools, rare and odorless gas are markers of good digestive health, *low* TOR activation for longevity.☺☺☺

Don't despair, for with vegan legumes you can remove the deadly stuff, but meat antibiotics that ruin immunity, unhealthy ω6:3 ratio from corn-soy fed animals, meat growth hormones that cause cancer, brain damaging catecholamines, PAHs, oxidized cholesterol causing plaque, TMAO, heterocyclic amines, trans fats, can't be removed, they're there to poison you daily.

11.12.3. HOW TO SOAK LENTILS (*the safe way,* not *in* cold water) 2-7 hrs & Cook them 30 min

You absolutely need to soak it 8 hours and change the water 3 times (2 times if you use as much water as 3 soaks), at 150°F temp as explained below, otherwise, you will live only to 80-90 instead of 110, due to low Mg, Zn, Mn, Cu (they bind to phytates, etc above), the cofactors for the most important cellular processes (Fe too for menstruating women), low protein digestion (protease inhibitors in unsoaked lentils). Unsoaked lentils are much harder to digest and provide 30 times more gas. The 150°F heat/8 hrs uncoils the protein, fiber, releasing leucine to activate TOR (protein synthesis pathway) so we regenerate muscle, preventing heart failure, falls, loss of function. Those low in D3, creatine, fast leucine @ 3 meals/day cannot build muscle after age 70, some losing 1lb muscle/yr: 3g leucine/meal, 450g cooked lentils, *"3 g leucine threshold proposed for the maximal stimulation of MPS (muscle protein synthesis) in older adults"* ► FN 2021;8:685165. The older we get, the more protein/meal it takes (450 g lentils @ 70 vs 225 @ 30) to maintain muscle mass & top cardiac function. If young, 20 g of protein/meal leads to maximum

MPS ► AJCN 2009;89:161-8. 20 g protein is 225 g heat soaked lentils, 1.5 g leucine. At 70, many will need 450 g lentils/meal to achieve the same muscle mass, physical function abilities as @ 20-30 yrs old. Even at 30, we need 20 g protein/meal to avoid hunger driven weight gain, besides maintaining cardiac muscle to avoid infarct. Even distribution of protein across 3 meals is the healthiest: it prevents glucose spike, keeps A1C low, halving brain shrink. Unsoaked lentils take 4 hrs to release leucine. Soaked lentils take 2.5 hrs and almost all protein is digested, versus only 85% for unsoaked. Weak muscles can mean infarct, needing wheelchair, falling easily, accidents. Exercise before (not after) meals, to properly regenerate muscles with the ingested protein, instead of burning protein for fuel. Why do some live to 85 not 105, after peacefully dying in sleep? Weak heart muscle, it stops beating. Eat meals AFTER exercising for chores, shopping or removing carpets, ideally within 1 hr, not 2. Add bromelain or other vegan proteases to release amino acids faster if older than 50. For the avg age 35 participant of 23 studies, timing of protein was far less critical than total daily protein intake: "consuming adequate protein in combination with resistance exercise is the key factor for maximizing muscle protein accretion (not timing of meals around exercise)" ► JISSN 2013;10:53. However, that changes after 35: eating right after (within 0.5 hr) exercise is better. Resistance exercise sensitizes muscle tissue to protein to the max only in the firt 1-2 hr after exercise. After 35, "anabolic resistance" makes it harder to trigger muscle growth, especially as "collagen and elastin synthesis decrease by 1%... (yearly, causing) skin wrinkles" ► CAS 2020;13(1):22-30. For 1-2 hrs after exercise, blood flow to the muscles remains elevated, making it easier to deliver meal amino acids to the target muscles than eating 3-4 hours later when circulation has returned to baseline. Plan your day to exercise (chores) right before the 3 daily meals, so heart beats until you're 150.

The next 8 pages are a must read for anyone who cooks at home. If you improperly soaked lentils and got gas, your microbiome can be reset in hours (no gas) by adding vinegar to your smoothie to kill off the overgrowth of gas forming bacteria or via an enema. Avoid plastic containers, plates, as microplastics are very toxic, buy stainless steel containers (glass jars or glass containers work too, less noise) and put the lid on them only after 3 hours in the freezer, because this way, they cool 5 times faster than you placing them directly with lid on (the lid keeps the heat inside and B. Cereus bacteria present in all grains/legumes multiply much more, producing more toxins, as these bacteria double each 20 minutes at warmer temp in a sealed container). The lentils can be prety warm in an air tight container for hours, but that can't happen if lid is off first 3 hours. Steel conducts heat so well that when you place it in freezer, it cools way faster, so bacteria grow a lot less than in plastic boxes. Soaking is essential, for reasons covered above. When soaking lentils or keeping warm any grains, legumes the top of the water needs be 150°F, to give yourself a thermometer 5°F margin of error, because bacillus cereus in all grains, legumes (especially red lentils, red kiney beans), potatoes, spices can cause

asthma, lethal pneumonia, and cereus grows in temps below 145°F. You can ignore this first paragraph that talks about the infinite laziness of modern people and the catastrophic consequences for their health. A few minutes of chores and you get a decent meal, much better than the legumes you buy at restaurants that are not soaked. In 160+ nations, lazy people pay for delivered food and the poor delivery drivers waste so much time to deliver the bad food, being paid so little. The foreign spy immigrant are promised the world, but when they land, their recruiter reveals different things and the real issue is spies (CIA, KGB, etc) can train them to insert poison in the food delivered or to use lasers to attack people. This is pure fraud due to lazy people who don't want to cook at home, spend 4 minutes with a smoothie maker or 5 minutes with a pressure cooker. The laziness of people has reached incredible levels in 170 nations. Why can't people cook at home with pressure cookers, while doing other tasks? It's all automated today, the electric pressure cooker is the cook, no chefs are needed. Buy 50 lb of lentils and cook a few lb at once after soaking, then keep it in warm mode for 20 hours until it's eaten or store in the fridge. Same for other things. You would eat healthier food and stop exploiting people who drive like crazy to deliver food for you: unethical governments create these visa categories and then those guys move to other countries to get a better pay. A national cooking program awareness needs to be established on TV so we bankrupt 99% of restaurants and give people decent single family homes. The workers they "need" are not needed. See the "acting busy" section. Why is it important to be self-sufficient and produce food (cook food with pressure cooker) from your electricity (solar panels) and off grid battery storage, to know how to cook stuff? Because in times of disaster or war, you can't have food delivered, because we immortalists are against anyone dying to deliver food, so all need to learn how to be self-sufficient, resilient and ready to survive an all out invasion by the anti-Immortality *for* All forces that may be tempted to attack the folks *who don't kill, unless* invaded by killing armies and they failed to: 1. develop nonkilling noninjuring high tech *methods* or 2. prevent war/killings by 1 million *low* tech *methods* such as World Peace in 3 months music. Well, they really tried 1 million *ways*, before resorting to the traditional 0 IQ weapons that kill. Today, nobody tries anything, it's all hooliganism and TALK of peace, not even the simplest *methods* to prevent war are implemented, like decent literature, music, movies, anthem, lyrics. The hypocrisy, lies and banditry are simply unbelievable. When people spend less on smoking, alcohol and pets, they can use 0.01% of the money saved to create the nicest pressure cooker that has a water container and can do all soaking and water change on its own, without input from the person. Until then however, we have to do it the slower way: ☺☺☺

SOAKING LENTILS: The first step of soaking is to bring the lentils/water at 150°F using any program that allows you to do that fast, which is most programs on most pressure cookers (Rice, Beans, Beef, Grain, etc and can be done without the lid on on many cookers), or Rice for Instant

Pot Duo Plus *(verified with watt meter that this is* the only button that heats up continuously at 990 watts*, the others do it 20 times slower, by stopping all the time).* Kindly confirm the 150°F or higher temp using a Home Depot 10$ IR thermometer. You only need to be there near the pot 8 min for 7 lb of dry lentils (2-3 min for 1-2 lb) in the first soak cycle until it reaches the scientific (that you determine in your kitchen) temperature that keeps top layer above 150°F (give a 5° error for your thermometer) thruout the 2-3 hour soak cycle, since for the remaining 1-2 cycles, lentils will already be pre-warmed after you drain the dirty water, so warming using Rice, etc (you need to lock the lid for a few minutes for that to work on many pressure cookers and Instant Pots) takes only 2-5 minutes on the 2nd and 3rd soaking cycles and is done automatically without you having to press cook and then switch back to warm mode, once in warm mode, it detects the cooler water and warms it up very fast to 150. On other pressure cookers, most programs, such as Beans, Rice, Beef, etc will warm your stuff to 150 or 165° or whatever you need to be able to hold that top layer above 145° for 2 hours until you change the soaking water. GoWiseUSA has 14 quarts, MegaChef non-stick inner pot made of polytetrafluoroethylene (PTFE, a plastic resistant to heat and stomach acid) is bad, as these Teflon particles are like tiny microplastics accumulating in cells, brains, etc and causing cell death, lowering IQ by 2-20 points. Buy the ☺☺ Amazon new MegaChef Stainless Steel pot version 12 qt (the only 12 qt cooker for vegans eating lentils daily as the main protein): 240°F like all other cookers, 15 PSI pressure, higher than most cookers, except Instant Pot Max. The immortalists will demand all pressure cookers worldwide to have a Soak button that brings up the temp to 150°F and then keeps it there, so we don't have to wait for temp to reach 150 (by using a cook mode for 3 min) and then place it in warm mode manually, as we're busy with life. To protect families, they'll demand the creation of 24-30 quarts cookers (weekly meal prep for legumes for all family) to replace the evil microwaves that kill everyone, since a steaming in the cooker harms none and protects proteins. Stoves, ovens, microwaves, grills create AGEs, while cookers don't if food is under water/steam. Let each kitchen come with a small and big cooker.

The new stainless steel pot MegaChef is way better than expected, you simply press Keep Warm and it keeps it warm much better than Instant pot for soaking, and also you press the main cook button, it goes to the P026 as the first choice, 26 min program for 'beef' and then you press start, but really all programs are same temp and pressure by default as with 14 QT GoWiseUSA, so the P026 is fine to avoid pressing too many times. Mega has more safety features than GoWiseUSA *(I no longer use it, company doesn't sell cookers anymore, the pot corroded and aluminum and coating came off, with 1-2 mm holes in it, odd)* or Instant Pot, lid has button to prevent sliding and the rubber ring on the lid is fixed in place 10x better, so unlike most cookers, Instant Pot, etc, the rubber ring doesn't slide (which creates hissing, leaks or failure to pressurize); stainless steel means lentils slide faster than nonstick pots of other brands, it's

slippery, easier to see dirt and clean it well. Dementia/Alzheimer brains have higher microplastic content. Price 2 save seller is sharing same address with Megachef.com 23608 Spirit Ct, Santa Clarita. Stainless steel 304, or SUS304 as the label says for MegaChef, is the same one with 18% chromium 8% nickel which can cause nickel allergies, dermatitis in some people. Never soak overnight, do it when at home during the day, to prevent fires and extinguish them instantly with a fire extinguisher next to it. Santa Clarita is a redneck town so is this company, as their site shows, 1000 times fewer sales then Instant Pot. This enables you to do 4-5 lb dry lentils at once to save time and cool the lentils with filtered water, to bring them to 65°F before placing them into the freezer, as 150°F is too hot and it takes 5 hours to cool to 65, leading to too many bacillus cereus deadly bacteria growing. If you soak overnight, with most pressure cookers temperature drops on the top layer if kitchen is not 80-90°F, so make sure you use some blanket or something to warm the pressure cooker lid and sides (not the bottom) to make sure it doesn't cool below 145°F via lid heat loss. For electric pressure cookers without adjustable warm mode and high enough Keep Warm temp, you can't soak overnight or keep it in warm mode after cooking, because they don't hold that temp well in colder climates or kitchens, though in kitchens with 90°F thruout the year, they could work. Once you reach at least 150°F for all areas of the top layer, simply press Cancel and then go into Sous Vide or Keep Warm Mode for your 2 hour soak, with Instant Pot setting at 170°F or 180°F depending on what keeps the top layer at 150°F. Oddly, the Instant Pot setting is useless as it doesn't keep it very warm in Sous Vide or Keep Warm, so you need to start really high, at 165°F actual water temp and place setting at 170°F at least before letting lentils soak for 2 hours. ☺☺☺

Because pressure cookers set the warm mode or other 0 pressure programs (Sous Vide, Steam with 99 hours max on some instant pots) at a certain plate temperature, the top of the lentil water solution can vary in temp depending on your room temp and height of lentils in the pot. Thus, you need to buy a pressure cooker with a knob if an Instant Pot, as the knob allows you to set the time to 99 hours and the temperature to any value you want 165-200°F, if that plate temp is the one that makes the top layer of your 2 lb lentil bag soaked in water to reach 150°F. When kitchen is 65°F, for me 170°F Sous Vide works fine for 2 hour soak cycles, but due to the fact Instant Pot doesn't have big cookers and their programs don't hold this temp well, due to poor quality control, I just used the bigger GoWiseUSA 14 QT for an extra year (until I bought MegaChef 12 qt stainless steel pot version which allows you to keep it warm as long as you want to soak overnight or etc, though it's best to change water every 2-8 hours, Instant Pot shuts off Keep Warm after 10 hours, really silly) and returned the Instant Pot in 2024. If kitchen is 55°F in Alaska, then, you may need start at 170, set it to 180 and run soak cycle 2 hours max, not 3. The knob versions of Instant Pot cost $20 extra, but these versions recall what temp and cooking time you set it at, so once you click Sous Vide and then click start it goes to the last settings you

used, such as the Custom (first setting to avoid using the knob each time) 99 hrs and 170°F for Instant Pot Duo Plus. You can use the Keep Warm preset temp of 180 for keeping warm after cooking and the Sous Vide 99 hours 170 for the soaking 2 hours during the day routine. To set your Custom Sous Vide values, press down the knob to select the Custom (first one that flashes) and move to time, then counterclockwise goes to 99 hours for overnight soak. However, I highly suggest avoiding overnight soak, since Instant Pot is very unreliable with their temps and lentils tend to cool while plate may seem to be at 165 to their sensor. Overnight soak or Keep Warm tends to oxidize the antioxidants more in solution, plus temp may grow and permit bad bacteria to grow wildly. So, keep soaking and keeping warm after cooking to a maximum of 2-2.5 hours for best results. Sous Vide is like a warm mode that goes beyond the 10 hours of warm mode. Duo Plus and others got all plastic lid that doesn't get hot and is safe to touch, unlike most Instant Pots. Keep Warm mode on all Instant Pots with Knobs also allows you to set temp to 170 or anything you want, and can be used for soaking max 10 hours, it defaults at 10 hours. *Instant Pot engineers need to modify all pots, so we don't need to press Start anymore, so it starts a program immediately after pressing a button, since usually people use the memorized settings of the last program for that button: simply allow the settings changes to only be made within 1 minute of a program selection if one wants to make changes. Why press twice? More calories wasted, more time wasted, more circuits and parts for an extra button.*

After buying an electric pressure cooker, gently buy an IR thermometer to measure every hour the temp of the top layer of your foods as they soak in Keep Warm or Sous Vide mode, since many pressure cookers fail (after 2 hours) to maintain the temperature at the advertised level for the top layer of whatever is in your pot. Get to know the reliability of your unit, since in USA, like the entire world, ☺abysmal IQ☺ rules due to 33 million companies in USA alone, so we can't make one reliable pressure cooker to keep the top layer at a certain temp, one good humidifier, one good food processor. Billions of people keep rice warm in rice cookers that don't reach 145°F for all layers of rice and this will cause asthma, pneumonia, sickness. Happy go lucky, listening to infernal music, they cook like science illiterate men and eat restaurant foods cooked by equally deadly or even more lethal methods. The naive billions trust these companies of fraudulent capitalism and eat food that has too many bad bacteria. It's important to get familiar with your pressure cooker or grain cooker and monitor how well the temperatures work. If the temperatures drop, during your soak cycle using the warm or sous vide mode due to room temp fluctuations (colder at night for example), you need to set the custom Warm or Sous Vide temp to a higher value, so that in 2 hours when you change the water, the temp is still above 150° (for thermometer margin of error) at all levels of the legumes/grains in the inner pot. If you have whole house filter before water heater, you can use warm tap water. Otherwise, don't use tap water, because water heater water of neighbors that contaminates your water heater due to the

pressure relief design of houses can bring in germs. Don't soak at temps above 150-165°F if possible because science papers show the higher temps diminish the effectiveness of gas forming sugars release, as well as anti-nutrients. Stay within that 147-153°F. A chemical reaction happens at high soaking temps that bind the sugars to other things, making it harder for sugars to come out. Watch the heating cycle after you got fresh cold filtered water into the pot, so you don't overheat the lentils, or you will have gassy lentils the whole week. ☺

Instant Pot Duo has the top water layer of cooked stuff reach 120°F, which is dangerously low. The closer to the lid your highest food layer gets, the lower the temperature it is versus the stuff in contact with the bottom of the pot, but sadly, even with less than half the height, many models fail to maintain the temp they claim to be set at (145 to 172 for example). Instant Pot being run by Canadian low IQ folks in 2019 prioritized Wars, the typing of the WARS word on cooking appliances, with a Star Wars edition and images Instant Pot, instead of safe appliances that improve health. No wonder they went bankrupt and the had to be saved by some US company in 2023. Therefore, it is time for Eterni Food Inc to create Eternal Pot and market it globally for the spread of immortalism, a truly outstanding pot with a sensor (shoots an IR laser to 5 locations of the top layer to make sure all 5 are above 150°F if you set it to 150) of the temperature of the TOP LAYER OF FOOD also, not just the bottom, since the bottom is always way hotter anyway and the top can become colder in cold kitchens in colder climates in the winter especially. Since Instant Pot has only 8 qt max, we need to make new models with 10, 12, 14, 16, 20 qt for people who want to meal prep legumes for 1-2 weeks for the whole family. Instant Pot was started by Chinese guys in Canada and bought by some US company in 2023. Due to this, the Instant Pot boxes and manual covers are red, which is crazy, since we want to promote diversity of colors, not Chinese Red related to New Lunar Year. It's sad these scam companies practice deceptive marketing and don't even include the temperatures and pressures for their programs in their manuals sometimes (Instant Pot new manuals are a disaster in 2025, they only indicate temps for 5% of the programs and pressure levels never, except if pressure exists or not). I believe the FDA, which needs 25 times more staff, needs to regulate some of these cookers better, so they list basic temps and pressure. We need to ☺☺*lovingly tenderly gently kindly*☺☺ ban any imports of any pressure cookers in USA whose warm mode fails to reach 150°F for upper layers of food and to centralize, unify all food companies into one mega Eterni Food Inc. Relax, don't rush like with Instant Pot, get the Eternal Pot.☺☺ This shows why we can't trust Instant Pot and any electric pressure cooker company worldwide and need to fine the companies $900 billion for creating a warm mode that sickens billions of people. Warm mode has to be at least 150°F for the top layer of food not just middle or bottom (not 140 as on so many models) to have a margin of error and ensure it never goes below 145°.

Since Instant Pot has removed the Keep Warm option to warm stuff for more than 10 hours,

your *only option for soaking beans or lentils for longer or for keeping warm for 15 hours overnight, is* something like Sous Vide program available only on fancier Instant Pots with Knob. However, I strongly suggest anyone to avoid soaking more than 3-4 hours before changing the water, as none of these companies make reliable cookers. The cheapest 6 quart Instant Pot with Knob to set a custom Keep Warm or Sous Vide temp is the 99$ Grey Whisper Quiet Duo Plus and the cheapest 8 quart for 12 hour soaking at a custom temp is the $120 grey Duo Plus Whisper Quiet. Let it soak 2 hours, then change water, soak again 2-3 hours, then again 2-3 hours. Make sure however *that in the coldest period* of the night, if you do it at night, the top layer of the water under which lentils are is at least 150°F. After soaking and changing water 1-3 times, cook the lentils using the custom Pressure Cook program you save in memory for 30 min to get crunchy (not mushy) brown or green lentils (red ones are more mushy due to being split). After cooking, draining the lentils, washing them with filtered water to cool them down to 65°F or so, store lentils in the freezer right away (freezer will cool it fast and prevent bacteria, that produce toxins, from growing during the ultra slow 5 hour fridge based cooling, then you can take a box in the fridge) in air tight containers. Trash any lentils or food that was out of the fridge for more than 2 hours, to prevent food poisoning due to 40-140°F bacteria growth as USDA says, meaning don't leave cooked lentils at room temp for more than 10 min, as bacteria can double in 20 min. Bacillus Cereus in rice, pasta, potatoes, *spices,* beans, *lentils* (100x more in red than brown ones, so avoid red lentils) and other foods (which can cause fatal pneumonia, sepsis per many papers, and oddly enough, you can get it via "inhalation of spores" from a contaminated area), etc can grow at temp < 145°F, so soak lentils above 145°F. As you figured out by now, the FDA guideline of 4-140°F is not safe, it needs to be 4-145°F due to bacillus cereus. This is why rice cookers, pressure cookers go into Warm Mode by default (145-172°F by default in most Instant Pot, 151-163 in others, and even up to 203° in Custom High on some models). The top layers of the food can get much colder with this default Keep Warm 145-172 setting on most pressure cookers, except the adjustable Keep warm function Instant Pots where you can set it way higher than 145°F. Fungi, bacteria can produce toxins that don't die at 165°F reheating.

In our "who can be lower IQ" race to the top society, we have 1 billion articles about soaking that are simply dangerous, due to decentralized "chaos", some saying soaking in room temp water is fine. instantpot...manuals shows which pots had 24 or 99 hours max for keeping warm, since all new Instant Pots have 10 hours max. To prevent setting houses on fire, finish soaking and cooking while you're at home, during the day, while you're awake. Instant Pot has *about* 35 pressure cookers and here is a list of the only 4 that *allowed 24 hours max* Keep warm, based on the manuals on instantpot website in 2025, manuals which are 5-11 years old, in a testament of the need to boycott the company and create Eternal Pot brand by the US based Eterni Food Inc, due to a total disrespect for customers due to monopoly of the market, having 80% of the US

market and delivering pretty poor customer service: Aura *Pro* 2018 manual page 10 shows 24h, Evo *Plus* 2019 pg 22, set Keep Warm temp even 194°F (temp adjust is Low, High or Custom 77-194), Cuisine *Crisp* 2021 pg 23, Duo *Crisp* 2020 pg 20. *The* next 5 *allowed* 99h: Duo *Plus* 2019 pg 19 (temp *adjust to* More), Duo Sous *Vide* 2020 pg 19 (temp *adjust to* More), Duo Nova 2020 pg 19 (temp *adjust to* More), Lux 2019 pg 17, Bluetooth 2014 pg 6. Lux and Bluetooth have no temp *adjust to* More. Keep Warm is indefinite for most other brands.

Think twice before eating restaurant foods,☺☺☺ as their grains and legumes are not soaked and not always left in warm pressure cookers, but on colder self-serve trays from which people take samples, and sometimes the rice-grains-legumes sit there for hours at 110°F, leading to bacterial growth, asthma and pneumonia. Avoid Keep Warm for long periods, since with Instant Pot and other brands, the top layer tends to cool over time and show 125°F, while the water-lentil slurry that is 2-3" deeper is actually 150°F at 4" ("=inch=2.54cm) deep, 155 at 5" deep, 160 at 6", and even 170°F for the bottom of the pot. Instant Pot Duo and most models without Knobs are useless, as the lentils will drop below the safe 150°F. If you leave the thick slurry there after cooking at the bottom of the pot to Keep Warm, it acts as an insulator and the top layer will be 135°F versus the 170°F bottom of pot. Avoid Keep Warm after cooking, just wash, freeze.

Amazon sells lentils 1.08$/lb if subscribed, yet lentils are sold as 10 lb/10$ bags at some stores, so, in order to avoid using kitchen scale each time to weigh 7 lb, simply get a container (plastic that they use for shipping bee pollen, etc) and place a mark where 7 lb is. 7 lb is about quarter inch from the top of some plastic container, so you fill it up that way, to save time, and wait until all water is filtered, then pour the water, heat water to 155°F, then pour the lentils. If you only cook 2-4 lb dry lentils, add way more water when soaking *(up to 1-2 inches from the top of the inner pot of the 14 quart cooker)*, since this reduces the need to replace water 3-4 times to only 1-2 times, saving your time, since it draws stuff much faster and overall time can drop from 4 hours to 1.5 hours as a dilute solution sucks a lot more nutrients out for a longer time as you know from osmotic chemistry, stir up a little the lentils every hour or two to distribute those gas forming sugars more evenly, if you don't change water more than once. Small lentils release those sugars faster, so you may only need 2 soaks of 2 hours to achieve the same results as 3 soaks of 2.5 hours for normal size lentils. Over 7 lb of dry lentils, it overflows and can't cook well. Even 7 is too much for 14 QT pressure cookers, ideally do only 6.5 as that won't mess the lid much. For beans, you need to soak for twice as long and cook for 50% longer too, hence I eat only lentils, also lentils have other advantages. If we soak lentils at 63-65°C or 145-150°F (the warm mode temp), drained every 60-80 min 3 times, in 3-4 hours we get rid of most oligosaccharides (the stuff that causes gas in some people), lectins, mineral binding phytic and protein digestion inhibitors, while if we soak at lower temperatures, a higher % of these remain. Science papers show at 140°F or less we get less removal, besides bacteria growing wildly.

Cooking without soaking lowers the efficiency of removing these deadly compounds. Lentils taste so much better when you keep temp warm at 148°F thruout the soaking cycle and your lungs and body, digestive system will be free from these deadly bacteria toxins. Always wash lentils with filtered water a little after cooking, so you minimize bacteria growth in that "soup slurry like medium" you discard, if any soup like mushy thing forms with your lentils *(due to using split lentils, overcooking (> 40 min) or soaking at suboptimal dangerous lower temp of 75-145°F as per Internet low IQ articles)*. Washing is very important if you like Keep Warm after cooking, since gas forming compounds are in that slurry and if you leave it in warm mode, it only heats up the bottom layer of lentils, as that thick paste acts as insulator that sends the wrong info to the thermocouple. By adding filtered water to the drained lentils, your warm mode temperature will be far more even from bottom to top and keep it at 150°F. Use thermometer and find out if yours can keep the top layer of water at 150°F, it's easier to achieve that if your lentil water level is half the height of the pot. ☺☺☺

Big 9 inch strainers are amazing, they can be placed directly on the bottom of the sink (or some container with rim same size for it can rest on it, if no kitchen around, camping etc) and then you simply pour the bottom cooked lentils with the sticky thick liquid over it, then use filtered water to cool down and wash. If the strainer handle breaks, recycle it and buy a new one, as the sharp metal after it fails can damage you, but these ones last 10-20 years usually. This 9" strainer makes it easy to take lentils out of the pressure cooker pot and to drain the ones left at the bottom. Why cook 7 times, like most people do, when you can do it at once and save hours each week? The first 3 lb of dry lentils can be taken even with a smaller tool, but the fastest way to clean and filter the rest is a 2.5-3 mm diameter hole 9" strainer, since the finer huge strainers (that cover the top of the pot circumference) clog too fast and take 10 times longer to drain. It's so fast with this strainer, you literally save 5 minutes or more each time you do this. 5 min 52 weeks is already 5 hours which could have been to relax and meditate. When you soak it, you discard water after each soak and the way to do it in 20 seconds is to use a 12 inch flat strainer, like this one or others (I got one @ $ store for 2$), not the 9" concave one. You hold the strainer tight to the rim of the pot and pour the light brown water in the sink. ☺☺☺

Some water heater brands may have heavy metals (Rheem SP11309T anode rod says up to 0.25% lead, not sure if a joke or extermination attempt by Rheem), so using such warm tap water for cooking isn't smart. *Don't soak lentils in 70-144°F water, bacteria can produce toxins that remain after cooking at 240°F, even if the bacteria are killed during cooking*. Trash any soaked lentils that have a funky smell, it means you didn't rinse well after cooking or forgot to keep soaking temp at 147 or higher for the 3 hour soak. Never leave the kitchen when you warm it 5 min (cycle 2 and 3, since 1st cycle takes 10 min to warm as lentils are cold, 8 min if summer, depends on how cold the tap or filtered water is) for soak it since you could forget it on 50

minutes and if lid is off or not sealed make one huge mess or *even start a fire. Safety first.* *Press Warm Mode after the fast warming using the Beans or Rice button, since you need to warm it ultra fast after adding water to prevent bacteria/toxin growth.* Lentils inflate and will almost reach the very top of the water level as the water warms up; during soaking and cooking, water can be 1-2 *mm* above lentils (this is so we make sure super high temp reaches all lentils even those at the top to remove antinutrients well, though lentils can move a little as water boils and still be exposed to water, but some water evaporates during pressurization). When done cooking, *discard the cooking water*, as FDA suggests for every type of legume (lentils, beans, etc) as it also has *the* lectins, oxalate, fluoride, *oligosaccharides (and it's technically a 4th soaking, but can have more antinutrients than 3rd soak as it was cooking too). If they cooked perfectly (i.e. they remained whole and there is no mushy thing at the bottom) it's ultra easy to drain the water; to ensure there is water left after cooking, and that they cook perfectly remaining whole without messing up the lid big time,* add *water 8 mm (0.3 inch)* above the presoaked lentils before cooking (if 7 lb of lentils using this cooker). If you add too little water it may not effectively remove antinutrients during cooking for the lentils that are not covered by the water. *Health first, convenience second.* Less *water* means less slurry mushy mix at the bottom of the pan. Don't add too much water and also don't let it sit under pressure after it's done in warm mode or in the pan since it will create a big paste at the bottom; be at home when doing it so you can vent it fast and cool it to prevent thick goop at the bottom from forming. Water above lentils makes pressurization last longer; if you put way too little or too much water, and thus, you got a thick paste at the bottom and for easier wash of the thick cooking water, feel free to add 1 liter filtered water after cooking, stir, to make draining them easier with a strainer, free from the thick cooking water that can even become an antinutrient rich paste at the bottom half of the pot (with nothing to drain). *You will lose 1-4% of lentil content (the thick water, maybe 100 ml), but it's easier to digest (less lectins, gas forming sugars), safer if we eat them daily as our only main protein source*. Another reason to add water after cooking, (only in cases you failed to add ideal amount of water*) to remove the sticky paste, is that in the fridge, that water mixed with lentil powder will rot really much faster; the mushy thing is only for split red lentils, not the healthier whole lentils obtained by adding no more than 8 mm of water above the soaked lentils layer (if you add 20 mm, they turn to mush).*☺

11.12.4. Pressure COOKERS (prevent AGEs, oxysterol, plaque (see-pic)) & IR Thermometers:

You can ignore this first paragraph, if you want to jump to pressure cookers directly (US only sells 12L cookers max, no 36L, since everything is geared towards buying food, wasting time cooking often, being a slave of restaurant industry, in this huge nation, no electric big pressure cooker exists to cook for a family once a week), this is a long intro. Pressure cooking means you avoid these 500 toxic chemicals in cans, packaged processed foods. The planet spends trillions

with gigantic kitchens/kitchen appliances all made redundant by the modern 3-15 quart electric pressure cookers (15 appliances into one basically) and quiet food processors, with massive expensive wasteful toxic appliances such as stoves, ovens, toasters, etc that create endless carcinogens, AGEs daily. This is despite that fact laziness rose 10 fold in USA, as adolescent obesity rose 10 fold in the last 75 years, with many eating ultra carcinogenic foods and lethal unsoaked foods at the Big Mafia Restaurant Chimp Industry. The Aristocratic TV floods the enslaved 99% with fake ads about these poisonous carcinogenic foods sold by the Big Food Mafia or made at home with Weapons of Mass Destruction (Grills, Toasters, Ovens) in a July 4th barbecue gathering or fried foods festivals. Then, these people walk to raise funds for cancer research, most of donations going to the fundraising (5% to actual cure research), everyone wasting their time, as the daily foods they eat cancel any "cancer therapy their 1 trillion of stolen donations would try to give us". Microwaves cause cancer growth via RF, WiFi-needless cell fuel cancer too (instead of wired desktop headphone use to mimic landline), while dry heat cooked foods cause an epidemic of dementia (vascular, via oxidative stress of arteries), vascular disease (heart disease, strokes and 500 other diseases due to low blood flow to an organ, like vascular dementia, see pic your Dry Heat Gives☺☺☺). Essentially, the limitless laziness of modern man introduces 900,000 poisons in his food, which no "cancer fund raising" will ever cure. The charlatan University Presidents making 1-8 million a year hide this, so phony "cancer and heart disease" research continues, while the easy to eliminate 99% of cancers☺☺☺, strokes, heart attacks via WET HEAT COOKING and better eterni foods (mix of new supplements) are ignored (steam veggies in 30 seconds, retain more nutrients, they become so soft, don't boil 40 min, takes so long, cook everything under water otherwise, no oxygen contact = living to 120.). What education do we get? Nothing mandatory on nutrition at these fraud universities. If we cure all cancer, average lifespan rises by 3 year max, if we cure AGE and carcinogenic filled food habits via dry heat cooking, fried foods, barbecue, fast food, etc, ovens, etc, replacing even food heating with steaming 1 min in a pressure cooker, we cure most cancers (caused by these lethal foods of high oxidative stress, weak immunity unable to fight cancer viruses, due to sky high inflammation and free radicals), all vascular disease and add an extra 20 years if we eat less salt to lower blood pressure, and sleep better too. With eterni powders to supplement foods, we add another 50 years, and help fetuses change genes to live to 4000 eventually. Kids rooms are 100 sq ft, kitchens are often 300 sq ft, nothing is more ironic, people are way lazier, buy 50 times more food from outside (premade cancer mix), eat outside 50 times more yet kitchens are 5x bigger than they should be for such low home cooking or for 50x more cooking given now you really only need a pressure cooker and a smoothie maker. Then, people talk of government waste of money or useless wars, but We the People wage wars on Ourselves by Our Paleolithic Dry Heat Cooking, waging war on 8 billion people, by poisoning the brains of 8 billion which causes violence via brain oxidative stress. These culinary habits fuel the violent crime epidemic,

the wars, brains go crazy due to AGEs. Want World Peace?☺☺☺ Help all get functional brains that are free of AGEs and carcinogenic poisons from DRY HEAT COOKING. Sick brains don't connect different brain areas and become very explosive in violent outbursts. The ego is so big, the "rat IQ" modern man fails to comprehend he's as "ultra low in IQ" as Neolithic savages, having learned nothing after 3 centuries of chemistry, he applies none of the knowledge gained. This is the 21st century, not 50 millennia ago when we discovered barbecue. Hello??? They criticize FDA, yet it says clearly, the more you fry the foods, the more you toast them, the more acrylamide and other carcinogenics. Nobody listens, they produce more toasters. Ant IQ. They take the food, dry heat cook it via a trillion$ expense so cancer potential rises 90 fold, then waste trillions to cure cancer. All with IQ 100+ wonder if humans started devolving via RF. These toaster and barbecue makers need lifetime labor to pick up produce to cure damage done. Dry heat takes cholesterol and turns it into 10-100 times more lethal oxidized cholesterol, etc.

OK, so what is a good pressure cooker to take charge of your health and lower brain, vascular, organ oxidative stress 2-50 fold today? MegaChef stainless steel pot cooker is the best big one, the $CaCO_3$, $MgCO_3$ in tap/filtered water that deposits on the stainless steel pots (on the bottom mostly, but sides too), either as white (first month of use) or green-brown film (mixed with the colorful antioxidants in legumes) can be removed easily with white vinegar (3$/gallon, use a few spoons), just let it react 2-20 minutes depending on how thick the film is *(2 min if you do it right after cooking each time, 20 min if once a month),* $CaCO_3$ (alkaline) + $2CH_3$-COOH (acidic) = $Ca(CH_3-COO)_2 + H_2O + CO_2$ (you'll see bubbles of CO_2 form: no need to "*scrub/waste time/stress hand*"). Vinegar is also used to remove rust from tools or even medical tools. If you have no vinegar, simply let tap water soak the pot for 1 day after you washed it, and then scrub, the film will be so softened by the water, it will come instantly with a metallic sponge or tough brush. Avoid aluminum or nonstick pot pressure cookers, as they leach aluminum/lead/PFAAs: see FDA list of how common lead is in regular pots, not pressure ones, see lead in many pressure cookers (see table). Avoid putting water on pressure cookers, as this can kill you via the explosion. Most lead leaking pots are South Asian/ American or Chinese, mostly made of aluminum, some of brass. The next 6 pages contain some less known info about pressure cookers, such as the failure of many brands to keep food warm above the minimum safe level of 145°F, leading to billions of people being poisoned by the aristocratic global palace and mansion terror network, due to the fact the pressure cookers don't have proper sensors for the top of the food and bacillus cereus in grains, legumes, potatoes, spices can cause lethal or life disabling asthma and pneumonia. This hidden genocide by Instant Pot (2 Chinese started it in 2009 in Canada, bought by some US company in 2023) and most other cooking appliances fraudulent companies worldwide (explained in more detail in the 6 pages above that detail how soaking with pressure cookers can be done), will cause many to become enraged and support the unification of all food appliances

company into the We the People's Eterni Food Inc, that produces decent pressure cookers, with manuals that even indicate the temperature of warm mode that is missing from Instant Pot manuals. People buy a pressure cooker every 10-20 years, so not much money can be made by these companies making them, but McDonald's and Big Pharma (75% of Pharma world profits, 4% of population to finance PALACES in Mexican Cartel Style Trillion $ Thefts) make big money by making poisonous food that then Big Pharma can take care of, people destroyed by Big Junk Food become Big Pharma customers for life. So, instead of giving people a 100$ pressure cooker that is amazing and makes cooking so easy, instead of teaching people how to fish, they want to sell you fish, to make you dependent on their poisoned fish (junk food, restaurant food full of bacillus cereus in their potatoes, grains, legumes, spices) and then on their lethal medicines to fix the fish poison, because that will force you to spend 200000$ to finance their palaces of genocidal celebrations. They spend billions to put rat poison fluoride in tap water, so other companies make billions filtering it out. How smart is that? Big money maker, while our country collapses due to all out banditry and lawlessness, insecure borders, etc. Thus, jobs don't pay much and these appliances are not getting top talent, most top talent is going to Big Foodies, like McDonald's, KFC, Popeye's, etc to poison billions of people with AGEs that cause arterial plaque, brain damage, kidney failure, diabetes, fatten everyone to 450 lb with ultra fatty foods, and get some managerial or research job doing nothing almost in terms of truly high tech research. Money corrupts everything and undermines public health, so immortalism will fix this issue, once enough people become aware of the scam. Some geeks may go to hedge funds or stock markets to waste their brain in financial or accounting fields, instead of creating a truly amazing humidifier, pressure cooker, food processor that we desperately need on this planet. Good home made food prevents trillions in Big Pharma profits, so it is not encouraged. MegaChef stainless steel pot cooker, the newest addition to safe stainless steel pot brands, is better than Instant Pot. Nonstick types are hard to clean, green lentils films are not easy to see on dark grey, microbes grow, besides the fluoride compounds they always leak into the food, the Teflon ruining brains. Use a decent sharp serrated knife, to avoid damage to your hand ligaments, when preparing food for pressure cooker. ☺☺☺

Gently eat foods within minutes of cooking/heating or place them in the freezer after cooking for 1 hour, to cool them rapidly without lid, otherwise bacteria multiply fast and increase 64 fold in only 2 hours if left at room temp by mistake in the pressure cooker, that warm mode is not good since warm temp is only for the part soaked in the water at the bottom of the pan. Avoid restaurants, that food stays in trays so long, 80-300 minutes, so that's 16 to 128 fold higher bacteria count, these bacillus cereus and others double every 20 minutes, press once on your cooker and save time/medical bills from these lethal supermarket/restaurant junk foods. They profit via murder, don't trust the aristocrat wolves, they just brainwash us that the foods they

sell are safe. FDA doesn't check even 1 trillionth of what they're supposed to check, they can't, as we waste half the labor force to redundancy due to 33 million companies instead of 11. The aristocrats make sure no regulations exist, so they can poison the masses, so FDA, EPA, etc have no staff, or 800 times less than needed. Our conman two parties only work to line their pockets with cash, they serve the aristocrats, Dems say 5000 times min pay/hour is fine for aristocrats, Republicans say 50000 is the way, but no third choice exists: 5 times max, see the scam??? Everything you hear on TV is mostly LIES. Think, nothing is as it seems. ☺☺☺ Pressure cookers remove all lectins in legumes, but you need to pre-soak legumes to get rid of gas forming sugars. The most sold pressure cooker is 80$ 6 QT Instant Pot, 100K Amazon reviews, 4.7 stars. However, for the health aware person, the best cheap one may be the 99$ Duo Plus 6QT with Knob and Whisper Quiet Vent, or the 8 QT version of Whisper, since the Knob allows you to set the temperature and time to an exact soaking temp in Yogurt mode (even 16 hours, which is not possible in warm mode, since that one is set to 10 hours max on all new Instant Pots), so you can soak legumes and grains at the correct 150°F temperature where bacillus ceres doesn't multiply, and where antinutrients and gas forming sugars are removed the fastest, so you can eat your legumes and grains without getting pneumonia. Any cooker with Yogurt function that goes to 99 hours and with Knob works, the Whisper is simply the cheapest that most will afford easier. Pressure Cookers replace 10 appliances to reduce waste and allow people to focus on lifespan tripling instead of making 10 gadgets instead of one, especially a brand new sterilizing 15 PSI Instant Pot Max that could be used also (if you never cook with it and it's brand new, at 15 PSI and 250°F for 1 hour, it can sterilize like an autoclave) as a dedicated humidifier too. Electric pressure cookers have in built safety features of heating shut off, temperature control, etc totally lacking in stove top pressure cookers. Therefore, electric pressure cookers are far safer and they also waste 100 times less heat versus an induction stove, electric stove or HYPER toxic gas stove. The hot elements and flame oxidize the air and create carcinogenic PAHs and other chemicals that destroy your lungs, brain, heart and organs as much as smoking, because when you smoke you expose yourself to that for only 2 minutes, but with cooking fumes it can linger for hours, even if less dense fumes. On top of that, the AGEs in dry heat foods are so deadly, they deliver destruction to one and all, smokers and nonsmokers, on an industrial scale. Thus, any ethical nonsuicidal person, needs to recall the safest cooking method on Earth today is electric pressure cooking, with many models on Amazon available for every taste. Slow cookers are a disaster, that can cause death, as explained in the beans section. Avoid slow cookers like the plague; they also waste electricity, increase fire risk a lot. Pressure cookers produce 0.1 to 1 million times fewer deadly air chemicals via the hot plate contact with 0.5 to 2 million times more air *(vs 100 mL in a mass produced mind blowing pressure cooker by Eterni Food Inc) in a typical 200-800 ft² kitchen-dining room) that then produces free radicals in our lungs and poison every organ and blood vessel. Therefore*, in the age of science, we choose pressure cookers in

every single family home, not electric stoves or gas stoves, no electric ovens or gas ovens, since all own their healthy house and buy-sell it in 1-4 days, free from deadly air free radicals, nobody rents (except a room for a few weeks if no hotel in town) and all eat/breathe 100 times fewer air and food AGEs forming chemicals. Ovens are not needed, since some pressure cookers reach 350°F. Bread toasters create many carcinogens and cause a drain of national resources, endless heart attacks, strokes, brain disorders thru oxidative stress. ☺☺☺

Ovens are the most *potent* weapons of mass destruction that kill millions each year, as if we have ETERNAL HIROSHIMA ATTACKS, that create thousands of chemicals destroying every organ. Immortalists will teach all that every dry heat cooking is worse than smoking a cigarette that gives lung cancer, that all these grills, barbecues lead to billions of future people dead due to dry heat cooking or dry heat eating out habits passed from one generation to another, meaning leading to genocides on a scale unimaginable today. Every grill leads to the equivalent of 100000 people dead in a genocide via ripple effects, as if you burn an entire city like Hiroshima with your dry heat. Please have compassion, gently trash your barbecue, air fryer, grills, etc, give them to metal recycling, etc. Immortalists will ban the sale of all ovens, air fryers, grills, toasters in houses or restaurants, replacing them with pressure cookers. Pressure cookers are too small, 100 times smaller, to allow cockroach colonies to form, as they do in most kitchen ovens, the paradise and house headquarters for cockroaches (due to food, rice grains, etc caught in the sink strainer that is useless and ought to be removed to prevent feeding the roaches; also seal all sugar, honey containers and keep all open food in the fridge) who spread all over the house from the kitchen and cost 7000$ to get rid of. Turn on that oven and hot plates on top of it to the max and lights off at night, for 2 hours, over and over, check every 4 min, turn off light again, repeat 30 times, all cockroaches will come out of the oven for you to kill them with Raid or a spray or shoes or a sponge (150 within 2 hour for me when I visited a friend whom I helped get rid of them), as one egg sac can birth 10-50 cockroaches. For 70$ a pressure cooker is today, by pressing a button and letting it all cook (come back to lift the lid later, no more watching pans and wasting your life in the kitchen like moms did for millennia), you spend 20x less time and cook meals way healthier (maybe even 20x less AGEs, so almost 20x healthier from that point of view) than in 1950, it's the way of machine learning leading to eterni labs replacing kitchens in every house, computer monitors with images of biomarkers, designing eterni foods, science studies. As neat 21st century gadgets, presure cookers reduce cooking time, retain more nutrients *(steam veggies in 1-2 minutes, double lutein levels as heat releases the nutrients from cell walls, pressure cooker boiling is not needed for veggies (steaming in pressure cooker yields better results), except for legumes, meats, etc),* keeping kitchen far cleaner: no more liquid splashing out while boiling and fumes that make cabinets and everything ultra sticky around the stove. While a study may say some 'grill' method is slightly better at retaining some (not really

needed) exotic nutrient for some exotic food (mushroom ergothioneine, which I eat once a year) most people don't eat even weekly, they don't mention that it also creates AGEs and other carcinogenics by oxidation and air contact; so water immersed cooking in a pressure cooker is by far the safest, you may not get 100% of all foods' nutrients to be at the maximum nutrient level released, but you get 10 times or 50 times less toxic stuff that does permanent damage; 10% less nutrient is easy to compensate with eating more of that or other stuff that has 80% more of that, but permanent damage done to arteries can't be reversed, if we did, we would all live to 500; we can only partially reverse damage and plaque. So, the only cooking method that will maximize lifespan the most in all circumstances is water in a pressure cooker. ☺☺☺

If we had a strong FDA, most restaurants would have to change everything to reduce carcinogenics and AGEs, because they commit mass killings without realizing, by inducing arterial plaque in billions of people, way more killings in lifespan years lost than probably anything except world war and its indirect lifespan shrinking thru diversion of resources to war (war toll is 800 times bigger than actual dead, in reality, since way more have their lives shortened by medical care, etc postponed due to war, stress, etc in the 800 years after the war ended, the *hidden unseen effects*). Besides, if we spend 5 hours a day cooking, where is the time to develop eterni foods and science labs if kitchen take such huge space and nothing for the eterni lab in every house, when all we need is just a pressure cooker, and 14 cup food processor for smoothies, not a million stoves, pans, etc? Sleep and tone of speech determine our longevity and species lifespan millennia from now far more than whether we're going to get our barbecues and grilled mushrooms to make tasty food that is filled with AGEs, and FDA not approved carcinogenics. Pans splash all around due to people not using a lid or lid having a steam release hole: the lid prevents over oxygenation during cooking that creates deadly compounds, as does using water to cover all the food. Pressure cookers use electricity (gas stoves emit toxic chemicals), cover everything in water to prevent oxidation (they limit oxygen many times versus conventional pans with lid) and formation of free radical generating toxins, have automatic cooking end to prevent "over cooking, burning stuff that causes cancer", saving you time and the planet from natural gas that causes explosions and ground water poisoning, 2 min video tap water catching fire (640 times increase in methane), or the 10 min longer version, or even rivers catching fire, global warming. Make sure the lid is fully closed and that if you use it for legumes, you add a lot of water, since those expand (10 lb water to 7 lb dry lentils). Instant Pot is better because it has stainless steel instead of aluminum (when it chips due to legume acids aluminum can poison you) or PFAS rich nonstick pots. Use stainless steel food storage boxes. Instant Pot has a strong safety record. Some Amazon brands got no US/foreign website.

Pressure cookers reduce the creation of toxic AGEs, 100 times deadlier than cholesterol oxysterol compounds, and plaque formation by 10-200 times, depending on food cooked, versus

more Neolithic cave men methods of grilling, frying and cooking with dry heat that cooks the body to death from within, dehydrating it and frying it, since toxins need water to transport deadly stuff out and to recycle antioxidants the body uses like Glutathione, CoQ10, etc. If you can contact customer care of your pressure cooker maker, please suggest to them, like I did, to upgrade their product line, so instead of having "9 into one" Instant pot (Pressure Cooker (240°F), Slow Cooker (196°F, never use for any foods, not safe, doesn't destroy deadly lectins, doesn't kill botulin spores in meats and low acid (legumes, etc) vegan foods which require 2 min at 240°F), Rice Cooker, Yogurt Maker, Egg Cooker, Sauté (no pressure, up to 400°F if you want to kill meat bacteria spores, need 270°F to kill worst meat/dairy spores), Steamer, Warmer, and Sterilizer), we have a "15 into one" with buttons for: Vegan Yogurt (they got heating of cow milk in cow yogurt, but vegan milk doesn't need it, as it creates AGEs), (not the one using walnuts for ω3 as in this 1 min video with cashews), Tofu, Vegan Cheese ("tofu" from nuts other than soybeans, plus other methods using fermentation), Soy/Nut Milk & Legume Soaker☺☺☺ (raise water temperature to 150°F in 3-5 minutes and then keep it at 150 until you change the water).

The safest pressure cookers are those that use stainless steel (Instant Pot, MegaChef) without non-stick coating, as that coating can leak flourinated toxins as videos and articles explain. Non-stick will make you SICK. The very best pressure cooker for sterilization seems Instant Pot Max, the only US available electric pressure cooker that can hold the pressure at 15 PSI for an hour or more, which allows via canning program, Max pressure setting to cause steam to heat to 250°F (only possible at 15 PSI) for 60 minutes, and sterilize stuff really well, like baby bottles, even stuff you use for dry eyes (forceps for eyelid expression, etc). 15 PSI cookes stuff 20-40% faster than most electric pressure cookers that use 6-10 psi max, so you can use that as default program in the memory and do it quick. Stainless steel pots are almost as easy to clean as non-stick ones, PowerCooker brand is very hard to clean due to rugged bottom. *Keep Warm function is a bad idea*, since oxygen amount is huge, pressure is normal now and water level has gone to 0 almost after a while; so when we Keep Warm, we create carcinogenic AGEs *that stick to the cooking pot and we live shorter; we have to also wash harder, removing more of the coating with dubious compounds and causing it to leak into food.* Freeze lentils immediately after cooking, don't leave them in keep warm. Keep warm dramatically increases the risk of overheating of elements and fires, since sometimes manufacturing defects prevent the full contact of pan with the hot area to release the heat. A rice cooker is vented to the outside all the time and oxidizes chemicals in anything you cook with it. Those browned toast breads and rice cooker rice contain toxic AGEs, toxic PAHs. Warm Mode evaporates the remaining cooking water quite fast and it's that water we want discarded due to containing antinutrients, fluoride. Fish and meat eaters (who use ovens to cook fish and meat) may like 90$ Ovate GoWiseUSA GW22708 types (ebay may have it, 8.5 quart, ideal for omnivore foods, using manual 320-355°F program). Oval cookers are

designed for cooking a whole chicken, so oval shape, so it can kill all spores/parasite eggs in meat/fish. Ovate Manual mode allows you to set *temperature between 140 and 355°F,* though default is 320°F (see page 10), allows undreamed of disinfection of meat/fish that is impossible to do with other GoWiseUSA or with Instant Pot due to low IQ of Instant Pot design team. Instant Pot/most cookers use only 240°F on their omnivore foods programs. There is a catch, the higher the temp of cooking, the more deadly denatured proteins, AGEs can form even in the absence of much oxygen (a little air within the pressure cooker) and dry heat, so only go beyond the 240°F of 99.9% of pressure cooker programs if you need to, no need to if vegan, only meat needs that. Some PubMed papers needed 1 hr at 240°F to achieve the same sterilization as an autoclave (121°C, 250°F, 20 min/L, 15 psi) in a microbiology lab (instant Pot 15 psi, 239°F, alone killed all spores, since it reached 15 psi, or 250°F for steam: see MG expression on sterilization details; saute is bad it oxidizes things big time, avoid it. Many brands got an aluminum protective plate on the lid, that Instant Pot doesn't have, to prevent food sticky stuff from getting into the air release valve. GoWiseUSA stopped selling pressure cookers in 2024. It only takes 50 ml of water to steam 5 lb of veggies you place inside, and about the same (or 25 for faster cooking) to make hard 'boiled' eggs using steam if you're not yet *vegan*. I use a yellow $10 Ryobi IR thermometer (or go to Amazon, type "IR thermometer" in the search box and pick the Amazon choice or type "purple IR thermometer" if you want a specific color) to make sure soaking water doesn't go above 150°F usually. If you go once above it even to 165°F it's fine, since you can add some extra cold filtered water to bring it back to 150, but try not to, as then you hinder the removal of the gas forming oligosaccharides below: ☺☺☺

11.12.5. FOOD CHEMICALS THAT CAUSE GAS (Oligosaccharides being # 1)

Below are presented the main sources of gas, with extra explanations about odorless gas (caused by bacteria that produce carbon dioxide CO_2, hydrogen, H_2 and methane, CH_4) and rotten eggs gas H_2S (caused by SRB (Sulfate (SO_4^{2-}) Reducing Bacteria) bacteria that breathe in sulfates and breathe out H_2S, as we breathe in O_2 and breathe out CO_2). Methane leaks smell because we add methyl mercaptan or methanethiol or CH_3-SH to methane to smell methane leaks. H_2S is H-SH, so CH_3-SH smells similar. Pure methane is odorless. The SRB can usually also reduce other sulfur compounds: sulfite (SO_3^{2-}), dithionite ($S_2O_4^{2-}$), thiosulfate ($S_2O_3^{2-}$), trithionate ($S_3O_6^{2-}$), tetrathionate ($S_4O_6^{2-}$), elemental sulfur (S_8), and polysulfides (S_n^{2-}). The main sources of gas in human beings are not SRB H_2S bacteria usually, but odorless gas bacteria. However, when this odorless gas is generated, as it travels thru the intestines, it meets the H_2S (that otherwise would have been oxidized back to thiosulfate or non-gas forms of sulfur) before it has time to convert to other sulfur forms and carries H_2S outside of the colon. Each vitamin has an optimal level, if we go above it, we shorten our lifespan; the same is true for minerals & sulfur.

The main 9 classes of chemicals in foods that feed the gas☺☺☺ producing bacteria are:

11.12.5.1. Oligosaccharides (di: rutinose, neohesperidose, tri: raffinose & solatriose, tetra: stachyose, penta: verbascose) & simple sugars: rhamnose, etc

These names are easy to recall, as they end in nose (smell) or ose. The first one is rutinose, which is rhamnose bound to glucose. Humans lack the enzyme to break the rhamnose-glucose bond, and other similar disaccharides in foods, so they ferment in the colon causing gas. These disaccharides are bound to flavonoids, for example rutinose to hesperetin forms hesperidin (highest in the white pith) in citrus that causes gas, neohesperidose to hesperetin (& other flavonoids: to naringenin (not bitter) forms naringin (bitter) in grapefruit) forms neohesperidin, rutinose to quercetin forms rutin found in many foods (citrus, buckwheat, caper, apple, onion). 100s of foods have these mono, di, trisaccharides that we can't digest, causing gas, such as L-rhamnose that ferments into propionic acid: rhamnose bound to quercetin forms quercitrin in buckwheat (lots of gas), and to a lesser degree in leafy greens (kale), tea. The oligosaccharides are half of bioflavonoids, like anthocyanins that contain anthocyanidins plus oligosaccharides. Solatriose (galactose-glucose-rhamnose) trisaccharide is found in green, sprouted potatoes and when bound to solanidine, forms the poison solanine, the alkaloid in potatoes that gives gas. Potato chacotriose (glucose-rhamnose-rhamnose) bound to solanidine is chaconine poison, while bound to solasodine it's solamargine poison. Eterni foods will have all enzymes needed to avoid any gas or remove gas forming molecules (pectin, etc), while adding the good short chain fatty acids produced by bacteria. The 3 gassiest bean oligosaccharides are raffinose (α-D-galactose bound to glucose and fructose in a trisaccharide), stachyose (α-D-galactose bound to raffinose in a tetrasaccharide), verbascose (α-D-galactose bound to stachyose in a pentasaccharide), which contain 1 to 3 α-galactose(s) bound to sucrose (what we call sugar). Raffi is like rough smell, so raffinose. These 3 are most present in beans (least in lentils), but also present to a lesser extent in nuts, seeds, grains, sweet potato, many other foods (mushrooms, etc), cruciferous vegetables, asparagus, absent from eterni foods. Oligo means a few in Greek, so oligosaccharides have 2-10 simple sugars, oligomers 2-10 monomers, polymers 100s of monomers. Soy or pea protein isolate, protein powders are not soaked, so they often cause gas. When we soak beans and lentils we remove them. If we don't soak them, they *undergo* bacterial fermentation *in the colon and produce CO_2, methane or hydrogen,* which *are odorless,* but when we eat high sulfur foods (meat and dairy), H_2S produced by SRB bacteria combines with this odorless gas and exits before being oxidized back to thiosulfate, etc. Beano tablets reduce gas: they contain α-galactosidase, an enzyme humans lack that breaks down these simple sugars ► DDS 2007;52(1):78-83. The enzyme breaks galactose leaving us with sucrose, or sugar, which is glucose-fructose. Beano also has invertase (which humans also have) which breaks the glucose-fructose bond for an easier uptake of sugar. NJ 2011;10:128 found pinto and navy beans cause

more gas than other beans. See trypsin inhibitors, gut lining cell irritating lectins section to see other reasons for gas (and why beano fails to work at times), besides "human lacking galactosidase, etc and the oligosaccharide content of foods"; soaking can help get rid of even more of these inhibitors vs cooking alone; why care about trypsin? Because partially digested protein or peptide can ferment, produce gas (CH_4, H_2, CO_2, H_2S); chemists can invent chemicals that wipe out gas forming bacteria without side effects (new good strains appear).

11.12.5.2. High sulfur proteins & SO_2 (sulfur dioxide) for preserving nut mixes, dried fruits, raisins, sodium aluminum sulfate ($NaAl(SO_4)*12H_2O$) used in baking powder (with toxic aluminum) and baked products, $CaSO_4$ in tofu, sulfite (Na_2SO_3), bisulfite ($NaHSO_3$) metabisulfite ($Na_2S_2O_5$), other sulfur compounds listed as preservatives in meats, juices, wine, fermented/canned veggies or natural sulfur compounds in certain plants (if overeaten) – ***create rotten egg mouth/gas smell*** ☺☺☺

One difference between *vegan* and animal protein is that ***animal protein has 3 times more sulfur***, so it promotes the production of H_2S. Vegetarians excrete in the colon (from undigested food) 62% less toxic ***p-cresol-sulfate and*** 58% less toxic ***indoxyl sulfate*** than omnivores ► CJASN 2012;7(6):982-8. Vegetarians ate 69% more fiber and 25% less protein in this study. Sulfate (SO_4^{2-}) becomes H_2S.☺☺☺ There are some *vegans* who eat more protein than usual for muscle building reasons, and in that case their intake of methionine and cystine can be higher than the typical vegan, leading to more H_2S. In the Immortal future, no foods will cause gas, and in the far future super-advanced subatomic tiny machines will provide all nutrients without eating. **Germ free mice produced far less free H_2S** ► FRBM 2013;60:195-200. "There is also evidence linking H_2S to colonic nociception, IBD, and colorectal cancer." ► IBD 2011;17(7):1620-5. "Sulphate-reducing bacteria (SRB) have been implicated (as a cause of ulcerative colitis) through the harmful effects of H_2S" ► BJS 2009;96(2):151-8. "fermentation of protein residues, primarily in the distal colon, produces a variety of metabolites, including ammonia, organic acids, heterocyclic amides, and phenolic and indolic compounds, that are toxic and detrimental to gut health… H_2S ***directly impairs epithelial metabolism…*** H_2S can be converted to ***thiosulfate*** $S_2O_3^{2-}$ and further oxidized to ***tetrathionate*** $S_4O_6^{2-}$ during inflammation. The latter supports the growth of Salmonella and other ***tetrathionate*** utilizing ***pathogens***." (***associated with gut disease***) ► AJG 2015;110(2):278-87. Nature made feces stinky so we avoid eating them. Nature made stinkier feces due to sulfur to alert us to lower methionine, cysteine intake to live 10 years longer. ☺☺☺

High sulfur proteins contain more methionine and cystine which activate TOR, speed up aging, neurodegeneration, cancer. Many people overeat protein in the hope of building a lot of muscle (it's exercise that builds more muscle not eating 3 times more protein), but this can decrease lifespan; the TOR section explains BCAAs (the stuff of muscles) in vegan and meat protein are

almost equal. In the age of intelligence, World Peace, Nonviolence, "Immortality", nobody needs muscles, as robots do all manual labor. High meat and dairy intake with its high fat intake slows down digestion increasing TRANSIT TIME from mouth to anus. Since omnivores eat 3 times less fiber on average, the transit time is much longer, leading to more rotting of protein and the conversion of sulfur (already more than in *vegan* protein) into H_2S. This is also explained in the constipation section. The other problem with eating meat is explained in the TMAO section. The beneficial properties of SCFA are minimized when the colonic concentration of H_2S increases as byproduct of bacterial fermentation, which inhibits host (gut) DNA repair" ► FI 2016;7:290. *If the gut lining can't be repaired, all toxins go into the blood damaging all organs.* This supports the hypothesis that *longevity depends on "odorless" stools.* ☺☺☺ Sulfites inhibit the growth of four species of beneficial gut bacteria at concentrations regarded as "safe" for food ► PO 2017; 12(10):e0186629. "Administration of metabisulfite has also been shown to *damage* kidney cells. Serum sulfite, sulfate, cysteine... are elevated in patients on hemodialysis" ► KI 2004;65(2):393-402. *Just 0.2% sulfite added to meat to make it appear reddish* or "*fresh*", made some dogs behave normally, but after 9 weeks, upon dissection "*Numerous small hemorrhages were observed in the lungs, endocardium, stomach, intestines,* and liver, and all (dogs) showed acute nephritis." ► JID 1904;1(2):355-7. Organ *damage may occur well before animals die on their own*, as with rabbits treated with sulfite superdoses who died; the 1904 Harvard Medical School article mentions Dr. Tyzzer examined 6 cats (that ate sulfite treated meat) and within 5 months they grew sick and seriously kidney damaged, while the control cat (no sulfite) was fine. "Sulfite, a well known air pollutant, is toxic for humans, especially those with sulfite hypersensitivity. *Sulfite is also generated endogenously, during normal metabolism of sulfur-containing amino acids*. Mammalian tissues contain the enzyme sulfite oxidase, which detoxifies both endogenous and exogenous sulfite by oxidation to sulfate. Deficiency of sulfite oxidase in humans is fatal, *demonstrating its physiologic importance*. Children with hereditary deficiency in this enzyme develop mental retardation, neurologic symptoms such as spastic quadriplegia, and early death." Elevated levels of blood sulfite was found in patients with chronic renal failure ► JASN 2000; 11(5):923-7. That may be a reason why meat eaters get more sulfite, twice the *kidney damage* of *vegans* in most studies, meat has high sulfur; same may happen to vegan fitness enthusiasts overeating protein powders. Eating sulfites can cause "dermatitis, urticaria, flushing, hypotension, abdominal pain and diarrhea", "life-threatening anaphylactic and asthmatic reactions." ► CEA 2009;39(11):1643-51. *Broccoli can cause odor when eaten in medium/large amounts*, due to sulfur containing glucosinolates. When I eat purple cabbage, cauliflower, kale I get no odor, but with broccoli I always do (plus gas with broccoli), so I don't eat it. The odor is from metabolites of broccoli glucosinolates, indole (feces smell) derivatives or H_2S. Some get stool odor even with other cruciferous veggies; cooking or pureeing broccoli (broccoli smoothies take 10 times longer than usual to make) can increase odor, as myrosinase comes in contact

with glucosinolates. Chewing only causes some contact, but pureeing/cooking increases it a lot.

11.12.5.3. *Sorbitol* & polyols (natural or added to foods as a non-sugar sweetener), polyphenols

Low calories sweeteners include polyols like: sorbitol (2.6 cal/g vs 4 for carbs), its stereo isomer mannitol 1.6 cal/g HO-CH_2-(CHOH)$_4$$CH_2$OH, xylitol 2.4 cal/g HO-CH_2(CHOH)$_3$$CH_2$OH, erythritol 0.2 cal/g (HO-CH_2(CHOH)$_2$$CH_2$OH. They say "no calorie" because they're poorly absorbed, fermenting in the gut, producing gas, but only erythritol is really low calorie. Avoiding these additives to processed foods or keto products seems smart, since some studies suggest xylitol and erythritol can cause stroke or heart attack. After we eat glucose, the blood level goes up 20% maybe, but after we eat xylitol it goes up 100000% (1000 fold). Isn't it funny how mannitol may also be causing stuff and yet its isomer sorbitol and mannitol are in thousands of products, vitamins, eye products, etc. Mannitol is a diuretic that can cause dehydration of eyes and brain; it is used to lower ocular pressure as a last measure; can worsen heart failure too. Sorbitol is used to improve shelf-life and texture of foods gathering dust on shelves. Candy, ice cream, chewing gum (which releases toxic microplastics), 100s of food products, medicines, vitamin pills, apple, pear, peach, avocado contain sorbitol/mannitol, which are digested very slowly (semi-indigestible, somewhat like raffinose). To minimize issues, limit processed foods or gums with sorbitol in them, avoid eating too many *1. nectarines* (0.11% to 1.95% sorbitol, *0.86*% average ► IJMS 2011;12(10):6919-35), *2. plums* (dried plums or dried prunes can contain *14.7*% sorbitol, while *fresh plums* only *5% (2.6-8.5%, depending on cultivar)* ► CRFSN 2001;41(4):251-86), *3. apples* (contain *0.6% sorbitol* on average, Table 1 ► SR 2017;7:44950), *4. pears* (contain *2.5% sorbitol* ► NT 2015;50(6):301-5, *that's why pears cause more gas, they have 3-5 times more sorbitol than apples*), *5. peaches* (contain *0.3% sorbitol* on average Table 1 ► HR 2016;3:15067). Other less known fruits, like *black chokeberries* got 8.6%, so they will cause enormous levels of gas, 3 times more than pears, the famous gassy ones; *blackberries are ultra gassy too, coming at 4% sorbitol*. *E420 is the EU name for sorbitol on food packages, though E432-6 (polymers of ethylene glycol and sorbitan esters), E491-5 (sorbitan esters polymers) also have sorbitol, being esters (sorbitan) with some foods having 11% sorbitol added. If you see any 'sorbitan' on food packages, it's a sorbitol ester that gives gas. Some papers found pears have 10 times more sorbitol than apples, the numbers given are averages of a few cultivars, cultivars can vary 3 fold for any fruit, not all cultivars are analyzed in a paper.* It's safest to stay away from eating many apples, peaches, pears, anyway, unless organic, as they have very high levels of pesticides. If you're bloated, try to see if you eat too many of these polyols, like some xylitol enthusiasts who replace all sugar with it, eating "industrial" levels compared to most people. JHND 2014; 27 Sup2:263-75 found "Polyols induced GI symptoms in patients with IBS independently of their absorptive patterns". JAFC 2009;57(2):554-65 found mannitol at 2.96 g/100g in cauliflower, 0.24 g in watermelon. Sorbitol is also called D-glucitol ► "3-year-old boy consumes six full packs of a

d-glucitol chewing gum brand (40 g sorbitol)... one hour after ...child complains of abdominal cramps and explosively passes about 500 mL of *thin* liquid *stool*... "pink" diarrhea was caused by d-glucitol-containing vitamin C supplements... d-glucitol in dried fruit, such as prunes, may reach levels that can contribute to diarrhea (hence too many plums = gas)" ► IJD 2016:5967907. A pack of Trident gum can contain 20 g of sorbitol; people who ate 40 g sorbitol "reported a change in the consistency of bowel movements to "loose" within 1 to 3 hours of ingestion" ► CFP 2019;65(8):557-8. But eterni foods can remove these smelly compounds. Excessive amounts of polyphenols in blueberries, the fruits with highest polyphenols, can also cause gas, so, it is better to avoid eating 5 packs of blueberries a day every day. ☺☺☺

11.12.5.4. Lactose (milk, dairy products)

Some people (especially non-Caucasians) lack enzymes to split galactose from glucose within lactose (made of glucose and galactose), exactly as all humans lack α-galactosidase enzymes to split galactose from sucrose within raffinose, stachynose, verbascose. We get gas due to bacterial fermentation identical to what happens with beans. Since lactose traces are in many foods, including whey protein powders used to make many processed foods, people can get gas that way, even if they never eat cabbage, nuts, seeds, whole grains or beans.☺☺☺

11.12.5.5. Starches and some fibers

Exactly as with oligosaccharides (made of a few saccharides), we have some starches and fibers (made of many sugars (saccharides)) that are semi-digestible or indigestible and bacterial fermentation is the only way they get taken care of, especially with longer transit time. As such, when people eat French fries, meat and fat slows digestion and transit time increases, starch lingers undigested and bacteria start to *ferment it*. That's why people eating burgers often times get gas. It can happen though even with faster transit time if a lot of starch is eaten. That's why bananas eaten in large amounts can cause gas in some, same for carrots.

11.12.5.6. Fructose for a minority of fructose "intolerant" people who digest it slowly.

A few people are partially fructose intolerant, and will develop gas from eating too much fruit with fructose or fructose yielding sucrose (apples and pears 6% fructose, watermelon 3% fructose, fruit juices, honey 40% fructose, sugar 50% fructose, raisins 30% fructose and they add sulfur dioxide to preserve raisins (and dried fruit-nut mixes) at times which feeds bad bacteria causing stool and gas odor). In the Immortal future, the molecular assembler prints foods knowing our tolerances/intolerances and optimizing for maximum lifespan and 0 gas. We need futuristic high tech food companies started by chemists, passionate nutrition geeks, aided by biophysicists with new preservation/treatment methods. As explained in the lentil section, pineapple is a great digestion booster, the fruit that seems to cause the least stomach issues,

possibly due to its protein digesting enzyme bromelain and non-gas forming fiber. ☺☺☺

11.12.5.7. Fructans (*polymers* of *fructose*, containing a few or a lot of fructose units)

Fructans are highly present in *garlic* (17% fresh weight, 0.22% aged *garlic* extract), *onion* (1-10%), wheat, plums, and many other foods (chamomile, kombucha, etc) as your; hence the smelly stool/gas *(fructans cause CO_2, sulfur compounds in garlic cause H_2S, combined, they give rotten egg smell of gas/stool)* when eating a lot (or much less) of *garlic*, bread, plums or bakeries. Eterni foods can remove fructans which have no benefits. Studies show garlic powder, which smells 100 times less when speaking or breathing, can improve artery function by 50% in those with bad diets; a 5th of a spoon is enough. Buy the ones in opaque bags, not transparent containers ideally, to prevent oxidation of lipids. Store the bag in the fridge air tight, after you place a small amount into a vitamin pill bottle that is opaque via aluminum tape on the exterior and clear tape on top to prevent aluminum particles falling. Many fructans are like raffinose mentioned at point 1, hard to digest, fermenting, causing odorless *CO_2* gas, which later mixes up with the H_2S from *garlic* (high sulfur), *onion*, eggs, meats causing the stool smell rise 300 fold.

11.12.5.8. Carbonates in calcium, magnesium and *multivitamin supplements*

1500 mg of $CaCO_3$ releases 336 ml of CO_2 gas or a third of a liter. So this can double the amount of gas you get. Multivitamins, like NOW Foods Daily Vits tablets, use 150 mg cheap $CaCO_3$ instead of citrate, so we burp and feel constipated. Sometimes, some multivitamins have too much B vitamin and this can also cause gas in some. Other *brands use cheap sulfates* to provide minerals and this causes sulfur smell. Aquamin calcium means $CaCO_3$ or carbonate.

11.12.5.9. Gluten (wheat, rye, oats, barley), especially low fiber very *processed bakery* goods with added *sulfates*. Gluten in *fetus stage* can cause *diabetes in kids*, and a LOT more:

"*Besides gliadin from wheat* gluten*, the lectin wheat germ agglutinin has also been shown to stimulate cells of the immune system and* increase *intestinal* permeability." ► Ntr 2013;5(3):771-87. "*Gluten proteins differ* from other cereal proteins as they're *partly resistant to enzymatic processing in the intestine*, resulting in a *continuous exposure of the proteins to the intestinal immune system*" ► Diabe 2014;57(9):1770-80. Gluten lingers in the GI tract *much longer, and can thus rot, i.e. be fermented (they feed on gluten) by bad bacteria that cause stool/gas smell*. Therefore, for many people (even non-celiacs), it is better to eat corn bread, corn tortillas or ideally home made popcorn (no oil added to prevent AGE formation), quinoa, millet (causes far less blood sugar spike than other grains, one variety got 12 times more fiber than rice), buckwheat, sorghum, amaranth, rice (brown, purple, wild are better), as these grains don't have gluten and contain more prebiotic fiber when cooked at home than the almost fiberless white flour bagels, bread, English muffins, donuts. AGEs in some grain products (see list) can feed bad

bacteria ► "*Dietary AGEs detrimentally modulate gut microbial ecology and may partially increase colon permeability*" (for toxins) ► MNFR 2017;61(10), inflaming the gut. Most gluten products (except some whole wheat breads with 0 sulfur compounds added) are so processed and stripped of prebiotic fiber. The ricin lectin in castor beans kill people at 2 mg doses. Raw kidney beans have lectins that can kill people too. *Legumes, grains, nuts have lectins* (*removed during soaking*, that's why I always soak my lentils) that can irritate the gut in some people and create tears in the intestine lining allowing toxins to pass through, even if lectins can also prevent cancer. Likewise, gluten can cause problems. 100s of books explain the catastrophic effects of wheat products and gluten, such as "Wheat Belly" by Dr. Davis.

Gluten is a name for several proteins: gliadin in wheat, avenin in oats, hordein in barley, secalin in rye. Fish, nuts, dairy, asparagus, etc have allergy causing chemicals that can kill some people. Mice without a gene get 114 times more plaque after eating the same amount of fat, think about that, what if some humans get heart disease at 10 times less fat than others? Humans without certain *genes* will get a really bad reaction to various chemicals in "natural organic foods" at much lower levels, so unfortunately, in nutrition one size doesn't fit all. Some people die of anaphylactic shock after eating dairy, fish, asparagus or nuts, others can eat them daily in huge amounts. The food industry in a Civilization of 900 year old "Immortals" would do all in its power to remove these chemicals in plants, meat and dairy (cow milk protein allergies, bovine hormones, milk viruses, etc can cause type 1 diabetes autoimmune disease according to some researchers) that cause allergies, stool odor and gas. When foods are made of only beneficial compounds, and agriculture doesn't exist anymore, we can create 5,000 year lifespan granting foods. *Stool odor* is a marker of bad bacteria thriving in the gut (70% of immune system is in the gut, so autoimmune diseases could be triggered by compounds we judge as harmless usually), the lining of the gut getting inflamed and allowing toxins to get into the blood, causing inflammation, atherosclerosis and *Alzheimer*, poor cognition, oxidative stress; because every single disease is worsened by oxidative stress this leads ultimately to *shorter lifespan*. Gluten, found in all pizzas, breads, burgers, etc can inflame the gut in some.

Type 1 diabetes in 6 yr old boy was cured with a gluten-free diet: BMJCR 2012:bcr0220125878. In mice offspring, *incidence of type 1 diabetes* dropped *to* 15% *(from* 64% *in the gluten group)* when gluten was removed from mom and offspring, and diabetes onset was delayed ► DMRR 1999;15(5):323-7. In mice, *when mom avoids gluten during pregnancy, offspring diabetes drops from* 62.5% *to* 8.3%, *even if mice continue eating gluten after birth*, see Figure 1 ► JDR 2016: 3047574. A 63,*529* women *observational* study found "*Women* with the highest [*477 g grains*] gluten intake versus those with the lowest [*112 g grains*] gluten intake (≥20 v <7 g/day) had *double the risk of type 1 diabetes* development in their offspring" ► BMJ 2018;362:k3547. ☺☺☺ As always, *due to 1000s of possible confounding* factors, *interventional* studies are needed to

confirm this association is causation in humans. In the study above the kid removed gluten (pizza, burger, pasta, bread, etc) and got rid of type 1 diabetes, but we don't *know if gluten removal was the only cause*, maybe causes included the *lower* glycemic index/calorie intake, *lower* casein intake (no pizza) *which is linked to less inflammation (no* casein antibodies), *lower* ω6 intake (ω6 means inflammation that promotes diabetes), *lower* AGEs *intake* (kid ate no more pizza, burgers with high AGE; oxidative stress can harm pancreatic β cells, higher AGE intake is associated with more diabetes) and other diet changes too. We need thousands of *gluten removal* interventional studies. However, like with smoking and lung cancer, it takes decades to convince the skeptics that association is causation, since introducing (instead of removing it) gluten/smoking *interventional* studies are unethical (especially smoking).

Gluten is a name for 4 proteins in 4 grains, so oats gluten may be less damaging than wheat gluten. There are interventional studies showing gluten introduction spikes up gluten antibodies linked to certain diseases. Nobody wants to sign up for a study to eat a lot of gluten to see if they destroy their pancreas and get type 1 diabetes, but for people who already consume gluten anyway and would never give it up unless paid, a partial temporary removal (motivated by being paid) and then reintroduction can be used to study the effect on tens of thousands of males/females who have no gluten prior to conception, or no gluten during pregnancy, to see diabetes and immune function in human offspring when compared to low, medium, high, very high gluten diets of the controls who ate gluten as usual (low, high, etc). "Celiac disease (CD) is frequently diagnosed in patients with type 1 diabetes (T1D), and *T1D patients can exhibit antibodies against tissue transglutaminase*, the auto-antigen in CD… studies suggest that *a* proinflammatory environment within the pancreatic islets *can promote the development of diabetes*… priming of diabetogenic T cells may take place in the gut and that activated T cells can home to the pancreas"☺☺☺ ► JI 2011;187(8):4338-46. Since for many compounds, the offspring deleterious effects exist when either mom or dad eat it before conception, it may be prudent to not overdose on gluten even if male. They'll switch cereals or design GMO wheat/oats without gluten if evidence mounts. Gluten allergy is a typical case of gut inflammation. "Celiac disease and type 1 diabetes are autoimmune conditions in which dietary gluten has been proven or suggested to play a pathogenic role" ► Ntr 2015;7(9):7143-62. Most people all eat bread with gluten (a protein), etc made from *unsoaked grains and they might all have inflamed guts from gluten and oligosaccharides*, by the standards of a 130 year old healthy human of the future, yet think we're healthy. Maybe in the future, when we live to 200-500, only odorless stool and gas free digestion is considered healthy. I stopped eating gluten (except for rolled oats or a bagel a few times a year until 2016) in 2012 to reduce sodium intake and also because bread products have too many dubious and oxidative stress causing chemicals added at times; too much sodium raises your heart rate and blood pressure. Now I'm glad I did, since it

may help me prevent diabetes and many issues from inflamed gut (see more studies below about the brain-gut link). Since 2000, I ate very little bread, mostly bagels, going sometimes months without gluten, eating rice or legumes only. Cholera spread fast in London in 1848 because they had no plumbing and were defecating in pits and eating nearby, with the virus spreading. Our sanitation was poor, just as today, our nutritional habits may be thought of as poor by future centuries. It seems certain that, for 4,000 years old humans of the future, all present foods are poisonous, as their nutrition science, food choices are far more advanced, optimized to remove toxins. The chemical signature of the stool odor may tell us what diseases and lifespan we will reach if no change. ☺

BMJ 1999;318(7190):1023-4 found "wheat lectin also binds to glomerular capillary walls, mesangial cells, and tubules of human kidney and (in rodents) binds IgA and induces IgA mesangial deposits. This suggests that *in humans IgA nephropathy might be caused or aggravated by* wheat *lectin*; indeed a trial of gluten avoidance in children with this disease reported reduced proteinuria and immune complex levels… Insulin dependent diabetes therefore is another potential lectin disease… Another suspect lectin disease is rheumatoid arthritis... the three main pathogenic factors for peptic ulcer... are all theoretically linked to lectins... why don't we all get insulin dependent diabetes, rheumatoid arthritis, IgA nephropathy, and peptic ulcers? Partly because of biological variation in the glycoconjugates that coat our cells and partly because these are protected behind a fine screen of sialic acid molecules, attached to the glycoprotein tips… But the sialic acid molecules can be stripped off by the enzyme neuraminidase, present in several micro-organisms such as influenza viruses and streptococci. This may explain why diabetes and rheumatoid arthritis tend to occur as sequelae of infections." Rats can eat wheat, and to keep rats away, plants create poisons called lectins that McDonald's and all fast food include in their breads and bakeries, since they don't SOAK for 3 hours these cereals first. This means bread, cereals, pizza, pasta, cake, bagels, donuts, cookies, granola bars, soy products, protein powders from grains and legumes, Soylent, protein bars, anything made from legumes or grains not cooked at > 100°C (212°F) to destroy lectins as explained in the bean section, can increase gut permeability, inflammatory immune responses and autoimmune/other disease risks, especially in more allergic people or AFTER INFECTIONS or injuries that stress the immune system. *This is now for all an extra reason, besides sodium overload which causes heart disease and hypertension in billions of people, to stay away from bread and all baked products, pizza, bagels, fast food, etc. "Non-celiac gluten sensitivity NCGS triggers* gut dysbiosis...*and* vulnerability for dementia" ► CNSNDDT 2015;14(1):110-31. "both CD (celiac disease) and NCGS can result in many autoimmune conditions... early consumption of cow's milk may be a risk for the development of autoimmune diseases" ► Ntr 2014;6(1):15-36.

"High titer IgG antibodies to gliadin were found in 87% of autistic and 86% of schizophrenic

patients and high titer IgG antibodies to bovine casein were found in 90% of autistic and in 93% of schizophrenic patients. High titer IgA antibodies to gluten or casein were found in 30% of children with autism while in schizophrenic patients 86% had elevated IgA antibodies to gluten and 67% to (dairy) casein; some normal children and adults have these antibodies but only in trace amounts (not high titer). A gluten-casein free diet was accompanied by improvement in 81% of autistic children within 3 months." ► NNS 2000;3(1):57-72. "Data suggests that up to 22% of patients with CD develop neurologic or psychiatric dysfunction, and as many as 57% of people *with neurological dysfunction of unknown origin test positive for* anti-gliadin *(gliadin=wheat gluten) antibodies*.☺☺☺ We reported that the age-adjusted prevalence (23.4%) of anti-gliadin antibodies in people with schizophrenia was significantly higher than that observed in general population samples (2.9%). A 3rd study… reported 27% of patients with schizophrenia having anti-gliadin antibodies compared to 18% controls… Landmark reported 19% in the schizophrenia group and 0% in controls." ► PQ 2012;83(1):91-102. Some studies advise not giving gluten or dairy to babies under 1 year as their immune system is too young. Many studies found much weaker links between gluten and neurological issues, autism, but in some people this link may be strong. We see this with many associations (may not be causation), some studies get much stronger links than others, possibly due to specific dietary or genetic factors unknown to science. Meat is also bad, as it promotes bad bacteria and rotting, and processed meat can have gluten too. AIM 2009;169(6):562-71 st*udy of* 0.5 million people *found that* those who ate 68 g red meat/1,000 calories were 36% more likely to die from any cause if female, 31% if male than those eating 9 g/1,000 cal. Cardiac deaths increase 50% *for women eating more red meat and 38% for women eating more* processed meat. ☺☺☺

11.12.5.10. *Artificial sweeteners* wreck the good gut bacteria *allowing the stinky ones to thrive*:

The immortalists will ban all artificial sweeteners, added sugars and 80% of added salt, as these, together with ultra strong flavors (which will be banned, as many cause cancer, as food dyes do), cause people to become obese and fat, destroying the nation and planet. What's wrong with eating lentils as a puree? No sweetness, just plain. Lazy spoiled gluttons with "fruit fly IQ" need to get over it. Health trumps taste, with taste everyone dies 4000 years earlier, we can't have that. Belly fat damages the brain, everyone becomes a monkey in IQ. The nematode worm IQ aristocrats steal our chemists to create the most lethal texture, color, taste properties of food, when these chemists could have designed the simple fetus diet giving 4000 year lifespan to all already by now. Before we discuss man made sweeteners, a word on the alternative: the only safer sweetener seems to be stevia, but even stevia seems to shrink SCFAs production, kill good bacteria (Ntr 2019;11(6):1248), feed bad bacteria, cause obesity, diabetes, hypertension in some people/mice, at least in some studies, so it's pointless to use stevia, if you buy sweet glycine amino acid. Stevia is the only sweetener that has many studies showing it helps prevent obesity

or cancer in some mice or people, while the artificial sweeteners show only bad effects mostly. Stevia ($5/lb, organic on Amazon) is not an artificial, but natural sweetener (all others are man made) and it's thought to be way safer than the other sweeteners (which cause gut dysbiosis), even though initially FDA banned it 1991-2008 to stop cheap imports of Chinese stevia (competing with US sweeteners made by Monsanto), though the official 'reason' for the ban was fear of "cancer shown in some animal studies". Then more studies showed it's preventing, not causing cancer: Mol 2022;27(4):1362, PM 2017;13(51):345-50, Oncot 2018;9(41):26299-308, OL 2018;15(4):5250-6, Mol 2023;28(3):1258, Biom 2021;9(12):1814. "Stevia and its glycosides possess therapeutic effects against... cancer, diabetes mellitus, hypertension, inflammation, cystic fibrosis, obesity and tooth decay" ► CPD 2017;23(11):1616-22. Stevia was banned in 1991, then corporations patented its sweetest chemical, rebaudioside A (240 times sweeter than sugar), obtained via 40 steps, then some added 99% clot infarct stroke causing erythritol to sell it as Truvia (1% rebaudioside). Stevia wasn't used due to a bitter aftertaste from stevioside (8% of stevia), and they removed the bitter taste steviosides (about 40 exist in stevia), so they just kept the rebaudioside (4% of stevia). Glycine is sweet, has no side effects as stevia (kills good bacteria) and the stevia compounds, it shows the politics of FDA, approve deadly chemicals, while detecting some of the poisons only, understaffed FDA... That's why we need Eterni Foods, to be able to remove deadly chemicals and synthesize the good ones. Next paragraph shows stevia is bad, as it causes obesity via microbiome changes.

Good bacteria are key to healthy *immune* systems and *brains* of developing babies, so avoid man made sweeteners. Eating artificial sweeteners is linked to cognitive decline. Artificial sweeteners can turn gut bacteria into pathogens, they damage the microbiome (AN 2019;10 (Suppl 1):S31-48, Metab 2024;14(10):544). "saccharin, aspartame, sucralose, and acesulfame-K, can profoundly impact gut microbiota, leading to microbial dysbiosis...a reduction in beneficial bacteria such as Lactobacillus and Bifidobacterium and an increase in potentially harmful Proteobacteria… decreased production of SCFAs… (leading to) glucose intolerance, dyslipidemia (high LDL/TG, low big size safe LDL, high inflammation)… obesity, insulin resistance, diabetes, hypertension" ► Cur 2024;16(9):e70043. "Exposure to steviol, a compound produced by bacteria harvested from the colon of volunteers, resulted in a tenfold reduction in propionate (a SCFA) production (which causes obesity, as good bacteria have no SCFAs food)… aspartame (dimethyl ester of aspartic-phenylalanine dipeptide that is linked to mice brain tumors) as a possible carcinogenic agent for humans...ace-K, advantame, aspartame, neotame, saccharin, stevia, and sucralose... cause (microbiome) dysbiosis..." ► FN 2025;12:1694264. "consumption of calorie-free beverages sweetened with artificial and natural NNS have minimal influences on total daily energy intake, postprandial glucose and insulin compared with a sucrose (sugar)-sweetened beverage." ► IJO 2017;41(3):450-7, so using sweetener doesn't help most lose weight. ☺ One

can use sweet fruits for smoothies. JTEHBCR 2013;16(7):399-451 says that *splenda* (*sucralose*) is not safe, as it *destroys* some of the *good* gut bacteria, like other sweeteners. Sucralose destroys the human DNA. Wrecking good bacteria via diet coke, chewing gums, endless other products loaded with sucralose, aspartame (possible carcinogen), saccharin *can* (at least in some genomes and atomic compositions) lead to *acne and weaker brain, immune system*. Don't eat grams of sucralose, aspartame, saccharin daily to cut on sugar, just meditate to get bliss from non-food.

Stevia is safer than splenda, which is hypothesized to be safer than *aspartame* and *saccharin*. I got a big acne breakout after I tried splenda, many people got severe acne, so avoid splenda. A *splenda* byproduct (from hydrogenation of the bichlorinated fructose unit of sucralose) 1,6 dichloromannitol is eliminated bound to glutathione like mercury is, glutathione is the master antioxidant in all cells, whose high levels are associated with maximum longevity ► page 239 at IJM 2009;27(1):239-44; up to 20% of sucralose can be absorbed, where does it go and what does it do? It looks like a chlorinated pesticide (it is sucrose with 4,1,6 OH replaced by Chlorine atoms), can its bichlorinated fructose or chlorinated glucose or any of its metabolism products accumulate in organs and damage tissues by unknown mechanisms or by substituting glucose or fructose that become parts of bigger molecules used by cells (like viral proteins sneak in as friendly ones due to a similar structure), then big molecule stops working as it's meant to? A healthy adult has about 10 g of glutathione in their body, so if you eat a tiny bit of *splenda*, *1%* may be eliminated as that glutathione bound compound, having a slight effect on *glutathione* reserves, losing maybe 10 mg (molar mass is 307.32 for glutathione) or so if you eat a few g of splenda. But the *99%* of splenda metabolism byproduct may be very toxic (doing damage before elimination in ways we don't know yet, and glutathione levels where this product goes may be low and the impact may be bigger locally) like mercury if *glutathione is taking it out, since that's what glutathione does with all toxins (mercury etc)* Glutathione rich foods (must be raw) are here. Glutathione is low in people with high mortality; to make it we need cysteine and glycine, that's why eating enough protein is essential. Diabetics given cysteine and glycine had their glutathione go up ► DC 2011;34(1):162-7. Intake of glutathione is 100 mg/day for those eating produce often; pill intake led to higher plasma levels ► EJN 2015;54(2):251-63. There are allegedly "healthier" natural sweeteners, like xylitol, erythritol, sorbitol, but they can cause bloating, gas or diabetes, heart disease. 2023 studies found intake of xylitol, erythritol (and possibly the ubiquitous sorbitol, mannitol) *increases its blood level 1000 fold*, vs 1.2 fold for glucose, and may cause strokes/infarcts at 30g/day. Thus, it's safer to drink water than artificial sweeteners our bodies are not used to. Allulose is mass produced sugar, rarely found in nature, that causes hives in many, and which may work for diabetics who want sweet stuff. Artificial emulsifiers can also shrink microbiome diversity, making us sick ► GE 2021;162(3):743-56. ☺

WHICH FOODS DECREASE GUT LINING PERMEABILITY, allowing less toxins in?

1. Polyphenol rich foods ► Table 1 of FI 2015;6:612 indicates the polyphenols *they tested* (quercetin, curcumin, genistein, EGCG) *decrease the gut lining permeability,* reducing toxin entrance into the blood. All flavonoids are very similar in structure to quercetin (the most common flavonoid in plants), so they all probably block toxin uptake that way. Chlorogenic acid polyphenol have similar effects in rats ► PO 2014;9(6):e97815.

2. Acetic acid rich foods ► Table 1 above. Acetic acid (CH_3-COOH) is present in vinegar and most fermented veggies jars, which list vinegar or acetic acid as ingredient. However, hot peppers (CPB 2007;55(8):1151-6), contain capsianosides which have the opposite effect of acetic acid, so eat non-pepper marinated veggies ► BBA 1997;1323(2):281-90. I myself never eat hot peppers, due to high capsaicin content. Hot peppers can have 5 million times more capsaicin than sweet ones, so avoid hot peppers due to risk of heart issues.

3. DHA/EPA ► EJN. 2008;47(4):183-91 ☺☺☺

4. Vegan diet has more protective bacteria, decreasing permeability ► "The *vegan* gut profile appears to be unique in several characteristics, including a reduced abundance of pathobionts and a greater abundance of protective species" ► Ntr 2014;6(11):4822-38. Vegans or those eating a lot of plant fiber produce more short chain fatty acids (SCFAs) that protect the gut, especially butyrate, the preferred fuel source of the colon lining cells (colonocytes get 70% of their energy from SCFAs oxidation) ► see Fig 3 (5 times more butyric, 4 times more propionic acid) at PNAS 2010;07(33):14691-6. A 98 people study found the *vegan* had mostly Prevotella, omnivores more Bacteroides, 11 vegetarians 27% Prevotella and 10% Bacteroides, in between *vegan* and omnivore ► Sci 2011;334(6052):105-8. In a study of 66 *vegans*, 102 vegetarians, 100 omnivores, *vegans* "had a higher Prevotella abundance and Prevotella/Bacteroides (Bacteroidetes subclasses) ratio… (the) proportion of Firmicutes was lower and of Bacteroidetes was higher" ► DMS 2017;9:62, same finding of the PNAS study above.

5. Zinc rich foods (nuts, seeds, legumes), Glutamine & Tryptophan rich foods (i.e. eat enough protein from legumes, nuts, seeds, veggies, etc), Vitamin D ► Table 1 above. Glutamine is a dangerous amino acid, since it can fuel cancer cell growth, harden stools, cause rectal bleeding.

FI 2015;6:612 says the following foods have the opposite effect, allowing more toxins in: *alcohol* (no reason to drink, there are foods with 100 times more antioxidants than red wine, 500 times more than white wine), *milk fat* "diets that favor growth of pathogenic or opportunistic bacteria (as with intake of milk fat) would have opposite effects, compromising barrier integrity", *gluten* (gliadin from wheat) foods. *Most papers on gut bacteria point out that* high *fat* diets help the bad bacteria, and weaken the gut barrier allowing *more* toxins in. In pigs, saturated fat increases blood endotoxin (LPS) *Papp* (a*ppa*rent *p*ermeability coefficient) by 50%, vegetable, olive oils had

no effect, while ω3 oils decreased it by 60% ► NM 2013;10:6. At the start of this section a study showed Alzheimer people have 3 times more LPS in their blood. ☺☺☺

11.12.5.11. Free delivery for online grocery/food orders & my diet: what did I eat in 2018 that gave no gas or stool odor? What do I eat now to keep the GUT HEALTHY? See the food table.

I got a BMI of 17 because of 6% fat calories vegan (LDL 46, TC 105, TG 65, Hcy 6.2, hs-CRP < 0.2), 0 grain/processed food, all shopping (grocery, etc) online for max personal security:

1). Amazon.com (scroll down to FAQ "What is Amazon grocery subscription?" and click on the link to sign up for the 5 (EBT) or 10$/mo program to ensure highest privacy, as Amazon no longer shows items in title and email body *(says "9 grocery items" shipped to First name, City to protect you against criminals who hack emails via WiFi, ethernet snooping, etc),* for metadata hacking interdiction. Amazon has far higher password, passkey 2 FA security than every other grocery outlet that obviously has no passkey, hard key or 2FA ►►►► free delivery for online food orders > 25$ via grocery plan, 60$/yr. Amazon is OK for groceries (that come from cold temp Whole Foods or real stores they partner with, you will see their name when you buy groceries), but not stuff that is kept in Amazon warehouses that are 80-100°F (never buy food or dried fruit, nuts from Amazon.com itself, they're all rotten, their trucks reach 160°F at times). Organic carrots are 6$/5lb, organic kale 2.5$. Amazon removed on July 9th 2026, the ability to see 1 star reviews only (or to see all reviews for a product) for many users, so now, all who're banned need to click on the link next to "We're showing a limited selection of reviews. To see more reviews, you can send a request" at the bottom of the reviews, and you may be allowed to see all reviews (I was allowed after a temporary ban after a 1 star review). Bezos, managers need pay 800 trillion in fines for genocide: Amazon ships and stores supplements in high heat to poison billions of people. Walmart allows all to see the 1 star reviews, Amazon removes the ability for some users, including me after I wrote about their genocide in the book and made a 1 star review☺☺☺. To circumvent this and ensure your personal safety online, it's best to use an alias online for any purchase, using privacy.com system of linking your real identity to an alias and securing your computer from hacking by aristocrats. Due to half products being available at Walmart, even for nonfood, nonpill stuff, it's safer to have Walmart ship it when Walmart times is faster than Amazon prime by 3-4 days (many items), free for 35+$, since the spies, criminals and thugs have less time to change your products and modify your electronics to spy or harm you with hidden weapons. All nations need to boycott Amazon until it no longer hides reviews for random users (total ban by all 50 states if they ban reviews for most users) and ships/stores perishable supplements, medicines, eyedrops, foods, walnuts, etc at insane high temps of 80-155°F. The arrogant aristocrats that planned WW1 and 2 don't give a crap about the masses. All world governments need demand restaurants, food manufacturers to lower AGEs in foods 2-90

fold from the sky high levels today, as AGEs cause millions of deaths. All nations need to ban Amazon/all companies from selling supplements, until transport and storage meets the correct temp (< 77°F). The planet is not a concentration camp for testing toxins by genocidal world aristocrats selling junk via online sites. Amazon needs to be bankrupted and taken over by Eterni Foods Inc, the other 10 companies to sell things properly via reviews.gov (all reviews for any product are centralized, no more reviews on 40000 sites so nobody can find them), after 1000 times more testing, to ensure product quality, consumer protection. Too many charlatans from all nations sell junk foods online. Reviews are the property of We the People poisoned by Amazon/online sellers☺☺☺. Each time a website sells something in the immortalist USA, Review button goes to Reviews.gov for the whole world to see. Only then the world will trust USA to lead. Honesty and fairness, don't just steal all from all *nations* and poison them all with Amazon/KFC junk (those 300K junk food US restaurants causing millions of strokes/infarcts worldwide, thanks to a chimp gov clueless about AGEs). To become 1 people, 1 nation with 1 trillion times less fraud/violent crime, we need honesty. No more eyedrops, pills sold on Amazon in rotten state to poison millions: Amazon sells tons of eyedrops that say store below 77°F, which they never do. This online sellers (Amazon too) genocide against US/all *nations* can stop by you ordering temp sensitive items directly from the company or Walmart that ships far cooler and stores far cooler (see below). Walmart needs privacy.com since the security is pathetic. However, Walmart lentils 1.56/lb are stored/shipped at much lower avg temps than Amazon 1.43/lb in the warmer 9 months of the year, so dry lentils from Walmart are in better shape. ☺☺

2). Sprouts.com ►►►► $2.5 service fee for online orders > 35$ or > 10$ for Super Saver items (Carrots) for 0.0$/yr, they're the only online grocery with organic purple kale 2.5$, sometimes 25% off, purple kale is far healthier. A problem is service fee means 4 big orders a month, service fees are 18$ way more than Amazon 5-10$, so a little discount on sprouts is not a big win, especially they lack passkeys, hard key like Amazon, 2FA, anyone hacks your metadata, ordered items, invoices, pathetic, these small grocery stores, any spy can try poison you, know what you will order, puts the poison there via a syringe, etc, you want max security; Amazon shows nothing, you can shop from 20 chains and still get secret email, the other sites the spies who hack global metadata can know and figure out etc what you really order (not claim to). Can't hack Amazon, it's like Pentagon, it's a lot harder with passkeys, hard key, 80 character password.

3). Instacart+ ►►►► $2.5-9 service fee for online orders > 10$ for 99$/yr (delivery for Aldi + 40 grocery stores + Walmart (bandage $1.38, alcohol pads 400/3.82$, powder detergent 2.2/kg) + 80+ other stores: $ Tree bandage 1.25$, Colgate Optic White fluoride paste 1.25/3oz or 2oz, 99.9% germs killing spray 1.5$, floss pick 1.25$, liquid detergent 1.5$, vinegar 1.5$, healthiest Shugar soap (no artificial colors) 1.25$, medium healthy soap (has TiO2) 1$, Home Depot offers free ship without instacart; this saves 50 trips to a store so EVs drive 20x fewer

miles to buy same items, saving millions of lives lost to car smog 10-40 years early; kind to all like the Immortalist Anthem; EVs save you electric, tire, gas $ and avoiding in person visits prevents contact with air, carts rich in flu, COVID19, RSV and endless diseases) ☺☺☺

4). Walmart+ ►►►► free 1 day (not 5 days, since pills rot) delivery for online grocery orders of any price, 49$/yr Walmart+ 49/yr offers free lower temp than Amazon shipping same/next day. They sell 24 bulbs 5000K/22$ (100W equivalent), 24 LED bulbs (40 W eq) /9$ too, 24 Phillips bulbs 2700K/20$ (100W), many items so cheap, plus 5$ off code for reviews. They also sell the cheapest lentils, 4 lb bag/5.98 (all it fits in 12 quart pressure cooker), free ship over 35$. If you bundle items and order is $35+, you get free same-next day delivery even without the 49/yr for non-grocery items fulfilled by Walmart (not shipped by third parties, don't order supplements in hot weather, they degrade, plan all orders for cooler months, stock in fridge for the 6 hot months), while Amazon delivery is free for 35+$ orders but takes 7-10 days. Almost all items on Amazon are on Walmart. Walmart gives you both "Amazon prime, 15/month + Amazon grocery 5/mo" plans in one 49/yr, to save 191$/yr. Walmart+ can give faster delivery at times even for 35+ orders. Walmart has cooler warehouse 75°F (Amazon often 95°F) for supplements, meaning longer life for you, Amazon 5 day prime ship in winter in many zip codes vs 1 day Walmart, free groceries, no service fee as with instacart+. Walmart shipping is cooler, as the heating section explains. Walmart/Amazon allow returning items with no printed label to FedEx (Walmart), UPS, Whole Foods/Kohl (Amazon), with a phone QR code or from your home (need a box and printing a label if you don't want to drop it off in person). This makes all returns green. Amazon returns are easier, since we don't need to have a box for most items shipped by Amazon. Merchants make less $ selling on Amazon, due to higher referral fees, 40$/month subscription, higher shipping fees, so for many products, Walmart has far more choices, as small volume sellers don't need Amazon for higher sales volume. Amazon takes 8-15% of sales (45% for some electronics), Walmart only 6-15%, so naturally, small volume merchants shun Amazon. Walmart allows you to return non-food items in 90 days, not 30 like Amazon. Walmart wins. Choose freeze dried powders, not those extracted in water at room temps and then spray dried in hot temps, because dry heat creates AGEs via oxidation, so ask sellers on Amazon to provide the extraction chart or ask if it's freeze dried and then order same thing faster on Walmart to avoid the damaged Amazon warehouse temp and hot shipping. ☺☺☺

Some items are cheaper in person, like butternut squash, purple cabbage, etc, so you could stop by if in route to work or back, to minimize fuel/tire smog. All shopping for food, shoes, clothing, can be done online from a wired Internet desktop, laptop, since phone apps cause RF brain/body damage. Sprouts and other local chains where Sprouts doesn't exist, are 15-50% cheaper (for carrots or other items) than Amazon grocery, fresh or Amazon Whole Foods, can save $50-5000/yr per family vs Whole Foods or other Amazon grocery markets, if you don't

order often, which creates huge service fees at Sprouts (30-50$ monthly if you order 10 times with 3-5$ each time), instacart vs Amazon. Amazon grocery is cheaper than Amazon Fresh (which can have cheap powder detergent, 2.6$/kg). Amazon Whole Foods (WF) is priciest. You can also order online direct (walnuts), since Amazon walnuts are all rotten and most chains don't sell fresh walnuts that need order in October. Amazon fresh: $2.5 organic Cal-organic (fresh only if you live close to California) kale (only 200g, rarely 290g, Amazon Whole Foods kale is 3$ (2$ if on sale) and local (fresher if you live away from California, old California kale Cal-organic rots and accumulates mold in its plastic bag, it's a hazard, can lose 30% of nutrients during 1 week ship to your state and due to wind, it's full of dust and earth and needs to be washed 3 times more than other kale, soaked in water well, immersed 10 times to get all mud and potential roundworm out), Sprouts kale that weigh only 160-230g, Safeway is cheaper, use instacart for that, 4.45/lb), $10/lb 3 garlic bulb (avoid this 'Christopher Ranch' US one, it's usually rotten and too expensive/lb; avoid Chinese garlic in physical stores: can have 4-50x more heavy metals, pesticides than US, 25% less allicin, toxic fertilizers, thyroid disrupting (I block) CH_3-Br from US port fumigation, 4000x the lead, millions of packs grown in sewage even if treated with chlorine and bleach before shipping to US, which further damage it internally; for ginger, buy US, Brazil not China), $7/lb amazon WF organic garlic (cheaper than most physical stores, saves you from toxic pesticides) $3.9/gallon vinegar (Amazon vinegar is the cheapest online one). Sprouts: $2.5 organic kale, $4/lb ginger (vs $4.7 organic @ Safeway, $10 organic @ fresh, $7 organic @ WF), $6 5 lb organic carrot (supersaver item, so will be delivered for free if 8-11 am 3 hr window within 40 hrs, if you order 10$ minimum, like 3 kale + 5lb carrot bag for $12.5 total, free without instacart subscribe). Avoid precut greens or veggies, they got 100x the bacteria. EBT users (food stamps) get prime/grocery plan 50% off ($7/$5). If we all do 100% shopping online, we save our health (less flu/Covid too), we save fuel costs, emissions/electricity, as each truck delivers 200 packages in its route, so far less tire particles, noise, gas that causes lethal smog if no EV. Eventually, drones will do all delivery from the driverless delivery vans, so there won't be a delivery job in the hot or cold weather. ☺☺☺

My present diet is 1 walnut, purple/green kale, carrot, butternut squash, purple cabbage (squash & 50+% of cabbage is steamed in a pressure cooker 2 min to soften them, improve digestion, reduce goitrogens, carrots steamed too sometimes oxalates, then pureed in a food processor alone or with lentils to create a low fat warm breakfast/lunch of deep purple color) ginger (protects endothelium from AGEs), raw garlic (removes plaque, has 12% inulin (a fructan, or polymer of fructose, like glucans are polymers of glucose) which creates glutathione and cancels fructose damage, burns visceral fat, lowers insulin by 70%), cloves + lentils I cook (see good places to buy) + supplements (lycopene, berberine at times, quercetin, bromelain, citrulline, ideally only stuff that is extracted via supercritical CO_2 (freeze dried retains more

nutrients, least oxidation, ask manufacturer to provide chemical extraction steps, avoid anything that uses heat) from plants and provide microbiome diversity, as if you ate the plants these were extracted from, and that diversity extends longevity; most powders today are extracted from plants; to fight oxidative stress, try LDL lowering 37$/kg HE, 42$/lb 100% GSE). You can use non-plastic 12 glass bottles 100ml/12$ to store powders eaten next 2 weeks (refill from sealed fridge bags/bottles), since microplastics in 1$ plastic bottles can cause dementia, plaque. Distribute the nutrients so that even if taken with water, each 5-9 hour window (5+5+5+9, 9 for sleep) has some strong antioxidant taken at its start to prevent plaque, aging, senescence since the high blood level of each chemical ends in hours: 4 trays of vitamins in the fridge for the start of each 5-9 hr window in small Amazon bottles to minimize air and tray size. Take out of fridge for 3 min max to move powders into smoothie or spoon/glass of water. You only need 1 big tray with the main meal, breakfast, the other times you eat, the tray can be tiny, since most nutrients (quercetin, hesperidin, berberine, CoQ10, carotenoids, etc) have bioavailability 2-10 times higher when taken with fat (we need to eat at least 1-2 g of fat, so 1-2 pills of ω3s or half a walnut). If 4 times is too often, try 2 times, twice with the meals if you eat twice only and once before bed. In 2024-6 I ate more lentils, so maybe 100 g protein/day. In 2026, no pineapple, just bromelain.

Many suggest 1.2g/kg weight reference protein of score 100, so 76 g for 63kg or 100 of lower score vegan ones. Included below chemical formulas and mnemonics (memorizarion techniques) for the most important fats (unsaturated: ω9 *oleic*, ω6 LA/ARA/GLA, ω3 ALA/EPA/DHA, saturated: *lauric*, *myristic*, *palmitic*, *stearic*) in our diet and physiology. We can teach 9 year olds this so they discover at 25 the biochemistry of living to 900. With techniques, we can get 4th graders know tons of biochemistry and organic chemistry. Fat quantity/quality have a dramatic effect on microbiota, GI tract and general health, since dry heat cooked, processed foods have high AGEs (and, if non-vegan, contain oxidized cholesterol) inducers of systemic oxidative stress, chronic inflammation, atherosclerosis which then leads to cardiovascular disease, dementia, cognitive decline, organ damage. 2018-2020 on average I ate 7% (5-11%, varies by day, typical of many centenarians) of calories as fat: about 14 g of fat (sometimes 15, 1 g fat = 9 calories), so *126 calories* or 126/1,859 about *6.8% of calories*. A typical 7% fat daily intake in 2019: 100 g purple cabbage 0.2 g fat, 0.04 g ω3 (omega 3), 0.03 g ω6 (omega 6), 100 g watermelon 0.2 g fat, 0.05 g ω6, 30 g ginger 0.2 g fat, 0.04 g ω3, 0.01 g ω6, 200 g plums 0.6 g fat, 0.09 g ω6, 125 g carrots 0.3 g fat, 0.14 g ω6, 2,000 g pineapple 2.0 g fat, 0.34 g ω3, 0.46 g ω6, 125 g kale 0.23 ω3, 0.17 ω6, 0.88 g fat, 400 g cooked lentils 0.55g ω6, 0.15 g ω3, 1.6 g fat, *3 g* walnuts 1.14 g ω6, 0.27 g ω3, 1.96 g fat, *7 g* chia seeds 1.23g ω3, 0.40g ω6, 2.16g fat, *2 g* pumpkin seeds 12 seeds, 0.18 g ω6, 0.001g ω3, 0.39 g fat, *7 g* flaxseeds 1.60g ω3, 0.41g ω6, 2.95 g fat, *vegan* Testa *DHA-EPA pill with 0.78 g fat of which* 0.03 g is ω6, 0.49 g ω3, 25mg sunflower oil (rest being rosemary oil, 6 mg E, some C). These 0.49 g ω3 contain: min 250 mg DHA, *docosa*hexa*en*oic acid or 22:*6*(n-3) in

USDA tables, (where 22 is # of carbon atoms hence *docosa* or 22 in Greek, 6 is # of *double bonds* hence the name got hexa before the *en* for double bond, 3 in n-3 is which carbon has the first double bond counting from the end (omega ω), with COOH being the alpha or beginning), min 125 mg EPA, *eicosa*pentaenoic acid or 20:5(n-3) because *eicosa* is 20 in Greek, some DPA, *docosa*pentaenoic acid or 22:5(n-3), to get 13.82 g total fat, 4.39 g omega ω3 (3.45 as ALA and 0.9 as EPA-DHA-DPA) and 3.66 g omega ω6 (mostly LA, linoleic acid or *octadeca*dienoic acid 18:2(n-6), 6th carbon from the end (omega) has first double bond). Thus, with *1 pill of vegan* algal oil, I got *ω3:6 ratio of 1.20:1*, which I returned to in 2025 via chia oil, after a 2 yr stay @ 4:1.

The ω3 *vegan* pill has 0.78 g total fat, with 0.49 g ω3 and some ω9 oleic acid or *octadecaen*oic acid 18:1(n-9), which makes 60-70% of the fat in avocados, olives, sunflower seeds, many oils, being the most *common monounsaturated fat in plants*); *oleic* comes from *olives* (57% calories in olives is oleic, 82% in sunflower oil, 73% in olive oil, 63% in canola oil); all plant oils are cis (trans fats, now banned by FDA, are in animal foods only), so *all famous ω3 (*ALA, DHA, EPA*), ω6 (*LA, ARA*), ω9 (*oleic*), are* cis*, the most important and common food unsaturated fatty acids*. The top 4 saturated fatty acids in our diet and body are: stearic *18:0*, CH_3-$(CH_2)_{16}$-COOH, palmitic *16:0* $CH_3(CH_2)_{14}COOH$ (50+% plus), myristic *14:0* $CH_3(CH_2)_{12}COOH$, lauric *12:0* $CH_3(CH_2)_{10}COOH$). The top 7 *un*saturated fatty acids in our diet and body are: 1. *oleic* has 1 *double bond 18:1(n-9)*, 9th one, cis$CH_3(CH_2)_7$-CH=CH-CH_2-$(CH_2)_6COOH$, one allyl like group (-CH=CH-CH_2-, C_3 like B_3 allyl sounds like ALA and the amino acid Ala 3 mnemonic) 2. *linoleic* (LA*) is oleic with ω6 extra double bond, a lean oleic, lost 2 hydrogens 18:2(n-6)*, so CH_3-$(CH_2)_4$-(CH=CH-CH_2)$_2$-$(CH_2)_6$-COOH, 2 consecutive allyl groups 3. *alpha-linolenic* (ALA) is linoleic (LA) with *ω3* extra *double bond*, a *lean linoleic*, lost 2 hydrogens *18:3(n-3)*, notice the extra *n* from lean in name, so CH_3-CH_2-(CH=CH-CH_2)$_3$-$(CH_2)_6$-COOH, *3* consecutive allyl groups 4. GLA, *ω6, gamma-linolenic* is ALA isomer CH_3-$(CH_2)_4$-(CH=CH-CH_2)$_3$-$(CH_2)_3$-COOH or *18:3(n-6),* 3 consecutive allyl groups 5. EPA *ω3* is ALA with 2 extra carbons and 2 extra *double bonds*, so *20:5(n-3)* or CH_3-CH_2-(CH=CH-CH_2)$_5$-$(CH_2)_2$-COOH, *5* consecutive allyl groups 6. ARA is *20:4(n-6), ω6,* so like EPA with *4* consecutive allyl groups, not 5, so CH_3-$(CH_2)_4$-(CH=CH-CH_2)$_4$-$(CH_2)_2$-COOH 7. DHA is EPA with 1 extra *double bond* and 2 carbons *22:6(n-3)* or CH_3-CH_2-(CH=CH-CH_2)$_6$-CH_2-COOH, *6* consecutive allyl groups. So easy to recall now: all 7 most important unsaturated fatty acids in our diet and body, oleic, LA, ALA, GLA, ARA, EPA, DHA have 1-6 consecutive allyl groups (alternating *double bonds)*. If I eat *2 pills of vegan* algal oil (like I ate Jan-April 2020, even if for 2017-2019 I ate only 1 usually), we get 4.88 g ω3, 3.69 g ω6, with *ω3:6 ratio of 1.32:1*, total fat 14.60 g. If I eat *3 pills of vegan* algal oil (May 2020 1st time) I get 5.37 g ω3, 3.72 g ω6, with *ω3:6 ratio of 1.44:1*, total fat 15.38 g. These ratios become lower when I eat more walnuts though, more like *1:1*. These numbers for *EPA* 20:5(n-3) or 20:5(ω3) are *good to know*, as when you look up foods they use 20:5(n-3) not *EPA* in some tables: flaxseeds with 22.81 g ω3 (100% ALA) in 100 g, chia seeds with 17.55 g ω3 (100% ALA), walnuts 9.08 g ω3 (100%

ALA), even non-vegan tilapia fish, you can see 33 mg ALA (19.5% versus 100% in plants), 5 mg EPA, 86 mg DHA, 43 mg DPA in 100 g tilapia for a total of 167 mg or 0.17 g of ω3, while canned light tuna got 0.279 g ω3 (tiny ω3 amount, plus 40 times more mercury than scallops, 10 times more mercury than sardines, salmon, shrimp, tilapia, oysters, mollusk) and most tuna types got 120-230 times more mercury than scallops making mercury elimination VERY difficult, depleting the body glutathione reserves used to get rid of other toxins, cooked scallops 0.396 g ω3 (199 mg DHA, 166mg EPA, 31mg DPA, 0 ALA), oysters 0.681 g ω3 (44.5% DHA, 39.9% EPA, 9.2% DPA, 7.4% ALA), canned sardines 1.69 g ω3 (51% DHA 865mg, 31.4% EPA 532mg, 3.6% DPA 61mg, 14% ALA 235mg), canned pink salmon 1.76 g ω3 (48% EPA 845mg, 46% DHA 806mg, 2.7% DPA 48mg, 3.3% ALA 58mg), raw pink salmon 0.62 g ω3. Our body takes plant ALA and makes DHA-EPA. For other types of salmon, see USDA nutrient lists, since raw soho got 3 times more ω3 than pink.

Chia seeds absorb much more water than flaxseeds, so if your stool is too watery, using more chia (instead of flax) seeds will make it more solid. If stool is too solid, flax or pollen is better (unless pregnant), because chia can make it too hard and slow transit time, increasing odor. Walnuts have 9% ALA by weight, and 39% LA by weight, while flax and chia have only about 6% LA by weight, so if LA intake is very low (no oils, olives avocado, no other nuts/seeds), 3-6 g (2-4 halves) of walnuts (or other LA rich foods such as popcorn which has 4% LA) may be useful since LA is important for many tissues in the body, blood vessels, skin. The diet above (14 g flax, 0 chia) has 2.5 g ω6 (mostly LA) without walnuts or 1.2% calories as LA (2.5*9/1859), as shown below. 6 g walnuts (2.3 g LA) almost doubles LA % to 2.3%. Walnuts have the highest ω3:6 ratio of any nut, except an exotic one nobody can buy in 99% of stores. The diet above lists 2000 g pineapple, which is huge (only ate that a few days of the month in 2018-2019), some days/weeks though I don't eat pineapple or just 150g, maybe 3 pounds of strawberries. It seems the prebiotic fiber in lentils is extremely good at feeding the good bacteria and starving the bad ones, so if you have smelly stool, try eat a lot of lentils for 1-2 days and see what a dramatic difference it makes; if the stool is too soft or almost diarrhea like, also avoid juices or water at meals, avoid smoothies that are too pureed/liquid (chew stuff more for a few days), eat more solid high fiber fruits and veggies, eat home made popcorn, ground chia seeds (they soak water, see start of this paragraph), eat 5-9 walnuts (like seeds, nuts add fat which slows down digestion, causing better water extraction from stool), avoid gluten (oats, barley, wheat, rye) and processed (at least over-processed) food. Corn is $1-1.5/lb or 2 if organic, so popcorn can be made in 2 minutes with a $15 hot air popcorn machine or microwave, 150g popcorn can sometimes turn very soft stool (that has transit time only 8 hours in vegans) into normal stool in half a day. Sometimes one may need 100 g popcorn for 3 more days after the first 200g.

Pollen also hardens stool, 3 spoons a lot, 1 spoon very little. 1 spoon pollen seems to diminish smell (pollen promotes diversity of microbiome, getting bacteria from 100s of plants, and 70% of

the immune system is in the gut, so immunity is boosted), 3 spoons to increase smell, as if there is a perfect microbiome balance that is achieved with 1 spoon. Oddly, 3 pollen spoons suck so much water, they make stool very hard, they increases transit time and thus toxins dumped into blood, plus stool smell, as it ferments more, so increase pollen amounts slowly. Circ 2014;130 (15):1245-53 mentions omnivores taking more LA had 15% less heart disease, for those who eat a lot of saturated fat (that LA replaced) compared to the low fat *vegan* diet that reverses heart disease. Other studies didn't find LA benefits, since LA replaced unsaturated fat. It's not known if within a mostly raw *vegans*, higher % of calories as LA is better, maybe not, because many studies show heart disease (hs-CRP too) is much lower when ω3:6 triples. There is a level of LA that maximizes lifespan, but we don't know it; 98% of studies have a flaw if you're a *vegan*: they study non-vegans. HC 2017;5(2):25 reports that Ikaria, other centenarians eat 2% calories as LA versus 6% for most, living longer maybe due to lower hs-CRP/inflammation; like most papers, it says that 1-2% LA is enough to prevent deficiency, 1.4% in infants.☺☺☺

The diet above has *fiber* for good bacteria *in g* = *76.6 g fiber/day.* The diet above (more typical of 2018-2019, now it's a little different, less pineapple, more blueberries and butternut squash, no chia seeds) has *1,859 calories (many times I eat much less pineapple or fruit, so calories will drop to 1500-1700, 58.7 g protein* (slightly more than one needs for 132 lb), 5,562 mg K, 560+ mg magnesium, 307 mg Na lowest hypertension people with low Na, 24.4 mg iron (about the needs of a *vegan*). My latest diet and vitamins are explained well in the food table, with dozens of columns, as well as the nutrient sections. For more on probiotics, see the red cabbage section. I only ate so much pineapple back then for a few weeks in 2018-2019, after 2022, I ate far less, usually 2000 grams in 3 weeks, not 1-3 days, more plums, which have same 1.4 g fiber/100g like pineapple. The example diet has the totals of 662 mg calcium, 2,456 µg RAE vitamin A/ (532 µg RAE extra if I add 100 g butternut squash) 1,209 mg vitamin C/ 9.6 mg vitamin E/ 1123 µg vitamin K/ 1,198 µg vitamin B_9. The 100 g watermelon offers 4.5 mg lycopene, the 125 g kale offers 49.4 mg lutein+zeaxanthin, the 125 g carrots offers α-carotene; I try to eat 100+ g butternut squash daily for more β-cryptoxanthin. I ate raw garlic or fermented garlic (ferments in 4+ days, becoming green, losing bitterness and smell, see how I made it in the reversing heart disease section) to prevent plaque 5 times. This diet is like Dr. Ornish's (and other doctors) who reversed heart disease by a *low fat high fiber vegan diet*. This diet, besides being prebiotic, also prevents the buildup of atherosclerotic plaque which can cause Alzheimer, strokes, etc. ☺☺☺

Most fat comes from walnuts+seeds whose intake is constant, so they largely determine the ω 3:6 ratio, regardless of whether I eat no pineapple one day or if I eat 9 plums instead of 2 (900 g instead of 200 g) or another 1,000 g of papaya or pineapple on top of the amounts above, which would make the fat percentage drop to 5.4% of calories or so, as total calories become 2,359 on very rare occasions, but fat and protein change very little. Swapping chia for flax doesn't change

3:6 ratio much, and may be safest, so I no longer eat flax. Walnuts have 4 times more ω6 than 3, so when not eating walnuts, the 3:6 ratio will increase, moving towards even less inflammation. The ratio will be *even higher* if I ate 14 g of flax instead of 7 chia and 7 flax and *no walnuts*, 4.49 ω3 and 2.53 ω6 if *1 pill of vegan* algal oil with *ω3:6 ratio of 1.77:1.* 4.98 ω3 + 2.56 ω6 if *2 pills of vegan* algal oil with *ω 3:6 ratio of 1.98:1*, 5.47 ω3 + 2.59 ω6 if *3 pills of vegan* algal oil with *ω3:6 ratio of 2.11:1*. This ratio drops to 1:1 if I eat many walnuts. If I ate 10 g flax, 0 chia, the ratio will be high too, if no walnuts eaten. Even if I eat no nuts/seeds, with 2 pills of algal oil, the ratio is 1.78g to 1.58 or *ω3:6 ratio of 1.13:1*. Most people eat a 3:6 ratio of *1:16* ► BP 2002;56(8):365-79, not *1:1* or *2:1* as above. This *1:16* low 3:6 ratio can increase CRP even 4 times, leading to inflammation. High CRP is linked to 16 times higher cardiac mortality. ☺☺☺

11.13. Acne, healing the body/brain with purple/blue/red/infrared light

11.13.1. Introduction: the use of light to cure acne, knee, hand arthritis and other ailments

11.13.2. Low Glycine, proline, etc cause acne, infarct (rough artery skin), stroke via low collagen

11.13.3. Eliminating gluten, dairy casomorphin (causes infant death too) & lectins cured acne

11.13.4. Increasing intake of vitamin B3, B5, B7, A, C, E, D, ω3, Mg, linoleic (if low), S cured acne

11.13.5. Increasing zinc intake, cured acne (collagen synthesis needs zinc and vitamin C)

11.13.6. Increasing selenium (Se) intake cured acne (detox needs Se for glutathione peroxidase)

11.13.7. Nickel allergy causes acne in some (Nickel is high in coffee, cacao, potato, tea, wheat)

11.13.8. Castor oil and avoiding warm water (in the shower) on the face prevent acne flares

11.13.9. Topical ceramides, salicylic, sulfur, zinc oxide and other products to heal acne scars

11.13.1. Introduction: Light for Acne, etc. Far IR or 6-14 µm heating pads penetrate much deeper into our joints allowing instant melting of the solidified synovial fluid that lubricates and nourishes joints with nutrients, leading to zero pain for joints that don't work well with the classic 660nm-850 nm IR mats. Infrared light penetrates sometimes 6 inches, and was used to kill all cancer cells, meaning the age of chemotherapy may be ending. IR also prevents autism. Even a regular oil heater you get for 40$ from Walmart, if you wear a lot of clothes or place a towel on it and then the part of the body that aches you, will help, as it has 3000-100000 nm (3-100 µm) IR, vs 850 nm in red light mats. This heat penetrates much deeper and it's more like far IR (3-100 µm) mats, 80$ each you can buy. Small 15"×8" mats have lights and can be used to

wrap/cover any body area, elbow, wrist, back, thigh, etc that has pain to help it after any injury or cold weather, etc. 660-850 nm also increases fertility when used on testicles (and probably ovaries), even sunlight works as it contains far IR and near IR (750-850) that do the same, etc. Check out this red light 660 nm and 850-940 nm IR cap that can help remove hair loss or knee pain or forehead pimples: "photons absorbed by CCO, especially within the red (600–700 nm) and near-infrared (760–940 nm) spectral ranges, can dissociate inhibitory NO (which) triggers... a surge in mitochondrial membrane potential, enhanced oxygen consumption, and intensified glucose metabolism, culminating in an amplification of ATP production within the mitochondria." See the flexible IR masks: (use some goggles with aluminum foil if any light gets thru due to an imperfect fit with your eye sockets): the 49$ (best value: 8 colors+IR, and has a spot light for pimples too, allows you to avoid paying extra for acne lasers, (white eye protectors hopefully work for some: can test with IR thermometer to see if object inside that eye hole gets warmer/brighter if you don't use aluminum tape to block IR/red; this mask has no negative 1 or 2 star reviews, unlike others, so that's a good sign it doesn't break right away. Avoid hard plastic inflexible ones as those are so heavy and can only be used while resting in bed, crush your face, collagen structure, etc. Blue kills acne bacteria, red/IR regenerates the mitochondria of the skin and eyes, used for preventing dry eyes. Amazon carries 500 masks. Keep eyes closed and the eye guides perfectly against the orbital area to prevent light going *to retina and damaging it*, don't open eyes as the people in the Amazon videos, as some light escapes and will damage cornea, retina giving you blindness. Even filif cow IQ MDs often use LLLT without proper eye protection. A video explains the amazing effect of IR light on human health. Try "Neutrogena® Light Therapy Acne Spot Treatment" 445+633 nm (google it to find new sellers) 30$ ebay. Always check RF signals as explained here, because WiFi tablets, laptops, devices, watches, routers, cell phones, cause pimples. This is more important today due to insanely high RF levels in every town. Add to that sound influences and it gets even more complex than vitamins and minerals.

Always wear goggles with Al tape (see pic) when treating face or body area with IR or visible light from bulbs, mats or any devices, since high intensity blue, red or IR light can damage eyes. 10 secs of red light with the Pulsaderm red goggles on, if using Pulsaderm mask or red lightbulb may be fine, if not using aluminum tape with the Pulsaderm goggles that came with the mask, but highest safety is achieved by blocking red light too, which the goggles don't (they block only 440 nm blue), as red light intensity may be more than outside light sometimes than our eyes are used to; plus these LEDs are made in China, even if Pulsaderm etc are designed and assembled in USA, FDA approved, you never know if quality control is best. Others used 730-740 nm light cap, which allegedly works better than the 660/850 nm for hair loss or related collagen issues that cause acne too, so give it a try when it goes on sale. Acne can be caused by fancy unseen devices used by govs to torture body parts, by increasing oxidative stress in one part of the face. They or

you need to check every single LED, that its spectrum matches desired pattern, with a cell phone (phone apps can turn phones into spectrometers) or some professional device. I bought a mp3 player and it broke 3 times in a row, returned all 3 of them, made in China.

ULTRASONIC BRUSH, NONROTATING TYPE: These are dangerous due to high magnetic field and RF, so be careful and don't use if any headaches. We want good brain, not to use this, among 300 methods of acne elimination. Many got rid of acne with the sonic brushes, like the US made Pulsaderm sonic scruber, or others. ***The issue is some of these have gigantic magnetic, electric and RF fields, due to cheap motors and these brushes can*** cause skin microtears as the Amazon picture about the safer non-spinning sonic brushes explains.☺☺☺ Some MDs suggest using the spinning brushes max 1-2 min/week, to avoid damaging the skin, those tears allow bacteria to enter and cause acne. A big issue with acne, is the same pimple reappears 30 times over 2 years, *because no blue light was used:* squeeze, alcohol, blue/red light pen (see below) after bursting a pimple are not enough, so use that blue light pen at least 8 min *after popping it, not just 0-2 min.*

VISIBLE LIGHT THERAPY: For only $30 one can buy an acne removal laser that shines 445 nm blue and 633 nm red light on the acne to kill P acnes; I used this for 15-25 minutes and any pimple will change fast from normal (huge red bump that stays that way for weeks or months if untreated, and impossible to break, due to thick skin) to beige color zit with thin skin ready to squeeze the beige pus out; the zit can be easily popped (don't try too hard to squeeze if it doesn't pop instantly, only pop when very soft thin skin at the top, otherwise, you can scar the face a little and it takes a lot longer to heal, 5 weeks instead of 5 days) and then healed with wet SA-S-ZnO. The $45 Pulsadern laser mask, can be used forever though, but it lacks the high intensity light of the pen laser above and it has a high magnetic field (1.5-4 mGauss > 2 safety level of EPA while worn in some mask areas if too close, so only wear 10 min a day as indicated and avoid high mGauss areas). A lightbulb may work better than these (only use 1 min/day if magnetic field is stronger than 1 mGauss (2-6 some LED brands), incandescents got lowest mGauss 1 mm away, 0.7 one brand, but half inch away is better since electric field is lower, since we don't want to heat the eyes, so it can be done 10 minutes, if you use a transparent 99.9% UV filter (window film on plastic), since incandescents emit some UV, LEDs much less), see below, since a lightbulb has 100s of blue/red wavelengths not 445/630 only, and papers show 400-600 nm broadband wipes out P *acnes too*; blue light can kill nail fungus too ► FM 2015;6:202. P. acnes produces specific porphyrins which can absorb these specific frequencies and move electrons into the excited state ► CCID 2014;7:145-63; upon return to the ground state, the porphyrins create free radicals that destroy the P. acnes bacterial cell. There are topical substances that produce even more porphyrins, so they're used sometimes in combination with light to destroy P. acnes. Red light for non-P acnes killing purposes works at other wavelengths (670, 810 nm) by donating light to cytochrome c oxidase (COO below), which can boost the

normal dermal cells and help the skin to recover after acne; this is a totally different mechanism. While anaerobic unicellular P. acnes also has cytochrome c, the structure is totally different than human version and bacteria cytochrome c often has a different function, as they use nitrogen, not oxygen as final electron acceptor. This explains why 670 nm can help human cells, but not bacterial ones, even if both have cytochrome c. JNCI 1975;55(1):115-21 shows a similar method was used since 1975 for destroying cells of tumors, by injecting them with porphyrins; today it's used for some cancers too. JCLT 2006;8(2):71-5 found "At the 12-week follow-up, the mean lesion count reduction was also significant at 81%", they used 415 nm (purple) and 633 nm (red). LSM 2007;39:180-8 (pdf) found 78% reduction in inflammatory lesions after 415/633 nm light (see dramatic pics of 1 male); the radiant fluences (doses) were 96 and 48 J/cm^2 for the red and blue light after each 20 minute treatment (2/week, 1 blue, 1 red).

FIMM 2003;35(1):17-24 found in vitro P. acnes reductions of 100,000 fold when treated with 75 J/cm^2 407-420 nm light 2-3 times with a 24 hour gap; it took 1 minute to get 1.25 J/cm^2 with a CL-420–1 system they used. JCAD 2016;9(3):25-35 found 445/630 nm mask was 5 times more effective than benzoyl peroxide or light+retinol+ 1% salicylic acid by some measures. Light can cure toenail fungal infections, 90% of which are caused by Trichophyton rubrum ► ADV 2010;90(2):216-7 (pdf has pictures). NF 2017;37(6):853-7 found "light (420 nm) irradiation caused obvious injuries in Trichophyton rubrum... At 6 h after the irradiation, the fungus in suspension showed a 30% reduction of viability." IDOJ 2015; 6(3):145-57 has more on light therapy of acne, but only 445-633 nm tech is cheap and widely available outside dermatology offices. Red light penetrates 6 *mm* into the skin, blue one only 1 mm ► PO 2016;11(6):e0157898; the study found 460 nm indigo (they call it "blue") and especially 630 nm red light speed up skin wound healing by promoting fibrous tissue, *epidermal* and endothelial cell proliferation. Others report less penetration (see table for blue, green, yellow, red light), but I believe they're wrong saying 633 penetrates just 1-2 mm, because when using it on toes, I noticed 633 nm illumines even 8 mm or more, see this in dim light; so take paper claims as hypotheses, not as in vivo. Red offers extra penetration, purple offers extra energy to jump electrons due to lower wavelength; 830 nm *infrared* (*IR*), which is half the energy of 415 nm purple was much less effective than 650 nm red light in preventing acne in mice ► AD 2016;28(2):186-91. Blood vessels are made of dermal like cells, so a *6 mm* penetration might rejuvenate even our vasculature (vascular wounds due to atherosclerosis, etc) and any tissue that has fibroblasts, etc. This could be used for rejuvenation in many conditions where we can get easily from 6 mm away. We could create red light emitting pills that heal the GI tract of people with gut problems. ☺☺☺

IJO 2016;9(1):145-52 explains that red and IR light are used to treat retinal diseases, wounds, blisters (Finsen got *Nobel* Prize *for treating* blisters *with* red light and lupus vulgaris with UV light), nerve injuries (optic included), brain issues, healing after stroke or heart attack, etc; the

paper explains that in 1960s Mester *treated mice with 694 nm red light and their fur grew faster after being shaved,* supporting other papers which show red light stimulated epidermal like tissues (hair and scalp), so it may be a therapy for baldness too; the primary recipient of red light seems to be cytochrome c oxidase inside mitochondria ► "Cytochrome c oxidase (COO) is the enzyme that catalyzes the transfer of electrons from cytochrome C to molecular oxygen, the final step in the mitochondrial respiratory chain and essential for the sustained availability of energy inside cells… (red light) causes marked changes in gene expression, including an upregulation *in the proteins that comprise the* mitochondrial respiratory chain and anti-oxidant genes… *a* downregulation *of* genes implicated in apoptosis (apoptosis is cell death; so it helps cells/humans live longer) and the stress response... cones in the aging human retina, and most prominently at the fovea, progressively accumulate mitochondrial DNA deletions and become more cytochrome c oxidase-deficient over time." Retinal damage in animals was diminished by 670 nm red light pre-treatment.

Visual acuity improved *in* 95*+% of patients*, in 0% receiving placebo 780 nm red light for 40 seconds ► PLS 2008;26(3):241-5. Brain performance increases after red/infrared (IR) ► "A 500 mW continuous wave LED source (mixture of 660 nm red and 830 nm NIR LEDs) with a power density of 22.2 mW/cm^2 (area of 22.48 cm^2), was applied to the forehead for a typical duration of 10 min (13.3 J/cm^2). In the first case study the patient reported that she could concentrate on tasks for a longer period of time (the time able to work at a computer increased from 30 min to 3 h). She had a *better ability to remember what she read*, decreased sensitivity when receiving haircuts in the spots where LLLT was applied, and *improved mathematical skills* after undergoing LLLT... COO has absorption bands around 665 nm and 810 nm… 730 and 980 nm groups did not show a significant improvement in NSS and these wavelengths did not produce similar beneficial effects as in the 665 nm and 810 nm" ► BBAC 2016;6:113-24; the paper also presents other studies showing similar results. "patient with a history of multiple concussions who had been on medical disability for 5 months prior to transcranial LED treatments, returned to full-time employment after 4 months of nightly, home LED treatments" ► JNT 2014;31(11):1008-17. Better memory/cognition, "increased function, better sleep, fewer angry outbursts, less anxiety, and wandering were reported" after 12 weeks of weekly 810 nm LED treatment of Alzheimer patients ► PLS 2017;35(8):432-41. We'll live to 990 thru lights that enhance rejuvenation. ☺☺☺

Far IR 3,000-100,000 nm promotes wound healing ► JMM 2017;95(11):12-3. Far IR treatment (the expensive far IR mats, $200-1500, used in EU hospitals for a century) led to double the capillaries in mice with some wound, speeding healing significantly ► PLM 2012;4:255-66; far IR (which can penetrate up to 4 cm or 1.5 inches) promotes angiogenesis (when an injury happens the first thing that gets destroyed is capillaries, so creating new ones is key to healing) and is more expensive to generate than the cheap near and mid (700-3000 nm) IR we can get with 3

returnable lamps: $67 300 W 500-1700 nm, $34 36 W US designed 660+850 nm, 143 mW/cm^2 @ 3" (7.6 cm), $24 US assembled (got China office to check quality, replaced for free within 3 years, the only IR bulb/lamp with 3 year warranty, high dirty electricity (on local socket only, not the rest), electric field at 6" 40-150 V/m, 250 V/m at 5", depending on meter and lamp, keep 9" away for maximum safety, also got nice spectrum pic) 850 nm only or 660 nm only (these last longer, as no heat from IR LEDs), 52 mW/cm^2 @ 6", $38 low EMF, 0 V/m at 6" 24W US, WI designed 660+850 nm 100 mW/cm^2 @ 3", $66 54 W bulb 660+850 nm US assembled.☺☺☺

JPPB 2017;170:197-207 explains more of the dangers and benefits of IR therapy; Beurer (a few youtube videos, only, odd company) and other IR devices have listed in the manual a range of 500-1700 nm or 3-30 µm for far IR mats (warmed Earth emits far IR around 12500 nm, so does a room we previously heated with a $40 700w or 1500 W (3 settings 600, 900, 1500, 600W enough in warm climates) silent oil heater, (the oil type at Home Depot, Walmart, Amazon are much better than the super hot radiator, red hot elements with grills, as those dry the air 10 times faster and make dry eyes drier) so a heater floor, wall, area, radiating IR back to us, has some of the effects of far IR mats, without the huge EMF pollution some mats generate, just like human bodies emit far IR around 3-50 µm with a peak at 9.4, hence 6-15 µm far IR mat rays are often called biogenetic rays) and in the first 5 minutes of heating up the actual emissions can be more in the lower wavelengths of the stated range, and then peak up at 1250 nm (Beurer) or 8000 (others). Berkeley Lab explains even 500-550 nm light can damage retina, not just IR as the 2017 paper explains, so wear blue blocking or, safer, Pulsaderm goggles wrapped in aluminum tape (since blue blocked don't block all blue range) with such devices. TheraLab 900 nm 300 W $54 lamp has its plastic melt per an Amazon review (used 3 times/day without letting plastic cool first?), so 18-36W lightbulb is way safer. 500-650 nm light from Beurer (no videos on their youtube about this '#1 company in Germany' manufacturing process, just 20 videos, a few reviews of Beurer TheraLab like lamp by people who hold it too close or suggest using it for more than 15 min daily (not safe probably), never answer phone and by email never shares mW/cm^2 at 12 inches) can produce a lot of free radicals that damage the skin, if used daily ► "Visible spectrum of 400-500 nm dose-dependently induced ROS in cultured human fibroblasts at doses equivalent to 1 hour of sunshine on a sunny summer day (150 J/cm^2). A pretreatment for 24 hours with 1 µmol/L LicA reduced ROS formation to the level of unirradiated cells while UV filters alone were ineffective, even at SPF50+… HEVIS [400-550nm], but not red light, induces hyperpigmentation... VIS (400-700 nm) and UVA1 (340-400 nm) synergistically induce skin pigmentation and erythema"; they found Lic-A (licorice polyphenol) reduced free radicals caused by visible (or UV) light at 100 times lower concentration (1 µmol/L) than vitamin E (100 µmol/L) and other antioxidants used in sunscreens ► PPP 2020;36(2):135-44.

That's why lamps that emit anything below red light (600 nm), may be unsafe for many if used

daily for 5-10 minutes too close, and for the skin sensitive, anything visible. Normal LED light bulbs are 2-10 feet from us, so intensity of red light (mW/cm^2) is far lower compared to a red light only LED at 1 ft or daylight – see spectra showing why visible red light can be stronger than red LED on sunny days, leading to free radicals. We lose 0.59kcal/g sweat, so a medium meal of 300kcal for 500g sweat, same as running 3 miles, so when on a far IR mat in a blanket, we exercise our heart and body and may lose even 900 kcal (9 mile run), in *30 minutes*, just drink water afterwards or watery low cal veggies to avoid dehydration. As toxins are released, our skin quality improves. Good for those who don't run. Philips and other heat lamps people buy from Amazon produce 200-600 nm (see graph), even though they have a red filter at 600 nm to prevent hemolysis (rupture of red blood cells, used to treat vascular lesions with IPL), but it's not clear how effective this red paint filter is, given the lifespan of these is only 300 h (16 pg pdf). That's why Beurer, which seems to allow 500-600 nm to reach user (or even a tiny bit of 400-500), is not very safe if used too much very close, it all depends on mW/cm^2, but Philips makes similar to Beurer lamps in Germany. Bob explains why far IR heaters relieve pain much better, while typical heaters don't: they penetrate 40-60 mm vs a few mm. If you ever buy one of the 100-250 W heat lamps, place them on a support where a tray is just 1" below or so, because these can break, by falling off from the lamp (read Amazon reviews, these are very heavy, never place them above you) and you don't want glass to fall near or on top of you; always sideways, and with a tray just 1 inch below to catch anything if the glass breaks. Your lamp needs to be made for 100-250W to avoid sparks, bursts and short circuit; you see now they have these plastic enclosures as with Beurer: safety, since 250 W bulbs puts out the heat of 100s of LED light bulbs. Warm showers activate the vagus nerve, parasympathetic nervous system, just like eating before bed, so it takes us from our fight-flight brain into sleep mode easier, just as red light or infrared light can do the same (relax on an IR mat or let the light warm up the belly). ☺☺☺

IR-A (800-1200 nm) can also activate cytochrome c oxidase, but without so many free radicals formed. Often times with far IR mats, to get max benefits you need use it at least 10 minutes on a body area, and then move to avoid overheating a tissue, simply because it takes at least 5 minutes to heat up, so then you get 5 min of warmth. However, they do produce EMF and you can get IR from other sources. If mass produced and improved, these far IR mats, with their increase of cellular oxygenation and respiration, can heal deep inside the body and prevent endless diseases or even lives (for severe injuries). If we have a dam that can withstand 5 million liters of water, it's fine, but if we put a few more liters it will break. Same thing is with our body, in some infections or diseases, even COVID19, a little extra cellular oxygen can make the difference between life and death, severe organ damage or minimal, amputating or not, as the dam doesn't break. Alzheimer, many diseases are caused by atherosclerosis, the clogging of capillaries, so far IR finds an alternate route to supply oxygen and nutrients, via angiogenesis,

new capillary formation, to tissues that otherwise would be dying, as our neurons do inside the skull every decade of life, hence our brains shrink. That's why far IR helps with memory too. Of course, we need more studies to see the best safest methods, potential risks of far IR with long-term use, but when it's about life or death or big things at stake, people will try it, it's not like doing minutes a day to prevent Alzheimer 50 years later and have 2x the brain performance at 90 than otherwise. IR heat around the womb needs be avoided by pregnant women and prior to conception around scrotum by men as explained in the heat section. ☺☺☺

"Cytochrome oxidase contains four redox metal centers: CuA, CuB, Hem a, and Hem a3. In the catalytic cycle of cytochrome oxidase, electrons are transferred sequentially from water-soluble cytochrome c to CuA, then to Hem a and to the binuclear center a3-CuB where oxygen is reduced to water. These metal centers determine different light absorption peaks for the enzyme: 620 nm (range 613.5–623.5 nm), 825 nm (range 812.5–846 nm), 760 nm (range 750.7–772.3 nm), and 680 nm (range 667.5–683.7 nm), which correspond to CuA reduced, CuA oxidized, CuB reduced, and CuB oxidized, respectively… In neural tissue, cytochrome *oxidase* is the most abundant metalloprotein and wavelength peaks in its absorption spectrum (*670 nm + 830 nm*) highly correlate with its peaks in catalytic activity and with ATP content in vitro" ► EB 2011;3:49-67. Several studies indicate neurogenesis (which can happen in late adulthood), synaptogenesis increase as a result of red/IR light, benefits can take 1-4 weeks from IR exposure to notice; even muscles improve (heart muscles too) ► "*a* fivefold increase in nerve growth factor mRNA transcription occurred after irradiation of skeletal muscle cell culture with 633 nm" light ► NDT 2015;11:2191-208. ► "longer wavelengths (up to 1,000 nm) will penetrate deeper; however, the absorption of water begins to predominate above 1,000 nm".☺

Some studies show P. acnes bacteria die also when shining a broadband light, 400-600 nm, not just exact wavelengths. Because of this, if one has acne, one could use a normal bright white lightbulb lamp (incandescent has more 600-800 nm red light, more 400-425 nm "blue" (it's purple, indigo) light, way more 800-2,500 nm, cool white LED has more 425-500 nm blue light as you can see at the pic/LED.pdf graphs for spectral intensities (if LED use EcoSmart, not Philips, since magnetic field is lower within 1 inch), best would be using both to destroy P acnes, and help the normal cells via 670/810 nm cytochrome c oxidase), after completely covering the eyes with an eye mask that blocks all light, to go around the face, with or without touching if too warm, in acne areas for 1-5 minutes daily, flooding the dermal cells with the red and blue light in the bulbs. Use only light bulbs and desk lamps you tested with some meter like the GQ EMF-390 or Trifield meter to have mGauss below 2 at the distance used, if used more than a few minutes, less time if higher mGauss. Only 10% of an incandescent energy is visible light according to energystar.gov; the other 90% is 800-2,450 nm IR light which was also used for healing in hundreds of studies. Figure 7 at Sensors 2010;10:3961-88 shows the typical spectra of halogen

and incandescent bulbs which produce a lot of invisible IR up to 2,450 nm. A lightbulb emits maybe 1500 lumens. The brightness, $B=L/4\pi r^2$, L = luminosity (lumens), r is the radius of an imaginary sphere around the bulb that catches all light. Since the sphere surface is $4\pi r^2$, the lumens/surface area or brightness is 1 million times greater at 1 mm away from the source than at 1 meter away, just like cell tower power density decreases by r^2 as we move away. Outside sunlight, when sunniest, can reach 100,000 lm (lumens)/m^2. While 1 mm away from a 1,500 lumen LED, we may reach 1 million lux max, since LED surface is already 10-15 mm from the center. That's why to destroy P. acnes, one has to be close to the light, otherwise, it's just like some overcast day 2,000 lux or lumens/m^2; 1 lux is 1 lm/m^2. Halogens have too little blue light to destroy P. acnes. LEDs emit almost nothing above 800 nm. ☺☺☺

11.13.2. Low glycine, proline, etc cause acne, infarct (rough artery skin), stroke via low collagen

Don't treat acne cosmetically or topically too much, figure out what internal deficiency causes it, since acne is a symptom of a life threatening issue, gut leak, hormone imbalance, nutritional deficiency that if left unchecked and untreated, and erased with acne treatments, can lead to 50 years shorter life via toxin buildup, stroke, infarct (half heart attacks are lethal) from deficiencies the acne tries to reveal to us: if arteries get rough due to low vitamins, minerals, or amino acids, you could die at age 30 due to infarct. Collagen is 35% glycine, 15% (hydroxy)proline, 9% alanine, 8% arginine, arteries are skin collagen tissue, meaning glycine, proline alanine, arginine deficiency (try 9 g glycine, 2-4 g proline, 2 g alanine/day, 2 g citrulline (arginine precursor, raises blood arginine a lot more than arginine) causes rough bumpy arteries that bring death: low collagen means vessels can't repair fast to stay smooth (low shear rate/turbulent flow), minimize arterial acne creating P. acnes plaque starting points, clots. Low collagen gives us leaky gut as there is no collagen to repair the gaps instantly: gut lining is skin like collagen tissue, so toxins can invade brain, arteries, organs via the broken gut. Acne isn't a dermatology issue, but a nutritional problem, people need to visit the Nutritional Doctor first, not to hide acne via IPL. One pimple is like a house fire: a reason for parents to visit a nutritionist urgently, or even 10. Glycine aids in tissue extracellular matrix repair, which helps heal acne lesions (not cause them), gives skin elasticity. Leaky gut allows leaked toxins, microbes to create arterial plaque or amyloid plaque via oxidative stress. The body will try to eliminate leaked molecules via pimples, so you need to have enough glycine, proline, etc, zinc, vitamin C to boost collagen production (avoid bone broth, as that has heavy metals and glycine, proline are easier to absorb as free amino acids to make fresh collagen than bone collagen being split into glycine, proline to make collagen). Your amino acid pool will provide the rest of amino acids to build fresh collagen and then you eat your meal, ☺☺☺. The lack of collagen causes endless issues, for arteries (artery pimples can't heal the scars as face acne scars can't heal fast either, so arteries lose smoothness needed for a long life), for ocular health (acne bacteria feed off the sebum in the meibomian

glands that provide the lipids to keep tears from evaporating, so low glycine, proline cause gland atrophy and ensuing evaporative dry eyes that can lead to blurry vision, ocular infections, uveitis, and a series of events leading to cataracts or even blindness. Thus acne is not just a "small issue", it can be often a sign the most important body protein can't be made in sufficient amounts, which will kill you at 62 instead of 99. Leaky gut may need 2 g glutamine for 3-9 days too, though 3-9 g can cause acne via TOR. Too much protein though, from any source (even legumes), can cause acne by activating TOR, with animal protein even more acne due to more TOR activation via methionine. A serum amino acid panel can tell what is going on better. 35% of body protein is collagen, it's the scaffold for all food goes thru from mouth to anus. Once acne is gone, glycine can come down from 9g to 5g, proline to 1-2 g/day, vegans lack these more. Today, we can buy creatine (can cause acne via raising DHT, leading to hair loss in people whose DHT responds fast to creatine), β-alanine, carnitine, amino acids, and many more to get what vegans can't take from meat, in order to avoid inflicting pain on animals, as that destroys the human quantum field. We need to keep our bodies healthy, but not via blood spilling. We need to use science, the Immortalist Anthem of Knowledge to overcome the demonic desire for blood eating as in meat and dairy, overcome the animal within. We need to clothe our souls and America with the Glistening Garment of Virtue Radiating in all *Universes* as The Light of a Trillion Suns, so all can rejoice in the Resplendent Magnificent Bounteous Effulgence of Eternal Immortality *for* All via a gentle tender soft nurturing loving healing kind universal immortalism.

High glutamine causes acne, acts as an anabolic fuel for rapid cell growth, raises IGF1 which promotes cancer (glutamine fuels existing cancers, omnivores have more cancers due to higher IGF1), which accelerates skin cell division, sebum production. Glutamine, BCAAs amino acids raise mTOR, causing sebum (more MGs oils to keep tears from evaporating, more tears, less dry eye, higher testosterone) and acne, so avoid high BCAAs protein powders if acne happens after use. This higher turnover by glutamine also promotes autophagy in the brain. All mTOR activators raise heart rate, speed aging too. Glutamine plays a role in brain health too, via GABA. Hence, don't take glutamine before any MRI, CT scan, as even RF from MRI can cause cancer.

11.13.3. ACNE is due to β-casomorphin-7 immunosuppressant, which is higher in A1 milk, vs A2, so removing A1 or all dairy led to 100% acne cure, as nature's thanks to kindness for animals too

Before going into dairy lethality over 3 pages (millions quit dairy/gluten and got rid of acne, rosacea), it's worth mentioning that some get acne due to gluten (see how bad this protein is, causes leaky gut in many, like dairy BCM-7) or due to lectins in unsoaked legumes, grains, nuts, seeds (here is how to soak lentils) that cause leaky gut, enabling toxins to enter the blood, to then be eliminated via acne. Just as milk BCM-7 causes leaky gut, so can antinutrients in bakeries, bread, cakes, donuts, cereals, restaurant or canned legumes which are never soaked.

Tomato products also contain lectins that can cause acne, you may need avoid tomato alkaloids that raise histamine if all else fails, see the lycopene section.☺☺☺. 500+ papers blame most acne in the West for high dairy consumption (dairy has hormones, iodine, antibiotics and these can wreck the microbiome, cause leaky gut for toxins to enter the blood) ► IDOJ 2011;2(1):2-5. 47,355 women study found a link between acne and intake of total milk, skim milk, instant breakfast drink, sherbet, cottage/cream cheese ► JAAD 2005;52(2):207-14. A 4,273 teenage boys study found a positive correlation between milk and acne ► JAAD 2008;58(5):787-93. Dairy, like meat, is rich in antibiotics (unless it is organic), which kill good bacteria, and damage the gut, causing leaks that allow toxins to enter and then be eliminated by the body via acne. Antibiotics destroy the immune system that resides in the gut mainly, making the body less able to fight the acne bacteria. 99% of dairy and meat are not organic. But, even organic dairy can cause acne via another mechanism: 80% of cow milk protein is casein, vs 40% of human milk. 30% of casein in cow milk is β-casein. 12 types of β-casein (209 amino acids) exist, with A1, A2 being most common: position 67 got proline in A2 and histidine in A1. β-casomorphin-7, BCM-7, *is produced when we eat* A1, *but not so much when we eat* A2 found in human and goat milk. Our gut was made to digest breastmilk not cow milk, so kids who drink formula are lower IQ. BCM-7 *is an* immunosuppressant opioid *linked to* diabetes *1 incidence* ► Diab 1999;42(8):1032. This means higher sugar, which is known to cause acne by raising TOR. BCM-7 irritates the gut of many, to the point any dairy causes acne. If we suppress immunity, we get colds/flu often, the brain becomes inflamed and IQ lower: once I gave up dairy, I got far fewer colds. Acne is caused by P. Acnes bacteria weak immunity can't fight. EJCN 2006;60:921-6 links autism, heart disease, diabetes to A1 milk (most in the West). Casomorphins are associated with autism, delays in psychomotor development, infant crib death, type 1 diabetes ► Pept 2003;24(6):937-43, see instant kid death video. Cruel, low IQ mothers who drink cow's milk, poison their kids thru their breast milk, that contains some BCM-7, unlike BCM-7 free milk of dairy free lactating mothers: as a result, kids' motor functions, IQ are diminished, especially if breastdeeding stops after 4 weeks, as in today's ultra lazy world. These cruel moms kill their children, because morphine, like many drugs and BCM-7, depresses breathing and babies run out of breath, in sudden infant death. Giving morphine to infants is GENOCIDE. Kids can even get acne for 15 years, as the pro-dairy "dermatologist" tries everything, but veganism. Pept 2009;30(10):1854-60 says "deterioration of bovine casomorphin elimination (may cause) ...autism." NNS 2000;3(1):57-72 shows autistic kids have more BCM-7 in their urine, see why cow milk produces more than human milk. See also these 6 videos on autism going away after a dairy free and gluten free diet. Autism was cured by removing gluten and dairy (casomorphin and gluten damage the brain-barrier, and then the speech center, so dairy causes "mute" kids who start speaking at 7) ► NNS 1999;2(6):435-9. Dairy lowers IQ, makes all autistic.☺☺☺. So much for Krishna's special wisdom of cow milk being holy and genocide being OK because "God already did it", or Jesus' idea of

"give us our daily bread" to die from acne in arteries, low IQ, diabetes and colitic, colon cancer. Love religion?

The endless issues with cow milk are here, obviously, religious fanatics say "cow milk is God's gift", so they remain bacteria living a nanosecond (80 years is a nanosecond), fighting any progress towards eterni foods, powders that become thick milk when dissolved in water to give all 4000 year lifespan or much longer later. Sometimes dairy gives acne due to AGEs, with the person being able to handle traces of BCM-7 quite well. In that case, you need cheese that removes most potential BCM-7 by removing 99% of casein, meaning cheese made from the 20% of cow milk protein that is whey (most cheese is made from casein, so it will generate BCM-7 during digestion), from the farmer that was never processed or that you make at home from raw milk. Urda cheese or other home (no heat, to avoid AGE creation) or farm made low fat WHEY cheese, or yogurt, milk have less toxic AGEs. Common in many countries, urda is made with wet (not dry, as that creates oxidation products, more AGEs) heat like the more known whey cheese called Italian ricotta (true whey ricotta, whey cheese, made from whey left over from production of the lethal casein acne causing mainstream cheese, not the ricotta in name only) which is also slightly sweet, since all whey cheese (whey, left over after cheese making, has 50% of milk solids, including most lactose, the sugar in milk) has a lot of lactose (not good for lactose intolerant, it may cause gas). 20% of milk protein is whey, 80% is casein. Urda is made from whey, like ricotta. Urda and a lot of ricotta is very white, while some whey cheeses are yellow or dark yellow due to higher heat, different process, burned lactose, added ingredients or AGE production, so avoid yellow cheese, real whey cheese, minimally processed, is very white. Most teens who eat processed high fat store cheese, have acne quite often, due to high fat, high AGE, low ω3:6 ratio, processing that denatures proteins, due to the banditry that runs the entire FDA-food industry mafia. Urda is very low in fat (thus AGE), while pizza, most supermarket burger cheese have bovine growth hormone, high AGE (AGEs destroy blood sugar regulation, pancreatic cells and high glucose causes acne) due to dry heat and high fat, and due to ω3:6 ratio 1:7 leading to more inflammatory overall diet low ω3:6 ratio. However, you need to realize that all dairy contains the FDA banned nasty trans fats only found in meat and dairy not vegan foods, such as the conjugated linoleic acid (CLA) and vaccenic acid, produced in the rumen of cows. If access to unprocessed white urda or ricotta whey cheese is not possible, try the denatured and damaged by industrial processing whey powder, to see if that gives you acne from the toxins of processing or not. The best is quitting dairy-meat altogether, as trans fats can kill via infarct and stroke. Alternately, you can encourage Eterni Foods or drinks based on chia seed milk, walnut milk (Elmhurst 6L/41$) (you can make chia or walnut cheese at home or start a company) as these have 10-20x more ω3 than any vegan or cow milk in existence now; chia milk is best as it got 10 times less ω6 than walnut milk; flax has cyanide, so chia is by far the healthiest ω3:6 ratio

milk, especially if we add some vegan algal oil DHA-EPA to complete the ω3 profile. Chia milk might eliminate annoying acne in millions of people allergic to dairy. "Smokers had more, primarily comedonal, acne than nonsmokers." ► JWH 2012;21(2):223-30. Japan has far less acne than US due to a way healthier diet/BMI, high in scar regenerating iodine (invisible skin scar that happens before the pimple forms). As nations ate more dairy-beef (hormones, allergic proteins), sugars, milk (vs soy milk), junk, Japan/world acne rates soared ► BJD 2025;192(2):228-37. ☺☺☺

This 36 min video explains how one lady got acne due to allergy to several foods and dairy and how getting more vitamins and natural supplements, she fixed her hormonal and allergy acne; she says any acne below the nose is usually hormonal if very big and nasty, and sugars cause her breakouts, so lower the sugar intake. Hormones in dairy, given to produce plenty of milk ultra fast, can also cause acne, even if you eat whey cheese (casein free) or A2 milk known to generate less BCM-7. A guy got rid of rosacea acne by eliminating dairy. Website shows acne pic before and after an unprocessed vegan diet. AGEs cause inflammation, so to reduce acne, avoid any fried dairy, meats, the high AGE foods, like fatty dairy, fatty chips, fatty meat. Any meat gets far less AGEs if you buy it unprocessed and then cook it yourself at home under water in a pressure cooker as that removes oxygen contact 100%, meaning less oxysterols, less AGEs, less acne. You may not go vegan, but you can lower AGEs intake by the choices above. The clueless Jesus ate meat: if Jesus can manifest 5000 loaves of bread, he can manifest 1 mg of happy chemical in the minds of all war starters so no war starts since 33 AD. Jesus ate meat, which, like with 67 proline/histidine causing infant death, autism, low IQ, diabetes, no speech, no walking (miracles of hearing, bread loaves, walking all faked), contains human like proteins, lipids, etc, which, when eaten ready made, insert themselves in the brain, like mad cow disease prions, and cause psychiatric (Mt 21 Jesus violence + Jn 14:6) disorders, dementia. That's why eterni foods are superior, they avoid any protein, come directly as amino acids and peptides known to save energy and create the best structures, that none have today in their brains. Why waste energy digesting protein, when we can provide amino acids, etc directly? If Jesus was God how come nobody praying to him has acne disappear in 1 minute, nobody ever lived to 700 praying to him, since eternity is infinitely more than even 1 trillion years? God should be able to give us at least a trillion year life, if we believe God gives eternal life. Think. Then, you will agree that perhaps, Only Knowledge via Scientific Work gives us Trillion Year Life, so we may have the time to study see what God is all about, become kind and ethical enough to perhaps go to a nicer "afterlife".

11.13.4. ACNE can be due to low B_3, A, C, E, Mg, LA, B_5, B_7, D_3, Cu; topical lotions aren't enough, we need fix vitamin deficiencies internally as those can kill us slowly via clots from arterial acne

This section has 6 subsections dealing with the most common causes for acne. B_5 is the most underrated vitamin used to prevent acne and heal acne scars: 500-3000 mg/day for a few

months or years in the worst acne cases, with 1 g minimum for medium acne cases (forehead scars, etc). B_5 500 mg worked wonders for many, so if all else fails, try taking B_5, glycine together, if glycine fails alone. B_5 is a catalyst for *chemical reactions of fat metabolism that clear sebum and fat accumulation in the follicles and skin*, thereby preventing excessive sebum buildup that clogs pores and leads to pimples by extra fuel (fats) for the P. acnes bacteria. B_5 also helps your brain fight oxidative stress, etc. Add some CeraVe cream too, see below for scars. Topical and oral melatonin (dissolve pure powder in water) also improves the skin and may diminish acne scars, breakouts. The skin care store sections got acne creams with B_2, B_3, B_5, B_7, K1-2, A, C, D, E, CoQ10. Each vitamin plays a role in fighting acne topically and internally. Acne, dementia, *heart disease,* diabetes, *etc often have* one cause: low tissue (not necessarily visible from serum, but in nails, hair, urine, feces) levels of Zn, I, Se, Cu, D3, topical or internal sulfur, with total cure happening after the deficiency is fixed. You need a strong immune system to fight acne, that means low copper and low D3 cause acne too, and since Mg is essential for D, you need enough Mg too. MgO keeps feces moving and soft, preventing overproduction of bacterial toxins that enter blood and cause acne. Vegan stool transit time is much shorter, due to 5 times more fiber, so they got less acne. B_3, A, C, E (see links) are used widely in cosmetics to improve the skin tone, diminish acne, but we also need these vitamins internally to prevent acne, not just topically, since people with low levels of these have acne on the face and in the arteries, increasing the risk of vascular dementia, death by stroke or infarct via clots formed by ruptured plaque. Vascular dementia is a slow process of arterial acne that destroys your brain over 30 years or even 50, later you won't recall anything you did the previous month, hour or day, your brain arteries will look like this, brain will die by starvation due to a high fat toxic diet. Acne is far more serious than people imagine: it is an urgent plea by the body to avoid catastrophic outcomes, it can't be cured with our silly "topical lotions sections the size of 50,000 Walmarts in all kinds of stores", we need a nutritional immortality class from age 1 to 25 required for all, weekly at least. With proper nutrition all acne vanishes fast and all live to 4000. Our society focuses on looking good on the outside, ignoring the disaster inside, acne is a nutritional disease.

11.13.4.1. ACNE due to low B_3 status (urine, nail, hair, feces, RBC or serum)

B3 (see details) inhibits the bad IL-8 cytokine production in keranocytes ► JDS 2009;56(2):106-12. B_3 "has a stabilizing effect on epidermal barrier function... leads to an increase in protein synthesis (e.g. keratin), has a stimulating effect on ceramide synthesis, speeds up the differentiation of keratinocytes... improves the surface structure, smooths out wrinkles and inhibits photo carcinogenesis." ► JCD 2004;3(2):88-93. "4% nicotinamide B_3 gel is of comparable efficacy to 1% clindamycin gel in the treatment of acne... Because topical clindamycin, like other antimicrobials, is associated with emergence of resistant microorganisms, B_3 gel is a desirable alternative" ► IJD 1995;34(6):434-7. B_3 was better than clindamycin. Amazon sells 50 g of topical

gel 4% B_3, but you can buy 100 g B_3 for $12, just mix a little with water soluble vitamin C (1kg, $19) to create a "C/B3 serum". ☺☺☺ I sometimes used the 10% sulfur + 3% salicylic soap, on the face only when I got acne. Fat soluble vitamins (A, D, E) can be bought as powders and dissolved in some oil: retinol vitamin A (JCAD 2012;5(5):32-40 lists common topical acne treatments) to make your own cheaper and better topical non-drying oily gel. Fat soluble vitamins become much more soluble in water if we add the isopropyl alcohol: ethanol addition increases vit E solubility in water 450 times ► JCED 1998;43(4):590-1. Isopropyl alcohol is less polar than ethanol (extra CH_3 group), so it raises vitamin A, D, E solubility more than ethanol.

11.13.4.2. ACNE due to high glycemic index diet and poor sleep habits

AJCN 2007;86(1):107-15 found after 12 weeks, acne count decreased 51% in the low glycemic diet group versus only 31% in controls: "rates of acne have increased with the adoption of Western lifestyles", just like colorectal cancer rises 60 times when Africans move to the USA (other diseases for other groups) and many fiber types heal the gut, prevent acne, as shown in the fiber section; diet affects acne, more fiber led to less acne. This is because more fiber is lower glycemic index and feeds the good bacteria that produce short chain fatty acids that heal the gut lining, preventing the entrance of toxins into the blood stream, which leads to acne as an elimination of toxins path. The glycemic index values, issues are detailed in the watermelon section. When I cut watermelon intake 12 fold, from 1200g/day average to 100, most pimples vanished (I also eliminated most walnuts, as acne bacteria feed on sebum and low fat means no skin oils to feed the face bacteria we all have). Cut all foods with added *sugar too*. Walnuts contain 39% ω6 LA, which is inflammatory and 5-7% of calories as fat is fine. Stress boosts cortisol and acne breakouts. High calorie meals (use food table to be under 570cal/meal) or high sugar meals raise glucose levels suddenly, causing a huge rise in insulin, which then causes the adrenal glands to secrete androgen hormones that promote the production of sebum (food for acne bacteria) and even of tears, oils in the eyes. That's why eyes are less dry after a big meal, the sebum is produced in the eyelid glands and tears in the lacrimal glands. Glucose ⍰ insulin ⍰ androgen ⍰ sebum ⍰ acne. So, cut added sugars, soda, etc. A popular compound is berberine, which lowers blood sugar, and thus prevents acne breakouts. Avoid overeating many detoxifying foods one day of the week (spread them over 7 days, say garlic, liver detox veggies, fruits or high selenium foods), because they cause the immune system to rush to the site of the toxins (blood etc) and run away from the face, leading to the overgrowth of facial acne bacteria. Propolis is a natural antibiotic and 1% of honey: it can act like man made antibiotics, without the damage, since our DNA is used to bee products. Many noticed when eating propolis pills, zits disappear. Since propolis stimulates immune function, it helps fight atherosclerosis and acne.

Erratic sleep hours also cause acne, due to T cell count falling 3 fold after a bad night sleep. Low

T cell count means low immunity. Wash pillow more often or buy pillow with silver thread that has 10000 times fewer bacteria per cm^2. Drink water to hydrate skin and sleep 8 hours without eating during the night, fast 9-112 hours daily if possible, by not eating between 10 pm and 8 am or whenever you sleep, just drinking water to detoxify liver, kidney, give rest for cellular repair to all organs. When we lose belly fat by fasting, we lower system wide inflammation which fuels acne. The fasting boosts our immunity, enabling it to fight the acne bacteria. Remove facial acne powders, lotions, etc before sleeping, as they can get on pillow, into eyes, causing dry, red eyes or far worse (cosmetic creams don't have labels to tell people to avoid using around eyes, so they may cause issues; our eyes are way more important than having the most shiny perfect facial skin). Sept 20th to Oct 4th 2020 I had no acne breakout 1st time since 2016, since there was no nightly CIA torture of sleep for 2 weeks, the only such "nice sleep" period in 12 years 2015-2026, see my diet in food.ods, no detoxifying foods eaten, regular sleep, not too bad, midnight to late morning. Likewise, any big injury can cause the neutrophils to go to the injury site and leave the face unprotected, and collagen depleted, as it goes to the injury and immunity can't be as strong, allowing facial bacteria to cause acne 30x more than before, as with my acne (caused by a 2016 toe injury due to immune system rush to toes). After the immune system recovered, once the face homeostasis changed, it is often hard to restore it, as P. acnes (Propionibacterium acnes, C. acnes in some papers after 2016 renaming to Cutibacterium acnes (cutaneous skin layer), that every human has on their face) grows faster. The acne was the same after removing lentils, legumes for 1 year in 2016-2017, showing that legumes had nothing to do with it. Acne only stopped after taking glycine in 2026, the main amino acid for collagen.

11.13.4.3. ACNE due to low linoleic acid (LA)

"Acne patients show a lower percentage of acyl-ceramides containing linoleic *acid* (LA)" in the skin ► MI 2010:858176. But this lower skin LA level in skin (or arterial wall) doesn't always mean systemic deficiency in the essential ω6 LA (we need 1.5% of calories as LA) ► JAAD 1986;14 (2Pt1):221-5. Thus, some advocate using plant oils (with LA) topically ► IJMS 2018;19(1):70, especially since "Monolaurin (50% of coconut fat) displays antimicrobial activity by disintegrating the lipid membrane of lipid-coated bacteria including *P. acnes*". Topical LA led to 25% reduction of lesion size versus placebo ► CED 1998;23(2):56-8. LA is the most abundant fatty acid in vegetable oils (ω6), 39% of walnuts by weight; it "plays an important part in maintenance of epidermal integrity by intervening in the cohesion of the stratum corneum and in prevention of transepidermal water loss" ► AI 1990;22(6):225-31. Jojoba oil enhances the absorption of topical drugs, hence it's used in topical vitamin E oils etc too. "A 54% mean reduction in total lesion count was observed after 6 weeks of treatment with (jojoba) clay facial mask" ► FK 2012;19(2):75-9. After acne clears, we need a cream with 2 skin lipids to restore skin: free fatty acids and ceramides ($HOCH_2$-CH(NH-C=OR)-CHOH-CH=CH-$(CH_2)_{12}$-CH_3). ☺☺☺

Ceramides are sphingosine plus free fatty acids, they're part of sphingomyelin. Amides are H_2N-C=OR, ceramides are amides of cera (means wax in Latin), of waxy fatty acids (stearic, palmitic, etc). JLR 2007;48(12):2531-46 explains that the lack of LA leads to abnormalities and acne (oleic ceramides (olive oil, sunflower, etc) replace linoleic (walnuts, soy, corn) ceramides), that lipids in stratum corneum (outer layer of skin) are 50% ceramides (in many acne products), 25% cholesterol (in many acne creams), 15% free fatty acids. ☺☺☺

11.13.4.4. ACNE due to high intake of B_6 or B_{12}

STM 2015;7(293):293ra103 reports (like papers since the 1960s) some develop acne after ingesting *higher doses* of vitamin B_{12}, as B_{12} causes higher porphyrin production by bacteria, leading to acne; the paper explains "acne affects more than 80% of adolescents and young adults globally". MMW 1976;118(6):155-60 reports acne eruption (even beyond face, on the back, etc) after taking vitamin B_6, while acne "rash generally fades within a short time after vitamin B_6 or vitamin B_{12} treatment has been stopped". COT 2014; 33(2):94-5 explains "Several drugs have been associated with the development of eruptions that may simulate acne vulgaris. However, so far, there are a few cases of vitamin B_{12}-induced acne". Cutis 1991;48(2):119-20 found high oral dose vitamin B_6 and B_{12} led to acne that diminished upon stopping vitamin intake. High B6, B7 & B12 in some B complex formulations are known (see 1000s of Amazon reviews) to cause acne, while methylated B complex is more prone to cause acne too, so you may need to switch brands to something slightly lower if all else fails, if serum $B_{6, 9, 12}$ are high.

11.13.4.5. ACNE due to high ω6 to 3 ratio (too much ω6) or low ω3 intake

Acne is often due to high ω6 intake from soybean, corn, etc oils (or low ω3) which increases body inflammation, as explained in the first 2 pages of the DHA-EPA section. Those with acne had lower DHA (ω3), ARA (ω6) in their serum ► CED 1990; 15(3):174-6. Those "that maintain a traditional diet high in ω-3 fatty acids (EPA, DHA, ALA) have low rates of acne" ► LHD 2008;7:36. IRCMJ 2015;17(9):e16544 found that sunflower seeds can double the acne lesions, maybe due to sunflower having 312 times more ω6 than ω3, causing a huge inflammation, while chia has 3x less ω6 than ω3. However, most say it's sunflower allergy, common in 20% of population.

11.13.4.6. ACNE due to high or low iodine

Intake of instant noodles, junk food, soda, snacks, processed cheeses, pork, chicken, nuts, seaweed (high iodine disrupting thyroid, heavy metals *causing* inflammation) were *significantly* higher in the *acne* patients than in the controls ► EJD 2010;20(6):768-72. As the USDA doc shows, like 100s of papers online, some breads, bakeries, snacks, donuts, etc can have 388 times more iodine than others, leading to massive acne eruptions, goiters, severe disease. Parents go to an MD to get pills that cause many health issues, as side effects, due to the health issues the

388 higher iodine bread, snack, bakery caused. 4 years later, parents switch bread brand to a 388 times lower iodine one (1 bread slice can have daily RDA of iodine), and the "health issues vanish", they think it was because of a Jesus prayer (that didn't work 5000 other times), since they don't know how the food industry mafia works. The aristocrat half a million big mansions (no immortality for all centers to test food iodine, etc levels, just useless mansions sitting mostly empty) cause acne via poor labeling decentralization chaos. Thus, we need to scan barcode or enter number to get the exact amount for the top 400 nutrients that are critical to health, not just the present Na, Ca, sugar, protein, calories, fat pathetic label. The aristocrats want "33 million small businesses", sort of like a Windows, Android OS run by 2 programmers, imagine our world then, today, every couple starts a food company, no labels, quantity of products, not *quality* (like music), 0 innovation, just pure Neolithic values, etc. We waste $200 billion a year spent on preventable doctor visits for acne and small stuff that would be easily fixed by the regular new mandatory nutrition checkups, or the person himself if they got a PDF from the Immortality Nurturing Agency website, with 5000 references about all causes of acne (diet, etc), etc. With mass labeling required, the cost would come down for many tests 500 times over 40 years as with solar panels, as innovation happens and we discover eterni foods, instead of a new burger flipping technique... that produces deadly AGEs for aristocrat medical company profits as they manage (never treat) diabetes, cancer, etc caused by Big Junk Food owned by their cousin (who has a PhD in how to shorten lifespan of millions by 10 years while claiming you increase it 20 years), who just made a deal with phone companies to cause brain cancer and Alzheimer. We always hear about Holocaust, but *what about businessmen doing covert Holocausts* of the working class via junk or improperly labeled foods? ☺☺☺

11.13.5. ACNE can be due to zinc (Zn) deficiency (more common in *vegans*)

This is why vegans need to stop being anti-science, anti eterni foods religious fanatics and take multivitamins. Zn lowers blood glucose and high glucose causes acne via mTOR activation. Organic Zn causes a bigger rise in GPx activity, the essential detox enzyme that removes toxins entering the blood via the leaky gut, which will be eliminated via acne in those with leaky gut due to low glycine, proline intake as explained in the first paragraph of the acne section. Mitochondria free Zn is 0.14 pmol/L, while insulin-storing granules Zn is 100 µmol/L, or 0.71 billion times higher ► AN 2013;4(1):82-91. We notice sugary foods give acne, due to low zinc status which causes prediabetes or insulin resistance. Zn *helps* in the synthesis and repair of DNA damaged by acne bacteria ► "29 patients received $ZnSO_4$ 600 mg daily and 27 patients received placebo (double blind study)...placebo showed no improvement. After 12 weeks of.. $ZnSO_4$, 17 patients (58%) showed significant improvement" ► ADV 1980;60(4):337-40. Those with severe acne had low Zn ► IJD 1982;21(8):481-4. Zn helped heal acne far more than placebo ► JAAD 1980;3(5):483-91. Those with acne had low serum levels of Zn, vitamin A, E, while those

with severe acne had lower Zn and vitamin E than the mild acne ones ► COT 2014; 33(2):99-102. "Oral $ZnSO_4$ (135 mg Zn/day, 9 times the mg in multivitamins) substantially *reduced* acne vulgaris *lesions in* several *groups of* young *adults.* Although the 15 to 19-year-old males with severe acne had initial serum Zn values lower than the healthy controls, none of the mean Zn values for any of the groups (range, 84 to 101 µg/100 ml) was below generally accepted normal serum levels (70 to 125 µg/100 ml)... serum Zn *is* not always an accurate indicator *of* Zn nutritional status". We can have OK Zn serum level, yet still need more Zn to get rid of acne or diabetes. We can have normal level of Hg or Al in the blood, but our brain can be fully loaded with Hg/Al. The serum Zn doesn't show the body reserves of Zn where it is needed at the organ levels, in the 300+ enzymes and how many months it takes to replenish Zn. We don't know how to assess the ideal metal levels, even the vitamin/protein RDAs change ► AD 1978;114(7):1093. Zn was much better than placebo at reducing P. acnes bacteria count (98% reduction) ► JAAD 1984;11(1):86-9. Acne is often caused by a *permeable* gut *lining* (Zn strengthens it) or GI issues. WJGP 2014;5 (4):496-513 explains that Zn can prevent leaky gut, ulcerative colitis, weak immunity (70% is in the gut), gastrointestinal cancer, diarrhea, celiac disease. 67% adult celiacs were Zn deficient in 1 study, since phytate in unsoaked bakeries, breads, legumes, grains blocks Zn uptake and without Zn no collagen synthesis is possible, so the intestine skin become wrinkled, inflamed, rough, prone to polyps, cancer, diverticulitis, IBD, just as low Zn, proline, glycine can do the same to the skin of arteries causing turbulent flow, clots, plaque and infarct.

11.13.6. ACNE can be due to selenium (Se) deficiency (more common in *vegans*)☺☺☺

ADV 1990;70(1):92 found acne patients are Se deficient. "The male acne patients had significantly lower GSH-Px (GPx) (glutathione peroxidase) levels than the controls... 29 patients were given 0.2 mg of Se (as Na_2SeO_3) + 10 mg of tocopheryl succinate (vitamin E) for their acne twice daily for 6-12 weeks. A good result was obtained... the beneficial effect was usually paralleled by a slow rise of the GSH-Px activity. Some 6-8 weeks after withdrawal of the treatment the GSH-Px values had returned to the pretreatment levels." ► ADV 1984;64(1):9-14. Oxidative stress can deplete cellular reduced glutathione leading to an inflammatory cascade and acne. Even foods that deplete reduced glutathione (GSH) or Se, such as high mercury fish (some fish has 200 times more mercury than others) or high cyanide foods (flaxseeds) can lead to acne breakouts as the benefits of ω3 are cancelled by the damage from GSH depletion. Mercury has high affinity for the sulfur (SH) in glutathione and Se in selenoproteins. Vegans are more likely to be Se deficient as seen in Table 4 of PO 2016;11(2):e0148235 study of 22 Finnish *vegans* (only 1 in 2500 are vegans in Finland, so there is less nutritional awareness among vegans) and 19 omnivores; vegans (91% of which used vitamins vs 78% for omnivores) had lower serum vitamin E, Se (none deficient, all got the 55 µg daily needs), iodine (all *vegans* and 91% omnivores were deficient), β-carotene, cholesterol, D_3, B_{12}, B_9, ferritin (3 times lower in *vegans*),

EPA, DHA, saturated fatty acids, but higher polyphenols and homocysteine (bad, this is due to ignorance, anti-vitamin stance of religious fanatics causing low B_{12} and B_9). ☺☺☺

11.13.7. Nickel allergy causes acne: coffee 430 ppm, dried tea 236, chocolate 28, chips/scallion 13, wheat flour 12, instant tea 10 (avoid coffee, chocolate, tea, potato to see what happens)

IJD 2013;58(3):240 says that *out of all metals in our diet,* nickel (Ni) is the *one that causes the most acne flare ups* and that Ni in mg/kg is: 430 for coffee beans (hard to believe that high, maybe 20 in worst soil coffee?), 236 *dried tea* (KJD 2005;43(5):593-8), 10 instant liquid tea (hard to believe), chocolate 28 (cocoa powder is higher), crisps (*potato chips*) 13, green onion (scallion) 13, wheat flour 12, cashew 4 (nuts 2.5 on average), *dry* lentil 2 (soy, oatmeal, legumes similar). *Nobody* eats 2 lb of nuts or *dry* beans/lentils daily (which is 5.5 lb cooked) to get 2 mg Ni, but we can eat *153 g* potato *chips* (low ω3:6 ratio, high AGE), *71 g of* chocolate (or 40 g cacao), drink 2 glasses of tea/thick coffee daily to get 2 mg Ni. Sometimes the "same" food has an "*estimated mg*" off by ..900%.. in Ni; Ni mg/kg were: for cooked (*dry* would be 2.5-3 times higher) beans (lima 0.062, avoid lima due to cyanide, pinto 0.58, white 0.33), peanut 0.49, spirulina 2.7, mussel 1 ► JCEDR 2016;7(3):1000355, but some foods high in 1 paper are low in another. Some studies noticed *serious acne flare up* after only eating 10 mg $NiSO_4$, or *3.8 mg* Ni. Most people eat under 0.2 mg a day, but some in Denmark get 0.9 mg. *Even* 0.6 mg Ni *may cause* hand eczema *in some people* ► ZLUF 1984;179(6):427-31. "4 of 10 nickel-sensitive individuals had cutaneous reactions to 1.0 mg nickel… None of the 20 healthy controls had cutaneous reactions to 4.0 mg nickel or to a placebo." ► CD 2003;49(3):124-32. "results from the 2 most sensitive groups show that 1% of these individuals may react with systemic contact dermatitis at normal daily Ni exposure from drinking water and diet, i.e. 0.22-0.35 mg nickel" ► CD 2006;54(2):79-86. Many kids can get 1 mg Ni daily (50 times the daily needs) ► JTEMB 2009;23(3):183-94.☺☺☺ Could those thick coffee, chocolate or tea loving teens get 1-5 mg Ni/day and ruin their face for years? Why not all of them? Chocolate, cocoa powder increase acne breakouts ► youtu.be.Q. Double blind placebo controlled study proved pure cocoa powder leads to acne ► JCAD 2014;7(5):19-23. A study with 100% cocoa chocolate saw the same acne increase ► JAAD 2011;65(4):e114-5. 25 g (less than an ounce) of dark chocolate 99% cocoa for 4 weeks led to an increase in acne ► IJD 2016;55(5):587-91. Some may eat things that prevent Ni absorption, so those teens get no acne even if heavy tea, coffee, chocolate drinkers. High Ni lowers iron, zinc uptake causing acne or issues related to low zinc or low iron. In Sweden *some eat* 4.5 mg Ni daily ► JN 1982;112(1):39-50. Many papers on Ni suggest avoiding high Ni foods, described via a scoring system of Ni content in Derm 2013;24(4):190-5, but we need to tabulate each diet and see which *unhealthy* foods to remove first (may be higher % Ni/day than legumes), not the healthy fiber rich legumes. ☺☺☺

11.13.8. Castor oil and avoiding warm water (in the shower) on the face prevent acne flares

The first 2 paragraphs cover castor oil, and then the 3rd one uses those concepts to explain in the why warm water causes acne. Avoid dangerous medications for acne, as some people died from them. Keep all creams, oils in the fridge to avoid light and heat, or coldest/darkest place in your room at least, to avoid oxidation as that causes more acne. For acne scars or to hydrate better to prevent eruptions, try castor oil (hexane free processing (cold-pressed), dark glass bottle, as plastic leeches estrogens like BPA, plus microplastics) as it heals the skin (see mechanism, but it binds to gut EP3 receptors, etc causing uterine muscle contractions and potentially premature labor, so not for pregnant ladies). Here is a list of Amazon amber bottle cold pressed glass brands: 99% are amber, you want the glass ones that are darker amber like this 15$/lb (subscribe each time for 10% off, appears darkest, but videos show it's regular amber) one or this 29$/lb which seems the darkest (in some pics, but videos show it's regular amber, depending on lighting, same bottle can appear light/dark amber) amber on Amazon. Avoid any plastic pump types or pumps that come with the bottle, as plastic leeches, damages skin, just bend bottle to dispense. The 2 amber ones above (both USDA organic, a plus) are the only dark amber with black/dark paper label to protect the oil best, among 700 amber bottle Amazon brands and 10000+ castor oil brands. The 15$ is cheaper, the same quality probably, the 29$ is from India. This lack of cold pressed dark glass bottle and dark color label to block light better, is why we need one company, not 3 million, as in 11 companies, not 33 million; 99+% of companies for any product sell CRAP, capitalism is about trying to get rich via poisoning the gullible consumers, regulation is zero, not one company makes 100% opaque bottle by full wrap in black label. Small businesses and lack of regulation of both big and small companies, destroy USA, reduce R&D 100 fold. The other clearer lighter paper label oxidize in Amazon warehouse etc light. Some papers say topical facial castor oil works better than vit E. Avoid clear bottle castor oil sold by "rat IQ" companies like NOW Foods, as oxidized by light create oxidative stress in the skin/body if used, besides BPA, plasticizers, microplastics destroy the skin, neurons. At home, tape it in opaque aluminum foil (tape on top of foil) or dark/aluminum tape to preserve its benefits, or store in a pitch black cabinet or fridge ideally for reducing degradation via low temp.

Olive oil is praised and it contains mostly CH_3-$(CH_2)_5CH_2CH_2CH$=CH-$(CH_2)_7$-COOH, oleic acid, while castor oil contains mostly ricinoleic acid, CH_3-$(CH_2)_5CHOHCH_2CH$=CH-$(CH_2)_7$-COOH meaning oleic with one H replaced by OH group that enables stronger hydrogen bonds to the collagen, better moisturizing properties. The OH hydrogen bonds H… O-H attract water from air into the skin, making it act as humectant. Castor oil is far thicker too, because the hydrogen bonds keep it together more, creating a stronger occlusive barrier on the skin, sealing in moisture and reducing TEWL better than oils lacking OH (most). Ricinoleic penetrates deeper into the dermis and subcutaneous tissue compared to many other fatty acids due to the attractive force of the H bonds pulling it in, making it highly effective for dry skin (hence they use it in dry eye tear

formulations) and barrier repair, leading to improved hydration and elasticity, which are essential for preventing dry acne prone skin. Dry skin is prone to acne because the lack of moisture disrupts the skin barrier, causing us to overproduce sebum to compensate, which clogs pores. The weaker skin barrier allows more acne bacteria to enter. Dryness also causes dead skin cells to pile up rather than shed, trapping bacteria in the follicles and leading to breakouts. How so? When the skin loses its lipids and water, the intercellular matrix that manages the turnover of skin cells fails: the skin relies on water-dependent enzymes to "break down" the bond between dead skin cells. In dry skin, these enzymes are inhibited, so the cells remain stuck together and attached to the skin, which appear as white, flaky patches. Normally the skin cells slide easily when all is wet, but they can't, everything is rough and they remain stuck blocking the follicles, and forcing the bacteria to remain stuck there, instead of shed with the skin cell. The bacteria multiply, feed on the overproduced sebum (made to compensate for dryness) and a face pimple emerges, or, via inflammation, by the same exact bacteria, an artery pimple, causing soft plaque rupture clot and death (this acne bacterium is found in plaque of dead people). Anything that causes an overproduction of sebum is bad, so a rise in testosterone or vitamin D intake well above the RDA can all cause acne to erupt due to sebum hormone activation.☺☺☺

Why does acne end if we take cold showers instead of warm? It's easy to understand now: hot water removes the skin oils, causing our skin barrier (that we talked in the prior paragraph) to vanish and the skin to become very dry acne prone skin, since hot water makes the somewhat solid oils melt and come out of the skin, causing acne. Thus, the simplest way for millions to end the acne drama is using room temp shower for head/face and less lipid extracting soap on the face, the body can use warm water if no acne on legs, etc. Likewise, living in ultra dry hot climates can cause oils/water to come out, skin to dry and break out. Death/stroke often starts with out of control acne causing these bacteria to invade the blood, arteries, though more commonly, death starts with dental bacteria due to not brushing often, etc. Washing face at the sink (just like when showering) with hot or warm water is a bad idea, as heavy soap plus hot water leads to stripping the face of ceramides that form a protective barrier against acne bacteria. Taking a shower in the morning is better. Millions of people, noticed when going for 3 weeks without hot water on the face, all acne/stye eruptions cease. So, lower shower temp when washing the face. Try use a filter, use a 0.5-1 GPM shower head for less chlorine (which destroys skin collagen) and less harsh chemicals and some chlorine filter, maybe GE 10$ shower filter (replace monthly or bimonthly, due to risk of mold growth), 20$ sink filter. ☺☺☺

11.13.9. Topical removal of acne scars using CERAMIDES or 1% salicylic acid (SA) solution in 50% isopropyl alcohol (IPA) suspension of 10% sulfur (S) plus zinc oxide (ZnO) mix

CeraVe (since 2017, subsidiary of L'Oreal, world's largest cosmetics company) for ceramides

(cera is wax in Latin, amides are R-(C=O)-NH-R'), has vitamin E, K_2HPO_4, MVE (*m*ultivesicular *e*mulsion) technology (see patent: ***multi-lamellar or multivesicular*** emulsion which is a series of concentric spheres or vesiculars of oil and water phase that can be seen microscopically; the active ingredient is released over a sustained period rather than spike released as in most creams), behentrimonium methosulfate (EWG score 4, $CH_3(CH_2)_{21}(CH_3)_3N^+(O_3S\text{-}O\text{-}CH_3)^-$ preservative used to kill microbes, similar to the infamous $(C_6H_5\text{-}CH_2\text{-})(CH_3)_2(C_nH_{2n+1})N^+Cl^-$ BAK in "99.9% microbes gone" cleaning wipes and eyedrops that damages meibum glands and eyes), ethylhexylglycerin, while DayLogic has lactic acid, 4 parabens (2 of them banned in EU, propyl is in Vital Care too, EWG scores 3,3,9,10, CeraVe and 100s of creams advertise "paraben free" due to the fact they're quite toxic), DMDM hydantoin (preservative used in almost all creams and shampoos these days, even liquid soap, releases formaldehyde to kill microbes), Na_2HPO_4. $ stores also got a helpful (yet some odd chemicals our skin is not used to after eons of evolution, like propylene glycol, PPG, etc, thus not my favorite) $2 Acne Free (7$ Amazon) 2.5% benzoyl peroxide gel with ceramides (which are 50% of outer skin layer fats), cholesterol, phytosphingosine (antimicrobial antiinflammatory amino alcohol, added to cosmetics, 2S,3S,4R-2-amino octadecane-1,3,4-triol, $HOCH_2\text{-}CH(NH_2)\text{-}CHOH\text{-}CHOH\text{-}CHH\text{-}(CH_2)_{12}\text{-}CH_3$, phytosphingosine = hydrated (HOH) sphingosine, $HOCH_2\text{-}CH(NH_2)\text{-}CHOH\text{-}CH{=}CH\text{-}(CH_2)_{12}\text{-}CH_3$. Sphingosine is the building block for:

1). sphingolipid ceramides, (ceramides are sphingosine with $-NH_2$ replaced by -NH-C=O-R, the R-C=O acyl group is a fatty acid group like stearoyl (stearyl is $CH_3\text{-}(CH_2)_{16}\text{-}CH_2$-, the extra o for O, so $CH_3\text{-}(CH_2)_{16}\text{-}C{=}O$-); skin barrier against acne bacteria = ceramides, cholesterol, + free fatty acids), 2). sphingomyelins (2-15% of most tissues, protect neuron axons, ceramides where CH_2OH is replaced by CH_2-O-phosphocholine i.e. $CH_2\text{-}O\text{-}P{=}O(O)(O)\text{-}(CH_2)_2\text{-}N(CH_3)_3$), *etc* see the choline link 3). cerebrosides *(up to 12% of some dry brain tissues,* glycosphingolipids or monoglycoceramides where CH_2OH is replaced by $CH_2\text{-}O$-*glucose (body)* or $CH_2\text{-}O$-*galactose (brain mainly)*, a *sugar*, hence *glyco* for *sweet* in Greek, AGEs = advanced *glycation* end products (sugars merge with fats/proteins to form AGEs), *glycans* = the sugar moieties of anthocyanins, many polyphenols), 4). gangliosides (brain lipids, olygoglycosyl *cer*amides where CH_2OH is replaced by $CH_2\text{-}O$-*oligosaccharide-sialic acid*). *Cer*amides prevent brain diseases*, not just acne.*

The SA-S-ZnO mix is made at home because RiteAid Bye-bye blemish suspension in IPA:H_2O of SA-S-ZnO has aluminum (Al) which increases biological entropy, Fe_2O_3 iron oxides for color which increase eye oxidative stress if some gets into eyes (makeup users may get red eyes, since most makeup uses Fe_2O_3). Al + Fe_2O_3 make long-term acne cure harder; depending on Al silicate polymer or its degradation products particle size (if not all Al particles are shed by dead skin cells), Al can even be transported via axons to the brain causing Alzheimer. Better than this wet powder suspension seems to be in certain cases, a home made yellowish paste of Amazon

glycerin, USP sulfur (S), salicylic acid USP (99%, 99.5% or etc) (SA), USP zinc oxide (ZnO). Search for "ingredient powder" to find one you like, make a paste or suspension with maybe 2-3% SA, though some creams for acne have even 5-10%. The SA-S-ZnO paste is way better than Bye bye blemish, since 1. it doesn't make a mess, doesn't spread powder on your pillow making you inhale toxic stuff (use some $ store plastic bandages (100/$1pack) if applying when sleeping to avoid getting it on your pillow), and 2. it penetrates deep under the skin preventing the acne from reappearing many times later in the same exact spot like it happened with me when using the pink Bye-bye powder, since powder only did a surface exfoliation, *surface killing of bacteria, superficial temporary pimple eradication, so weak and ineffective, you can even see the scar left there sometimes. You can use powder sulfur in glycerin to make sulfur paste, much better than the* De La Cruz 10% sulfur alone gel *in allergenic* PEG *(4$* at Walmart) that doesn't work well to exfoliate alone. Blue light from RiteAid lasers or IPL for acne has real limitations, it only penetrates 0.2-0.8 mm (0.3 mm for 445 nm RiteAid laser), while this paste can go deep where the bacteria hide and wait for right conditions to rebring the pimple to life, requiring new Laser and IPL applications. *Bye bye blemish beige or brown for brown skin. like powder is easy to make with S, ZnO, SA and iron oxides to use for special events, as it hides it perfectly from view from a distance, while bright yellow-white powder is not invisible (nobody has such a bright yellow-white skin like this powder). Make a SA solution in 50% isopropyl alcohol and wash face daily entirely (except around eyes and thinnest skin around eye orbit) to get rid of all, besides using the paste on all thick skin face areas to deliver deep under the skin the SA, ZnO, S,* zinc does DNA repair*,* to kill the P. acnes bacteria on your entire face where acne appears (never around eyes) – this will enable our facial immune system resources to reestablish control and diminish eye inflammation caused by weakened immune system under attack by endless pimples. Then apply Vital Care healing cream (not Dermasil brand, which has aluminum) from $ store with 6 vitamins or something to nourish the skin, and redo the exfoliation paste, 12 hours, then cream a few hours, so the nearby skin doesn't get too dry and damaged. ☺☺☺

The SA-S-ZnO paste I made worked in 4 days better than the blemish powder worked in 4 months, in conjunction with *Vital Care cream* (only 2$ on Amazon (6 pack for 12$), contains propylene glycol and triethanolamine allergenic compounds, made in USA, *vitamins A, E, D, C, B_5,* B_7) to help recreate skin smoothness after exfoliating dryness damages skin around the pimple. You can also try the non-comedogenic (Vital care doesn't say non-comedogenic, so it's better for hands and feet mostly, if issues appear, though it has many plant lipids that compliment DayLogic lipids) 11.5$/454g (made in Israel) RiteAid DayLogic, a cheaper CeraVe version (well, CeraVe is 16$/454 g on Amazon, 17$ @ RiteAid sometimes "buy 1 get 1 50% off", so 12.75$ (made in USA) *sharing 19 ingredients with DayLogic, including the 6 important ingredients*: hyaluronic, 3 ceramides, cholesterol (25% of skin lipids, etc), phytosphingosine.

CeraVe has far less water, so actually, the price of the 6 ingredients may be the same, per gram. Acne Free can help heal skin barrier, you can leave it on your face way longer than 5 minutes, even 5 hours, just use Vital Care afterwards or at the same time to repair oxidative damage from benzoyl peroxide which is killing all bacteria in a way that compliments salicylic acid; but I noticed $2 Acne Free (@ $ store) doesn't work well at all on the actual pimple itself (pretty useless), more like a brief facial cleanse preventive maintenance and cheap ceramides, the SA-S-ZnO *paste is way better*. It took me years to discover the SA-S-ZnO paste and laser method, which, for not too deep pimples, is better than using harsh chemicals like 10% benzoyl peroxide etc that scar the face if left too long; try it and you will be blown away how fast you can get rid of a zit (apply paste above afterwards, to get rid of it for good, to deliver salicylic, sulfur, zinc deep under, since powders will require reusing laser 30 times on same pimple resurfacing), making it 5-10 times smaller in bumpiness in just 2-3 days (press the laser on the skin, because red light only penetrates a few mm and you want to reach deep inside; press it and hold it for 2 minutes for 10 to 50 times, after 2 minutes it shuts off by itself; then after 1-3 days when the top became soft skin to the touch, pop it and apply the SA-S-ZnO paste for a few days; the red mark won't disappear instantly (can take a week after squeezing or more), but it allows you to cover it with the SA-S-ZnO paste or pink powder you make at home and makeup so that nobody will know you have a pimple that became 15 times smaller after you got pus and lymphatic liquid out", allowing you to go about your day without being so self-conscious of your "huge bump" which can't be hidden by makeup if the bump is there (because you didn't know of this ultra cheap method of wiping out the bacteria in the zit). Cheap soaps and lotions full of chemicals can also cause acne when all else is fine, so stop poisoning your skin and body, as skin absorbs it all. Many made their own creams, lotions, moisturizers, see here how for higher safety. Rosemary oil led to drastic reduction the bacteria causing acne ► PM 2007;73(12):1275-80. ☺☺

11.14. Dental Health, Ethics, Fluoride, mouthwash/paste colors

11.14.1. Introduction: pH, menthol, lead level 11.14.2. Bristles with 20-200 times thinner tips

11.14.3. Fluoride filters (Florida/Utah banned it) & IQ/health: fluoride means 13 less IQ points

11.14.4. Fluoride calcifies pineal, causing Alzheimer, Multiple Sclerosis, Depression, Insomnia

11.14.5. Teeth whitening at home: 2 g baking soda, Colgate Optic White paste (RDA 46, pH 7.4)

11.14.6. Nanohydroxyapatite (rod shape, 20 nm) toothpastes (the best), xylitol and erythritol

11.14.1. Introduction: ethics, menthol causes infarct/dementia, toothpaste lead, amalgam

D takes calcium from food and brings it to the teeth via K2, the most important teeth vitamin after D. Kids with higher D_3 intake had 51% of the cavities (64% of controls for D_2, so avoid D_2) ►

NR 2013;71(2):88-97. No K_2 means enamel doesn't repair, teeth erode. Watch the primitive people who never brush their teeth, but get 50,000 IU D3 from sun being outside more and healthier nutrition with vitamins, polyphenols, etc that kill bad mouth bacteria have no cavities and misaligned teeth (no orthodontics needed) as they age, because the bone that holds each tooth is not lost due to low D and low K_2. Weston Price visited various tribes (see 3 min video summary of his findings, more than 12 pics of teeth are in his free 445 page book) eating a zero processed foods diet: food antioxidants created a *perfect biofilm of good* bacteria that protected their teeth against S mutans/other cavity causing bacteria. In the "snail IQ" West, the "worm IQ" MD often makes 80x the min wage, sets up guideline for 600 IU D_3 that causes cavities, crooked teeth, endless 150,000$ heart bypass surgeries due to calcified arteries as low D takes tooth calcium into arteries, causing hypertension and plaque via stiff arteries and plaque, vascular dementia, diabetes, etc. Price found kids with healthy teeth ate 10 times the fat soluble vitamins (A, E, D, K) of "gnat IQ RDA" diets, see rural vs urban Swiss (68 pics 9 nations) teeth, read vitamin D, A, E, K2, C (for collagen, part of teeth), Zn (for collagen synthesis enzymes) sections. If we have average MD salary same as the only salary worldwide (instead of 10-90x depending on clinic and specialty, the min federal wage in US), 1 eterni/hour, we attract the more ethical people in the health professions, which can expand 50 fold beyond MD, to ET, NP, ND, MD to give all 4000 year lifespan by better nutrition. Right now, useless lawyers get 10-500x the min wage, as well as evil CEOs, 10-50000, if we bring efficiency, we bring World Peace, zero violent crime, 50000 fold rise in nutrition and lifespan other researchers, and the rich parasites who keep everyone sick won't build palaces anymore, we build chemistry and physics labs, we grow teeth naturally, no implants, avoid all cavities. The rich hide the fact their inefficiency causes 90 million workers in USA to duplicate and waste time, when with the trillions these bastards steal and efficiency, we can have 50x more health research and professionals to give all 4 millennia lifespan. They obfuscate the fact were it not for their astronomical salaries and exploitation of the 90%, we would have everyone much skinnier and healthier, living to 120 on average today at least. The same salary some get can create 50 STEM positions of people whose lives were destroyed by rich celebrities with their evil music, who caused these victims to be jailed, get no education, as University Presidents got 1-8 million salaries for destroying all, while education not being free made the nation one of "tomato IQ snails" without any clue about any nutrition. Keep teeth healthy, otherwise, the "ethical MDs" will put RF trackers in your root canal/implant and kill you as Mossad does. Watch this clip on proper toothbrushing and why you need to stop snacking and sipping now: you need to make food contact with teeth about 15-20 min daily max, and mostly not acidic foods: 3 quick 5-7 minute meals, plan meal so contact time is 5 min or less. Eat to live, don't live to eat. The longer the contact time, the more cavities. Neutralize food pH with baking soda+xylitol right after each meal, then wait 2-5 min (5 if any acidic liquid like smoothie juice, 2 if only some lentils), then brush, don't wait 1 hour to brush when pH naturally

returns to 7.4, since you can bring mouth pH to 7.4 in seconds, not 1 hour. The new digital x-rays (90% of USA) are 0.005 mSv per whole mouth 4 pic set, less than the daily background radiation exposure, the risks from the new digital x-ray (not film x-ray) are far lower than the benefits of annual x-rays. Always use digital x-rays. Due to low dose of the new x-rays, no lead apron is needed. A CBCT scan allows you to see the bone infections caused by poorly done root canals. Due to lack of regulation, 99% of toothpastes, mints, mouthwashes contain chemicals (fluoride, some essential oils, antiseptics, alcohols, menthol, etc) that cause infarcts, strokes, dementia, atherosclerosis by killing the nitric oxide NO producing bacteria, NO being key to relaxing blood vessels and preventing blood pressure, plaque, clots and this type (see pic) of arterial blockage. Alternatives are shown below, search google for "nitric oxide bacteria friendly toothpaste mint, mouthwash", but you can still use normal toothpaste/mouthwash, eat citrulline to produce way more NO than kale, beets ever could, as explained with all chemical reactions here. Arginine feeding bacteria keep mouth pH lower, which helps the anti cavity good bacteria and harm S. Mutans that causes cavities, so it's still a good idea to try Fygg arginine toothpaste to add to your favorite toothpaste perhaps, if Fygg doesn't remove all stains. Due to Aristocratic Palatial Dictators, US still allows the deadly silver amalgam fillings (mercury is far worse than lead), while Norway banned them in 2008, Sweden in 2009, EU in 2025, the planet in 2034 hopefully (USA included, 26 years after Norway). US is decades behind Europe in health rules, consumer protection, so some EU live longer even if spending half, since laws protect the 99%, not the 1%.

Mouth bacteria were found in arterial plaque, so poor oral hygiene (cavities/gum disease) kills via heart attack ► FCM 2023;10:1114927. "Nonsurgical periodontal treatment was effective in reducing the levels of CRP (marker for heart attacks)" ► JNSBM 2013;4(2):379-82. Clots of heart attack patients had the root canal bacteria, just like arterial plaque have acne bacteria, meaning arterial plaque often has bacteria that infect any area of the body. Thomas Levy "Hidden Epidemic" book explains root canals, happening due to kids not getting central government online free video daily education on health, ethics, etc since age 0. Root canals can kill us slowly, via chronic infection that causes infarct. Dr. Rogers's video what happens in a root canal. Realdentalinfo.com goes deeper into root canal, etc. The free Root Canal Cover-up is a 250 pg book on the genocidal American Dental Association hiding of the dangers of root canal bacteria traveling to almost any body area to cause death. The free MS Mystery is a 420 pg book (also free at the archive) on how root canals, mercury fillings cause multiple sclerosis (if no time to read, watch this video). If you have any pain around the trigeminal nerve (ear, face, teeth, eye), it can be from a root canal (causes trigeminal neuralgia, or pain on the cheek or nearby areas, due to nerve damage by dentists), as this video explains. Hence, you need to educate your kids to brush teeth 3-4 times daily, after each of the 3-4 meals, to never snack between meals any tea, coffee, beverage, candy, chewing gum, chips, etc. Otherwise, they will put mind control

chips in your root canal connecting to your nerves or God knows what. This trigeminal nerve damage can cause dry eyes, since the trigeminal has 3 branches, one goes to the eyelid/lacrimal glands, one to the cheeks, one to the teeth. If stuff happens to the ganglion, it affects the ability to produce tears, to produce lipids of the tears that prevent tear evaporation and then cause dry eyes, as explained in the 400 page chapter about the dry eye epidemic. ☺☺ IAOMT has 1300 videos about mercury-free biological dentistry, safe removal of mercury fillings that cause MS, dementia, etc. XRF scanner/lab tests showed 48 toothpastes with bentonite, hydroxyapatite, calcium carbonate contain lead, cadmium, mercury, arsenic, so 90% of 53 toothpastes tested contain heavy metals. Guardian talks about this study too, but other NIH studies found similar trends, so choose toothpaste brands carefully, avoid Crest. The only safe ones with no heavy metals were 4 fluoride free ones: 13$/3 Brown, 11$ Spry or 18$/3pk, 3$ Orajel, 8$ Miessence (Aussie, if Amazon out of stock, try ebay or online) and low F one: 20$/3 Pegciz (China made, fluoride is 452 ppm, regular toothpaste is 0.15% or 1500 ppm). Recall to cover the toilet when flushing and keep toothbrush away from the bath, unless you want poop on the toothbrush. Check out biological dentists on youtube, they're the safest, removing less tooth for a cavity.

A dentist (Ellie, whose protocol is criticized by other youtube dentists who tried it and got bleeding) may have some useful ideas, even if her protocol is off, so some of her ideas are presented together with alternatives to what she's trying to do, to kind of see the bigger safety picture when choosing a dental routine. She explains a. how you can avoid seeing a dentist, how tiny cavities (that you see with a 20x mirror only initially, not 1x) are sometimes reversible (place fluoride/hydroxyapatite toothpaste on a cavity area; it will go away in 5 months no longer showing dark on x-ray but white, if you brush well, use pH 7.4 mouthwash 5x daily to kill S. mutans), b. how bone loss/receding gums are reversible, c. how she helped gal heal receded gums (when pick flossing (see how), but disinfect with alcohol pad (1 cent each, 2 pads per floss session) before each new tooth, scrap the base, see how, to remove ALL bacteria), d. reverse cavities using her 4 step (watch youtube) system summarized in this pdf and criticized below (ignore the part with "no flossing", since flossing is critical, even with the best toothbrush):

1.0. "xylitol mints" (that may cause heart attacks, strokes if overused (30 g xylitol or 60 mints/day would screw you), she sells these to make money, like many dentists on youtube sell stuff or make videos to promote their affiliate link to make money off gullible youtubers). Her mints contain magnesium stearate which can in theory block nutrient absorption if you just ate vitamins, and menthol. While using menthol rarely is fine, as part of a home made mouthwash you use once a month, using it daily is shortening your life, since menthol kills the nitric oxide, NO, oral bacteria that keep our arteries flexible and relaxed, thereby preventing hypertension, infarct, clots, strokes, dementia. Those using mouthwash often were 85% more likely to develop hypertension than those using it rarely ► BP 2020;29(2):103-12. This lady, like millions of

dentists and hygienists, lives in the 1st century. Today, there are many new mouthwashes (that don't kill NO bacteria) and mints wholly superior to her 1970s (she used it since 1975 or so, watch how so called 'wise ladies' wear makeup, liners on youtube to poison 4 billion ladies' eyes who imitate these chicken IQ youtubers; any lady who has lots of makeup makes a fool of herself and says "I am a fruit fly IQ lady") protocol, check out the fygg.com coconut toothpaste, (3 pack/33$ with subscription, uses arginine to help fight cavities (causes biofilms that are less acidic, less enamel damaging) and promote nitric oxide generation to lower blodd pressure, free ship for 50+ orders (order 6 at once for the whole family/year), or subscribe on Amazon 13.5$) free of fluoride and alcohols that destroy your body's NO system (avoid any mint or vanilla, cocoa, chocolate flavor toothpaste as these can interfere with NO and the brain). Revitin Citrus (3/42$) is free of menthol (all mint flavor stuff has menthol) and free of fluoride and even hydroxyapatite. Due to risk of stroke, infarct, dementia, organ failure via atherosclerosis, this book doesn't promote any toothpaste, mint, mouthwash, varnish that has menthol, fluoride (a known NO bacteria killer) alcohol, essential oils, peppermint oil, vanilla, cacao unless you use 5% of normal amount and not 30 times weekly, but once weekly to get some stubborn stains. They even got hydroxyapatite Fygg varnish to replace fluoride one. The EU has tight criteria (< 50 nm, rod shaped) for nanohydroxyapatite that USA lacks, and 35 nm nanoXim (meets EU safety) is used in Fygg and other popular brands (Boka, David's, Risewell that have the bad menthol or mint oil). Just because a youtuber got 500K followers doesn't mean it's the best info. So, to avoid NO issues, make a mouthwash with xylitol and baking soda for daily use and one for monthly use with menthol or peppermint oil added. If too lazy, just rinse mouth for 1 minute with baking soda powder and some water, then rinse with xylitol and water for 10 min and you never have to worry about making mouthwash. Use a spoon to take some baking and xylitol from your bag/box. Using daily menthol mints, toothpaste (99% of toothpaste has menthol or essential oils, sometimes hidden as "flavor") daily or chewing gum could destroy our entire vasculature, create 200% more plaque and white matter silent strokes causing brain death. It's a covert genocide, born of laziness, due to the love of convenience, why brush well, when a little menthol everywhere gives all 10 year shorter life and demented brains and atherosclerosis? Like WiFi and cell phones give us 2000 cancers and dementia, the modern man is so lazy, he won't want to walk to a computer desk he needs it wireless and WiFi, not LiFi. Menthol and essential oils can kill a lot of good bacteria we depend on to stay alive. To use mouthwash with menthol, when almost all toothpaste has menthol or another alcohol (ends in ol, like benzyl alcohol), is insanity. So, you can just wash teeth with some home made water-xylitol-baking soda solution.

Many work on new mouthwash formulas that don't kill nitric oxide bacteria. Everything Dr. Ellie recommends harms longevity via excessive menthol and other essential oils. We can't destroy it all for shiny teeth. If dead, what use are the teeth? Her mints supposedly have only health

benefits, to mineralize the teeth. What she doesn't say is that it is far cheaper and safer to buy xylitol or erythritol, which has 12 times fewer calories than xylitol and kills cavity bacteria as much too, and simply place some in a spice bottle to sprinkle in your mouth 5 times daily, or dissolve 5 g xylitol or erythritol (read side effects when you eat huge amounts) in 100 mL water and use as mouthwash (5-25% xylitol is pretty typical for mouthwashes you buy, a 5% was enough to decrease S. mutans a lot) 5 times daily for 3 minutes at a time (this frees you from toxic ingredients in her mints and other mints, gums. Peppermint oil contains 2% pulegone, a neurotoxin/carcinogen, though mouthwashes don't get ingested and at 2 drops/liter it's negligible. However, cinnamon oil irritates the throat, so it won't work. Effects of cinnamon oil in dentistry are covered in Mol 2020 25(18):4184. ***Most of us are used to peppermint oil 1 drop/L, almost every gum, mint, toothpaste, mouthwash has it***. This explains the huge amount of infarcts, strokes, etc, as these things prevent blood vessel relaxation and normal blood pressure. Manual flossing and brushing, good sleep stop bacterial growth.

Cinnamon oil contains eugenol, so the taste of cinnamon oil is the same as like after dental work when they use eugenol. Root canals and cavity areas that were drilled are cleaned/flushed with eugenol, not peppermint, since studies show cinnamon bark oil (8% eugenol, 70% cinnamaldehyde) or cinnamon leaf oil (85% eugenol, 5% cinnamaldehyde, on Amazon is leaf usually, read label) kills cavity bacteria far better than menthol or peppermint.☺☺☺ Essential oils are optional and problematic due to killing too many good bacteria. Since many toothpastes have peppermint oil, there is no point to add it. For example, magnesium stearate raises triglycerides (saturated fatty acid salt) and magnesium prevents the growth of dentin and enamel crystals (see below what happens with Mg replacing Calcium in enamel and dentin hydroxyapatite $Ca_{10}(PO_4)_6(OH)_2$). She smiles well, to gain our trust, but that doesn't mean her ingredients are ideal. 1.1. "Rinse 1 minute with CloSys 11$ mouthwash with pH 6.5" (contains the least (4) ingredients of any mouthwash from a store: water, Na_3PO_4, citric acid, stabilized chlorine dioxide ClO_2, which is kind of a bleach, that causes a lot of damage to healthy cells too, just like whitening peroxide in Colgate baking soda toothpaste or $ store whitening kits or office visits). See her youtube channel, to bring pH to neutral 7 right after eating acidic foods, which you can also do with a homemade xylitol mouthwash (that costs 50 times less than CloSys). This is *better than a mouthwash with toxic artificial sweeteners, flavors that cause many* problems, besides the carcinogenic colors. The cavity forming bacteria evolve and they adapt to essential oils, xylitol, etc sometimes, but no microbe or cell can adapt to ClO_2, it is absolutely destructive like hydrogen peroxide in store mouthwash, like bleach for any bacteria, so it destroys your gum too (even enamel like peroxide) with each use (hence some may not want to use CloSys, except for 1 month to get rid of tartar, due to the destruction of good bacteria, like H_2O_2 does). You take water, hydrogen peroxide, xylitol, menthol and make your own "CloSys" equivalent.

2. "Brush 2 minutes using a fluoride toothpaste" (or your favorite non-fluoride) NaF as source of F only, she says "Crest Regular toothpaste". Always get any toothpaste in the version without the colors, the Pro-Health Maximum Cavity one, 3.5$ at Walgreens, 1.3$ at $ tree, not the cheapest, as blue 1 is very toxic, one lady died, yet she suggests using one with this blue 1, odd. Or get a brand with 0.24 NaF (0.15% F ion) 2 min (maybe glycerin free CloSys, Crest supposedly has fine silica, ***not coarse silica to break enamel, no glycerin to stick to teeth and prevent remineralization, no chalk, no baking soda, no peroxide to attack enamel*** (a little baking soda or $NaHCO_3$ is fine in toothpaste or mouthwash, since HCO_3 is part of the 3 buffer systems in our saliva, tears and blood, CO_3/HCO_3, $PO_4/HPO_4/H_2PO_4$, protein/proteinH+; some are against baking soda, but we see it in millions of toothpaste/mouthwash brands, it can't be that bad as some claim as then everyone would have bad teeth (sprinkle a little to get your water-xylitol home mouthwash pH to 7.4, the ideal tooth mineralization pH). Maybe it's the concentration that's important, so Colgate may need use less as their baking soda toothpaste is pH 8.5 or even 9; too much can be bad of course, as then apatite (stuff that makes 95% of teeth) $Ca_{10}(PO_4)_6(OH)_2$ and stronger yet $Ca_{10}(PO_4)_6F_2$ becomes $Ca_{10}(PO_4)_6(CO_3)$ which is more soluble and makes enamel dissolve easier with acidic foods). ☺☺☺

3. "Rinse for 30 seconds with Listerine Cool Mint" 2$ on Amazon (methyl salicylate + 3 essential oils: thymol, menthol, eucalyptol to destroy cavity forming bacteria, the 3 main ones being Streptococcus mutans, or ***S. mutans,*** the main cavity forming one (killed by cinnamon oil and most essential oils), S. sobrinus, some lactobacilli). Many MDs advise against Listerine Cool Mint or any alcohol based mouthwashes. pH is 4, to facilitate the chemical reaction of acids with $CaCO_3$, from the calcified plaque, or tartar at the base of teeth or the edges: that's why this system is multi-step, you need both alkaline and acidic to destroy the plaque a little bit each day) to destroy all S. mutans and then immediately do the 6.5 pH ACT wash, since pH 4.4 damages teeth. I got about 4.5 using pH paper. Another dentist suggests avoiding Listerine, due to 4.4 pH and good bacteria killing alcohol. Listerine Total Care is 3.6, so avoid it, the thing is you don't need follow this protocol, this is just to show you the importance of some mouthwash or at least using baking soda powder and some xylitol powder to rinse mouth with to bring pH to neutral, avoid acidic pH after meals. See pH values for common mouthwashes. A list with pHs that are 1-2 unit higher than real for many, is here, for those curious. Listerine may be useful once a year for people who visit a dentist and have heavy plaque due to laziness and not brushing, but for those brushing often, it probably will damage their teeth. For reference, watermelon pH is 5.5, which means 10 times more alkaline than 4.5. Lemon juice pH is 2.5, meaning 100 times more acidic than Listerine. Listerine got strong antibacterials that kill good bacteria too. It's better to use Listerine only rarely, once a year if any tartar deposits exist, that cleaning with thin tip toothbrush won't remove. Can buy a 2$ 3 oz Listerine to use once a year,

but most won't need it, just use some lemon juice once a year to remove calcified tartar $CaCO_3 + 2HCl = CaCl_2 + H_2O + CO_2$. Don't buy Listerine, lemon and home made safer mouthwash will get you the same results without the ultra toxic colors in it, the toxic saccharin and other junk. Take a glass with 10 mL water, put xylitol and 5 drops of lemon until pH is 4.5. 5 drops in 10 mL will give a pH of 4-5, depending how big the drops are. Lemon is world famous for whitening teeth, so if tartar is stubborn, put more drops and slush well or target teeth with more tartar by squeezing a lemon right there and letting it dissolve carbonate in 1 minute, use those $ store dental mirrors to check the back of teeth where plaque is thicker due to people brushing less. Blueberry juice got a pH of 4.4 too, but they do stain teeth. A list of common fruits and their pH is here, so it's good to immediately use pH 8 mouthwash after eating any fruit smoothie or fruit juice as pH is too acidic and damages enamel. Apple juice is pH 3 and could also dissolve $CaCO_3$. Only use regularly mouthwashes with pH 7.0-7.6. If you got a small cavity on X-ray, create a formula at home, and then see how after good hygiene it vanishes. Her 4 step system is only for twice a day, as 3-4x will damage the teeth from acidic Listerine, too much fluoride in ACT. She rightly☺☺☺ dismisses water jet systems as dangerous, as they emit RF, EMF and also can cause receding gums. You don't need water floss with the latest 1-10 micron tip manual toothbrushes. Some dentists never floss and have perfect teeth. Many tribes never brush, have perfect teeth.

4. "Rinse 1 minute with ACT Anticavity mouthwash (0 Alcohol, so good bacteria will be happier)", or the green one, 0.05% NaF, pH 6.5-7.0, rinse 1 minute. I'm skeptical about this, check out ingredients, some are carcinogens, like propylene glycol, etc. Isn't it odd how they add toxic colors to these? Try find one without these colors, and maybe use that 0.05% one, if pH is 7, then leave mouth as it is for 30 min, so F can do its work. If you got a nice F toothpaste, you don't need this ACT mouthwash, if teeth are fine. A toothpaste got 0.15% F, 3 times more, gets 0.05% with some water. Most toothpastes have Na_2FPO_3, not NaF, which is less effective, since NaF dissociates faster to replace the hydroxy in hydroxyapatite and give you a stronger enamel.

11.14.2. Ultra soft and thin bristles with tips that are 20-200 times thinner are better

It is worth trying to use a thin 1 micron thin bristle tip, as that cleans the area where gum sits on teeth 100 times better, reducing junk between teeth 100 fold, as you can see with a 20x mirror BEFORE and AFTER – be amazed and *SHOCKED* how bad a conventional toothbrush (150-300 micron tip) is vs 1 micron tip (the 1 micron tip type removing the need to floss, except rarely, if you eat like me: no breads, no dry foods, everything smoothie or wet). Check teeth with the 20x mirror, if any residue seen, use the brush on that area more and it will allow the bristles to go like a floss without shaking, moving the teeth as during flossing, shaking which is not a good idea. Hydroxyapatite toothpaste, say the size of a rice grain, can be used on a stained tooth or a groove or tiny cavity (visible at 20x only) or enamel repair (it works on tiny cavities too to

remineralize them, not on big cavities, but small ones you only see at 20x, those are easy to heal naturally without dental work).☺☺☺ Normal brushes are like you use a body brush whose bristles are 200 times thicker: it would be very uncomfortable, scratch the skin, and clean nothing. Likewise, a 200 times thicker toothbrush bristle tip is 200 times less flexible, applies 50-200 times more pressure on the enamel, gums and erodes tooth enamel or even dentin 200 times more causing a global epidemic of tooth loss seen in millions who get white ceramic fill. Besides, it leaves far more dirt on the edges of teeth where all plaque accumulates. This is a national travesty. Money thrown in the garbage. The difference is so huge that it is criminal for a government to allow conventional toothbrushes to be sold, when Earth wastes $500 billion a year in useless preventable dental care because of bad toothbrush design. Not to mention that mouth bacteria can cause systemic inflammation and worsen heart disease, 9000 other diseases. If the tip is 10-250 times smaller, of course it will remove junk, bacteria film in between grooves, teeth, 200 times better, your mouth will be 200 times cleaner of Strep mutans and smell far less. ☺☺☺ Omnivores eat meat with 3 times more sulfur than vegan protein, so it rots between teeth and makes their mouth stink like a rotten egg with bad toothbrush design.

Some ULTRA SOFT TOOTHBRUSHES WITH TAPERED TIPS, that are 10-20+ times thinner than the base, are the Nimbus (3$ each) brand by Dr. Klein, whose tips are softer and less gum damaging than the similar design Gum brand and some others out there. These work better than electric brushes, if you do the cleaning correctly (see video). This dentist used Nimbus brush for 10 years and suggests replacing brushes every month, due to bacterial growth and damage to the fine tips in these new tech brushes that almost nobody uses (due to ignorance), yet which remove the gum line plaque 5000 times better (meaning you have far fewer bacteria, cavities, gum problems). Mouthwatchers.com sells an ultra fine bristle tips (1 micron) toothbrush, the most dramatic thing is how after 3 months, the calcified tartar at the base of teeth, the back of teeth especially where we brush less, has disappeared, due to its 10 times thinner size, 100 times thinner tip than the "regular soft toothbrush in most stores" in 2024 (meaning it prevents cavities in hard to reach places, grooves, in between teeth 100 times better), being able to get to those pockets easier and break the plaque, clean dirt, food, Strep. mutans film. GUM Amazon pic shows exactly how these tapered bristles with small tips (0.01mm, base is 0.2mm) have a tiny pointed shape to get plaque broken. This is why Colgate makes several toothbrushes with these same tips that are 17 times thinner than the base, such as the Advanced Floss Soft 360, 4 for 14$, which reaches 4x deeper along the gumline. When buying these, go for soft or ultra soft, as those have base thinner and tips will be 17 times thinner than that base, giving you a really thin tip, maybe twice thinner than that of a hard brush with 'thin tips'. This is the Colgate top of the line brush basically. Colgate has other thin tip brushes, like Colgate Gum Expert Ultra Soft (3K bought) with 8 sets of bristles, reduces gum bleeding 3 fold, cleans 6x deeper along the gum

line (Colgate official page) due to tapered (thinner tips) bristles, so collagen and peptide damage to gum-tooth link will be possibly 70 fold smaller. Colgate 360 Slim Soft Gliding Tips (1K/month bought) ones have a good Amazon picture to show how these tips are 17x smaller than the base or regular bristles, cheap 25 cents toothbrushes, see Colgate 6x deeper along gumline 1.5 deeper between teeth page, so these may be the thinnest tips among Colgate, or you can call Colgate to ask. Even so, since these are pretty regular bases, the tip is still going to be 5-10 micron, not 1 as for the best. The advantages of ultra tiny 0.01 or 0.001 mm soft tips are huge.

The Oralphi Chinese toothbrush Amazon video and their Amazon images on mold growth explain so well how regular hard toothbrushes with no gaps between bristles rot and cause damage to enamel and gum, using the strawberry example: regular hard brush rips the red tissue off strawberry, the soft ones never do that – you know gum are like skin, they got collagen fibers etc and skin collagen is damaged by hard brushes. So what happens, people who use regular brushes may actually cause their gums to recede by mere brushing: the 'low IQ' US government never taught people to brush properly via centralized education since age 1, so people often go up and down a lot and force the gum to recede even with a soft toothbrush like Oralphi; this causes tooth loss too (strawberry example above), as you scrub so hard using the worst toothbrushes (*most brushes sold today are very bad, they lack 1-5 micron tips to get food in small grooves and between teeth, so the US spends billions extra in dental care due to* national resource mismanagement), the enamel and dentin vanish. To avoid gum recession, go mostly upwards for lower teeth (downwards for upper teeth) and sideways, to avoid going AGAINST the gums (always brush from gum to teeth, not from teeth to gum, brush away from the gums, not against the gums) with the brush and don't use thick hard brushes as they severely damage the gums and the enamel. Mident bristles are about 0.1 mm,, while the tips are 0.01 mm, smaller than most brands. Most dentists suggest using softer brushes, as they lead to less tooth loss. People buy regular brushes and don't realize they will literally brush the teeth away, with each aggressive brushing, they remove more of the dentin/enamel, requiring ceramic pouring later where dentin eroded. ☺☺☺

Bacteria can double every 20 minutes on a toothbrush, leading to gum disease. Thus, we need to kindly gently allow the toothbrush to dry, since gum disease *anaerobic bacteria* die when it gets dry (never put a brush in a bag or drawer or container). Thus, *if you brush 4 times daily after 4 meals, you need to have 4 toothbrushes, and let each dry 24 hours*; if you brush twice, you need 2 toothbrushes. The bacteria that cause cavities are anaerobic, so if you seal the brush, those types multiply rapidly. Amazon has really thin 0.01 mm or so bristle (12 brushes for 9$, don't buy these, it's just to show you the bad type that doesn't dry due to no gaps) toothbrushes that can help remove dirt in the tiniest grooves or between teeth, massage gums without causing receding gums (the soft brushes are wholly superior to anything in most stores for *gum*

massage to stimulate stem cell release and tooth-gum regeneration); since some of these got more bristles than normal brushes, they need to be washed very carefully, allowed to dry fully (takes longer, due to less space between bristles). After brushing, you can always insert brushes into a small container where you placed peppermint oil and water, baking soda cleaning solution, for 20 seconds, to disinfect, then let it dry in an upright position so water drains faster by gravity, disinfecting the base faster (don't let it sit flat on the counter, with tips facing up, as it takes longer to dry). The bristles have to be soft, widely spaced, so they're easy to dry, to clean of food debris. Dryness is key, never cap a toothbrush, as mold will grow. For ultra-soft brushes, with diameter of bristles 3-15 times smaller than regular soft ones (0.01 mm, not 0.15 mm for soft and 0.3 mm for hard), the 0.012 mm bristles ones with space between groups of bristles (4 for 9$, avoid, since some are too tight, need 32 sets of bristles, not just 8) are much safer, as air will dry them faster and allow for faster *anaerobic* bacteria killing, as the anaerobic ones are protected by water that prevents air contact and then they can accelerate gum disease. Dentek sells tiny interdental brushes (32/4$) that are useful for people with big gaps or crowns or teens with braces. The gum stimulator is an old tech made obsolete by the latest amazing toothbrushes that remove all plaque much better, it uses a rubber tip to get rid of plaque that is around the gum (see how it is done), or in more detail here, at the end rinse mouth and brush teeth or floss with water jet device). Listerine used once a year removes any calcified tartar by its acidic pH, these stimulators can mess your gums. Just brush the gums to stimulate the gum by going from the gum towards the teeth, not against the gum. ☺☺☺

Some use Mouthwatchers silver-polyester toothbrushes, like this dentist suggests, (S. Korea made 3.6$ on Amazon if you order 4, tips of bristles are 0.001 mm to get into tiniest spaces (the bristles are 10 times smaller than regular so about 0.01 mm, but the tip is even smaller, 0.001mm, as you can see in the picture, with plenty of space to dry fast, these are the smallest tips on the market) where the ones above, 0.01 mm ultra thin can't go, the silver kills bacteria 6 hours after brushing, 10 times thinner than regular brushes to do part of the flossing for you). The only issue is silver may scratch enamel more or may cause oxidative stress and damage to gums in unknown ways. I used this silver one on Aug 7 2024, and my teeth had for the first time in my life become free of that S. mutans plaque around the gum line around many teeth, so with this type of small tip toothbrush you never need tooth cleaning (like the dentist explains, if you use good brush and toothpaste, mouthwash, dental cleanings are NOT needed, just a scam to enrich dentists) having used Listerine mouthwash first time ever for 2 minutes too, and then brushing 5 minutes using the Mouthwatchers toothpaste to see if it can remove the accumulated biofilm of S. mutans. The toothbrush removes stuff between teeth SO MUCH better than normal ones, so when you floss 25 times less stuff comes out, making flossing redundant. *We healthy vegans don't eat lethal foods, like sticky cheese, toxic peanut butter, cookies,*

chocolate, biscuits, chips, so we need a lot less flossing too. Just avoid mango (useless expensive fruit, vs berries, etc) and pineapple (causes asthma, if eaten daily, OK during colds, injuries), and nothing will get stuck in between teeth, as apples provide no special nutrients not found in much healthier veggies/fruits, and apples (skin gets stuck between teeth) have pH 3 (enamel destruction) vs 5.5 for carrots or watermelon. Oranges and citrus are also overrated (I no longer eat them), they destroy enamel, *get stuck between teeth* (especially the white stuff) and provide few benefits vs kale, berries (way more polyphenols), carrots, watermelon, etc. *Today eyes are the most important thing, and kale has as much vitamin C as oranges, and 500000 times more lutein (eye pigment, brain protector), 10 times more polyphenols (add kale to smoothies, puree it), etc.* If you use this brand, recall that silver can react with traces of bleach from the Closys mouthwash and form black silver oxide, a toxic compound that can stain teeth, poison the blood (sublingual absorption), cause lung damage, or even oral-throat cancer in theory. Tap water chlorine can also oxidize silver and then this AgCl can react with acids in foods forming brown oxide and staining teeth or causing liver, kidney, and other organ damage if ingested in large amounts, though what we get from food in lead and mercury (even more toxic) is far more damaging than 1 mcg from a toothbrush. If silver nanoparticles falling off the bristles attach to the dentin tubules and goes inside, it may make teeth brown over time in some people, as it oxidizes. It may be best to not use CloSys if you use the silver brush, even if 1 dentist uses it. However, we get so many heavy metals from food alone, that the amount of silver leaking from this one may be so small, that it's negligible, since silver is not reacting with anything except chlorine dioxide. Brushes with silver leak tiny silver particles, which then are oxidized by CloSys or peroxides mouthwash, or even regular mouthwash that contains hydrogen peroxide. Not everyone may detoxify from silver compounds easily, while silver particles are inert inside the body, mostly. So, do some basic research before using any system or mouthwashes to determine risks. The other issue with 1 micron tips, instead of 10 micron, is that the silver can get into certain places, attach there, and form a biofilm that then promotes cavities, due to the scratching of enamel by the silver part of the bristle tip. These 1 micron scratches by silver will attract bacteria and could cause cavities to flourish. Silver is 2.5 on Mohs scale, vs 10 for the ultra hard diamond and 1.5 very soft plastic, so I don't know. Just as excessive force brushing with bristle type of plastic (softer than silver) removes enamel and dentin, so can silver. I doubt this doctor did the proper studies, to prove by microscopy that an identical size plastic toothbrush is not safer and causes less scratches than the silver plastic hybrid. We have not been shown the microscopy pictures, the microcavities with the 2 analog brushes to ascertain that the silver one is safe, doesn't scratch, doesn't promote cavities (via enamel scratching or fracture) more than it prevents cavities via antibacterial effects. The website seems too simplistic, IQ of 5th graders, like that of 99.99% of US dentists who're lack 500 references. ☺ Abysmal IQ☺ rules in USA, like in all nations, like with humidifier safety. Since 20K/month

bought these toothbrushes with silver in 2024, they seem OK, but safety studies are needed.

11.14.3. Downsides of Fluoride: fluoridated water has 200x more F than breastmilk:

Fluoride or F^- (in water, toothpaste, mouthwash, dental cleaning varnish) kills the nitric oxide bacteria that prevent high blood pressure, atherosclerosis, strokes, infarcts. "NaF (1 ppm, same level added to city drinking water) in rats ... water resulted in damage of the hippocampus, purkinji cells and formation of β-amyloid… (dementia was) found to be more common among people living in high F contaminated regions… people who drink water contaminated with high levels of F have been found to grow old faster." ► TL 223(2):236-51 has more on all devastating effects on endothelium, every organ. Why can't We the People sue the cities, counties, state, fed officials who got 2-8 times average salary for committing genocide, to build their palaces by genocide via inflated salaries, to pay collectively 1 trillion to all they destroyed, we use that trillion to create Universal Immortality Inc? F^- is used to poison rats. PFAS cause craniofacial birth defects (33% of birth defects) and are often only removed by filters aiming for PFAS. The next pages describe Epic (300+ videos on their youtube), the cheapest US made filter removing an "official (when new)" 99+% of F^-: 45.9$/filter or 75.65$ (click redeem 15% off) pitcher + 2 filters. They give you a free filter for every 5 you send back after use for recycling, if you buy them via their website, a first in the industry, showing they are the best of all world companies. Amazon ships it in 12 hours vs 4-5 days for the company website, and anonymously (nobody reading our email knows it's coming, amazon now hides order contents), which is useful if you are a target of terrorists due to publishing a book like this, that criticizes Islam, Judaists, others. You can recycle the plastic with a mallet, taking apart the plastic of every cartridge, to maintain secrecy, via privacy.com alias when setting up amazon account and ordering. Recall fake science and how Big Business said "lead raises your IQ and lead is an essential brain nutrient", just as today, the F^- selling CEOs (who brainwash municipal water systems, their customers) say fluoridated water supplies were associated with 1 point higher IQ. This is a fraudulent study, since everyone knows all people with higher income, better health facilities, more education always live in more urban or nearby areas that fluoridate water due to being part of the "fake culture of dental appearance first, longevity last", and those people evidently are not rural rednecks with few hospitals and always, for decades had higher IQ, way higher, that's why males in Ivy League areas live 10-15 years longer than those in redneck areas where everyone is on well water and IQ was 10-50 points lower for centuries vs the city. Correlation is not Causation. F^- lowers IQ, but this is another example of bandits creating fake studies to push poison on the US per Nazi-KGB agenda, German-Russian-British spies infiltrating USA. Aristocrats sell the ultimate poison as the greatest medicine, spies do that too, a filif cat IQ US population will accept foreign spies running the show via fake elections installing people they remotely control via spies. For nasty cities, you may need both filters to remove all metals, microbes, algae, algal toxins. After 8 decades of

protests (since Jan 25th 1945, when Nazis or KGB disguised as officials fluoridated the first US water in Grand Rapids, Michigan, like Nazis & USSR used F^- in water in POW camps to destroy the brains) from We the People, EPA has to take action:

A federal judge ordered in 2024 the EPA to take action to lower the risk of American kids lowering their IQ by drinking water that 67% of cities fluoridate at taxpayer expense to please the American Dental Association and enrage the American Brain Collective. JHM 2011;186(2-3):1942-6 found that each increase *in* 1 ppm of urine fluoride (F^-) associated *with* 0.59-*point* decrease in IQ; the F^- concentration in this study was 0.24-2.84 ppm. Does the IQ also increase if F^- changes from 0.24 to 0.05 in drinking water? What about babies with underdeveloped detoxification systems? Many studies found pregnant moms are iodine deficient and iodine deficiency leads to 15 point IQ drops. F^- is in the same chemical group with iodine and it competes with I^- ion, potentially making breastfeeding or pregnant moms *who ingest high* F^-, *bromide from water/foods* more iodine deficient. Since brain doubles in size in the first year of life, lower iodine thru high F^- is bad independent of F^- toxicity. Millions of Americans have thyroid issues; 3 glasses (8oz) of fluoridated water provide 12 moles of F^- for every mole of iodine we ingest as KI in vitamins for example (vitamin tablets with KI, 150 µg RDA). What if this F^- messes the hormones of 200 million Americans? UNICEF sponsored a study that found children who drink 0.88 ppm F^- water had lower IQ than those drinking 0.34 ppm water; 200 million Americans drink stuff around 0.7-0.88 ppm F^-; this UNICEF "Lin et al, Xinjiang, 1991" study is listed in Table 1 on page 1364 at EHP 2012;120(10):1362-8. For millions of years we drank 0.05-0.15 ppm fresh surface water, now some drink fluoridated 0.7 ppm, when Harvard researchers advise otherwise; the main paper author, from Harvard, says "F^- seems to fit in with lead, mercury, and other poisons that cause chemical brain drain." Children drinking 3.1 ppm F^- water had IQ 9 points lower *than children drinking* 0.8 ppm ► JD 2012;9(3):221-9. "Infants whose mothers lived in areas with water fluoridated at 1.7 to 6 ppm while pregnant had delayed orientation reactions ... compared to those whose mothers were exposed to 0.5 to 1.0 ppm... A... children living in 'high F^-' areas had *IQs that* averaged 7 points lower than those living in 'low F^-' areas. Seven of the 'high F^-' areas had F^- concentrations > the U.S recommended range (1.8-3 ppm), while one was within the recommended range (0.88 ppm) " ► EH 2015;14:17. ☺☺☺

One can make distilled water with a home distiller for 625$ (plus expensive electricity, filters for the DI machine) and then add electrolytes as shown in the fasting section. For cooking or humidifiers, distilled water is fine. However, it's easier to leave the minerals in water via filtration. Bioweapons, drugs can be inserted in filters, to enable 100 times better absorption in filtered water, like MDs say 'take this pill on empty stomach'. Pur (made in Mexico), Brita (made in Canada) are easy to contaminate by spies, so order from amazon via cybersecurity as amazon hides via email who gets the filter. If your city water has no F^- added (all Utah, all Florida, etc),

then you don't need F capable filters, the cheapest 99% F filters being Epic, safer, as they're made in USA, and got the cheapest price on amazon via subscription (not the website): 45$/filter or 75$ pitcher (click redeem 15%)+ 2 filters. 1 filter is 100 gallons, so we save plastic and money.

You can use dispensers in a house to store distillation water, though a pitcher is far safer and easier to clean, since you to produce purer water uncontaminated by the dispenser faucet which gets bacterial growth as water sits and goes thru it for a long time. Pitchers can be cleaned in 3 minutes 300 times better, but we can't clean the faucet of the dispenser well. It's better to use 2 pitchers and practice some exercise lifting them than to use a dispenser, as mold grows fast. Water is idle in the dispenser and bacteria multiply there. Filtering saves the planet, as we don't use plastic bottles, but distillation is far more ecofriendly, since with solar panels we get clean electricity for 80 years, and the distillation filters use less plastic than Pure XP epic low plastic cartridges. The green algae from the Los Angeles tap water piles up after 3 months on a very light green film in the white casing of the Pur filtration faucet system, that biofilm in a dispenser faucet will poison you slowly. If you use that faucet filter from Brita or etc, you can clean that green algae film every 2 weeks. Bacteria films can be very invisible and do harm and people rarely clean with 70% alcohol or something their pitcher or dispenser. Dechlorinated water (chlorine will come out of water over time) mixes with air bacteria and starts to grow crap fast. This is so true in warm states, since this warm temp is ideal for endless bacteria. Drink the water right away, don't let it sit in the dispenser/pitcher. F filters are not the best idea, as they can get clogged after a mere week and filter less efficiently, but adding minerals takes a lot of fossil fuels too, so you may end up with the same waste. Filters seem more wasteful environmentally long-term than distillation machines that use only a tiny filter 50 times smaller, but we need real research to compute effects. US needs to ban F or give people free good distillers to avoid this deadly poison cities add to kill Americans. For millennia people used copper to kill microbes (kills most bacteria in 1-300 hours), so to ensure a clean water, after filtering the chemicals on it, keep water in a copper jug ► AEM 2010;77(5): 1541-7, paper detailed in a video on copper. ☺☺☺

The latest tech is 1000 times better at removing PFAS in water than current filters, and 100 times faster too. The white Epic Pitcher may filter more F^- (99%) than most US filter companies. Epic is located in Boulder, Colorado, where 35,000 Jews live, so order from amazon, via subscribe, as nobody will know who gets what filter, as the company may have Jews in it too. Avoid Clearly Filtered (see below), run by Jews, as they waste huge amounts of plastic with each filter and don't recycle it. To protect self, when buying stuff online, always use secure computers and an alias linked via privacy.com to your real bank and name, so no foreign spies can intercept UPS/FedEx data and try to intercept your packages and poison them or install spyware. The solution is obviously distillation or to move to Florida (google "how many Jews in this town" before moving, as they gang up to harass free thinkers who reject Torah genocide rape

"religion") or Utah or areas without F in the tap water, as even osmosis filters can be compromised easily. The only possible issue with this Epic is that it removed only 25% or 0.3 ppm F for water with 1.1 ppm level in one old test of the first awful version (no longer sold), possibly due to the carbon block becoming loose in the first versions of the filter when they had the carbon often detach (cartridge was unremovable, meaning much of water was not even filtered if it detached). In 2025, Epic improved filter design a lot, but their pitcher lid is far worse than first versions, it comes off fast if you don't hold it with 1 finger, so you just need to tape it to avoid holding it and take tape off when replacing filter once a quarter. Very poor engineering of the lid. Water filtration speed seems higher than before. Youtube got a 2 min, 3 min (co-founder Joel Stevens) clip about Epic, US made (less tire particle pollution (less transport), more stringent criteria), including co-founder Mr. Ash Heather 3 min clip. The timer can be easily removed with a scissor, then recycled with a mallet to separate electronic waste from the plastic, to avoid espionage by those who use it to connect via WiFi, etc, record talks.

► The white Epic Pure certification PDF shows it removes 99.2% F, (vs 68% nano), 99.94% Lead (nano same), 99.9% PFAS/Cysts/Chlorine/Microplastics/Arsenic/Parasites, 99.99% r. Terrigena (same as nano), 99.9% MS-2 (vs 99.98 for nano), 99.8% volatiles & pesticides (same as nano), 99.4% Cd/97% Hg/97.2% Cr/96 % Ba, 91% hormones (same as nano), 99.2% Cr6 (vs 96.6% nano).

► The grey Epic Nano certification PDF shows it removes (for dirty well/city water with viruses, bacteria) 99.9999% cyanobacteria (algae) (not removed by Epic Pure Filter or Brita/Pur/Walmart brands), 99.5% Chlorine, 99% microplastics, 95% arsenic, 99.4% Lead, 99.5% aluminum (vs 76.7 for Pure). Epic is superior to any faucet filter (slow filtration removes far more stuff), since it filters 200 contaminants (vs 30-70 for Culligan-Brita-Pur made outside US). Pur filters only 25 chemicals. Epic is made in USA, so we get less risk of filter bioweapons, poisons, fentanyl.

The Clearly Filtered (Jewish) removed 1.1 ppm or 100%, but added toxic cobalt to the water. Clearlyfiltered (founded in 2011 vs 2015 for Epic) didn't get NSF certification, but claims to remove 386 contaminants vs 200 for Epic, including 99.5% of F, as the list shows, 99.9999% rotavirus, extra microbes vs 0% for some microbes for Epic. The pitcher handle is plastic, so when hands handle it, we get more microplastics, while Epic uses bamboo to prevent that. Lead *filtration is 99.3% for Clearly vs 99.94% for Epic Pure, 99.0% for* Pur. Clearlyfiltered sells a 45% pricier pitcher (110 vs 75.65) & 37% pricier filter (63 vs 45.9) than Epic, plus wastes 30 times more plastic, not sure if quality is better if cobalt is added at 5.4 ppb, when Health Guidance Level is 2 ppb in water. The way things work is that any filter out there, like Epic, that filters 200 known contaminants also filters another 900 less known ones, so whether Clearly really filters more than Epic or it's just more marketing uncertified by anyone, is subject to debate, but one video claims Epic takes 5 sec vs 13 sec to filter, meaning slower filtration usually means more

removal, but not always. Pur and Brita leave a lot of copper. Epic leaves a lot of minerals, so you don't need to buy them, 427 ppm vs 177 ppm for Clearly Filtered, so Clearly strips you of essential minerals, creating osmotic damage in tissues like RO and distilled water. A color strip test shows 90% fluoride removal, not 99%, which is still a lot better than 35% for Brita, the discrepancy being due to using 100 ppm water, which never happens in drinking water (max 5 ppm), since certification is for filtering normal 1-5 ppm F levels, not saturated. Epic does filter 99.2% F, at 0.2-5 ppm, so the 99.5% F removal of Clearly is not worth the huge price and 2.5 times less minerals, addition of cobalt. Thus, some youtube tests are irrelevant and can be used to manipulate users into buying a brand. We need a neutral gov agency to test these filters before even 1 is sold and rank their Immortality Credit Score, print it on all products sold in the USA. Avoid Clearly, too expensive and wasteful, disregards human labor in making plastic, offers no recycling and free filter for every 5 returned for recycling. You can buy a good aerator and change it often if a fine screen or clean it often if a very wide hole screen, to prevent lead particles from being stuck there from the old pipes; use some scanner if you can to check which aerator is free from heavy metals; a good type is one with a good rubber washer and grooves so when you try to install or remove, you can use a wrench to grab it without having to apply any force that would destroy the threads of your aerator and then faucet, scratch the aerator sides leading to bacteria buildup. Even the US made faucet water filters (that don't remove F) remove only 85-98% of lead and, like non-US ones, often have poor websites, COA. ☺

If you live in Southeast USA or warm climates where algae can grow, this paragraph is helpful. People who move from other states to Florida think all "city water or water utility connection water" is not well water, but it's well water for many cities and algae rich water too. They do filter the algae out for cities, but can't remove all of them, since in USA 50 million jobs are about smoking, vaping stores, alcohol selling, strip clubs, stadiums, endless redundancy for aristocratic profits. That's why we have 1 scientist working on living to 500 years old, instead of 50 million. The palace dwelling aristocrats take the whole planet down into the pit of hell, fast death and aging. Thru aristocratic decentralized chaos values of everyone reinvents the wheel to make 4 extra $ and buy a bigger unique design house, progress becomes 1 billion times slower in longevity sciences. Aristocrats give us 400 million house designs and living to 80, instead of just 400 house designs by Immortality Building Inc and living to 80 million. Aristocratic "Logic" 101. The obsession with having 20000 water utilities, instead of one Eternal Utility Inc, means that the amount of duplication and wasting of one's life is huge, because staff is not allowed to invite someone from a nearby city and show them how they do it to save 1 year of reinventing, so then nothing new high tech can be developed as all time is spent reinventing what others already invented filtration wise. In the name of fictional "copyright" or "intellectual property", the nation sinks into 3rd world country status. All inventions belong to the nation, "copyright", every

company reinventing everything means decades of innovation lost. All "intellectual property" is based on the toil of millions of teachers, construction workers, infrastructure workers, gas station attendants, janitors, etc who support scientists, etc, it doesn't belong to a company or owner of a company, not even to a tiny nation if we talk of EU where they share so much together, it belongs to the entire EU or planet finally, when humanity evolves to Immortality for All. Likewise, within NATO, all ought to be shared at civilian and military level. Like Elon Musk shared all Tesla electric car patents with everyone on Earth to help all workers live longer by not inhaling chemical smog and breathing clean air. In China everyone shares everything behind the scenes with a 100% fake competition, so they already have tech way beyond USA one in many fields. Soon, we will become like monkeys vs the Chinese, due to centralization, and they may enjoy not just dog meat, but American meat too.☺ In Florida, especially the super warm year round South Florida, many cities use wells where green algae grow 365 days a year, so the tap water is green (you need to put about 1 gallon of water into a white container to see that, you can't see it in a regular glass), as the state doesn't care, due the federal aristocratic government of decentralized chaos. The filtration of the algae fails, so even city pages (Dania Beach) say "our water has color", a thing nobody would say in other states. Washington DC has yellowish water.

South Florida is much warmer year round than California at night, especially in the winter, spring, fall, so algae grow a lot easier. City of Dania Beach, FL, has very green water, as do 100s of Florida cities. To remove algae and their mycotoxins from Florida water, you may need to distill the water, as Epic Nano, Clearly Filtered won't remove algal toxins. Most states have more than 50% of water fluoridated, Florida banned fluoridation on July 1st 2025, California poisons 59% of residents with rat poison (F). Water is used by moms to make formula from powder, to cook for kids. Breastmilk level of F is 170 times below that of California mandated 0.7 ppm level. If baby brains needed so much F, why is Nature, after 5 billion of years of evolution, providing 170 times lower level? Fluoridation valves can malfunction, leading to 200 ppm levels. California requires all providers of water to more than 10000 people to add 0.7 ppm brain destroying F, like Nazi experiments with F. Distill cooking water to prevent toxins from the cyanobacteria. With smoothie makers, that can puree all foods, our teeth go thru less stress, so we need prioritize brain and body health. Beavers have strong teeth, having 10 times more F in their teeth, but we don't aim to live as long as beavers, do we? With so much F in toothpaste, it is illogical to add it in the water. Many lived to 100-120 and their nations never add F. Denmark etc have better teeth, lower cavities than USA and no F added. Go figure the puzzle. Utah, Florida got zero F, Hawaii doesn't add F much either, except maybe on military bases to lower soldier IQ and make them submissive, especially if people use rainwater like on the big island, a 2022 state map of fluoridation shows that cavities are often not in states with the least fluoridation: Alaska fluoridated 42% of water, and got 62% of 3rd graders with cavities, New

Hampshire 46% of water, 35% of cavity kids, Kentucky 100% water and 63% cavity kids, so KY got 2.2x more F, but 1.8x more cavities than NH, the more F, the more cavities, US Logic. MN got 2.2x more F, but 1.4x more cavities than NH. ND 97% F & 55%, WA 64% F & 53%. Probably the only thing that matters is how much a state educates its kids to brush teeth after every meal? "Higher levels of aluminum and F were related to dementia risk" ► BJP 2020;216(1):29-34. Forgetful soldiers are useful to aristocratic generals: "The neurodegenerative effects of F are particularly critical in the early stages of biological development, which many authors attribute to its ability to cross the blood–placenta barrier. F causes degenerative changes in all parts of the brain and in the spinal cord, including axon deterioration, myelin sheath degeneration, mitochondrial damage, alterations in synaptic ultrastructure. It also affects neurotransmitter metabolism and causes changes in the expression of neurotransmitter receptors" ► IJMS 2023; 24(2):1558. For those who don't care about (due to having no F in tap water) F, but care about US made, try 35$ Culligan faucet filter (the largest US made faucet filter company, founded 1936, 7500 employees, with 13$ filter, lasts 400 gallons, filters PFAS, Class I particulates (0.5 to 1 µm). Avoid crystalquest.com filter, it's a bad company, even if US made, the worst customer service, ship you twice wrong items on purpose, have you pay shipping defective items back. Even the EU faucet filters only remove 100 contaminants, and no F, since EU adds no F. Amazon reviews explain thyroid issues mean less F is better. Israel (as of 2014) and 98% of Europe don't fluoridate water, 70% of USA adds it. Half of the world's people who drink fluoridated water are in the US. That's maybe why US got more people on antidepressants than any other nation worldwide. F was used on prisoners in World War II too for brain damage. 70% of America and 5.7% of the world adds F to drinking water. Why? Many nations outlive Americans and they don't add F to their drinking water. *EPA lowered F limits from 0.7-1.2* (1962-2015, 99% of fluoridated systems were 0.8-1.2) to 0.7 in 2015. Fluoridation lowers iodine uptake, iodine uptake raised US IQ 15 points, so USSR and Nazi spies infiltrated US gov to fluoridate to block iodine. No wonder Americans are so stupid today vs 1950 when fluoridation started. Why not go lower to 0.2? Veggies have very low F, but once we cook them in F rich water, the F ion is attracted to the organic matter, etc in the food and the F content increases 25-90 times: ☺☺☺

The F levels in µg/100g are: fluoridated tap water ►70◄ or 117-234 times higher than breastmilk 0.3-0.6 (Eur JD 2007;1(1):21-4), *man made babyfood* (*200 times higher than nature if mom takes fluoridated tap water (even if filtered with nonF filter)* to make a toxic formula for a baby with a barely active immune and digestive system and brain doubling in size first 12 months of life, formula with fruit juice concentrate, etc or powdered cow milk; high F will lower IQ by 10-30 points if baby can't handle so much F in first 5 months of life? No food company is required to list F like a barcode would in a Civilization of Immortals with Eterni Foods). Niagara Spring water mineral content (ppm: Ca 13, Na 7 , K 1, Mg 5, 26 total) is about same as way pricier

Smart Water *(Ca 10, Mg 15, K 10,* 35 total*),* but Smart Water has less toxic compounds in trace levels found in spring water, and less trace beneficial minerals and possibly compounds (silica polymers that filter out aluminum etc) too; Niagara spring water *TDS is 95 vs 250-450 for tap water & 27 ppm (< 35 ppm* Iowa State found) for Smart Water. Few spring waters are safe, meaning F < 0.05 ppm or 5 µg/100g. Recall $_{9}F^{19}$, $_{17}Cl^{35}$, $_{35}Br^{80}$, $_{53}I^{127}$ (difference of 8 for $_{9}F_{17}Cl$, due to 8 main groups of elements, 18 for $_{17}Cl_{35}Br_{53}I$ due to the extra 10 groups of transition metals), so it takes 19 µg *of F to displace* 127 µg *iodine (150 µg daily iodine intake for most*, versus 20-2000 µg F) in the body, eye, thyroid, *damage our brain, pineal, eyes, thyroid, though oxidative stress from F is complex.* High F water on empty stomach without antioxidants from a juice or meal may not be ideal). The USDA has a list of the highest 1428 fluoride rich foods, on the right most column in µg/100g: black tea 373, instant tea 335, raisins 234, canned blue crab 210, white wine 202, shrimp 201, grape juice 138, potato chip 106, red wine 105, bottled water 104, coffee 91, fluoridated tap water 81, Olancha, CA spring of Crystal Geyser 80, Dannon water 78, Root beer 71, 0.7 ppm fluirdated city water 70, Coca-Cola 57, Sprite 56, Beer 45, Gatorade 34, Perrier bottled water 31, drained beets 26 (also 26 with liquids, as F leaves the fluoridated water of the can and attaches to calcium, etc in the veggie it is canned with, since it has months or years to migrate), French fries 26, 0.25 ppm F (on manufacturer site at times) spring water 25, Crystal Geyser from Weed, CA spring 24, Poland Spring water 10, grapes 8, Calistoga water 7.3, avocado 7, Dasani water (Coca-Cola) 6.7, radish 6, Aquafina water (Pepsi) 5, Niagara Spring water 1-4, strawberry broccoli 4, apple carrot 3, banana watermelon tomato cherry plum pepper 2, grapefruit cauliflower cabbage onion cucumber 1. Pickles are 30, cooked carrots 48, as marinating or cooking water is full of F. *The 1428 foods list shows that a vegan diet, of mostly* produce *and some cooked* lentils *is literally the lowest F diet out* there*, since we drink negligible amount of any* water. NIH has a list too based on BJN 1983;49(3):295-301 (free paper via widget). 0.7 ppm tap water has 70 µg/100g. 0.7 ppm is (0.7 mg or 700 µg)/(1,000,000 mg or 1 L).

Food F may be far less bioavailable (*unless juice or puree* as *with baby foods*) than water F (most of it may be eliminated via feces), just like soy milk calcium (added☺☺☺) is about 10 times more bioavailable than spinach calcium. 0.7 is the EPA recommendation for max F in water (170 times higher than human breastmilk level), and California law requires every water system with over 10,000 connections to add toxic F to water, *even though toothpaste F is* enough. Brushing teeth after each meal is enough to prevent tooth decay without endangering other organs. Our brains and organs are more important than our teeth. F uptake by arteries is linked to calcification or hardening of arteries ► NMC 2012;33(1):14-20. For 50+ studies on lower IQ by F ingestion, see fluoridealert.org. This is why people who live near an area where 10 pounds of cucumbers (peeled to remove 90% of pesticides) are cheaper than reverse osmosis water, just eat that instead of tap water, to protect their brains. If you eat lots of veggies and

fruits, with a few exceptions noted above, cooked or not, you still get way less F than tap water or filtered water, unless filtration is reverse osmosis or using special F filter (none of the main Pure, Brita, etc filters removes F). If you cook veggies at home often, and your water utility report shows F > 0.1 or 0.2 ppm, you can buy a F filter, or use RO water when cooking or drinking. Cooked veggies/fruits in fluoridated water have 5-20 times more F than raw ones. This increase of F content is especially true if you cook stuff other than lentils, beans (cooked lima beans 7 µg vs 47 µg cooked carrots), but veggies, because softer stuff is more penetrable by F as seen in the USDA cooked foods tables. Steam veggies 1 minute using DI water, it is safer than cooking that destroys phytonutrients, creates AGEs. All sodas/foods from restaurants in a fluoridated state or region (USA) usually are loaded with F like tap water is, so choose reverse osmosis (Aquafina, Dasani) water bottle when out, instead of the diabetic sodas.

11.14.4. Fluoride causes Pineal Calcification, Alzheimer, Multiple Sclerosis, Loss of Direction, Insomnia, Depression, brain damage (less melatonin production, melatonin protects the brain)

CaF_2 is a very stable compound, since F is very electronegative, Ca very electropositive. It's so strong, that it is inert to most acids. The pineal gland has both Ca and CaF_2. F to calcium ratio is higher in the pineal than in bone. World's most prestigious medical journal, Lancet 2014;13(3):330-8, classified F as a neurotoxin in the same category as arsenic, lead and mercury. F is hypothesized to speed pineal gland calcification "pineal and muscle contained 297+/-257 and 0.5+/-0.4 mg F/kg wet weight, respectively; bone contained 2,037+/-1,095 mg F/kg ash weight. The pineal contained 16,000+/-11,070 mg Ca/kg wet weight. There was a positive correlation between pineal F and pineal Ca" ► CR 2001;35(2):125-8. "The level of F in the pineal gland of goosander was 5-fold higher than that in the brain of the animal. The similar results were observed in the aged human pineal gland. Thus, decrease in environmental F pollution may be helpful in delaying or avoiding premature pineal calcification. It was hypothesized that the lack of calcium salt crystallization inhibitors, such as pyrophosphate and phytate, would favor calcification" ► Mol 2018;23(2):301; this paper, which may have fake information on purpose (fake news and science papers exist, mixing truth with fakery) explains pineal calcium is hydroxyapatite, like the one in arteries and teeth, unlike calcium oxalate in kidney stones. After kidneys, pineal has the highest blood filtration of any organ, so it can pump melatonin, with blood flow far exceeding its metabolic needs, making it susceptible to F^- DEPOSITION due to fluoridated water, given that some calcium structures already exist and F binds to calcium to turn hydroxyapatite $Ca_{10}(PO_4)_6(OH)_2$ into fluoroapatite $Ca_{10}(PO_4)_6(F)_2$ as explained in a few pages. This blood flow also makes it susceptible to blood calcium deposition like arteries. Pineal calcification as seen on x-rays can lead to a defective sense of direction ► BMJ 1985;291 (6511):1758-9. NA 2008;29(2):203-9 found 0.15 cm^2 of pineal gland was uncalcified in Alzheimer patients versus 0.25 in healthy controls. ☺☺☺

The atherosclerosis section shows HOW the arteries of Alzheimer patients are WAY thicker, with more calcium and oxydized cholesterol plaque. The oxidized cholesterol section explains in detail which foods destroy the body and teeth. Youtube has videos on pineal gland decalcification. Anecdotal rumors claim the calcification of the pineal ("third eye") makes "clairvoyants" see (or imagine if it's linked to imagination neurons as skeptics say) less stuff. PO 2016;11(7):e0159239 found that pineal gland calcification is 2 times more common in males (is that why more women are "clairvoyant"?) and that it increases each decade until the age of 60, after which it decreases; this paper mentions an older study which found calcification % of "2% in those 3 to 12 years old, 46% in those 13 to 40 years old, and 69% in those above the age of 40"; the paper also explains several studies found calcification is varying wildly among studied populations, and it may relate to the intake of dairy (high calcium), especially processed dairy or exposed to light, where the absent vitamin K (since they don't eat greens) can't prevent Ca buildup; the paper explains some researchers believe calcification leads to lower melatonin production which is associated with epilepsy, Parkinson disease, depression, stroke, and cancer. Many papers show heart problems from calcium (Ca) supplements (lacking vitamin K that prevents Ca from going to pineal and arteries, instead of bones/teeth) of 700+mg/day, due to calcification. AR 2006; 13(7):822-6 gives pineal calcification %: 39% ages 8-14, 8% ages <10, 1% ages < 6. This means a HUGE difference between those under 6 and those older, after age of 6 most kids lose their clairvoyance. It's interesting that kids have the least calcified pineals and are the most "clairvoyant". Older people often times, at least months or years before dying, can start to regain clairvoyant abilities they had before, when younger and with a less calcified pineal gland. Could this be because the pineal starts to decalcify after 60? ☺ Patho 2008;15(1):41-8 found that the greatest increase in the % of pineal calcification happens in the 2nd decade of life, any increase after that being far more gradual. Coincidentally, it's between 10 and 20 that most people lose their clairvoyance partially/totally. JPR 1987;4(3):247-52 found steep rise in pineal calcification in the 2nd decade of life. IJNS 1994;76(1-2):71-9 found the calcification of the pineal was found in 87.5% of Multiple Sclerosis (MS) patients, in 100% of MS patients with cerebral atrophy and in 77% of MS patients without cerebral atrophy. IJNS 1991;61(1-2):61-7 found that 100% of MS patients have calcified pineal gland, versus 42.8% in healthy controls, indicating a direct relationship between pineal melatonin functions abnormalities and MS. This indicates that pineal calcification is related to cerebral atrophy, which makes sense, as explained in the vitamin K and oxidized cholesterol sections, calcium blocks arteries, nutrient supply decreases, neurons can't regenerate, Alzheimer sets in and the brain shrinks and atrophies. Pineal calcification can be a marker for pineal degeneration. IJNS 1992;65(1-4):167-75 found 72% of those with complex partial seizures had a calcified pineal. ☺☺

Dental fluorosis happened in 30% of young kids due to EPA guidelines to add 1.2 ppm F in

water. With the new guideline of 0.7 ppm, this fluorosis % in kids drops to 12%, which is very damaging still, because kids avoid kids with brown spots on their teeth (studies show it) and isolate them socially. Besides looking bad, fluorosis is a marker of brain damage and lower IQ. The National Toxicology Program published in 2019 a 135 page report, reviewed by the US National Academy of Sciences, on the neurotoxicity of F^- and concluded that F^- is most likely a toxin and we need to presume it is toxic before adding it to water. USA seems to finally realize what Europe (who doesn't fluoridate water) knew since 1940s, based on the Nazi and USSR experiments of using fluoridated water to lower IQ of prisoners, being that F^- is rat poison. In 1945, after USA won the war, USA started to add F^- to water in a few cities, starting with Grand Rapids, Michigan, reaching millions of people in 1960s, lowering everyone's IQ. Since 1960, USA has been on a rapid decline, which is probably due to F^- too, besides alcohol. The KGB has promoted many things probably, via their spies, to destroy USA.

11.14.5. Teeth whitening at home: H_2O_2, $NaHCO_3$ & Colgate Optic White toothpaste

It's a good idea to brush teeth 4-5 times daily, including when waking up before breakfast when bacteria are high and they could be ingested with food. After meals, use 1-2 g baking soda, 1-2 g xylitol + 5-10 ml water to rinse mouth and bring pH to 7.4, the optimal value for mineralization. To whiten teeth, twice a week, use 3% hydrogen peroxide to make a 2x dilution, 1:1 = H_2O:H_2O_2. Teeth become soft after meals, since most foods are slightly acidic, so after neutralizing the meal acids with baking soda plus xylitol home made mouthwash (or simply a pinch of baking soda and xylitol you dissolve in water), wait 5 minutes before brushing to avoid removing the softened enamel. Most MDs say to wait 30-60 minutes, but that is a comical "fruit fly IQ" idea, since in that time bacteria will produce so much acid feasting on your food residue, that they will start dissolving the enamel. The smart way is to bring pH to 7.4 in 10 seconds, instead of waiting for the mouth to return to 7.4 in 1 hour. Use your brain, don't follow experts, since many dentists already use this trick of changing pH and brushing 5 minutes later instead of 50. You will get really stained teeth if you wait 1 hour as the gurus say and more cavities. Colgate Optic White Stain Fighter Toothpaste pH 7.4 (7.4 is natural saliva pH, the ideal pH for enamel mineralization, unlike other toothpastes with pH 5-6) is the most mineralization boosting and, perhaps, the best Colgate F^- toothpaste, removing most plaque/stains too, but since it has menthol, this is to be used rarely (twice monthly maybe) for stains, not daily, as it will damage the body's nitric oxide production system. The other Crest, Colgate toothpastes are either too damaging (too much peroxide) or too acidic/alkaline. The Colgate with Baking Soda & Peroxide will damage the gums, enamel and dentin, root cement for exposed teeth, etc, due to its 9.0 pH that is too high for optimal mineralization. So, only use toothpastes that have pH 7.2-7.4, if nothing else is used afterwards. In the 360+ section on dry eyes, ☺☺☺ you see best eyedrops have physiological pH, or 7.35, and how eyes suffer at high or low pH. The same applies to teeth, enamel rebuilding

likes 7.35. Never use a toothpaste with pH under 7 or above 7.6, as it will damage teeth. Such low or high pH toothpastes are OK only if you use a mouthwash right after that has pH 7.4. ☺☺☺ Some people want to use special toothpastes with nanohydroxyapatite in order to use the acidity to remove certain food residues, S. mutans bacteria films, kill certain bacteria that don't get removed with alkaline toothpaste. If so, bring pH to physiological pH, 7.35 for optimal remineralization. With a good thin tip brush, Colgate Optic White will remove the longest most stubborn stains in 10 minutes of brushing, far faster than any "at home or at office whitening" (*or any other super whitening one, some Crest ones even have 4% hydrogen peroxide* (never use hydrogen peroxide as mouthwash, watch this video, as it kills good bacteria, you can use it rarely)*, but the super strong peroxide toothpastes will damage your natural biofilm and enamel far more, so try use Optic White first before you go to the ones that damage gums and enamel a lot)*. Most toothpaste is so abrasive that it wears the teeth away, so then we spend billions to place artificial ceramic fillers to make teeth look perfect. Why can't we have the abrasivity lower so people don't erode enamel and dentin so fast? The relative dentin abrasivity or RDA for toothpastes can be seen here, baking soda 7, Colgate Optic White 46 (lowest of any mainstream toothpaste, the best for removing stains among F ones), Crest/Colgate Regular 95/98, Crest Whitening 245. *If tap water is too plain, and your teeth wear away fast with toothpaste, you can just brush using your baking soda-xylitol-peppermint oil mouthwash of pH 7.35.* If using toothpaste, stick to the least abrasive, Colgate Optic White of pH 7.35 (ideal remineralization pH), use 2-9 times (2 times if your foods stain the teeth and have more dental issues) less paste, it still makes a mouthful of foam and lead to far less ingestion and damage to your throat, voice, stomach from the harsh chemicals in the paste.

With ☺Universal Immortality Inc,☺ we centralize, improve standards, so we don't wear enamel away with hard brushes, abrasive ingredients, ultra toxic (colorful shiny package to deceive) hydrogen peroxide 5% abrasive whitening toothpastes that destroy all good bacteria, gums, NO forming bacteria (NO is key to blood vessel relaxation). Make smoothies out of staining foods (don't chew as stain is 100 times bigger) and use a straw, if you want natural stain prevention, instead of using these highly destructive for enamel whitening products (or use them once a year only for special occasion). Avoid (and help immortalists to ban) candy, alcohol, smoking, weed, biscuits, chocolate, peanut butter (very toxic), carbonated beverages (the acid destroys teeth), cookies, chips, bakeries, breads as these stick to the teeth, yellow the teeth and cause cavities. Eat healthy stuff, made at home, under water, with a pressure cooker, stuff that's wet, not dry. Let us create a culture of bliss and longevity, not getting bliss from toxic sticky dry foods. Hydroxyapatite toothpaste, plus some F sometimes, will help the tooth to grow new crystals and appear white, as whiteness also depends on new apatite crystal formation. Prevent yellow teeth, stains, S. mutans cavities with xylitol mouth rinses and, perhaps, rarely, essential oil

mouthwashes. Simply, eat better, less refined sugars and use alkaline mouthwash (or a pinch of baking soda) pH 7.5 right after each meal, before you brush. It's best to not use hydrogen peroxide, or baking soda to scrub, except once a year or decade before you revamp your dental hygiene habits (xylitol, etc), as they can damage the enamel and gums. The combination of 94% $NaHCO_3$ (baking soda), 1.5% H_2O_2 (hydrogen peroxide) and CPP-ACPF (phosphopeptide-amorphous calcium phosphate, which is a $Ca_3(PO_4)_2$ like nanoHA is) was effective in improving color☺☺☺ and microhardness of teeth with extrinsic stains ► Table 2 of JCED 2017;9(3):e344-50 shows the Vickers Hardness Number (VHN) for various mixes: $NaHCO_3$ with H_2O_2 (127) was better than controls (86) or $NaHCO_3$ alone (114). Perhaps $NaHCO_3$, H_2O_2 and nanoHA would have similar effects, since nanoHA is $Ca_3(PO_4)_2$ too like CCP-ACPF. The paper explains more about whitening teeth at home with baking soda and H_2O_2, though H_2O_2 damages enamel. Most people don't know where to buy these compounds raw (there are toothpastes that one can leave on the teeth for a while, as with at home whitening kits, toothpastes that contain CCP-ACPF or nano hydroxyapatite), so baking soda and H_2O_2 would work for some special event. The $ store sells 3% H_2O_2 solution, $NaHCO_3$ which can be used to whiten teeth at home, the back of teeth where tartar mixed with blue polyphenols made a blue stain that is removed in minutes if daily brushing with a good brush didn't do it. For really tough stains on the back of the tooth, you can use a cotton swab dipped into $NaHCO_3$ and the 3% H_2O_2 to rub the tooth; it can happen if you eat too many blueberries, etc. This is the cheap way to make your teeth really white. This is what whitening toothpaste usually has, H_2O_2 and $NaHCO_3$, but brushing doesn't do it at times.

Dental cleaning with Strong F may Damage Your Brain:

Fygg fluoride free varnish (which you can use at home, though coconut (less nitric interference) toothpaste can work too) is way safer than the typical F^- varnish they bill insurance for in their pathetic "cleaning" they often do in 5 minutes to steal insurance funds. Did you know at $ stores they have $1 kit that contains 4 items: dental pick, toothbrush, tongue brush and mirror that can be used to clean your teeth well, to inspect your teeth with a bright light? Use a chair and bright lamp and small mirror (from $ store) and look into your mouth, and you will be able to clean it better than the technician spending 3 minutes versus you spending 30 minutes. All for free. Plus you won't get a super dose of F to sublingually absorb, bypass digestion, liver and destroy blood antioxidant homeostasis for a while ► OMCL 2018:8379123. Dental cleanings remove the plaque which are layers of S. mutant bacteria films, which can disappear with xylitol mouth wash (her videos are great, contain info on teeth structure, etc, except you need to ignore her advice to ingest xylitol, as it can cause clots, heart attacks, death); thus if you flush mouth with xylitol, erythritol after brushing, you can avoid dental cleanings, as this MD explains. Test mouth saliva for S. mutans and if none, you're now pretty good, you need one final good scrub at home to remove plaque residues. See why it is better to not to whiten the teeth with cheap kits that

totally destroy your dentin and enamel. She explains that some floss brands have fluoridated toxic compounds and that floss is great for getting stuff out from between the teeth, but some MDs don't recommend it daily: one lady did floss only 20 times in her life and after 50 years as a dentist, she has perfect dental health. People think she's lying, but she's not, look at these people who never used a toothbrush, toothpaste, or floss, and have 0 cavities. No dentists on Fiji back then, the images of healthy vegan mostly diet full of minerals vs mineral depleted junk Standard American Poison Diet. The plant based diet has 4 times more minerals, 10 times more vitamins, 5 times more fiber (meaning less sugar to attach to teeth in high concentration and cause cavity; junk foods got candy, cookie, breads with refined sugar, no fiber), leading to much healthier teeth. The floss is moving the teeth too much, so if you do it daily, choose thinnest floss, be gentle. Also don't cause bleeding, as mouth bacteria will infect every organ.

Moving teeth so much with thick floss can weaken the teeth over time, speeding up their fall. Perhaps, people with huge gaps between teeth benefit from flossing 25 times more, but not those with really healthy tight teeth. As we age, bones recede and the jaw bone becomes smaller due to lack of vitamin K (deficiency causes bone and tooth calcium to go into the blood stream and form arterial plaque and calcified hearts) or dietary calcium too, and this causes the lower jaw teeth to move from perfectly straight when we're 20 to crooked when we're 50-95, etc. This can only be fixed with invisible braces (the plastic ones). So, as these shifts occur, the gaps emerge. If you use too much flossing on perfect teeth, you encourage (by the slight moment of 0.02 mm) a tiny shift of the teeth from their straight position. Thus, overflossing can cause crooked teeth. Few told you that. Many people floss so hard, with such thick wire that they create gaps in the teeth and introduce dirty bacteria, as they don't clean the floss between uses with alcohol prep pad and introduce bacteria where none exist. Get a dental cleaning kit (1$ at $ store) and use that metal thing to clean widest gaps first, to remove sugars that feed S. mutans and other bacteria, for areas where the gap is 10-20 times bigger than the biggest floss, that way you don't need always shake the teeth top to get to the bottom of teeth where the gap is. Use your common sense, if any smell exists in mouth, you obviously got more food residue that causes the smell as microbes ate it. ☺☺☺ You can also use a cotton swab (1000 for $1) soaked in water and then dipped into baking soda ($1/lb at $ store), to scrub on the teeth and back of the teeth to clean the polyphenol stains that are natural for vegans eating green smoothies daily after a year: I was amazed when I tried it, the green stains on the back of my front teeth disappeared in minutes; because you need to apply some pressure while scrubbing and be patient, this is not profitable for dentists, so they use strong chemicals that destroy the enamel to get those stains out, or ultra sharp dental picks that bleed the gums. At home, there is no rush to "get to the next patient" and you can do a much better job, all without wasting 10 min driving, 30 min waiting, getting my body destroyed by F sky high dose entering blood after a

superficial 3 min cleaning that achieves almost nothing sometimes (especially if you're a new or one time customer), with tons of plaque still left, the so called “free cleaning included in every plan”. See, rats die after F ingestion used as rat poison and we share thousands of biochemical pathways with them. Don’t you think that F is perhaps 100 times more toxic than baking soda for teeth cleaning? Dentists used to place lead in our mouth in 1850s (today mercury in US and countries that didn’t ban amalgam yet like Norway did in 2008 for all and EU in 2018 for kids and pregnant women) and tell us “lead fillings are fine”.

Dental enamel consists of 95% hydroxyapatite derivatives $Ca_{10}(PO_4)_6(X)_2$, bones are mostly hydroxyapatite too, that's why we need calcium (and vitamin D to fix calcium) for teeth and bones. The more acidic a food is, the faster it can dissolve $Ca_{10}(PO_4)_6(OH)_2$ and start a cavity. The lower the pH, the more acidic and the more damage can happen to the enamel. For a list of pH values of common foods you can check the Clemson long list or the FDA shorter list. Toothpaste pH is 6-8, baking soda 8, most foods 3-6. Tooth enamel erosion is sped up by not brushing teeth after each meal, even if the meal was "eating a tiny bit of anything", even candy (avoid). At least rinse mouth after drinking tea, coffee, soda, juice and smoothies, ideally with a slightly alkaline solution, such as baking soda in water. JD 2001;29(8):517-20 found that ginseng, vanilla, Twinings blackcurrant herbal tea can dissolve the enamel 5 times faster than Typhoo black tea. AJCN 1988;48(3Suppl):712-38 found "osteoporosis, dental erosion, and dental caries are lower among vegetarians." EJCN 2013;67(8):836-40 found 100 vegetarians had better teeth conditions than 100 omnivores. MS 2010;59(11-12):583-91 found 15 omnivores had better enamel condition than 15 *vegans*. There are too few small studies to draw conclusions. EHI 2015;9:27-32 explains the potential toxicity of sodium lauryl sulfate $CH_3(CH_2)_{11}SO_4Na$ in toothpaste/cosmetics, see video. Our glands make about 1 liter(quart) saliva/day. Overbrushing can also cause enamel loss. Acidic juices, soda, vinegar (pH 2.3-4), black tea/coffee/sparkling mineral water (pH 5-6) can erode enamel*:* they exposed teeth for 7 days and 3 mm of enamel were gone in acidic drinks; the least damaging fruit juices were those with Ca and PO_4 added; “orange juice, pH 4.0, *supplemented with 40 mM Ca and 30 mM PO_4 did not erode the* enamel" ► CR 1999;33(1):81-7.

Some MDs claim the good bacteria teeth biofilm is removed by baking soda too, so since you need alkaline pH to remineralize teeth well, if worried about this, you could use less baking soda, maybe 0.5 g or none at all (0.5 g in 16 oz water will give alkaline 7.5 pH, even if you added 10 g xylitol or erythritol, etc, while 2 g can give 8.5 if you eat truly acidic foods and want to sip only 1 ml of mouthwash that has more baking soda per mL to neutralize food acid; high pH suddenly may damage cells in the mouth, gums, etc, so 0.5 g seems safer with more water used during mouthwash), in your home made mouthwash. Xylitol in water can reach pH 6-7, so maybe not enough to start remineralization, if used as the last step. You may need to use a little tooth pick, or floss in some cases if the alcohol prep pad didn’t remove all plaque. Avoid

ingesting xylitol, erythritol (or related sorbitol, mannitol) since some potentially fake studies show they may cause heart attacks and strokes, meaning if you eat 30 g a day (EHJ 2024;45(27):2439-52).☺☺☺ So, to be ultra safe, if you rinse mouth with xylitol, you don't ingest more *than 1 g a day* by accident. Danes used xylitol since 1960 and have lowest rate of cavities in the world. There is a mania among some people to replace sugar with something else, like the UK, etc, but all these sweeteners, aspartame, stevia, saccharin, you name it, have myriads of problems, like destroying gut good bacteria, etc. Why can't people simply eat food as it is, do you really need to feel sweet to be happy, when meditative breathing is 1000 times more ecstatic? Some older online articles by dentists, etc suggested eating those sweeteners to avoid cavities (since this is what MDs did in some old studies on cavities), but it's not a good idea. Use a mouthwash (xylitol, erythritol (both polyols as they're complimentary, they both kill S. Mutans, see below), 0.3 g baking soda, menthol or cinnamon oil (allegedly better than eucalyptus, peppermint, and 6 other oils in some studies, but not in other studies. Generally, each oil works in a unique way, some prevent plaque adhering more, others kill more S. Mutans, etc, so a blend is better, 1 drop of 3 types of oil in 1 gallon instead of 3 drops of same oil/gallon) *or* eucalyptus *oil* (S. Mutans reduced 60 fold, BDJ Open 2023;9:26), *water mix)* to flush well, since the swishing of mouthwash (or even water in between meals) allows stuff to get there toothpaste may not get, little holes, etc. Once mouthwash is in, you can suck the "baking soda solution" or mouthwash with teeth closed in and out inner mouth area (swish or irrigate left, right, front teeth, floss, brush, irrigate, or swish first to bring pH to 7, then wait 2 minutes with baking soda+xylitol mix in, to soft enamel to harden and alkalize, then brush teeth in 5 min (if meal was very brief 3 minutes, some lentils, you don't have soft enamel by acidic soda, etc, so you don't need wait 10-20 min for pH to alkalize as waiting feeds bacteria in 30-60 min wait some online gurus recommend, as if everyone eats their super acidic diet), floss and finally swish again, since 50% of people get gingivitis. It's wise to not overuse mouthwash or pour too much antibacterial essential oils, as you may kill the NO generating bacteria that lower our blood pressure as this video on daily tongue scraping explains (this cleaning is to be done ultra gently, as this clip shows, can use even a very round edge spoon or your toothbrush). Your brain, arteries, ☺☺☺ are more important than dental health. Just use common sense and test for NO forming bacteria if possible after your routine regime and let us know via youtube. Kindly use soft toothbrushes to prevent receding gums as the clip explains). You can even make a saturated salt solution in water, once a week max (otherwise, it ruins enamel and gums) to get to infected places by osmosis by salt solution drawing water from bacteria. See NIH papers on salt water and baking soda. Avoid electric toothbrushes as they create for your hand highly toxic radio (80 mW/m^2, like near cell phone towers in your hand), electric (60V/m) and magnetic (260 mGauss, 130 times above EPA max monitor level, damages your hand nerves) fields. See RF section for a good RF meter, always avoid vibrating (sex, massage) devices, they completely destroy health,

as they will give birth defects to any offspring and may have been designed to sterilize naive folks or create 'low IQ easy to enslave' ethnic groups. 90% of people or 98% actually don't brush their teeth well at all, due to lack of education, many do learn about fake miracles though. ☺☺

Teach proper tooth brushing to all kids, to avoid endless visits to the dentist and have them wash teeth often, use mouthwash to prevent candy and sweets between meals, etc, beverages without mouthwash after etc. Otherwise, we get cavities there even if you brush very well the front of our teeth; most people when stressed etc forget to fully brush the back of all their teeth. Don't forget to go behind the very last tooth at the back of the mouth on each of the 4 sides and brush it well. $ store has tooth metallic picks that allow access to curved areas where flossing and brushing may not reach, that you can check and clean, even if not daily. Recall to floss teeth daily, especially if you got gaps between teeth, and that $ tree and other stores sell back teeth plackers (35 for 1.25$, so cheaper than their website) that make flossing 100 times easier than using wire or the traditional straight plackers that require much more effort, and allow far less control, so lead to more unintentional gum bleeds; just trim the back teeth plackers to avoid getting the sharp end poke any skin area if they're the type with sharp end; due to the angle, the angular momentum favors less force and far more precision in guiding it, so these bath teeth flossers work better than regular plackers for front and all teeth too; they can be washed with antimicrobial mouthwash and reused once, so you don't need trash them daily. Mouthwash, toothpaste can contain carcinogenic pig*ments*: bentonite (heavy metals, deadly germs and viruses that cause cancer), white (TiO_2), Red, Blue, etc. Do we really need green mouthwash*?* If the floss is too thick to fit between teeth, it is critical to use ultra fine floss such as this Grin brand, to avoid weakening the teeth by moving them with thick floss. Plackers offers many types, including the thinner floss picks and double line floss which may work for teeth gaps (molar) that are 2-5 times larger than the tightest teeth. Some use F/hydroxyapatite toothpastes as a combo, but never fluoridated water, others avoid F toothpaste for 3-500 months at a time. To protect teeth, avoid bad foods, soda, biscuits, cookies, candy, bakeries and if you love walnuts, add them to a smoothie, so they don't get stuck in between teeth. Use mouthwash after every meal or dissolve 1 g baking soda and 3 g of xylitol in your mouth, sip some water, rinse and discard in the sink. Never snack or sip between meals, brush teeth after every meal. Avoid heavy spoons like those sold at Target. The 5 times lighter basic Gibson or other brands at $ stores of 15-25g is safer since it can't chip or crack teeth when accidentally touching teeth while eating when tired and not careful (can happen rarely). The heavy 125 g spoons have more inertia when you bring them to your mouth☺☺☺, in a swinging motion, guiding spoons when you eat fast and the tired, less coordinated hand muscle upon waking up can swing a heavy one and crack tooth enamel or a tooth itself. This swinging doesn't happen or happens with 5 times weaker force with a 5-8 times lighter spoon. If the spoon handle edge is 'sharp', buy another one

if you can't polish it with sanding paper, to prevent damage to the collagen layers of your finger skin that could cause a scar over time. Youtubers explain how cavities vanished in 3 months (he used cinnamon essential oil, etc rinsing mouth with coconut oil is dangerous it can cause lipoid pneumonia, don't do it). Some dentists don't even use a toothpaste and many people who wash with tap water often have 0 cavities. The truth is each person gets 100 cancers in their life, but most go into remission, as they're tiny and the immune system attacks them, the same is with cavities, when they're small they can vanish. What matters is how good your brush is, how often you replace it (monthly ideally). Recall to brush the back of front upper, lower teeth, see 3 min video on the 45 degree angle towards the gum method, to remove everything, a longer 7 min clip explains better how to go around 3 times 45°, outside gum, inside gum and the top of teeth in a way that removes the film around the gum; a good brand for this is Dr. Fresh (4 toothbrushes for 1$ @ $ store; replace it every 2 months, since these are soft). Most of the food residue or plaque accumulates on the top layer of teeth, especially the front 4 ones and plaque is sometimes hard to remove. If you still have plaque after using the strong stain removal Colgate Optic White toothpaste, brush harder, use a 20x mirror to see when it is all gone. Don't overuse Colgate as menthol removes the natural biofilm, kills the NO bacteria.

11.14.6. NANOHYDROXYAPATITE (nanoHA) or $Ca_{10}(PO_4)_6(OH)_2$, XYLITOL, ERYTHRITOL

$Ca_{10}(PO_4)_6(OH)_2$ makes about 70% of human bone by weight, 75% of enamel. F is only 0.2% of enamel, even less of dentin. $Ca_{10}(PO_4)_6(OH)_2$ is also found in the small brain calcifications known as brain sand in the pineal gland and other areas. That's why Amazon has so many MCHA or MCHC (microcrystalline hydroxyapatite MCHA or MCHA complex MCHC) pills and why many take them (and report amazing results) to improve tooth health. MCHC is also called MCH concentrate and it contains bones of cows: apatite, collagen, growth factors (IGF-I, IGF-II), full of heavy metals (unless a really good brand). For the bone, cementum, and dentin, collagen type I constitutes 90% of their organic component. Therefore, one has to have proline, vitamin C to synthesize collagen easily in the diet. Enamel is 95% $Ca_{10}(PO_4)_6(OH)_2$ (+ analogs with Ca or OH replaced by other ions), 4% water, 1% protein ► JCED 2017;9(1):e118-22. This study (about the Biorepair toothpaste which has 12-24% zinc hydroxyapatite) showed a F free toothpaste with biomimetic zinc carbonate hydroxyapatite $Zn_{10}(PO_4)_4(CO_3)_2(OH)_2$ was as enamel protective as the F one. The paste without F or $Zn_{10}(PO_4)_4(CO_3)_2(OH)_2$ was not as protective. Among F free toothpastes, some may be considerably better or worse than F toothpastes, they even got Lornamead healthy one (US made) at $ stores for 1$, using $NaHCO_3$, Zn citrate, xylitol, SiO_2, $CaCO_3$, glycerin, carrageenan, sarcosinate. Toothpaste companies make many types, in which Ca^{2+}, $(PO_4)^{3-}$ or $(OH)^-$ are substituted with new cations Zn^{2+} or anions $(CO_3)^{2-}$, like $Ca_{10}(PO_4)_6(CO_3)$, $Zn_{10}(PO_4)_4(CO_3)_2(OH)_2$. Only big companies test enamel surface hardness after an erosion attack via soda. It's better perhaps to buy a brand that an NIH study (free of conflict of interest, not the

manufacturer) proved to be good for enamel, dentin, gums. Apatite toothpastes are better than F ones, they provide premade apatite and penetrate deeper, but you can use a little F toothpaste too: F from the paste uses Ca^{2+}, $(PO_4)^{3-}$ in the saliva to form fluorapatite, but apatite is already premade in apatite toothpaste, so mineralization is way faster, so many people with 7-20 year stains notice apatite toothpaste makes those areas white first time ever, which F can't. Email the seller to confirm the shape of the particle is rods (only one approved in EU, they're ahead of US in consumer safety) and 20-50 nm max, the smaller the better. "Enamel has little or no collagen, and its organic matrix is made up of noncollagenous protein, which is 90% amelogenin. Enamel has more inorganic content (~90% prismatic crystals) than dentin and bone (~70%) and cementum (45%). In $Ca_{10}(PO_4)_6(OH)_2$ magnesium substitution inhibits crystal growth, carbonate substitution increases solubility, and F substitution *decreases the solubility*" ► IJN 2016;11:4743-63. That's why F prevents cavities, enamel becomes STRONGER, less soluble than natural enamel. JDR 1989;68(6):1064-8 showed that gum or empty chewing (empty chewing is the only safe way, since all gums are toxic, with polyols causing poor digestion, menthol that kill nitric oxide bacteria, etc) doubles enamel remineralization, because it secretes more saliva rich in PO_4^{3-} and Ca^{2+} and these ions are needed to create hydroxyapatite (same effect from kissing a lot too, even kissing the air). Some create a mouthwash (5% of the cost of store one & healthier) using peppermint oil which is not ideal; peppermint oil has 40% menthol, hence store mouthwashes and cough drops use menthol; peppermint oil in many foods and chewing gum, fish oil, etc also has 2% pulegone, a neurotoxin and carcinogen, so a better option is menthol (4 oz 14$ - from Toledo, Ohio or from Japan (seller didn't say if near Fukushima nuke disaster) 100% opaque pack 2oz/7$ US tested menthol, both enough for 4 years, since these do expire) instead of peppermint to be safer (store it below 28°C, away from oxygen, light, heat, at which one of the isomers melts, so maybe keep it in the fridge), since peppermint oil also has 30% menthone, a controversial compound; menthone is liquid, menthol is solid, due to OH group hydrogen bonds... but when mixed, they become liquid peppermint oil. ☺☺☺

However, since both peppermint and menthol can inhibit the nitric oxide producing bacteria in our mouth, it may be safer to go with baking soda plus xylitol, or xylitol alone, as many toothpastes and mouthwashes do; the issue with many mouthwashes is that if they inhibit those bacteria, they can cause some vascular issues later (arteries constrict, blood pressure rises, arterial plaque forms, etc); *can use* 4 drops of peppermint oil/0.5L water, 1 teaspoon baking soda ($NaHCO_3$) + 0.5 spoon xylitol/0.5L, because $NaHCO_3$ neutralizes acidic pH more than the store citric acid containing mouthwashes. Sublingual mouthwash is absorbed fast, bypassing digestion, so we want to avoid toxic ingredients. After $NaHCO_3$ mouthwash, the mouth pH goes to 7-8, while after the store mouthwash only to 5.5-6.5, *which is too low to 1.* neutralize *tongue & in between teeth residue food acids*, 2. prevent enamel demineralization and caries formation.

Many mouthwashes contain the enamel abrasive hydrogen peroxide (plus other compounds).☺

Xylitol 2.4 calories/g, glycemic index 7 (sugar is 100), $HOCH_2(CHOH)_3CH_2OH$ and erythritol 0.2 cal/g (compared to 4 cal/g for sugar, or 20 times less, but 70% as sweet as sugar), glycemic index 0, $HOCH_2(CHOH)_2CH_2OH$, xylitol without a CHOH group, are naturally occurring (in fruits, plus nowadays industrially made) sweet polyols that prevent caries; they're added to food (erythritol since 1990s, xylitol since 1960s), medicine, toothpaste, mouthwash, gum to give a sweet taste. Many studies found erythritol is superior to xylitol in preventing caries: CR 2014;48(5):482-90 (*1.3%* got dentin caries, vs *2.0%* for xylitol), IJD 2016:9868421 (this has a list of studies and we see that some find xylitol being better at some things, so it's better then to add both to mouthwash), ADR 2018;29(1):104-9 (amazing charts and summary of several studies), HC 2021;9(8):935 (this study shows how toxic normal toothpastes are and may suggest that you could wash your mouth with less toothpaste that has sodium lauryl sulfate and more mouthwash made at home from erythritol, xylitol, (avoid the all too common glycerin ($HOCH_2CHOHCH_2OH$) in toothpaste and mouthwashes, since it may block remineralization and weaken antibacterial effects of the other ingredients), baking soda, menthol or essential oils, to prevent damaging the gum tissue). Glycerol or glycerin, a humectant used in most mouthwashes to help the mouthwash stick to the tooth surface and help plaque dissolve, can also stick to teeth and prevent remineralization; the *main reason they add it to toothpaste is to prevent it from drying in the tube when people* forget the cap off. Sometimes they use sorbitol instead, which is better. CCID 2014;6:89-94 found that "An anticaries effect of xylitol and sorbitol usage has been demonstrated and compared among primary and permanent teeth. The xylitol group had 27% fewer caries than the sorbitol group. This experiment also concluded that xylitol positively impacts permanent teeth..." Until the age of around 3 years, children's immune systems are underdeveloped (we vaccinate kids 50 times, yet their immune systems are underdeveloped), and hence newborns are extremely susceptible to bacterial colonization. These age group children frequently receive affectionate kisses from their parents/caretakers and also share utensils with them while eating. Due to these practices, *parents transmit S. mutans from their mouths to their children's mouths*. Regular use of xylitol is reported to reduce vertical transmission of dental caries from mother to child. Studies have reported that children using xylitol exhibited significantly more nondetectable, MS-negative levels on the tooth ridges or tongue and the gingival ridge at 9, 12, and 24 months. Xylitol chewing gum consumption among pregnant women with high salivary MS counts was compared with F and chlorhexidine varnish treatments in a randomized controlled field study. The mothers were consuming 6-7 g of xylitol per day, whereas F and chlorhexidine varnishes were applied biannually until the child was aged 2 years. The % colonization of MS was 10% in the xylitol group, 29% in the chlorhexidine group, and 49% in the F varnish group at the children's age of 2 years. At the age of 5 years, the caries

occurrence was observed to be 71% lower in the xylitol group as compared with the F varnish group. After 10 years, the need for restoration was least in the xylitol group." Xylitol gum chewing by mothers daily prevents the transmission of mutans streptococci (MS) from mother to child far better than F varnish or chlorhexidine dental office treatments every 6 months; at two years of age, 9.7% of the children in the xylitol, 28.6% in the chlorhexidine, and 48.5% in the F varnish group showed a detectable level of MS ► JDR 2000;79(3):882-7.

EPMAJ 2015;6(1):3 found that "The inorganic part of enamel consists of hydroxyapatite (75%) $Ca_{10}(PO_4)_6(OH)_2$ or $Ca_5(PO_4)_3OH$, carbonate apatite (19%) $Ca_{10}(PO_4)_6CO_3$, chlorapatite (4.4%) $Ca_{10}(PO_4)_6Cl_2$, fluorapatite (0.66%) $Ca_{10}(PO_4)_6F_2$, and non-apatite forms (2%). Beaver have a lot more fluorapatite and their teeth are the strongest of any mammal, so now you understand why F is added to toothpaste, it just makes enamel stronger, harder to destroy by acids or abrasion. The ideal hydroxyapatite composition corresponds to the formula $Ca_{10}(PO_4)_6(OH)_2$, where the Ca/P molar ratio is 1.67. However, in case Ca is substituted by other microelements, the Ca/P ratio may vary within the limits from 1.33 to 2.0. Thus, in case Ca is substituted for similar chemical elements such as Ba, Cr, Mg, the Ca/P index ratio is reduced to 1.33 and the properties of the obtained apatite are changed in regard of the enamel resistance to an adverse environment. The hydroxyl groups' substitution by F results in fluorapatite formation, which exceeds the "ideal" hydroxyapatite in its strength, and the Ca/P ratio can be increased to 2.0. The beaver enamel microhardness is 1.53 times higher than that of humans. These figures indicate that beaver tooth enamel is functionally stronger; that is how the extremely rare carious teeth in these animals can be explained (there are other ways too). It also proves that fluorine is only needed in childhood as in the newborn beavers' teeth (it is known that they're born with teeth), the F content is 10 times higher than in humans, and in adult beavers' teeth, despite the absence of caries, only traces of F are found. Plaque has a pronounced ability to demineralize the enamel (under it), which results in a reduction of the inorganic substances by 44.23% and an increase of the organic matter by 45.15% compared to intact enamel. The reduction of mineral components was primarily due to calcium 11.45% and phosphorus 5.08%. The main feature of saliva is its great oversaturation with Ca and PO_4 ions. The saliva is saturated with these ions 2.0-2.5 times more than the blood serum, which maintains enamel composition relatively constant. Another property of the saliva is a significant preponderance of the PO_4 ions over the Ca ions in it. In blood serum, the Ca content is 9-11 mg/100 ml and the P content is 2-5 mg/100 ml; in saliva the Ca content is 3-6 mg/100 ml and the P content is 10-20 mg/100 ml. In physiological conditions (pH 7.0-7.5), it is about 50%, and most phosphate in saliva is ionized. Calcium in saliva appears mostly in a form of ions and phosphate—mainly in a form of hydrophosphate (HPO_4^{2-}) with a small part of dihydrophosphate (HPO_4^-)." As we age enamel Ca content increases from 32 to 37%, P content increases from 15 to 18%. ☺☺☺

CGD 2006;6(6):1504-8 found "Fluorapatite [$Ca_{10}(PO_4)_6F_2$, FA] is *hexagonal with the highest symmetry found among the apatite minerals* [space group: P6/m (175) with the lattice constants...]. The crystal structure can be considered as the Ca^{2+} and PO_4^{3-} arranged around the central column of F ions, which extends throughout the crystals in the [001] direction (c-axis). The substitution of OH^-, Cl^-, CO_3^{2-} or other ions for the F^- usually leads to atomic displacements and lower symmetry, therefore compromising its chemical stability. On the other hand, F substitutes directly for a column hydroxyl or occupies a hydroxyl vacancy in the hydroxyapatite (HA) crystals, which incurs a reduction in a and b lattice parameters in the crystal with a concomitant reduction in crystal energy. This generates a more stable structure and the acid solubility of the crystals decrease dramatically giving the crystals the anti-caries effect." Cells 2012;1(3):631-45 found "F ... increases enamel hardness and reduces the incidence of dental caries. In contrast to this protective effect, excess F during childhood (ages 2–8; when the enamel of the permanent teeth is developing) has the opposite outcome, weakening enamel and resulting in areas of increased opacity. F decreases synthesis and secretion of the enamel proteases by decreasing mRNA translation... induces expression of genes associated with oxidative stress...increases oxidative stress by reducing the activity of antioxidant enzymes." sangi-co.com who makes $15/125g Apagard HA toothpaste in Japan added cetylpyridinium chloride that indiscriminately kills all bacteria, even the nitric oxide bacteria we need to live to 125. Avoid this brand, as it has SLS (bad), PEG, animal conchiolin protein with viruses, saccharin. This company says "Nano Medical HA, used as a remineralizing agent in toothpaste in Japan for the last three decades, was shown... to cause a similar reduction in new caries among schoolchildren to that seen with fluoridation in the U.S., namely 36-56%. No risk of fluorosis, HA has been shown to be safe – even edible – and can be swallowed by children without concern, as it has no known toxic or harmful impact. Nano Medical HA is a crystalline calcium phosphate substance almost identical to the natural HA of our teeth. Supplied in the form of nanoparticles, it directly replaces lost mineral to restore subsurface demineralized areas of tooth enamel (incipient caries) and fill microscopic fissures on the enamel surface. Its nanoparticles also bind protein such as oral bacteria and plaque fragments during brushing, facilitating their removal from the mouth. Medical HA achieves the same degree of remineralization as F, as seen above, and *penetrates to the very bottom of demineralized lesions, whereas F tends to create a dense zone of fluoridated apatite at the top*." 1970 ► "First synthetic form of HA created by NASA to help restore teeth and bone loss by astronauts following gravity-free environment missions." ► or..ence.com. This page says "This arose largely because of a patent from the U.S. National Aeronautics and Space Authority (NASA)… in 1978, we became the first company in the world to succeed in developing a toothpaste incorporating HA". Today, 5000+ companies make such toothpastes, for a similar, higher or lower price. AOJ 2009;25(1):12-8 found *fluor*apatite (forming as a result of F toothpaste on the tooth surface) worse than the natural *hydroxy*apatite in shear

bond strength. However, fluorapatite dissolves less in acids, so evolution placed it more on the outer layer of enamel, with hydroxy on the inner to give it strength. More than 90% of the fluorapatite and the HA-fluorapatite specimens demonstrated bond failure at the substrate-adhesive interface, while only 33% of the hydroxyapatite specimens exhibited bond failure at that interface. CCD 2012;3(4):433-6 found nanoHA was superior to 2% (20,000 ppm) sodium F (NaF) in remineralization. IJN 2018;13:2755-65 found apatite superior to 0.2% NaF. Topical F attempt only to reduce apatite dissolution instead of promoting mineralization of apatite crystal (remineralization replaces lost Ca). That's why nanoHA toothpaste is superior.☺

Normal toothpastes are 1-3$, while nanoHA ones are more expensive. But if you use 20-40% of normal toothpaste amount, you end up paying the same price $3/100g. Tooth repair depends less on how much toothpaste we use during that 1 minute of brushing, but *more* on the number of hours (*hundreds of minutes*) the apatite remains after brushing in contact with the teeth; sometimes we may use 9 times less toothpaste, but get better repair, because we didn't over rinse the mouth with so much water, that we left more apatite, besides the fact apatite remineralizes much better than F (deep inside the tooth, not surface). The 2 minute brushing main function is to clear plaque from the teeth, dirt, etc so that the bacteria can't produce acids that cause cavities. Then, in the *250+ minute after brushing* the real remineralization happens, and that's the critical step in enamel and dentin restoration. The only good toothpaste I know so far is Fygg coconut flavor, *as all other ones interfere with nitric oxide production, its price is* 11$ (3 pack subscribe), quite standard for 500 other brands on Amazon that kill most nitric oxide bacteria we need to live to 125. The $6.75/100g (100g= 75mL*1.33 g/mL toothpaste density) Biorepair ($27 for pack of 4) has 24% zinc apatite (other Biorepair pastes have 15 or 20%, so you need use more to get the same remineralization), but no F, parabens, titanium dioxide (see next page), SLS sodium lauryl sulfate. Biorepair has the phenoxyethanol preservative, also used in vaccines, which is banned in Japan in toothpaste or food, as it causes depression. Apagard has SLS and more dubious chemicals, such as cationic surfactant preservative hydrochloric acid alkyldiaminoethylglycine that destroys gum cells, glycyrrhetinic acid (in licorice) that affects nerve cells, may cause abortion and hypertension. Biorepair is a cheaper HA toothpaste I found and but it contains benzyl alcohol, which kills the nitric oxide good bacteria we need to live to 120, so avoid buying Biorepair, as it got 2 deadly ingredients. 29 nations have French as official language, see the biorepair.fr 25 second youtube in French (they wrongly claim to be the first company making enamel restoring toothpaste, but this is what ads do for millions of products, dental, Pharma, cars: exaggerate), or this Italian 15 second one with 0.4 million views. These toothpastes may become outdated when we discover the chemical mix that stimulates stem cell repair of enamel by itself, as recently tissue regeneration and tooth regeneration was done using stem cells or with chemicals without stem cells.

With the 11 companies, we create a mouthwash and toothpaste that is regenerating enamel 30x faster than the best HA varnish today. Today, many stem cell like repairs are done by various signaling peptides and molecules, but when filif IQ dentists run the industry, nothing can be done, except greed to build PALACES. However, until then, they seem better than F to a lot of dentists.☺☺☺ This toothpaste is approved by the ADA (American Dental Association) equivalent in Italy, AIDA, see Bologna Professor N. Riveri explain it here. Colgate has a page about apatite toothpastes saying that "The teeth that were brushed with the nano-HA-containing (F) toothpaste were considerably harder (remineralized) at the end of the study compared to those brushed with toothpaste containing only F." ► JDRDCDP 2017;11(1):14-7, mentioning the KJMS 2013;23(3):168-76 finding that the higher % of apatite, the more remineralization, so Biorepair (cheapest) *24% is the best as it's the highest*; other toothpastes I found online say 10-11% apatite, ask them for the %. Sadly, most apatite toothpastes sold on Earth have menthol and essential oils that kill the nitric oxide bacteria, as they're designed by low IQ folks (most dentists become that to get rich quick, not because they're high IQ ☺☺☺). When you have capitalism you separate everything, so dentists produce the most lethal products, without realizing how it impacts the other body systems. In 1850 they told us lead fillings are fine, or mercury today. With the centralization of education, the National Toothpaste Uni will produce the healthiest toothpaste approved by 5000 MDs in every specialty on Earth, real standards, not like these 1st grader toothpastes sold today by greedy companies run by low IQ buffoons. ☺☺☺ Many Greed Personified, palace Building Aristocrat turned Dentist/MD, make sodium benzoate toothpastes and foods, and you swallow this naturally so it reacts with the vitamin C from vitamins or food you're forming carcinogenic benzene, for your own good. We have 50000 aristocrats making 50000 bad toothpastes, instead of a National Toothpaste Uni creating 10 truly amazing & beautiful ☺☺☺ toothpastes 5000 times safer than the garbage of classic predatory capitalism. Science has amazing chemicals that cause teeth, enamel, dentin to regrow, the future toothpastes are centuries ahead of today's garbage.

Like the simulation 0.1 million *confounding* factors section explains, we don't know what's really going to extend lifespan the most, F or apatite toothpastes, since apatite ingestion may have some side effects just like F has, nobody can prevent accidentally swallowing tiny amounts of toothpaste while brushing their teeth. But one day we will discover new techs, far better than existing ones, to keep teeth young to the age of 900 or longer, without any side effects on lifespan duration, be it shortening of 20 days or more. Like with F toothpastes, we're not supposed to ingest any, as their websites explain. Apatite is what makes much of our bones, teeth, etc, but it's also part of arterial plaque. Of course when it gets into stomach, the acid reacts immediately with OH group and we're left with calcium phosphate that is present in thousands of toothpastes without apatite, Colgate ones too. Arterial apatite calcium

accumulates due to vitamin K partial deficiency, which takes teeth and bone calcium and deposits it in the heart and blood vessels, so we need enough vitamin K for perfect dental and bone health; we eat daily 800 times more calcium from other sources than the 1-2 mg we ingest while brushing teeth; thousands of non-apatite toothpastes have calcium added. We have yet to see studies showing the arterial calcium score (plaque) affected by the calcium or apatite content of toothpastes, but as the Civilization of Immortals takes priority, studies to discover the safest apatites (that can't diffuse in unwanted tissues or vessels, due to small nanometer size) will be done. Since the calcium ingested in negligible compared to food calcium intake, it is perhaps safe. I've been using apatite toothpaste since 2018. ☺☺☺

You can also use hydroxyapatite *[premade apatite* $Ca_{10}(PO_4)_6(OH)_2$*]* toothpastes mixed with a F toothpaste, since studies show better enamel restoration results in combination for obvious reasons: 4% of enamel is $Ca_{10}(PO_4)_6F_2$ and 75% is $Ca_{10}(PO_4)_6(OH)_2$. There are many brands of HA (the main stuff in teeth) paste, one being Mouthwatchers, made in France, pH 6.5 (not 7.4 like Colgate Optic White, or 9 like Colgate Baking Soda), not recommended unless you use home made erythritol or xylitol baking soda mouthwash of pH 7.35 right after, since enamel mineralization is fastest at pH 7.35. Its menthol kills the nitric oxide bacteria we need to live to 130. Mouthwatchers contains propolis too (which prevents tooth decay and helps dentin regenerate) available also on Amazon for 4.5$ if you subscribe. Some MDs (like Dr. Ellie) claim apatite is a "useless (to be avoided) bandaid" that covers the tooth surface, but it's the exact opposite as many papers show: F helps form fluorapatite $Ca_{10}(PO_4)_6F_2$ on the surface, while the nano apatite $Ca_{10}(PO_4)_6(OH)_2$ travels in the tubules deeper and replenishes the Ca, and apatite crystals lost, helping tooth longevity more than F. Because F can cap the tubules at the tooth surface, as some papers claim, it may be far worse than HA. CNN suggests the F and apatite are complimentary. With the F-apatite combo, the carries natural reversal may happen 4 times faster, as you place F toothpaste and apatite one over the affected cavity and leave it there 5-10 min daily. I noticed some tiny cavities I got disappeared by this technique. F can also (besides the stuff in mouthwash) kill the cavity forming bacteria, while HA prevents the bacteria from adhering to the teeth. As we age, CoQ10 and thousands of chemicals diminish in blood, saliva, tears, all 3 made of the same basic liquid, same pH, similar composition as plasma. The older you are, the more you need apatite toothpaste besides F one. So, likewise, as we age, our ability to take saliva and produce apatite diminishes, just as with bone loss with age. Both can travel, but apparently, the teeth is mostly $Ca_{10}(PO_4)_6(OH)_2$, not fluorapatite, so some areas of the tooth like apatite. We do need a little F toothpaste if we never drink fluoridated water, etc to replenish the strongest form of apatite that makes up 5% of enamel, fluorapatite. Another F free paste is Tooth Builder paste with 36% xylitol and 18.5 nanocalcite (nanocalcite is $CaCO_3$, used in dentistry to restore tooth surface area and pH), though nanocalcite may cause teeth and enamel to

become softer, as F and OH in hydroxyapatite are replaced by CO_3, which is attacked faster by food acids. That's why you don't want to overuse baking soda either, as CO_3 can weaken teeth. High nanocalcite may weaken teeth, just as high baking soda (HCO_3) may (see above), so it may be safer to use an apatite toothpaste too, and alternate them or if brushing thrice, use F one time, calcite next, apatite third or the 3 in one, 3 times smaller amounts each time. Some apatite toothpastes are really cheap, only 4.5$ or less, though 7$ Italian Biorepair (I used it for 4 years) got man made $Zn_{10}(PO_4)_6(CO_3)$ instead of natural $Ca_{10}(PO_4)_6(OH)_2$ with may cause enamel to be more brittle and soluble, since it was proven already $Ca_{10}(PO_4)_6(CO_3)$ is brittle and replacing Ca with Zn will only probably make it even more brittle, since Zn is bigger and will cause the geometry to be more odd and crystal less stable. Do a little research and ask what kind of apatite they use, is it fluorapatite, the strongest, or hydroxy, or etc. Man made is not necessarily bad, since we also can travel 9000 times faster and better than nature via man made rockets, but we don't know yet fully the Zn effects, as no massive studies were done. ☺☺☺

Avoid toothpastes with SnF, stick to NaF, since Sn has been shown to have toxic effects, much like Cd, Hg, Pb, etc, being a heavy metal located just above Pb in the periodic table as you can see for yourself. Avoid tin cans (Sn) too, place beans in water in a pressure cooker and it cooks on its own, you don't have to watch it or anything, it's so easy, no guy needs a gal to cook. The Squigle toothpaste has 36% xylitol, 0.24% NaF, NaOH to bring pH higher unlike other acidic toothpastes, since you need pH 7-7.5 to mineralize enamel, and few toxic ingredients, may work best for people too lazy to make xylitol mouthwash, and who want to avoid the toxic blue 1 color, sorbitol, SLS, titanium dioxide in Crest, or blue 1, green 3, yellow 5 in ACT mouthwashes, made by ☺infinitesimal IQ☺ clowns who absolutely need to add carcinogens to make it look "colorful". Check out some guys got rid of canker sores with this Squigle xylitol paste, showing how useful it is to buy some Amazon xylitol and make your own mouthwash with water and a drop of peppermint oil (costs 10 cents, not 4$ like some brands). Rotate perhaps essential oils if home made to surprise the bacteria and disrupt them better when they get used to a chemical. If mouthwashes are expensive, just add 1 drop of peppermint oil to your solution of water plus xylitol, as peppermint oil has menthol and other terpenoid alcohols that kill S. mutans cavity bacteria, it may work better because of fewer toxic chemicals in commercial mouthwashes.

You can even buy $Ca_{10}(PO_4)_6(OH)_2$ from Amazon for less than $10 (keep it in mouth a bit to increase Ca and PO_4 saliva concentration) but it may come from cows and have lead. The only "problem" is that the size of this $Ca_{10}(PO_4)_6(OH)_2$ is not nano, so it won't have the same effect as in some of these studies on nano$Ca_{10}(PO_4)_6(OH)_2$, but this is useful as source of phosphate and calcium for those low in those in their diet, so that the saliva can recreate enamel normally. However, the problem with the dentin tubule blocking nanoHA of 0.1 to 1 µm (many tubules are smaller diameter, some are even 4 µm) is that dentin tubules play a role in teeth renewal and

with the right chemistry of the future 500 year lifespan science, the unblocked tubules can be more useful in teeth regeneration than by the conventional nanoHA blocking. Even if nanoHA is much better than toxic F, it has its own issues, as with any medical or dental tech, nanoHA a temporary tool until we perfect gene methods or others. nanoHA is in some baby products, Gerber®, Well Beginnings ™, Enfamil™ infant formulas, and that's possibly (according to some science papers) compromising the best tooth development by blocking dentin tubules (since we don't fully understand tooth development, restoration and regrowth), although companies sell nanoHA toothpaste for kids and junior too, see this 0.25 million views video. After 25, when teeth are all grown, the nanoHA loses the "potentially toxic" effects of course, even if nanoHA is safer than F itself. We see people who're 25-95 and have severe dentin erosion and spend $5,000-15,000 to rebuild eroded teeth with ceramics, which would be prevented by this dentin and enamel restoring and strengthening toothpastes; F *hardens only the outer enamel layer, doesn't strengthen dentin or inner enamel.* nanoHA (51 nm) causes oxidative stress in vitro in TR146 human oral buccal epithelial cells, by increase of free radicals, can cause a little cell death too. The "ever present in foods, vitamins, pills, cosmetics toothpaste" *nano* titanium dioxide TiO_2 (24 nm) causes 28% of cells to die after 24 h ► ACSAMI 2014;6(9):6248-56. "TiO_2 nanoparticles *are classified as 'possible carcinogenic to humans', they cause oxidative stress and* DNA *damage,* damage *neurons* rapidly" ► RO 2011; 45(4):227-47. "IARC classified TiO_2 as a Group *2B carcinogen* based on lung inhalation studies" and TiO_2 is "the most widely used pigment globally… FDA allows up to 1% by weight of TiO_2 particles as a food colorant (white or opacity)...up to 25% in cosmetic preparations… [mice] *sperm cells displaying abnormalities* increased from ~ 13% in controls to ~ 23% in the 50mg/kg group… cardiac (thyroid, liver and kidney too) toxicity in young rats… at 2mg/kg (oral)" ► JN 2018;16:51. When sunscreens (long sleeves/pants, hats, umbrella☺☺☺ or ZnO cream are safer), lip balms, mouthwashes, toothpastes, pills, creams dry on the skin and get inhaled (lung→ blood→ brain) or absorbed via retrograde transport from skin/mouth to brain, they can cause cancer, *brain* damage *(hippocampus)* as in rats. Could cosmetics/toothpaste TiO_2 ruin us? The EU banned it in 2022, followed by 4 Muslim nations. It's added to foods without label listing, so customers have no idea if their foods have it or not, scary isn't it? Demon-cracy indeed. ☺☺☺

11.15. Curing diseases with whole vegan foods (mostly raw)

11.15.1. Diabetes 11.15.2. Cancer 11.15.3. Heart disease 11.15.4. Others

You can jump to the section of interest or read this introductory paragraph. Eating an unprocessed vegan diet (with B_{12}-D_3-Zn-Se-I-DHA-EPA-CoQ_{10} supplements) is great, but longevity is also about moving/waking up gently, staying hydrated. Before the diet videos, this intro paragraph has some ultra basic info nobody almost knows: avoid stroke by staying hydrated

(video explains 5 habits), drinking water thruout the day, especially once at night or immediately when you wake up (or a few minutes before your trunk is perpendicular to your legs, have a stainless steel bottle there, to avoid eating microplastics). When we sleep, we lose water, so the blood is thick and far more likely to cause heart attack or stroke. Thus, you need to thin the blood urgently by drinking 500 ml of water or so, or 200 if you already drank 300 thruout the night. Then, while still in bed, you stretch gently for 1-2 minutes in bed before you stand up, to avoid a sudden rise in blood pressure, then move around the house 5-10 minutes and relax after waking up (avoid phones, Internet, stress), to get the blood flowing, brain refreshed, then you eat breakfast right away (*never* skip *breakfast* or take pills first, *always drink water,* then eat to bring glucose levels up) and avoid coffee that dehydrates the brain, *you keep moving every 30 min thruout the day.* To avoid weight gain, make your breakfast the biggest calorie meal and the dinner the lowest calorie meal, this will protect your brain even more, as belly fat kills the brain. The blood sugar is low when you wake up, due to a 10 hour fast, so it can be very dangerous for the brain to go without eating. Tao Te Ching explains "the more you rush, the longer it takes to reach your destination", since you have to restart over and over again, like in engineering projects, when rushing means rocket blows up and you rebuild it 3 times. Always recall the essence of the Immortalist Anthem ethos: there are always trillions of ways to any destination or outcome, without any rushing, stress, war, violence, threats, pain, intimidation, it's just you may be clueless now as to what those ways are, so seek to find them with tenacity and true love for the human quantum field. Rushing out of bed, as some do with alarms clocks for decades will destroy your heart/brain. All schools, people, camps, military facilities need to end these destructive habits. Also, in waking life, don't just *suddenly* start running or doing some intense *(heart rate rising)* exertion wildly, since you do that same sudden rise in blood pressure that can damage your brain/heart, especially if repeated for years. Be gentle with your body, it's not a phone you replace every 2 years. Always build up slowly, like if you trim a tree with a saw, do it slowly, not suddenly move from pulse 60 to pulse 145, build up slowly, take breaks and maintain it at 100 max to avoid dying (and drink lots of water to thin the blood before any exercise in the garden, house, etc). If you have a car and you press the pedal to 200 mph, you can break it, same for your body, always recall the grace of the Immortalist Anthem, and record a mp3 to use on your alarm (if you ever use an alarm, not recommended as body knows best): "May all live to a trillion"☺☺☺, in Eternal Bliss & ~*~Eternal Universal Peace~*~, by filling every step, breath, every glance, every word, feeling, thought, typed sentence, every minute of their awake state with universal *gentle tender soft nurturing healing* graceful compassionate loving kindness". Some people try to sleep in a slight right position, supported, as it may clear Alzheimer and brain waste faster and allow easier breathing, as long as the venous return works fine, meaning heart gets the body blood returning to the right atrium easily without the vessel being pressed by the internal organs. Move slightly during sleep, to prevent blood pooling that overworks the heart.

Use 2 positions if unsure. Good habits in the 20s, 30s, can prevent a stroke at 65 or 70. *Damage to your brain can start by bad* habits *at age 15 and accumulate over 20-50 years*. Form good habits early. The stroke and mini-stroke symptoms are detailed in this brief video.
